Passing Massowah, we come to the volcanic island Jibel Teer, very seldom seen in eruption, two rocks, inhabited only by birds, Zebayer and Jibel Toogur, and, about twelve hours before reaching Perim, the Great and Little Hanish, where the P. and O. boat, *Alma*, was wrecked. The boat then passes Mocha (famed for its coffee), in the Straits of Bab-el-Mandeb—properly Babu 'lmandab, the Gate of Tears, most probably so called from the number of vessels wrecked in passing through in the earlier times of navigation—which is hemmed in by barren, rugged rocks. In the mouth, forty miles from Mocha, is the barren island of Perim, one mile from the Arabian side, nine from the African side, and ninety from Aden. Perim, however, possesses an excellent harbour, and is, from a military point of view, a most important station, absolutely commanding the entrance to the Red Sea.

This portion of the Overland Route is by far the most trying to most European constitutions. The decks of the vessels are covered with double awnings, but the sun's rays penetrate through all, and render the atmosphere, while sitting on deck from eight o'clock in the morning till three o'clock in the afternoon, well-nigh unbearable. There is rarely a breath of wind. The body becomes heated, and a burning thirst attacks the traveller, which he endeavours to assuage by drinking. Did he know it, a saline draught would far more tend to lessen the fever, and the juice of ripe oranges would much more certainly assuage the thirst. This fruit is plentiful in this region, for a beneficent Providence always furnishes an antidote for every unavoidable ill. Sometimes the weather is boisterous, and the wind blows terrifically; there is little hope for small vessels and their crews, which are cast upon either the African or Arabian shores at such times; the ships are mercilessly plundered, and the crews led into slavery. In fine weather, we not seldom have a shower of flying-fish on our deck, those queer little creatures, whose immense lateral fins enable them to take long leaps right out of the water; and, at times, overleaping themselves, or, perhaps, curious to know what is contained in the huge monster which comes steaming in amongst them, they blindly leap to their own destruction.

Whilst we are still in the Red Sea, the business of sorting the mails and stamping the letters is begun. The appearance of all the great mail-bags standing open-mouthed, with the mail conductor, in his Eastern habiliments, going from one to another, seeking and handing them to the sorters and stampers, irresistibly reminds one of a sort of Arabian Night's tale of "Forty Thieves," or of the interior of "The House that Jack Built," with his sacks of flour neatly stacked up against one another all round.

The number of these mail-bags has been increasing all along the road, and now numbers several hundreds; so that the work of sorting the letters is not an easy one, nor one that can be done in a hurry, especially in consideration of the intense heat, and that, in order to save time, it is necessary to complete the sorting before arriving at Bombay.

On arriving at Aden, we find that our watches are three hours behind time, and that we have about ten or twelve hours to go on shore, if we please, and take a peep at anything that may be worth seeing. To tell the truth, there is not much. Scarcely a tree or a blade of grass is visible. A good road, but totally unsheltered, five miles long, leads to the town or "Tanks." Here, the prettiest place is the governor's garden. We shall also see some of the queer Arabian sheep, with fat tails, sometimes weighing ten pounds, which they carry on little running platforms, especially constructed for that purpose.

The great interest of Aden, however, are the "Tanks." There are eleven or twelve of various sizes, in a gorge overlooking the town. They are built of solid masonry, and look like so many forts. They were first constructed many centuries ago, but were terribly neglected and filled up with rubbish, till the English took possession of Aden, since when, large sums of money have been spent in cleansing and reconstructing them; and now much of the Aden water-supply is obtained from them.

Whilst taking in a fresh supply of coal for our voyage across the Indian Ocean, we may have some good fun with the Arab boys, who crowd round our steamer, crying for "backsheesh," and when any one throws a coin overboard, they will dive after it, bringing it up from a great depth. It is also interesting to watch the Arab boats, which ply for fares around the steamer so soon as she appears in sight of the harbour. They are manned by two, and sometimes four, wild-looking and cunning Ishmaelites, who make their apparently frail bark dash along through the water at an astonishing rate. When our coal-bunkers are all filled, a gun is fired from the steamer, which is a signal that we are about to start. There is the usual hurry-scurry, some sightseeing passenger is nearly left behind, but gets on board just in time; a few ropes are cast loose, a rumble and splashing is heard in the water behind us—it is the screw revolving and beating the water into foam. Look again at the shore, wave your handkerchief (very languidly, for it is so hot!) to some one on the wharf; we are off. In a few moments we shall be out of sight of land, and, unless we should happen to catch a passing glimpse of Socotra, we shall see no more of *terra firma* for seven days.

A sea voyage of seven days may be the most tedious of inflictions, or may become a passably pleasant trip. It must be said for the P. and O. Company's officers, that they exert themselves to lighten the irksomeness of the situation in every way in their power, besides which, the vessels are supplied with pianos, and generally have a fair library. Then the passengers generally, recognising their isolated condition, soon become friendly, and many are the amusements and entertainments which are got up among them, if the weather is fine, as it almost always is. Very striking are some of the pictures which an artistic eye finds on deck at times, as, for instance, that so frequently seen, of an ayah or Indian nurse, playing with her mistress's white baby, the contrast of the two skins—one dusky as an Arab's, the other the pink and white of an English baby—being very great. It is astonishing, too, the affection which exists between the strangely-assorted pair. Among the deck games may be mentioned quoits, rings of rope which are thrown upon an upright stick fixed on the deck; billiards,—a plan is marked out in chalk on the deck, and divided into numbered partitions, something like the figure on which we used to play at "Hop Scotch" when at school, then a disc of wood is shoved along the deck by means of a sort of rake, the object being to get the disc into the space numbered with the highest figure; then there is frequently a banjo player on board, who sings songs to us; and in the evening there are concerts, and very often dancing.

And so we pass away the time, until, one morning, some one descries a reef of rather dangerous-looking, dark-coloured rocks, on which, we are told, many vessels have been wrecked, and many poor people have lost their lives, and then we know that we are not far from Bombay, and the end of our sea voyage. If the steamer should arrive in the harbour in the daytime, the view is exceedingly picturesque, overlooking rich groves of dates, palms, and other trees, with Malabar hill and its country houses three miles behind, whilst far in the distance are to be seen the superb Ghauts, towering to the skies. As soon as the steamer is discerned by the look-out at the flag-staff on the top of the lighthouse (situated on the small promontory of Colaba), a gun is fired, the mail signal hoisted to the peak, and its arrival telegraphed all over India.

The steamer then, without delay, proceeds to her anchorage. The mail is landed immediately, the great bags being sent sliding down a smooth board with sides to it into a bunder boat, or small steamer, the passengers being permitted to land afterwards. Our artistic friend was in a hurry to get ashore, and he, also, wanted to follow the mail bags as closely as possible, so, seizing his opportunity, he took his topee, or pith-lined sun-hat in his hand, slipped between a couple of bags, and went sliding down the shoot before any one could stop him, much to the astonishment of the mail receivers in the hold of the bunder, who had probably never seen a man come aboard in that way before.

And now that our mails have arrived at Bombay, all that has to be done with them is to send the bags, which are all properly labelled, to their respective destinations all over the great Indian peninsula, as quickly as practicable, and with all possible despatch. And I think you will now have formed some idea of How our Letters go to India.

BUBBLES AND BAUBLES.

A "BUBBLE" is an empty, hollow thing, that bursts with the touch; the term is used to describe anything that is unsubstantial and unreal, something that is cheating and ensnaring. The word is derived from the Latin "*bulla*," the sound made by boiling water; very descriptive indeed, for bubbles often consist of a great deal of noise, with nothing to show for it.

A "bauble" is a showy, glittering plaything, a fine, taking trifle, a bit of tinsel to please small people; it is connected with the root of the words "babe" and "babble." Bubbles and baubles, how they occupy the mind and heart of thousands, taking up an important place in lives that ought to be occupied with more substantial, lasting things.

Men make bubble reputations, pursue long courses of action that end in ruin; others have dancing before their eyes the baubles of life, glittering, jingling, enticing, ever pleased with a rattle, tickled with a straw; they that should be men, being nothing but old children, delighted and satisfied with all that amuses.

There are solid things in life, if men would but grasp them, things solid enough to last through time, on into eternity. Is it not useless to let the bubbles and baubles divert us from these?

LOVE, COURTSHIP, AND MARRIAGE.

By PHYLLIS BROWNE.

No. 7.—Parents and Children.

THERE is a pretty story told in Roman history of a noble lady, named Cornelia, the wife of Gracchus, and mother of the two popular leaders, Tiberius and Caius. When her sons were young, Cornelia took the greatest pains in superintending their education. She lived very simply, and dressed most plainly, and seemed to care nothing for gaiety and pleasure, so entirely was she devoted to her boys. One day a rich and fashionable dame called on her, and boasted of her fine dresses and costly gems. Cornelia listened in silence. At last the visitor said, "Do you possess no treasures, O Cornelia?" Cornelia went out of the room, and in a moment returned, accompanied by her two splendid boys. "Behold," she said, "behold the jewels of the Gracchi!"

Since Cornelia's days, a great many parents have looked upon their children as their most priceless treasures, and have learnt to disregard comfort, finery, and ease for their sakes. Indeed, the love of parents for their children is the most divine, the purest, and truest feeling known to us. There is about wedded love, and the love of people who are engaged, something of selfishness and unrest. But the parental love gives liberally, and asks nothing in return. It finds satisfaction in giving, and abundant content in the welfare of the beloved object. Very often we see men, whom we consider stern and rough, meek and gentle with their girls and boys; we see mothers, whom we had pronounced selfish and thoughtless, self-sacrificing and considerate for the little ones; to have a child dependent on them brings out the best that is in them—"a little child leads them."

Where little children are rightly received, they generally bring happiness with them. A house is never so happy as when it contains a baby. It is very usual for childless people to pity the busy mother of a large family. They say, "Poor creature, how hard she has to work for her children! how weary she must be!" The pity is often thrown away. The mother has joys of which the childless know nothing. She would not give up the clasp of tiny fingers, or the kiss of rosy lips, for the most luxurious ease.

Sometimes when parents are hasty in temper, and even harsh with their children, it does not mean that they do not love them, but that anxiety and worry have made them impatient, and that they have not learnt to master themselves and conquer their own humours. It is sad when the fate of a little child is in the hands of one who does not realise the sacredness of the trust. But in almost every case we should make a mistake if we imagined that these parents did not love their children. If the child were to be ill and die, they would grieve in bitter anguish.

Poor parents, who have to toil and struggle hard to pay for the food and raiment of their children, sometimes imagine they are unfortunate that they have so many mouths to feed; but they could not say which child was the one too many. I once read a story of a very poor father and mother who had seven children. The father worked hard, early and late; the mother saved, contrived, and pinched herself, that the family might not want. But at last they grew weary. "Our task is too difficult," they said. "We are too heavily burdened; we have too many children!" A rich woman, who was childless, heard them thus complaining, and said, "Give me one of your children. I will take it away to be my own, and you shall never see it more. Choose for yourselves which you will part with, only understand when once the child is gone away, you are never to claim it, never to have anything more to do with it."

The father and mother were delighted. They said, "Here is relief! We shall have one child less to work for!" But then the question arose, "Which shall we send away?"

It was evening when the lady called, and the children were all fast asleep in bed. The father and mother took a candle, and went round to the little cots to make their choice. First they came to Willie, the eldest. The mother said he was such a good little fellow! His father had been so glad, and his mother so proud, when he was born; they could not let *him* go. Besides, he was already beginning to be useful; he helped to keep the little ones quiet. So his cot was passed over. Next came May; she was father's darling. She always put his slippers to warm, and ran to meet him when he came home from work. The father said it would never do to part with May. Then there was Hal, the mischievous boy, who was always in hot water; he kept the whole house in a ferment. Both parents said that they would feel dead alive if Hal were not there. They passed on to Joey, the delicate one. He needed his mother's care. Mabel was the only one like grandmother, with her blue eyes. Charlie had cut his finger that afternoon, and had cried and sobbed, and refused to be comforted until father had come home and kissed the place to make it well; then he had dropped asleep at once. The tear lay on his cheek still. Dear little Charlie! After Charlie, Baby only was left, and of course it would be quite ridiculous to send Baby from them. By the side of Baby's cot the father and mother stood. They looked at each other, then without saying a word, they went downstairs.

"Madam," said the father to their visitor, "we were mistaken: we have not one child too many. Our children have been sent to us by God; so long as He leaves them with us, we will cherish them, and do for them the best that we can." "Yes," said the mother, "children are the heritage of the Lord. We can never be poor while we have one another and the children. We will struggle on, but so long as we can avoid it, we will not part with one of them." These parents had learnt a lesson; they realised how precious the children were. They took heart once more, worked with a will, and in time success rewarded their efforts; but they never again talked of "a child too many."

It is a great responsibility to bring up children. "As the twig is bent, the tree is inclined"; "Train up a child in the way he should go, and when he is old, he will not depart from it." How shall we train the child?

There was once a very clever woman, so clever, that it was said she had intellect enough for ten average intellects to turn round in comfortably. She read deep books, talked with learned people, and, perhaps, was a little inclined to think herself an extraordinarily wonderful person. But, after a time, she married, and a child was given to her. Then this woman, who was believed by all her friends to think so highly of herself, wrote down in her diary: "I am the mother of an immortal being. God be merciful to me, a sinner." How natural! How many a woman, who has become a mother, has felt the same. We are so feeble, so unworthy, so weak, that we should be in despair if we could not rely on love and strength beyond our own.

How, then, should young fathers and mothers train the children God gives them? The first lesson they have to teach is Obedience. In happy homes this lesson is always taught and always learnt; and people unaccustomed to children, would scarcely believe how necessary it is to teach it early. A father, whose lightest word was law with his children, and in whose home peace and concord reigned, each member appearing to think of the other rather than of self, said that he should never care to attempt to teach a child obedience after he was two years' old. With each child he had one struggle only; that one struggle had sufficed, and it always occurred while yet the child was a baby. After it was over, what the father had to do was to watch himself, not the child. He had to be careful never to tell the child to do anything unreasonable, nor to say a thing was to be done without meaning it and insisting upon it. He felt that he ought never to blame a child for accident, or because he himself was annoyed. In short, he tried to deserve the respect of his children. The home of which this father was the head was one of the happiest I have known.

Some parents have a notion that part of their duty to their children is to break their wills, and to secure blind, absolute, instant obedience. To this end they lay down a regular system of hard rules, enforced by severe punishment. The children of these parents too often grow up deceitful and dishonest. They early get the desire to hide their misdoings, in order to escape the consequences.

A stern, but really well-meaning, father had a son who was disobedient, and caused a great deal of trouble. One day the father said to a friend, who was staying in the house, and knew the state of affairs: "I have made up my mind that, whatever happens, I will break that boy's will." Said the friend: "If I were in your place, I would as soon make up my mind to break his neck."

The friend was right. Boys and girls whose wills are broken never turn out very well. In this world we need all the will we have to enable us to do our duty. But the will should be so trained that, through it, we may choose what is right, and hate what is wrong; and that we ourselves should be made willing to give it up, and to accept God's will instead.

The parents who are too indulgent are, I believe, far more numerous than those who are too stern. The parents whose conduct varies according to their humour are most common, and their children are nearly always spoilt—they gain no idea of obedience, no respect for their parents, no knowledge of duty. If they turn out well, they do so in spite of their training, not in consequence of it. The best atmosphere in which children can be brought up is that of obedience,

founded on love and trust. If, while the child is still almost a baby, he is made to understand that his father's will is law—if, later, he learns to respect that will, and realizes that it is not founded on mere whim, but upon righteousness, love, and duty, then trust may be allowed full scope. The happiest homes are those in which the children have learnt obedience, and the parents dare to trust.

One word more ought to be said about the training of children, and this one word is addressed specially to mothers. Childhood is the time above all others when a love of the Bible should be implanted, and the habit of prayer should be formed. Sad to say, in these days the Bible is not read in our homes as much as it was thirty and forty years ago. For the young people who are growing up in those homes, this is a terrible loss—a loss for which nothing can make up. A child who has learnt, while young, to enjoy the Bible stories and the Bible poetry, and to repeat the Bible words, may not, perhaps, enter to the full and immediately into the spirit of the Bible-teaching; but it will be in his mind for all that, and will recur to him in future years under all sorts of circumstances. As some one has said: "A child's mind is wax to receive, and marble to retain." A mother who fails, during the susceptible period of childhood, to make her child familiar with the best of books, is throwing away a golden opportunity of enriching him with treasures which will benefit him through life.

So with prayer. It is at a mother's knees that prayer is best taught. Teach a little child to lift up his heart in communion with his heavenly Father—not night and morning only, but whenever he feels glad or sad, wants help, guidance, or comfort—and you train him to realise the Unseen, you prepare his feet to walk in the way of righteousness. The habit thus commenced will influence all his life. To form this habit is, surely, a mother's highest privilege.

ON VEILS.

By Edward Butler.

Part I.

VEILED FACES.

WALKING along the footpath I met a lady for whom, at the distance of several yards, I felt a sudden pity, which disappeared as we passed each other. She appeared to have a great number of pink pimples on her face, distributed with curious regularity. On coming close to her, I saw that she wore a diaphanous veil, and that these spots were ornaments on the veil.

This threw me into a meditation. Many of us wear spotty veils. There is the sea-captain of the old type, who "clothed himself with curses as with a garment," and is pitted all over with his execrations. But the heart of the fruit is often sounder than the rind, and the veil of preposterous blasphemies sometimes hides a nature tender to women and children, and gentle to the suffering. Why, O sea-dog, should you array your humanity in so ugly a veil? Those who contemplate you through that medium attribute the ugly blotches of profanity to your innermost nature. It is of no avail to say they "mean nothing." Moreover, these poison-patches have a way of working themselves inwardly to the vitals, after the fashion of the shirt of Nessus.

As the moral antipodes of the old captain is the man of deep feeling, lofty aspiration, and passionate sympathies with the noblest destiny possible to man, who veils it all with a gauze of levity, spotted perhaps with unworthy quips and cranks. Why should we be ashamed of seeming as serious as we really are? Perhaps it is in indignant protest against those who wear a veil of sanctimoniousness, spotted with texts of Scripture, over souls discoloured by lust and lies. But in either case it is affectation, and should be discarded. Hypocritical godlessness is hardly more to be respected than hypocritical religion.

VEILED SOULS.

All souls should wear veils. And the more fine and delicate the tracery of the soul, the more carefully should the veil be adjusted. The sacerdotal injunction to divest the soul of all covering, before the eye of some poor fellow-creature in a confessional-box, who there usurps God's prerogative, is a command which, if complied with, humbles the soul for evermore, so that thereafter it cannot walk quite erect, but cowers before the presence, or at the recollection, of the man who has seen its shame. This injury is the most serious to the finest spirits. There are coarse natures in plenty, to which the turning of themselves inside out seems of no more consequence than to a polype or a glove. If there be a Holy of Holies in the temple of their hearts, they have never discovered it, and they trot any one who likes through the sacred edifice, from top to bottom, with glee. They have nothing to veil—these raw souls, bundles of spiritual leather just out of the tanpit—pig-iron just run from the furnace. But after the Divine Artificer has been at work upon the raw material, shaping it into celestial designs, touching it into beauty, inscribing the first letters of the "new name, which no man knoweth, save he that receiveth it," then the instinct of self-veiling seizes on the spirit, and woe betide it if it recklessly throw the veil aside. Who shall say what melancholy deterioration seizes upon the artist's models, whose nude figures are portrayed on the walls of our Royal Academy? Who shall say at what price of ruinous humiliation of sweet souls the public enjoy the spectacle of the lovely female forms that are there exhibited? And who shall say what analogous harm comes to the spirit that permits itself to be too minutely inspected and coarsely handled?

Cultured and highly organized spirits have many veils. The statesman wears his veils in Parliament; the judge upon the bench. When statesman or judge goes home, he throws off the outer veil, which, with reminiscence of the Jewish Tabernacle, we will call the "veil of badgers'-skins." Before his loved and loving children, the "veil of ramskins" follows, and they look upon the "veil of goat-skins." To the eyes of the wife, equal in age and experience of life, and joined in the sweet confidences of married life, the veil of goat-skins is cast aside, and she looks upon the "veil of fine-twined linen." But even to the nearest and dearest eyes there remains that veil,—a veil only laid aside in the soul's communion with Him who "dwells in its Holy Place." Before those serene and loving, though righteous and holy, eyes of our Maker there should be something beyond the mere cold cognisance of Omniscience; there should be the consciousness of unveiling, self-contemplation, in the essential light that allows no haze, adds no tints, and permits no distortion, but shows the soul to itself as God sees it, in a revelation of "the truth, the whole truth, and nothing but the truth, so help me God," as the old forensic oath runs. Flooded by that uncompromising brightness, pride, self-conceit, the incrustations of flattery and ignorant or insincere praise of men, and all manner of self-deceptions peel off the soul. It comes forth from that interview with Light and Love, purified, chastened, and humble.

VEILED PATHWAYS.

I remember, in early life, driving into Wharfedale at sunrise one winter's morning. From the heights of Orley Chevin, I looked down into the valley, through which my path lay for many miles; but the eye only rested on a sea of fog, or travelled over it to the distant hills that rose on the other side of the sea, and caught the early sunbeams. It seemed to me like my life's pathway, which then lay before me, veiled in the mist of my ignorance of its pleasing or painful incidents, appalling in its uncertainties, but presenting two solid facts: a good road at my feet, and the everlasting hills in the distance,—two facts linked together by my knowledge, that the one led to the other. The mist in lovely Wharfedale was not so intense that I could fail to know the road, or read the directions on the finger-posts, and I descended, wrapped in fog and meditation, into the silent cold and clinging vapour.

I believe that young men and young women are not infrequently oppressed by the veiling clouds that persistently trail before them and around them. They desire the veil to be uplifted. They would see "things to come." They flirt with tricky spiritualists, and tamper with planchettes. They concentrate the whole will on the act of vision, peer into the future in the spirit and power of a gimlet or a bradawl, and see nothing. But let them be of good cheer. The road is sound and palpable under their feet; and from rising-grounds of faith they may behold, now and again, the distant sunlit hills of heaven.

Is it not well that our way should be thus hidden? Constituted as we are, would not the inevitable troubles and pains of life crowd upon us through the lenses of our telescope of disastrous foresight, and crush us? and would not its pleasures be half drained by imaginary fruition before they were reached? and would not our moiling in the future demoralise our present? Yes; we may thank God for the veil on life's pathway. Let us not desire the vision of the seer. Seers were ever sorrowful folk. "Take short views," and be thankful you can take no other. The compass points as true in a fog as in the clearest air; and the compass of an honest conscience, instructed out of God's Word, laughs at uncertainty. The road may be steep, may be narrow, as well as mist-veiled, but never doubtful to the man of single mind. We shall come to the brink of the river at last; and many stories, as true as strange, are told of the sudden radiance, the flashing revelation, that bathes the redeemed spirit in the moment of transition to the region "beyond the veil." Mourning friends around the dying bed are startled by a momentary participation in the light that greets the entrance of the spirit into eternal day.

"It is not thy faith, but God's faithfulness, thou must rely on."—*Fuller.*

"God wants from us a religion of principle, not one of mere feeling."—*Fénélon.*

COMPETITION PRIZES.

CONGRATULATIONS sincere and hearty to our successful Competitors! The Prizes and Certificates have, almost without exception, been well won, and really creditable work has been done. We give below the comments of our Examiners in Divisions II., IV., and V.; the "Results" in the other Divisions will be published, we hope in our next number.

Division IV.—Science.

"A total of 91 Papers were sent in. Of these, 9 were on Zoology, 10 on Botany, 10 on Geology, 9 on Astronomy, 4 on Chemistry, 8 on Physiology, 19 on various branches of Physics, while 22 were on other miscellaneous Science subjects.

"The ages of candidates ranged from 14 years to well-nigh three-score; but more than half the total number were only 21 years old, or under. A remarkably good Paper was sent by one candidate of 16; and we must distinctly notice one contribution, evidently from a working man, which was very creditable.

"No one but the winner of the prize gained full marks (100), but five others had from 90 to 95. The twenty to whom Certificates have been awarded obtained 80 marks and upwards. Seventeen others secured 70 marks and upwards.

"A considerable number of writers attempted subjects far too large for the 3,000 words allowed.

"It is very satisfactory to know that Science teaching is making such an impression on the community, that really good Papers were received from all parts of England from Northumberland to Cornwall, from Scotland, and from Ireland. Wales was worst represented. Another point worthy of note is the large number of female competitors. The second best Paper (95 marks) was written by a lady, and more than half the certificates have been gained by the gentler sex."—W. H. H., Examiner.

Division V.—Historical or Biographical.

"Many of these Essays are characterized by an attempted intensity of thought which is very unnatural in young writers. The award is made comparatively easy by the distinguishing merits of the two Essays, 'Thomas Cochrane, Earl of Dundonald,' and 'Samuel Johnson.' In both of these the writers have set down their thoughts in a concise and natural form, while the style is free throughout the Essays. I would therefore award the prize to Mr. J. Clarke for his able and interesting sketch of a man who is worth the consideration of every young fellow; whilst I am glad to give special commendation to Miss Bennett for her excellent Essay on 'Samuel Johnson.'"—W. H., Examiner.

Division II.—True Adventure.

"Though many of the narratives in this division betray a considerable amount of literary skill, the competition has been singularly barren of what may properly be called adventures; but the prize has been divided between the two Papers which are the most deserving."—W. H., Examiner.

Examiners' Awards.

£2 2s. PRIZE
For the Best Science Paper.

ARTHUR JESSOP, Rawdon, near Leeds.

HIGHLY COMMENDED.

Dixon, M. G., Ryde.
Edmonds, H., Brighton.
Jukson, R., Chichester.
Key, M., Maidenhead.
Keyte, G., Ramsgate.
Mandall, M. E., Stockton-on-Tees.
Miller, L., Eccles.
Taylor, B., Tetsworth.
Todd, M. G., Edinburgh.
Walmsley, H., Kingston-on-Thames.
West, A. C., Truro.
Williams, Rev. A. L., Bury-St.-Edmunds.

COMMENDED.

Abraham, E., Maida Vale.
Allen, R., Loughlin.
Crowther, H., Manchester.
Dearden, A. L., Tunbridge Wells.
H. M. S., Kingstown.
Southall, K. M., Llandudno.
Speakman, A., Burton-on-Trent.
Whitton, L., Stradbally.

£2 2s. PRIZE
For the Best Historical or Biographical Paper.

JAMES CLARKE, Liverpool.

HIGHLY COMMENDED.

Bennett, M., Falfield.
Dodgson, F. V., Lowestoft.

COMMENDED.

Crighton, H. M., Forfar.
Noble, G., London.
Ranken, M., Richmond.

£2 2s. PRIZE
For the Best True Adventure.

Equal { **MAJOR-GENERAL BARTER, C.B., Whitegate.**
Equal { **E. M. BULLEN, Rotherham.**

HIGHLY COMMENDED.

Jones, E., South Norwood.
Wright, S., Scarborough.

COMMENDED.

Golding, A., Whetstone.
Knight, A., Nottingham.
Randolph, D., West Hartlepool.
Roberts, M., Sheffield.

THE SERGEANT'S LAST HALT.

A STORY OF THE AMERICAN WAR.

By an Eye-Witness.

AS I was passing through the Hospital wards, after the battle of Bull Run, two strangers—a sister and an aunt of one of the young heroes—accosted me to ask if I would be so kind as to stand by the couch of their relative, while the surgeon re-amputated his limb, an operation on which his only chance of life depended. They were both weeping, but the wounded soldier, though suffering intensely, smiled as he gave me the military salute. I sat down by his couch, and took his hand in mine. He told me that he had been wounded late in the action, left upon the field, and remained where he fell from Saturday until the following Wednesday, "with no food save a few hard crackers left in my haversack, and with no water save that which God gave me from heaven, in rain and dew, and which I caught in my blanket."

After a paroxysm of pain, the sergeant continued :

"You know, Colonel, how God always remembers us wounded soldiers with rain, after the battle is over, when our lips are parched, and our tongues are burning with fever. On Wednesday, I was found by a surgeon, who dressed my wound, and sent me in an ambulance to Washington. I arrived there late on Thursday evening, my limb was amputated, and I——"

The sergeant again paused in his story, and I begged him not to go on. I noticed that his voice became weaker, and his face more pale and death-like ; a moment afterwards, blood began to trickle on to the floor. I at once called the surgeon. He examined the limb, and, after consulting with other surgeons, said it was impossible to save his life ; that re-amputation would be useless ; that the soldier was fast sinking from exhaustion, and, in all probability, would not survive the hour. They desired me to make known their decision to the aunt and sister.

With such language as a soldier might command, I informed them that the serjeant must soon rest. Tears filled their eyes, and they sobbed bitterly. Then the sister, wiping away her tears, asked if I would tell her brother how soon he must go, and read to him "the prayer for the dying." I went again to the couch.

"Sergeant," said I, "we are going to halt soon—we shall not march much farther to-day."

"Are we going to halt, Colonel, so early in the day? Are we going into bivouac before night?"

"Yes, Sergeant," I replied, "the march is nearly over—the bugle-call will soon sound 'the halt.'"

His mind wandered for a moment, then he said :

"Do you mean that I am so soon to die?"

"Yes, Sergeant," I said, "you are soon to die."

"Well, Colonel, I am glad—I want to rest—the march has not been so long, but I am weary, very weary—I want to halt—I want to be with my Saviour."

I read "the prayer for the dying," most of which he repeated ; then the sister knelt beside the couch of her brother, and offered up to God a prayer full of earnestness, love, and faith. The life-blood of her dying brother trickled down the bedside and crimsoned her dress, while she besought the Father that his robes might be "washed and made white in the blood of the Lamb." The prayer was finished ; the sergeant said, "Amen." We stood by the bedside.

"Sister—aunt—do not weep ; I am going to Christ ; I am going to rest in heaven. Tell my mother, sister,"—and the soldier took from his finger a ring, and kissed it,—"tell my mother, sister, that this is for her, and that I remembered and loved her, dying."

He took another ring from his hand, kissed it, and said,—

"Sister, this is for her to whom my heart is pledged ; tell her—tell her to come to me in heaven."

"Colonel," said he, turning to me, his face brightening with the words, "Tell my comrades of the army—the noble army of the Potomac—that I died bravely,—died for the good old flag."

His pulse beat feebler and feebler, the blood trickled faster and faster, the dew of death came and went, and rippling for a moment over, the pallid face at last rested,—rested for ever. The sergeant had halted ; his bivouac now is in heaven.

Y.M.C.A. ITEMS.

THE Y.M.C.A. at Cork, Ireland, has removed to new and larger Rooms.

The Swansea Y.M.C.A. held a most successful New Year's reception to young men on January 10th. Music, recitations, and a first class gymnastic display by members of the Association gymnasium were much appreciated by the crowd of young men present.

A NOVEL COMPETITION.

"THIRTY NOUNS."

WE offer Two Prizes of Half a Guinea each, for the best original, readable Paragraphs, containing the following Thirty Nouns. One Paragraph is to be in prose, the other in verse. The Prizes will be awarded for brevity and clearness.

"THIRTY NOUNS."

1. Ventilation.	16. Mud.
2. Pig.	17. Pincushion.
3. Chimney.	18. Poetry.
4. Shakespeare.	19. Cabbage.
5. Porpoise.	20. Senator.
6. Beehive.	21. Multiplication.
7. Football.	22. Eggs.
8. Cat.	23. Lily.
9. Italy.	24. Papers.
10. Grammar.	25. Turk.
11. Umbrella.	26. Frost.
12. Leviathan.	27. Rhododendron.
13. Silk.	28. Bicycle.
14. Bullfinch.	29. Department.
15. Telegram.	30. Quarrel.

RULES.

1. The Nouns must he introduced in the order in which they are given above.

2. No competitor may send in more than one paragraph.

3. Each competitor must work unaided, and write on one side of paper only.

4. Stamped addressed envelope must be enclosed with any questions.

5. No paragraphs can be returned.

The Competition will close on March 24th, on or before which date all paragraphs, endorsed outside "Thirty Nouns," must reach the Office of —"A. 1.,"— 62, Ludgate Hill, London, E.C.

CRISP CORRESPONDENCE

AND

ODDS AND ENDS.

ANSWERS.

Lover.—Certainly a man in humble position in life may marry upon 30s. per week,—*but* "Mind WHOM you marry." Many a woman will make you poor ; a wise, thrifty, practical, energetic wife will make both ends meet comfortably. Of course the husband must be thrifty, smart, and energetic, too ; and, withal, no drinker or smoker !

Good-bye.—Yes, there comes a significance to our words of farewel when we realise that we are breathing a petition—God be with you. The hearty words and earnest efforts of friends are very cheering.

"Hints on Bible Marking."—We regret that this little pamphlet is now out of print. Facsimile pages with full information will be found, however, in the following numbers of Our Own Gazette : January, February, March, May, July, September, November, 1884 ; and January, April, May, June, October, December, 1885. Some of the Bible Jottings, published by Mrs. Menzies in connection with this plan of Bible Marking, can still be had. Sheets, ½d. each ; Annual Vols., 1s. 6d. Office of Our Own Gazette, 62, Ludgate Hill, E.C.

Lover of Wordsworth.—By far the best *selection* from Wordsworth's poems is that by Mr. Matthew Arnold, in the "Golden Treasury Series" of Messrs. Macmillan, and there is an Introduction to it in the caustic and brilliant style of that critic. 4s. There is a less expensive volume in Messrs. Rivington's English School Classics, by Hawes Turner, price 1s.

Porter.—Thanks for your hearty letter and practical suggestion. We shall endeavour to carry it into effect. If you are engaged on one of our railway lines, help us by getting our Paper amongst Railway Employés, Guards, Engine-Drivers, and Porters. How much of our safety and comfort is in their hands. We hope we have many friends amongst this important community. If you will send us your name and address, we will send you a parcel of specimens to distribute.

Enquiry.—Would the writer of a certain request for prayer every week, which reaches us, bearing postmark, "London, W.," please send us name and address. We should like to help writer.

An Anxious Inquiry.—Your question is purely speculative, and therefore unprofitable. What would have happened if Adam had not sinned does not concern us ; he *did* sin, and we, his descendants, are sinners. Look to the Saviour, who alone can blot out that guilt, by His death for each penitent, believing sinner.

A Friend of —"A.1."—We are glad to hear that, amongst your large experience of Sunday School Notes, you have found "none so helpful" as ours, and that "several other Sunday School Teachers are equally gratified." Notice "Quit you like Men," by Emily S. Holt, in this Number ; the very thing to read aloud at an Afternoon Sunday School Class.

A Competitor.—In answer to your letter of confession, we freely send you the forgiveness you ask. We *trust* our Competitors, believing that we should do wrong to dishonour the standard of Christian morality by suspecting them of unfairness. We rejoice that you have sought a higher forgiveness than ours ; "If we confess—He is faithful and just to forgive."

J. T. H.—The one and only essential for admission into heaven is a heartfelt belief in the death of the Lord Jesus Christ *for you*, by which He bore the penalty of sin as your Substitute. If you believe this, you are "born again," and you will of necessity live a Christian life. No question of sacraments or Church custom can touch the safety of a sinner who trusts Christ.

L. K. D.—Mrs. Poole's Poems are published by Nisbet and Co., 21, Berners Street, London,—the special leaflet for which you ask, by Morgan and Scott.

A Member.—Yielding ourselves to the Lord is very simple, when *He* has made us willing. You desire to give yourself completely to God. "Now then, *do it.*" Tell the Lord that you do, now, at once, make a surrender of yourself to Him. And then, *at once*, perhaps without any special feeling or emotion, believe that He has taken what you have given, and that therefore you are His—that there has been a transfer, He taking all your guilt, and you receiving His imputed righteousness, in the value of His precious, all-sufficient atonement.

CHESS.

D.J.M.W.—The diagram was correctly printed, and the position is capable of being solved. Please note the last four lines of Law X. in the same issue, and see solution in No. 12.

Carleton.—Every Pawn which reaches the eighth square may be promoted to a Queen, or any other piece the player chooses. It follows, therefore, that he may have two or more Queens on the board at the one time. After playing a pawn to the eighth square, the selected piece is placed on that square.

Black Queen.—The term "check" is used only when the King is attacked. It does not apply to the Queen under any circumstance. The fact of your opponent having threatened your Queen did not necessitate a compulsory move on your part. Therefore, in replying with a move which gave checkmate you won legally. Please see the Laws of Chess in our issues of January 7th and 14th.

Y. M. C. A. BIBLE CLASS LESSONS.

WITH a view to helping Secretaries of Y.M.C.A. Branches who are using the Course of Bible Class Lessons published by the National Council, we propose giving Notes on these each week.

Four sets of subjects on the following topics are included in this list.

1st.—New Testament Illustrations of Messianic Psalms.

2nd.—Some of the Dangers, Responsibilities, and Privileges of Young Men, as set forth in the Book of Proverbs.

3rd.—The Parables of our Lord recorded by St. Luke.

4th.—Personal Interviews of our Lord as recorded in the Four Gospels.

With a view to securing variety, these subjects have been so arranged that a lesson bearing upon each topic may be included once in each four weeks.

FEBRUARY 26TH.

THE HUMAN NATURE OF THE MESSIAH.

Ps. 22. 22-25. *Heb.* 2. 9-18.

OBSERVE the manner in which the fact of the Messiah's humanity is set forth in Ps. 22., not in express doctrinal statement, but in the *behaviour* of Messiah Himself. Note—

1. The recognition of kinship in the words, "My brethren." The first use of this expression by Christ occurs after resurrection (John 20. 17).
2. The communion of praise (ver. 23).
3. The attitude of dependence and trust (ver. 24).
4. The attitude and act of worship (ver. 25).

All these indicate, illustrate, and prove Christ's humanity. He is *one* with His people. Christ's deliverances are here made to furnish encouragement to His people (see 1 Pet. 1. 21). "I will declare Thy name" (comp. John 17. 6, 26).

Observe *to whom* He declares it. To His *brethren* (see John 15. 15; Matt. 13. 11).

"The only way in which the Son can make us know the Father's name is by making us one with Himself in personal, experimental loving knowledge of the Father, in whose bosom He dwells."—*Dr. Candlish.*

Christ is *not ashamed* to call us brethren. Why not? Because the name is not a mere compliment, but a *reality.* It involves the conferring of real and substantial brotherly benefits (see Heb. 11. 16). And yet are we not sometimes ashamed of Christ? What a condescension for Christ! What an elevation for us!

The co-existence of the human and Divine in Christ must ever remain a mystery, yet we can accept it as a revealed truth, at present beyond our comprehension.

"Impassive, He suffers!
Immortal, He dies!"

Heb. 2. 17 declares the great object for which Christ became man—"to make reconciliation." He is our Representative. His human sympathies well fit Him for the work, and they win our affection."

JAMES L. STANLEY.

THE PERFECT MAN.

He is

1. The *Divine* Man (Mark 15. 39).
2. The *Wise* Man (Matt. 13. 54).
3. The *Loving* Man (Luke 15. 2).
4. The Discerning Man (John 2. 25).
5. The *Mysterious* Man (John 6. 52).
6. The *Wondrous* Man (John 7. 46).
7. The *Despised* Man (John 18. 40).
8. The *Faultless* Man (Luke 23. 4).
9. The *Forgiving* Man (Acts 13. 38).
10. The Outcast Man (Matt. 8. 20).
11. The Powerful Man (Matt. 9. 6).
12. The Seeking Man (Luke 19. 10).
13. The *Offering* Man (Heb. 8. 3).
14. The *Risen* Man (Heb. 10. 12).
15. The *Glorified* Man (Acts 7. 55).
16. The Representative Man (Rom. 5. 19).
17. The *Glorious* Man (Heb. 3. 3).
18. The *Priestly* Man (Heb. 7. 24).
19. The Coming Man (Matt. 24. 27).
20. The Mighty Man (Isa. 42. 13).
21. The Judging Man (John 5. 27).
22. The Reigning Man (Matt. 25. 31).

The sight—"Behold the Man" (John 19. 5). An invitation—"Wilt thou go with this man" (Gen. 24. 58). Where the italics are, the words "*This Man*" are found in the text. Typical illustration of the humanity of Christ in the shittim wood, of which the ark was made. The gold tells us of His Deity (Exod. 25. 10, 11).

In Heb. 2. 9-18, we have a sevenfold view of Christ as the Son of Man.

1. As the *Submissive* One "Made a little lower," etc. See seven downward steps (Phil. 2. 6-8).
2. As the *Suffering* One—"suffering of death." Look through Luke's Gospel, where Christ is seen as the Man, and mark all the passages where He speaks of His sufferings.
3. As the *Seated* One. "Crowned," etc. Five times in this Epistle Christ said to be seated. As the Sin Purger (1. 3), as the High Priest (8. 1), as the expecting One (10. 12), as the Conqueror (12. 2), and here as the glorified One.
4. As the *Sanctifier.* "He that sanctifieth." One as the cherubim and the mercy seat (Exod. 25. 19, margin).
5. As the *Son of Man.* "We see Jesus." His human name given. Man lost his dominion over creation by sin; it is to be restored again during the Millennium.
6. As the *Subduer.* "Destroy (render powerless) him that had the power of death, that is, the devil." Christ by His death has been the death of death.
7. As the *Sympathiser.* "Able to succour," etc. Always put against your inability His ability. His might against your weakness. His succour against your sickness.

Sunderland. F. E. MARSH.

NOTES ON THE INTERNATIONAL SUNDAY SCHOOL LESSONS.

By REV. J. H. THORPE, M.A.

FEBRUARY 19TH.

A LESSON ON FORGIVENESS.—*Matt.* 18. 21-35.

GOLDEN TEXT.—*Matt.* 6. 12.

THE teacher may know that the 34th verse is quoted by the Church of Rome in support of her doctrine of purgatory. The argument is this: "Till he should pay all that was due unto him" means that *at a certain time*—after the soul has atoned for its sins in purgatory—it will be delivered from punishment. If "*till*" means this here, may we not fairly demand why the Church of Rome denies it this meaning in St. Matthew 1. 25, where it plainly overthrows her doctrine of the perpetual virginity of the Blessed Virgin? But the whole argument drawn from this passage fails, for (1) the whole aim of the parable is not so much God's forgiveness of us as our forgiveness of others. (2) The argument rests on the radically wrong assumption that man can atone for his sins, or discharge his moral debt to God. If the utmost man can do is *his present duty*, how can he atone for the past? (3) The Bible sets before us but one thing which can take away sin—"the blood of Jesus Christ." (4) The debt itself is so vast that nothing less than an infinite atonement could satisfy God's broken law. (5) Even without these points, the doctrine of purgatory, resting on the assumption that there are two sorts of sins, venial and mortal, and therefore two sorts of guilt, is utterly refuted by the fact that the Word of God knows no such distinctions, and that Isaiah expressly declares that "the Lord hath laid on Him *the iniquity* of us all,"—where the whole mass of guilt is viewed as one load. Such points as these should be clearly set forth to elder classes. The lesson teaches three points as to forgiveness—the motive, the measure, and the manner. Side by side with each is its contrast, its opposite.

1. *The motive.* "The lord of that servant was moved with compassion." But contrast the conduct of the servant. *True* forgiveness is the flower of but one plant—a tender heart. Does your heart wish not to forgive, or feel it hard not to "take satisfaction"? Ask God to take away this stony heart. If your watch is out of order, trying to mend it yourself would very probably make the mischief still greater; you take it to the watchmaker. Take your heart in prayer to God, who alone can set it right!

2. *The measure.* This was what St. Peter was not clear about, and so he asked, how oft his brother should sin against him and he forgive him. Jesus' reply really meant —"*always* forgive." Then the parable further answers in the words of the king, "I forgave thee *all* that debt." *Contrast:* the servant would not give his fellow-servant so much as a little time to pay his debt, which was ridiculously small, compared with that which had been forgiven him. Note—true forgiveness *never counts!* It looks not so much on the debt as on the debtor. True love will never keep a journal to record its sacrifices! A truly forgiving heart will cast the debts into the depths of the sea, and spread a feast for the debtor! The bushel with which you measure out your corn to others will mete out the like to yourself. Your forgiveness is like a cistern—the water you draw off by the tap is the exact quantity which will be admitted by the supply cock. "So likewise"—remember the words whenever you are tempted to give short measure. The teacher will use this opportunity of pointing to God's forgiveness of sinners as our great example.

3. *The manner.* Not unimportant. Acts are often greatly affected by the manner of their performance. The heart is as often expressed in the manner and behaviour as in the word. Children should be reminded of this.

The right manner is hinted at in the 27th verse. "Then the lord . . . moved with compassion," etc. And it is more clearly brought out in the contrast of the servant's conduct—"he laid hands on him,"—"took him by the throat,"—"went and cast him into prison." Forgiveness ought to be given—

(1) *Graciously.* A sour face as ill becomes a forgiving heart as festive garments do a mourner. Forgiveness, dressed with the pepper, allspice, and vinegar of severity, is a poor dish to set before a man. If you forgive, do it like a king. Such a good thing is worth doing well. Present your pardon in the silver dish of a loving manner. What does this mean, "He that showeth mercy with cheerfulness"?

(2) *Instantly.* "Then the lord"—at once, when he was asked, without keeping him in suspense. There is a poor, mean, scolding way of granting a request! It is the way of him who waits, hesitates, considers, and dawdles till he has sickened the heart of the suppliant, and at last gives a forgiveness that has been paid for in bitter chagrin and wounded feelings. It is hardly worth the price! Forgive as the prodigal's father did—forgive as your Father in heaven answers prayer:—"While they are yet speaking I will hear!"

FEBRUARY 26TH.

THE RICH YOUNG RULER.—*Matt.* 19. 13-26.

GOLDEN TEXT.—*Matt.* 6. 24.

NOTICE *two* things about this young man:—

1. He was rich (ver. 22), but not satisfied.
2. He was religious (ver. 20), but not satisfied.

"What good thing shall I DO?" He quite thought he could obtain eternal life by his own efforts.

"Why callest thou Me good, etc.?" Unitarians claim that Christ here denies His Deity. Just as reasonable as to say that in chap. 22. 45, He denies He is David's Son.

As the young man was bent on *legal* righteousness, Christ takes him on his own ground (ver. 17), "Keep the commandments." If you want salvation by works, you must keep the *whole* law. (See James 2. 10, Gal. 5. 3.)

Ver. 18, 19. Christ only enumerates those of the *second* table—duties to man.

The young man replies with confidence in his own righteousness. Had he really *kept* these commands? He only regarded the *letter*, not the *spirit.* Paul once *thought* he was blameless, but he afterwards said, "When the commandment came, sin revived, and I died."

Ver. 21. A powerful test; all his self-righteousness in the balance of the sanctuary, weighed, and found wanting. LOVE is the fulfilling of the law.

"Come and follow Me." Indirect proof of Christ's deity. Mark the claim He makes. No *mere* man would dare to do so.

Verses 23-26. Riches are like *a cord* binding men to earth; like *thick clay*, rendering them unable to rise to heaven; like *heavy weights*, impeding their progress in the race. Christ does not say it is *impossible*, but *difficult* for a rich man, etc. "With God all things are possible."

JAMES L. STANLEY.

1. *The ruler and the Redeemer.* What a contrast! The poor rich young Man and the rich poor young man. One kept all that he had, and was sorrowful, the Other gave up all that He had, and was glad (Heb. 12. 2).
2. *Request of the ruler.* "What good thing shall I *do?*" Do! So, too, Nicodemus: "No man can *do*, etc." Day of Pentecost—"What must we *do?*" The cry of the jailer—"What must I *do?*" Satan's creed is "*do.*" The Gospel of God is, "It is done." The *do* of the law and *not to do* is death. The *done* of the Gospel and believing in Christ is deliverance.
3. *Rigour of the law.* This is seen in Christ's words to him. He was big in profession, but little in practice.
4. *Riches of the Ruler.* Riches bring reward, if used for God; but if not, they will bring blight, bitterness, bondage, and eternal blasting.
5. *Reference to the camel and needle's eye.* This was a common way in the East of speaking of anything difficult or impossible.
6. *Remark of the disciples.* "Who then can be saved?" Answer: Not the impure and unbelieving (1 Cor. 6. 9, 10). Who? Those who believe in Christ, those who are born again, and who follow Christ.
7. *Reply of the Saviour.* Salvation is an impossibility from man's standpoint, but man's impotency is God's opportunity to bless and save.

F. E. MARSH.

Two similar instances: Luke 10. 25, Mark 12. 28.

The story of rich ruler given also in Mark 10. 17, Luke 18. 18, etc.

By reading the three accounts, a more perfect picture can be presented. Mark supplies the words: "running," "kneeled," "loved him," "one thing thou lackest." Matthew supplies Peter's apparently selfish question, "What shall we have, therefore?"

A long time had elapsed between this incident and last lesson. Many important events between—Raising of Lazarus, two journeys to Jerusalem, etc., etc. (Luke 9., John 7.). Now only a few weeks to time of crucifixion.

Introduce lesson by reference to *young men* of the Bible. This one was—

Very rich. Perhaps owned farms and vineyards. Who was the richest king we read about in the Bible? Did his riches do him any good?

Very brave. Christ not popular. Homeless, outcast, shunned by great. Young ruler brave enough to come to Him for advice; brave enough to endure jeers of comrades.

Very lovable. A moral, outwardly religious young man.

Very anxious. Not sure of heaven. Unrest of soul. Determination to ask Christ.

Very sorrowful. Found out *the way—self-sacrifice, cross-carrying, following faithfully.* Did not like the cost of eternal life. Hope crushed. Describe what he may have hoped the answer would be. *Illustration*—Naaman.

Very foolish. "Went away." Forsook the greater to keep the less.

In brief, the lesson would be—

SOMETHING LACKING.
SOMETHING SOUGHT.
SOMETHING FOUND.
SOMETHING REJECTED.

Points to think over—

In our strength we shall ever fail. "None is good."
Amiability no passport to heaven.
Self-sacrifice the test of love.
Beware of the glittering snare.
The *One Thing* lacking, we lose all.

C. SKINNER.

If our doubts do not prevail so far as will make us leave off praying, our prayers will prevail so far as to make us leave off doubting.

A RAMBLE AMONGST THE BEAUTIES OF BRITTANY.

By Miss Spottiswoode (*continued*).

THE people of this province are very devout Romanists. Among the pleasant orchards, with their promise of the golden cider the people prize so much, or on the sides of the high stone houses in the narrow dirty streets, a gaunt crucifix will suddenly meet your eye, or, more often, a plaster figure of the Virgin, with an offering of artificial flowers at her feet.

In lower Brittany, of druidical renown, the people speak their native Breton; a language akin to Welsh. There, as in the northern parts, efforts are being made by those who can make themselves understood to win the people to a purer faith. But Romanism has a firmer foothold here than in any other part of France.

In picturesque Dinan, standing on the wooded slopes of the Rance, we went one day into one of the fine old churches. It was a splendid temple, but it were hard indeed to say to whose glory it was erected. Altars glittered along the sides, and as we followed the long line, reading the names of ancient saints, we came at last to one rather less resplendent than the rest, "au Sauveur," "to the Saviour."

Entering the churches at any time you will see some of the kindly, civil, light-hearted peasant women kneeling before the altars, their rosaries in their hands, and their wistful eyes fixed on the tinsel figure in front of them. Perhaps some one dear to them is navigating their dangerous coast, or one familiar and beloved has passed hence into the vague beyond, and they are beseeching some good angel to intercede for them with the great unknown God. Such He surely is to them, when they crave such intercession.

We went one day to Mont St. Michel, where a little town clusters on the steep sides of a mass of rock, sometimes separated at high tide from the mainland. A stone causeway has been constructed over the cold grey sands, much of it treacherous sinking sand, which lies between it and the fertile shore of Normandy.

The narrow streets consist chiefly of steps, and all lead to the monastery crowned by the fine church on the top of the mount.

Three years ago a fiat went forth from the government, dispersing all the monks save one, who remained as parish priest. The place is still, however, the resort of pilgrims, who wear a medal, in the shape of a cockle shell, as a badge of their purpose.

The church is being carefully restored at the public cost; but the once resplendent altars, the beautiful cloisters, and the grand banqueting hall of the knights, with its stately pillars, are silent and deserted. So too are the dark, cold dungeons within, to whose thick stone walls are still fastened the iron chains, light, doubtless, in comparison with the hearts of those to whom, in days gone by, their dismal clanking was the only sound which broke the dreadful stillness. Close by, within the walls, is the brothers' burial-place.

In the centre of one crypt, containing singularly massive pillars, stands a figure known from its colour as "the black virgin."

Round the windows of the little shops, which line the descent to the gates of the town, hang rosaries, medals, and other mementoes of the place, for the purchase of tourists and pilgrims.

The chief trade between Brittany and England consists in the export of dairy produce and the import of coal. A pleasant Sailors' Rest is provided in St. Malo for our seafaring countrymen. It may be mentioned, for the sake of tourists who are not fond of the sea, that the voyage from Southampton to St. Malo occupies just twelve hours, that the steamers are comfortable, and that we found the sea, both in going and returning, as smooth as possible, though that is not, of course, a universal experience.

But even should rolling seas lie between an English holiday-seeker and the white cliffs of the opposite coast, weeks of pleasure, and it may be a store of health, will compensate for a few hours of discomfort. When change is required, it can be obtained most completely by leaving the familiar scenes of Great Britain. New sights and new sounds refresh both eyes and ears; even the chatter of a foreign language and the clatter of wooden shoes tend to increase the sense of restful novelty.

Time and space would fail to tell of all the possibilities of enjoyment in the northern provinces of France. The river trips, where the steamers speed steadily through green valleys, with here a ruin, there a quiet farm; now and then a landing-stage, with a crowd of country people—the men, perhaps, receiving a farewell kiss from the "director of their conscience" in his sombre ecclesiastical garb, whilst the stalwart women fling the rope to secure the steamer, or carry heavy baggage ashore.

French and English people have ways of their own, and if they find amusement in each other's peculiarities, they may find instruction, too. Certainly we may take many a hint from the courteous manners of our neighbours, and from their hearty enjoyment of open-air recreation. And if the sight of a row of figures kneeling at the foot of a crucifix, and kissing the stone steps at its base, rouses an earnest longing that idolatrous superstition should give place to a purer faith, they, at least, set an example of simple and open confession of Christianity, and of acting up to the knowledge they possess. Perhaps the peasants of the northern provinces of France show to greatest advantage on the fête days, when a procession of neat figures, in holiday attire, are seen wending their way to some little chapel. Health and happiness, the two great beautifiers, seem to deal far more favourably with them than with their well-to-do countrymen in the cathedrals. When the service is over, an overflow of good feeling is generally shown in the liberal distribution of alms to the blind and halt beggars, who invariably wait on each side of the pathway. These beggars sometimes make an English visitor long for the Charity Organisation, so persistent are they in their demands; but they seem to meet with unfailing sympathy from the churchgoers, who encourage them with *sous* before they prepare to enjoy themselves.

To follow them, when the holiday is over, into the little fishermen's dwellings reveals one respect in which our cottagers have the advantage. The word "home" has no equivalent in any other language, and our idea of home life is scarcely to be found in France. How should it be when the women work so much out of doors, or are even sometimes found in the rigging of a fishing-smack? For this their love of the open air and their bright, clear climate may be accountable. It may explain, too, why their disposition is in many respects so different to our own. The human kind are no more proof against atmospheric depression than the birds, which give notice of coming rain by letting their heavy wings bear them low and close to the earth. Perhaps our own more deliberate and steady-going natives may sometimes thank our specialities of clouds and mists for saving them from being carried away too much by physical exhilaration, such as makes French people at times objects of amusement.

It is needless to enumerate the historical associations which give interest to the whole of this district. Such names are Brest, Ouessant, Nantes bring to mind early schoolroom days. But it may be worth while to mention that the attraction of the sea at St. Malo is not limited to bathers; this port fits out more than one-third of all the French vessels engaged in cod-fishing. It is interesting, also, as the birth-place of Duguay-Trouin and Chateaubriand.

CHAPTER I.

KATE KENNEDY was tall, fair, graceful. She was young, and she certainly possessed quite an average share of good looks. People spoke of her as a strong-minded girl, but that, in the unkind sense of the word, was scarcely true, for Kate possessed too tender a heart to be at all strong-minded, according to the modern acceptation.

She had a bright face, and was neatly dressed; but at the moment when this story opens, her surroundings were scarcely cheerful. In the first place, a London fog half filled the room, and in the second, the room itself was dingy, dark, and dirty—in short, it was a second-class, perhaps a third-class, London lodging. Kate had just finished her breakfast, and was buttoning on a pair of somewhat shabby gloves, when her landlady entered the room, and presented her with four letters.

"And I'd like to know, if you please, miss," said the good woman, in a rather tart voice—"I'd like to know if you'll give notice to-night, or if it's your intention to abide with me continual, Miss Kennedy?"

"To stay here always!" exclaimed Kate; "but I want to go somewhere where the fog won't follow me. Thank you very much, Mrs. Minchin, but I cannot promise to stay with you for a long time. I shall know my plans better to-night, and will then let you know more certainly how long I am likely to remain."

"'Miss Kennedy, this is quite unexpected. Where are you going?'"

Mrs. Minchin dropped a little curtsey, scowled a trifle, and, finding she had really no further excuse for remaining, withdrew.

Kate pulled off her gloves again, turned the gas full on, and, kneeling by the fire, opened her letters.

The first was in a school-girl hand, and ran as follows :—

"DEAR KATIE,—

"I am perfectly wretched at Miss Green's ; she does not understand me nor suit me. She says I'm all 'idiosyncrasies.' The work she gives me is perfectly menial. The food I have is very poor and insufficient. I shall never improve my mind here, nor do anything worthy. I wish you would let me come back to you. I am sure I shall not be much expense.

"Your unhappy sister,
"ALICE."

Kate tossed this letter on the table, and, breaking the seal of another, read a few words :—

"DEAR SISTER KATE,—

"What a worry it is that I can't see you oftener. I have got into no end of a scrape, and I can't tell any one but you. Can you manage to come to see me on Saturday? I know you won't scold me. You will just remember, when I tell you all, that I am silly little

"NELLIE."

Kate sighed as she replaced this short epistle in its envelope. Her third letter was even shorter than the two first :—

"DEAR KATE,—

"I have left my situation, and have gone into lodgings in Manchester. Please send me a cheque or postal order for my fare to London. When you know all, you certainly won't be angry. Dear Kate, how I long to see you !

"Your loving sister,
"POLLY."

The fourth letter was totally different from the three preceding ones. It had a business touch and feel about it, and was dated from Lincoln's Inn Fields. The few words it contained were as follows :—

"DEAR MISS KENNEDY,—

"Can you favour me with a call this morning at 11 o'clock? I want to see you on a matter of importance.

"Yours faithfully,
"HENRY SIMPKINS."

Kate bundled all her letters into her pocket, buttoned on her gloves, fastened her cloak, and ran swiftly downstairs.

"Those three poor darling girls !" she said to herself; "they always are in hot water, and I am as poor as a church mouse. I broke into my last £5 note yesterday, but it is lucky that my quarter's salary at Miss Grey's will be due on Monday. Well, whatever happens, I must send for Polly ; such a pretty little giddy-pate cannot stay by herself in Manchester lodgings. Dear, dear, what can Mr. Simpkins want with me? And who is Mr. Simpkins? Oh, I remember ! he is the lawyer that poor cross Uncle Tom always made such a fuss about. Of course I will go and see him ; but what can he want?"

Kate hailed the first omnibus which loomed dark and imposing through the fog, and getting into it, was bowled along in the direction of Chancery Lane. Before many moments she found herself in Lincoln's Inn Fields, and soon after in the presence of Mr. Simpkins himself. He was a bald-headed, little, rosy-faced man. He came forward to meet her eagerly, and, holding out both hands, shook hers warmly.

"So good of you to come at once, my dear Miss Kennedy ; and—and—what a cold day ! Allow me to offer you this seat by the fire. Now, now, not a word—it was very good of you to be so punctual."

"I'm afraid I'm a little bit before my time," answered Kate ; "but the fact is, I am on my way to Miss Grey's. I am a teacher at Miss Grey's school, so I ventured to come to you before eleven, as my time is not my own."

"You a teacher, my dear Miss Kennedy ! Allow me to remark I don't think you are suited for that post—not at all ; no, no, by no means. You a teacher !—it is a sin to think of you as spending your time drilling ideas into stupid children."

Kate's cheeks flushed rather angrily.

"The children I teach are not at all stupid," she answered. "I like my work, and, pardon me, Mr. Simpkins, I flatter myself I am a good teacher."

Mr. Simpkins smiled, and rubbed his hands softly together.

"A thing of the past, my dear young lady," he said—"a thing of the past ! We will grant that you were a good teacher. If I am any reader of physiognomy, I doubt if there is a thing which Miss Kate Kennedy could do badly."

"Odious, insufferable man !" muttered Kate, under her breath.

"But now to business, my young lady,—to business."

"Certainly, sir," answered Kate ; "and, as I remarked before, my time is very limited."

"I have the happiness, Miss Kennedy, of informing you that you are, at this moment, the fortunate possessor of £30,000. Not a fortune, no, by no means, but a very nice competence for a young lady. Your Uncle Tom died last week, and left what property he possessed to you."

Kate's face turned very white—her bright, dark eyes sparkled with some curious emotion—then the said eyes filled with tears —she stood up, sat down again—her hands trembled—for a moment she could not find her voice.

"Forgive me," she said at last ; "this is sudden—it has taken my breath away. I did not know that my uncle was ill—that he had died ; he was my mother's brother ; he was never particularly kind. I looked for nothing from him."

"The fact, however, that he was your mother's brother enables you now to inherit £30,000, Miss Kennedy," answered the lawyer in a dry tone. "I respect all due grief for your admirable uncle, but the little sum I name will, I doubt not, have a soothing effect in assuaging your natural sorrow."

Kate both frowned and smiled.

"I have not an idea of grieving," she said. "I am sorry to have to say it, but Uncle Tom never won my affection. It was kind of him to leave his money to me, but I could have loved him, and wept some tears for him to-day, if he had been good to me when I asked him to help me about Polly, two years ago. I was in great trouble then, and he would do nothing."

Mr. Simpkins knit his brows and coughed.

"Miss Polly was no relation of your uncle's," he answered ; "surely, Miss Kennedy, it was unreasonable to expect him to take up your step-sisters."

"No matter," said Kate, abruptly ; "we won't go into feelings. Of course I'm glad of the money, for I am very poor. I can't realise yet that I have got it, however. I suppose I shall be even more delighted by-and-by. Is this all you have to tell me to-day, Mr. Simpkins?"

"*All*—what a very unreasonable young lady ! I warrant you have not got a hundred pounds at the present moment in your possession" ("No, not ten," muttered Kate under her breath), "and yet you ask me if I have anything to add to the fact of your being just entitled to a very comfortable little fortune."

"To £30,000," echoed Kate. "I can't realise it. If you said I was to have £50, I could jump for joy ; but a big sum I can't realise. Oh, it will come ; I shall know all about it presently. May I go now, Mr. Simpkins? I would rather, please."

"May I lend you £50 on account? I shall feel proud to be your banker to that amount, and I own I should like to see you skipping for joy."

Kate was about to refuse, for, strange to say, she felt quite put out and disturbed, but a sudden memory of Polly, in the Manchester lodgings, caused her to change her mind. She accepted the proffered loan, and went out of the house feeling very much as if she were walking on her head. What magic in all the world had transformed one of the poorest and most hard-working girls in London into the possessor of a fortune?

CHAPTER II.

KATE went straight to the nearest post-office ; from there she sent off three telegrams. The first ran as follows—

"POLLY—your money goes by first post. Come home immediately on receipt. KATE."

The two other telegrams were to each of her other sisters, and were to the effect that she would run down to see one that evening, and that she would visit the other early the following morning. Finally, standing in the post-office, she scribbled off a note to Polly, and enclosed her a postal order for her fare to London.

"How delightful it is to have £50 !" she said to herself, as with a light heart she left the friendly office. "Poor Polly, I must have things very bright for her when she returns home to-morrow. I won't stay in Mrs. Minchin's dismal dining-rooms. I know her drawing-rooms are vacant—I'll engage them. How surprised Polly will be ! Dear, dear, it is delightful to have £50, but I must not think about it any more for the present ; I have to hurry off to school. I am dreadfully late as it is ; I trust Miss Grey won't scold me."

Miss Grey was a severe disciplinarian, but she had a great deal too perfect control over herself to dream of saying angry words to her teachers. She certainly raised her eyebrows as Miss Kennedy came in, and remarked shortly that that young lady's class was waiting for her, but the young lady in question gave her so bright an answering nod, and went with so much spirit and animation to her work, that Miss Grey's anxious face relaxed into a grim smile, and she said to herself, "Miss Kennedy is very seldom late, and she is an admirable and very conscientious teacher."

The school hours passed very quickly, and Kate, with the delightful consciousness that she carried the balance of £50 in her pocket, went home to astonish the good Mrs. Minchin with the information that she was about to become her drawing-room lodger for at least a week.

Oh, how obsequious and polite the good landlady at once became, how she overpowered Kate with attentions, and how relieved the young girl was when, at last, she found herself alone !

Mrs. Minchin went upstairs to arrange the drawing-rooms, and Kate sat down in the

arm-chair in front of the dingy little fire, and for the first time allowed herself to dwell upon the fact, that she had not only £47 odd in her pocket, but that she was the heiress—indeed, the lucky possessor—of nearly £30,000 more.

Kate was twenty years of age, and she had three step-sisters; the three were younger than Kate, but not much younger, for Alice was a little over eighteen, and Nellie, the youngest, was sixteen. Kate quite considered them her very own sisters—their mother had been as good to her as if she had been her own child. Their mother, too, had died when her children were little more than babies, and the father of the four had brought them up as best he could—that is, he neglected them a good deal, and did not dream of providing for them. He, too, died when Kate was sixteen, and from that hour she looked upon herself as more or less a mother to the younger ones. They were not the least like her. She had fibre and backbone, spirit and resolution, and they were pretty and idle and silly—not at all worse or more selfish than hundreds and thousands of other girls, but they were by no means calculated to fight the battle of life alone, and even with assistance they were all three extremely likely to make a mess of things. Kate, with the aid of one or two kind friends, had got her sisters into different situations; but oh, the weariness of finding employments for girls who were never satisfied,—who invariably came home again at the end of three months, who spent all their little earnings in purchasing pretty dresses and gay ribbons! Kate never knew what evening she might find one or other of them sitting by her hearth, waiting to tell her, in an exasperatingly piteous voice, that the sorrows and trials put upon this special pair of young shoulders were greater than any girl who had a vestige of self-respect could endure. Of course Alice, Polly, or Nellie, had come home to her "dearest Kate," her "sweet Kate," quite sure that she would sympathise with and provide for her.

Kate sighed on these occasions, tried to scold the culprit, signally failed, and then did her utmost to provide the pretty, giddy creature with some fresh and more congenial employment. Kate trembled and feared when "her girls," as she called them, came back; and yet how much she loved them, how pleasant it was to her to hear their merry laughter—for the volatile creatures cheered up very quickly—and how sincerely she admired their pretty faces, and reciprocated their loving ways! They were all three as warm-hearted as they were good-looking, and they each of them, after their fashion, adored Kate.

Now she sat in her arm-chair, and thought about the future; and as she thought, a great wave of thankfulness came over her. Oh, the goodness of God! Oh, the rest, oh, the joy of knowing that in the future she could provide a home for the girls! £30,000, what could it not do—what comforts, what luxuries, even, could it not procure! What a lot of good Kate could do with it; she need not turn away from that sad-looking little flower-girl who stood at the corner each morning; she need not grudge the crossing-sweeper his penny. Oh, what a lot of happiness was before her! She and her sisters might become ladies bountiful; they might scatter happiness wherever they went.

Miss Grey, Kate's employer, had been heard once or twice to say,—

"If Miss Kennedy had only religion, she would be a perfect girl." Poor Kate, no one knew anything of certain prayers and certain struggles; and no one, to her dying day, was aware of the fact that now, in Mrs. Minchin's gloomy little parlour, she fell on her knees, and, in impulsive and earnest words, asked God to help her to spend her money in the best way. This direct prayer brought a direct answer; for Kate's excitement was soothed, her heart no longer beat too fast, her cheeks no longer burned. Happy, but not tumultuously happy, she ran upstairs to tie on her best bonnet, and put on her freshest pair of gloves, in preparation for her visit to Alice.

Alice was a teacher, an assistant teacher, and truly a subordinate one, in a large Seminary for young ladies at Sydenham. She had been in her present situation exactly three weeks; and Kate knew, from the tone of the letter she had received that morning, that she might expect to see her back at her fireside any evening. Under existing circumstances, she resolved to answer Alice's letter in person; but she also made up her mind that she would tell her nothing of her own good fortune for the present. She took the omnibus to Victoria, and there purchasing a second-class return ticket, proceeded leisurely towards her train, which was not to start for another five minutes. A gay voice caused her to start and turn; a young man walking rapidly in the opposite direction had caught sight of her, wheeled quickly round, and now held out an eager hand, and showed a handsome face, slightly flushed with pleasure.

"Miss Kennedy, this is quite unexpected; where are you going?"

"To Sydenham," answered Kate; "and that is my train. How are you? I have not seen you for months."

"Nor I you. I have been away for the usual summer holiday—just come back. Is not shaking into harness awful? and what a dismal day! I am as depressed as possible, I assure you."

"You look it," said Kate, laughing; "well, I must not lose my train—goodbye, Mr. Graham."

"Oh, I say, I am not going to lose sight of you like that," answered Graham. "I have a thousand questions to ask you. My day's grind is over, and when I met you I had not an idea how I should pass the next couple of hours. If you don't object, I will just run and get a ticket, and come down with you as far as Sydenham. You can tell me your news on the way; I am dying to hear. There, stand by that carriage door; I shan't be an instant."

Kate smiled to herself as the bright-looking young figure dashed quickly through the crowd; but by the time Kenneth Graham, slightly panting from his run, was back again at her side, her face wore a grave and even slightly troubled expression.

The two were old friends, however; and by the time the train was in motion, they were both chatting on many subjects, although an under-current of thought still kept Kate's face rather grave.

"Shall I tell him that I am an heiress, or shall I still let him suppose that I am a hard-worked teacher, with three young sisters dependent on me?" she said to herself.

Before she could quite decide, Graham pulled himself up short in the midst of an eager narrative.

"How I must worry you about myself! May I ask a few personal questions? Why are you going to Sydenham?"

"Alice is there—she has got a post as assistant teacher at Miss Green's Seminary."

"Oh! and is Miss Polly well?"

"I believe so; she is in Manchester at present, but I expect her back to-morrow night."

"And your little sister—is she as pretty a baby as ever?"

Kate laughed.

"I think you are a little impertinent, Mr Graham," she said. "Nellie wears long dresses now, and puts all her hair on the top of her head."

"So much the worse for Nellie," replied the young man in a careless tone. "Miss Kennedy, I am delighted to have met you. I shall go back to my work quite cheered now."

Kate's face grew a little pale.

"Mr. Graham, I ought perhaps to tell you something. I have had some wonderful news this morning—good and unexpected news."

Something in Kate's tone caused her companion to look at her narrowly.

"Of course I'm delighted to hear it," he said; then he added, with a forced kind of smile,—

"I suppose it is the usual thing—you are going to be married."

"Nothing of the sort; I am not thinking of being married. This is my news: an uncle who never during his life-time appeared to give me a thought, who never seemed to be very kind, has died and left me his money. I was a poor girl yesterday morning. I am a rich girl now."

"Rich—are you really? Let me pull up this window; don't you find the air rather cold? So you are rich—you! Am I to congratulate you?"

"If you like. I had only £5 this morning, now I possess some thousands. I suppose that is a subject for congratulation."

"As people think. You must forgive me if I cannot say that I am glad. Kate, what a lot of fortune-hunters will come round you—wretches with mercenary motives. And you are so unsuspicious. And an honest man,——Kate, I am not glad. This is Sydenham. Good-bye. Thank you for telling me."

"Don't go away in such a hurry," said Kate, suddenly stretching out her hand, as they stood together on the platform. "Your return train is sure not to be due. Walk up with me as far as Alice's present home."

"No, I won't—I mean I hope you don't think me rude, but I can't. I have got to think of you in an altogether different light in future, and I may as well begin at once."

"Mr. Graham—Kenneth!"

"What did you say?"

"I want to say that my fortune does not change me."

"Poor Kate!" said the young man, clasping one of her hands suddenly in both his; "poor Kate! don't say anything rash at the present moment, and don't call me Kenneth again, or I may,—I may be tempted by it. You think you won't be changed, that you will always be the frank, brave, jolly Kate of old. No, no; don't imagine that you will escape the glittering snare. In six months' time, I wonder how much or how little you will remember of Kenneth Graham. This is bad news to me, Kate; I won't disguise the fact, for it dashes away a hope out of my life. I had hope, and you gave it to me, but do you think I am a fortune-hunter? There, I know that is my train round at that platform. Good-bye, good-bye."

"If this is the result, I hate having a fortune," said Kate, as she slowly walked away from the station in the direction of the house where her sister lived.

(*To be continued.*)

The Prize Punctuation Competition.

TO OUR COMPETITORS.

PLEASE stop, if you can! Knowing from sad experience the *comma*-cal difficulty found in many *colon*-ies at this *period* as to punctuation, we give the following paragraph as a test.

Most of our readers will discern that, as it stands, it is *not* correct; *many* will try to set it right; few, we expect, will succeed. Any Competitor recognising the source from which the quoted Paragraph is taken, is put upon honour not to take advantage of such knowledge in any way.

A Prize of £1 1s.

is offered for the most accurately written copy of the given Paragraph, and Four Prizes of 5s. each for the Papers which stand next in order of merit. Certificates will also be awarded.

The Competition closes on March 31st, on or before which date, all Papers, endorsed outside, “Punctuation Competition,” must be sent to the Office of “A. 1.,” 62, Ludgate Hill, London, E.C.

RULES.

1. The Competition is open to all, but those who are professional Teachers must make a note to that effect beneath their signature.
2. No help may be obtained from any person or book. (See Rule 3.) A signed declaration that this Rule has been kept must be affixed to each Paper.
3. Reference *is* permitted to a Grammar; the name of the one used, if any, must be given.
4. Stamped addressed envelope must be enclosed with any questions needing reply.
5. No MSS. can be returned.

“PLEASE STOP!”

THE crown and glory of Life! Is character it? Is the noblest possession of a man constituting a rank? In itself and an estate, in the general goodwill dignifying every station and exalting. Every position in Society it exercises. A greater power than wealth and secures all the Honour. Without the jealousies of fame it carries with it an influence; which always tells for it is. The result of proud honour rectitude and consistency! Qualities which perhaps more than any other command. The General confidence and respect. Of mankind character is human nature in its best; form it is moral, order embodied, in the individual men of character. Are not only the conscience of society but in every well governed state? They are its best motive; power, for it is moral, qualities in the main which rule. The world even in war! Napoleon said the moral is to the physical. As ten to one the strength, the industry and the civilisation. Of nations, all depend upon individual character and the very foundations of civil security. Rest upon it laws and institutions! Are but its outgrowth in the just balance? Of nature, individuals and nations; and races will obtain just so much as they deserve and no more, and as effect finds its cause so surely, does quality of character; Amongst a people produce its befitting results. Though a man have comparatively little, culture slender abilities; and but small wealth: yet if his character be of sterling worth he will always command. An influence whether it be in the workshop the counting house the mart; or the senate Canning wisely wrote. In 1801 my road must be; through character to power I will try: no other course and I am sanguine enough. To believe that this course though not perhaps the quickest; is the surest you may admire. Men of intellect (but something more) is necessary before you will trust them hence. Lord John Russell once observed in a sentence; Full of truth it is the nature of party in England. To ask the assistance of men; of Genius but to follow: the guidance of men. Of character this was strikingly illustrated. In the career of the late francis horner, a man of whom sydney smith said that the ten.—Commandments were stamped. Upon his countenance the valuable and peculiar light says. Lord cockburn which his history, is calculated to inspire: in every right minded youth. Is this? He died at the age of thirty-eight possessed of greater public influence than any other Private.—Man and admired, beloved trusted, and deplored! By all except the heartless, or the base no greater. Homage was ever paid in parliament to any deceased. Member, now let every young man: ask how was this? attained by rank he was. The son of an Edinburgh merchant by wealth, neither he nor any of his relations ever had. A superfluous sixpence by office he held. But one and only, for a few years of no influence, and with very little. Pay by talents his were not; splendid and he had no Genius; cautious and slow his only ambition. Was to be right by eloquence? he spoke; In calm good taste without. Any of the oratory that either terrifies or seduces by any fascination. Of manner his was only correct, and agreeable by what? then was it merely by sense? Industry good principles and a good heart qualities. Which no well constituted mind need ever despair of attaining, it was the force. Of his character that raised him and this character; not impressed upon Him. By nature but formed; out of no peculiarly fine elements. By himself there were many, in the house of Commons. Of far greater ability and eloquence but no one surpassed him.—In the combination of an adequate portion of these. With moral worth horner was born to show. What moderate powers unaided! by anything whatever except culture: and goodness may achieve even, when these Powers are displayed amidst the competition and jealousy of public life truthfulness. Integrity and goodness qualities that hang not.—On any man's breath form the essence. Of manly character or as one of our old writers. Has it that inbred loyalty? unto virtue which can serve her. Without a livery he who possesses these; qualities united with strength of purpose carries; with him a power: which is irresistible? he is strong, To do good strong; to resist evil and strong; to bear up under difficulty. And misfortune when Stephen of colonna fell. Into the hands of his base; assailants and they asked him in derision where? Is now your fortress here? was his bold reply placing his hand upon his heart it is.—In misfortune that the character of the upright. Man shines forth with the greatest lustre; and when? All else fails he takes his stand: upon his integrity and his courage.

Praying will make us leave off sinning, or sinning will make us leave off praying.

The True Test of all life's actions and service is, not “What will men think about it?” but “What does God think of it?” It matters not if the world applaud and richly reward, if it meet not the approval of the Great Searcher of hearts.

Home.—There is no place like home, however poor or small; it is the place where all family affection loves to gather. Take away home from the heart, and you remove the brightest part of earthly existence, and drop a blank on the best years of any man's life. To be homesick is a good malady, and one that it is no disgrace to suffer from.

Advice.—It is a very delicate thing to give advice: very few who ask for it are sincere in so doing. In most cases it is as a salve to the conscience, or as a justification for desires that have often passed into actions, with a wish to make others responsible for them.

Life Stains.—A single drop of ink is a very small matter, but drop it on a clean table-cloth, and it makes a great show. So, the purer the character, the more glaring is a little sin.

You Cannot Serve your Father in heaven at the expense of a neglected nursery, a forsaken home, and ignoring of parental responsibilities. Domestic duties have the first claim on every renewed heart. “Go home, and show what great things God has done for you” is an important command.

Knowledge.—He that would gain true knowledge, will have to pick and cull all that comes to hand. The false and the true are amazingly mixed down here. It requires knowledge to get knowledge, but “all is plain to him that understandeth.”

Life's Love.—There is nothing brightens life like love; without it all is dark, cold, cheerless—one vast iceberg drifting hither and thither. Therefore, cherish love, sympathy, and warm-heartedness, which draw and bind hearts together.

A Man's Face.—Cover a man's face, and he becomes a mere bundle of clothes that takes up room; but let his face and eye be seen, the expression shows the man.

Finding Fault.—It is one of the easiest things in the world to find fault with others, to be continually complaining about their doings, looking on the worst side of their actions, and exposing to view the shortcomings that are about. Charity hideth, covereth (not a few, but) a multitude of sins. Let all our deeds be done in charity.

Knowledge is Power.—Yes, knowledge is power, but sometimes it is a knowledge of evil, and is only powerful for evil—a curse and tyranny on the earth. The world by wisdom knows not God, neither doth it follow that might and power obey Him.

Much of the Mischief that is in the world comes from people not knowing what is good for them; they worry to obtain that which, when obtained, gives neither satisfaction nor contentment.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

"Then a bold headland appeared in sight."

CHAPTER XXVII.

SUMMER IN THE ARCTIC OCEAN.

THE ship passed slowly, near to one of those great hummocks, and as she opened out the north side of the berg, a great seal, that had been sleeping in the sunshine, raised its head, and gazed for a time after her. If the animal was wondering at all, it did not wonder long, but quietly resumed its first position, and apparently went off to sleep again. The seal looked better fed, and better clad, and far more intelligent and happy than the poor soul they had seen in the boat.

That night Katie stood with Captain Boyd and Jack to gaze northwards at the midnight sun. It would not set again for many a day. It does seem strange to talk of night and day, when describing a land where, at this season of the year, there is no division.

"I don't feel as if I cared to go to bed," said Katie.

"Well, Miss Katie," quoth Jack Silk, "it is my watch, and I'll be very pleased indeed if you'll come and walk the deck with me till eight bells strike again, and Desmond comes on duty."

"No, Mr. Silk, it would not be fair to send me packing off to bed when Desmond came up. No, I'll take your arm, Captain Boyd, and go below."

"Well, sound sleep and sweet dreams," said Jack.

"Good-night, sound sleep to you."

"Sound sleep?" cried the captain; "I had better not catch him at it for the next four hours, else up to the crow's nest he would go."

Katie looked up at the nest, gave a little cold shudder, then gave Jack her hand, and a good-night smile, which, between the two of them, made the sailor boy's heart very happy indeed; so that if he had not sound sleep for the next four hours, he had, at all events, the very sweetest of dreams.

Jack had a straight-forward, regular way of doing his quarter-deck walk of a night, which was unmistakably Jack's own. He knew he was in the habit of putting down his feet somewhat firmly—somewhat too firmly, perhaps—and it occurred to him one day to ask Katie if his style of pedestrianism disturbed her of a night; "for," he added, "I really can't help it, you know."

"Oh no, Mr. Silk," had been the girl's answer; "I rather like it. It makes me sleep."

"Makes you sleep?"

"Yes, because, somehow, I feel safe."

Jack thought of this to-night, and he also thought of her smile and look when she bade him good-night. "I wonder," he said to himself, "if she cares for me a little, little bit? Just a point or two?"

Jack's walk was from abreast of the binnacle to close abaft of the mainmast. Well, he had put the above question to himself when abaft the mainmast, and had answered it in the affirmative by the time he had reached the binnacle; but before he had taken two turns more, and was back once more at the binnacle, the bright vision had fled. And so on, back and fore, as he swung along the deck, now the answer was yes, and now it was no; at one time Jack's soul seemed sky high, and at another down in the black bottom of Behring Straits. It was the old game of, "She loves me,"—"she loves me not," only played in a different way. He had never forgotten that Katie once called him "Jack." That was a sweet morsel to roll up in a rose leaf, and stow away in his memory. But to-night, he suddenly remembered that she had said "Desmond," when speaking of his friend. Here was another subject for agitation and cogitation, and for the next hour, at least, Jack's heart was once more a shuttlecock, and Katie's bright face and winsome ways the battledore, that sent it spinning high in air, or let it descend to the very sea's level. To use the words of Jack's favourite song, it was a case of "Blow high, blow low" with him for the remainder of the watch, and when Desmond came on deck to relieve him, "Honolulu!" he cried, "it surely isn't eight bells already?"

But the sailor-boy was no nearer to a solution of his conundrum than ever, and when he went below and turned in with the intention of regularly thinking the matter out, his head was no sooner down on the pillow than he himself was under full sail for the land of Nod.

The next thing Jack was sensible of was being shaken by the shoulders. He opened his eyes, and there was Boy Bates, whom he had taken on as servant.

"Have I been asleep?" said Jack.

"Rayther," said the boy; "but at fust, sir, I did think nothink else but wot you was dead. I've been a-shakin' and a-shakin' of yer for more'n 'arf an hour, and were just agoin' to call old Sally. 'Ere's yer 'ot water, sir. Get hup and dress your little self, 'cause the ladies is agoin' in to breakfus."

"The ladies going to breakfast! Honolulu!"

Jack was out of bed at a bound, and on deck in ten minutes after.

Yes, it was summer now in these seas; so different from the same season in more southern climes, with their wealth of waving woodlands; their hills and mountains that rise dreamily, softening into the blue of burning skies; their sunny seas and shores, where the white waves seem to whisper and sing as they break and recede. But it was summer, all the same, and every creature and everything around the good ship *Oonalaska* appeared to feel its influence; and a hopeful, happy, bracing influence it was!

There was a glad, healthful feeling in the gentle southern winds that stirred the sea, and made its wavelets dance and glitter and gleam in the soft sunshine—sunshine that did not scorch or burn; sunshine that was something to bask in, to be joyous in; sunshine that calmed you and soothed you; sunshine you could revel in and feel thankful for.

Katie and Miss Graves, and even Sally, were on deck nearly all day long now. And white and beautiful that deck looked, for Jack Silk, as first officer, took a pride in seeing things perfect. Jack never lost his temper; nor did he, as I have heard ship's mates do, utter words ugly enough to make the mainstays shiver, and the capstan shudder; but Jack would have things properly done.

If there were a bit of polished ebony about anywhere that he couldn't see his face in, he would point it out and quickly ask the price of bees'-wax. If a rope were uncoiled anywhere on deck, he would give it a kick, or pretend to stumble over it; or if the boats'n stood near by, Jack would point to the loose end of the rope, and ask, with pretended innocence, what poor fellow was going to be hanged this morning. As for the brass work, when Jack stood alongside any of it with that big watch of his in his hand, back uppermost, and looked from the one to the other, the spectioneer orthird officer, Jackson, knew very well what he meant, and took the hint.

One day—I only mention the matter to show what manner of man this sailor-boy was—the quarter-deck did not please him. It was not white enough, and this made Jack look black enough.

"You do look so cross," said Miss Graves.

"Do I? There's enough to make one, mother. Just look at that deck."

"Why, it is almost like satin-wood. One could dine off it."

Jack smiled, but remarked: "It looks to me as if some one had been dining on it—a chimney-sweep, for instance."

About an hour after this, when everybody had sat down to lunch, Jack got hold of old Sally.

"Mrs. Bennett," said Jack, "will you do something for me?"

"Goodness bless the dear gintleman! I'd go on my knees to please ye, sir."

"Precisely what I want you to do. Boy Bates, carry up the bucket of hot water for her, and the cocoa-nut husk, and all the fixings, and show her the place I want scrubbed. Tuck up your old sleeves, Sally, and fall to."

A minute or two after, said one sailor at the fo'c's'l head to another, as he took his pipe out of his mouth,—

"My eye, matie; look yonder. Whatever's in the wind now, I wonder?"

"Ha! ha! ha!" This was a chorus of laughter so hearty that the spectioneer himself popped up out of the half-deck cabin.

And there, sure enough, was Sally on her knees, hard at it, with her arms bared to the shoulder, with Boy Bates astride of Robin Hood, both looking on, and both grinning from ear to ear.

Sally did her work well. But in less than five minutes Jackson had a gang at work; and by the time luncheon was over, and the ladies came up, the quarter-deck had dried itself white in the sun's warm rays.

"That's what I call satin-wood," said Jack, pointing to his quarter-deck with pardonable pride.

Summer in the Arctic Ocean. Yes, but do not imagine, dear reader, that summer is always like this. For white, wet mists will lie over the northern seas, and fogs obscure the sun.

"It's Queen's weather we're having," Katie said.

Jack thought afterwards he had lost a fine opportunity of saying a pretty thing in reply to this. Jack always *did* think of the things he ought to have said when it was far too late to say them. However, he had a happy thought almost immediately afterwards.

"Mother," he said, "wouldn't you like to be hoisted into the maintop? There is a splendid view to-day, and not a bit of swell on."

Miss Graves looked at him with a smile making ripples round her eyes, but did not immediately answer. Jack burst into a hearty laugh.

"Honolulu, mother!" he exclaimed, "how you can read a fellow's thoughts! Yes, mother, it really is Katie I want to hoist. I was patting the baby for sake of the nurse, or rather *vice versâ*."

"Go straight away and ask her, Jack. Yonder she is, talking to Chips and his friend, the savage."

"Miss Katie," said Jack, a minute after, "there is a delightful view from the maintop to-day; would you like to be hoisted?"

"Like to be hoisted!" replied Katie, laughing; "that sounds so funny. But—I think I would, unless——"

"Unless what?"

"The danger was extremely great."

"Chips, old man, rig a block and tackle at once, and see that the chair is as safe as——"

When Katie began to ascend, she *did* feel a little afraid; but there was Jack himself, moving like a big spider up the rattlins, and keeping the chair steady all the way. There was not even a hitch getting over the top, though just here the girl got almost giddy to see Jack hanging almost head down, as he scrambled out and over. But once the chair was swung over and made fast, why, there she was as safe as a baby in a bassinet, and twice as happy. There was even a bear-skin rug placed for her feet to rest upon, a piece of refinement which made her smile; but she thanked Jack for it prettily, all the same.

Katie was surprised to find there was so much space up here.

"Why," she said, "one could almost jump on it. Have you ever slept at such a giddy altitude?"

"Ay," replied Jack; "when a youngster in the service, put up for punishment, you know."

"What is that square hole for?"

"That is called the 'lubber's hole.' It is an easy way of getting into the top."

"Why don't you always use it, Mr. Silk? It was dreadful to see you hanging head down, like a hen going to market."

Jack laughed at the notion.

But while the girl was still gazing at the lubber's hole, somewhat timidly, it must be confessed, for it made her giddy to look down, she was startled to see a figure pop up through it, for all the world like a Jack-in-the-box.

It was Boy Bates, with a basket containing a flagon of hot coffee, and two china mugs, to drink it from. Delicious coffee it was, too! There was nothing else needed to complete her happiness. She did not feel a bit cold, and the gentle, swaying motion was rather pleasant than otherwise. So the time passed quickly by. Jack's altitude above the deck did not really represent the height he *felt* himself above the world and all it contained. He would have gladly stopped up here, with Katie by his side, for a week and more.

There was plenty to see and talk about. The icebergs themselves were a sight. Not that they were of any great size or height; many, indeed, were little else save patches of snow-clad ice, flat, with, perhaps, a little hill or hummock in the centre.

They were summer icebergs, many of them fantastic enough, in all conscience. The sides were grooved round with the action of the water, so that the snow overhung the edges; then down below the sea's surface, they all spread out clear and green. Katie quite realised how dangerous such bergs could be in a storm, when hurled at a vessel's side with all the force of a rolling wave.

On many of the bergs lay seals asleep, enjoying the sweet summer sunshine. They would give just one wondering glance upwards with their beautiful eyes, as the ship sailed past, then quickly resume their *dolce far niente*. Very beautiful some of these seals looked from a bird's-eye view. Some were nearly all dark-brown, and very large; others were marked with white; others, again, were yellowish-white, with charming patches and circles of black. And they all looked so gentle and so wise!

In this summer sea, there were also thousands of seals playing in the water. Their antics and the strange shapes they assumed were, at times, astonishing. Katie noticed, too, that they could swim under water with a celerity that, doubtless, defied the efforts of even the terrible Greenland shark to catch them; in fact, not even an eel could excel them in speed.

One of them, accompanied by its calf, passed close to the ship, going south for a change of air, no doubt. From the maintop, the gambols of the calf could be easily noticed; swimming briskly, first at one side and then at the other, and sometimes jumping right over the mother's slowly swinging tail. It was a wondrous scene; and, as good luck would have it, a great whale stopped right abreast of the ship, for her baby had gone to sleep under her gigantic flipper, with just a bit of its head above the water. It was the most interesting sight Katie had ever seen. Her delight was quite child-like; she gazed with round eyes, and—I must tell the truth—with slightly open mouth. But then, Katie's mouth was very pretty, and her teeth were as white and even, and almost as small as a bat's.

Yes, Jack thought, she never looked so beautiful before, and can you blame this sailor boy, that his eyes were bent on her instead of on the whale?

"Oh! look, look," she cried at last. "The mother is going on."

The mother *was;* she had got baby to sleep, and now floated slowly onwards,

moving only the flipper that was disengaged, and with her tail considerably bent to one side, else, with only one arm in motion, she could not have steered straight. The steam of this gentle leviathan's breath rose like a fountain in the air, but, strange to say, without any noise. She did not mean to wake her baby.

On sailed the ship through the summer sea. Medusæ now began to appear in the water, and birds came screaming round, or floated on the waves ; and the snow on the icebergs was not more white and pure than the lovely plumage of some of these.

Then a bold headland appeared in sight ; the summits of the hills all clad in virgin snow, but the valleys green and smiling, patched here and there with the orange of the Arctic poppy, and the mauve or crimson of blooming saxifrages. The cliffs that overhung the sea were black and steep, and some of the mountain breasts were terraced and streaked with greys and browns.

Sketch a bright blue sky over the headland with streaks of feathery clouds, throw a few icebergs into the foreground, and, in the hollow between two hills, paint a village of tents, with figures running hither and thither, waving good luck to the passing ship, and you have as good a picture as I can suggest of summer in the Arctic Ocean.

(*To be continued.*)

THE PRIZE SPELLING CHASE.

GREAT SUCCESS.

A NEW ONE COMING ON.

CLOSE on 2,000 Competitors, but the work is nearly done. In our Number for March 10th, we shall give Illustrated Pages of Results, with a humorous introduction, showing full details of failure and success. All should see it.

So keen has been the interest,—so many rushing in,—so many falling,—so many puzzled,—so many who regretted that they did not try it, and so many that they ever saw it!—that we have been compelled to accede to an appeal for another. Yes, **another Spelling Chase.** We shall hope to print it almost immediately after the publication of the names of the Prize Winners in the present one. The new one will be even more entertaining.

ABOUT OURSELVES.

OUR patient Competitors will find the Final Results of three Divisions of the Literary Competition on page 269. As one of our Examiners feelingly says, "The number of papers certainly speaks well for the circulation of —'A. 1.'—."

Our Spelling Chase Exam. is almost over ; see above. The Examination of the three other special Christmas Competitions is also getting ahead ; watch each Number for Results.

The "Thirty Nouns" Competition, announced last week (page 254), is sure to be popular. Still open ;—why not try for a Prize?

The "Punctuation Competition" announced in this Number (page 260) will rival our "Spelling Chase." It will be easier to examine the stops than to stop the Examination!

Now is the time to enlist fresh subscribers for —"A. 1."—. "That House in London" will deepen in interest every week. Begin at the beginning.

MORE VEILS.

By EDWARD BUTLER.

PART II.

VEILED FRIENDS AND VEILED ENEMIES.

IF Satan occasionally appears as an angel of light, on the other hand, men and women, who are angelically good, do manage, now and then, to array themselves in habiliments that seem to have been purloined from wardrobes not angelic, and thereby assist the operations of the great Master of the Art of Lying. Satan's wardrobe is by no means limited to the full dress of an angel ; he "plays many parts," and suits his attire to his intended victim. "Innocent Gaiety" is a favourite disguise of his, especially with the young ; but it would be doing great injustice to his skill to suppose him restricted to one or two "make-ups." He can look very attractive as a "Searcher of the Truth," and "Pure Science" is a get-up in which he does great execution. The more advanced his intended quarry is in spiritual things, the more intricate and elaborate the deceptions into which he insinuates himself.

There is a fine imaginative touch in a print of Albert Durer's, hung in one of the rooms of the British Museum. It represents the temptation. Eve is standing at the foot of the tree. Satan, in the guise of a beautiful serpent, is sliding down the tree, and with polished courtesy is offering to get the apple for Eve, as if he should say, "The apples are beautiful, dear madam, are they not? Pray allow me to get one for you!" Satan takes care to well grease the ways down which the vessel that carries a soul can glide to damnation. No courtesy shall be wanting on his part. And this Durer emphasises, shrewdly depicting a sleek old cat, sitting bunched-up, cat-fashion, as if dozing, but with one eye half-open, watching a mouse that plays nearer and nearer.

Satan himself, of course, is unadulterated enmity, and his friendship is absolute falsity. But one cannot say that of men and women, who are merely his tools, and who do his work with a dash of goodness of heart, of natural kindliness, *bonhommie*, and goodwill, which weakens resistance and fascinates the prey. We have, in such a case, intended friendship veiling unintentional enmity,—a very seductive arrangement. It is very kind of my friend to ask me to dine with him :—"Come and take pot-luck with me, old fellow!" an invitation enforced by a cheery slap on the back; but much depends on the cook, after all.

I have sat at a table where my first mouthful of pudding included a large piece of broken glass. Its size saved me. And I have, also, personally met with a pudding which disclosed, at the first cut, the remains of two fine cockroaches. Before we accept a proffered meal, or a proffered friendship, it is well to have a committee of all the senses,—eyes, ears, and nose, or their spiritual counterparts ; otherwise we may find things as unpleasant as surprising "behind the veil." I sometimes look down the decorous columns of advertisements for governesses, nursery-maids, young lady-assistants, and so forth, and wonder what fat spider lies veiled behind this or that cobweb of an advertisement, begemmed with glittering dewdrops of promises.

The sad stories I thus glance at are, it is needless to say, stories of deliberate ambuscades for souls, and bodies, and purses ; but there is many an unwholesome friendship, which is, in its way, sincere and well meant. Let us remember that spiritually, no man can give what he has not got ; and when a friendship is offered to us, let us first inquire of what treasures of knowledge and virtue the offerer can ask us to partake. Is it a feast worth sitting down to?

A lady had a favourite cat, to which she had given many a tit-bit. One day the grateful animal leaped up on her lap at dinner, and deposited a fine mouse in her plate. It was kindly done on the cat's part. It was an act of sincere friendship. If a young man receives overtures of close companionship from ever so "good" a "fellow," yet one whose tastes are not those of the noble life, probably ere long the good fellow will, with fraternal love, put a mouse on his plate, in the shape of ignoble talk, low suggestion, vulgar pastime. It is hidden from him that his friendship veils an enmity to his young comrade's spirit. He "means well." But his own nature, his own destiny, the intrusive character of his own life are veiled from him, and therefore from his "friend."

Some friendships are unhappily veiled by shyness. Neither likes to be the first to speak. Sensitive hearts fear rebuffs. It is like the case of certain chemical elements, capable of closest combination, but incapable of intimate approach without the aid of a medium. Blessed be the electric spark, or other medium, that assists the fore-ordained union! The judicious hand of the common friend will not tear off the veil from either moiety of the predestined unity, but will gently lift it aside, and puff at it with little kindly zephyrs ; for shyness is not a sin or a vice, but is nearly allied to humility and modesty.

Some friendships are still more lamentably veiled by slander, scandal, misrepresentation ; met by the answering veil of pride, and of the self-withdrawal of wounded love. How shall one teach the pen to write calmly of this pest of social life? Egyptian frogs and lice, Australian rabbits and thistles, the Hessian fly, the Colorado beetle, and the Arabian locust, all present their testimonials to me, and ask to be engaged as similitudes of the tattling liar and tale-bearer. The carrion-crow and the blue-bottle fly also hand in their credentials.

It is desperately hard work to tell the simple truth of a story just as you receive it. Do any of my readers doubt that? Then let them try the Russian game. Let a dozen people sit in a circle ; let one whisper a little narrative to his neighbour, and so let it pass round from ear to ear. Then let the last recipient tell the story aloud as he received it, and, in most cases, it will considerably astonish the first narrator. What chance, then, is there for the poor little naked truth, when every one who passes it on finds his reputation as a story-teller enhanced by each little ray of picturesque falsehood he can manage to hang on its shoulders? The gossip is everybody's enemy, and should be boycotted. Many lovely friendships have been sundered by some gauzy fabric of false scandal dropped between, and stricken hearts have retreated from one another for ever behind the veils woven of slander for the warp, and hasty credulousness for the weft. One cannot but allude to Coleridge's familiar lines :—

"Alas! they had been friends in youth ;
But whispering tongues can poison truth.
* * * *
They parted—ne'er to meet again!
But never either found another
To free the hollow heart from paining ;
They stood aloof, the scars remaining,
Like cliffs which have been rent asunder."

JANE, JOSIAH, AND JOHN. THE STORY OF A WEDDING.

By G. DE LA PLANTE.

"Your hearty congratulations! I'm going to be married."

JANE, Josiah, and John. John, Josiah, and Jane it ought to have been, but it wasn't. John was his mother's first-born by twelve months or so, but the moment Josiah came, John tottered from his throne; and after Jane's advent he resigned all hope of regaining the prominence due to his primogeniture.

Josiah and Jane came into this world of woe with a private world of woe upon their shoulders. From childhood onward they had been persistently and consistently depressed and depressing. They believed that life was a wilderness; that hope was always deferred; that friends were future enemies; that evil possibilities eat like a canker at the root of purest pleasure; and that it became perishing mortals to groan in harmony with their sad estate. Josiah was perhaps a shade less consistent in his misery than Jane; therefore, inasmuch as consistency always carries the day, Jane came to the forefront, and reversed the order in which Dame Nature had sent the trio into the world.

Jane brought a shadow on the household, like the "great black crow" we dreaded in our nursery days. But as water runs off a duck's back, so woe rolled smoothly off John, without one drop penetrating his nicely plumed feathers. Merry? He nearly drove Jane to despair. That he, a man nigh on fifty years, should indulge in unseemly mirth; should laugh so heartily; joke so funnily; sleep so dreamlessly; and enjoy himself so thoroughly;—it could betoken nothing but a shallow mind, and a heart incapable of "pulsating to another's woe."

Jane was a woman of intellect, and believed that her powers were a "solemn trust." She put them to school in a determined sort of fashion, as if they were naughty children needing discipline. She took charge of John's house; not that she ever owned for a moment that it was his. The house wanted to be managed; it was a most uncongenial task, but painful duty must be done, and she did it. The rest of her time she spent in studying Botany; not in the fields, amongst the flowers, but shut up amid herbariums and unintelligible names. She liked flowers best when they were dried; she was consistent even in that! She took a grim pleasure in strapping an unlucky plant firmly between her boards, having first arranged the leaves and petals so that the freedom of growth was modified, and the details of structure shown. Of course she worked on the Linnæan system; the Natural had no charm for her.

Three unmarried people living together, with scarcely a point of contact with the outer world, are bound to have at least one hobby apiece. The hobbies in this household were Bees, Bones, and Botany. Needless to say, the bee hobby appertained to John. In the sunniest part of the garden, beneath the south wall, surrounded by beds of wild thyme and other fragrant flowers, were rows and rows of hives, mainly old-fashioned straw ones, with great sheaves turned over to keep out sun and rain. John spent most of his time amongst his bees.

He watched them, and fed them, and handled them; the gardener said that he talked to them, but then the gardener knew John was not in favour in the household, so he was not an unbiased witness. As for Jane, she despised bees, and would not even eat the honey.

Josiah had begun his hobby by showing a taste for exploring the geological formation of the country; but gradually the inconsistent liveliness of this dawned upon him, and it became modified into a morbid love for the acquisition of bones, and especially of complete skeletons. Talk of a skeleton in the cupboard! In this house there were fifty skeletons, and their cupboards had glass doors. Josiah kept them in the sitting-room, and Jane liked to place her chair where she could see them when she raised her eyes from her knitting. Jane thought it was "a woman's duty to knit," so she did it, rejoicing—if she ever did rejoice—that it was unpalatable. In the centre of the glass case was a human skeleton, flanked on either side by the skeleton of the long-departed family cat and dog. Report said that the human skeleton was a family one too; but "not proven" must be writ large against that accusation. The cat was supported by the adjacent skeleton of a mouse, whilst a fine rat in bony outline told of the former prowess of the dog. Skeletons of birds, and bats, and fish were grouped symmetrically around, with geometrical devices of odd bones arranged in between. It was a grim cupboard, but it undoubtedly helped to keep Josiah consistent in his woe. John always sat where he could not see the skeletons, and Jane spoke solemnly to him about his distaste for facing the awful realities of this wicked world. But John declined stoutly to alter the position of his chair.

Now, you know, it is never safe to account one's self thoroughly settled in this fleeting world of change. Nothing seemed more unlikely than that the trio should be turned into a quartette; yet it was, and this is how it happened.

The bees, who had been gathering honey for themselves, were the means, one sunny day, of bringing John in the way of what was even sweeter than honey, all ready stored up and waiting for him.

John loved the swarming time. He would sit for hours watching and waiting, and then, when the swarm rose, off he would go after it, far more intent upon noting the habits of the bees than upon stocking a hive. This special swarm—worth, according to the old rhymester, a load of hay, for they started on their travels in the balmy month of May,—led John a pretty chase. First they left the garden at the corner farthest from the gate, so John had to run round as smartly as he could to catch them up on the other side of the wall. Then they went across several fields,—the hedges were nothing to them, but they meant a good deal to John. On, on they went. At last they rose over a high garden wall, and were lost to sight.

Now the garden inside that wall belonged to a worthy couple whom Jane despised as an aggravated instance of cold-hearted happiness. They were positively exultant; even worse than John. Their house was furnished with soft hangings and cosy chairs, and as the two old people were alone, they generally had a visitor in the shape of a light-hearted pretty girl, to keep their old hearts warm. Jane, finding that her woe was unwelcome in this household, gathered her skirts around her, and left it to be happy by itself. John hesitated now as to whether he dare revoke his sister's decree of separation by seeking to follow his bees; but a startled scream from within the garden soon settled matters. His hand was on the latch; the green door opened; and in a minute John found himself soothing a pretty, round-faced girl, who had been frightened by the sudden descent of the swarm.

"Don't be frightened," said John cheerily. He meant to say "my dear," but it suddenly struck him that he was not old enough to use such a reassuring phrase without possible offence. It was a long time since John had remembered his age; now he caught himself thinking that his half-century had not yet passed. Was there any connection between his age and pretty Mary Brown? How

Jane liked Funerals.

strangely these minds of ours mix up things, to be sure!

Mary recovered her fright, and became much interested in the bees. She and John found a hive in the tool-house, and watched the creatures settle quietly on an apple-bough in a beautiful cone. Then, feeling as if he were a knight of old, fighting with his "fair ladye's" ribbons on his front, John shook the bees into the hive, whilst Mary murmured, "Oh! do take care of yourself, *please!*"

At last—it was a long last—the job was over. Mary escorted her new acquaintance into the house; John was warmly welcomed by the kindred bits of sunshine, and in a few minutes found himself protesting that nothing would give him greater pleasure than to come every day, to see how the bees, which he had given to Mary, liked their improvised quarters in the garden.

"Mary will be here at least a month longer," said her hostess; "then she goes back to London with her brother."

John rose to say good-bye. "I think I have been dreaming all these years," he said; "how I thank my bees for bringing me here to-day."

"I expect that will prove a lucky swarm," said the sunny old lady, with a twinkle in her eye.

John went home. Jane met him with her stocking in her hand, knit, knitting as she walked along. He felt so excited and so happy that he stopped her, and stretched up to pop a kiss on her chilly lips. Jane drew back and caused him to miss his mark by half an inch, so that the kiss echoed in empty air.

"My dear Jane!"

"This is no time for levity, John. The realities of life ——"

"Jane," said John with sudden boldness, "why is your gown made so skimp?"

"Brother, it is unbecoming"—"in this vale of tears" she would have said, but John broke in,—

"Yes, my dear, it *is*. Do let me see a better dressed mistress in my house. You could look quite nice, Jane, if you tried."

John passed on; Jane stood still, her needles motionless, and her head bent down, until her glasses threatened to slip from off her nose. "Mistress in *my* house;" John had reminded her of that! What could it mean?

Never did bees need such care as did that swarm! It took two people to watch them, and John was so very kind in helping Mary. Her big brother took a casual glance now and then, but John assured him that two people were quite enough, and that it was injudicious to frighten the bees.

Of course Jane liked funerals, and went to one whenever she could. An old lady died twenty miles away, and Jane announced that she and Josiah would take the dingy carriage, and go to weep at the tomb. John declined to go; a "previous engagement," he said. Whether a definite engagement existed before the funeral party set out or not, it certainly did exist before they came home.

The bees needed a long spell of watching that day, and Mary's brother took care not to frighten them by his presence.

Somehow or other John told his story, and in a way enigmatical in print, but perfectly satisfactory in reality, Mary replied.

Mary's brother wrung John's hand, and said he was glad matters were settled, as he need not now be so afraid of passing the bees. The sunny old gentleman wrung John's hand too, and the sunny old lady shed a few tears on Mary's shoulder. Mothers always do on

these occasions, and though Mary's mother was with the angels, the dear girl should not miss this little tribute now.

All went as merry as the projected wedding-bells, until it grew near the time for the funeral *cortége* to return. The news had to be communicated somehow, and the sooner the better. Mary's brother proffered his aid; he said that two to one would be scarcely fair, and that he would walk home with John, and be present at the interview.

At last the old carriage arrived. Jane went straight to her own room, but Josiah went into the sitting-room;—it was a fitting occasion to gaze at the skeletons in the cupboard, and cultivate woe. Sitting side by side, that they might have their backs to the bony trophies, were John and a good-tempered, resolute-looking young man.

Something had happened. Josiah sat down, facing the skeletons, without a word. John drew his chair forward till his knees almost touched his brother's.

"Old boy," said he, leaning back suddenly, and throwing out his arms with a gesture of enjoyment, "your hearty congratulations,—I'm going to be married!"

"John," said Josiah solemnly, "there is misery enough in the world. At your time of life you should reflect on other things."

"Bless your heart," said John, with a ringing laugh, "I'm not turned fifty yet, and you're a year younger. My Mary will find you a bright little wife for yourself."

"Have you yet dealt this blow to Jane?"

"What blow?" said Jane, standing gaunt in the doorway; "life is nothing but fatal blows at our highest hopes."

"Look here, Jane," said John, going towards her, with a touching tenderness in his voice, "look here, I'm going to be married, my dear."

Jane said never a word.

"It shan't make any difference to you, my dear," said John, anxiously; "Mary will be a real sister to you."

"Bring three wives to the house, if you like," said Jane, with a sudden gust of passion, "but don't ask *me* to meet them. I suppose you'll be willing to let me keep one room, in which I can be miserable alone!"

"Certainly, certainly, Jane," said John; then he added under his breath, "Bad look-out for Mary, poor girl."

Mary's brother strongly advised her to have nothing to do with such a household of woe. But the girl stuck to it that she wasn't going to marry either Jane or Josiah, but that she was, most decidedly, going to marry John. And so she did, as soon as the knot could be properly tied.

As the young bride and her middle-aged husband stepped across the threshold, Jane disappeared upstairs amongst her dried flowers, and took to her studies with zeal. Josiah represented, in his proper person, the skeleton at the feast. He had dusted all the bones, and polished the glass of the cupboard until it stood out staringly in the dingy room. That was his preparation for the bride. He determined not to retire, as Jane had done, but to be a living protest against thoughtless merriment; probably he would sit during the evening with a skull in his hand, and a leg-bone or two at his feet on the hearth-rug.

Mary shuddered a little at the skeletons. They should not long stare at her out of the case like that. A few yards of silk or cloth would line those glass doors, and hide the ghastly contents. She suggested this to Josiah after dinner, and so strangely had her bright ways won upon him already, that he half admitted that less light *would* be better for the bones. "We could have the doors open in the evenings," said he.

"Yes, yes," conceded Mary, though she privately resolved that if *that* had to be, she and John would have a sitting-room for themselves.

At the end of six weeks, Josiah's woe was intermittent. At the end of three months, he was able to live for a day or two without access to his bones, and grew so horribly inconsistent altogether, that Jane ceased to protest; it was hopeless.

Jane had now apparently two worlds of woe, her own and Josiah's, under which to groan. She kept to her own rooms, barely spoke to Mary, and lamented over her degenerate brothers. She was a hale woman, but all this told upon her health. At last she fairly broke down. Having repeatedly forbidden her maid to tell Mary, averring that she would prefer to die in lonely misery, it is not to be wondered at that the girl sped as quickly as an active pair of feet would carry her, off to her mistress. Ten minutes later, Mary was ensconced as sick-nurse in Jane's room, the botanical litter was unhesitatingly turned out, and a better order of things began. Jane was a gloomy patient. She dictated her will to Mary, alluded unsparingly to her brother's "unfortunate marriage," and her own relief at a prospective departure from the vale of tears. She lay and recalled misdeeds of her own,—and of every one else's,—and fairly smothered herself in reproaches and sins.

And sunny Mary just loved the desolate, frozen heart, and was persistently bright through it all. She knew how to minister to soul as well as body, and Jane was conscious of being done good to against her will. She began to get better. By-and-by Mary got mysteriously busy; as she sat by Jane, her deft fingers fashioned a skirt of soft stuff, with rich, full draperies; and later on she began to make a cap, with creamy lace and dainty ribbons.

"Going to deck yourself with lace and ribbons?" said Jane; "well, the world looks bright for you, I suppose."

"This cap is for *you*," said Mary briskly; "that and the dress will be ready for the first day you are fit to come downstairs." Then, before Jane had time to answer, she began to sing.

Jane's consistency gave way at last. Frost must thaw in the sunlight. She did not even complain when she came downstairs in the dress and cap, and found the skeleton cupboard lined with pretty red cloth, and the whole room redolent of fresh flowers that had no prospect of being dried. Love had conquered; John's wife was victorious.

WANTED—THE ANSWER.

I HEED not heat nor bitter cold,
Nor e'en the driving rain,
From morn till night you see me pressed
Against the window pane.
My blackened form betrays to all
That former friends will roam,
Though voiceless, I proclaim afar
"This is an empty home."

Six weeks have passed. Oh, what a change!
They wash me off the scene,
Only to let me reappear,
With an added eye between.
No longer grim and lone, I'm decked
With ribbons blue or red,
I tell not now of empty home,
But of an empty *head*!

The Answer to this Acrostic will be given in our Number for March 10th.

THE PHONOGRAPH.

By CONSTANCE GORDON-CUMMING.

THAT "a little knowledge is a dangerous thing" is never more vividly illustrated than when men, grasping some half developed scientific theory, which at first sight has seemed to run counter to Scriptural teaching, have straightway assumed that revelation was at fault. Happily a deeper insight into Nature's mysteries leads most candid minds to acknowledge that science is in truth the most loyal handmaid of the Holy Scriptures. Never has this been more strikingly illustrated than by the latest marvellous discovery in the possibility of recording and transmitting sound.

How many of us, reading in the Bible that "by our words we shall be justified, and by our words we shall be condemned," have accepted this in any literal sense? Still more surely have we assumed that the saying, "For every idle word that men shall speak they must give account in the Day of Judgment," was simply a strong form of speech; whereas now a very wonderful scientific discovery enables even clumsy human beings, not only to capture every word spoken by a human voice, or by a score of voices, but to transmit this record by post across sea and land for thousands of miles, there faithfully to repeat every syllable it has heard in the exact intonation of each speaker, and, having done this once, the tiny box containing this indisputable evidence may be put away, to be brought out again a thousand years hence, when there is every reason to believe that it will repeat the whole conversation as accurately as it does at the first moment.

Marvellous as this undoubtedly is, we know that we as yet stand only on the threshold of what there must yet be to learn in regard to this extraordinary discovery,—just as our grandparents, hearing with wonder and awe of the first capture of a spark of lightning, little dreamt how soon homes would be lighted by electricity, and the whole earth encompassed with telegraph wires and electric cables.

So in regard to Mr. Edison's wonderful invention of the phonograph, we as yet know only just enough to help us to realize how it may be that the very air we breathe keeps record of our words—a faithful reporter, whose witness none may gainsay, in that awful day when each one of us must give account of all words spoken in the present life.

A good many years ago, the possibility of recording and reproducing sound first occurred to Mr. Edison—indeed, more than ten years have elapsed since he constructed a phonograph, which clearly proved that it contained the germ of some truly marvellous scientific fact to be evolved at leisure. But so many startling discoveries presented themselves about the same time, that it was impossible to develop them all at once. Just then the telephone, for the simpler transmission of sound, began to secure its position as a commercial enterprise; and though various inventors lay claim to its parentage, Mr. Edison certainly receives the lion's share of credit.

About the same time he invented the microphone for magnifying sound, and in order the better to display its power, he applied it to the telephone, with the result of causing the most insignificant sounds to be heard, startlingly intensified, at a distance of many miles. Thus the buzzing of a fly, imprisoned at Bradford, was distinctly audible at Leeds, while the ticking of a watch was clearly heard at a distance of ten miles.

While feeling his way towards the phonograph, and testing the various methods by which the concussion of the atmosphere by human articulation (or whatever else produces sound) might be reproduced, he devised an experiment for speaking into a concave instrument, of which the convex side reflected the sun's rays, and, under the influence of the human voice, flashed more or less vividly, so that it appeared possible that such flash-signals might have been reduced to some intelligible system.

But as there are limits to the working capacities of the most brilliant human genius, Mr. Edison found that the task of adapting electricity to purposes of public and domestic illumination, and bringing all details of his electric light to perfection, and into commercial working order, fully engrossed his powers until the present year, when he was able once more to turn his attention to the transmission and perpetuation of sound by his infinitely more wonderful permanent process. After devoting eight months of steady work to the subject, he now announces that his invention is ready to take its place in the commercial world, and that he expects very soon to see the phonograph established in every business office. Just conceive what this means! No shorthand reporter ever noted speech so faithfully or so indisputably as will these invisible recorders.

By the end of January, Mr. Edison expected to have five hundred phonographic machines ready for distribution. The apparatus will not occupy more space than an ordinary type-writer, and can be fitted into a box which can stand beneath a table, nothing being visible except the mouthpiece and a revolving cylinder. The owner of the machine touches a little switch to secure its attention, and adjusts the mouth-piece to the cylinder, which is made of a sort of sensitive material specially manufactured to register the very faintest atmospheric movement. At present the simple phonograph requires that the lips of the speaker should talk into it, but Mr. Edison is now preparing and testing instruments like funnels, which will collect sound from a large area, and bring it in concentrated form to the receiver.

When the sound condensors are perfected, then, in truth, the phonograph will work absolutely independently of any intentional aid from the speaker. It will be quite a new illustration of the "little pitcher with long ears," and will be found to be also a most dangerous tell-tale—indeed, to venture on a private conversation in any room which has not been minutely examined in every corner, will be very much like talking in one of those halls we find in old houses, with an upper gallery opening into other rooms—a regular trap!

No sooner is this faithful recorder told off to its work, than it at once begins to mark on the sensitive paper every vibration of the air, as influenced by different voices, and so perfectly does it succeed that, if twenty persons speak in rapid succession, the tones of each voice can be clearly recognised whenever there is occasion for this witness to reproduce the conversation! Nor is there any limit to the number of times that it will repeat the whole story without the slightest variation; a thousand times over it will, if required, unwearingly re-iterate each comment in the precise intonation of the speaker, whether of anger, love, or indifference, and at the self-same pace, rapid or drawling—never was there so perfect a mimic! If we cannot all "see ourselves as others see us," at least we shall henceforth be privileged to hear ourselves as others hear us, and a very surprising revelation that will be to many! Imagine the annoyance of the poor man with an incurable stutter at hearing it thus perpetuated, or of those who so needlessly and often unconsciously interlard their conversation with expletives—to say nothing of that numerous company who make such cruel havock of their Hs!

It has been suggested that the man who dictates his will to the phonograph will secure himself against any subsequent dispute as to its authenticity, for his very voice will be heard as clearly as it was ever heard during his lifetime, and can repeat its directions again and again, to the utter confounding of all interested adversaries.

One class who are likely to benefit largely by this discovery are printers, as Mr. Edison hopes to enable them to set their type from the dictation of the phonogram, instead of having so often to puzzle over illegible manuscript, perhaps by a bad light. Already Mr. Edison has devised a method by which the printer has only to touch a lever with his foot, and immediately some half a dozen words are sounded. Should he fail to hear clearly, the same words can be repeated again and again till his type is correct. At any time, should any part of a phonographic message be indistinctly heard from any cause, all that is necessary is to touch a spring, which causes it to go back, and repeat precisely as many words or sentences as are required. Even in the present imperfect state of the instrument, recent experiments have proved that although about twenty per cent. of the words were sometimes unintelligible at first hearing, on the second or third repetition they were distinctly heard. Indeed, to any one who considers how bewildering it often seems to attempt to listen to one real human voice, in the buzz of a large party, or of any mechanical noise, it is no wonder if this little machine was sometimes inaudible to the man who listened through a small ear-phone attached to the instrument, while all around him workmen were busy carpentering, hammering, sawing, and producing a general chaos of sound.

To musicians the phonograph should prove invaluable, especially to such as are endowed with the delightful talent of improvising beautiful airs which they find themselves unable subsequently to reduce to notes—fleeting, fanciful dreams of melody, beautiful as the tints of the rainbow, and as evanescent. Here every sound can be reproduced with wonderful delicacy, and held captive till it is reduced to its representative symbols. Indeed, the phonograph seems peculiarly adapted to music: it whistles and sings more perfectly than it speaks. When in presence of a full orchestra, with the aid of sound condensers, it registers the whole melody with marvellous success. "Each instrument," says Mr. Edison, "can be perfectly distinguished. The strings are perfectly distinct—violins even from violoncellos, wind instruments and wood—all are heard, even the notes of the singer. A selection for any instrument, or for an orchestra, or the whole act of an opera, including musical instruments and voices, can be given out by the phonograph, with a beauty of tone and distinctness past belief; and the apparatus for duplicating phonograms is so cheap that the price of music will be scarcely worth considering." Just conceive what a boon this captor of fleeting melody would have been to such a composer as Sir George Macfarren, of whom we have recently heard how, on account of his blindness, he dictated, note by note, the score of all his elaborate compositions!

One of Mr. Edison's curious experiments is that of superimposing one sound upon another. Thus "after reading a long list of geographical names, he turned the machine back and sang 'Hail, Columbia!' directly over the previous words; then once more turning it back, he whistled 'Yankee Doodle.' The triple message was then given out by the phonograph, resulting in the most curious combination, in which each part was heard perfectly distinct"—just as you might hear the three, and a few more besides, from your window in "a quiet neighbourhood!" By the application of the sound condensers, of which I have already spoken, the voices of any number of speakers can be heard simultaneously; and the noisiest debate that has ever yet been heard in Parliament could be seized, held spell-bound, and transmitted to foreign lands, or to future generations, for their edification or the reverse.

As regards the transmission of phonograms to a distance, it is obvious that in the first instance they must be principally employed for the transmission of business letters, since it is necessary that the recipient of a phonogram should possess the corresponding machine, without which the message brought to him by the post is a dead letter indeed. But on placing the little inanimate slip into his magical box, straightway the voice of his correspondent is heard (through the ear-phone) as plainly as though he were sitting in the next chair.

Every office in which the phonograph is adopted will have to provide itself with a stock of phonograms, just as it lays in a stock of writing paper. These will be sold in the form of small cylinders, $1\frac{1}{4}$ inch in diameter, and from one inch upwards in length. They will be made of several sizes. An additional mystery is how so much can be conveyed in so small a space. Short messages, not exceeding two hundred words, can be transmitted on a phonogram only one inch in length, of which a dozen are to be sold for $7\frac{1}{2}$d. Phonograms to receive from eight hundred to a thousand words are only four inches in length, and cost about 1s. 6d. per dozen. The number of words recorded varies according to the rate of the speaker's utterance. For longer letters, sheets will be prepared capable of receiving from two to four thousand words.

What a singularly methodical habit of mind will be formed by men who thus accustom themselves to calculate the very number of the words they utter! And what a saving of trouble and of eyes! A man has only to talk into the receiver with his natural voice, and with the precise intonation he wishes to adopt, and the thing is done.

Should there be no occasion to preserve the letter, the little scroll can be scraped by a tiny knife, so delicate in its operation that it will remove a shaving $\frac{1}{7000}$th part of an inch in thickness, leaving a fresh surface ready to receive a new message. This shaving may be repeated a dozen times; and so, though the slip originally costs upwards of a halfpenny, it may perhaps do duty a dozen times over, so that the expense is not really greater than that of note-paper. Small wooden boxes, resembling old-fashioned pill boxes, will be sold with the machine. These are destined to hold the phonograph; and it is hoped that the Post Office authorities in the United States will undertake to transmit them at the same rate as ordinary letters, an example which doubtless would very quickly be followed by Great Britain.

A GLANCE AT THE WORK OF HER ROYAL HIGHNESS PRINCESS HELENA, PRINCESS CHRISTIAN OF SCHLESWIG-HOLSTEIN.

By LADY JOHN MANNERS.

HER Royal Highness, the Princess Christian, in a short account of her work among the poor at Windsor, has indicated, with touching simplicity, a way in which the poorest and humblest of us may be of great comfort and help to our fellow-creatures. I wish that I could quote her account in full, but knowing the value of space, I must content myself with a part. The Princess, who had been asked to give some details as to the work she has most perseveringly but most unobtrusively carried on for a very considerable period, writes :—

"Only those who work among the poor can understand and appreciate the real hardships of their lives, which so many, if not most of them, have to endure, and which, as a rule, are met so uncomplainingly and so bravely. Desirous of really being of more direct use, I obtained the consent of the Rector of Trinity Church, Windsor, to take a district in his Parish under my especial care. It is situated in a very poor part of the town; the houses on the whole are good, the rents often high. When work is plentiful, they manage fairly well, but when times are hard, as was the case last winter, the distress is great. I, however, rarely heard complaints, unless I asked them to tell me how matters really stood.

"I generally visit my people twice a week, and it is a real pleasure to feel that my visits are looked forward to, and that they receive me as a friend, so that by degrees I have learnt all their individual troubles and difficulties. I have endeavoured, from the first, to encourage them to help themselves as much as possible; and then, when I found they could do no more, I have given them help from the parish, when I could obtain it, and from myself.

"There is no greater mistake than indiscriminate charity, which only tends to pauperise; therefore I made a point of sifting each case most carefully, and I can truly say that I have very seldom been imposed upon. Indeed, I look on my poor people as my real friends. I am sure there are many who will understand the feelings which filled my heart when, on leaving Windsor for an absence of several weeks, one poor woman took both my hands in hers, and exclaimed: 'To whom shall I tell my troubles when you are gone?' To me the words were far more precious than any thanks that could have been offered me. It strikes me each time afresh how wonderful the poor are in helping one another, showing so much unselfish devotion, sitting up at night with the sick, looking after a neighbour's children, though they themselves have numbers of their own; and, above all, the childlike submission and resignation with which they take sorrow and trouble when they come upon them." The power of sympathy can, indeed, scarcely be over-rated, and how precious such kindness as that of Her Royal Highness would be to many in every rank of life!

The Princess goes on to explain the manner in which she started, with the help of friends, a fund for providing free dinners for children of the town, coals, and the loan of blankets for those who need them. Every precaution is taken that those who really need the dinners should have them. On an average, two hundred and fifty children are fed twice a week. The Princess is always present to help to serve the children, and is assisted by many kind ladies in Windsor. The surplus food is given to poor men out of employment.

The Princess describes the free concerts given during the winter. She always takes part in them, and the performers consist of members of the Eton and Windsor Madrigal Societies. I have often wondered what the best way of distributing tickets for similar free concerts would be. The Princess mentions that it is done by the clergy and district visitors. I can quite enter into the pleasure the Princess expresses she felt in observing the enjoyment of the audience, for I have often noticed at free concerts the happy faces of the listeners, who seem to appreciate music most keenly.

*H.R.H. Princess Christian of Schleswig-Holstein.**

The sick poor of Windsor are indebted to Princess Christian for establishing a fund to support two district nurses. In the families of the rich, a trained nurse is found a great comfort in cases of serious illness: how inestimable a boon must a kind, skilful nurse be in the homes of the poor, when perhaps the mother is laid on a bed of sickness, and there is no one to clean, cook, attend to the children, still less to nurse the sufferer!

* *From a photograph by Alex. Bassano.*

The Princess writes: "I am more than rewarded for any part I may have taken in this movement, by the fact that the poor clamour for these nurses, who are beloved for their unselfish devotion, and who bring help and comfort wherever they go." The Princess has also taken an active interest in an infant nursery or *crêche*, started by a lady in Windsor. These nurseries, where poor women, who have to be absent from their homes working all day, may leave their babies, in certainty that they will be well cared for, are great blessings.

The work at which I have glanced would, in most cases, be thought sufficient for one lady to accomplish; but Her Royal Highness, Princess Christian's sympathies and active charity extend very far, and the good works she has aided by her presence are really countless. We must all have read perpetually of her giving prizes and opening bazaars, homes, and schools, in many parts of the country. No one can tell the help extended to hard-working clergy, or to promoters of good works, by the encouragement given to them by the personal assistance of the Princess.

We owe her a most valuable record of the life of her sister, Princess Alice of Hesse. It is a book that all should read, for it gives the story of a beautiful, noble, self-sacrificing life; and it is told in a style so simple and charming, that the readers feel as if they had personally known Princess Alice; and I am sure the record of her brave, loving, industrious work has encouraged many a mother to persevere in discharging her daily duties with conscientious cheerfulness.

Princess Christian has written other works; and her literary talent is so much appreciated by the best judges, that I sometimes feel she must make a sacrifice in giving up so much of her time to details of charitable work. She is also a first-rate pianist.

Among the many good works that her personal efforts have encouraged was the Royal School of Art Needlework, now a flourishing institution at South Kensington. It was started by the Hon. Lady Welby, to give employment to ladies in distressed circumstances, by the revival of the ancient arts of needlework: stitches and devices, fallen out of use, were revived.

Princess Christian made herself acquainted with the work itself; and I well remember seeing her, when on a visit to Behoir, engaged on a beautiful, elaborate piece of the work, which was then new to the public. Since that time great quantities have been executed; there is a regular demand for the exquisite pieces of art work in England, on the Continent, and in America; and a large number of ladies are employed, who would otherwise be in deep distress.

The question of higher education has lately occupied the thoughts of many interested in the welfare of women. To many minds it presents great difficulties; and I

personally feel grateful to the Princess Christian for advice she gave to the students of the Royal Holloway College on the occasion of her unveiling a statue of Her Majesty there. I have long felt anxious that some opinion should be expressed by a lady of experience on the question, and once more I will quote the Princess's own words :—

"I note with pleasure that the training in this institution is not confined to mere book-learning, but that feminine accomplishments of varied descriptions find a place here, as well. It is no longer necessary, as was the case even fifteen or twenty years ago, to lay stress on the importance of the higher education of women. It has, on the other hand, rather become a duty to warn against the almost exaggerated views that some are inclined to adopt on this subject. I should like to say, let a woman never forget that she is a woman ; let her never forget that her chief attribute lies in her womanliness. I certainly sympathize with the desire for learning and mental culture ; but I do feel that sometimes ambition, which urges many to encroach on man's province, causes them to under-rate the importance of the many duties and privileges which are given to women alone."

After the Princess had expressed her conviction that intellectual cultivation was not incompatible with good housekeeping, she concluded :—

"Be true to your college, your teachers, and your womanhood ; be learned, be courteous, be religious ; and before many years are past, the anxious wish of the founder to benefit the women of this kingdom, by placing within their reach a complete course of education, will have been accomplished, and you will have shown that his bounty has not been expended in vain."

When we reflect on the countless drains on the time of those who occupy the exalted position of the Princess, we can only wonder at the immense amount of work she does ; and trust that she may reap a rich reward in knowing that her example has stimulated the energies of many, in various walks of life, to do what they can to help all in need of succour and sympathy.

LITERARY COMPETITION RESULTS. THREE DIVISIONS.

Examiners' Awards.

£2 2s. PRIZE
For the Best Pithy Extracts.

Equal { J. CAMPBELL, Ayr.
E. M. JENNINGS, Newport.

HIGHLY COMMENDED.

BLACK, A., Colchester.
COOLIE, M., Twickenham.
COX, G., Leeds.
DELF, A., Bungay.
GREEN, E., Seaford.
HINE, V., Maida Hill.
HOLDSWORTH, A., Arbroath.

WILSON, M., London.

WE give above the Results of three Divisions in our Literary Competition. We regret that at the last moment, owing to the illness of our kind Examiner, we were obliged to hold over the Results of the Final Division—Gospel Anecdotes—until next week.

EXAMINER'S REPORT. SHORT STORIES.

"Terseness and pointedness are necessary to short stories. When the limit is 5,000 words, it is not essential that every expression, ejaculation, and emotion should be recorded. The Competitors have erred in having sought to portray, with a minuteness proportioned to three volumes, the surging feelings of girls whose highest thought seems to be marriage, or the sad sacredness of broken engagements and early death. Gladly did I welcome the few stories which were written with a pure, strong tone, in which crimson sunsets, golden hair, wistful eyes, and tear-stained cheeks did not occupy the first place. I sincerely trust the Competitors do not live the lives so often described in their contributions !

"Between three and four hundred stories were sent in,—certainly a goodly number. Next time I hope we shall see a marked improvement in tone and aim ; then Competitors and Examiner can unitedly rejoice in stories in black and white, instead of in grey and cream-colour !"—C. G.M.

EXAMINER'S REPORT. POEMS.

"397 candidates entered for this Division ; several writers sent in more than one poem, so that the work of decision has been a long and somewhat difficult task. After attentive consideration, we have determined to award the £2 2s. to Mr. T. H. Engall. Many more, deserving of honourable mention, have their names recorded above. Verse-making is evidently popular with our readers, and one young lady has illustrated her poems by pen-and-ink sketches of a lively description. On the whole, the poets have chosen subjects far more inclined to grave than gay ; most of the verses are tuned in a minor key ; and some would do better, we think, in future, to attempt simpler themes."—M. H.

NUTS FOR INFIDEL NUT-CRACKERS.

By Rev. J. H. Thorpe, M.A.

WE once heard of a certain preacher who, meeting with a difficulty in his text, took occasion to give his hearers a receipt for the treatment of difficulties in general. It was this: "Look your difficulty straight in the face, and pass on!" He acted on his principle at the time, and passed on; but the difficulty did not. A very different class of people have adopted this maxim, and taken up a position of "masterly inactivity" with respect to certain very disagreeable difficulties. Some difficulties, of course, they hug and caress, and are never tired of exhibiting in most prominent positions, but then they are such as seem to suit their purpose.

Our readers will have already guessed that the persons of which we write, are, to use plain language, infidels—persons who deny that there is a God (we cannot say who *believe* that there is no God, because we do not believe in their non-faith); persons who take up, as a life-work, the pulling down of hope and the pouring of added gall into every bitter cup we may have to drink.

These persons ground in part their views, or opinions, or whatever you please to call them, on difficulties in Revelation and riddles in human life. No Christian advocate denies the existence of such difficulties. On the contrary he contends that, believing the Bible to be the revelation of an Infinite Mind, he expects that it will contain matters which a finite mind such as his cannot grasp. He holds that, if he could "understand all mysteries" in the Word of God, it would be the outcome of a mind no higher than his own. Its difficulties, as he believes, being not difficulties *in themselves*, but difficulties *to him*, are only consistent with its Divine origin. And allowing, as he does, that there are many riddles in life which baffle reason and often sorely try Faith, he remembers that there is yet to come "a time of restitution of all things," when the right will have its own and the wrong will receive its due. But he very justly points the objector to certain difficulties which infidelity cannot account for, and does not even pretend to explain. The objector may find it convenient to ignore these things, but let those who may be in danger of his evil influences get a very correct knowledge of these tough nuts, on which our infidel friend declines to try the strength of his nut-crackers. We shall just select a few out of a heap ready to hand.

1. What explanation can be given by the infidel of the character, teaching, and power of the Bible as a whole?

Remember that, as a Book, it is the most wonderful in the world. No one book has been subjected to such close criticism, has been read by such multitudes of men of all nationalities, of different degrees of education, and of various mental endowments. No Book has received so much attention or caused so great a stir in the world. Now its character is not that it is a Book, but a collection of Books, all joined together by the golden chain of a common purpose, yet written by men who lived at times removed from each other by hundreds of years. How does the infidel profess to explain this unity of purpose, so different from anything else in literature. For who ever heard of the meaning of a writer of the 19th century being explained by a passage from a writer of the 1st century. Yet St. Paul's meaning is often explained by David or Moses. The Christian is ready with a solution adequate to the case: "Holy men of old spake as they were moved by the Holy Ghost." What has the infidel to say? "It is all a forgery." Well, if it is, *when was it forged?* Is it likely that *such* a book would be imposed on the world without a contemporary writer to raise a voice to denounce it, if a forgery? And suppose it is a forgery, how can the infidel explain the character of the book? Is its morality not the highest and its teaching the noblest man is acquainted with or indeed can conceive? Well, if a forgery, some man or men must have done it. Then we reply, "The Bible is such a book that a good man *would not* forge it and a bad man *could not!* Therefore it is not a forgery, but the word of the living God.

When our friend has plied his nut-cracker for awhile on the foregoing question, perhaps he will take a try at this,—How does he explain *the fact* that multitudes of men and women are finding the Bible a source of comfort in trouble and a mighty educator for good every day in the week?

2. We turn to another. There is in the world the Church of Christ. Its existence cannot be denied. If it is no more than a body of men like any other body, such as Mahommedans, how does he *explain its existence?* remembering—(1) that its founder died the death of a felon; (2) that its first professors were mostly poor men; (3) that it not only had no human power or influence at first to propagate it, but all the wisdom, wealth, and authority pitted against it; (4) that it called upon men to deny themselves, to control natural impulses, to give up present ease and comfort, and even to go to the stake for promises of a *future* blessedness.

3. Again. From time to time we meet men whose conscience has been awakened. They are oppressed with a sense of sin. Their soul is clouded by the thought of an offended God. They find no pleasure in the world. These men are not mere enthusiasts or afflicted with melancholy. They are equal to all the business of life, and betray no signs of any want of mental power. Now it is a fact to which multitudes are prepared to witness on oath, that the gospel of Jesus Christ has given them peace, has met the want of their awakened conscience, and has laid their fears to rest for ever. How does the infidel propose to deal with persons in such condition? Can he point to any one person so affected who ever found peace in any other way except that which we have described?

4. Again. We see around us in the world a number of sick people—some sick in body and some sick in pocket. We also see a number of institutions supported by charity, and designed to meet with such cases and relieve them. These institutions are supported by voluntary contributions. The persons who contribute profess, like the persons who founded these institutions, the Christian religion. Of course it may be granted that contributions are sometimes received from persons who profess no religion. This we grant for argument's sake, we do not *know* it, and it does not affect the issue. Now take away the Christian religion (if you can!). We suppose it will be allowed that the institutions we have named are desirable things in the present state of human life. What *motive* does infidelity supply for founding and maintaining such institutions? Or, how does the objector profess to deal with the fact that no such thing as an hospital for the sick ever existed in the world before the era of the Christian religion, or that in the world to-day there does not exist a single hospital, alms-house, or charity, started and exclusively maintained by infidels? In a word, we point out the needs of our race, and we ask what motive—adequate and sufficient motive—does infidelity supply to prompt men to meet them? Remember the things we have mentioned are the direct outcome of a great motive which the religion of Christ supplies to all its professors.

5. We expect, by this time, our friend's nut-cracker, if he has worked it at all vigorously, bears serious marks of hard usage. So we shall offer him but one more of our nuts, and we feel if he only squeezes hard enough, his tool will be worthless henceforth. We presume that he will agree with us on social grounds that impurity is a terrible curse to a nation or an individual; that every lover of his country or his race should war against it with every weapon he can lay hold of. That purity of life is one of the bulwarks of the constitution; that impurity in youth brings a blight on the home, the body, and the mind. Here's our nut. What motive—what adequate motive—does infidelity offer to men for purity? How does the infidel propose to cause men to curb their passions? Perhaps he proposes to establish a great teaching staff who will set forth to assemblies of men the evils of impurity—the Pathology of Passion—the blessings of purity, and who will conclude their lecture with a powerful appeal to that which our objector, with some show of reason, will describe as the strongest motive men know of—Self-love. Alas! we have but to turn to the old book called Experience, and we see that some of the most impure of men quote the very same motive as causing them to practise impurity, which our sage friend propounds as being an invariably opposite tendency. As a matter of common observation, neither self-love nor selfishness make men pure. The pure are those whom the faith of Christ makes pure.

Here we leave our objector. May he speedily see life is not worth living without the living hope in the living God!

NOTES ON THE INTERNATIONAL SUNDAY SCHOOL LESSONS.

By Rev. J. H. Thorpe, M.A.

February 26th.

St. Matt. 19. 13-26.

PORTION divides into three parts: Christ and the Children, Christ and the Young Man, Christ and His Disciples. Carefully note corresponding passages—Mark 10. 13, etc., and Luke 18. 15, etc.

I. *Christ and the Children.* St. Luke says, "Infants;" R.V., "Babes;" a hint that they were brought by their own parents; R.V., "*their* babes."

"Touch them." These parents may have seen Christ working wonderful miracles by a touch, and thus connected great blessings with His touch. Learn—

1. It is never too soon to come to Jesus. A boy very much wanted to be a sailor, so started off to a seaport town, and tried to get into the Navy, but he was too young. None rejected for being "*under age;*"—here is the regulation: "Those that seek Me *early*, shall find Me."

2. How very good men may make mistakes. Jesus "rebuked the disciples," and "was much displeased." Even in our days, good men stand between sinners and Christ, by their inconsistent lives—by their want of sympathy with seekers—by a tendency to suspect persons in anxiety as only hypocrites. Whatever we do, let us try never to be a hindrance to those who seek Jesus.

3. How Jesus is always more gracious than we expect. *Note*—The disciples often interposed to save annoyance and interruption to their Master, but always against the mind of Christ.

II. *Christ and the Young Man.* St. Luke says he was a "ruler." He was not a Sadducee, for he had a firm belief in eternal life. Many good points in this young man. Jesus "loved him." It does not follow that because men are not Christians that there is nothing in them we can love and admire. *Note*—

1. *His humility.* A man of position and of wealth, he knelt at the feet of Jesus, the despised Galilæan, and that before the whole crowd. Pride of person and pride of position laid aside. An example to all who would come to Jesus.

2. *His earnestness.* He came "running," as if he felt the business he had on hand of great importance, and the opportunity one not to be lost.

3. *His morality.* He professed that from his youth up he had kept the moral law, and our Lord did not dispute it. Morality goes for nothing as a ground of acceptance before God, but it is of great importance to society. This young man's morality was all the more noticeable because he was rich. Riches, which give a man facilities to sin and to conceal his sin, are very often accompanied by unholiness. But on the other side, notice—

1. His self-complacency—"What lack I yet?" No doubt this may point to an inward dissatisfaction with himself, but we are disposed to regard it rather as a challenge to Christ to point out a flaw, and if not, to give praise to his perfection.

2. His sin. What was the one thing between him and eternal life? The love of riches. *One* idol can keep you out of heaven. One band, if only a rope of rags binding you to earth, can keep you out of life eternal. Learn, therefore, this sad lesson: that a man may go a long way towards heaven, and yet miss it *for one reason.* Jesus must have the whole heart or none. The letters of the word "acres," spell also "cares."

3. Christ and His Disciples. "How hardly" does not mean "impossible." Note St. Mark's words: "Them that *trust* in riches." "It is easier for a camel," etc. This is a proverbial expression, denoting a very great difficulty. The disciples may have imagined that to rich people, who have not cares for bread and clothing, salvation is easier than to others. Rich people will not be saved *in*, but *from* their worldliness. One lesson from our Lord's words: "With God all things are possible." Never despair about any sinner. Let S. S. teachers take this hint. Don't despair about any boy or girl, be they never so naughty and troublesome.

"Treasure"—a lesson might be founded on this. There are three sorts of treasure mentioned in the N.T.: 1. Treasure in heaven. 2. Treasure on earth ("Lay not up for yourselves treasures on earth"). 3. Treasure in hell. (Rom. 2. 5.)

We would strongly commend to our readers the admirable address on "Intellectual Interest in Work" delivered by Mr. Goschen to the students of Aberdeen University, on January 31st. It is reported more or less fully in all the London papers of Feb. 1st.

By Rev. J. H. Thorpe, M.A.

March 4th.

Christ's Last Journey to Jerusalem.—*Matt.* 20. 17-34.

Golden Text.—*Matt.* 20. 28.

Two apparent contradictions should be noticed: (1) St. Matt. tells us that the request of James and John was made through their mother; (2) St. Mark, that they themselves made it (ch. 10 35). The explanation probably is that St. Matt. mentions the immediate petitioner. St. Mark writes, as we commonly do when we speak of a gentleman building a house, though the actual work is done by the builder.

Again, in the miracle of healing the blind man (1) St. Matt. tells us there were two, and that it was done as Jesus departed from Jericho; (2) St. Mark, that there was one, named Bartimæus; (3) St. Luke, that the man was healed as Jesus was "come nigh unto Jericho."

Possibly the two latter writers mention one (see also the demoniacs in Gadara, etc.), because his case was best known and most remarkable. As to place, different explanations are given; for instance, that Jesus entered and left Jericho by the same gate, or that there were two towns, the old occupying the ancient site, and the newer a little outside, on the same road, both called by the same name, and that the miracle took place between the towns; so either account would be exactly correct.

I. The Revelation of love. Christ draws aside the curtain, and shows His disciples an unexpected and unwelcome future (ver. 18). See here (1) *the tenderness of Christ.* Not the first time He spoke thus.

(2) *See further, Christ does not want blindfold service.* He would have every man know there is a cross as well as a crown. Christ is to be followed by men who, having counted the cost, "count all things but dross for Christ."

II. The request of ignorance. James and John "knew not what they asked." Note, "'cup,' the inner and spiritual bitterness, resembling the agony of the Lord Himself; 'baptism,' more the outward accession of persecution and trial, through which we must pass to the kingdom of God." One of these disciples, the first to drink the cup of suffering, and be baptized with the baptism of blood (Acts 12. 1, 2); the other had the longest experience of a life of trouble and persecution. See here (1) *How much we need the help of the Holy Spirit.* These two men, so holy and so good, prayed for what was not good for them. (2) See how *Salome had grasped the truth of Christ's Person and Office.* Even her request showed faith in Christ as the King. Like that of the dying thief, "When Thou comest in Thy kingdom." But there was more, for she worshipped Christ (ver. 20). As a Jewess she would not think of doing so, unless she believed in Christ's Godhead. She desired nearness to Christ for her sons, and advancement in His kingdom, rather than mere earthly honours. (3) *Position in the kingdom of God is not of favouritism, but of capacity.* Christ's question was, "Are ye *able?*" Do you want to be great in the kingdom of God? Then labour in prayer for grace and in practice for victory over sin. (4) *How ready we are to condemn our own sins in others.* (Ver. 24) the ten, filled with indignation, forgot that, not long before, they had disputed which of them should be the greatest!

III. The Reward of Faith and Perseverance. Note that in each of the three miracles of healing the blind, the blind men addressed Christ by the title, "Son of David." Blind men often see farther into the mysteries of the kingdom of God than those who have their sight.

Learn from these (1) *to seize the present opportunity.* Christ never came that road again. For these poor men it was "now or never." Lost opportunities, like last year's leaves, will never come back. "Now is the day of salvation." (2) *Those who seek Christ may have difficulties thrown in the way.* These men were told to be silent, and when Jesus called them, probably they had to grope their way, guided by His voice. Such obstacles only test true faith, and *never can* deprive true seekers from the blessing. But they need to be met with earnest determination. (3) *The nature of prayer*—it is the expression of need. Where there is no sense of want, there is no prayer. "*What* will ye?" etc. Particularity is an ingredient in true prayer. (4) Note, "while they are yet speaking I will hear." Jesus heard the cry above the din of the crowd. (5) *How to use eyes that are opened.* "They followed Him," and that "immediately." Remember, life for the Christian comes from "a look at the crucified One," but the looking is *to be kept up* all through the life; we are to run, "looking unto Jesus!"

THE recent monster Missionary Meeting in Exeter Hall was enough to rouse the most stolid to enthusiasm about foreign missions. The large hall was crowded to the very ceiling, platform and galleries also (with an overflow gathering below). Eleven missionaries from the East London Institute were about to sail to different spheres of labour. Miss Guinness and Miss Reed, with the widow and children of the late lamented Dr. Schofield, to China. The stirring, yet pathetic address of Mr. Grattan Guinness moved many, and surely some earnest hearts responded: "Here am I, Lord: send me." Young men, Christ is worthy of your best for this work. Mothers, the Father withheld not His beloved Son—will you keep back your costliest, noblest?

OUTLINE LESSON.

Two Ways.

I. The way to Jerusalem, the way of Suffering. *The travellers.* Jesus, the Leader. *Prophet,* knowing the future; *Priest,* about to offer the world's sacrifice; *Prince,* at the end would triumph. Companions, like ourselves, knew not the meaning of passing events.

The journey. On foot, ninety miles. Now in the Jordan valley. Near Jericho. Trace on map the former part of the journey, from Cesaræa Philippi, and what yet remained to be accomplished. Incidents on the road.

The goal. Jerusalem. Ps. 147. 12; Matt. 23. 37. "Beautiful for situation," Ps. 48. 2. Type of heaven—New Jerusalem. To suffer, die, rise, descent of Holy Ghost. "Tarry ye in Jerusalem."

This journey a picture of life. Our Leader. Life's purposes and mysteries. Different scenes. Death waiting close by heaven's gate.

II. The way to be Great.

The desire to be great—universal. Day-dreams of James and John. *Mistaken ideas about greatness*—being the two chief personages under the King. To be rich, knighted, spoken of in newspaper. Common ideas of greatness. *Mistakes about how to be great.* Got their mother to ask Christ. True greatness *won, not granted.*

Selfish ambition is both ignorant and rash. Ver. 22.

Steps up the ladder of true greatness:—

Self-abasement.
Self-sacrifice.
Service for others.

The first part of the lesson will well illustrate the latter.

C. Skinner.

Y.M.C.A. BIBLE CLASS LESSONS.

March 4th.

Wisdom.—*Prov.* 3. 13-26.

A GLOWING description of the blessedness of true piety. For clue to meaning of name "Wisdom," see 1 Cor. 1. 24, 30; Col. 2. 3. Wisdom, in Proverbs, is not *intellectual* so much as *moral* (see ch. 8. as to its origin).

The lesson sets forth true religion, or piety *personified.* The feminine is probably used for the sake of contrast (see ch. 9.; comp. vers. 1-6 with 13-18).

Mark the dignified attitude. Religion, not cringing and abject, but comes as a king with authority, requiring submission: as a princely benefactor, with hands full of blessings: not asking, but conferring favours.

What are the blessings Wisdom bestows?

1. Happiness (ver. 13).
2. Wealth (vers. 14, 15).
3. Length of days (ver. 16).
4. *Honour* (ver. 16).
5. Pleasantness and peace (ver. 17).
6. *Immortality* (ver. 18).

The Excellence of true Wisdom in relation to men (vers. 13-18); *the Excellence of Wisdom, as it is seen in Exercise by God Himself* (vers. 19, 20; comp. James 3. 17, 18).

The Charge (ver. 21). Notice *three* things:—

1. Wisdom is to be *found* (ver. 13).
2. *Laid hold of* (ver. 18).
3. *Kept* (vers. 18, 21).

The Reward (vers. 22-26).

1. Spiritual vitality—"life to thy soul."
2. Spiritual beauty—"grace to thy neck."

("'Tis first the *true,* and then the beautiful;
Not first the *beautiful,* and then the *true.*")

3. Spiritual support (ver. 23).
4. Spiritual defence (vers. 24-26).

This passage (13-26) has been endorsed by millions of testimonies. Let any young man take it and act upon it; he will find it useful, even for *this* life.

Inference.—A book which furnishes such a safe guide for this life gives good evidence of its trustworthiness as a guide for the life beyond. James L. Stanley.

I. Excellence of Wisdom (vers. 13-15).

Wisdom is to be *found,* and understanding *gotten.* In seeking the Lord as *sinners,* He will find us. In inquiring as *scholars,* He will instruct us. In waiting upon Him as *servants,* He will direct us. In willing to do His will as *saints,* He will enable us.

II. Endowments of Wisdom (vers. 16-18).

(1) Length of days. The holiest liver is generally the longest liver. (2) Riches. What riches are so rich as eternal riches? (3) Honour. They that honour the Lord will be honoured by Him. (4) Pleasantness. The way that Enoch walked in was pleasing to God, and pleasant to himself. (5) Peace. Christ's own peace. (6) Tree of Life. "Lay hold on eternal life," said Paul to Timothy. He did this himself (Phil. 3. 12). (7) Happiness.

III. Example of Wisdom (vers. 19, 20).

This is Wisdom making and managing worlds. He spoke and they came forth, and He upholds them by the word of His power. In Genesis the Lord separated the waters from the waters. In these verses there is the thought of separation. As the Lord made separations, so are we to do the same. Separating from evil company, bad books, and all that is not of Himself.

IV. Exhortation of Wisdom (ver. 21).

(1) Observation. "Let not them depart from thine eyes." Be like Moses (Heb. 11. 27). (2) Discretion (Dan. 6. 3).

V. Experience of the Wise (vers. 22-24).

(1) Vigour, no langour, like an evergreen (Ps. 1. 3, Isa. 58. 11). (2) Adornment. The graces of the Spirit (Gal. 5. 22; Rom. 13. 14). (3) Safety. Kept (Ps. 31. 20; 1. Pet. 1. 5; Jude 24), hedged about as Job. (4) Rest (ver. 24).

Encouragement to the Wise (vers. 25, 26).

F. E. Marsh.

CRISP CORRESPONDENCE.

Ernest.—Dear boy—for boy you must be—you are terribly impulsive. The words you object to in my tale, namely: "Being Irish would account for everything," do not give the author's sentiments. The tense shows that. Have you not studied grammar? It is *I*—Gordon Stables—who answer you, and when I inform you that every drop of my blood is Celtic, either Highland or Irish, that I am descended from one of the best Dublin families on the mother's side, that I love Ireland, her people, her scenery, and her music, and have defended her for twenty-five long years by voice and pen, I think you will feel sorry you wrote. If I had you here, lad, and my fiddle were in my hand, I'd change your tune. If the tears didn't come welling into your eyes as I played "Aileen, dear Aileen," or the "Wearing of the Green," it would be a proof you were no true Irishman.

Phyllis.—Many young women find situations in editorial offices, but in order to do this they must be thoroughly practical, energetic, and painstaking. A well-trained and excellent memory is very valuable, clear handwriting; and if to this can be added a thorough knowledge of Pitman's shorthand, very fair remuneration ought to be secured. Probably the work would consist in transcription of letters, the correction of proofs, and a variety of general secretarial work, with salary varying according to experience, ability, and locality, from 12s. 6d. to 22s. a week.

Ash Wednesday.—If J.M. will refer to the Commination Service, and compare it with the title given to Ash Wednesday before the Collect for that day, he will see that in the early Church notorious sinners were put to open penance at the beginning of Lent. Part of this penance consisted in their going to church clad in sackcloth and ashes. According to Gratian, ashes were thrown on them by the clergy. From this the first day of Lent was called in Latin, *Dies cinerum* ("day of ashes"), in English, "Ash Wednesday."

To Gild the Edges of Books.—Cut the edges quite smooth; this would be done in a Book Bindery by a cutting machine. Failing such, the book must be fixed firmly in some kind of press, and the edges cut with a very sharp knife. It is essential that the edges be perfectly smooth, even to the extent of being carefully rubbed down with sand-paper. While the book is in the press, the edges should be covered with a red ground-work, which may be made from a little red bole, mixed with a small quantity of French chalk, and water sufficient to make it quite liquid. This can be applied to the edge with a small sponge, brushing afterwards with a hard brush. Then apply a somewhat thick coating of a mixture of 1 part of white of eggs and 10 parts of water, with a camel's hair brush, and upon the edges thus coated, lay gold-leaf, cut to the required size. When the gold-leaf is dry, burnish down with an agate rubber and tissue paper; then remove the tissue, very slightly rub the edge with a little bees'-wax, and then further burnish down upon the gold-leaf itself with the agate, till a bright polish is the result.

English Literature.—"The Story of English Literature," by Anna Buckland (Cassels, 5s.), is an excellent introduction to the subject, and many of the important works of the chief English writers, with copious notes, are published at moderate prices by the Clarendon Press (London: Henry Frowde, Amen Corner).

Y.M.C.A. ITEMS.

THE Glasgow Y.M.C.A. has protested against the recent election of two sellers of intoxicating drinks to the office of magistrate.

Mr. Robert McCann, Travelling Secretary for the Irish Y.M.C.A.'s, has held a most successful sixteen days' mission at the Ballyclare (county Antrim) Y.M.C.A.

The members of the Brighton Y.M.C.A. have presented Mr. Marriage Wallis, the president of the Association, with a portrait of himself. The picture is to be hung in the rooms of this popular seaside resort for young men.

Since the reduction, last September, of the subscriptions to the Bradford Y.M.C.A., over 120 new members and associates have been enrolled. A most successful social evening was held on January 25th, the first of a series, organised entirely by the young men of the Association. This is a step in the right direction, and an example that might be profitably followed by other Associations. Let the young men bear their share of the work, instead of giving everything entirely into the hands of committees.

Mr. Thomas Jameson, the new General Secretary of the Liverpool Y.M.C.A., was presented with a handsome clock, a pair of bronze ornaments, and a purse containing £55, on leaving the Bristol Association, which he had served for ten years as General Secretary.

FAIRS AND MARKETS IN OLDEN DAYS.

FAIRS and markets are of ancient origin. Alfred the Great first began them in England, about the year 886, though meetings for the sake of barter had been established in the Roman empire. They seem to have originated in the "Church's Holiday," instituted by Pope Gregory. On the eve of the festival the people assembled in church, bearing lighted tapers, and were supposed to watch and pray throughout the night. These nocturnal meetings were called "fairs," or "wakes," but as the attendance increased, the devotion became less. Dealers in provisions and ale came upon the scene, excess and disturbance of course soon followed, and what was at first a religious meeting, degenerated into a scene of riot and intemperance. An old MS. legend speaks of the "songs, dancing, harping, piping, gluttony, and sin" in the house of God. So scandalous did these wakes become, that they were prohibited at night, and though a fast was proclaimed the day before, all conviviality was reserved for the day of the festival.

The bishops and abbots, for the temporal good of the Church, applied to the king for charters to hold a fair, and reaped a large harvest from the tolls which their charter authorized them to levy on all who transacted business there. The taxes were "stallage" for the place occupied by the stall or booth; "lestage," for permission to carry goods to and from the fair; "pontage," for passage over the bridges; and "geresgiene," for entrance into the town. In addition to these profits, the monastery had many stalls in the fair, where, for the benefit of the monks, articles were sold. At these fairs temporary streets were formed, which took their name from the various commodities sold therein: such as Pottery Street, Spice Street, Sweet Street, etc. In the reign of Henry III., more costly articles began to be sold. At Winchester fair, a cloak was bought for his son for £20. At St. Mary Ottery's College, in Devonshire, two hundred pounds of wax were annually bought at the fair for the use of the choir.

It was usual to oblige every man who entered at the gate of the fair to take an oath that he would not lie, steal, or cheat while he remained there.

The kings of England replenished their empty purses, in these bygone days, by demanding enormous prices for granting charters for the fairs. Henry III., "devising how to extort money from the citizens of London, made a mart at Westminster to last fifteen days, and demanded that all trades of merchandise should cease in the city during that time, which the citizens were fain to redeem with two thousand pounds." Henry VIII. charged two thousand marks for confirming the charter of Stourbridge fair.

If fairs were kept beyond the specified time, the managers were fined; the vendors forfeited double the amount of their goods—one-fourth to the prosecutor, and the rest to the king. One of the famous old fairs of England was that of St. Giles, near Winchester. The fair extended seven miles round, including Southampton in its limits. On St. Giles' Eve the keys of the four gates were delivered to the bishop's officers, by the mayor, bailiffs, and citizens, and for the sixteen days following, the bishop appointed a mayor, bailiff, and coroner. A court was formed, called the Pavilion, at which the bishop's justiciaries presided, to try any cause seven miles round. The bishop took the toll of every parcel that passed the gates, and among other fees was the curious tribute of four ewers and basins, annually paid to his lordship's justiciaries and treasurer by the foreign merchants who sold brazen vessels. So great was the revenue accruing to the proprietor from all this traffic, that, during the wars between Maud and Stephen, Henry of Blois, the Bishop of Winchester, threatened to excommunicate any who should molest those coming to his fair.

Markets are of greater antiquity than fairs. The first mention of them is in the Domesday Book. The market at Taunton, Somersetshire, paid a toll of fifty shillings. Like the first fairs, the markets were held in churches and churchyards, and with equal profanity, on Sundays. Many severe fines had to be enforced before the market day was changed from Sunday to Saturday: for the custom was convenient for those coming from a long distance, who could transact business and hear mass with one journey. It was not until the reign of Henry VII. that the holding Sabbath markets and fairs was done away with.

Many of the markets belonged to the monasteries, and hence the crosses which still are to be seen in many of our old towns. Round this cross the farmers sold their fowls, game, eggs, etc., on all of which toll was paid to the abbot. Fines were imposed on any rubbish thrown near the cross, and a fine of sixpence exacted for every cart, barrow, etc., left in the market-place. Notwithstanding the many laws and precautions taken to insure fair dealings, many frauds were practised, especially on the poor. An old writer—Holinshed—complains of the state of the markets of his time. He tells us the rich bought up all the corn, and kept it, to raise the price, often until it became musty; they then sold it cheap to the poor. The rich farmers bought with large measures, and sold with small ones. The clerk, kept to test and keep in order the weights and measures, had a fee for every examination from the farmers, so the weights were never in order.

In 1764, a "most elegant market-house and shambles" was given to the town of Alnwick by the Earl and Countess of Northumberland. Sometimes the markets were the property of the town, and the proceeds of the tolls were dedicated to its improvements. Such was the case with the Stock Markets in London, the profits being devoted to London Bridge.

CHAT ABOUT CHAFERS.

CHAFERS are scientifically termed "Lamellicorns," but if we put that title at the head of this paragraph it would act as an effective danger signal to intending readers. The alarming word simply means that the antennæ of this special portion of the beetle family are flattened into plates, or "lamellæ," generally capable of being folded on one another, like the sticks of a lady's fan.

Some of the Tropical Chafers are formidable fellows indeed. The Hercules beetle, from the West Indies, sometimes measures eight inches across his expanded wings, and is close upon seven inches in length. The Goliath beetle, from the West African coast, is not quite so long, but being of solid build, equals the Hercules in weight. The Sacred Scarabæus, whose sculptured image adorns the tombs of Egypt, belongs to the Chafer family, and raises its homely relatives to a higher platform by this historic association. How paltry does an ancestral monument in Westminster Abbey, which glorifies one of our little families to-day, seem in comparison to this Chafer's "place of honour" on the old Egyptian stones! The nearest relations of the Sacred Scarabæus in this country are the Dumbledors, or Night Watchmen.

However useful some of its relations may be, it is not possible to discover the utility of the common Cockchafer. We know it must fulfil some wise purpose in nature, but as far as we see at present, it seems an unmitigated pest. In its larval state, it lives underground for three years as a fat, white grub, feeding on the roots of plants, and in its winged state, it eats ravenously the leaves of trees.

In this country the rooks and other birds keep the number of Chafers somewhat in check, but in France, where any bird is "game," even down to the robin redbreast, the Chafers have their own way, and do terrible damage.

The Cockchafer makes its appearance about May, whence it is often known as the May bug. A smaller species, *Rizotrogus Solstitialis*, appears a month or so later, and is called the June Chafer, or June bug. One summer, at Margate, the June Chafer swarmed to such an extent on the cliffs, that they almost blinded the passengers, and as in those days the path was undefended by railings, they rendered walking dangerous.

Another destructive Chafer is known by several popular names; one is the Bracken-clock, on account of its fondness for places in which ferns grow. Another is the Chovey, by which it goes in the eastern counties, while westward it is called Coch-y-bondhu, corrupted by anglers into Cockerbundy. Its scientific name is *Phyllopertha Horticola*, a very appropriate title, the generic name signifying leaf-destroyer, and the specific name meaning garden-haunter. It seems to be peculiarly destructive in the eastern counties, where it simply ravages gardens and orchards, and is said to rival the locust itself as a plague. It is not one quarter as large as the Cockchafer, has a rather flattened and squared body, and the wing-cases are reddish brown, while the thorax and head are blue-black. In order to destroy it, pigs are driven into the orchards, and ducks into the gardens, while the trees are beaten with long sticks, so as to shake the insects down.

The last of the Chafers for which we can find space is the lovely Rose Chafer, *Cetonia Aurata*, an insect so beautiful that it really seems to have come from the tropics. Its colour is a peculiar shining green, glossed with the golden tinge which has gained for it the specific name of aurata, or gilded. In its perfect state, it is fond of sitting in the very centre of roses, the wild rose being its favourite. But it may be also found in gardens, where it prefers the white rose to any of the coloured varieties. It also has a liking for the flower of the strawberry, which, as botanists tell us, belongs to the rose group.

In its larval state, it much resembles the grub of the Cockchafer, and lives underground, mostly at the root of some tree, the willow appearing to be its favourite. It is also found in the mound-nests of the wood ant, probably feeding on the dead leaves, dried twigs, etc., of which the mound is composed. From this circumstance, the Beetle is sometimes called the King of the Ants. Just before it passes into the pupal state, it makes for itself a cocoon composed of small wood-chips, and when an old willow tree is uprooted, plenty of these cocoons can usually be found.

What message dost thou bring,
  O happy-hearted maid?
Thou hearest steps of Spring
  Within the primrose glade;
Beneath the tear-wet April skies,
The shining daffodils arise.

In shadow or in light,
  Though changeful be the way,
Still Hope shall make us bright,
  And whisper cheer for aye;
For on through April's rainbow-gate
Doth not the golden Summer wait?

ONE PENNY.

WEEKLY—Edited by MRS. STEPHEN MENZIES.

THAT HOUSE IN LONDON.

By L. T. MEADE,
Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," etc., etc.

"'Charlie, I told you not to come in for a minute or two.'"

CHAPTER III.

"NOW, my dear young lady, you really must excuse me, but I never heard of such a preposterous idea. Wrong I call it, I do indeed, for it simply means this, and this alone, you spend your money on your step-sisters."

Miss Kennedy was seated in the lawyer's small office; it was as dingy and crowded, and dirty-looking a room as possible, and Mr. Simpkins himself looked dismal, notwithstanding his somewhat rubicund face, and his clean-shaven neat little person. Kate, tall, erect, with her bright hair, and her eyes glowing, and a rich colour in her cheeks, formed the only bit of sunshine. The old lawyer looked at her admiringly—he had never thought one way or another about Kate Kennedy when he met her at her uncle's house, but now he began to consider this client of his quite handsome.

"A very fine girl," he said to himself, "and if I can prevent it, she shan't throw herself away on these good-for-nothing little step-sisters."

"Well, Mr. Simpkins," interrupted Kate, "I am sorry you do not approve of my plan, but it is my plan notwithstanding—I may as well say distinctly that I mean to carry it out—I mean to have my sisters to live with me, and I mean to have a house to live in. Is there any harm in asking you to help me to purchase one?"

"Oh, not the least, and I won't desert you, however foolish and headstrong you may be. I am thankful to say, however, that your uncle must have had premonitory warnings of all your mad and quixotic schemes when he made his will."

"Indeed! I have not heard his will."

"No, I did not think it necessary to acquaint you with more than the mere fact that the money was yours, the other day; but it is not given to you without certain conditions. May I tell you now what they are?"

"If you please; I should like to know all about them."

"Take a seat by the fire—what a cold day it is! Well, Miss Kennedy, these are the conditions. Your uncle makes you of age at once,—rather unusual, a girl of twenty; however, you are to have the use of the interest of £28,000 from the moment that the will is proved. £2,000 you are given absolute control of; that means that you may spend it, or throw it away, just as you like—a most far-fetched and ridiculous arrangement in my opinion. Well, to proceed. The interest of £28,000 provides you with a very nice yearly income from this date until you are five-and-twenty. You cannot touch the principal, but up to the date of your twenty-fifth birthday you can spend the interest. On that day—listen attentively, please, Miss Kate, for this is most important—on that day, if you are still unmarried, the whole of your fortune, with the exception of the £2,000 already mentioned, is divided between four of the London hospitals. If you are married, and your husband has an income equal to your own, your uncle's fortune belongs to you and your heirs. These are the conditions most rigidly set out, and there is no escaping them. A most wise proviso, I call it; it is impossible for your step-sisters absolutely to ruin you."

Kate's face had turned very pale—all the rich colour had left her cheeks.

"It seems, then," she said slowly, "that I am really not an heiress; a yearly income is secured to me for the next six years; after that, I am as I was before."

"Not at all, my dear young lady, not at all; long before then you will be the happy wife of some lucky fellow who has got thousands a year to meet your few hundreds."

"We won't consider a remote possibility," answered Kate. "I shall prepare myself for the fact that at five-and-twenty I am penniless."

"At the worst you have your £2,000.

"I want to buy the house out of that."

"What a headstrong young lady! I had hoped that I had cured you of the house; well, at least you will have the same house as a shelter; all things considered, you certainly might make a worse investment."

Kate roused herself with an effort from a rather painful reverie into which she was sinking.

"After all, six years *are* six years," she said. "You will see about the house for me, Mr. Simpkins? It must be a country house, and yet it must be in London; it must be full of cupboards and queer corners; it must be as old-fashioned as possible—I don't care a bit about its being modern, or having modern conveniences. I wish the rooms to be small, and to have low ceilings, only there must be plenty of them, and there must not be many stairs, and there must be bay-windows with lots of creepers growing about them, and there must be a good-sized garden with trees in it, and old-fashioned flowers growing there already, and, if possible, some flowering shrubs; and there must be a place where I can build a greenhouse. Oh, yes, six years of happiness are not at all to be despised out of one's life."

Mr. Simpkins could not help smiling, and again he mentally ejaculated,—

"A handsome girl, a bright, striking, handsome girl!" Aloud he said, "My dear, you're a wilful young thing, and must have your way. I will look out for the sort of house you want—no doubt it will take me ages to find it—in the meantime make me your banker, and, my dear young lady, I'm awfully busy—can you run away now?"

Kate laughed quite merrily, shook hands with the old lawyer, and tripped downstairs. Polly was coming home to-night, and she was busy making preparations. She went to a confectioner's and bought a tempting cake—Polly had such a sweet tooth—then she ordered cream for the tea, and a nice fresh lobster, and a rather expensive salad, and finally she hurried home with a great bunch of fragrant flowers in her hand. Mrs. Minchin was on the watch for her drawing-room lodger, and let her in with effusive words and many welcomes.

"Now, miss, the drawing-room is as beautiful as beautiful, and a fire clear as amber, and fresh white curtains to the windows, and the tea-table looking most elegant. Oh, dear me, Miss Kennedy, what lovely flowers!"

"Are they not, Mrs. Minchin? See, I have brought these violets for you—you shall give them to Mabel; I hope she is better."

"She is but poorly indeed, miss, but the violets will do her a sight of good. Thank you, Miss Kennedy; tea shall be all ready when your sister comes, miss."

Mrs. Minchin retired to the kitchen to gossip and wonder. What was the matter with Miss Kennedy? she who used to be so saving—certainly always bright enough, but so particular saving, not to say screwing—to have turned suddenly open-handed, to have migrated to the drawing-floor, and to have ordered in absolutely cream, and lobster, and salad, and a frosted cake, for tea!

"It means a fortune," soliloquised Mrs. Minchin, "and it behoves me to be civil. Mabel, you have got to go up and thank the lady for them there violets the first thing to-morrow."

"Oh, dear me, mother," answered Mabel, a pert-looking, delicate girl of two or three-and-twenty. "Violets, are they, but they don't suit my complexion. I never could abide that tone of colour; give me pink or red, or even a good down-right white in the shape of a camellia, but violets—oh, dear me, no, mother, they're no fancy of mine."

Meanwhile Kate had given the finishing touches to the very lodging-house-looking drawing-room, and was standing by the glowing fire, looking rosy and expectant, when Polly's cab drew up at the door. Polly was a very eager young lady, extremely demonstrative, and when she dashed into the room, and threw her arms effusively round Kate's neck, Kate certainly felt no surprise; but she did look up in amazement when immediately following Polly came a sleepy-looking, red-haired youth, who stood in an awkward attitude by the door, twirling his hat in his hand, and looking intensely miserable.

"My dear Polly, I am very glad to see you; but who is your friend?—introduce me, dear."

Polly extricated herself from Kate's embrace, began to unfasten some expensive-looking furs which she wore round her pretty throat, and turning sharply round, stamped her foot rather impatiently.

"Charlie, I told you not to come in for a minute or two. Oh, don't stand there at the door, looking so horribly sheepish! Oh, how tiresome you are! you are enough to prejudice any one. Kate, darling, this is Charlie."

Kate's face had grown very pale—all the pleased light had died out of her eyes.

"Polly, dear," she said, even more gently than before, "introduce the gentleman properly to me."

"What a bother you are, Charlie!" again exclaimed the indignant young lady. "Kate, this is Mr. Segrave—Charlie Segrave. We are engaged, and we—why, Kate!"

"Excuse me, Mr. Segrave," said Kate; "please don't think me very rude; I want to talk to my sister. Will you, can you, come in to-morrow? Don't think me rude if I ask you to go away now."

"Oh no, Miss Kennedy; I'm sure you're awfully kind to say I may come at all. Thank you very much, thank you awfully—I'm—I'm—good-bye, Polly."

"Good-bye," snapped Polly. "Kate, did you ever see such an awkward young man? Oh, do go, Charlie, I'm getting so ashamed of you."

The poor red-haired youth managed to back somehow out of the room, and Polly, throwing her arms again round Kate's neck, burst into tears.

"I know you're going to scold me," she exclaimed, "and I know I deserve it, for he is ugly and he is awkward; but he has got such a lovely name, Charlie Segrave, and I thought it would go so sweetly with Polly. Polly Segrave sounds delightful, and I hate Polly Kennedy. Oh, isn't it a pity that he has red hair, and that he is awkward? I'm miserable about it, I am indeed."

"Sit down, Polly, and take off your jacket and hat," said her sister. "We won't say anything more about Mr. Segrave at present. Stop crying, dear; I won't scold you—I will never scold any of you if I can help it. There, darling, see what a nice tea I have prepared for you."

"Oh, cake and lobster!" cried volatile Polly; "and flowers; what beauties! And, Katie, you have rooms on the drawing-room floor! Has that dreadful old screw, Miss Grey, raised your salary?"

"No, dear; we will speak of that presently. Polly, you must be cold, and I have no doubt you are starving."

Polly quickly wiped away her tears, looked relieved at having unpleasant topics deferred, and, warming her hands by the fire, began to chat and laugh merrily. She was a very pretty creature; her eyes were blue, her hair golden and fluffy, her complexion dazzlingly fair, and her small features well formed. Her figure was *petite*, but well proportioned. At the first glance no one knew how shallow and slight was the soul which looked out of those sweet and pathetic-looking eyes; and no one guessed how little lay beneath words which sometimes rose to almost passionate earnestness; for Polly was all impulse and fire, nothing stable about her—the kind of girl who would attract many lovers and be constant to none. Kate had always felt that Polly was the sister who would give her the greatest share

of responsibility and trouble; and as she looked at her to-night, she could not help knowing that some of the fears which she had always entertained for Polly were about to be realised.

"I am so thankful I shall now have a home to offer her," she said to herself. "She is a great deal too brilliant, she is a great deal too pretty, she is a great deal too foolish to be allowed to find her own way in the world. Poor Polly, does she ever, ever think of any one but herself?"

Tea was over, the younger Miss Kennedy had partaken well of all the delicacies which Kate had provided, and now the two sisters drew in their chairs to the fire.

"Kate, I hope you won't be angry with me, I bought this fur to put on my winter jacket; it is not all paid for yet, I owe about a pound, but if your screw is raised——"

"Polly, dear, you know I don't like you to use those expressions. I will settle about the jacket another time; I want now to talk on quite a different matter."

"Oh dear, I did not think we were going to have anything unpleasant to-night; I am so tired."

"No, dear, you are not too tired to listen to me; and I have a great deal on my hands, and don't want to waste these precious moments. I am not going to scold you, do not fear, Polly; I hate being a mentor to you all."

"Oh, you dear, darling Kate, you aren't that—you're the sweetest old thing in the world! Well, what is it?"

"What about Mr. Segrave—you are not really engaged to him, Polly? Tell me all about him, Polly. Was it on account of him you lost that nice situation? You spoke in your letter about getting into a scrape; do tell me all about it, for I am so anxious."

"Oh, it was such fun," said Polly, beginning to laugh; "you know Mr. and Mrs. Reade were so particular, and they said they'd take such care of me; and she told you, Kate, that she'd act as a mother to me; but really now she didn't—or, at any rate, I wouldn't have that kind of mother worrying me. She never even wished me to read a story, and she said I must only take the children for one proper little walk in the day; and it was so dull! Of course I couldn't stand it; and the worst time of all was when I had to go down and sit in the drawing-room with Mrs. Reade. Oh, that drawing-room!—even you, Katie dear, you poor old sober-sides, could not have borne it. All the chairs were covered with brown holland, and there was a table in the middle with Alison's 'History of Europe' and a Shakespeare, and a Cowper, and Heber's poems, and Herbert's poems, all set out at intervals round it. Every second book was Alison's 'History of Europe,' and the rest were those I've mentioned. And could you think of anything uglier or duller? And the walls were hung with prints; and there wasn't an easy-chair in the room, except one for Mr. Reade and one for Mrs. Reade. And Mrs. Reade used to knit socks for the children; and when I was alone with her, she used to get me to read Alison's history. I never took up the same volume two nights running, but she didn't notice, so I know she wasn't listening. She usually went to sleep when I had read for half an hour, and then I used to pull a novel out of my pocket, and go on with it until Mr. Reade came up.

"One day, about six weeks ago, he brought up two gentlemen with him—one was Mr. French and the other was poor Charlie. I had never seen either of them before, but of course I preferred them to Mrs. Reade. When she woke up that night she found them both talking to me, and I don't think she liked it much. Well—oh, dear me, Katie, you don't want to hear this part—of course they both came every night, and the drawing-room wasn't so dull, and I went in debt for a few little ribbons and things. Well, oh dear, oh dear, it's horrid, and the Reades are very angry; but I don't see that I am to blame, for what could a girl do who spent her evenings in that drawing-room? But Mr. French is rich, and not very young; and poor Charlie, he's nothing but a boy, and he's *awfully* poor. But—but—I suppose it is a little awkward—I'm engaged to them both!"

"Polly!"

"Yes, really, Kate; and the Reades didn't like it, and they sent me away in a minute, which wasn't at all kind or Christian of them. Kate, what's the matter?"

"Oh, Polly, I am so shocked—what can I say to you? Have you no feeling? Have you no sense of honour? Don't you know what it means to accept a man's love, to promise to be his always? Polly, I knew you were volatile, but I never, never thought it would come to this! Oh, how thankful I am that I have got that money!"

On the smallest provocation Polly always cried. She shed torrents of tears on the present occasion, and wrung her hands, and bemoaned and bewailed herself, and said more than once that she wished poor Charlie was present. Kate looked at her, and clenched her own hands tightly together, and wondered if anything could ever be made of one so slight.

"I won't scold her," she said at last to herself; "she does not even take in my words."

"Polly, dear."

"Oh, yes, Kate. Are you going to say anything more dreadful?"

"No, dear. I must help you out of this scrape. You shall write to both the gentlemen to-night."

"Oh, dear me, I couldn't! I shouldn't know what to say."

"I will dictate the letters to you, Polly. Answer me one question first. Have you a spark of love for either of them?"

"Love? No; I'm not so foolish. I can't bear Mr. French. Charlie rather amuses me, he's so devoted."

Kate rose from her seat, went to her davenport, and bringing over paper, pen, and ink, laid them gravely before the refractory and silly girl.

"Oh, dear me, Kate, can't we put it off till to-morrow?"

"Write what I tell you, my dear. I have promised not to scold you, but if you do not write these letters, and allow me to post them to-night, I will take steps to-morrow to send you to a boarding-school, where I trust you will learn sense."

"Katie—why, I'm seventeen!"

"No matter."

"And you haven't got any money?"

"Yes, I have. Will you write your letters?"

Polly seemed so amazed at this latter fact that she became quite sober, and even took up her pen thoughtfully."

"Oh, Katie, if you are well off you can buy me one of those new winter jackets!"

"Write your letter, Polly."

"What am I to say? Whom am I to write to first?"

"It does not matter."

"I'll begin with Mr. French—I hate him so. Katie, I know exactly the kind of jacket I want—trimmed with grey fur, and tailor-made. Well, go on. What am I to say to Mr. French?"

"Begin—'My dear Mr. French.'"

"Yes—he's not 'my dear,' but that's written."

"'My sister Kate says that there must be an end to our engagement. I have found out that I made a mistake, and that I am much too young to marry any one for a long time.'"

"Oh, now, Katie," interrupted the writer, "I vow and declare I will never be an old maid of twenty. Well, what else? Won't Mr. French be in a rage!"

"There is nothing more, Polly. Sign yourself,

'Yours sincerely,
'MARY KENNEDY.'"

"That's written," said Polly. "I think it a very short, rude letter, but I really don't care a bit. He deserves it, although of course he's very well off, and he promised me diamonds. He said, too, that my eyes were brighter than any diamonds. Poor fellow! He could say rather nice things sometimes. Well, Kate, how stern you do look!"

"You have got to write to Mr. Segrave, Polly."

"Oh, dear me, poor Charlie! I'm sure he'll drown himself. Well, Kate, what a cruel tyrant you are. Here, let's begin. I'm getting so sleepy. 'My dear Charlie.'"

"No, Polly, you're to say, 'My dear Mr. Segrave.'"

"Oh, how ridiculously stiff! Well, here it is written. What next, Kate?"

"Say this," answered Kate; 'My sister says she will see you to-morrow, if you will call at eleven o'clock; but she wishes me to tell you now that our engagement must be quite at an end.

'Yours sincerely,
'MARY KENNEDY.'"

"I never wrote two nastier letters," exclaimed Polly. "Well, are you satisfied now, you dear old dragon?"

"Poor Polly! Are you ever going to learn sense? Are you ever going to learn what true honour means?" answered Kate in a sad, low voice. "There, dear, go to bed; you are as you are made; but you might ask God to help you to be a good and a true girl. Oh, Polly, can you sleep happily to-night if you have pained one honest heart?"

Polly looked up at her sister. Her volatile nature was touched; her beautiful eyes filled with tears, and she threw her arms impulsively round Kate's neck.

"I do love you," she said. "I don't want to pain you;" and then she went upstairs to bed.

Kate posted the two letters herself; then she sat long by the fire. She was as energetic, as practical, as strong, as Polly was weak and vacillating. She had never in all her life lost time in idle regrets or in vain musings.

"I must take care of the girls now," she said, half aloud; "it is my life-work, and God has given me the means to do it. Perhaps some day a good man may love Polly, and his love may raise and strengthen her—and—and—save her. Such a thing is possible, and I almost think I know. No, no, I won't dwell on that; time enough to face the trial when it comes. The other two girls are easier to manage than Polly, and they all love me. Yes, my duty is quite plain. I must get that house as soon as possible, and we must all live together. What a strange

will my uncle has made. I am not at all likely to marry. Well, it is all six years ahead. I have six years to look around me, and surely in six years I can provide for the girls. I am much better off than I was a week ago, and yet, somehow, even already I feel more full of cares. Well, I am not going to be over careful. I must be always their bright Kate to the girls ; and poor Kenneth —poor Kenneth—I had better not think about him."

Then Kate too went up to bed, and laying her head on the pillow, was soon fast asleep ; for although she had plenty of cares and worries, and although even now Polly considered her old, she was but twenty, and had all her life before her. At twenty it is impossible for any amount of worries to make a bright and strong girl wholly miserable, so Kate slept and awoke refreshed, and had no idea of shirking her duties.

"To-day," she said to herself, "I must see Mr. Segrave, and do what I can for him, poor fellow; and then I must go and see about our house."

(*To be continued.*)

THE LOGIC OF THE GOSPEL.

"Come now, let us *reason* together, saith the Lord."

THE Origin of Evil does not come into our theme to-day. We accept the fact that a busy devil has injected sin into the human race ; that men are fallen from what they were, and are not what they may be.

On looking facts plainly in the face, this conviction of personal sin is inevitable. Your parents—and mine—were sinners ; therefore, as grapes are not gathered from thorns, nor figs from thistles, you must, by your very birth-right, be a sinner, too. "Ah !" you say, "that is original sin ; I do not hold myself responsible for what I cannot help." Well, my brother, *God* does, and after all, that is the main point to look at. You are not responsible because you are born a sinner, but because you reject God's offered salvation from sin.

If there were no redemption, original sin would lose its condemning power ; but in the face of a "so great salvation," his share in fallen human nature is enough to sink the man who rejects God's way into the lowest hell. God condemns no man because he has original guilt, but only because he *chooses to keep it.*

Actual sin must be looked at from another standpoint. Any one committed sin, of thought, word, or deed, must inevitably and logically shut the sinner out of heaven. God and His attributes are eternal, and cannot change ; and God and sin cannot co-exist in the same place. From its earliest pages the Bible makes this clear, by type, by incident, and by direct statement. Picture a home perfect in its surroundings, its happiness, its love,—an earthly paradise. Let one of the sons become a drunkard, and display his foul habit within those sheltered walls,—where is the happiness now, where the unity, the peace ? The one plague-spot has infected all. Greater far the contrast, more disastrous the effect, were it *possible* for a man with the defilement of sin upon him, to set foot within heaven. Heaven would not be heaven, if amongst its countless thousands one uncleansed sinner stood.

And what is sin ? Murder, adultery, theft, lying,—how glibly we run through the list, priding ourselves so far on cleanly hands. Wait a moment. Man looks on the outward appearance, God on the heart. Do you not know that hatred in the heart is murder in the sight of the High and Holy One ? That looking with an evil longing, even though it be quickly repressed, is equal to the most flagrant sin ; that coveting is as fatal as theft ; and that God's truth does not mean mere absence of false speaking, but truth of thought and intent in the very "inward parts" ? There are four definitions of sin in the Bible. Note the *crescendo* in the scale, the gradual narrowing of the meshes, so that none can slip through :—

"Sin is the transgression of the law."

"All unrighteousness is sin."

"Whatsoever is not of faith is sin."

"The thought of foolishness is sin."

Well, what then ? "The soul that sinneth, it shall die," most just though awful doom; and with God's light shining down upon us,—the white light from the judgment throne,—which of us does not cry, "Unclean" ? "If we say we have no sin, we deceive ourselves."

Thank God, friend, you have got so far ; just go on a step further to the next verse. "If we confess our sins, He is faithful and just to forgive."

Just to forgive,—why, we have only now admitted He was *just* to condemn." Exactly so. God's justice *compels* Him to condemn the impenitent sinner, but that same perfect justice *compels* Him, in no less degree, to welcome every sinner who shelters beneath the blood of Christ.

Before a sinner can enter heaven, God's justice demands that the penalty earned by the sin of *each individual*—note that—be paid ; and that penalty is death. No human effort could accomplish this payment ; a *man's* death could not, in justice, pay the full penalty for all humanity, the less could not atone for the greater ; nor could any human example, or any scheme of law, suffice to raise man to what God's holiness requires. There is but one way, and it is perfect. God promised it to fallen man from the first ; foreshadowed it in sacrifice, and fulfilled it in the stupendous marvel of the Incarnation, Death, and Resurrection of Jesus Christ, His only Son. Here was One who, by His inherent Godhead, so far outweighed all the human race, that His one atoning death was a just substitute for the death of sinning mankind. He alone was sufficient to pay the penalty in our stead. In our place He suffered, and for our sin He was bruised.

Therefore, by this marvel of redeeming love, God is "*just* to forgive us our sins."

Then, are all men forgiven ? Nay ; for we noted now that each had *individually* earned the penalty and was condemned, not as a part of sinning humanity, but as a single sinner before an offended God. God and the sinner stand alone, face to face, in this awful condemnation. So they stand in regard to the atonement for sin. One by one, the souls condemned must personally forestall the penalty by sheltering beneath the infinite atonement of Christ. It would not be *just* that particular sin should be met by a general atonement. Christ Jesus suffered in your place ; step into that place as a condemned sinner to-day, and say, "Christ died here in my stead, therefore there is now no doom for me." God's justice cannot demand a second payment,—there will be "no condemnation" for you.

What must the condemnation be,—how awful, how despairing—if this stupendous sacrifice was necessary to save you from the certain wages of sin ! This day, my friend, face that condemnation, and turn from it to the waiting Saviour, who loved *you* and gave Himself for *you.*

ABOUT OURSELVES.

LOOK out next week for "SQUALLS."

See paragraph "Great Preparations," for entertaining details of our Prize Spelling Chases—past and future.

The very last of our Literary Competition Results is given on page 283. The MSS. already stamped for return will be sent off in due course.

The Spelling Chase Results are promised for next week ; shortly after, we shall announce the Prize Winners in our "£100 Competition," and in due course, those who have been successful in our "Definition Competition" (Husband and Wife), and our Double Acrostics, will see their names in print.

The amusing "Thirty Nouns" Competition, announced in our Number for Feb. 18, page 254, closes on March 24. It will take some ingenious manipulation to get such dissimilar words together.

Our last week's Competition, "Please Stop !" bids fair to be a grand success. Plenty of time to try for one of the five Prizes, as it remains open until March 31st. An invaluable and entertaining exercise. Ask your Bookseller for "A.1." for Feb. 25th, or send 1½d. direct to our Office.

Like all creation, "A.1." is waking up this spring-time to new life and vigour. Coming Numbers promise to be first-class. Fresh effort on the part of editor, author, and artist, will be met by fresh effort amongst our readers. Who will canvass for new subscribers ? We shall gladly equip you, on receipt of name and address, with Specimen Copies and leaflets, free.

GREAT PREPARATIONS.

BETWEEN TWO SPELLING CHASES.

SUCH is our unenviable position ! In one room lies a huge brown sack, containing a *selection* of Spelling Paragraphs,—oh ! so droll—for our unfortunate artist to look through, in preparation for the Grand Illustrated Pages of Results in next week's Number (March 10th) ; in another room sits an equally unfortunate author, racking brain, and exploring dictionary, in search of suggestions for the new Spelling Chase promised March 24. We hope no harm will come of it ; we must watch over those two !

The new Competition will be very sparkling ; we hear the author chuckling over some of the "nuts to crack" ; it will only remain open three weeks, so competitors should not lose a day. Rules will be given March 17th. Order early for your friends ; you will earn their gratitude by such a pennyworth.

The most powerful king on earth is working ; the laziest, shir-king ; a very doubtful king, smo-king ; the most common-place king, jo-king ; the leanest one, thin-king ; the thirstiest one, drin-king ; the slyest, win-king ; and the most garrulous one, talking.

The chief end of a college is to fit, in the best way, the most men and women to be and to do what nature gave them talent for.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,

Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

"After dragging the poor seal for nearly a mile, he found he could get no farther."

CHAPTER XXVIII.

A CHANGE COMES O'ER THE SPIRIT OF MY DREAM.

WHILE the short summer lasted, and when the icebergs were small, or comparatively so, with everywhere plenty of open water between, and the wind scarcely ever rising above a gentle breeze, it was very pleasant in those Arctic seas—wondrously silent and wondrously strange! The ice had hitherto been almost flat, while the sea looked dark, almost inky black, in fact, around them. Quietness reigned on all sides. You could hear the plunge of a seal, as it took the water, nearly a mile away, and the sullen, booming splash of the dark narwhal, or sea unicorn, at an equal distance. Now and then, on a piece of floating ice, a bear would be seen, looking very forlorn indeed; for he seemed to know that on his snow-clad barque he must eventually die, and die by inches, unless it brought up at last on some coast, when he would step on shore and begin life in a new land.

Sharks came alongside now and then, in twos and threes; vengeful-looking monsters of terrible strength and power, and with those cunning, leering eyes that justly entitle them to be called the demons of the seas. They would rub against each other or the ship's side, in seeming amity and peace, till something was thrown overboard—it might be only a bone—when, for a few moments, they would chafe and fight like tigers. Katie trembled once to see one of these awful creatures, that had been beaten off by a bigger brother, attack the copper-sheathed rudder, on which he fastened like a terrier dog, lashing the water around with his body and tail in his futile and agonising rage.

But few such incidents disturbed the calm of every-day life. Gradually, however, as the ship got farther north and east, a change came o'er the spirit of the scene: the ice-bergs grew bigger and more fantastic,—grew, one might say, from mole-hills to veritable mountains. There was seldom, as yet, however, much danger to be apprehended from them, though even a child could have understood how small a chance the largest and strongest ship that ever sailed would have had among such ice, had it come on to blow.

But the sea remained open, as a rule. What I mean to express is, that the heavy bergs were in streams, floating barriers that the vessel had to steam slowly through; often even rubbing sides with them, and seeing for a time about as little horizon as one does in a forest of pine trees. When some distance off one of these berg-barriers, with the hot, midday sun glittering on them, their beauty and radiance defied description. Our heroes could only look and admire. The tops of these floating ice-hills were nearly always covered with snow, though there were exceptions; for when a berg becomes undermined by the action of the water, it topples over, and the clear side comes uppermost.

The prevailing colour of the ice is pale green, but owing to the cleavage, there are thousands of prismatic ridges, and it is this fact which accounts for the strange and ever-changing glory of colour as a vessel sails past them.

Chips was very often by Katie's side, or she by his; for he was a roughly-bound, walking cyclopædia in all matters concerning the Arctic regions.

"Have you ever been in a storm," she asked him one day, as they were steaming through a stream of gigantic bergs, "among ice like this?"

"Aye, missie, more'n once."

"How terrible it must be!"

Chips was silent for a little space before he replied:

"It is terrible enough, Miss Katie; especially if the sky be dark, as it usually is, and a snowstorm blowing on deck from stern to stem. Especially, missie, if you have no steam-power, and only daring to show a storm-jib, maybe, and some morsels o' cloth, not much bigger than table-napkins, as I might say, and the wind a-coming gusty-like round a berg, and taking ye all aback; especially if you hear every now and then a sound like fifty pieces of artillery, all fired at once, and know as how one ice-hill has smashed another to smithereens, and that were the ship there, she'd be sunk with the falling pieces, even if she weren't in the squeeze,—sunk, as sure as ever village was buried by an avalanche! Aye, missie, and more'n once we've had to make fast by ice-anchors to a bight in the biggest berg we could find. I've been four and twenty hours in such a situation, and I couldn't tell you now whether we felt safest when the berg turned its back to the storm, or when it wore round, and the green, cold waters made a clean breach over us. When the side we were fast to was on the lee, we could see and hear the chaos; and awful it was, when there was nothing to be seen for the drivin' spray. Yes, it were awful! But ah, missie, we were in God's good hands, and I reckon it matters little where we dies, after all.

"But, Miss Katie," he continued, after a pause, "these great bergs don't move so fast nor so viciously as the little ones do in a storm. My dear young lady, a stream o' pieces, maybe only fifteen to forty feet square, is a fearful thing to battle against. It is all a case of good helm. Let them hit ye stern on, or hit *them* stern on, and it's all right; but if one is hurled on ye anywhere amid ships—bless you, then there is nothing for it but sink.

"We saw the barque *Ranger* turn turtle, miss, almost afore our eyes, just after coming through a stream of flat, lumpy bergs. She'd been stove, and they'd heeled her over a bit, to get blankets, and such, on the hole. Well, it might have been all right; but clouds banked up to windward, and a squall came roaring on. It struck us hard, but we weathered it. But when the blue shone above us again, there was no *Ranger* there!"

"How sad! And are ships always lost when struck with ice?"

"Not if they can blanket up the hole, and set the carpenters at work; but if alongside heavy ice, miss, they lose heart, and get on a berg, bag and baggage. By-and-by down goes the ship, and their hardships begin in earnest."

"And these, at times, are dreadful?"

"Too dreadful, miss, for such as you to think about!"

* * * *

The *Oonalaska* had not made the progress that had been expected, and when July was wearing to a close, and there would be but a few weeks more of open sea, Captain Boyd and his officers found themselves sternly confronted with the question, whether to push on, or, turning farther southwards, to seek for more open water, and retrace their knotage back along the Alaskan coast.

It was to be a war with the ice and the elements either way, and so council was held in the snuggery. Chips was one of the speakers. When asked for his opinion, he gave it in very few words:

"Ye see, gentlemen," he said, "it's been an exceptional season all through, and them's the very words I said to Jackson in that first tough blow we had when we got foul o' that slush stream. Well, the season ain't ended

yet; but I've never seen such clear weather in these seas afore, and I never saw clear weather in summer that didn't forebode an early winter. Howsomedever, it'll be a matter o' froze-up at the best, and if I were master o' th' *Oona*, I'd say, let us winter among thinner ice."

"Winter, Chips!" said Nat, senior. "Why, we hardly thought of wintering!"

"Nor do I think it will come to that," Captain Boyd said. "I think Chips has taken a pessimist view."

"What ship's that, sir? Pessie—mist. Well, mist here or mist there, you'll find old Chips isn't a long way out of his reckoning."

"May I say a word, gentlemen?" said the sturdy Scotch engineer.

"Certainly, my dear sir; that is what we asked you here to do."

"Then I'll say two words. Ahem! Push on."

"What, with the certainty of being crushed?"

"Things may be better, sir, farther ahead. But I repeat, push on. Never gang back. There's neither luck nor sense in it."

"Scotchmen, I believe, never do," said Nat, senior, smiling.

"Never, sir. Even when the battle rages fiercest; when hope itself seems a sin, our bold Scotch regiments never yet turned back.

"Good-day, gentlemen," he added, picking up his cap with one quick uneasy glance at the American. "Good-day; dinna turn tail, sir. I wouldna for a' the Yankees ever born."

But despite the advice of the worthy Scotchman, it was finally decided to steer for the south and west.

For a time it seemed that all was going well; and, as far as the size of the icebergs went, and the more open spaces in the sea, hope of soon getting clear was gradually merging into a certainty.

But mist and fog once more settled over the ocean, and, one day, they found themselves in a kind of *cul de sac*. They had been steaming for ten hours in open water, between two packs of heavy bergs, when suddenly, through the fog, the bergs loomed up ahead. To retrace their way was the first thought of the mariners, but this plan was finally abandoned, and they boldly took the ice. Then came a battle with the bergs such as they had not yet engaged in; for the farther they advanced, the more closely were the pieces packed and banked together.

It was toilsome, weary work. Men were constantly over the side, easing the bergs aside with poles; but the *Oonalaska*, though aided by steam and sail, could make hardly half a mile an hour of headway. Still they struggled on. Jack, in command of a small party, went on ahead of the ship for several miles, hoping to bring back news that the open water was within a measurable distance.

This little expedition was hazardous in the extreme. It is a terrible experience that of being lost in the mist on a highland, moorland, or mountain, but to be lost in the fog of an Arctic sea is, nine times out of ten, to have entered into the valley of the shadow of death itself.

Jack and his party carried both guns and compasses. They might need both before they saw the *Oonalaska* again. The fog-horn was kept blowing from the time they started, and when they had been gone about an hour, rifles were fired every minute.

As no signs of open water were apparent, they now began to retrace their steps. The trail they had left would guide them, and this they followed. For some time they had heard neither fog-horn nor rifles. This they thought somewhat strange, but went on for a time cheerily enough. Suddenly they stopped, puzzled and dismayed. For right across their trail a long black shadow had fallen.

It was water. The great ice-stream had split in two, and even as they stood there, the canal was widening fast. To make matters worse, the wind began to moan across the snow-field, and raise wavelets on the water, that lapped and broke on the ice-edge at their feet. The situation was one to dismay the stoutest heart. Try to realise it, reader, if you can!

CHAPTER XXIX.

AT WAR WITH THE ICE.

THE men who stood with Jack on the ice were hardy seamen, fellows who had been in Arctic dangers of every sort, and their officer now looked to them for advice.

"There is nothing to be done," said one, "absolutely nothing, except to fire a cartridge about every five or ten minutes. They may hear it, and send to our assistance, but I doubt it."

Just as he spoke, the sound of a heavy gun came roaring over the floe, and far away it seemed.

After firing, those on board listened, but listened in vain for a response.

Something then must be done, and done at once.

Chips was summoned.

He grasped the situation in a moment.

"They've never been fools eno' to go on out o' hearin' like, sir. No, the pack has split in two. Now, sir, here's what I'd do, and do quickly. Lower a boat, and let men drag it on after old Bob-a-link and me.

The men were called away immediately.

Chips' last words to them were these:

"Follow our trail all the way. Never once get off it. Don't be misled by the first trail. We may keep that, or we may not."

They were away out of sight in the mist almost before the last words were out of their mouths.

"Hurrah! lads," cried the spectioneer, who was in charge of the boat to be dragged. "Hurrah! lads. Now for it."

Then they disappeared, and silence reigned on board the *Oonalaska*, broken only at regular intervals by the booming of the signal gun.

The sails were kept a-shiver,* but fires were banked. There was nothing in the thoughts of any one on board except the startling calamity that appeared to have befallen them.

Miss Graves and Katie sat in the semi-darkness of the saloon; the gloom suggested lights, but this would have only made it seem more dismal outside. Neither Katie nor her cousin spoke much, though the frequent uneasy sigh, or the impatient word or two, told of the great anxiety in their hearts.

But Old Sally must wring her hands every now and then, and weep and talk through her tears.

"Poor dear gentleman! Ah! I'm sure this is a bitter day for Old Sally. Ah! D'ye think, ma'am, there's any hope? Ah!"

"Hush! Mrs. Bennet, hush!"

"If I'd only gone with 'em, ma'am! Ah! But my poor back, you see."

* This term is now seldom heard from any but Arctic sailors.

The two Nats came down presently, to try to cheer the ladies up—a vain attempt.

Meanwhile, steadily and silently, up and down the deck paced Desmond and Captain Boyd, stopping only for a moment or two to listen, after each gun was fired.

One hour, two hours, and three hours passed slowly by, but no voice or sound came up through that dismal wall of mist.

"This suspense is bad to bear," said Captain Boyd at last, wiping his brow, on which beads of perspiration were standing.

Just as he spoke, faintly up the wind came the sound of a rifle.

Again the gun thundered out—a welcome this time, and in a few minutes more Jack himself came smiling up the side.

"Heaven be praised!" was all the captain said, as he shook Jack Silk's brown hand.

"Go down below and report yourself," said Desmond.

"Give me your hand, then."

Desmond led him down to the saloon, for poor Jack was snow-blind for the time.

The ladies shook hands with him, but neither spoke, for tears were rolling over Katie's face.

She was glad Jack could not see them.

The plan of search adopted by Chips and Bob-a-link was sensible. They ran along the water's edge, firing every now and then, and at length, to their great joy, from over the black canal came the sound of Jack's rifle. But they had a weary time to wait for the boat, and ere it was launched, the water was no longer a canal, but a broad lake. How the men bent to their oars, and how the boat sped on, need scarcely be told!

The men worked harder than ever now to get the ship into the open water. For every soul on board now knew the difficulties and dangers which they would have to encounter, did winter extend his icy grasp over the Arctic Ocean while they were still far up in northern latitudes.

Working on the ice, however, was not unattended with risk: for at this season of the year the snow on top of the icebergs is soft, and one sinks in it as he walks. Moreover, the edges of the pieces were sadly undermined and unsafe. This was soon only too apparent, for in more than one instance it gave way, precipitating a man into the black, cold water, and it went surging along like a mill-race between the bergs.

But in each case assistance was speedily at hand, and a rope was thrown in time to save the luckless sailor from being either sucked under the ice, or pulled down by a shark.

There is no more terrible monster probably swims in the ocean than the Greenland shark. They are nouns of multitude, too, in these seas; it would be impossible even to guess at the numbers in a shoal; they may be but in hundreds, but they may be in thousands. Their terrible ferocity makes them an easy prey to seamen who care to catch them, for they will fight for and seize upon a baited hook, however often it may be thrown into the water. They have seen their companions, after swallowing a suspicious tit-bit, dragged struggling on to the ice, but this circumstance does not seem to influence the brutes in the slightest.

Boy Bates and Turlough O'Brien were busy on the ice with the others. The former especially thought it fine fun, and Turlough's wit and humour, with snatches of Irish song, kept every body in good humour.

But all this was presently extinguished very quickly and completely indeed, for, in saving his little shipmate, Bates, the snow

gave way under poor Paddy, and down he went.

He was dragged out with difficulty after some delay, and sent on board to change his clothes, and have a jorum of smoking coffee.

The open water was made at last, and had it been clear weather, Captain Boyd would have now known in which direction the great canal trended. As it was, he steered for the south and east, only to find in less than an hour that a heavy pack of ice once more confronted him.

There was every prospect now of a gale of wind, and as the glass sank but slowly, it appeared as if there might be a week of it.

The wind had an uncomfortable sough in it. Beginning with a low moaning sound in the rigging, it would steadily increase to almost a roar, then gradually die away again. But every gust was stronger than the last, and every interval briefer, till it ended in one steady roar.

Then the fog began to lift at last. This was some comfort, though the sky, when it did become visible, showed only an even, dark-leaden surface, with never a strip of cloud visible, because it was all one cloud. Right away to the north, however, was a long patch of light, and from this direction the wind blew.

All around the ship was a sea of ink, bounded at no great distance by the white and dazzling ice. It was in a lake they were, then, and it did not tend to raise their spirits to notice that the area of its surface was getting gradually smaller, and that before many hours the bergs would hem them in entirely.

But as yet there was little motion in the ice-pack. This was accounted for from the fact that the wind blew from over the ice. Had it been the other way, great waves would have rolled in, and the bergs would have risen and fallen with terrific noise, as they crushed and ground together.

Smaller and smaller grew the lake of dark water. And now the captain sent boats to survey its surface, and the *Oonalaska* was finally "rove" in through the most likely ice to secure her safety. This was a patch of what is called "bay-ice," low and flat, and of no great thickness. Pressed upon, however, by the huge bergs on every side of it, it was soon evident that even this could be a source of real danger. The berg ice became packed, that is, thrown up in pieces one after the other, like cards in a pack.

Meanwhile the noise was terrific. There was the shriek of the wind as it tore through the rigging, and the incessant indescribable noise of the ice along the vessel's sides; so great were the two combined, that hardly could even shouting be heard on the deck.

The danger of being crushed became more and more threatening as the time went by; Captain Boyd therefore issued orders for bags and provisions to be got on deck, and everything put in readiness to leave the vessel, should the worst come to the worst. He had no desire to alarm the ladies, but in all cases of danger this worthy sailor knew it was best to be prepared.

There was little peace or comfort, either, at dinner on board that day, for if any one ventured a remark during a momentary interval of comparative silence, the last part of it was almost certain to be lost, so the best plan was to nod and smile and say nothing.

As gradually as it had commenced, however, did the danger pass away. The wind died down, the ice had become still, and by breakfast time the sun was shining, and hope reigned supreme once more.

(*To be continued.*)

OUR VISIT TO A SILVER MINE.

By Mrs. ORME-WEBB.

I HAD always a great desire to see a silver mine. I had already been down the largest coal mine in England, and had found it disappointing on the whole, but a silver mine was a very different thing. My ideas upon the subject were somewhat crude, but I specially looked forward to seeing the gleam of silver among the ore. My delight, then, was very great when one evening, during our stay in San Francisco, a friend offered to give us an order to visit the great Comstock Mine, and it was not many days before we found ourselves at the little station of Reno, which was *en route* for our destination.

Our first thought was to go to the hotel and secure rooms. We asked which was the best hotel,—the porters looked at each other in wonder. What did we mean? There were no hotels in Reno. However, we finally engaged a very comfortable room at the station, and were soon discussing dinner in the refreshment room, where we became the centre of attraction to a party of miners, who were at another table, and who turned round every now and then to refresh themselves with a good stare at us.

The next morning we started for Virginia City, near which is the Comstock Mine.

"Is it a large town?" I asked, with a traveller's thirst for information.

"Wall, I guess it doesn't beat New York," was the reply.

A single line of rail connects Reno with Virginia City, and our short journey led us through a very uninteresting district, reminding us of Yorkshire moors. At last we reached a bleak hillside dotted with small wooden shanties, and this was the "City"! A strange place it looked; and as we walked through the long one-sided street, we were astonished to find that we were by no means in an uncivilized region, in spite of appearances. There was a large hotel and a public hall, while the people whom we met were all dressed in good black clothes, for miners when above ground are most particular as to their costume. We made our way to the mine, and after a chat with the manager in his office, we were taken into a long dark place, and were shown into two little dressing-rooms, in which were large baths. Presently a man brought me some blue serge clothes, and a tarpaulin coat and sou'-wester hat. I did not quite relish it, but the man informed me that I must not go down with any of my own garments on, as if I did so, I could never wear them again. I donned my sailor's dress, and opened the door to find my husband arrayed in a similar manner. I regret to say he greeted me with roars of laughter, so I conclude my appearance was not calculated to inspire admiration. Two guides now took possession of us, and led us at once to what looked like a black hole, round which were gathered a number of men, who all surveyed us curiously.

"Now, marm, in you get, please." And before I had time to hesitate, I was quietly lifted into the "cage," which is really a small square box without a lid. "All ready? then all right." But the next moment I felt that it was all wrong, for down we went, and the water pouring upon our heads out of the ground, soon filled the cage up to our knees!

"How do you like it?" asked my husband.

"Oh, very - much - in - deed," I gurgled, as one stream of water trickled down my neck, and another made its way into my mouth.

Presently we stopped with a sudden jerk, and scrambling out of the cage, found ourselves at the entrance of a long, low passage. This was the Cuto Tunnel, which connects this mine with another one. We had only gone half-way!

At last, breathless and wet through, we arrived at the bottom of the mine, and made our way into a tiny place called the "cooling room," where cold air is pumped down to the miners, who, at this great depth, can only work for five minutes at a time, and then go for a breath of air to the cooling room. In the hottest part of the mine, some of the men only work for half an hour a day, and for this they receive very high wages. When we remember that the depth of the Comstock Mine is 2,900 feet, it is not surprising that the heat is very great.

We were now given candles, and started for a walk into the mine itself, while the heat became more and more intense. "Will you go on?" asked my guide every two minutes. "Of course," I replied each time, though I let him take my candle. And presently a horrible sensation seized me, everything appeared blue, and I felt as though I was sinking into the sea, and struck out to swim. Instantly my guide picked me up, and conveyed me back to the cooling-room, covering me with grease from the candles on the way. When he had carried me there, by turning a handle, he produced a delicious rush of cold air, which very soon revived me.

My husband went on into the hottest part, where the heat was so intense that he covered his chest over with his serge blouse to keep it from being scorched.

Meanwhile I sat in the dark little cooling room on an old tub, while my guide seated himself on the ground, and told me all about himself, how he had a wife and baby far away in Cornwall, and how he hoped soon to be able to send for them; and as he talked about them, the poor young fellow's eyes filled with tears. How strange it was to be thus sitting 2,900 feet below American soil, listening to the hopes and fears of this Cornish miner! Now and then grimy, panting men came in to refresh themselves with cold air, stood for a minute listening to our conversation, and then, with a nod to me, went back to their work. One man in particular I noticed, who came in, and after his whiff of fresh air, threw himself down in a corner, and lay there for some little time. My guide got up, and poured some water from a filter into a tin mug, and handed it to the man, who presently got up and went out again. "It's only Joe," said the guide carelessly; but before I could ask who Joe was, my husband returned, and we made our way back to the cage, and, after a swift ascent, once more found ourselves above ground.

The men crowded round the cage and helped us out. Then a sudden thought struck me. "By the way, excuse my mentioning such a trifle, but where is the silver?" Until that moment I had utterly forgotten it; and I began to wonder what we had gone down the mine for at all! Then I learned that the actual silver in the ore one can never really see; but at least we had seen the mine itself, and some of the miners at work. We found warm baths awaiting us, which were most acceptable; and then, after bidding goodbye to the miners, we retraced our steps to the station, and returned to Reno, utterly tired out with our underground experiences.

"I made a promise to present the happy pair with a specimen of the place after it was 'drawed through the telescope.'"

IN this advanced and enlightened epoch, in the annals of that portion of Africa's dark-hued race which has been transplanted to American shores, where the Sambos, Dinahs, Bills, and Sallies have been metamorphosed into Mr. and Mrs. Samuel Johnson, and Mr. William and Miss Sarah Johnson, the discovery of a genuine old-fashioned darkey may be considered a matter of just congratulation. I do not think that, after mature consideration, I could recall a better specimen of the unadulterated article than my dark and philosophic friend "Uncle Hamp."

Our acquaintance, which to me has been an unfailing source of profound entertainment, began in this manner: I had just purchased a "cord of good seasoned ash and hickory." These were the words, the very words, in which the former owner had described it to me, and which, moreover, had induced me to close the purchase as I stood on the curbstone and very learnedly inspected it.

I very much wondered mentally which was the ash and which the hickory, but did not dare to bring down on my defenceless head the derision of the wood-hauler. I had heard that persons in higher walks of life sometimes failed in veracity and honour, but the confidence was unbounded and sincere which I reposed in that wood-hauler, perched on the top of his ware, and clad in homespun jeans, woven in the loom under his own roof, mayhap. Beneath this coarse exterior, I thought, lie that rugged simplicity, and that strict integrity, which have handed down the names of some of these old pioneers to undying posterity, and which so many bewail as strikingly deficient qualities in the rising generation.

I paid him a liberal price for the cord of wood, because it was of ash and hickory. My next wish was to discover some one who could cut it into suitable lengths for utility, and a young African offered to send some competent person to my assistance. I heard his shrill voice rise above the din of the traffic, in a call of "Uncle Hamp—Uncle H-a-m-p-p-p!" Presently came the response in deeper and cheerier tones, "Yes, my belovéd, I'm a-coming!" and the owner of the tones hove in sight. He wore a cloth wrapped *à la* Turkish turban around his thick grey wool; the huge, shapeless, and dilapidated shoes which are so characteristic of the old-time darkey; and garments so artistically patched, that it would have taken no small amount of examination to have decided what were their original materials. In his face, shrewdness and simplicity held an equal sway. The saw-horse and saw, which he carried, proclaimed his vocation.

"Well, my dear baby," he cried, as he came up with a winning smile on his countenance that instantly warmed my heart towards him, "I'spects I'm coming 'round right in de nick o' time, as de alligator said when de man fell overboard. I observe from dese surroundin's dat my presence is absuleetly desired," continued Uncle Hamp, putting down his burden, and regarding my late purchase with the eye of a connoisseur.

I assured him that his conjectures were correct, and asked his opinion of my purchase, which he immediately gave; it was, "dat de load wuz a werry comfortable one ob its kind, but couldn't okupy de fust position in society."

"But," said I, somewhat bewildered by the incongruous reply, "I thought that ash and hickory were considered the best of fuel."

"Yes, my preshus child, so dey iz, and dat's just why I make dese few insinerations," responded Uncle Hamp, with a deprecatory shake of his head, "kase dere ain't none of eder in complete de collection."

"What?" I cried incredulously.

"De whole trufe, an' nuthin' but de trufe," replied Uncle Hamp impressively. "Yer Uncle Hamp won't lie 'bout such triflin' insignificances. Mos' ebery stick's red oak, an' green at dat."

"But the wood-hauler said it was dry through, and that it was ash and hickory," cried I, loath to believe the horrible depravity of that homespun-clad man, in whose honour and simplicity I had so firmly believed.

"Oh, my dear baby," said Uncle Hamp, as he regarded me with undisguised commiseration, "dem same clodwhoppers is so deceivin', so awfully deceivin'. Dere's not a bit ob calculation to be put in 'em in de least."

"Well," said I faintly, a perceptible distrust for rural persons in homespun gradually stealing into my breast, "do you suppose there is a full cord of wood there, then?"

"Now, my darlin', I dunno but what dere is," he replied, reflectively. "Dere may be jest a few pieces dat ain't here what orter be; leastways and howsomever, I couldn't come at it noways 'cept as a cord, takin' into viewance all dem knots and crookednesses."

After a short parley, in which I discovered that Uncle Hamp was no amateur at bargaining, it was agreed that he should be paid the sum of seventy-five cents, which he called a "few fragments," and for which specific amount he promised, in his peculiar vernacular, to "grind de timber into suitable fractions."

"You see, my preshus baby," he said, as he began "to pinch off a small bit," or, in more intelligible words, to saw one of the sticks asunder, "dis yere wooden animule is de kritter what carries yer Uncle Hamp fro dis vale ob tribulation. When I don't have no sawin' to do, I begins to feel oneasy like as grub-time comes, an' I hain't got no vickels to put under my waistband; but when I've got plenty ob sawin' afore me, I knows dere 'll soon be a few fragments comin' along dat 'll get me enuf vickels to las' me a spell, an' I don't feel no restlessness wuth relatin' ob. I just sez, 'Keep quiet, honey, an' don't make no disturbance to yer Uncle Hamp; jist wait a bit, and de fragments an' de vickels will soon be 'round.'"

Uncle Hamp completely ignored those valuable works known as lexicons. His fertile brain, however, never allowed his volubility to suffer for want of words to express his ideas; with an utter disregard—we might almost say an amusing disregard—for classical English that was certainly amusing, and possessing an inventive genius that was at once astonishing and bewildering, he readily coined or introduced some queer term, hitherto unknown, which he adopted with a

seriousness and composure that affirmed his perfect confidence in its appropriateness.

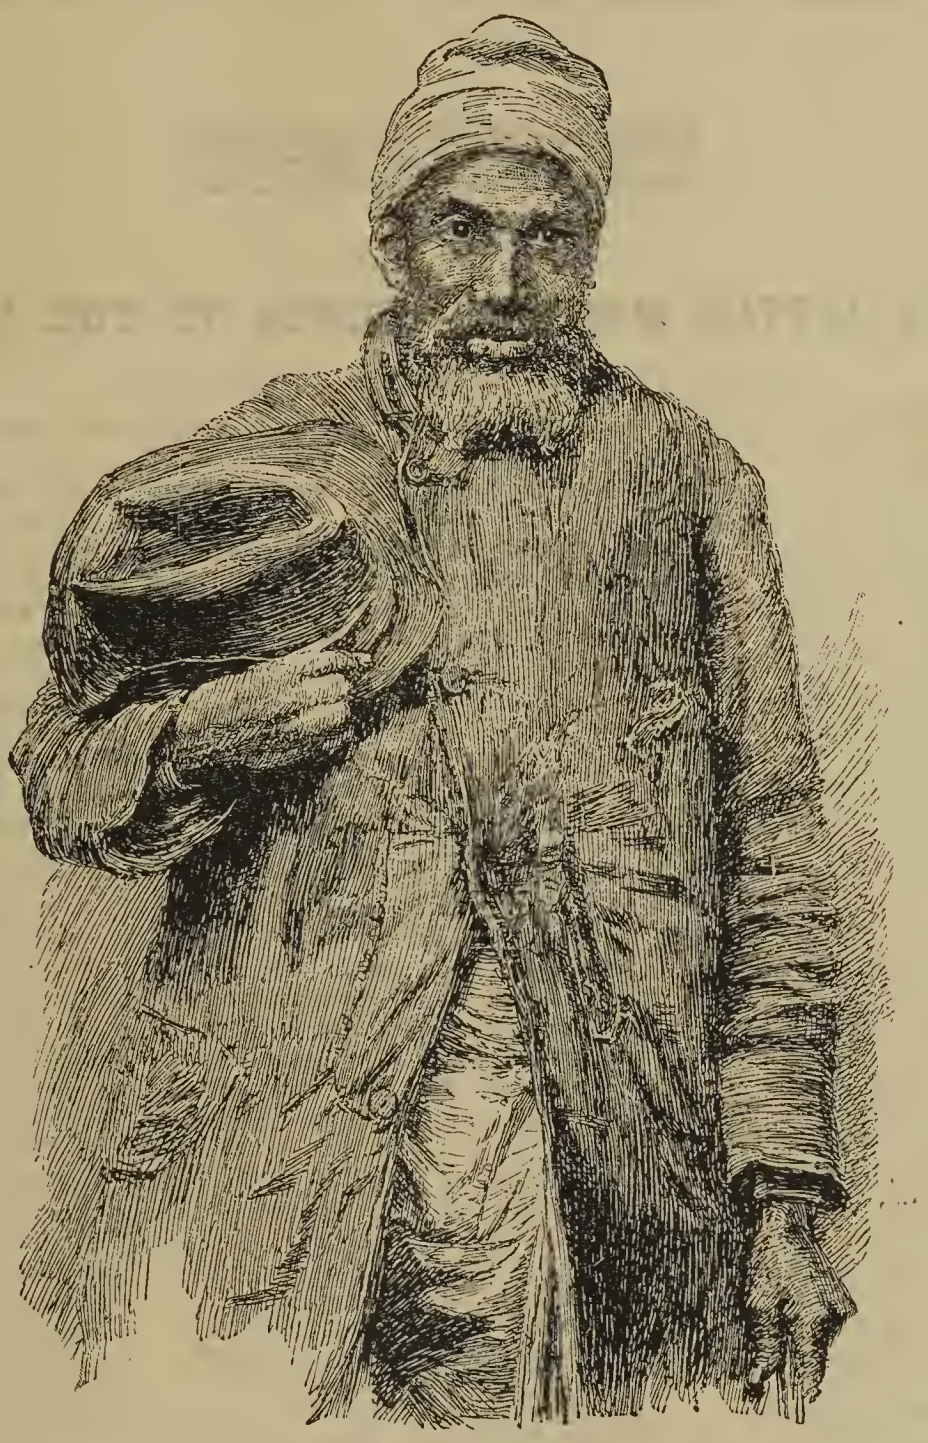
Corn bread was "common constance," while wheat bread was "extra dido." If the weather was inclement, it was either "sassy" or "impident."

When he corrected "de young sprouts," his hopeful and ebon-hued heirs, he gave them "a leetle 'possum soup," which was served up rather warm by means of a lithe, slender switch, some four feet in length.

Uncle Hamp was frequently sent on errands, and it was especially interesting to hear him call at the News Depôt for the various publications that were desired. Sometimes a lady wished a "Dody," or "Hupper's 'Tar," or "Lapside Liburry," or some gentleman, a "Curious Jingle," "Scrivenger's Monthly," or "Appleman's Journal." Whisky was "tanglefoot," and at a subsequent interview, Uncle Hamp gave me an account of how near he came to being wrecked on this dangerous reef.

"Yer can jist bet, my baby, dat yer Uncle Hamp had a mighty tight tussle with de ole kritter. In dose absent days I used to get awfully dilapidated, yer Uncle Hamp did. Ebery time I wrestled wid de ole kritter she tripped me over. I jist couldn't keep de forkede end down; but now dat I've fit an' conkered, I kin walk de chalk-mark widout flickerin'. You don't ketch me locating 'round arter it any more."

For many years had Uncle Hamp kept true to his pledge, made by the bedside of his little daughter, who, in her last moments, accomplished a mission that had in it, perhaps, the salvation of a soul.



"I promised her," said Uncle Hamp, with a tremulousness in his voice, and a dimness gathering in his eyes, "jist a leetle while afore she went ober de creek inter de Lord's vineyard, dat I wouldn't have nuthin' more to do wid de ole Tanglefoot; an' I never has, honey, an' I never spects to."

At first I wondered at the old and ragged garments that he wore, knowing that he made a good deal by sawing wood, as well as by numerous little odd jobs that he was called on to perform; but I soon learned that his savings were carefully hoarded up, and went in payment for a small cabin, which it was his intense desire to own, and which he at length purchased out of his hard-earned "fragments." I am sure that no magnate in all the land was prouder of his costly mansion than was Uncle Hamp of this lowly cot, which constituted, in his eyes, that dearest of all earthly spots—a home.

A short period after the last payment on this property was made, he hailed me as I was passing near his dwelling; and, to a warm invitation to take "a viewance ob de promiscuous lan'scape," I readily assented, and was shown over the premises, even to the indispensable pig-stye, which occupied a prominent corner of the domain; while the visible pride with which he exhibited his house and grounds, afforded me a useful lesson of how little it sometimes requires to carry supreme happiness to one's bosom.

Having missed Uncle Hamp's genial smile and cheery voice about the streets for some time, I learned, on inquiry, that he was seriously ill, and a few days later, on picking up the town Paper, read with sincere regret the announcement of my old friend's death.

A week or two after this, having occasion to pass near his humble home, the thought occurred to me that I might step in, and offer a few words of sympathy and condolence to his poor decrepit wife. Acting on the impulse, I soon stood beneath the lowly roof. Imagine my astonishment when the familiar voice of Uncle Hamp himself greeted me on my entrance. He was propped up in bed, and looked rather the worse for a long illness, but was undeniably alive.

"'*Uncle Hamp don't want to consternate his effections.*'"

"Well, now, my preshus chile, dat's clever. Is you come up to see how yer Uncle Hamp has tussled wid de raw bones?"

"And it was a mistake about your being dead, after all," I said at length, after I had congratulated him on the fallacy of the report.

"It wuz, fur a fac', my darlin'. It wuz, fur a fac'," said he, with a broad grin. "Yer Uncle Hamp knowed it wasn't so, just as soon as he heard ob it. Dey thought once dat de raw bones had me down fur shore, but I jist did git de underholts in time, an' trip him up. When I riz to de top again, de doctor fotch me up a Paper, an' he laf, an' sez dat I was about de fust patient ob his'n what eber saw his own bituography all set up in de Papers. Yer Uncle Hamp 'preciated dere polite remarks, only dey wuz just a leetle previous. Dat's all de dejections he had to 'em, my baby—yah! yah!"

It was not many weeks, however, before the dark-winged messenger did visit the humble abode, and took from my friend the faithful wife of his long-passed youth. I did not know of his bereavement, until I met him one day, and inquired the cause of his unusually quiet and serious countenance.

"I wuz powerfully decomposed, my darlin,' yer uncle was," he added, when he had advised me of his recent loss. "Yer see, me an' Hanner had trotted along in double team fur more an' fifty-one year, an' she neber once kicked out ob de harness in all dat time, an' now I feels sorter lost an' subsequented, pokin' along in dis one-horse fashion."

It was some time before Uncle Hamp's cheery tones and laugh were heard on the streets again; but gradually the genial smile crept back over his brown countenance, and the mellowness returned to his hearty laugh. A perceptible change began to make itself manifest in his raiment and general appearance, so that I was a little prepared for the sight of him one day, arrayed in a complete new suit, his face beaming with pleasure, and each arm engaged by a very youthful and stylishly-attired coloured damsel, while he conscientiously divided his gallant attentions between them. After the lapse of half a century he had once more assumed the *rôle* of attentive beau to the gentler sex. Frequently after this I saw him in his new character, and almost invariably with a damsel on each side.

"Yer see, my dear baby," he said, when I once referred to his impartial style of courtship, "I pays 'em attention all 'round, so dere won't be no confusion, an' amphibious feelin's at my slightin' eny ob 'em. Yer Uncle Hamp don't want to consternate his effections, dat he don't."

Despite this resolve, however, his "effections" were finally "consternated." One morning I met him wearing a more radiant expression than I had ever before seen on his features, whilst, in a mysterious undertone, he informed me that, if I "would happen down at de culled church in de evening," I might have "de agreeableness" to see him and his "dear damsel jined in de holy bands of weddenlock."

"And you are really going to be married?" I said, after I had tendered my thanks for his invitation. "Is the bride that is to be a very youthful one?"

"Now, jist lissen at 'im," responded Uncle Hamp, with a broad grin. "He don't know

whedder I've done cut my wisdom jaw teef or not. My preshus one, yer Uncle Hamp, at dis time ob de evenin', ain't gwine ter try an' drive a skittish colt along dis narrer road ob life, yer better bet he ain't."

In confirmation of this piece of philosophy, I discovered his "dear damsel" to be a matronly, sedate dame of some sixty summers, bearing the Christian name of his first wife.

"I jist kep' a-pulverizin' 'round, till I come across anodder Aunt Hanner, case I 'preciated de name, honey," said Uncle Hamp in generous explanation.

Although not present at my old friend's nuptials, I learned that the affair was a brilliant one in the calendar of coloured social events.

The church was crowded to its utmost capacity, with numerous friends of the contracting parties, while both groom and bride were arrayed in the choicest garments their wardrobes afforded, and went through the ceremony with happiness very prominently stamped on each face.

After the ceremony, Uncle Hamp and his "dear damsel" rolled homeward, in the most elegant barouche the town afforded, which was gratuitously furnished by the bridegroom's former owner.

A nice supper was awaiting the newly-married couple, which repast was also given by the many friends of the bridegroom, and, as his abode was rather diminutive for extensive entertainment, a kind neighbour permitted the banquet table to be spread in her spacious kitchen, where the festivities continued until a late hour.

"I'll tell you what, my darlin', it wuz a superfluous concasion, it wuz, fur a fac'," said Uncle Hamp, in recalling the pleasant event "They jest bestowed a large multitude of things to me. There wuz more an' 'leven pound-cakes a disportin' of themselves on de table, besides a dubious sprinklin' of odder ingredient mixtries."

When I took a photographic view of the premises, to be used in the present article, I made the promise to present the happy pair with a specimen of the place, "after it was drawed through the telescope."

Uncle Hamp and Hannah still live very cosily and contentedly in their humble home, while Uncle Hamp daily strengthens in the belief, that he was wise in "pulverizin' round till he cum across anodder Aunt Hanner, 'kase he 'preciated de name."

THE LITTLE MEMBER.—WORDS TO THE WISE.

By the Rev. J. Hiles Hitchens, D.D., F.S.Sc.,
Author of "*Ecce Veritas*," "The Young Men of Scripture," etc.

The Tongue; or, Caution in Speaking.

In the production of speech, a very considerable portion of the human body is brought into full and regular action. There are what may be denominated the *vocal* and the *articulating* organs — the *vocal* comprising the lungs, larynx, vocal chords, and the glottis—the articulating organs including the tongue, uvula, lips, teeth, and the palate. The air, passing through the larynx from the lungs, causes a vibration of the vocal chords, and produces the voice. Then the articulating or enunciative organs modify, direct, and interrupt the voice so as to form letters and words. In the utilisation of the vocal powers, the tongue plays an all-important part. By its action the articulation is either clear or confused, steady or stammering, slow or swift. Both audibility and distinctness depend mainly upon the manner in which the tongue discharges its functions; and without the tongue, none of the multiform and varied shades of expression can be given to the human voice. Hence it is that, though many organs are engaged in the production of speech, yet the tongue is taken as the representative of all, and hence all the praise or all the blame that may be attached to speech is attributed to the tongue.

Very marvellous is the influence the tongue possesses in the world. The Apostle James tells us that it is "a little member," but at the same time it is "a world" in itself. Adams quaintly says: "What it hath lost in thickness, it hath gotten in quickness; and the defect in magnitude is recompensed in the agility. An arm may be longer, but the tongue is stronger. A leg hath more flesh than it hath, beside bones, which it hath not; yet the tongue still runs quicker and faster; and if the wager lie for holding out, without doubt the tongue would win it. . . . So little that it will scarce give a kite her breakfast, yet it can discourse of the sun and stars, of orbs and elements, of angels and devils, of nature and arts; and hath no straiter limits than the whole world to walk through."

It is not possible for any of us to estimate the full influence of speech. Every utterance exercises a power for good or evil on the mental and moral life of others; and no word, as the vehicle of a thought, can pause in its relative effect. The thistle-down floating in the summer breeze is regarded as an airy nothing. But it carries a tiny seed. It will lodge somewhere, perhaps in your neighbour's garden, and there beget a long race to overgrow the ground. No word is an airy nothing. What is whispered in time, echoes in eternity. There is an inseparable wedlock between the faculty of speech and the formation of character. They act and react upon each other. Every word spoken is written in ineffaceable characters upon the air-library around us. Years after the utterances, we may witness their delightful or disastrous effect—their fascinating or offensive fruits.

> "I shot an arrow in the air,
> It fell to earth, I knew not where;
> For so swiftly it flew, the sight
> Could not follow it in its flight.
>
> I breathed a song into the air,
> It fell to earth, I knew not where;
> For who has sight so keen and strong,
> That it can follow the flight of song?
>
> Long, long afterwards, in an oak
> I found the arrow, still unbroke;
> And the song, from beginning to end,
> I found again in the heart of a friend."

So, doubtless, many of our readers can testify concerning their words of wisdom or folly, of benevolence or bitterness, of mercy or severity, of piety or profanity, of candour or duplicity, of truth or falsehood. They passed our lips years ago, but they are not dead or powerless. Some persons are to-day mentally and morally stronger or weaker, and socially more or less influential for good, as the result of our past utterances.

Standing amid the charred remains of a once stately mansion, all the beauties and precious contents of which have been destroyed, it would be a childish platitude to affirm that fire can consume. So, addressing by this paper a company of persons who are but the remains of what humanity once was, —the relics of the glorious temple which God first created and inhabited,—it seems superfluous to say that ruin is wrought by the tongue. With all the features of physical and moral inanimation around and within us, we are too sadly familiar. And we have but to take the oldest extant records in our hands to learn that this universally natural state was brought about by the power of the tongue. The word "devil" originally means traducer. Into the peaceful and pure abode of Paradise, the vile traducer entered, and, whatever may have been the precise nature of the serpentine language, it is written, "And the serpent *said*." Ever since that *say*, what a work of destruction the human tongue has accomplished! With some, the tongue has been like a dark and troubled fountain, continually pouring forth the black and bitter stream of envy, malice, falsehood, and uncleanness. With others, it has been like a forger of false coin, ever at work to impose by fraud and lying on the credulity and simplicity of society. With many, the tongue has been like a cowardly assassin, concealing itself amid fashionable companions and superior phraseology, but using its power of sarcasm and exaggeration in stabbing another's fair fame.

There is the *irreverent* tongue, which places things spiritual and Divine in the most ludicrous light, which trifles with matters of the most solemn moment, and, with shameless profanity, blasphemes the thrice holy name of the Eternal One. There is the *murmuring* tongue, which feeds the flame of discontent in our own minds, makes those to whom we speak unhappy, and dishonours and displeases the great Arbiter of life. There is the *boasting* tongue, which sways the censer before our own love of approbation, which clearly proves we are conscious we lack the commendation of others, and which is offensive to all good taste. There is the *lying* tongue, which

speaks to deceive, merits the disapproval of all virtuous persons, and is exposed to the eternal wrath of God. There is the *exaggerating* tongue, which is closely allied to the tongue of untruth, which lowers the tone of the mind, destroys the power of accurate perception, and diminishes the confidence of friends in our testimony. There is the tongue of *misrepresentation*, which, giving a false colouring to facts, transforms the appearances and relationships of things to the injury of the person spoken of and the person spoken to. There is the *angry* tongue, which indulges in what Wordsworth terms "*malignant* truth or lie," and which, in its fevered utterances, often makes wounds that life never heals.

Alas! in some instances, all these sins of the tongue are found in one person. In other cases, there is a strong tendency to one or more of these evils. The Puritan says: "God hath made us men; we make ourselves monsters. He hath given us two eyes, two ears, two hands, two feet. Of all these we will have, or at least use, but one. We have one eye to pry into other's faults, and not another to see our own. We have one ear to hear the plaintiff—not the other for the defendant. We have a foot swift to enter forbidden paths—not another to lead us to God's holy place. We have one hand to extort and scrape and wound, and not another to relieve, give alms, heal the wounded. But now whereas God has given us *but one tongue* and one heart, and bidden us be content with their singularity, we will have two tongues, two hearts. Thus are we cross to God, to nature, to grace, monstrous men; one-eyed, one-footed, double-tongued, double-hearted."

But the tongue has been employed in all ages in the promotion of good. The Holy Book is denominated the "Word of God." In it we are taught that "holy men *spake* as they were moved by the Holy Ghost." Some of the writers commence their message by affirming, "Thus *saith* the Lord." "God *spake* all these words." Moreover, Jesus is Himself styled "The Word," and He spake weighty, wise, winsome words. In all ages, Christianity has been dependent for its promotion on the faculty of speech. On the day of Pentecost men "began to speak with other tongues, as the Spirit gave them utterance." Every convert is called on to "confess" Christ. The public worship of God is the employment of the tongue in the ministration to the soul's weal. Our churches and chapels all imply the consecration of speech to the Divine Being. In such places every tongue should join in the solemn Litany, the ecstatic Jubilate, or the hearty "Amen."

How often has a casual conversation, an incidental word, completely altered a whole life career. Demosthenes became what he was through overhearing his tutors agreeing together to go and hear the great orator, Callistratus. Demosthenes resolved to go also, and became fired with a determination to be himself an orator.

When the Almighty created the world, He used but one majestic word; and when Christ wrought some of His greatest miracles, He employed but one word. God said, "Zehioth," and there was light. Jesus said, "Siopa," and the wind ceased; "Pephimoso," and the waves were stilled; "Ephphatha," and the deaf man's ears were opened; "Cumi," and the dead arose. So, often since, by a single word, Divine life and light have been flashed into many a dark soul. A devout young man simply, but seriously, whispered the word "Eternity" in the ear of one for whose welfare he was concerned, and that produced an impression which led the hearer to a reformed life. Thus, in numberless instances, the tongue has, by a simple effort, been the means of leading men out of sorrow into joy, out of sin into holiness, out of the world into the Church, out of the arms of Beelzebub into the loving embrace of Immanuel.

Let us, then, try to tame and guard the tongue. In the Spartan schools, as each scholar entered, an old man pointed out the doors, and said: "Through these, no word goes outside." If the words we speak be a mighty agency for virtue or vice, for weal or woe, over all time and circumstances,—if when our thoughts are bodied in language, we, by that language, inject into the mental and moral history of others an impulse which must bless or curse them for ever—then we cannot be too guarded in the employment of our tongues. Old Quarles says: "A word unspoken is like the sword in the scabbard—*thine*; if vented, thy sword is in another's hand. If thou desire to be held wise, be so wise as to hold thy tongue." It is a hard task to keep the speech in the appointed and happy track of duty. Socrates says that a certain man in his time desired to live well, and sought aid from a good and learned contemporary. The counsellor began by reading him the 39th Psalm, the first verse of which is, "I said I will take heed to my ways, that I sin not with my tongue: I will keep my mouth with a bridle while the wicked is before me." The learner at once shut the book and took his departure, saying he would go and learn that first. Months passed on, and he returned not. Forty-nine years afterwards, on being asked why he never visited the good man who undertook his instruction, he replied, that he had not yet learned the first lesson. Yes, it is a hard task, and a task which *alone* no man can perfectly discharge. There is One only who can tame the tongue—that perfect, wise, and loving One, of whom the world is compelled to say,—"Never man spake like this Man."

Let us try to use our tongues for the good of others and the glory of God. It is not necessary that our talk should always be distinctly pious. We may thereby sometimes cast pearls before swine. But the tendency should be good. Lord Morpeth well said, "Emulate the flame which, while it enlivens all around, points to heaven." Worth remembering are the words of Archidamidas, when people found fault with Hecatœus because he did not talk when at a public repast,—"He who knows how to speak, knows also when to speak."

LITERARY COMPETITION.

GOSPEL ANECDOTES.

WE give below the Results of the Examination of this Division. This makes our Prize List complete. Our Examiner reports that "many of the Papers are very good," therefore those whose names are given below deserve our cordial congratulations.

£2 2s. for the best Gospel Anecdotes.

F. P., Winchester.

HIGHLY COMMENDED.

Dodgson, F. V., Lowestoft.
Fox, M. E., Lynn.
France, Mrs., Tynemouth.
Hunt, J., Broxbourne.
Johnson, M., Manchester.
Law, J. E, Ardbeg.

COMMENDED.

Bennett, E. W., Oxford.
Cheeseman, A., Kent.
Clapton, M., Eastbourne.
Cunningham, A., Walthamstow.
Gallelly, J., Callander.
Harris, W., Worthing.
Hurd, A. M., Bath.
Saunders, E., Ipswich.
Smith, E. M., Leatherhead.

RUSSIAN PRISONS.

By M. F. Billington.

THERE is a strange fascination for English readers in hearing particulars of the Russian prisoners and prisons. In their barbaric sternness, their harsh rules, and their maddening isolation, they carry us back to a state of political development that we associate with medieval pseudo-civilization. It seems difficult to realise that the sister of our own Princess of Wales is consort of him who rules over a land in which the rigour of its punishments drive men mad—a cruelty far worse even than quick death. And its horrors are enhanced by the fact that the dreaded organization of police may be utterly mistaken in their suspicions. Innocent men have languished for years under baseless accusations. Even a partial trial has been denied them, and when the terrible gates close behind them, they have left the clear light of heaven, family, friends, the great end perhaps of an ambition-spurred life, to pine and die in filthy dungeons, away from all that makes earthly existence happy.

A terrible and humbling picture of the prisons of that great territory of the north, has been given to us lately by an American writer, who has had a considerable insight into both the fortresses and the alternative horrors of Siberia. From him we learn that in the Fortress of Petropavlovsk, the great jail for political offenders, the cells are large, but appallingly prison-like. Their dimensions are "approximately 24 feet in length, 16 feet in width, and 12 feet in height, to a slightly vaulted ceiling. The walls and ceilings are of brick, and the floors are concrete." One arched window, placed eight or nine feet from the floor, admits both light and air, but is guarded by double gratings. A tiny slit in the wall has an opening outside, and enables the guard to look in upon the prisoner, and watch his actions, without this unhappy creature's being aware of it. This is called the "Judas." The furniture consists of an iron bedstead, firmly secured to the wall; a heavy slab of iron, affixed to the wall also, and intended for use as a table; a fixed wash-hand basin, a cup to catch the moisture that often drips through the windows, and a small cheap picture of the Madonna, before which he may say his prayers. As Mr. Kenna remarks, "The general aspect of the casemate is sombre, gloomy, and forbidding; and the first idea suggested to the mind by the massive walls, the vaulted ceiling, the iron window, the damp lifeless air, and the profound stillness, is the idea of a burial vault or crypt."

The prisoners are usually taken into these dreary holes at night. They are first stripped completely naked, and search is even made in their hair, mouth, ears, and nostrils to see that they do not conceal any contraband articles. Then the prison costume, consisting of a coarse grey linen shirt and drawers, a long outer garment of blue linen, resembling a dressing-gown, woollen stockings, and a pair of grey felt shoes, is given to each, and he is taken away to these dreary cells. He hears the bells of the cathedral near, chiming the quarter hours, and each one sounds the knell of more time gone, but no nearer hope for him. Even the floor is worn into a perceptible path by the feet of those, who, like himself, have trodden it countless times in the agony of despair. In this prison were confined every one of that famous band of revolutionists, known as the "Decemlists." Young and brave they were, even if fired

with an enthusiasm that led them to wild impossibilities in Russia, such as to attempt at the accession of the Tsar Nicholas to obtain a constitutional form of government ; but they paid the bitter penalty for their errors of judgment by spending their lives in incarceration, dying there by their own hands, or insane.

The story of Colonel Battenkoff is a particularly pathetic one. For more than twenty years he never went beyond the yard of the fortress, nor saw another living soul beside his guards. He was permitted the untold favours of a Hebrew Bible and dictionary, and with infinite patience and perseverance—all the more so, when he had no hope of the slenderest reward—he compiled a new Russian translation of the Holy Scriptures. He was "released" at last, in so far as he was sent to Western Siberia, where at least he could move about with somewhat more freedom. Another of this same party, Lieutenant Zaikin, could bear the solitary confinement no longer, and killed himself by dashing his head against the wall. Yet a third, who felt that his reason was giving way, swallowed a lot of broken glass from his cell window rather than live as a madman. Even the name of a fourth was blotted out of mind ; and so completely had the awful severity broken him down, that he could not answer the simplest question put to him. This was reported as a kind of insubordination, and then examination revealed the fact that he was completely imbecile. With a ghastly realism, Mr. Kennan describes the feelings that a short time in the casemate can produce.

The picture is such a vivid bit of word painting, that I must quote it *in extenso :* "He imagines that he can feel with his lightly shod feet the shallow trough made by the feet of his unknown predecessor, and every step in it suggests possibilities of suffering which he dares not contemplate. Seating himself again on the narrow bed, he listens long and intently for some sound of life from the outside world—some faint audible evidence of human activity, to break up this oppressive nightmare of burial in a subterranean crypt, haunted by phantasms of tortured suicides and imbeciles. The bells of the fortress cathedral chime out slowly again, 'Have mercy, O Lord,' but the faint tones of the mournful supplication die away into a stillness, if possible, even more profound than that which went before it. Suddenly the prisoner becomes conscious of two human eyes staring at him with fixed unwinking gaze from the middle of the casemate door. Startled, nervous, excited, it seems to him for a moment as if the phantasms of his disordered imagination were taking definite objective form, as if the ghost of some political suicide at that dead hour of the night were peering into the gloomy casemate, where on a tragic day long past it left its emaciated mortal tenement lying on the floor with a fractured skull or a throat full of broken glass. But as he gazes in spell-bound fascination at the mysterious expressionless eyes, they suddenly vanish, and a faint click made by the cover of the 'judas,' as it falls over into the slit where the eyes have been, shows him that the fancied apparition was only the guard looking in from the corridor."

All the prisoners agree that the loneliness is the worst feature of the punishment. They are only allowed from ten minutes to a quarter of an hour for a walk in the prison yard, and even that is alone. Bad food, cold, damp, discomfort, they do not fear, but the isolation breaks down the strongest. They are not permitted any knives or forks, and if the prisoner be a female, and is allowed to do some needlework, she cannot have scissors in her own keeping, but must call the guard, and get him to do the necessary cutting. Books are frequently, though not invariably lent to the prisoners, as well as pens, ink, and paper, but every line they write is carefully scrutinized, and the copy books given for writing in must be returned absolutely unmutilated. But this is often withheld at the mere caprice of the guard, and Solomon Chudnofski, a political prisoner in 1878, a man of vast learning, and a member of the Russian Geographical Society, was put into a strait-waistcoat for insisting upon a sheet of paper, to which he had a perfect legal right, upon which to write a letter of complaint to the governor. A certain Dr. Melnikoff was not allowed books or paper for several months, and at last, in sheer desperation for an occupation, he took to saving a little of his bread, and, after having kneaded it up with water to a kind of dough-like consistence, used to mould from it little figures. Though so utterly harmless, the amusement was prohibited at once, his images and paste were taken away, and he was warned that if he attempted it again, he would be severely punished. He was not allowed even the diversion of whistling or talking to himself, and at length, in his extremity of resource, he used to induce violent fits of hiccoughing as a kind of distraction to himself, and annoyance to the guard, to whom he used to say that he could not stop himself!

Of course all sorts of devices have been tried among the prisoners for intercommunication, but only two have ever succeeded. One was by saving scraps of cigarette papers, and pricking or dotting holes corresponding to the number of the letters meant to be indicated in the alphabet, and then enclosing these in tiny bread pills, to be dropped in the yard when out for exercise. The other was to make the faintest mark over the letters, or even words of a book, and then trusting that in due course it will reach the one for whom it was intended. But Dr. Melnikoff records one of the most sadly pathetic bits of ingenuity ever perhaps devized.

In his own words it runs : "One afternoon, in the summer of 1881, I was lying on the bed in my cell, wondering how I should get through the rest of the day, when there flew in a large blue-bottle fly. In the stillness and loneliness of one of those casemates, any trifle is enough to attract a man's attention, and the occasional visit of a fly is an event in one's life. I listened with pleasure to the buzz of his wings, and followed him with my eyes as he flew back and forth across the cell, until I suddenly noticed that there was something unnatural in the appearance of his body. He seemed to have something attached to him. I arose from the bed in order to get nearer to him, and soon satisfied myself that there was a bit of paper fastened to his body. How to catch him and secure that paper without attracting the attention of the guard in the corridor, I hardly knew, as he was flying most of the time in the upper part of the cell beyond my reach. For ten or fifteen minutes I watched him without being able to think of any way to capture him ; but at last he came down nearer to the floor, and as he passed me, I succeeded in catching him in the hollow of my hand, without injuring him. Attached to his body by a fine human hair, I found a small folded scrap of thin cigarette paper, upon which a man's name had been written with the burnt end of a match. It was not the name of any one whom I knew ; but as it was evident that some strictly guarded prisoner hoped by this to let his friends in the bastion knoweither that he had been arrested, or was still alive, I fastened the paper again as well as I could to the fly, and put him out, saying, *S'Bogom* (Go with God), but I never heard anything more regarding it."

In a recently delivered lecture on the world's prisons, Prince Krapotkine said that the Russian ones were far the worst. Certainly it would be difficult to string together such horrors regarding any other reformatory institutions I ever heard of.

Three or four Commercial Travellers happened to be in a Hotel parlour as a package of Bibles was received from the New York Society for distribution in the rooms. A copy was taken up by one of the men, who after reading it a little, said, "There are good things in this book, I wonder why I never read it before !"

THE GOLDEN TRUTH ABOUT SLEEP.

By A Consulting Physician.

THE most generally received opinion among scientists, and indeed the only one tenable regarding the physiology of sleep, is, that this condition is only possible when there is a considerably lessened flow of blood through the brain.

We all know that activity of any organ, or any set of muscles, determines the blood thereto. Well, the active brain is the thinking brain ; and the youngest of us know that till we get rid of thinking of a night, anything like proper sleep is impossible.

During attacks of certain sorts of headache, again, the brain is for the time congested, and until we can get rid of that state, sleep is out of the question. Cold, however, contracts the brain capillaries (the multitudinous tiny blood-vessels), hence one common-sense way of dispelling a congestive headache is to lie on the back with the head resting partly over the pillow, and have rags dipped in cold water placed on the brow. The physiology of this simple cure is easily explained, for the position the sufferer assumes favours the return of the blood from the head, and the application of cold contracts the vessels and helps to dispel the effusion.

And the following fact is worth remembering in regard to sleeplessness. It is this : the arteries of the brain, like those everywhere else, possess, in health, a certain contractile power, which permits them to resume their ordinary calibre as soon as any stimulus, which has caused them to be temporarily engorged, is removed. But if this engorgement be long continued, then, to some extent, the elasticity of the little arteries is destroyed, and they cannot properly and healthily empty themselves.

I am purposely using simple language. Now to give you an example or two—take first that of the hard night-working, or rather day-and-night working, editor. She or he has been at it for weeks, till the capillaries of the brain are over-stretched, and when the editor retires, although sleep be sadly needed, it is found impossible for the poor brain to become lapped in the elysium of unconsciousness.

Take the case of a person who by some excitement, pleasurable or otherwise, has been kept out of bed till, say five in the morning. To retire may be possible, but this person will tell you that he doesn't care to go to bed now, *he is past sleep*. Why *past* sleep? Only this; the blood-vessels of the brain have been kept so long on the stretch, that they refuse to contract, and the individual probably seeks the solace of a cup of strong tea and goes to his day's work. He will not work so well or ambitiously, however; and it should be borne in mind that the cup of tea is only a stimulant, it does not strengthen, but acts like a whip on a flagging horse. That is, it draws out latent energy. Well, this may do for the young, who have a good fund of this latent energy to fall back upon, but it is most depressing for the middle-aged and old.

And here is a hint for invalids, or rather I should say, for nervously-delicate individuals. Beware what you do towards bed-time. Prolonged excitement, however pleasurable—even that of talking—induces a fulness of the head, and to lie down thus and expect to sleep, is just as nonsensical as throwing a lead bullet into a mill-dam and expecting it to float.

Well then, whether this view of the physiology of sleep be altogether correct or not, it is well to keep it in mind, because it is practically the best extant, and guides to a proper understanding of the phenomena of wakefulness, its causes and cure by safe measures.

Probably this would be the exact place and time for me to enter my earnest,—nay, even solemn protest, against the use of so-called sleeping draughts. Oh! mothers of England, if you but knew the dangers incurred by this practice of administering to innocent babies the "soothing syrups," which government still permits to be advertised and sold, you would as soon think of having a rattlesnake in the nursery as a bottle of any of them. They nearly all contain opiates, or some equally hurtful narcotic drug, and it is not sleep your infant is enjoying, but non-refreshing insensibility. It is well for those poor, drugged children when they sleep away altogether: for assuredly, if they live, they grow up with feeble constitutions, weakened hearts, and, worse than all, with weakened brains,—quite unfit to battle against the allurements and temptations of a wicked world. Their last state is, indeed, worse than the first.

As to the only-too-common use of sleeping-draughts by grown-up people, I have only space to say, it is a practice fraught with such danger, that having once commenced it, there is seldom power to free oneself from the slavery—a slavery which leads to death or the asylum.

But I am happy to say that it is rare indeed that even doctors require to prescribe narcotics for sleeplessness. The remedy, in almost every case, lies in the sufferer's own hands.

"What is it?" do you ask. The reply is: Find out and remove the cause of your trouble.

In nine cases out of ten, the drugs we take for the *cure* of ordinary ailments do not cure at all, but only give temporary relief. Here is a simple simile. If your eight-day clock is going slow, there are two ways of keeping it up to time. One is to take a chair and sit down in front of it, and keep touching the pendulum every now and then. "A very sensible plan!" you say ironically. Oh! very, because, as long as you touch the pendulum it will move quickly, but when you tire, it will resume its old motion.

Just in this way do drugs act for the relief of say constipation or sleeplessness; only, tampering with human machinery is a more serious matter than touching up the pendulum of grandfather's clock. But there is another way of curing the clock—viz., cleaning it. Ah! that *is* sensible.

The difficulty, of course, lies in finding out the cause. Now this, I grant, may at times be beyond our power to remove. For the cure of grief and mental worry of many kinds we have but to wait, and trust to the tender mercies of Time the great healer. But in nine cases out of ten, the mal-nutrition or starvation of the nerves is at the bottom of the mischief. This is caused by poverty of blood, and poverty of blood is caused by indigestion, and reacts upon the stomach forces, and makes that indigestion worse.

But the blood supplied to the nerves may be rich enough in nutrient properties and still be poisoned and impure, that is, it may be laden with effete matter which ought to have been got rid of.

So that whenever any one begins to suffer from sleeplessness, or even from bad dreamful sleep, and a feeling when awakening in the morning that it might have been almost as well not to have gone to bed at all, instead of sitting down and wondering what the matter can be, let him or her at once endeavour to find out errors in mode of living and straighten these.

If I had merely to give a list of the causes of sleeplessness, it would fill at least a couple of columns in this page. Happily I do not require to do so, because the *régime*—notice, please, that I do not say the medicine, but *régime*—which will remove one set of causes, will remove the next.

The same holds good with regard to plans for inducing sleep. Their name is legion. Try this, and try that, and try the other! Why, I have known poor afflicted souls lie tossing in bed from nine at night till four or five next morning, trying this, and that, and the other, till they were so worn out that they wept like children, and Nature took them in her lap at last.

It is not after you get to bed that you ought to try this, that, and t'other, but during the day when the bright sun is shining, and blessed healthful breezes are blowing over all the land.

Begin your cure for sleeplessness early in the morning, by taking a sponge bath. This is a habit that should be commenced in youth, and kept up through life, winter or summer; and happy is the individual who needs not the enervating dash of hot water in the tub when snow-winds are blowing. This bath is a terror to many, who prefer to merely think about it. But it need not be,—especially if a quick wash all over with hot water and soap is first indulged in; then bathe head and face, and sponge down sitting in the tub. Let the sponge be very large, and half a minute will be long enough; in another minute you are rubbed down with rough towels, and have commenced to dress. This gives the skin a chance all day; it prevents colds, gets rid of blood infirmities, and braces nerve and brain.

Now have a breath of fresh air before breakfast, and if not very hungry, a ten minutes' walk.

Exercise must be taken during the day by those who would sleep. It must be abundant and pleasurable. If not pleasurable or interesting, it is merely a penance, and I need hardly say it ought to be taken in the open air. A good, sturdy walk last thing before turning in for the night, will conduce to sound sleep. No one sleeps so well as he who is tired.

Besides, exercise draws the blood from the brain, it purifies the blood too, oxygenises it, causes effete and poisonous matter to be burned off, and carried off by the skin.

It is Dr. Parker, I think, in one of his lectures on Food, who says: "Nothing will ever secure good sleep except good digestion. If digestion is disturbed, or, if healthy, is still active on going to bed, sleep may be heavy, but will not be refreshing. Three hours should pass betwixt a good meal and bed-time."

Delicate people, however, must not go to bed hungry; some little bite and sup should be taken to start with, and dispel the craving feeling, which would otherwise make sleep an impossibility.

There are certain kinds of diet that tend to banish sleep. Whatever is difficult of digestion causes activity and a species of nerve-irritation, that makes going to bed little else save a farce.

Tea banishes sleep in most. So it should never be taken to excess, nor at all late in the evening. Coffee may or may not have the same effect. To the busy brain-worker it may do good, even as late as nine o'clock, by calming the nerves, and taking his thoughts away from the work of the day.

The after-dinner nap is condemned indiscriminately by some writers. This is wrong. A delicate individual should sleep whenever nature craves for brain-rest, but the strong have no need of such siesta.

So we see that, as far as the body is concerned, everything that tends to strengthen, and keep the health up to par, tends also to insure good sleep at night.

The bedroom must be well ventilated.

It must neither be too warm nor too cold. The happy medium is about 60°.

The bed itself should be level and springy, but hard rather than soft—the bedclothes warm and light. Those subject to rheumatism should wear a woollen night-dress.

Those subject to colds should wear a chest-protector—not so much in front, as between the shoulders. Many thousands die annually from fatal colds caught in bed. But death does not aim his dart at the front of the chest; no, *but at that unprotected spot below the neck and between the shoulder blades*. Keep that warm all night, and you are safe.

The writer was asked once by a patient if he should wear a night-cap.

"Certainly," was the reply, "though *not on your head*, but between your shoulders." It was an Irish answer, but that patient is well to-day, and sleeps well.

There is a night-cap of another sort that I only mention to condemn. I mean wine-negus, or any stimulant of the sort. If you need that, your case is not a hopeful one.

In a word then, the cure for sleeplessness lies in feeding the nerves, by eating only that which is easily digested, and not more than can be easily digested; by keeping the blood pure; attending to the skin; using the bath; and taking *abundant* hearty exercise in the open air.

In conclusion, let me remind you that you ought to go to bed to sleep, and not to think or plan.

Meditate in your chair for some time before lying down, and do not forget that if we have burdens to bear, there is Someone always willing to help us. Take no heed for to-morrow. Then just *trust*—and trusting, sleep.

A CHAT ON TEA.

By J. Eaton Fearn.

WHO does not love "the bubbling and loud hissing urn," throwing up its steamy column and making the room redolent with fragrance? It cheers the weary man of business—even in anticipation—as with eagerness he wends his steps homewards through the mist and sleet of a November night. How very weary, stale, flat and unprofitable would this world be to the fair sex if it were not for tea!

At no time or place does a lady seem more at home than when she is gracefully pouring out this delightfully refreshing beverage, the virtue of which—to slightly alter a couplet of Pope's—

"Makes the politician wise,
And see through all things with his half-shut eyes."

How merry and light-hearted a character conversation always assumes at the tea-table compared with what it does at any other meal in the day! At breakfast our wits are not fully awake; lunch, to the majority, is a snatch and away; dinner is altogether too substantial a business conversation bristling with solemn topics; while at supper, should this good old English meal be indulged in, the prattle and infectious lightheartedness of the children are missed.

Does it not seem almost incredible that less than two centuries ago the use of tea was not known in this country? And yet such is a fact. One shudders to think of such barbarous days. Fancy living with people to whom 5 o'clock tea was unknown! Wretched heathen!

In a treatise on "Warm Beer," published in 1641, the gist of which was to recommend the use of warm drinks to the public in place of cold ones, the author goes on to quote a Jesuit to the effect that "they of China do for the most part drink the strained liquor of an herb called '*CHIA*' hot."

To this day the Portuguese and the Japanese call it "*CHA*," but civilized Europe adopted, and still retains, the Chinese expression "*THEH*," which has been anglicized into "tea."

In such little estimation was "tea" held by the Chinese themselves about this period, that they actually bartered it for sage with the Dutch, their estimation of its value being four pounds of tea for one pound of sage.

About this time, too, the then Russian Ambassador, who resided by virtue of his office, at the Court of the Mogul, declined a large present of tea for the Czar, on the ground that the latter exalted personage would have "no use for it!"

In the year 1660, tea was sold at sixty shillings the pound. Of course it was regarded as an "exotic novelty," and not as a beverage. The doctors of the day rose up in a body to protest against its use. All manner of evils, they prophesied, would be the consequence of indulging in the "foreign poison shrub." A few of the rich, who, in spite of the learned opinions of the doctors, indulged in an occasional infusion of the entrancing leaf, were regarded in much the same light as we "look down" on unfortunate opium-eaters. A wicked spell had got the mastery of them!

Patin, a great author of the day, took up his pen, declaring that "the use of tea was as bad as antimony." The great German, Hanneman, regarded tea-dealers as "immoral members of society, lying in wait for men's purses and lives," while the Dutch ridiculed it under the title of "hay-water." All manner of virulent pamphlets issued from the press. But in vain, for, in spite of all, tea still won its way. When it was observed that people who were known as habitual indulgers "in the wickedness of the tea-cup" did not die or go mad, or become the prey of some frightful disease, the bad things said about it came to be disbelieved. The "immoral circle of the tea-table" expanded.

Then a new race of doctors appeared on the scene. They trumpeted its virtues as loudly as their forefathers had trumpeted its vices. Tea was the new cure for everything. There was no malady which "flesh was heir to," that it would not charm away.

A clever writer in the *Edinburgh Review* of 1816 very ingeniously compared the progress of tea in popular favour to that of truth, which was "suspected at first, though very palatable to those who had courage to taste it; resisted as it encroached; abused as its popularity seemed to spread; and establishing its triumph at last, in cheering the whole land from the palace to the cottage, only by the slow and resistless efforts of time and its own virtues."

Here is a copy of a curious shop bill given by D'Israeli in his charming "Curiosities of Literature":—

"Tea in England hath been sold in the leaf for six pounds, and sometimes for ten pounds the pound weight, and, in respect of its former scarceness and dearness, it hath been only used as a regalia in high treatments and entertainments, and presents made thereof to princes and grandees, till the year 1657. The said Garway did purchase a quantity thereof, and first publicly sold the said tea in *leaf* or *drink*, made according to the directions of the most knowing merchants in those eastern countries. On the knowledge of the said Garway's continued care and industry in obtaining the best tea, and making drink thereof, very many noblemen, physicians, merchants, etc., have ever since sent to him for the said leaf, and daily resort to his house to drink the drink thereof. He sells tea from 16s. to 50s. a pound."

To-day tea is still regarded as "the luxury of the rich," though, paradoxical as it seems, it is the principal meal of the extremely necessitous. In many a humble cottage in our remote villages, "a cup of tea and a bit of bread and butter" serves for dinner. The teapot scarcely leaves the workman's hob. Tea has its delights, too, for the middle and professional classes, as well as for the poor and the rich.

If the Vicar's wife wishes to discuss matters connected with the proposed bazaar, why, she invites her lady-helpers to tea at the Vicarage. The tea-table is neutral ground. The country surgeon's wife would never dream of dining with Mrs. Jones, whose husband is a prosperous butcher, but she will condescend to meet her at the tea-table at the Vicarage. The teapot seems to level all distinctions!

Of course the tea-table is answerable for much silly gossip, idle tales, scandal-making, the snarls and bickerings of little minds! But anything and everything can be turned into abuse. The same thing might with equal truth be said of Sewing Meetings,—not unmixed blessings.

But who would denude the ragged bairns or the indigent of their little shirts and stockings, because in the making of them *sharp tongues*, as well as sharp needles, have been busily at work!

It is said that smokers in all their weals and woes fly to their pipes. The "divine weed" intensifies their joys, and robs their sorrows of their stings. Whether this be true of tobacco or not, it is certainly true of the teapot. For headache or for heart-ache, there is no cure like a cup of tea!

Much has been said of late of woman's mission. What is a woman's proper sphere?—to cross swords with men in the fierce battle for bread? No; woman's work all the round world over is—

"To make a happy fireside chime
To weans and wife—
That's the true pathos and sublime
Of human life!"

Yes, Burns, you are right—that is woman's work!

CRISP CORRESPONDENCE.

ANSWERS.

Total Abstainer.—I. *The Church of England* has two classes, one for *moderate* drinkers, and one for abstainers. *We entirely* abstain,—therefore only one class.

II. The *best* wine, unfermented and not intoxicating, as proved by Matt. 9. 17. The grapes and the barley, "good creatures of God," not the alcohol, which is introduced by *man*.

III. Scripture, in laying down general principles for Christian life, especially inculcates self-sacrifice, even to the sacrifice of our lives: this *must* include useless luxuries, especially if they cause our brother to *stumble, to be offended, and made weak*.

Slavery not forbidden in Scripture, pleaded for in my memory on Scripture grounds. Unworthy in a professed follower of Christ to search the Bible through for a justification of self-*indulgence*, when the whole Gospel is *sacrifice*, from beginning to end.

Phrenology.—P. B. P. will find that Messrs. Fowler, Ludgate Circus, publish a large variety of Phrenological Literature. Much care, however, should be taken in the selection.

Periodicals, Newspapers, etc., etc.—What a supply of these, friends send us! They are most helpful, and we say "Thank you" indeed for every one; but if *only* the senders could kindly remember to put a cross beside the paragraph they wish us to see, they have little idea how much disappointment it would save us. It is so utterly impossible to read each newspaper! Please add a little ×.—Ed.

Enlarged Tonsils.—Chronic Cases are obstinate: skilled treatment should be obtained and persevered with. Most useful Homœopathic Remedies are Baryta Carb. 6 or 12; Cal. Carb. 6, or Cal. Phos. 3. Gargling the throat with cold, or cold salt water two or three times a day is very efficacious. Attend to digestion. Take no hot drinks. Apply cold water compress, and take a few doses of Bell. 3, if throat is inflamed.

Rogator.—"The letter killeth, but the spirit giveth life" (2 Cor. 3. 6). How are these words to be understood? They have been supposed to mean by some that the literal sense of Holy Scripture is to be avoided as pernicious, while the figurative or spiritual sense is to be accepted as salutary and true. But nothing can be more mistaken than this. In nine cases out of ten such a rule of interpretation would prove utterly misleading; nor do the words in question give the slightest support to it. Their real meaning is that "the letter," by which is signified the law of Moses, written and engraven in stones, carries in it the sentence of death and condemnation against the sinner. Whereas "the spirit," by which is meant the Gospel of Christ, written on the fleshy tables of the heart, carries in it, on the contrary, the assurance of life and peace.

Common Sense.—We thank you; but you will have noticed a considerable sum reckoned upon as margin, to cover various sundries.

A Clergyman's Wife.—We shall very shortly hope to give our readers a series of Six Articles on Housekeeping, from the able and practical pen of "Phyllis Browne."

A Good Idea.—Temperance men may with great advantage adopt a plan to which a correspondent of the *Pall Mall Gazette* recently drew attention. For the comfort of the coachmen who drove visitors to his house on the occasion of a social party, his wife arranged for a coffee-stall keeper to locate himself close by, by whom hot coffee, currant cake, etc., were supplied to them free.

Theatre-Going.—In these days, when there are found Christians, and even Christian ministers, who openly advocate attendance at theatres and defend ballet-dancing, it is instructive to remember a statement made recently in the *Nonconformist* by a Birmingham gentleman who can speak from long experience. For 25 years he had been a visiting justice, for 36 years on a committee in charge of the police, and for more than 50 years the Superintendent of a large Sunday School, and his testimony as a magistrate is, that hundreds of prisoners have confessed to him that they dated their downward career from the time when they first entered a theatre, or attended a stage play.

OF INTEREST TO YOUNG MEN.

IF you heard a young man spoken of as a "bookworm," you would never think to ask *him* to fill that vacant place at "half-back" in your football team—would you, now? Still, there is no reason why a studious young fellow should not be an athlete. In fact, his mental powers ought to be, and would be, stimulated and refreshed by the hour in the football field, or the seven or eight miles, spin across the country with hare and hounds club. Evidently Professor Alexander Johnson, the historian, and Professor of Economics at Princeton College, U.S.A., is of this opinion. At the close of last summer's vacation a pedantic young tutor asked Professor Johnson what special work he had taken up during the summer. "For my part," said the erudite young man, "I completed my monograph on the different Latin pronunciations. What did you do?"

"I covered second base for the local baseball team," said the political economist, "and we won five out of the eight games of the season."

The interesting article on "The American Game of Football," which appeared in the October *Century*, was from the pen of Prof. Johnson, who is one of those rare combinations, a student and a lover of athletics.

The German universities this winter are attended by 26,945 students, an increase of 692 compared with the attendance last summer. Of the total number of students 1,644 are foreigners. According to studies 5,791 students belong to the theological, 5,769 to the juristic, 6,650 to the medical, and 8,735 to the philosophical faculty. Of all the German universities, that in Berlin seems to be the one which attracts most students. It has an attendance of 5,478, of whom 601 are foreigners.

It is well known that at central commercial places, there are certain agencies who keep a record of the position and standing of nearly every business man in the country. Careful men are employed to collect this information; and it not only includes the amount of property which the parties are worth, but also their standing as regards punctuality, promptness, integrity, temperance, etc. A few years ago four young business men in Boston, U.S., were rated on the books of these agencies as "A. 1." They were rich, prosperous, and prompt. One of them had the curiosity to see how they were rated, and found these facts in the book, and was satisfied; but at the end it was written, "they all drink." He thought it was a good joke at the time, but to-day two are dead, another is a drunkard, and the fourth is poor, and living partly on charity.

Nine hundred and ten new members and associates have joined the Manchester Y.M.C.A. during the past year.

H.R.H. the Prince of Wales has accepted the invitation to formally open, in March, the new Exeter Hall Y.M.C.A. gymnasium in Long Acre.

The members of the Fulham (London) Y.M.C.A. distributed forty thousand tracts at the recent American Exhibition at West Brompton.

The Y.M.C.A. in the dockyard town of Devonport, which was organised last summer, is doing a good work for so young an association. Vice-Admiral Grant, C.B., the president, who was the leading spirit in the formation of this Association, conducts a well-attended class for Bible study every Sunday afternoon.

A Y.M.C.A. has been organised at Bulli, New South Wales.

The Triennial International Conference of Delegates from Young Men's Christian Associations throughout the world, will be held at Stockholm, in August.

COVENTRY.—A new branch of the Y.M.C.A. has been formed here. The inaugural meeting has just been held.

As the result of a special Mission, recently held in Birkenhead by Mr. Henry Thorne, a new building scheme has been so far developed that £1,000 have been secured, plans prepared, and a capital site selected. The scheme was put before the public at a splendid meeting recently held in the new Town Hall.

Mr. Henry Thorne has recently concluded a most successful ten days' Mission at Oxford.

The Committee of the North District Union of Young Men's Christian Associations are appointing Christian men to act as correspondents of the Y.M.C.A., in places where it is not at present possible to form Branches.

A physician lecturing upon physical exercise declared that if only twenty minutes a day were spent in physical exercise as an adjunct to mental education, we might live to be seventy without a day's illness!

Marriages are not allowed in Russia before a young man is 18 and a young woman 16, nor are men over 80 or women over 60 permitted to enter wedlock. A fourth marriage is illegal. Marriages in secret without witnesses are not valid.

NOTES ON THE INTERNATIONAL SUNDAY SCHOOL LESSONS.

By Rev. J. H. THORPE, M.A.

MARCH 11TH.

CHRIST ENTERING JERUSALEM.—*Matt.* 21. 1-16.

GOLDEN TEXT.—*Ps.* 118. 26.

THE lesson may be treated under two heads—the King and the Cleanser.

I. THE KING. (i.) His wonderful knowledge: (1) Of things. He knew that the disciples who were sent would find an ass and her colt. "He is acquainted with all our ways." (2) Of place. The exact spot where they should find them (Mark 11. 4). (3) Of men. "Straightway he will send them." Compare with all this the cases of Nathanael and Nicodemus. Remember, Christ is the One "unto whom all hearts be open, and from whom no secrets are hid."

(ii.) His humility. "The Lord *hath need* of him"—the ass. What a King, who had no place where to lay His head! He preached from a borrowed boat; here He rode on a borrowed ass; at last He lay in a borrowed tomb. His glory—not that of pomp and ceremony. His majesty is in His meekness.

(iii.) His commands: (1) Must not be disputed, but obeyed: and (2) If obeyed, we shall find the way prepared for us, as the disciples did.

(iv.) His subjects must learn that those who take Him for their King must lay their all under His feet.

(v.) He must have and will accept homage from all. Even the children joined in His praises; and He intimates that if they did not, His praise would be imperfect.

(vi.) He is sometimes unknown in the places where the clearest light shines, and the greatest profession of religion is made. Jesus ought to have been well known in Jerusalem, yet they asked, "Who is this?"

(vii.) Learn an indirect lesson on the value of popularity. Most probably some of those who now cried "Hosanna" (which means, "Save now"), by-and-by cried, "Crucify Him." Neither human applause nor human censure is the test of truth, but either of these should make us TEST OURSELVES.

II. THE CLEANSER. (i.) His work must be continual. This was the second time Christ purified the Temple; for men are so hard and prone to evil that *one* rebuke does not always suffice. "The blood of Jesus Christ cleanse*th* us," etc.

(ii.) See here His power over men's consciences and hearts. If these money-changers had combined, they could easily have expelled one man, but not *this Man!* His word was irresistible, so mark their silent submission.

(iii.) The sale of doves, etc, was not wrong, except in the wrong place. Lawful things, ill-timed and ill-placed, may become sinful.

(iv.) The right use of the house of God—a place not of merchandise or worldliness, but of *healing*.

(v.) The rule for reformations in the Church of God, "It is written." Let all our zeal be tempered and governed by a knowledge of, and a desire to conform to, the Word of God.

Y.M.C.A. BIBLE CLASS NOTES.

MARCH 11TH.

THE RICH FOOL.—*Luke* 12. 16-21.

IT is interesting to note the different meanings of the word "Fool" in the Bible.

1. *An evil person.* "The way of a *fool* is right in his own eyes" (Prov. 12. 15).
2. *A boaster.* "I said unto the *fools* (R.V., arrogant), Deal not foolishly" (Ps. 75. 4).
3. *A self-confident one.* "He that trusteth in his own heart is a *fool*" (Prov. 28. 26).
4. *An empty person.* "*Fool* hath said in his heart, There is no God" (Ps. 14. 1).
5. *A thick-headed one.* "Yea also, when he that is a *fool* walketh by the way, his wisdom (R.V., understanding) faileth, and he saith to every one that he is a *fool*" (Eccles. 10. 3).
6. *A thoughtless person.* "O *fools*, and slow of heart to believe," etc. (Luke 24. 25).
7. *A heedless, or witless person.* "Thou *fool*," etc. (Luke 12. 20).

---

1. *Centre of this man's life was self.* (Ver. 17, 18). A fool, because he thought more of his body than his soul.
2. *Covetousness of this man was his sin.* Covetousness is the root of all evil; it is the rack that will distort the soul, and ruin eternally. Arnot says: "Riches are truly enjoyed when they are wisely employed in doing good; but hoarded as the portion of their possessor, they burden him while they remain his, and rend him at the parting."
3. *Consulting with himself, shows his self-confidence.* We might call this man—The man who talked with himself. He was a fool for consulting himself, instead of God.
4. *Calculation he arrived at* (ver. 19). How miserably he was deceived, how mightily he was deluded!
5. *Condemnation that came upon him* (ver. 20). As Nabal was a fool for not listening to David, and so met his death; as Belshazzar was a fool for desecrating the vessels of the Temple, and so was judged; even so was this man.
6. *Consequence of his folly* (ver. 20). *He lost all* by laying up treasure for himself.
7. *Cure for covetousness* (ver. 21). "Rich towards God." What is it to be rich towards God?
   1. Ministering to the poor, as Zaccheus did (Luke 19. 8).
   2. Rich in faith (James 2. 5), as Abraham.
   3. Rich in spiritual experience (2 Cor. 6. 10), as Paul.
   4. Rich in good works (1 Tim. 6. 18), as David.
   5. In giving Christ the first place. Not as the young ruler (Luke 18. 22).
   6. Rich in love to the Lord. Not as Ephesus (Rev. 2. 4).
   7. Rich in endurance, as the Church at Smyrna (Rev. 2. 9).

Sunderland. F. E. MARSH.

NOTE the *occasion* of parable (ver. 13). Observe *unseemly interruption* to our Lord's discourse.

If it was so when *Christ* was the speaker, need we wonder if it is the case when His *servants* are speaking? Carnal thoughts will follow men, even into the presence of Christ.

See how eager this man was to get Christ's help in obtaining an *earthly* inheritance. Had he applied for help in regard to the heavenly inheritance, he would have readily obtained it. Christ evidently sees not a case of *oppression* calling for *relief*, but of *covetousness* calling for reproof.

Reason attached to the warning against covetousness.—"A man's life," etc., *i.e.*, his true happiness and best interests.

Riches insufficient to create happiness. Riches cannot prolong life.

Ver. 16. The man obtained his wealth honestly. This is not a case of unjust gain. He owed his wealth to God's good providence, too, for his "ground brought forth plentifully." Yet he is sordid, selfish, unthankful.

Ver. 17. Note the cause of his care (Eccles. 5. 12).

"*No room.*" But for his selfishness, he might have found plenty of room in the empty cupboards and tables of the poor. "*My* fruits," "*my* barns," "*my* goods," "*my* soul." He decides to enlarge his premises.

Notice the "I wills" here—four times in vers. 18, 19. A preacher lately remarked: "Let us see what sort of a *soul* he had. It turns out to be only a stomach: a thing that could eat and drink."

The believer can use the language of ver. 19 in very truth (Prov. 2. 7; Col. 1. 5; 2 Tim. 4. 8).

Contrast ver. 18, "And he said," with ver. 20, "But God said." What "*God said* upset all that "*he said* (James 4. 13-15.

"*Thou fool.*" A fool intellectually and morally, he left God out of his calculations.

He gets notice to quit—*short, peremptory.*

When the worldly man dies, he *leaves* all.

When the Christian dies, he *gains* all.

JAMES L. STANLEY.

THE WORKHOUSE BOY WHO BECAME A GREAT AUTHOR.

By F. Burton Irving.

Part I.

JOHN KITTO was born in 1804. From the first, the curse of that poverty which is the result of drunkenness rested upon his home; so, when he was four years old, his poor old grandmother, to save him from the wretchedness of his surroundings, carried him off to share the humble shelter of her garret.

She was always very kind, and "pinched herself to support him"; but it was not until he reached his eighth year that his school life began, and even then his attendance was very irregular. This was owing to two reasons—severe headaches, making study impossible, and the fact that his grandmother could not afford to pay for him, and that his father's money too often went to the publican for his own lusts, instead of going to the schoolmaster for his son's education.

Whenever the school fees were swallowed up by drink, John stayed at home, when, fortunately, he learned from his grandmother lessons of patient industry, which served him well in after life. She taught him to sew, and he made gay patchwork for quilts, besides kettle-holders innumerable, while he listened eagerly to the ghost, fairy, and witch stories which fell from her lips, and from those of a neighbouring shoemaker. One day he made the happy discovery that these stories were printed, and that some of them might be purchased for a copper. He at once began to forego the childish luxury of sweets and cakes, in order to save money to buy picture-books. The love of reading grew, and he soon finished his grandmother's little library of four volumes,—a Bible with pictures, a Prayer-book, "Pilgrim's Progress," and "Gulliver's Travels." His kind old guardian fostered his taste for books by borrowing them from her neighbour, for nothing but reading could give John pleasure now; the craving for knowledge, once aroused, became insatiable, and though often baffled by penury, it was never crushed; difficulties only stimulated desire.

But the quiet period which he had enjoyed was near its end. His grandmother had an attack of paralysis, and became helpless. She was forced to go and live with her youngest daughter, being unable any longer to do the daily work, which had previously enabled her to live under a roof of her own.

John was obliged to return to his father's house, where he was speedily told that he must earn his own living; so he went as shop-boy to a barber, where he did much sweeping, dusting, and cleaning, learned to lather chins, and, in the intervals of leisure, practised upon himself, which resulted in a very bushy beard when he reached his sixteenth year. However, he was not able to keep this situation long, for he had the misfortune to lose some razors, and his master discharged him on suspicion of theft.

His next work was to assist his father, who was a mason by trade, although his intemperate habits prevented him from following his craft with any regularity.

Poor John! his prospects were very cloudy; but they soon became increasingly dark, by a sad accident which happened to him in his thirteenth year. He was carrying a load of slates up a ladder, and when stepping off it to the roof, he missed his footing, and fell a distance of thirty-five feet into the court beneath. He was picked up bleeding, and lay unconscious for nearly a week. For four months more he had to keep his bed, and he did not entirely recover for a much longer period. The accident left results which deprived him of one of his senses for life—it rendered him absolutely deaf, not only to human voices, but to the loudest sound. Some time passed before he knew the extent of his calamity.

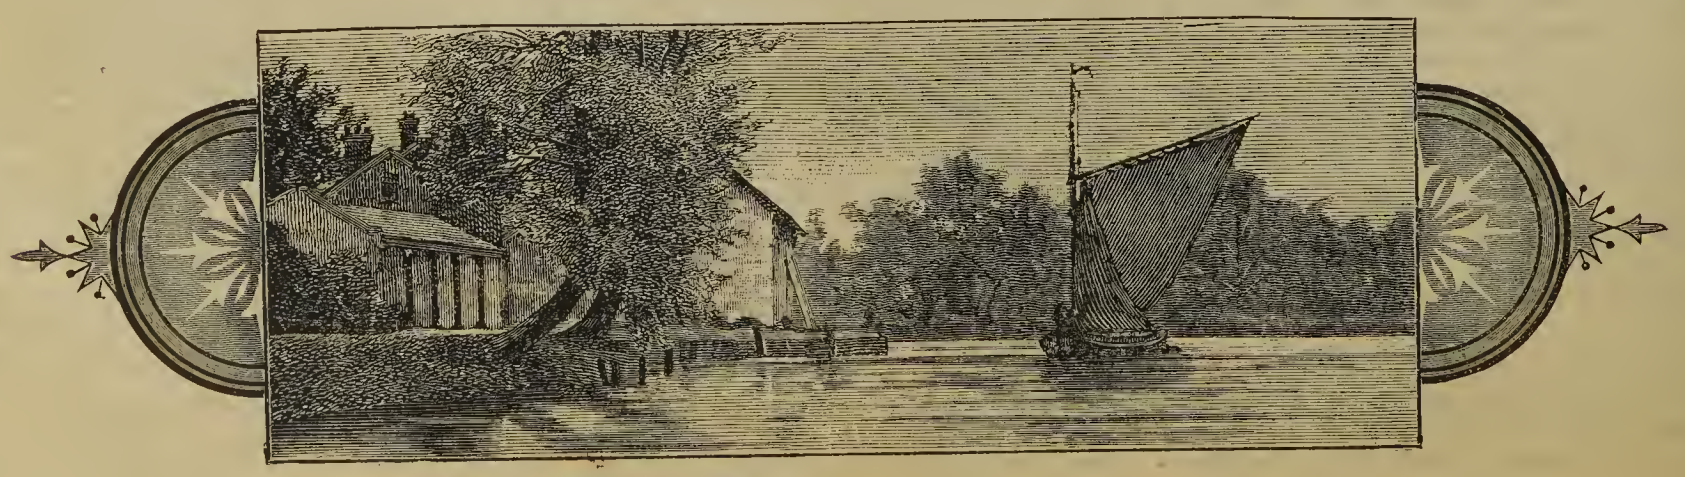
When he began to amend sufficiently to take an interest in his surroundings, he asked many questions, which were always answered by signs. These he could not understand, and said, repeatedly: "Why do you not speak?" At last, the answer was written on a slate: "You are deaf."

However, help was nigh; his pitiable condition became a subject of common remark; so in 1819, at the age of fifteen, he was admitted into the Plymouth Workhouse.

Considering his circumstances, and the want of "Homes," which now receive so many similar cases, it was the best thing which could have happened, for God raised him up a friend in the governor, who was very kind; the society of other lads was a healthy check upon a natural shyness, which was confirmed by deafness; he learned to make list shoes, and his friends rejoiced that he now knew a trade, which would keep him from penury when he was again cast on his own resources.

In 1820 he began to keep a journal; for he could not get many books to read, and thought writing would be a pleasant substitute for them. This journal bears strong marks of natural ability; but we have only space for two of the briefest extracts. The first indicates his honest love of independence, and shows the sting in his position: "The word pauper sticks in my throat." The second tells of a sorrow greater than any which went before: "April 17th.—Granny is worse. April 18th.—She is dead."

In November, 1821, John was apprenticed by the workhouse authorities to a Mr. Barnard, they being anxious that he should "learn a trade, so that he might be able to support himself without parish relief." Had his new master been kind, John would have been well content with a transfer which he regarded as a promotion; but he proved a brutal tyrant, and the six months spent in his service were the most miserable part of a life which had been schooled in misery.



Much cruelty wore out John's endurance, and he made a complaint, which was investigated by the magistrates, who at once cancelled his indentures, and set him at liberty. He returned to the workhouse; but he had found so much freedom in writing his appeal for the trial, that he became conscious of the power which lay in his pen. A gentleman, accidentally met in a bookseller's shop, exerted himself on his behalf, and some of John's papers were inserted in the *Plymouth Weekly Journal*. Interest was excited, and public attention called to his talents, by means of a circular, signed by Harvey, the mathematician, and other gentlemen of influence, which resulted in his leaving the workhouse, and being appointed Sub-Librarian in the Public Library of the town. In this congenial position he studied hard, and also wrote several essays.

Some time after, another new and powerful friend, Mr. Groves, a dentist, of Exeter, who had long watched John's faithful improvement of his time, offered to receive him into his house, and give him board, salary, and instruction in his profession. This offer was gratefully accepted, and the deaf hero of our story went to Exeter, where he was very happy with his new master, who spared no effort to promote his comfort and to forward his studies. In 1825, his first book was published, under the title of, "Essays and Letters, by John Kitto."

The next change in Kitto's condition was more fully to prepare him for a work with which his name will ever stand honourably identified,—"The Pictorial Bible." Mr. Groves had long desired to become a missionary, and in the intervals of business he had prepared himself for ordination; this, however, did not interfere with his desire to befriend Kitto; so, before entering on his new life, he laid before him plans by which he could either follow chemistry, or go as printer to the Church Missionary Society, on one of its foreign stations.

The latter offer was accepted, and he went to the college at Islington, to learn printing, Mr. Groves generously paying £50 a year, for two years, towards his expenses.

MAR. 10, 1888. "A.1." ONE PENNY.

WEEKLY — Edited by MRS. STEPHEN MENZIES.

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "Water Gipsies," etc.

CHAPTER IV.

"GRAHAM."

"Yes."

"How soon will you have done?"

"Presently."

The speaker whistled and walked to the window. The room was a London office, its occupants two young men, the time of day evening, the time of year winter.

"Graham."

"What is it?"

"It is time to shut up. Can't you leave that until the morning? I want you to come out with me."

"Presently."

"You have said that twice already. I am perfectly sick of this office. I detest London. When are you coming?"

"You're an awful worry, Segrave; do sit quietly by the fire for half a moment, there's a good fellow, while I get this through. I must catch the last post, so don't interrupt me."

"But it isn't your own work, and it's after hours, and you're not paid anything extra."

Kenneth Graham just raised his deeply set eyes and glanced at his companion. He made no verbal answer, however, and bending his head once more, resumed his interrupted writing. A pile of loose sheets lay around him, the gas flared overhead, the monotonous scratch of his pen was the only sound heard in the room.

Segrave sat on by the fire; the half-minute lengthened into one, into many, and still the writer pursued his task.

"Graham." "Well?"

"Are you coming?"

"Presently."

"The third time, I do declare. Graham, I am going out; I am sick of this office."

"All right, Segrave. I'll follow you by-and-by, when I've finished."

"Are you up to a game of billiards?"

"Not to-night, thanks. I shall be in my rooms at nine o'clock. Come in, and have a bit of supper."

"Thank you; I'll see. I'll look in if I can, but don't wait for me."

Segrave slammed the office door after him. His steps were heard descending the stairs, and absolute silence reigned in the apartment; for Graham was now reading what he had written, preparatory to putting it into a large envelope for the post. His work was finished about half an hour after Segrave left him; then he turned down the gas, and pushing his letter into his pocket, went out, and dropping it into the nearest letter-box, walked towards his lodgings.

"'Graham.' 'Yes.' 'How soon will you have done?'"

"That's well done," he said to himself. "If those communications did not reach Martin to-morrow morning, there would be very little hope ; as it is—well, he knows all I can tell him, but I wish he would come home. It is dreadful to have the head of a Firm away at a critical moment."

"I say, Graham." A hand was laid on his shoulder ; he turned round to encounter the boyish and somewhat fresh-looking face of a man who was in reality six-and-twenty.

"Why, Martin, is it possible? I was just thinking of you, or rather of your father. I am heartily glad you have returned."

"So am not I then, my dear fellow ; smoke, fog, mist, drizzle, sleet, snow—who would enjoy London at this time of year? And I am come from sunny France. Where are you going, Graham? May I walk with you?"

"Of course. I am going home ; will you come with me? Segrave is coming in later, but you won't be at all in the way. Is your father at home, too, Martin? We want him uncommonly badly at the office just now."

"My father! Not he. He talks of going to Egypt for the winter."

"He must not do that on any account; his presence is urgently needed. We are at a standstill, and if matters are not cleared a bit, will soon be in serious difficulties. Do you hear me, Martin? Your father's presence is required in town, and at once."

"Of course I hear you, Graham. When you put on that hectoring, disagreeable manner, and lower your voice at the same time, and growl out words as if you were vying with the thunder of the elements, a fellow must be both deaf and an idiot not to listen to you. But now look here, if there's one thing I detest more than another, it's office talk out of office hours. I'll listen to all you've got to say to-morrow ; now I'm in the humour to be amused. Of course I'll come home with you, if you like."

"All right! This is our way."

"Graham, it strikes me you've turned very morose ; but I know what it is, you've got office on the brain. Well, to change the subject, have you heard of Segrave's last?"

"My under clerk. Poor boy! he has only been at the office about a fortnight, so I know very little about him in any way. I take pity upon him, for he seems to be somewhat friendless. I honestly confess, however, that he's a worrying sort of chap."

"I believe you. Poor stripling, I doubt if he's all there. The fact is, however, he belongs to a respectable set of people up in the North, and they've got into the habit of laughing at him, and labelling him as half-witted. Nice, isn't it?"

"Very. I would rather not have such respectable relations."

"Dear me, Graham ; don't take me up so short. The Segraves are awfully nice, and Charlie is no end of a muff, and of course they laugh at him. How can they possibly help it? How amused they were when they heard he had got a berth in our office."

"I believe he's a good fellow," said Graham. "I know he's queer, and I own he's a worry ; but what did you say his last scrape was?"

"Oh, he has spirit enough in his own way. What do you think he did? went and got engaged to that pretty little girl, your friend's sister."

Graham had been walking quickly ; now he paused, drew himself up short, as if he meant to say something, changed his mind, and walked on faster than ever.

"You need not run, Graham. Segrave went and engaged himself to Miss Kennedy's sister, the one they call Polly—awfully pretty girl ; but the best of it was, French, of Muirhouse, fell in love with her at the same time, and the little puss encouraged them both, and it seems did not care for either. It's all off now, for Miss Kennedy—an awful dragon they tell me she is—put a stop to any such nonsense. Why, what is the matter, Graham?"

"I would rather you did not speak of Miss Kennedy if you cannot manage to do so respectfully."

Martin gave a short whistle, glanced at the taller man's very irresponsive face, and resumed,—

"I meant nothing ; I think Miss Kennedy a splendid girl. I have the greatest respect for her. By the way, have you heard the romantic story of her fortune?"

"I have heard that she has been left money ; I don't know particulars."

"Oh, come ; I'll tell them to you."

Graham stopped short again.

"I don't know that I particularly care to hear," he said. Then he paused and quite perceptibly hesitated. "Yes, I will hear," he said ; "but first of all come in. We are just at my place now. Come in, Martin."

The two young men drew up short at the door of one of the usual London lodging-houses. Graham opened the door with a latch-key, and they went up to the second floor, where a smoky fire and a very dingy sitting-room awaited them. Graham took no notice whatever of the dismal appearance of the apartment, but not so Martin. He was more or less dependent on creature comforts, and he turned up the gas and stirred the fire himself, and pulled forward an easy chair.

"Graham, have you nothing at all in the house for supper?"

"Oh, yes ; look in that cupboard. You will find a ham-bone, some biscuits, some cheese, a brown loaf, and I believe some butter."

"What a tempting array! Let's have them out ; you look starving, and I undoubtedly am reduced to the very last extremity of hunger. Graham, your ham-bone is very bare. What do you say to my adding a beefsteak to the feast?"

"I should be very much obliged, and would much appreciate it."

"All right ; where's your landlady?"

"Somewhere in the kitchen. She objects on principle to cooking for the third floor."

"Oh, leave her to me ; I'll manage her."

Graham smiled. Martin, muttering all kinds of unintelligible things, rushed wildly downstairs, and, in the course of half an hour, a fairly well-done steak smoked on the board.

"Now, old fellow," said Martin ; "I'll tell you that story."

"Thanks."

"You have heard of old Jenkins? He was in the same business as my father, and they saw a good deal of one another at one time. Then he retired, and took his fortune with him—not a very large one, but he lived comfortably. He was always a solitary and morose old beggar, and somehow we took it into our heads that he had no relations. He never encouraged visitors, and lived absolutely to himself. A month ago he died, and my father found that he was made one of the executors of his will. He had left all his money to no less a person than that bright-looking Miss Kennedy, whom I have sometimes seen you with, and sometimes heard you mention. She, it seems, is his niece, and only living relative. He left her £30,000, and my father is one of her trustees ; my father, and Simpkins, of Bell Yard—— Why, Graham, what is the matter? You are a lucky dog. Yes, of course, old fellow, any one can see through a glass wall, and you are an uncommonly lucky dog. Your Miss Kate has got £30,000."

"Don't," said Graham ; "she is not mine. I am not going in for her, so there!"

"Not! Then why this pallor and perturbation?"

"Draw your own conclusions. I won't be questioned. Is that the whole of the story?"

"No ; and as I am bound to believe your last assertion, I can tell you the remainder more comfortably. Old Jenkins had a head on his shoulders, and had no idea of allowing pretty Miss Kate to sacrifice herself, and to squander his money over those three silly half-sisters of hers. The will is a queer one, but 'awfu' canny.' Miss Kate can only spend the interest of her money until she is five-and-twenty. If at that age she is still unmarried, Jenkins's little savings go in equal portions to St. Thomas's, St. Bartholomew's, Guy's, and the London Hospitals. If she is married before that date, the £30,000 remain with her and her heirs for ever. But, here's the rub—the fellow of her choice must bring an equal fortune to meet hers. I call it horribly hard lines, don't you?"

"Not at all," answered Graham. "I think they are absolutely reasonable. Now, if you don't object, we will finally change the subject. Ah, and here comes Segrave. Segrave, have some cold steak?"

"Have a polished ham-bone?" called out Martin in a jocose voice ; but as he spoke, he watched Graham narrowly.

CHAPTER V.

KENNETH GRAHAM was called by his friends the best fellow in existence.

Nobody quite knew why he got this title ; he was not particularly good-natured, nor even particularly good-tempered. He was known, too, to take his own way on almost all occasions. Nevertheless, his friends trusted him, and were fond of asking his advice ; though whether they followed it or not was quite another matter. They were wont to consider Graham as very safe, and quite high and dry above all temptation. He had been for several years a clerk in the firm of Martin and Winter. He had won confidence and esteem in this position, and the young clerks liked him, and did not mind being put, in a certain sense, under his protection. It would almost have provoked a smile to see how anxious fathers and mothers confided in Graham, and begged him to be good to their special boys, and, above all things, to see that they did not get into temptation. Graham was taciturn in his replies, and the youths in question felt more or less disgusted. That was before they saw him ; when they did, the usual thing happened—in a week's time they invested him with hero-worship. Whether it was his manner, or his appearance, which was big, and broad, and stalwart, or the very quiet and deliberate way he had of bringing out rather terse sentences, yet never saying an unkind thing—whatever the reason, all the youths who worked under him adored him, and would have done anything for him. Even young Martin, the junior partner in the firm, thought well of Graham, and did not disdain to be seen with him, and that although Graham was known to be very poor, and not the least uplifted by any one's attention. Perhaps the fact of his total indifference to every one's good opinion was one reason why

he so easily obtained what many men would do much to possess.

The true fact, however, was that no one really knew Graham at all,—not one of his many so-called friends had got an inch below a very self-possessed and cold exterior, and knew nothing of the real man, who was passionate, and frail, and tossed about, and buffeted by many and sore temptations. Graham was in no sense of the word, "model;" he was sensitive, he was easily hurt, and, in some particulars, he was as weak as he looked strong.

He had a history which no one knew about; he had a past to which no one alluded; but until lately he had also a hope which gilded all things, and made virtue and goodness, and even religion possible to him. Nobody knew when the hope died out, for whatever Graham did, or did not possess, his self-control was perfect.

Young Segrave was his latest *protégé*, and he now listened languidly as the lad,—for he was very little more,—poured out a piteous story about the faithless Polly who had so lately won his heart, to toss it back again to him.

"It's all her sister's doing, of course," said Segrave. "I saw her, and she was very nice; yes, of course, she was extremely nice; just the kind of girl you'd admire immensely, Graham; but she made me feel absolutely hopeless. I was wild with her, and yet I could not resist her. She said I must be brave, and think nothing more about it,—so easy for a girl to talk like that! Upon my world, Graham, I feel awful—I do, really."

"You had much better take Miss Kennedy's advice," answered Graham. "It's unpalatable—all advice is unpalatable, and of course you are to be pitied at the present moment; still, I don't see what you are to do, for Miss Polly herself has refused you."

"She'd never have done it, if her sister had not come in for that odious money."

"What has that to say to it?"

"Why, everything. She'll have a comfortable home now."

"She must have loved you very much if she is willing to give you up for a comfortable home."

"Don't be sarcastic, Graham. She loved me in her own little way. She's almost a child, and she don't know her own mind of course; it's a shame for Miss Kennedy to influence her."

"Perhaps so, Segrave, but if Miss Polly is so sensitive to the seductions of a comfortable home, have you one to offer her?"

"Oh, I say,—you know I'm very poor."

"Don't you think you had better put love and marriage out of your head for the present? Now, I am very sorry to appear inhospitable, but I really fear I shall have to ask you to go. I have some papers I must get through to-night."

"You are such a bookworm."

"Not at all. I have my work to finish, that is all."

Segrave rose reluctantly, and Graham, after he had left him, got up and locked his door. He was very unhappy; he could now let the mask drop from that calm, serene-looking face; he could now let his real self appear. The extinguishing of his hope had unmanned him, and he knew it.

"I thought I could have borne it," he said to himself. "When I met her that day at Victoria, and she told me about her fortune, I made up my mind there and then to give her up. Of course, I don't even suppose she cares for me. I shan't try to find out now—certainly not. A girl with £30,000 to tie herself to a luckless beggar like me? Let me see, what have I got, what have I got to offer her? Myself—oh, of course,—myself—six feet of me, fairly good-looking, up to the average as regards strength, youthful, not more than seven-and-twenty—respectable, quite so—considered religious, always go to church—no low, mean ways about me, simply because I hate them. Really, upon my word, quite a virtuous character; quite a handsome, nice young man. I have no doubt some of Kate's friends would admire me vastly as her husband. What have I got to offer her besides myself—the position of a clerk's wife in an eminent mercantile Firm, salary £220 a year, half of which goes—oh, never mind, I need not go into that; probable rise of salary to £500—perhaps £600; no chance of partnership without capital; some of Kate's £30,000 would do it nicely! Well, if I had any idea of being mean enough to go in for her, what Martin told me to-night would put an effectual spoke in my wheel. Kate loses her fortune unless she marries before she is five-and-twenty, and she must marry a man who brings equal money to meet hers. Am I likely to have £30,000 before Kate is twenty-five? There, let me stop thinking of such folly. Poor Kate—yes, I call her poor, for I know how she'll be surrounded. Very likely young Martin will go in for her. I don't much like him now,—*then* I shall hate him. Poor Kate, no one would have made you as happy as I could, and you'd have made me—good. I'd have been in reality what I now appear to be. I'd have been the model man all my friends suppose me to be. Poor Kate, and poor luckless Graham—it does seem hard that the one girl in all the world who could have made a man of you, and saved you from yourself, should be just snatched away from you because she happens to inherit some paltry thousands. Kate is just the girl to be a poor man's wife; we might have married before long. Well, well, I must pull along as best I can without my hope, without that one very brilliant and clear-shining star in my lonely sky."

Graham pulled himself together, ceased to soliloquise, and taking up the two large ledgers he had brought home with him, plunged into a hopeless sea of accounts. After a couple of hours' very hard work, he suddenly stopped, raised his head, and said aloud with great bitterness,—

"Hopeless confusion, truly, and after all, why should I try to set young Martin's affairs straight for him? He's safe to go in for Kate, and his father will encourage him. Why should I burn the midnight oil to make matters smoother for him?"

Nevertheless Graham bent again over his ledgers, and worked hard until the dawn of a new day sent him to seek a couple of hours sorely needed sleep.

Such midnight toil necessitates late rising, even with the best intentioned. Graham was young, he had a splendid constitution, and he was just at the age when a man may burn the candle at both ends without being aware of any apparent injury. He may burn the candle at both ends, and not even suspect that the citadel of his house of life is being slightly undermined by so doing. Why then did he look so ghastly this morning? why were his deeply-set grey eyes so dull? and why did his fine muscular-looking right hand shake slightly as he poured out a cup of coffee? He drank it off eagerly, sighed as the slight stimulant acted on his frame, and then, with a certain brightening of his face, shook off what looked almost like deadly illness, and turned to examine a letter which had come by the morning's post. He broke the envelope, and as he sipped his coffee and munched his bread and butter, acquainted himself with the contents.

"Poor Mrs. Alexis," he said to himself, when he had finished the letter; "poor good soul—I really have neglected her shamefully. I have absolutely not been near her for quite six months. I know why. It is six months since I first saw Kate. From the moment I first saw Kate Kennedy I have lived in a dream. Yes, from the very first moment I have lived in a false, golden dream. My God! I loved her the instant I looked at her. What a fool I was! Well, it's all at an end now. I wish my hand did not shake so terribly, though. I am absolutely unmanned—I, Kenneth Graham, and about a girl!—just a tall, straight, dark-eyed girl, whom some people might not look at a second time, but who nevertheless means my world. Well, I have lost her. I really must not begin thinking of her again at this time in the morning. Poor Mrs. Alexis! I have neglected her shamefully; not been near her for six months, and now she wants to see me very badly. Begs of me to come to-night. I wonder what for. Has she had news of that scoundrel Jonas? Yes, of course, I'll go; I'll send her a line at once."

Graham rose from his scarcely-tasted breakfast, scribbled a few words on a post-card, and on his way to his office dropped the card into the first pillar-box.

The great Firm of Martin Winter and Co. had their offices in Seymour Street, E.C. There were great warehouses at the back of the offices, for Martin, Winter and Co. were wholesale merchants, and did no retail work. Graham was a little late in arriving at his destination, and when he did so, he found that the slight feeling of uneasiness which had been scarcely perceptible yesterday, was now much more marked. The younger clerks were whispering together. Martin, junior, came to meet him with a face quite blanched.

"Come into my private office at once, Graham. Of all mornings in the year, why should you have chosen this one to be half an hour late? Come into my private room, I must speak with you at once."

(*To be continued.*)

OPPORTUNITIES.

By the Rev. SISSON COOPER.

WHENEVER you find one, use it. The only thing is, be sure it *suits* you. It is quite possible to fail here ;—to find an opportunity, a real one, and yet such that it will be a mistake to avail one's self of it.

As, for instance : A man has a well-furnished house, with pretty nearly all he needs, but one morning at breakfast he takes up the paper, and reads the sale list at some local auction. It is a very good chance, he thinks. Things often go cheap at an auction. He must just step over and look in. There is a grand side-board going as he enters, so roomy, and so quaintly carved. How well it would look in the dining-room ! and the bidding is slow, it is quite an opportunity ; he will try for it. He nods to the auctioneer once, twice, three times, and the hammer falls. It is his, but before he lies down to sleep that night, he regrets his success ; he made the purchase without sufficient thought, and had no real need for it. It was an "opportunity," but lacked this element of which we speak.

Just another instance in the same direction. I knew a skilled bicyclist at a seaport town. He used often to ride along the curb-stone of the quay, with only three inches between him and the edge, and that, too, with his hands in his pockets, guiding the bicycle with his feet, and he did it with perfect safety. But I also knew a young fellow there, who had a new machine, and had been riding about a month. One evening, upon witnessing this grand display, he started off to copy it ; but not successfully, as, somehow losing his balance, he toppled over, and, had he not been a tolerable swimmer, must have lost his life ; as it was, he only lost his dignity. Again, an "opportunity," but not happily chosen.

Bearing, then, in mind this one caution, *use* your opportunities. You will find a great many of them in life. They will spring up before you, or may be sought.

Supposing, good reader, that you are a young man or woman, and that you are in business, at a counter, or in an office. There you have an "opportunity" daily before you of improving your *skill* and *information* in the peculiar branch of work you have selected. Don't simply do your day's work so as to *get it over ;* do it so as to *learn from it*. Practise your eye, and ear, and memory ; notice how things are *generally* done in that department, and think of how they might be *better* done. A man who does this systematically, will not be long an ordinary hand, he will be a skilled one. He will be daily fitting himself for a higher post. Remember you *have* this opportunity ; it certainly is yours, unavoidably so. If you are young, and at business, you may improve yourself in it.

Supposing still that you are young, and that there is a reading-room or library within reach. That is an "opportunity." Read there this year, as often as you have leisure time, and I will promise you two things by next March—wider information, and refinement of style. You will know more than you do now, of the state of your country, of the prospects and possibilities of trade, of the new life opening up for us in our colonies, of the triumphs of science, and of the progress of religion.

And your *style* will be improved. I mean by a person's style, his way of speaking, and his way of writing, and his tone of thought. All these are improved in each individual in proportion as he reads, supposing only, of course, that the matter be healthful literature. A man insensibly comes to express himself after the manner of the writer whose works he has been perusing, and to form his opinions as he has there heard them expressed.

But, perhaps, oh, reader, you are a married man or a married woman, with much of life gone over your head? Well, you, too, have "opportunities," in many ways, and in many places, *e.g.*, in your own homes, of speaking kindly words and doing kindly actions. We, many of us, remember how much the kind word did in the "Oiled Feather" for Civil Sam, how it helped him over various stony places on the road of life. Look out for opportunities to speak it. You sometimes in your position have to find fault ; look for opportunities even on the same occasion to bestow praise. If you must tell your servant that she has swept the floor carelessly, she will take the reproof all the better if you can begin by saying that she has been very patient with the baby, or boiled that fresh egg just to perfection.

And as for kindly deeds—well, I am speaking at random. Perhaps there is down the street a little way, a young man living in bachelor's quarters, lonely and strange, having lately come to your town ; ask him in of an evening, and let him breathe, if even for an hour, the healthful atmosphere of Home !

Perhaps the good people in your parish, who are doing what they can, but are short-handed, want a teacher at the Sunday School, or a visitor for a district !

Perhaps some relation's child is left at school for the summer holidays, the parents being abroad, and that young heart is sad and lonely. Ask the little one to your home, and be *pro tem.* a father and mother !

These are "opportunities." They come, many of them, without seeking ; they knock at your door. Don't neglect them. St. Paul will tell you as much in Galatians 6. 10 : "As we have therefore *opportunity*, let us do good unto all men, specially unto them who are of the household of faith."

Again, young man reader, you are not married. I would not like to advise you in such a matter ; I really could not think of interfering. The responsibility would be very grievous. But—are you—quite sure you are not missing any "opportunities"? An opportunity with a fair face, and a loving heart, and a prudent mind, sometimes meets a man, and he is wrong, I fancy, for the most part, to let *her* slip.

As for any corresponding advice on the other side, it is quite out of the question. I would only go back to the starting words of this paper, and remind any girl whose hand is asked in marriage, to consider, indeed, with thought and earnest prayer, before she accepts. An "opportunity" of saying "Yes," if not suitable, if not, in short, the right one, God's chosen one, is, and ever must be—a life-long calamity.

And now, lastly, a solemn word or two. We have all an "opportunity" every day of reading the Bible. It is God's own message to our souls, giving *such* counsel and comfort in difficulty and sorrow. Certainly we are wrong to neglect it.

We have all, every morning that the sun rises, an "opportunity"—a splendid one, of spending a better day than we ever spent before—a spotless day. Let us pray from henceforth, before we leave our bedrooms, "Keep us this day without sin."

ABOUT OURSELVES.

THE results of our Spelling Chase, on pages 296 and 297, will create much interest. Those who have failed will hasten to Webster's Dictionary to find out their mistakes. The new Spelling Chase is rapidly taking shape, and promises well. The Rules in next week's Number, the Paragraph to be written out, in our Number for March 24 ; don't miss it ! Try for our Guinea Prize, and be sure you order copies of "A. 1." in advance.

The "Thirty Nouns" Competition, announced in our Number for Feb. 18, page 254, does not close until March 24. A fortnight remains ; why not have a "try"?

"Please Stop !" is only just started. See —"A. 1."—for Feb. 25, p. 260. One Guinea Prize for whoever can punctuate best. Competition remains open until March 31. Highly entertaining and helpful.

The last of our Special Christmas Series of Competitions closed on Feb. 29. The Exams. are getting forward, and results will be announced on the first possible dates.

Those who have received one of our new Artistic Certificates will think it has been well worth while to lose the Prize !

During the three remaining weeks of this month, we shall give a series of Papers on "Instinctive Architecture," with exquisite illustrations. The pictures alone are worth the money.

Much interest is roused about "The Star of Bethlehem" just now. Next week a thoughtful Paper on the subject from Rev. Canon Dobbin, M.A.

"NOT WORSE THAN OTHERS."

THIS is cold comfort and false logic. Does the judge acquit a criminal because he has only defrauded £50, while another has £5,000? Are not both guilty in the eye of the law? Does a tailor measure by moral measurement, or by deduction from and addition to the size of another person's garments? Does God make a variable requirement to suit all sorts of consciences that people choose to erect? Does He measure us by ourselves, or by others? Is relative goodness or personal sinfulness His standpoint for man? If you were on your death-bed, and eternity close and straight before you, would it be a comfort to you to know that Mr. Alpha was as bad as you, and that Mr. Beta was no better? Would the knowledge of that help you to face God's judgment-seat with calmness? No ! you know it would not. Then why do you now stifle conviction with such thoughts?

Be honest. Measure yourself by God's standard, "All have sinned," "All are guilty" ; you are no better than others, and need the same Saviour who died for all. 'Tis wise to see ourselves as God sees us, to measure ourselves by God's measurement, and then to go where God would have us go, to the cross of Christ, for pardon and peace.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

"'*The bergs must be tackled . . . it's our* ONLY *chance!*'"

CHAPTER XXX.

THE BATTLE HAD BEGUN.

THE war with the ice continued for a whole month, without surcease or intermission. Monotonous such a struggle could not be called, for it was ever-varying. Sometimes the ship was sailing or steaming in a comparatively open sea, but with bergs floating lazily here and there, and always with a white and rugged horizon. Sometimes she would be imbedded in fast sheets of bay ice, through which she needed all the power of wind and stern to force her way. Sometimes the sun would be shining on icebergs of every conceivable shape and form, with turrets, towers, and spires rising higher even than the main-truck — monsters that rose and fell gently with the swell, as if innately conscious of their own terrible power. Sometimes mist enveloped everything, and the bergs, as the ship passed them, looked like a succession of gigantic ghosts, appearing for a moment out of the gloom ahead, and gliding past, to fade away in the invisibility astern.

At other times frosts came, sharp and bitter, lasting for days; then ice hammers had to be kept working ahead, and poles used to force the bigger pieces asunder.

Once the frost was so hard that the ship's way was stopped entirely, and, for a time, it seemed as if they were already in winter quarters. On this particular occasion, Nat Graves, while following up a bear on the ice which finally escaped, nearly lost his passage. He had been all alone, and when he turned to go back, was surprised to find the snow on the ice getting softer as he advanced. Clouds, too, were banking up in the sky which previously had been blue. The truth flashed upon his mind. The ice was breaking up. Of this there was soon but little doubt, for it was not one lane of water he came to, but several. He lost his gun, and had often to ferry himself over, by getting on to a piece of ice and shoving it off by means of his club.

The club used in some parts of the Arctic regions is a species of battle-axe attached to a tough handle; it is a dreadful weapon of either offence or defence against the seals or bears. It would have gone hard with poor enthusiastic Nat on this occasion had not the dilemma he was in been noticed from the crow's-nest, and a boat sent over the ice to his assistance.

Bears were far more frequent now on the ice than they had yet been; a fact which was not reassuring, for it indicated a close pack, and probably the oncoming of an early winter.

One day Desmond came down from the crow's-nest, and it was evident he had something important to communicate. He found Captain Boyd in his snuggery closeted with Jack and Nat, senior. They had been discussing probabilities.

"Well, Mr. O'Neil," said the former, "any good news for us?"

"I can hardly say whether it be good or bad, sir. There is terribly heavy ice on our beam. I don't think we can force it. But I can just catch a glimpse of blue water beyond."

"Open water?"

"Not quite; it is bounded still farther to the south by what may be more ice, but what seems to me is land."

"Land! Then it must be the northern shores of Alaska. I will be up myself in a few minutes. Meanwhile, send Old Chips aloft to have a look, and let us hear his report. Better keep the lead going, Mr. O'Neil; we might get into shoal water in no time. Best to be careful!"

"I have two men in the chains, sir."

"All right, then. Thank you."

"Heigho!" continued Captain Boyd, as soon as Desmond had gone. "This has been a weary time for all of us, and an anxious one, too."

"Well, apart from the anxiety," said Mr. Graves, "it has been quite an enjoyable time for me, and, I may add, for the ladies as well. It has been all so new, and in this little world it is just something new occasionally that one needs. But I must admit we have all been a trifle anxious at times."

"Mr. Graves," said Jack, "you haven't let down your heart, anyhow, anxiety and all."

"No, Silk, and I think it would be impossible for anything to check your flow of animal spirits."

"The plans we—that is, myself and the boys—formed before we left Bristol," said Captain Boyd, "are a long way from being fulfilled, though

"'The best laid schemes o' mice and men
Gang aft agley,
And leave us naught save grief and pain
For promised joy.'"

"True," said Graves. "But what were your schemes?"

"What were our schemes, Jack? I've almost forgotten."

"So have I, sir. I'm not sure, though, that they would hold water. Let me see, we were to combine pleasure and profit. We insured the ship against extra risks from ice, etc. That cost us something. But we didn't mind, did we, Captain Boyd?"

"Not a bit, Jack. 'Hope told a flattering tale.'"

"Well, Mr. Graves, we were lucky at the start, for we got as many passengers as paid our way to 'Frisco. Luckily, too, they didn't mind how long the voyage was — invalids, you know, though we soon put them straight. The cook doctored them. Well, we were to have left 'Frisco without passengers. We saw fortune before us. For it wasn't only 'Hope that told a flattering tale,' but Chips. Chips was spokesman, and he quite swelled all our heads with yarns—not that he meant to deceive us, no, Chips is as honest as the day is long. But we thought we should have nothing to do but enjoy sport of every conceivable kind, load up with the most valuable furs and ivory—with a chunk of the north pole thrown in to show them at home—and set sail once more for merry England."

"Go on," said Captain Boyd; "you talk like a book!"

"I daresay. I'm not often so long-winded. However, we didn't get clear quite of all our passengers at 'Frisco, and we shipped some new ones. And then, what with one thing or another, especially the mist, we haven't got all the skins, and we haven't succeeded in

forcing a passage east and round to Davis' Sea. But never mind,—what's the odds so long as you're happy?"

"Bravo! Jack," cried Desmond, who had just come down the ladder. "Bravo! old man. It would take a good lot to make you lose heart; but here is Chips himself, sir."

"Which I've been up to the nest, sir," said Chips with a scrape and a bow, "and that isn't ice on the other side o' the bit o' water. Leastways, sir, I never seed ice like it before, not in all my born days."

"And you think it is the Alaskan shore?"

"I wouldn't go for to come to say that, sir. But it's *land*, if it be only an island."

"Then it *is* Alaska, Chips; thank you. And now we must try to get into that bit of blue water."

"I don't think that is possible," said Desmond.

"Whatever men dare they can do, Mr. O'Neil; isn't that so, Mr. Graves?"

Mr. Graves smiled as he replied, "I would not like to endorse that opinion, but a man never knows what he can do till he tries."

"Hurrah! then, boys. We'll go on deck and have a glance round."

But the ice looked too dangerous and formidable for even Boyd's bold heart to encounter. The ship at present was steaming very slowly eastwards, and the day was tolerably fine with a cloudy sky. The water was dotted here and there with heavy ice and smaller pieces. The former could mostly be avoided or rammed stern on, the latter were a source of but small danger, although the noise they made, as they went rattling and bumping along the side, was alarming enough as heard down below.

So the *Oonalaska* was kept on her course for hours, in the hope of the ice between the ship and the shore becoming less heavy. Some bears were seen on the bergs in the course of the afternoon. They appeared to be of enormous size, and had altogether a very independent swagger about them; it was evident therefore that they had not been much hunted.

The evening was spent in the saloon with more than the usual amount of light-heartedness. The mere propinquity of the land seemed to have raised the hopes of every one. Captain Boyd himself, however, appeared unusually silent and uneasy. He retired frequently to his snuggery to have a look at the chart, and was heard often talking with the officer of the watch on the quarter-deck.

Once, during a lull in the conversation below, the following words were heard, and they tended in some measure to damp the flow of animal spirits.

"Yes, Mr. O'Neil, it will go hard to the frost, so come what will we must try it to-morrow. If we get in the nips to the nor'ard of these bergs, good-bye to the old '*Oona*.'"

Then the captain came below, and Katie got alongside of his chair.

"Any danger, daddy?" she asked, coaxingly.

"Danger, baby? No, my dear; what makes you think about that?"

"Oh! you know," she replied; "I heard what you said to Mr. O'Neil."

The captain laughed, but wisely proceeded to tell her the exact situation, adding, as he finished,—

"For if frost comes—I mean hard frost—we are locked up in these seas for the winter; and I naturally would like to get into a good harbour."

"Harbour?"

"Yes. Will have to make one, though."

The stars were very bright that night, and there was a very distinct display of auroral light. On the whole, there was but a poor prospect of the ship's being able to proceed much farther to the east.

Captain Boyd was on deck early next morning. He went straight up into the crow's nest.

"Stop her!" was the order he sang down almost immediately after. "Send Chips up here, Mr. Silk."

"Aye, aye, sir."

Jack ran forward himself. He found Chips in the half deck, with a basin of tea before him.

"Swallow that tea down, old man," said Jack; "swallow it right off."

"Right off it is, sir," said Chips, putting down the empty basin and starting up.

"Away aloft to the nest; Captain wants you."

Few old men could have sprang to the rattlins as Chips did, and very few young ones could have gained the crow's nest much more speedily.

"Chips, look south there, and look round you also, and tell me a bit of your mind."

Chips did as he was told—slowly, deliberately; then he handed the glass back to the captain.

"A beautiful roomy bay in there, sir. Open water now. Ice already spreading out from the shore. Sky clear, so frost will fix us. Yes, that stream of bergs must be tackled; it's our only chance. To the north there is more heavy ice. We must try, sir."

"And if we don't get through that barrier?"

"We'll last till the first nip comes, then sink, sir, like a crushed egg-shell. I'd risk it; we can't stay here."

"No. You're right, Chips."

"I know I am, sir."

In half an hour more the battle had begun. The course of the ship had been altered to almost due south, and she had entered a stream of bergs far more heavy than any they had yet seen.

"The battle has begun in earnest," said Jack to Desmond.

"Aye, Jack; and how long will it last?"

"And who's to win?" added Jack Silk.

(*To be continued.*)

A PARABLE FROM THE PAST.

"FATHER," said a young man, to an Ancient that lived in early times on the banks of the Nile,—"Father, I have come as a disciple of thine, to learn wisdom of thee." Taking the young man down to the side of the river, the sage bade him pull up some young reeds just shooting from the ooze. This the young man easily did. The old teacher then took him further on, and bade him pull up some others of older growth, which, with much tugging, he accomplished. Further on the papyrus grew rank and tall. "Pull me up that," said the instructor; but the young man tried in vain; the tough old plant was too much for his utmost strength. Then the old man spoke, saying, "You see, if you want to do anything, how necessary it is to begin in time. Passion of every kind, habits good or bad, are formed from little things; they are like young plants—you can bend, control, or uproot them, but when grown up, they get strongly rooted into nature, controlling and destroying it. Go, my son, learn *now* to overcome, lest when age sits on thee, thou hast too late to mourn over sin's conquering power, and thou become its slave."

ABOVE OUR HEADS?

By J. Edgar Jones.

SHE came from Concord's classic shades,
on Reason's throne she sat,
And wove intricate arguments to prove, in
language pat,
The Whichness of the Wherefore, and the
Thusness of the That.

She scorned ignoble subjects—each grovelling household care—
But turned her lofty soul to prove the Airiness of Air,
And twisted skeins of logic 'round the Whatness of the Where.

To lower natures leaving the shillings and the sense,
She soared above the level of commonplace pretence,
And studied treatises which prove the Thatness of the Thence;

Her glorious purpose to reveal the Thinkfulness of Thought,
To trace each line by Somewhat on Somehow's surface wrought,
To picture forms of Whynots from the Whatnot's meaning caught;

To cultivate our spirits with the Whyfore's classic flow,
To benefit the Thereness with the Highness of the How,
To flood the dark with radiance from the Thisness of the Now.

"What good has she accomplished?" Oh,
never doubt her thus!
It *must* be useful to reveal the Plusness of
the Plus,
To illustrate with corkscrew words the
Whichness of the Us.

Mock not, poor common mortal, when thoughts like these appear,
Illumining our labour with the Howness of the Here,
And blazing like a comet through the Nowness of the Near.

Some day in Realms Eternal such grand mist-haunted souls,
Inscribe their words of Whichness on Wherefore antic scrolls.
In that great world of Muchness which through the Maybe rolls.

Then shall we each acknowledge the Whyness of the Whence—
Each understand completely with Sensefulness of Sense—
The Thusness of the Therefore, the Thatness of the Thence.

"If there's a Power above us
(And that there is all Nature crys aloud
In all her works), He must delight in Virtue;
And that which he delights in must be
happy."—*Addison.*

"Dare to be true; nothing can need a lie;
A fault which needs it most, grows two
thereby."—*George Herbert.*

"Our deeds will travel with us from afar;
And what we have been makes us what we
are."—*George Eliot.*

SQUALLS!!

By G. DE LA PLANTE.

I AM an old bachelor, and have seen a good deal of life. Before the stiffness of age pleaded for the quiet of my own fireside, where a fine young nephew or a bonnie niece is often glad to be my companion, I used to stay about amongst my friends in country and town, making my home sometimes with one, sometimes with another.

I'm an observant old fellow now; I was even more observant then. Perhaps I saw a good deal I was not meant to see, but at least I was never unkindly. It is an easy thing to sneer; cynicism is cheap and plenty, but it does very little work, and does not leave the poor old world a whit the better.

Now I don't mean to be cynical to-day, but I do mean to be plain spoken, so if you object to that, please pass on at once. I am astride my hobby horse, riding full tilt against SQUALLS. Not baby's squalls—poor miserable mites, but those domestic breezes which are said to clear the air. Ah! do they? Perchance I may answer the question to-day. I divide my subject into five heads:—Squalls Matrimonial; Squalls Parental; Squalls Domestic; Squalls Political; Squalls Religious. A few words on each.

Squalls Matrimonial are bad, very bad; and they are unfortunately more common than married people like to admit. Here are a man and woman who have sworn to take each other "for better, for worse," yet before six months are over, some trivial circumstance annoys them, and they begin—to fight?—Oh no! nothing so shocking, only to *squabble*. Petty bickering about some unimportant thing, needle-pricks which spoil the beauty of a fair woman's face; by-and-by a stamp of the foot from the husband and tears from the wife; then a slammed door proclaims that the Squall Matrimonial is over. We bachelors notice such things more than people think. In the evening the wife will put on her prettiest dress, and be very penitent and gentle, while the husband is sure to bring her a present from town. Putting oil on the waves. The better way would have been not to have roused the storm. "Quite blown over"—is it? The sun shines truly, but the storm has left its mark. The man believes a little less firmly in his wife, and she a little less wishes to keep his good opinion. Take an old man's word for it, the Squall Matrimonial is a dangerous thing.

Squalls Parental are nearly as bad as the above. They are chronic in some houses, and far too common in most. Sometimes they rage between mother and daughters, sometimes between father and sons. It is very rare for a mother to have "domestic breezes" with her sons, or a father with his daughters. Now this is the sort of thing I mean.

I went to stay with old General Somers, who fought beside my father in India. His wife and two of the girls wanted to go out shopping. I volunteered to go with them in the barouche, but I was rash to do so, for squalls at such close quarters are too much for a man who has no women of his own. Phew! it did blow! I can't tell exactly how the squall developed, but when, after keeping me and the horses for an hour or so outside the shop, the girls and their mother reappeared, it was at its height. The trio took their places in silence, and we drove towards home. "You don't know how people are to be pitied with five extravagant daughters," said the General's wife, with a sigh.

"Mamma," said Ethel, indignantly, "what is the good of all papa's medals if he can't afford to dress us respectably?"

"Those dresses we bought are simply shabby," said Nina; "I was so ashamed when you said you couldn't *afford* the others."

"It's perfectly true, girls," said their mother excitedly; "you know your father——"

"I know he *must* be stingy," said Ethel. "Cissy Danvers says Indian officers always are."

Here mamma's dignity or Christianity came to her aid, and she was silent. That night the brave old General took me to his room and talked to me of his "five fine girls." He told me his income—"for my father's sake,"—and said half sadly, "It's not a large one, sir, and they want a good deal, do women. My wife tells me the girls have not enough. I'll put down my riding horse, sir; wish I'd thought of that before."

That was squall sad enough. The girls were not heartless, only thoughtless; by-and-by they learned better, and appreciated the father who did all he could, though not all he would. But I can tell you a sadder story of a Parental Squabble.

I knew a father and son, as much alike as forty-five and fifteen could be, and both good fellows. The father was outspoken, and impetuous in his temper; so was the son. This reproduction of himself unconsciously irritated the elder man; whilst displaying his own excitability, he resented that of his son. Father and son would come down together to breakfast, with a fine air of perfect communion, but before the meal was over a clash of some kind was inevitable. Then the son would be weighted with a sense of injustice, the father angered at what he deemed insolent rebellion. These daily breezes became the habit of the house. Phil's mother was an indolent woman, and did not play a mother's part. It was easier to be "hard" on Phil, than to reason with her impetuous husband. I never heard an absolutely passionate word from the father, or an ungentlemanly one from the son, but squalls blew those two asunder—as effectually as dynamite would have done. Phil was appreciated elsewhere, if not at home. His companions drew him downwards. Little by little the deep love between father and son was turned to what seemed almost hate. When last I saw them, Phil was stepping aboard an emigrant ship—and he an only son—whilst his father, grey before his time, stood stern and dry-eyed on the pier. Poor father! Poor Phil!

The Squall Domestic,—well, I *must* have a laugh at that. Why, my dear good friend, you do make yourself so absurd! Only an omission on the part of the cook, or some unhandy innovation on the part of the butler, and here are the winds a-blowing! These breezes awe no one; they only roar in the chimneys, and give a sense of discomfort to the folk by the fireside. Just be calm, good host or hostess; reprove, if need be, but don't make a household fuss. The squall will not get the work better done, and it is sure to cost you loss of self-respect and of the respect of others.

The Squall Domestic is mostly in woman's domain; the Squall Political, on the other hand, appertains to men. It is usually protracted and severe, and often ends in life-long animosity.

Perhaps it is the most senseless of all, for why blow against a man's opinions? England is a free land—in theory at least. I have seen Liberals utterly illiberal; Conservatives who could not conserve their tempers; Unionists fostering social disunion; and Home-rulers, who, seeking to rule their country, could not rule their tongues. The worst of it is that, with all this social tempest whirling round him, a man cannot well keep motionless himself. And while "*mourir pour la patrie*" is beautiful, "*mourir pour la partie*" is a widely different thing.

My liveliest experience of the Squall Political was years ago, when twelve of us were together in a large country house, all, except myself, belonging to one side in politics. Which that side was I am too cautious to disclose. There was a sudden change of Ministry, in which my party scored a heavy victory. I had nothing to do with it, even remotely, for the Member I had voted for was not in his seat at the famous Division. I did not refer to the victory in any way. Why then should I have been held responsible? Those eleven men were not touched in reputation, position, or pocket, by the change; if they had been, it was not my fault. I only know that whilst those "stormy winds did blow," I felt keen personal sympathy with the Eddystone Lighthouse!

Now finally, a word about Religious Squalls. "All squalls are irreligious" does somebody say? And quite right! Glad you gave me the opening for that. A man dishonours his Master just as much by petty passion, as by violent rage. The loss of self-control, or the breaking from Christ-control, is the real sin; after that it is only a question of degrees. Nevertheless, what we must still call the Squall Religious is the worst of the whole bad lot. We encounter it in every region of Christendom. It blows about our ears from the pulpit, and whirls in our tea-cups at afternoon tea. Some good folk believe it will blow away error, but error is a weighty thing, to be dealt with pickaxe, rather than a pair of bellows. The great danger is, that many men's faith, being light as a feather, is apt to be blown right away by a Religious Squall. You know the old saying: "When your doxy agrees with my doxy, then your doxy is orthodoxy,"—that is the spirit which originates the Religious Squall. When we get to heaven, how surprised we shall be, to be sure! All those rags of outward form, those shades of theological definition, about which we blew and stormed in the lower life,—what will they matter then? In the calm joy of the King's presence, His love will be the all-absorbing thought. Might not that same Presence calm us now, if it abode within our hearts?

Now you will think I have seen as many squalls as any old sea-dog who has sailed round the globe. Take care you are not making just as many in your home—your workshop—your Bible Class. Watch yourself for a day or two; note the fitfulness of your temper; the unnecessary force of your words, the peevishness of your manner; the narrowness of your views. Then pray for God's grace, to be strong for truth and right, and yet *calm*.

THE SUM OF IT ALL.

THE boy that by *addition* grows,
And suffers no *subtraction*,
Who *multiplies* the thing he knows,
And carries every *fraction*,
Who well *divides* his precious time,
The due *proportion* giving,
To sure success aloft will climb,
Interest compound receiving.

Prize Spelling Chase

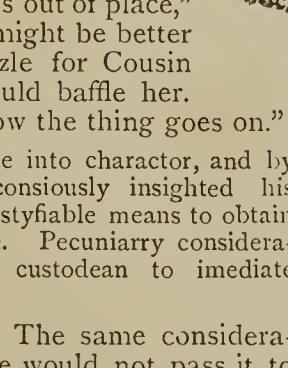
THE STORY OF A COMPETITOR WHO FAILED.

THIS is the sad story of a young friend who entered for our Spelling Chase. He saw, in a shop window, the Paper announcing the Competition: simply a wrongly-spelled Paragraph to be correctly written out, and a Guinea Prize was offered for the best. He bought the Paper at once, because he used to spell so well at school. He saw something about "pecuniarry considerations," which were rather pressing just then, so he hastened home, and prepared for "imediate action." Seated at his desk, he began to read:

"Their was once an ancient, castleated manner, envelloped by a mote wherin muscles caught their pray. The parrapet was Elizabethian in stile, and the gargoils were parallel to one another, ocassioning much coment by there archeological symetry."

"Delightful!" said he, "any one can see the mistakes, and that's half the battle." Much encouraged, he read on again:

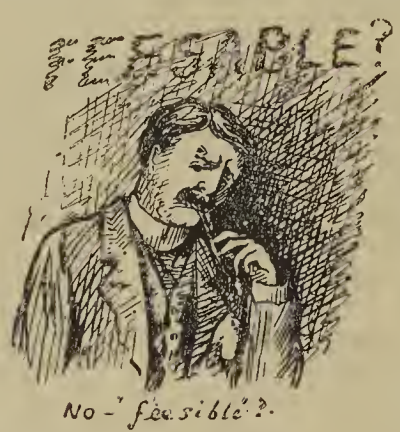
"The posessor of the domaigne was a miner, and his irrascible guardian had irrevoceably decided upon the spoiliation of his estate.



"Poor Phillip! rich as he was, his physionomy betrayed that he was peculiarily week from a psychological point of view. He had an irremediable fisher in his palette, and his pretenscious phrasiology added to the uninteligibility of his pronounciation."

"That 'fisher' seems out of place," said he; "perhaps it might be better fun to keep this puzzle for Cousin Jane; doubtless it would baffle her. At any rate, I'll see how the thing goes on."

"Phillip had no incite into charactor, and by his demienour he unconsiously insighted his guardian to employ unjustyfiable means to obtain the reciept of his income. Pecuniarry considerations moved his grim custodean to imediate action."



Our friend paused. The same considerations moved him. He would not pass it to Cousin Jane, but have a try himself. Of course he could spell a common English paragraph, for that Guinea Prize! Just two hours to dinner; he dipped pen in ink and began. He wrote busily, waxing still more excited as time flew by. The letters of the alphabet had gone mad, and danced before his aching eyes. The vowels were utterly irrational, and no knowledge of the classics could solve the problem of a double or a single "l." At last, half-way down the first column, he paused for a moment's rest. The next words caught his eye:

"Arranging the minutea of his marterdom was not an agreable task, but it was not desireable to ajourn it."

"*Not* 'an agreable task,'" he fervently agreed, "but the fellow needn't have tried to catch me with that single 'e.' What's his next dodge?"

"Should he higher an asassin to administer some drams of stricknine in his matitutinal farinacious food, or mix it with the yoke of an egg in his omlette? Should he look in the Pharmacopia for some aneasthetic which would have a soppor-

ific influence, or try the effects of fumigation with incandecent salt peter, which had been recomcnded to him as a sucessful practise amongst the aborigenal Misissipians?"

"I should think the easiest way to finish him would have been to give him the Spelling Chase to write out. At any rate, that *must* be the worst bit; the next looks plain sailing enough."

"None of these plans seemed feesible, but it was the 31st of December, and his guardian resolved that Phillip should not see the comencement of another year. Nought but prompt action would avail."

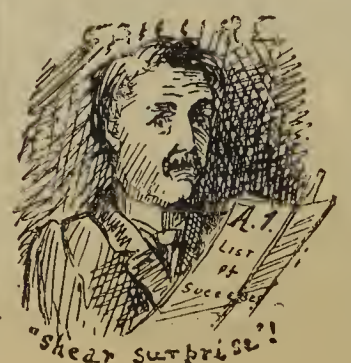
"'Comencement,'—two 'm's, of course; can't catch me there; but 'feesible,' feasible, feesable,—and it 'seemed feasable,' after all. No hope of doing this unless you make a dash; here goes:

"As the hier sat mewsing, and contemplating the ceiling, which was decorated with arabesk designs, round the corner by the rabbit borough, came a man with a comendatory letter in his sachel. Phillip rose to recieve him. The letter contained a complement to his purspicasity, and ernestly asked him to council the bearer in reference to a draught on his banker. Phillip heard him redily and then in concieted silables, preceded to give him some advise. Courtiously acknowleging his kindness, the man said he would esteam it a priviledge to obtain a clarkship. Phillip sinically told him his calliegraphy was so ilegible as to render him ineligible for any post but a synecure. The man esayed to make a tier ouse from his lackrimal duckt, but finding that imposible—"

"Ah!" said our discouraged friend, "if I could only find the right spelling as easily as I could just now find a tear! Alas, that Guinea Prize! Why was I never taught to spell? 'He spoke extemporary'—extempore—I'll be bound he couldn't *spell* this extempore, if he tried. Oh for a Dictionary!"

"He spoke extemporary, and with some aspiration:

"'Bass vilian! I indite you for being acessory to my iretreiveable ruin. Though it reigns heavily, and their is a leek in my umbreller, I will draw my freize coat around me, and cast myself into a limekill.'



"He watched Phillip with the eyes of a links. Dispair was depickted on his youthful linements. The threat was terific, and like a peripathetic philsosopher, he miandered up and down."

"A capital idea; it might relieve my mind. No harm in looking at the book-case, anyhow; wonder what Dictionary they will select; is this of mine the newest edition?" But an echo of our Spelling Chase checked our young friend ere it was too late; had he not just been writing about "unjustifyable means?" Convicted on the eve of a crime, he resumed his chair, and steadily read and wrote to the end.

"'I will give you my etymological collection,' said the lad, pausing before a cabbinet of insects, 'if you will not asociate me with this peice of navery. I am not a medlar, but a man of metal.'

"The stranger rased himself to his full heighth, and seizing a knarled beach wand which lay ajacent, he asaulted the lad. From shear surprise, Phillip staid immoveable, and then sank unconcious to the ground.

"The asassin, fearing Parlamentory investigation, fled, leaving his victim stationery.

"As Phillip slowly became convalecent, he murmured:

"'Bring me the encyclope-encyclopœ-encyclopæ-encyclæpædiæ,'—he never could articulate a dipthong, 'that I may escape

Prize Spelling Chase

to cousin Lettuce.' He took a seditave draft, and examined his rout. He found that by hastening along the key to the peer, where his yatch was ancored to prevent her drifting on to a lea shore, he could redily bored her, and sale away at the rate of 12 nots an hour. Picking a spray of fuchsia to remind him of his domesne, he fled to cousin Lettuce, and in her matternal solisitude, found solase for his former greifs."

"Well!" said he with a sigh, as he laid aside his pen," it *will* be 'sheer surprize' if I don't get that Prize. The Paragraph has bothered me a bit, but I don't believe anyone will do it better."

The Lists are out, and our poor Competitor has nothing to comfort him in his failure but sheer surprise!

NOTES AND COMMENTS.

WE have intentionally reprinted on the opposite page the Paragraph which Competitors in our Spelling Chase (see —"A. 1."— for Dec. 31, page 142) were required to write out. We do this because the public will scarcely credit us that out of close on 2,000 competitors, only *five* had no actual mistake in spelling; whilst out of those, four were so uncertain in the formation of their diphthongs that we had no difficulty in giving them a second place. One Competitor remarked that as "'Phillip never could articulate a diphthong,' he had considerately omitted them altogether." Our standard has been

WEBSTER'S DICTIONARY,

which we were informed by the highest literary authority at the British Museum was the one most widely accepted; therefore we regard our decisions as unimpeachable. The words for which our authority allows different spelling we have also accepted. Several most amusing letters have reached us; some from people who were painfully conscious of errors, others from those who were perfectly sure they would get the prize,—and didn't! One gentleman begins, "Dear Madam, I'll thank you to hand me over that 21s." In due time we shall be glad to send him a Certificate!

The following are *some* of the mistakes made by our Highly Commended Competitors:—Agreable, entymological, yelk, indite for indict, irrascible, pretensious, villian, matitutinal, lea shore, yoke of an egg, Mississipians, and several times fuschia. One competitor also omitted one difficult word, which was counted as a mistake. Those who obtained Certificates of Commendation have made the following blunders, amongst many others:—Minutae, pretencsious, matitutinal, metal for mettle, perspicasity (this more than once), entymological, yoke of an egg, assasin, pallette for palate, dipthong, strichnyne, miner for minor, spoiliation, agreable, parapit, matinal, gargers, villian (repeatedly), entomonological, and very frequently fuschia and Mississipians. In view of such an appalling list, we think it must be conceded that we have been liberal with our Certificates.

OUR NEW SPELLING CHASE.

We heartily thank those friends who have written approving our Spelling Chase; in —"A. 1."—we seek to combine *education* (in no scholastic sense of the word) with *recreation;* this, in a special manner, our Spelling Chase does. Already keen interest is felt at the prospect of our fresh announcement. We expect that our New Spelling Chase will be more amusing and provoking than the last; we are reserving it for the Easter Holidays, when it will be a source of endless delight. Next week, we shall announce our Rules; the following Number, for March 24, will contain the **New Spelling Chase,** which will remain open for three weeks.

RESULTS OF EXAMINATION.

We certainly did try their patience at a very busy time.

FIRST PRIZE, £1 1s.

Mrs. CHARTERS, Ealing Dean.

FOUR SECOND PRIZES OF 5s. EACH.

ANDREWS, L., Bournemouth.
LEAROYD, T. W., Liverpool.
SANFORD, C. R., Ashbourne.
SAUNDERS, P., Blackheath.

But the poor Examiners were even more perplexed.

HIGHLY COMMENDED.

ATKIN, T., Nottingham.
BOULTER, Miss, Ipswich.
BUCK, G. M., New Brighton.
CHARTERS, F. L., Ealing.
COBB, F., Birmingham.
DOBSON, A., Kilburn.
FERRIS, T. H., Clifton.
GALE, T., Cahir.
GILL, A. W., Lavender Hill.
GILLER, F., Leytonstone.
GREEN, A. J., Upper Norwood.
HAYDON, E. M., Bournemouth.
HEADFORD, C. F., Westminster.
HILL, T., Reckham.
JAMES, C., Thornton Heath.
KNOX, S. H., Ayton, N.B.
LASCELLES, J. H., Camden Town.
MACMILLAN, M., Brashmills.
MASON, E. D. (no address).
REYNOLDS, E. —
STANSFIELD, C. E., Rawdon.
STONE, E. E., Upper Holloway.
STRANGE, A. M., Frome.
TAIT, M., Inverness.
TWEMLOW, A., Dublin.
WATERS, M., Cork.
WILLSIE, A., Manchester.
WILSON, W., Derby.
WOODLAND, T. H., Frome.
WRIGHT, A. E., Gainsborough.

COMMENDED.

BRISCO, M. E., Manchester.
BROWN, W. A., Ashbourne.
C. R. N., Tunbridge Wells.
COLLINS, K., Atherstone.
COLSTON, J., Cheltenham.
COOMBES, V., London.
COOPER, S. A., Lowestoft.
CLARK, A. J., Folkestone.
DREWBRIDGE, J. T., London.
FLINT, J. H., Bournemouth.
FRY, E. L., Ipswich.
GORDON, Mrs., Hull.
GRAHAM, A. J., Perth.
GREEN, E., Salterton.
HALL, F., Nottingham.
HAYCRAFT, H. C., Brockley.
JOHNSTONE, L., Jersey.
KAY, E., Egliam.
KENT, P., Boston.
LAMB, E., Shadwell.
LEA, F. B., Brixton Hill.
LOADER, C., Wincanton.
LUKE, F. C., Kilburn.
MATTHEWS, E., Ilford.
McGUCKIAN, W., Desertmartin.
PEDDAR, F. M., Ipswich.
PORTER, E., Duleek.
ROYLE, N., Manchester.
SHARP, E. P., Reading.
SMEATON, M. E., Leamington.
SMITH, A. D., Dundee.
STOREY, M., Southend-on-Sea.
TABRAHAM, E. C., Wood Green.
TARR, M. F., Ivybridge.
TAYLOR, W. E., Highbury Park.
WENDON, J., London.
WHITBY, A. J., Bridgwater.
WILSON, J. H. O., Settle.
WOODMAN, A., Great Yarmouth.

It is only fair to future Competitors that the above *Five Prize Winners* should not be eligible for Prizes in the next Spelling Chase.

RECREATIONS IN GEOLOGY.

By W. H. HARRIS, B.A., B.Sc.

No. 10.—The Gold and Silver of our Coins.

WE prize some things for their *in*trinsic worth, others for their *ex*trinsic value. A loaf to a starving family would possess an immense importance in itself; to the baker, apart from its nourishing qualities, it represents merely an equivalent for a few pence. On the other hand, a large diamond, which would be absolutely useless in itself for purposes of human life and comfort, gains an enormous preciousness from circumstances independent of its individual constitution. Its *in*trinsic value is very slight, its *ex*trinsic may be inestimable. Probably, to most of us, the latter kind of quality seems the more important in gold; but a little consideration will show that its inherent properties have largely tended to give it so wide and so long-continued favour with the human race.

Before speaking, then, of what more particularly concerns us in this Paper, viz., the geological aspects of this metal, it may be well to say a few words about its special qualities.

Its colour is attractive to the eye, and as it has various shades, according to its purity, its polish, and its treatment, we have in these facts one recommendation to human regard. Again, it is remarkable for its power of resisting the tarnishing influences of the air. Not only is the great devourer—oxygen—unable to affect it, but various impurities, such especially as sulphuretted hydrogen, do not dim its brightness, though they readily attack its sister—silver. Then it is surprisingly *ductile*. It is said a single grain can be drawn out into 500 feet of wire; hence its importance in embroidery art among all highly-civilised peoples. It is also *malleable* to a marvellous degree. We are told that it has been beaten into leaves so thin, that 360,000 laid one on another would be only one inch in height. This makes gilding work so extensively possible, at a very moderate cost; for a single grain of gold, when hammered out to extreme thinness, will cover more than 50 square inches. It resists the solvent power of nearly all acids, and when dulled on its surface by particles of extraneous matter, its brightness is easily restored. Lastly, it is sufficiently soft to be worked with ease into various shapes. These circumstances are sufficient to account for the estimation it has so universally and so long enjoyed.

Its representative value has grown up from the comparative scarcity of the metal, and the difficulty with which it is procured. Were any vast, new discoveries of gold made, it is this latter value which would be altered. Its purchasing power would be diminished, while its intrinsic qualities would be as important as they are now.

We have spoken of the esteem in which it has been held from ancient times. We find mention of it in the oldest books of Holy Scripture, and reference is made to it in the Bible more than 400 times. The monuments and the literature of all the most cultured peoples testify to its general employment in various arts.

It is remarkable, as the late Sir Roderick Murchison, one of our greatest English geologists, pointed out, that "modern science confirms the truth of the aphorism of the Patriarch Job, which thus shadowed forth the downward persistence of the one (metal) and the superficial distribution of the other: 'Surely there is *a vein* for the silver;' 'the earth hath *dust of gold*.'"

Geologically, this metal is very widely distributed, but it occurs always in rocks of the most remote epochs, or in gravels formed by the wearing away of these. When found in strata of its original occurrence, these are, with few exceptions, members of the metamorphic series, *i.e.*, those which have manifestly undergone great changes from heat and pressure. Its special abode is in quartz-veins, which traverse schistose and slaty rocks. These must have been, at one or more times, deep down below the surface of the earth, but various movements of the "crust" have elevated them into hills and mountain-chains. Subsequent degradation has frequently worn these away to a considerable extent. Frost and rain have broken them up into fragments, and the gold once scattered throughout these beds has been, in many instances, carried down into the neighbouring valleys, and along their river-beds. Sometimes the metal has been washed clear of its adherent mineral matters; at others it is still found enclosed in pebbles of various size, down to fine sand.

It was from such auriferous gravels and drifts that ancient peoples collected their whole supply of gold. From similar sources tribes of imperfect civilization procure it at the present day. In fact, in all countries where this precious metal is discovered, so long as the "stream-works," as they are called, remain remunerative, the "veins" are left unattacked. Yet these latter are the most steadily productive, and afford the most reliable source of supply.

Almost wherever rocks of the nature previously mentioned occur in elevated masses, gold has been found. In the Ural Mountains, Brazil, California, Nevada, British Columbia, New Zealand, and Australia, these schistose, metamorphic strata have yielded the metal. So constant, indeed, is the connection between them, that Sir Roderick Murchison, from descriptions given by travellers of the geologic structure of some of the mountains of Australia, predicted the discovery of gold in that country long before the metal had actually been met with there in its native state.

Quite recently, very extensive deposits of the precious substance have been brought to light in the Transvaal. A gentleman who has returned from that district within the last few months writes: "One might just as well expect to find gold on the Scotch moors as find it here. This is undoubtedly a country of surprises, and not amongst the least of these surprises is the eccentric distribution of its mineral wealth. . . . It is thought by scientific men that the Randt is an ancient sea-beach. The gold has been deposited in fine grains, there being several layers separated by sandstone. Then, after a long period, during which the strata have had time to consolidate, a mighty upheaval took place, tilting up the whole beach, so that what was lying in a horizontal manner, is now found going down perpendicularly to unknown depths. The 'banket' (a Dutch word for a sweetstuff like hardbake, which the rock resembles in appearance) is composed of water-worn stones, pebbles, and pieces of quartz, all welded together with a cement of silicious sand. It will break in the hand, and crumble to gravel on exposure to air and moisture, and it is in the cement that the gold is found."

Some specimens of auriferous rock from this district, that we have seen, had the distinct appearance of having been subjected to volcanic agency. The "conglomeratic" and, in some parts, the "brecciated" look of the earthy matrix suggests the idea that water at a high temperature, and holding much silex in solution, had been belched forth from some crater or geyser, and flowing over the auriferous sand and gravel, had compacted the whole into a somewhat friable rock.

The metal is extracted from strata of this kind, and from vein-stones, by "stamping" and "amalgamating." Strong and heavy masses of steel or iron, driven by steam or water power, break up the rock-material into fine powder. With this a considerable quantity of quicksilver is incorporated. The gold and mercury have a very strong affinity for each other, and form what is called an "amalgam." This is so heavy that the much lighter particles of earthy substances may all be washed away without appreciable loss of the metals. The quicksilver can be separated from its more valuable concomitant by evaporation; and, being re-collected after condensation, can be used over and over again. This method of getting rid of the rock-materials will be better realised when it is remembered that gold is about eight times as heavy as they are, and mercury between five and six times.

Considerable public interest has been evoked in this country, within the last few months, by the reported discovery of very valuable gold-bearing beds in Wales. There seems every reason to believe that the "find" is a genuine one. There have, however, been so many previous unsuccessful efforts to work similar beds in the Principality, that we shall await with curiosity future details of this recent and, apparently, productive mine.

It may surprise some of our readers to learn how small a quantity of the precious metal will repay the expense of crushing rock and extracting the gold. One ounce to the ton, *i.e.*, slightly more than $\frac{1}{20000}$ part, is considered a quite remunerative yield. Under favourable circumstances as to labour, steam or water power, facilities of transit, etc., it pays to work rock from which not more than seven or eight dwts. of gold per ton can be obtained.

For coinage purposes, pure gold is too soft to resist the wear and tear entailed in the constant handling of money. A small quantity of alloy (copper, silver, etc.) is, therefore, added to improve its hardness. This adulteration, moreover, serves the purpose of preventing the melting down of our coins by refiners, when prices of the pure metal are slightly varying. The reason why our gold-pieces are stamped, and not cast, is that gold, when cooling from the molten state, contracts so much that all sharpness of outline in the moulds would be lost.

We must now say a few words about silver. Many of the properties we have attributed to the metal previously spoken of belong to this one also. Its colour is pleas-

ing to the eye, especially when brightly polished. It is not affected by oxygen. It is hard enough to stand a good deal of friction and wear. Its *ductility* is so great that it may be drawn out into wire not more than $\frac{1}{1000}$ inch in thickness; and its malleability is such that it is said a single grain has been beaten out so as to cover 98 square inches. It is the best known conductor of heat and electricity. It is employed in its pure state in many of the arts, but it is alloyed with a small quantity of copper when coined, or used for articles of plate.

Geologically, its relations are very similar to those of gold. It is found native in the older metamorphic rocks, occurring in threads and strings, in plates and nuggets. Very frequently it forms an alloy with such other metals as gold, platina, copper, and arsenic, but especially with mercury. Most lead-ores also contain silver, often in quantities which pay for extraction. These lead-ores are not confined to the oldest and most altered strata, but occur as high as the carboniferous limestone. They are buried, crushed, amalgamated, smelted, and variously treated, according to the nature of the ore.

The countries yielding the largest quantities of silver are Chili, Peru, Bolivia, Nevada, Colorado, Mexico, Russia, Transylvania, and Spain. The metal has been produced in such superabundance within the last twenty years, that its coinage value has seriously decreased. The Indian rupee was formerly worth 2s.; at the present time it may be bought for 1s. 5d.

There are no silver-mines proper in the United Kingdom, but very appreciable quantities of the metal are obtained from our lead-veins—probably approaching £200,000 in value per annum. Mexico and Peru afford far the largest supplies of any countries in the world. Bishop Watson, in *Chemical Essays*, observes, that by the silver which was produced from the lead mines in Cardiganshire, Sir Hugh Middleton is said to have cleared £2,000 per month, and that this enabled him to undertake the great work of bringing the New River from Ware to London.

"NOWHERE IN PARTICULAR."

By Samuel Gillespie Prout.

"WHERE for, sir?" "Thanks, I'm going nowhere in particular." This very odd announcement, made in a quietly decisive tone of voice, would never have been expected from the speaker, a well-dressed, middle-aged man, with grave, purpose-like features and bearing, standing by his compact, serviceable luggage, on the "Up" platform of a thronged Great Western Station.

The active fellow in invisible green plush, who had asked the question, extending at the same time a hand to take the traveller's portmanteau and rug, gave a rapid, puzzled glance over him, and stood for fully two minutes, briskly rubbing his arm-badge, as though hoping to evolve by friction a spark of conjecture respecting the passenger with such surprisingly vague ideas of Great Western Stations.

"It must have been his fun," but somehow the thought got no support from a face without a suspicion of "fun" in it; and, giving a disparaging quick little jerk of his chin, the perplexed porter caught up a bag that was claiming his attention, and aiding with an extra energetic shove, and "By your leave," a piled barrow that just then came up, was soon too busy at the van of the Up Express Train, too, for further speculations about "that queer gen'lm' as was going nowhere in partic'lar."

"What *did* he mean?" I'm sure I can't tell you; I have no more idea than the porter could get hold of. All I know is, that when our train drew up to the platform, the passenger who was going anywhere, or nowhere, tossed his portmaneau into the carriage in which I took my seat; handed his ticket to be punched, offered me half his rug, and the *Graphic*, and accepted—"A. 1."—and the morning's telegrams. We talked about Bills, and Bishops, and Ironclads, and he bade me good-bye at a junction, the name of which was, I presume, on the ticket he delivered up, as the collector received it without remark. Perhaps it was "his fun" after all, or possibly an aversion to the bestowal of sixpences.

"What a rigmarole! Your travelling companion was slightly eccentric, anyhow." "Yes, I suppose he was; it certainly was a droll thing to say; but, after all, *he had his ticket.*" "Excuse me, we have not, I think, met before, but you did me the favour of speaking. You are, I see, like myself, a traveller. May I take the freedom? Where for?" "Well, one never likes to be too certain about things. We're hoping to go, of course." "*Go where?*" "Oh, you know." "Yes, to be sure, the City Terminus." "Thanks, we're all right, we have our tickets." "You will pardon me, but might I just see them? You *couldn't* have taken your 'Up' tickets that side—it's for the '*Down*' trains." "We are sure you mean most kindly. Thank you *so* much, but it's all *quite* right. Very nice of him, wasn't it? Have you got all your things?"

Your destination? No uncertainty, you hope, about *that*, though you say it yourself, not, you humbly trust, without a due sense of thankfulness. There are few, you believe, better prepared for the journey—and everything carefully labelled—it never does to leave these things to the last. "Got your ticket?" Very rude and abrupt! and you smile on complacently by your pile of handsome, costly bags and wraps.

They're nice enough, but you'll never want all those things on your journey, and, in our Hand-book for the City, you will find this prohibitory rule explicitly and repeatedly laid down, that *nothing may be taken in.* But one thing required, or allowed at the other end, the Free Pass—free to all the penniless travellers—to you and to me; that cost *God* all He had to give. I say, dear young friends, you *must not* stand there, your pleased, uplifted look resting on that neatly packed precious luggage of yours, till the door of His "Now" is shut to, and night gathers on the lonely platform.

Where for? "Oh, only a few streets off." You may have to go a great deal farther. A messenger may meet you ere you reach the first corner, and while your friends are wondering about you, and so miss the capital song you were to have sung, and the flashes of mirth that should have been the light of the evening, you are off with him on the swift, silent journey.

We said just now, none of our nice, beautiful things might go into the City: what have you and I with us, and *upon us?* We think, some of us, "a lot" of our travelling attire,—we would not care to accept the Bible description of it. What do you say? Might we walk unabashed up the golden streets, through thronging white-robed saints and glorious angels, *in what we have on?* Do you, now, really think *your things* would do for Heaven? You answer, quite frankly, No, you are very sure they would not; you never thought of taking them there. But you have to take them *somewhere!* Not a shred can you take into the City,—and you cannot take them off; if you keep them on you till they *are claimed*, they must be taken, where alone, out of earth, they may be worn! What *are* you going to do with them? "A dark look-out for us, that!" There's a wondrous light beyond: Christ is waiting, He is *longing* to take our "filthy" things from us; *our* taking must be to *Him*—His own "in no wise" upon all we bring.

I cannot tell how far on the year-road you will be when you read these words. As I write them, we are passing its first milestone, unreached by millions! Will *our* feet cover the miles beyond, or another furlong, or a few more yards? You *cannot* be "going nowhere in particular"; either your face is towards the Sunless Day, or your sad shadow is lengthening before you into night—in the glory, or in the gloom, each traveller must be met.

Do not, any of you, say, "Yes, I suppose these things are very important; we ought, of course, to think of our souls," in a sort of half-admitting way, as though *that* thinking might come in, among any number of other things which "you know a fellow has got to think about." We have all of us often heard of "The three R's"; shall we have *two* as motto initials for 1888? Real—Ready! You may jumble up and "agitate" the soul-things and the body-things together. You can never make them blend. "These things" are so stupendously, inevitably "real." They are things *by themselves*—no ratio, no comparison *touches* them. They are your things; they are my things. *Not to be* "ready" for all they mean to us, is a thought more unendurably fearful than may be worded by any poor, thin talk of mine. While you are yet on this life-side of that moment when the pulseless hand is laid back, and they whisper, "Yes, gone!" get fast hold of *this* reality, clinched and rivetted by God's great strong "shall," that all the other things—alike earth's bravest, gladdest successes and honours, and its heart and brain-haunting failures — fade out, and are lost in that Eternity, when the amazed soul *knows*, "and *this* is never to end."

Around you, and beyond you, is that vast, solemn mystery of the "For ever." You cannot get from it. You have God's eternal word for it, and, too, for your perfect security, girt round by those dread, unmeasured heights and depths. Make it a *safe mystery*. In the silence, it may be, of your morning awaking, the utter awe, the tremendous realness of it all, comes down on you. "Where for?" Your own soul is asking the question, and will not be denied reply. Have you *really come* to *a real Christ*, who died for *you*, and lives for *you?* In that waking hour, *do* you come? Then you may turn quietly to sleep again, or as calmly rise for the day's labour or danger.

Our hands may not be always clasped, nor our knees bent. These awful souls of ours have their work to do, true, in the body, as in life's outwidening beyond the river, where they shall be differently "clothed upon." We shall not be for ever taking our Through Pass. *It's there.* We know quite well *what is upon it.* It will be given up when it is asked for, in the City's entering. You *have* yours? and you? and you?

TALKS WITH MARRIED FOLK.

THE MANAGEMENT OF INCOME.

By PHYLLIS BROWNE.

THERE was once a well-to-do married couple. If they had known how to manage their money, they might have been most comfortable, and have had enough and a little over. But they were ambitious,—they tried to appear better off than their neighbours, and they spent just a little more than they possessed. The consequence was they were always miserable, always behind-hand ; and it used to be said of them, that they lived at "Agony Point."

It is to be feared that a good many other married people, besides these, live at "Agony Point" ; yet not all of them wish to surpass their neighbours, or to be extravagant.

The difficulty with most of them is, that what they consider their necessities, are greater than their means will supply. This is an unfortunate state of things, but it is a very common one. The probability is, that if we could compel all the people now living in England to say what they really believe about themselves, we should find that out of every hundred, ninety-nine would say they had to "make do" with less money than they needed. Yet it is evident that the great mass of these people never will have very much more money than they now possess. They may have less ; the income with which they are so discontented may take to itself wings and fly away ; but only one here and there is likely to have more. The remedy for the difficulty, therefore, is not to be found in adding to the sum of money in the world, but rather in persuading the possessors of money to dispose more wisely of what they have.

A clever writer once said that the man who possessed £20 and lived on £19 19*s.* 11*d.*, was happy ; the man who possessed £20 0*s.* 0*d.* and lived on £20 0*s.* 1*d.* was miserable. The idea expressed in this remark suggests the principle on which our own incomes ought to be managed. If we cut our coat according to our cloth, and keep within the mark, we are good managers ; if we decide what sort of coat we ought to have, and should like to have, and then drag the cloth first this way and then the other, to make it stretch up to our pattern, we produce a garment which is a failure, and are bad managers. The great thing is, therefore, to make up our minds what the piece of cloth at our disposal is like, and how much can actually be got out of it, and then not to distress ourselves by trying to get more.

The reason why so many people do not succeed in managing their cloth, is that they never attempt any calculation of this kind. They simply take a snip at the cloth one day, and another snip another day ; sometimes the snip may be a large one, sometimes it may be a small one, as occasion demands ; but the snips continue, until one fine day the discovery is unexpectedly made that no more cloth is left. Then dissatisfaction and disaster are the order of the day.

This is a very mistaken method, or want of method. Even though our supply of cloth be painfully limited, it is wise to cut it out according to pattern. We gain nothing by refusing to accept facts, and, at least, we are in a much more dignified position, if we master facts, instead of letting them master us.

It may be that there are married people reading these pages, who feel that up to now they have not managed their incomes, and that every day makes them more behind-hand in money affairs than they were the day before. If this be so, let me advise these unhappy ones to stop now : to take pencil and paper in hand, and, in my company, if they will permit of my presence on such an occasion, to fairly face the situation bravely ; and let us see if some remedy cannot be found for the mischief that is going on.

"House-rent! Taxes! Gas! and Coal!"

There is, however, one stipulation I must make before beginning the proposed inquiries,—it is, that both husband and wife must take part in it ; for unless this can be arranged, our chance of effecting an improvement in affairs will be very considerably lessened. It is by working together that husbands and wives make much out of little. There are husbands who think that portioning out the money is their business only ; and that what the wife has to do, is humbly to accept what is given to her, and thankfully make the most of it ! Husbands with these ideas may, it is true, get their households managed economically ; but the economy will not be carried out in a cheerful spirit ; and without cheerfulness, economy is most dreary drudgery. When people are compelled to economize, it makes all the difference in the world whether they live *to* economise, or live *and* economise. When husband and wife economise together, economy becomes a detail ; when either husband or wife takes its entire management into their own hands, the partner who is managed is usually discontented, and the partner who manages is in danger of becoming unreasonable and tyrannical.

Husband and wife both being present, therefore, let us commence our inquiry, and try if we can draw up a plan that will work, and can be carried out. Supposing we plan for the next three months. It is no use taking a shorter time than this, because expenses and necessities must vary to a certain extent from week to week, and if we make our calculation for one week only, or one month only, we shall very likely find ourselves in difficulties for the next week, or the next month. The secret of thrift is the habit of looking ahead, and of refusing to live from hand to mouth. When we become more skilful in this business of managing our money affairs, we will take a year at a time, and try if we cannot lay our plans for that ; but at present, until we have gained a little more experience, we will take three months only.

First of all, let us put down on the left-hand side of the piece of paper the sums of money we expect to receive during the period referred to. No matter how much money there is, or how little there is, put it down accurately. If we receive our money by the week, multiply the weekly sum by thirteen, for there are thirteen weeks in three months ; if we receive our money by the quarter, we have nothing to do but put down the lump sum ; if we get our money at uncertain times, or in varying amounts, let us form an idea of what the whole is likely to be, and in this case let the figures written down be under the mark, rather than above the mark, for thus only can we be safe.

Having calculated our income, the next thing to consider is the expenditure. This must be set down on the right side of the page. Let us remember all the payments we have to make, and write them down as they come into our minds ; not caring whether they are in their proper order, because one thing will suggest another, but chiefly anxious lest we should omit any item.

The amounts named, if our calculation is to be of value, must be as close as possible to the actual fact. We must not calculate them too liberally, because we do not intend to be extravagant ; we must not calculate them too narrowly, because we want to ascertain our exact position. Whatever comes, we must be accurate.

When husband and wife work together at a plan of this kind, it is marvellous how complete a statement of expected expenditure may be made. The husband remembers one class of expenses, the wife remembers another, and together they arrive at the truth. Thus the husband will think of house rent, taxes, gas, and coal ; the wife will think of doctor's bills, wages, school expenses, dress. The husband is sure to recollect the amount given per week for the household ; the wife is equally sure to set down railway fares, newspapers, repairs, beer and tobacco, —if money has been spent on such things ; and when both have done what they can, the estimate will be tolerably perfect.

Having written down every expense that is likely to occur, the next business must be to add up the different items together, and see what they come to. If the expenditure column comes below the income column, so far as expenses go, we are on the right side. We may not be spending our money wisely, we may be neglecting claims which we ought to honour, but we are not on the highway to the workhouse for three months, at any rate, and we can look round in comfort.

But if, on the other hand, our expenditure column is higher than our income column, then we must take most energetic action. Some of these amounts must be reduced,

and we have to decide which they are to be. They *must* be reduced, it should be understood. We are not called upon to see *if* anything can be done, we are to choose what *must* be done, first in theory, afterwards in practice. If we are to deserve the respect of others; if we are to keep self-respect; if we are to shake ourselves free from the trammels of anxiety about providing for each day's needs,—trammels which at present threaten to wear us out; trammels which stand in the way of our best thoughts, of our consideration for others, of our mental and moral improvement, of our peace and our freedom,—we must make the items on the right side of the paper come up to a less sum than that on the left side.

It is more than possible that many of the people invited to enter into an inquiry of this sort, and afterwards to lessen their expenditure, would protest against the arbitrariness of the proceedings. Perhaps one of them would say, "The thing is impossible. I cannot plan my income to cover my expenditure, simply because my income is not equal to my needs. My family is large; my children are delicate; I have doctors' bills and school bills, rent, rates, and taxes to pay. What am I to do? If I had just a little more than I now possess, I could draw plans and add columns with the best; but as I am situated at present, I am helpless."

To this individual I should reply: "My dear friend, if you can honestly increase your income, by all means do it; it will be an excellent thing for yourself and your family. Look round at once, and see whether your work cannot be made more profitable; discover whether it is not possible to adopt new and better methods, and, with all my heart, I hope your efforts will be successful. But still I repeat, that unless your income can be increased, or rather, *until* your income can be increased, the sum on the right side of the page must be made less than the sum on the left hand side, or you will be anxious, uneasy, and miserable, you will lose power, honour, and peace of mind.

The lesson of the whole inquiry, therefore, is this: if income exceeds expenditure, one of two courses must be taken—either our money must be made more, or our wants must be made less. If neither of these two courses are taken, and things are left to slide, the result will be financial ruin.

It goes without saying, that schemes for enlarging the income must be formed by the individual, and they will necessarily vary with the station in life, the business capacity, the energy, training, and skill of the person concerned. For these, therefore, no general advice can be given; each one must settle a point of this kind for himself or herself. But it is altogether different with the expenditure side of the account. In ordering this, there are certain rules which have been drawn from experience, acquaintance with which is of the greatest assistance in helping married folk to make the pattern of the household coat lie easily within the supply of cloth to be cut out. These rules hold good, no matter how much the income may be; for it is a curious thing that a majority of the people who get into money difficulties, would be in exactly the same position if their income was doubled. This is not universally the case; it would be most unfair to say it is, because there is no doubt that large numbers, now in difficulties, mean honestly, and do all they can to save, but through no fault of their own they find themselves in a position where demands are made upon them which they cannot meet.

With the majority, however, it is true; and the only way to extricate persons thus situated, is to give them an idea of how to arrive at a better order.

Years ago, when rents were not so high as they now are, it used to be accepted as a truism that married folk who did not wish to "outrun the constable" must never pay more than one-tenth of their income for rent. That means that if the income was £1 5s. a week, the sum paid for rent ought not to exceed 2s. 6d. per week; if the income were £300 a year, the rent ought not to exceed £30 per year. But in these days, when rents are high, it is not always possible to follow this rule implicitly; people have to consider convenience of situation, the size of a house or of apartments, and also suitability from a sanitary standpoint, as well as from the point of rent. Unfortunately, a great many houses in these days are not properly drained, or they are damp and badly built, and it would be no economy to go into a house of this kind, even if we got it for nothing, and had the taxes paid by the landlord. The probability is, if we took such a house, that though we might not pay money, we should have to pay something more precious. Parents would not care for this kind of saving.

With regard to rent, therefore, there must be a certain latitude. At the same time, the aim should be not to pay more than the tenth of the income; and if in certain districts prudent persons are compelled to pay an eighth, or more, then it ought to be acknowledged that the strain has been made, and that there ought to be compensating advantages.

Here we come face to face with the practical difficulty that, for most of those who desire to order their expenditure wisely, the amount of rent to be paid is settled for a period. They find themselves in a house, or in apartments, paying a certain rent, and it would be a greater expense to them to move, and to make a change, than it would be to stay where they are. For these persons economy in rent is impossible; rent and taxes must be looked upon as expenses which are beyond our immediate control. All we can do with regard to it is to hope most earnestly, for the sake of the arrangements we aim at, that rent shall not exceed one-tenth, or at the very outside one-eighth, of our income.

But though rent and taxes are beyond our control, it is very comforting, if we pass our eye over the list of items into which our expenditure is divided, to notice there are several other items which we can deal with as we will. There is abundant scope for the exercise of our powers of good management in the living expenses, or the expenses of the household, as they may be termed—the clothing, the amusements and holidays, the hospitality and charity of the family. There is also opportunity for arrangement in the way of saving and insurance. Indeed, rent and taxes being fixed, if there is to be ecomony effected at all, it must be in one of the directions named. All being well, therefore, I will take these subjects up one by one, and try to give married people a few hints concerning them. These hints will, I hope, tend to throw a little light upon difficulties concerning which a great many people (now walking in the wrong road) would very gladly go right if they only knew how.

Contending for the Truth.—Men will wrangle for religion, fight for it, give for it, yea, even die for it, much sooner than live for it. It is easier to rouse the passions, and excite the feelings, than to quietly suffer and patiently bear.

Withered Hearts and worn-out lives are not the things we ought to offer to our God. The Jew of old was forbidden to bring a lamb blind or damaged as an offering. There is nothing like the fresh, youthful vigour of early life dedicated to the heartiest service of the Lord Jesus Christ.

Honesty is the best policy, so say some; but if a man is only honest from policy, not from principle, he will only be honest when it is his policy not to steal.

Cleanliness is next to Godliness is first quoted in the Talmud as the maxim of a famous Rabbi. The spirit of it is taught in many Scriptures. The two are first cousins that have no connection with the family of dirt and debt.

Why does the same sun harden mud and soften wax? Some of the commonest of facts we cannot understand. Why, then, should we reject higher things equally incomprehensible.

Every person you meet has some knowledge that you have not; the task of the wise is to extract that knowledge for their own benefit and information. There is much learning that can never be found in printed books.

Busy Idlers.—A person may be busy about nothing, and make a great to-do about trifles. They only are busy who are wisely employed. The bee and the butterfly are ever on the wing, but they do not both bring home honey.

Alone.—There is nothing more desolate than to be alone in a crowd, every eye strange, every name unknown, every heart unsympathetic. There are times when man is never less alone than when alone, away from the creature, but shut in with the Creator.

Circumstances.—The majority of men are the creatures of circumstances: few indeed make circumstances the material from which they build their life.

It depends upon the genius and ability of the architect as to what the bricks and mortar are to become. Strong characters build stately mansions, while the weak and feeble look on with a sigh.

Wants.—Some are ruined, not by what they really nced, but by what they think they do. Never go abroad in search of wants; if they be real, they will come home in search of you, and prove their reality by their power.

In all things be sincere; let every word, look, action, desire be honest—that which will stand the light of other men's lanterns.

Everywhere endeavour to be useful, and everywhere you will be welcomed.

LONGING, LOOKING, LEARNING.

THE STORY OF A PAINTER.

By Mrs. Travers Poole.

YEARS ago, there hung in a Roman palace a picture of glorious beauty and immortal fame. It was in the possession of the pope, who admitted visitors to see it on certain days, and the room which contained it was always crowded.

A young painter, living in a back street, struggling towards the light of fame, went daily to gaze upon the picture ; and his soul was refreshed by its beauty as a drooping flower by the dew from heaven. As he gazed, a great longing grew up in his heart to copy it, so that its beauty might always be with him. And yet he often wondered at his presumptuous thought, for he knew any copy of his could only be feeble and poor in comparison with the exquisite original.

Yet the longing grew into an intensity of desire which was painful to bear, so he asked permission to make a copy of the picture. A stern and peremptory refusal met his request. No man on earth should copy that precious picture, and it should live through ages incomparably alone !

The young artist retired, repulsed, but not discouraged. Copy it he *must*, and *would*. It had become his dream, his love, his life ; day and night its beauty haunted him, and he felt that his yearning soul must perish if it were denied him. He prayed God for guidance, and so praying the inspiration came !

And this is what he did :—

Day by day he wended his way to the door of the Vatican, waiting until it opened, coming early, leaving last, and kneeling before the picture, he gazed upon it until its fair beauty filled his eyes and soul. People watched him and mocked him, but he neither saw nor heard them. The picture grew into him, and became part of himself ; and one day he hurried home, up to the studio where his easel stood, and with eyes in which the outlines of the picture were still imprinted, and a hand that seemed nerved with new and magic power, he began to paint. Only the general outline at first, the grand broad proportion of the whole ; then, as daylight faded, and the starlit night bade him cease his labour of love, he rested and dreamed of the picture. With morning light he was back again at the Vatican gazing, and then at home reproducing, bit by bit, unweariedly, patiently, the minutiæ that made up the whole.

At last he gained his end. Each fresh day's look corrected the last day's faults ; and as he toiled, his power grew, and his hidden genius blazed forth, kindled by the torch of love. Each look made his eye keener and truer, his judgment finer, his perception deeper. Each look revealed to him fresh beauty in the picture. Yes ; and though every day the conviction fastened itself more strongly on him that he *never* could make a *perfect* copy, yet this knowledge never deterred him from trying to do so, but rather urged him forward.

Months passed on, and in the humble studio of the Roman artist there stood at last such a wonderful copy of the treasured Vatican picture that men who saw it spread its fame, and could not rest until they had seen for themselves the glorious original.

A thought for you and me ! The germ thought of a grand truth. Souls that have seen Jesus, the fair, sweet picture of the Father's face, must represent Him. The indwelling Spirit longs to let the image, which is stamped on a true Christian's soul, shine out in eternal colours for the world to admire. But only as we *look* to Him, daily kneeling at His feet, and gazing up into His blessed face, do we gain the power to reproduce His fair beauty. Only thus are we filled with love to Him, and with longing to make Him known to men. And although, strive as we may, the work is imperfect, and the colours dim, we are not discouraged. Daily "looking unto Jesus," we gain power, skill, courage and love, consumed by the one desire to be "like Him." By-and-by, when earth-work is over, and we stand face to face with Him, we shall forget the mistakes and the failures and false colours in our picture of the Christ, and shall be eternally "satisfied when we awake in His likeness."

OF INTEREST TO YOUNG MEN.

SINCE the revival of missionary zeal in the English Universities, and the consecration of such noted athletes as Mr. Studd, to mission work in China, it is most pleasing to note the closer connection between religion and athletics, and this is especially noticeable in the United States.

Undoubtedly much is due to the American College Y.M.C.A.'s, which have a membership of 14,000, in creating and fostering a Christian spirit among the students, and to Professor Drummond's recent visit to Yale, and its outcome in the Sunday evening evangelical meetings for College students held in New York, under the leadership of Mr. Stagg, the famous baseball pitcher. Mr. Stagg is librarian of the Y.M.C.A. at Yale, and is very active in the work of the Association.

The best "back" football player Yale ever had is a Minister in Connecticut, while his fellow "back" in the '80 team was drowned in saving a child's life, just as he was finishing his theological studies. At Amherst and Princeton Universities, as well as at the University of Pennsylvania, the prominent athletic leaders are, many of them, leaders also in Christian activity. The aggressive Christian spirit of a few leaders in scholarships and athletics, does much to shape the attitude of a College generation towards religion. The younger classes, especially, are greatly influenced towards thoughtful and earnest consideration of the claims of Christ, by the example of the Christian leaders in the Class-room and on the athletic field.

The offences committed by the teetotal soldiers of the Indian Army, as compared with those of the non-abstainers, are declared to be as one to forty.

The military marriage in France is a serious affair. Any officer wishing to marry must inform his superior of his intentions. The declaration is forwarded to head-quarters, and placed before the Minister of War, who orders an investigation of the moral character and pecuniary qualifications of the young lady concerned. She must be of irreproachable moral character, and have a fortune of £400 a year. The conditions being fulfilled, the marriage can proceed.

Silent Force. — Some of the most powerful agencies in the moral and physical world are silent or invisible,—the wind, electricity, thought, love, light, heat, the eye, emotion. Oh that we realised more than we do the power and majesty of things unseen !

Y.M.C.A. ITEMS.

The Y.M.C.A. at Ballyclare has started a tract distribution band.

Mr. William Bright has been elected Hon. Secretary of the Kingstown Y.M.C.A.

The Membership of the Belfast Y.M.C.A. is steadily increasing : 1,450 Members are now enrolled.

The young Associations are making good progress. The Y.M.C.A. at Clonmel has added 34 Members to the roll during the past year, and the Lurgan Y.M.C.A. has increased its Membership from 26 to 58.

The Association at Holywood, which was organized last November, has been steadily increasing in numbers, until the Membership roll now stands at 60. The work is carried on in a room in the Town Hall, rented by the Association.

American Y.M.C.A. News.

One thousand eight hundred and fifty young men have joined the New York Y.M.C.A. Branch of the White Cross Army.

A few Members of the Coldwater, Mich., Y.M.C.A. have rented a pew in one of the churches of that town for the use of not only themselves, but of any young men who may come there to attend service. A good plan !

The Philadelphia Y.M.C.A. has started an althletic club.

THE GRUMBLER'S BOOK.

TO all persons who are inclined to grumble, we recommend the adoption of a plan that was instituted some time ago at one house, viz., to have a "Grumbler's Book." All who felt inclined to grumble, instead of doing it audibly or visibly, to the annoyance of others, had to write the cause of grievance in the book, which was inspected every Saturday night, and, where practicable, the evil was redressed by unanimous consent.

It was astonishing how few entries were made, and how small the grievances seemed when read over. On the spur of the moment little troubles seemed very big, and for the time they magnified themselves wonderfully ; but when the book was opened, they had to a great extent disappeared, and the folly of registering little annoyances was self-evident, especially when they had to reappear at the end of the week.

We therefore say to all, keep a "Grumbler's Book," and allow no one to grumble without entering it in your ledger.

ANSWER TO SQUARE SCRIPTURE PUZZLE,

GIVEN IN OUR NUMBER FOR FEB. 11TH.

BEGIN at the W in the right hand corner, and read round and round till it ends in the middle. "Whoso eateth My Flesh and drinketh My Blood, hath eternal life, and I will raise him up at the last day" (John 6. 54).

WANTED—THE ANSWER.

ANSWER.

"To Let"—bill in window.

"Toilet"—which takes its place when the house is let.

The Riddle to which the above is the answer, was given in our Number for Feb. 25th.

CRISP CORRESPONDENCE.

ANSWERS.

"Petersfield."—The water we use for drinking and culinary purposes holds in solution a certain amount of air, and frequently of carbonic acid. These gaseous ingredients seem to have some influence in bringing out the flavour of tea. By continued exposure to a high temperature, they are entirely driven out of the liquid. Hence it is not advisable to render soft by long boiling, the water which is to be used for making tea.

S. S. Teacher.—The "Sunday School Teacher's Manual," by W. H. Groser, B.Sc. (Sunday School Union, 2s. 6d.), can be strongly recommended. Various methods of teaching are described, advice given respecting useful books, etc., etc.

Ignoramus.—Ship-money was the name given to a tax originally levied on maritime counties and ports for the equipment of a navy. John Hampden's patriotic resistance, in 1637, to the attempt of Archbishop Laud to impose the tax on the country at large, roused the nation to resist the general oppression exercised by Charles and his advisers.

Botheration.—"Kyrie Eleison" is "Κύριε ἐλέησον," two Greek words, signifying, "Lord, have mercy."

The Proverb.—"A word to the wise is sufficient" is at least 2,000 years old. It is found in the *Phormio* of Terence, which was written about 160 B.C. The same comedy also contains the saying, "Fortune favours the brave."

History.—For the general reader, Green's "Short History of the English People" cannot be excelled.

A Reader of "A.1."—Many thanks for following out so promptly the suggestion lately given, and sending us the names and addresses of six young men who would like to see our Paper. Specimen copies have been forwarded to each.

Violet.—Assuming that there is no rule requiring you to travel second class, you are quite justified (although second class fare is allowed) in travelling third class.

Bankers' Clearing House.—An exchange of cheques drawn on the different banks takes place daily in London at the Clearing-house. To this place the bankers send all the cheques which have been paid into their banks during the day, and exchange them for cheques of a corresponding value drawn upon their own banks. In this way £2,000,000,000 of cheques are annually exchanged, whilst to effect this exchange no specie whatever is required. Formerly, after the exchange of cheques, all differences were settled by cash payments, but this custom is now discontinued, and the differences are settled by an account kept at he Bank of England, called "the account of the Clearing Bankers." The balance for or against each bank on the day's transactions is entered in this account, and thus one entry *per diem* suffices for each bank.

How to Prepare Rabbit-skins.—"The inside of them is generally first 'tawed' (dressed) by the application of a solution of alum. They are next well dressed over, and rubbed with hot plaster of Paris or whiting, and are lastly thoroughly dried and brushed clean. When it is desired to change or modify their colour, the grease being removed by lime water or a weak soda lye, they are stretched out on a table or board, and the ordinary liquid mordants and dyes are applied hot by means of a painter's brush."

"Freedom of the City," what does this mean, and what are the benefits in connection?—The position of Freeman of the City of London is obtainable in several distinct ways: (1) by birthright; (2) by service of apprenticeship; and (3) by "redemption," that is, by order of the court of aldermen, and payment of a fine; or by complimentary gift. The right to the position "simply gave the right to trade." But in early times this was a right of great consequence, for only freemen (at first contra-distinguished from villains) could belong to a trading body; thus the Associations of freemen known as Trading Guilds and Livery Companies soon acquired a monopoly of trade, and admission to a Company, though it did not make a man a freeman, was evidence of his being one. And even by so recent a document as the Charter of Charles I., it is declared that a person must be a freeman of London to be entitled to carry on merchandise there; only the freeman "who became a resident householder, and took the Livery of his Company, entered into full enjoyment of his civic rights."

It will thus be seen that there was a distinction between a citizen and a freeman: citizens were freemen living within the city. Accordingly, the custom of London is described to have been, not only that those who were born and inheritable in the city by descent, were to be citizens, but also those who were resident and taxable at act and let, which, coupled with other requisites of the common law (viz., that they should be of free condition, would be sworn and enrolled, and be householders), contained all the qualifications of a free citizen and law-worthy man.

The third mode of obtaining freedom (redemption) was frequently abused for political and mercantile purposes; and restrictions, especially in the reign of George II., were put upon the liberty of thus granting freedom to aliens and strangers. The full civic powers include many rights, such as the having separate sheriffs and separate courts, into which we cannot more particularly enter. At the present day, to be presented with "the Freedom of the City" is rather a mark of honour than anything else.

Inexperience: Proportions of Tartaric Acid and carbonate of soda in baking powder, and if these two are the only ingredients? Baking powder is a compound of two parts of rice flour with one part of a mixture of tartaric acid and bicarbonate of soda.

MARCH 18TH.

THE SON REJECTED.—*Matt.* 21. 33-46.

GOLDEN TEXT.—*John* 1. 11.

I. *God asks us for what we are able to give Him.*

These husbandmen were asked for the fruits. Now see (1) They had been put in a place prepared, having every facility for the production of fruit; (2) and the inference is not that they had no *ability*, but that they had no *will* to render the lord of the vineyard his due. If we have the true desire to serve God, He will take care that we have the ability to do so.

II. *See the perverseness of evil men.*

The different messengers sent ought to have impressed them with sense of their lord's kindness, but it was turned by them into an argument that if they got off so often they would get off always.

III. *See what persistence in sin leads to.*

More and greater sin of the same kind. Sinning is like running down a hill; the farther down you go, the faster you go, and sometimes you end your race by *a bad fall.*

IV. *See the patience of God.*

Why is God so patient? Because He desires sinners to be saved. He willeth not the death of a sinner. But mark, there is a point beyond which it will not go—the rejection of His well-beloved Son.

V. *See the power of conscience.*

Ver. 45: "They perceived that He spake of them." A guilty conscience needs no accuser. Truth and conscience are to each other like the positive and negative electric poles. Conscience may be lulled to sleep, but the voice of truth can awake it.

VI. *See what excellent judges men often are of other people's sins.*

See ver. 41—Yet we should remember that ten thousand of the greatest faults in our neighbour are of less consequence to us than one of the smallest in ourselves.

INTERESTING incidents since last lesson: Night at Bethany; Walk back to Jerusalem; Withering of the Fig-tree; Questions about John the Baptist; Parable of the two Sons.

Describe 1st, THE PARABLE.

(*a*) *The Landlord.* "A certain householder." Unlike some, he was *generous in expenditure; thoughtful in arrangements.* "Went into a far country," not implying a great distance, but went forth. Luke says "for a long time;" did not wish to spy upon them. A *trust* and a *test.*

(*b*) *The Vineyard.* A very common thing to Christ's hearers. "The table-lands of Judah is the true climate of the vine" (Stanley). A peep into the vineyard. "Digged a winepress," literally "hewed," so we gather the vineyard was on a rocky slope. Such winepresses still found. "The tower." For storage, residence, and look-out.

(*c*) *The Tenants.* "Husbandmen." Vinedressers.

(*d*) *The Rent.* To be paid in fruit. "It is the system known in India as ryot-rent; the cultivator undertakes to give the owner a certain fixed quantity yearly, from the produce of the farm."—*Arnot.*

(*e*) *The Collectors.* First, servants. The *dishonesty* of the husbandmen; wanted the vineyard for nothing. Their *cruelty.* Second demand. Third Collector—the Landlord's Son. His murder. The tenants' plot.

(*f*) *The Ejectment.* Turned out, punished.

2nd. THE MEANING OF THE PARABLE.

The Landlord—God.

The Vineyard—Canaan. God's wondrous blessings and plans.

The Tenants—The children of Israel.

The Rent—Isaiah 5. 2. Fruits of righteousness. John 15. 14.

The Collectors—Prophets and Christ.

The Ejectment—Fall of Jewish kingdom. Rom. 2. 8, 9.

3rd. THE PURPOSE OF THE PARABLE.

To get the priests and elders to condemn themselves, as Nathan did David (2 Sam. 12. 5).

To show them the selfishness and wickedness of their own conduct.

To warn them of their fall (ver. 43).

To prove the futility of their designs (vers. 42 and 44).

4th. THE LESSONS FOR *us* FROM THE PARABLE.

Our sphere in life is our vineyard.

We each have our particular work to do in the vineyard.

The Lord requires fruit from us.

To reject Christ means ejection from happiness.

Christ's triumph is sure in spite of all opposition.

Illustration.—It is said that when Solomon's Temple was building, all the stones were brought from the quarry ready cut. Amongst them was a very curious one, apparently unfit for any place. They tried it at this wall, but it would not fit, and at that, but it could not be accommodated, and so in anger they threw it away. The Temple was so many years in building that this stone became covered with moss, and grass grew around it. Everybody laughed at it, and felt quite sure it was good for nothing. The eventful day came when the Temple was to be opened, and the multitude was assembled to see the grand sight. The builders said, "Where is the top-stone?" "Where is the pinnacle?" They little thought where the crowning marble was, until some said, "Perhaps that stone which the builders rejected is meant to be the top-stone!" They then took it and hoisted it to the top of the house, and as it reached the summit, they found it well adapted to the place. Loud hosannas made the welkin ring, as the stone which the builders refused thus became the head-stone of the corner. —*Spurgeon.*

C. SKINNER.

Y.M.C.A. BIBLE CLASS LESSONS.

MARCH 18TH.

THE PALSIED MAN.—*Mark* 2. 1-12.

CONTRAST Christ's conduct with that of the worldly ambitious. Christ withdrew from Capernaum to *subdue* popular excitement in His favour. Yet when He returns, it is rekindled. Many try by various arts to promote it, and yet fail.

"It was noised that He was in the house." But *He* did not noise it. He did not advertise Himself.

When Christ is in the house it will soon be known.

"Straightway many were gathered together." This shows "how to reach the masses." Christ is sufficient attraction.

"He preached the Word unto them." Christ did not repel them—did not send them empty away.

Those who gather round Christ will always get something from Him.

"They come unto Him, bringing one," etc. It is a good work to bring others to Jesus. By prayer, faith, loving counsel and guidance this may be done now. *Four* men bring the sick one. *United* effort.

"When they could not come nigh," etc. They did not give it up. They were determined to get what they came for. Earnest faith rises above all obstacles. Love is infectious. "Where there's a will there's a way." God delights in earnestness. The one object of these men was to get the man into the presence of Christ, and they did not rest till they had accomplished it.

"When Jesus saw *their* faith." Note the word "*their.*" See how the faith of friends may prevail.

Faith honours God and God honours faith.

"Son, thy sins be forgiven thee." Christ, like a wise Physician, goes to the root of the disease and removes that first. *Soul* first, then body. Christ gave more than they asked for: and He gave the *best* first.

"But there were certain of the scribes," etc. Sour, cynical critics. Heresy hunters. Men bent on finding fault.

His servants often have to endure captious criticism.

Verse 7 expresses a sound sentiment, though used as the basis of a wrong inference.

A word against Popish priestcraft.

Verse 8. See how Christ read their hearts. Compare Heb. 4. 12, 13. A proof of Christ's deity.

By the display of power in the *visible* realm, Christ gave proof of His power in the *invisible.*

Had Christ been only man, it *would* have been blasphemy to pronounce absolution. But He does not retract or recede. Mark the strength of His assertion. The calm deliberation with which He makes and maintains it.

A helpless paralytic becomes a means of glorifying God. He was a living proof of Divine power. So ought Christians to be.

"Seeing the man that was healed standing with them they could say nothing against it."

JAMES L. STANLEY.

I. A *group* of miracles and incidents at CAPERNAUM (ver. 1).

1. Christ healed Simon's wife's mother of a fever (Matt. 8. 14).
2. Heals the man with unclean spirit (Mark 1. 21–28).
3. Matthew is called from the receipt of custom (Matt. 9. 9.
4. Wrought miracle on the Centurion's servant (Matt. 8. 5–13).
5. Taught disciples lesson of humility with a child (Mark 9. 35).
6. Gave the wonderful discourse on the Bread of Life (John 6. 24–59).
7. Cured the man sick of the palsy (Matt. 9. 1; Mark 1).

II. *A gathered company* (ver. 2). The power and centre of attraction was Christ and His Word. "Where the word of a king is there is power."

III. *A grand contrivance* (vers. 3, 4). Four men bringing one to Christ. We shall give these four men names, and the names illustrate what we need as workers in seeking to bring souls to Christ. First, Mr. Faith; second, Mr. Sympathy; third, Mr. Prayer; and fourth, Mr. Perseverance.

IV. *A grievous case.* "Man sick of the palsy." Different diseases illustrate sin under different aspects. Leprosy illustrates the pollution of sin; blindness, the darkening effect of sin; and palsy the deadening effect of sin. The man sick of the palsy illustrates the helplessness of the sinner to save himself.

V. *A gracious cure* (ver. 5). All blessing, temporal and spiritual, flows to us on the ground of atonement. Christ's work is the basis of all blessing; His power is the procurer of all benefits, and His love and grace are the cause of our liberty and gain. Pardon for the past, peace in the present, and power for the future come from Him.

VI. *Glorious consequences.* (1) The man's sins were forgiven. (2) His palsy was gone. (3) He took up His bed and walked. (4) The multitude glorified God. This is the result, in a spiritual sense, of Faith in Christ. Forgiveness of sins is followed by freedom from sin's power, walking in newness of life, in following in the steps of Christ; and the power of Christ is seen by others.

VII. *Grumbling Cavillers* (vers. 6, 7). As in every audience, there was a variety of hearers. There were the scribes with their reasonings, and the multitude with their wonderment. Reasoners have not died out yet, and men still bring their thoughts in opposition to the word of Christ.

Sunderland. F. E. MARSH.

THE WORKHOUSE BOY WHO BECAME A GREAT AUTHOR.

By F. Burton Irving.

Part II.

IN 1827 Kitto left England for Malta, where he superintended the Church Missionary Society's printing presses, and also assisted them in the preparation of tracts ; but he only remained at this work for eighteen months, when he left the Society, as they objected to his studying so much.

He returned to England, much dispirited, and purposing never to leave its shores again ; but a special sorrow led him to accept the invitation of Mr. Groves to accompany him abroad, in the capacity of tutor to his two little boys. He was now twenty-five, and this opening proved another link in the providence of God ; for while he taught his pupils, he perfected his own education, and the combined advantages of travel, and a residence in the East for four years, qualified him for those works of Biblical illustration which made him so useful and famous.

In 1832, Kitto's employment as a tutor being at an end, he returned home. One of his fellow-passengers, a Mr. Shepherd, who died on the voyage, charged Kitto to deliver some memorials to the lady to whom he was engaged. He fulfilled the commission immediately after he landed ; one interview led to another, until intimacy ripened into love, and on the 21st of September, 1833, he was married to Annabella Fenwick. At this time he won a livelihood by writing for the "Penny Magazine," for a remuneration of £18 per month. Still, he had not found his niche, though he was near it. Mr. Knight, the enterprising publisher, thought of bringing out an "Annotated Bible." Kitto prepared a specimen, which gave such satisfaction, that he was entrusted with the entire work. It was commenced in 1835, and finished in 1838, being issued in monthly parts, and proved popular from the beginning. While writing this, Kitto received £250 a year ; the labour occupied him sixteen hours a day. How true is the proverb : "No pains, no gains." How many there are who covet honour and reward, and never pause to calculate the price that must be paid for it. Think of the incessant brain-work, which only left eight hours out of the twenty-four at his own disposal, for sleep and recreation ; think, too, of the close previous study, which gave him the facility to write with ease and clearness. In 1849, when the Standard Edition was published, which required special attention, besides some thousands of new notes, he received £600 in payment.

His responsibilities being over in connection with the "Pictorial Bible," Kitto went with his family for a holiday to Plymouth, the place of his birth.

After a rest of three weeks, he returned to his daily toil, finding, as all true workers find, that his "enjoyments grew out of his employments." He generally rose at four o'clock, the alarum first rousing his wife, who in turn woke her husband. He dressed at once, went into the study, prepared himself a cup of tea by means of a spirit-lamp, and then worked till breakfast. After that meal was over, he worked again till one, then paused for dinner. The business of writing letters, correcting for the press, and various other duties held him till tea-time, when he emerged for a little while from the study, but soon "returned to his desk, writing till towards ten, and reading till eleven." Out-door life, amusements, and company were crowded out of his laborious days ; for when a little leisure came, it was spent with his children.

His wife was one with him in everything, her good sense enabling her to see plainly the work to which her husband was called ; so she never permitted his literary toil to be broken in upon in any way, and it was her proud boast "that during twenty-one years of married life, she never spent ten separate hours from him in visiting."

Kitto's home was a very happy one to every inmate, and his poor, much-tried mother found there a peaceful shelter for the evening of her days. His children had quick ears and busy tongues ; and when they discovered that no sound, however loud, attracted their father's attention, or caused him to lift his eyes from his book, they soon learned, by imitation, to talk to him upon their fingers.

These halcyon days were not to last. The publishing house with which Kitto had now been connected for so long, fell into money difficulties, and he was suddenly cut off from remunerative labour. At first he lived upon his savings ; then he was reduced, till he had to part with some of his books, to sell his house, and remove with his wife and four children from London to cheap quarters in Surrey. Trade was dull, booksellers not inclined to new ventures ; so for twelve months he had no employment. For the next few years he only obtained occasional employment ; and but one work demands our notice—the "Cyclopædia of Biblical Literature," which he edited in two volumes, and which appeared with the letters D.D. and F.S.A. after Kitto's name. Honour came to him, though not riches, for he was the first English layman who received a theological degree.

Other works followed, but he only reaped a very inadequate remuneration ; the discipline of suffering, the battle for bread, was telling sorely upon his health ; but the cloud had a golden side, for his spiritual nature was renewed continually ; he cared less for the "solidities of knowledge," and began his best and latest work, "Daily Bible Illustrations," with a mind keenly alive to Divine harmonies. During its composition, his working day was from 4 a.m. to 9 p.m., with hardly any interval, even for bodily needs. The first series, now dedicated to the Queen, was finished in 1850, and Kitto received a grant of £100 a year, "on account of useful and meritorious literary works."

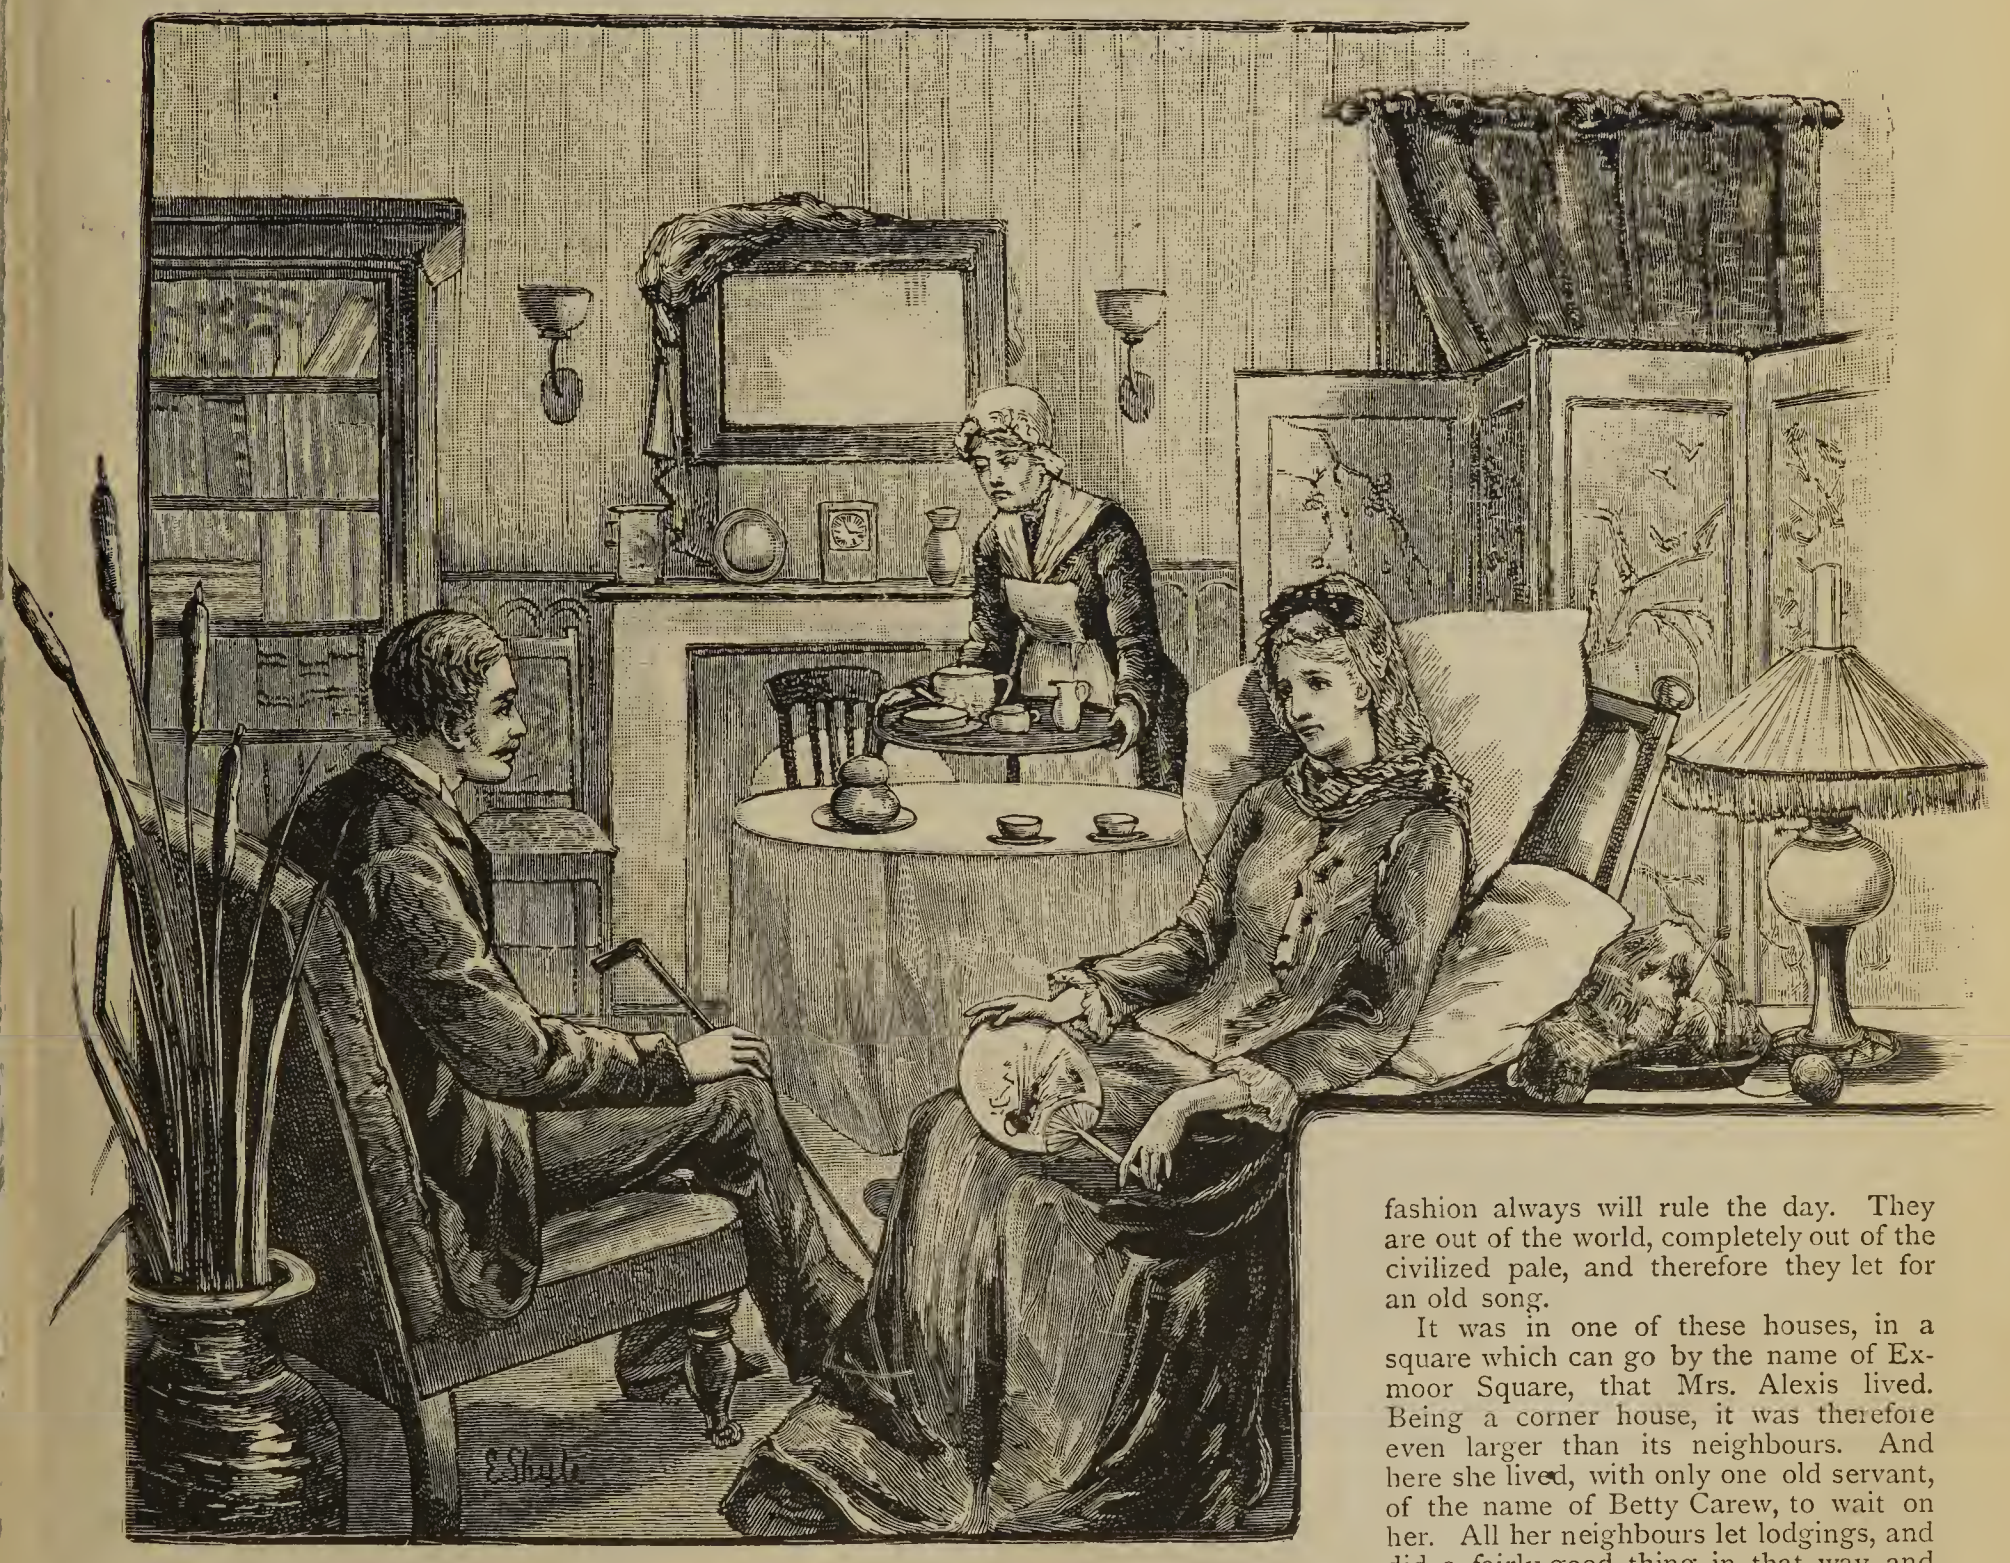
In 1851, there were signs of the beginning of the end. Kitto still wrote, but he had to shorten his hours of toil ; his head was often in agony, to bend it caused excruciating pain. However, the brave man worked on, toiling alike for the world's good and his family's.

In 1852 the bad symptoms were intensified, and the long-shunned exercise of walking was ordered by the physician as the best means for restoration. Ten children were now dependent on him, and for their sakes he tried the remedy ; it gave relief, but that was all. Sorrows thickened ; a dear child died ; Kitto's health grew worse. The doctor said plainly, "If you mean to live, you must work less." After awhile, he urged him to lay aside all toil, and to give his overwrought brain rest. The reply was emphatic : "No ; I must finish the work for which I have had the money ; and if I knew I should die with the pen in my hand, I would go on as long as the Lord permitted."

He continued to work amidst pain and weariness, till he had completed his design ; when he thanked God, who had lent him power to write, even the last sentence. It was finished at night ; on the next morning he had an attack of paralysis. The body was shattered, but the spirit triumphed. He said to a friend : "I know that all must be for eventual good, though it be by ways I should not prefer, or that I should even wish to avoid." The purifying process went on ; in less than a month he lost his youngest and eldest children. The family were then in Germany, hoping that the change would benefit Kitto. Vain hope ; his work was done ; for him, "the less of earth, the earlier immortality." The hour had come when he must die, to find in another world the rest he had been denied in this. He fell asleep on the 23rd of November, 1854, and was buried beside his two children, in the churchyard of Cannstatt.

His life was not lived in vain ; for besides the books he wrote—books which contain a rich legacy of suggestive thought for this and for succeeding generations—his example shows how perseverence and a determined will triumphed over the rocky barriers of untoward circumstances.

MAR. 17, 1888. ONE PENNY.



"A.1."

WEEKLY—Edited by MRS STEPHEN MENZIES.

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "Water Gipsies," etc., etc.

"'How is it you have sustained this serious loss?'"

CHAPTER VI.

THERE are squares and squares of handsome houses at the back of Bloomsbury, which are now almost forgotten of men. Half the houses stand empty, half of them are let out in lodgings, all of them are dirty, grey, gloomy and dilapidated. But they are well built, and they each of them contain many and large rooms; the entrance-halls are wide and noble, the stairways broad, the stairs shallow. The houses have great drawing-rooms and other lofty reception rooms, and some of the ceilings are exquisitely moulded, with rare devices of fruit and birds and flowers. The old forsaken houses would fetch a large rent, and be much esteemed in a fashionable locality; but fashion always will rule the day. They are out of the world, completely out of the civilized pale, and therefore they let for an old song.

It was in one of these houses, in a square which can go by the name of Exmoor Square, that Mrs. Alexis lived. Being a corner house, it was therefore even larger than its neighbours. And here she lived, with only one old servant, of the name of Betty Carew, to wait on her. All her neighbours let lodgings, and did a fairly good thing in that way, and the more thriving ones managed to fill their spacious rooms from cellar to attic, and did something more in the way of gain than simply cover their rent.

Mrs. Alexis never let lodgings; she knew none of her neighbours, and only went out of doors once a week, on Sunday morning, when, in a black silk dress, black satin cloak, and black satin bonnet, she walked slowly, accompanied by Betty, to the nearest church. Betty carried her Bible and Prayer-Book and

her umbrella, and sat at the other end of a square pew which Mrs. Alexis occupied, and which she never shared with any member of the congregation, Betty excepted.

Of course a woman who kept herself so much to herself could scarcely expect to be popular. Mrs. Alexis was spoken of by the neighbours as a proud, stuck-up thing; some people even hinted that she must have a dark history, to keep so very quiet. But they all agreed that she was rich—that she was very rich—and they respected her and envied her accordingly.

On this particular evening, after a harassing and most anxious day at his office work, Kenneth Graham started out to keep his appointment with Mrs. Alexis. He was to have tea with her at six o'clock, and after the worries and annoyances of the day, he looked forward to a few hours spent in the presence of his old friend with a sense of relief.

Mrs. Alexis, in black satin bonnet, with veil drawn well down over her face, hurrying to church as the neighbours saw her, was not at all the same woman as the gentle, sweet little lady who now rose to meet Kenneth, and, stretching out two daintily mittened little hands, gave him a hearty welcome.

"My dear boy, what an age it is since we have met! I'm very pleased to see you. It was very good of you to come on receipt of my note. I daresay you considered the old woman a worry, but still you came, and it was good of you. To see you gives me pleasure. Now sit down in that easy chair, and make yourself comfortable."

Kenneth obeyed. The great room was cosy, with a roaring fire and gas-light; a reading-lamp, with a soft golden shade, stood on a little table near Mrs. Alexis. The centre table was spread with a cloth of the whitest and finest damask; a tea-service of the rarest old china further graced the board; tea, bread of different kinds, honey, new laid eggs, muffins and crumpets, and other varieties of hot cakes further filled the table; and just then Betty appeared with a dish of hot sausages and potatoes. Kenneth heaved quite a sigh of relief.

"It's very good indeed to see you again, Aunt Judy," he said.

"Ah! that's right, my boy; you have not forgotten the playful old name. Don't you remember how angry you used to make Jonas when you called me by it long ago?"

"I remember everything that happened long ago," answered Kenneth. "Are you quite well, Aunt Judy?"

"My dear, I am very far from quite well; but we will come to that presently. I am an old pilgrim, my dear, not far from the end. So much the better. I have had many troubles, and am tired of the journey. Now come and have some tea, Kenneth. You don't look well; you have lost——"

"What, Aunt Judy?"

"I can't tell you. Something—your youth, perhaps; no, you are still young; your strength—you always were a strong lad, Kenneth, and you are strong still; your gladness. Oh, we are very weak folk if we can't do without that. I know, I know, my dear; you must get it back as quickly as possible. The loss you have sustained will absolutely cripple you in life, and you must get it back at once."

"Aunt Judy, you quite raise my curiosity. What awful calamity do you think has befallen me?"

"Help yourself to some of those nice sausages and potatoes, Kenneth. Have some tea? Betty, bring in the tea-pot. My dear, we will have tea first, and then go into all these minutiæ. I have sent for you because I want to talk business with you. Do you quite understand?"

"Yes."

"And I want you to confide in me. Your mother was one of my greatest friends, and I have always cared for you, Kenneth, particularly since poor, poor Jonas went away. Now make a good tea. Do you like that brown bread? It is home-made."

When Kenneth left his office in Seymour Street, he was depressed, and suffering from a violent headache. He thought he could not eat, and shuddered at a friend's suggestion to accompany him to a neighbouring restaurant. Now, however, so soothed was he by the pleasant atmosphere, which always surrounded gentle Mrs. Alexis, that he made a capital meal, his headache vanished, his eyes grew bright, and his spirits rose.

"Oh, it is a relief to come to see you," he said, suddenly. "I've been almost worried to death to-day. Oh, nothing—only business worries; but your room, after the atmosphere of Seymour Street, is so perfectly peaceful. I had a headache, and it has gone. I must thank you for inviting me, dear old friend."

"You know, Ken, you can always come; there is always a place at my board for you, and that easy chair looks much more comfortable to me when you are filling it. Now Betty shall clear away, and we will get to our business talk. I have some very important matters to consult you about."

"Nothing wrong, I hope," said Kenneth, when the old servant at last left them alone; "I mean, no bad news of Jonas?"

"I have not heard from Jonas,—I have not had a line from him for fifteen years. Kenneth, we won't talk of Jonas just yet; it upsets me. I have a great deal to say to you, but, first of all, I want to hear all about yourself. How is it, my dear boy, that you, a young man—of—oh, yes, I know your age—you are just seven-and-twenty—how is it you have sustained this serious loss?"

"Now, Aunt Judy, don't be so enigmatical. What have I lost?"

"Hope, my dear boy,—hope. You are like a goodly ship tossed about on a great ocean, without rudder or compass. It pains me, Kenneth, for I have always thought well of you. At seven-and-twenty a man is, indeed, to be pitied who has to go through the world without hope."

Graham had been feeling a slight degree of returning cheerfulness; now he sighed deeply, changed colour, and moved uneasily on his seat.

"Every man has to bear his own burden," he said tersely, "and some sores hurt by being touched."

"And yet they must be treated to be healed," said Mrs. Alexis. "Kenneth, you must tell me your story. I was your mother's friend. I must and will know what has wrought this change in you."

"Oh, just the usual thing, Aunt Judy,—just what almost every fellow has got to go through, only I am fool enough to feel it more than some."

"What salary are you now drawing, Kenneth?"

"Two hundred and twenty a year."

"Come, that is not so bad. You are not in debt?"

"Not a penny."

"Better still. Your mother was very fond of you, Ken,—you were such a nice, bright, handsome fellow, and so winsome and so gay. Your poor mother! she would not know you to-night. For your mother's sake, I trust, I pray, I hope you are taking up no bad habits."

Graham coloured.

"Ask for my character at the office," he said; "they will give me a good one; you must be content with that."

"So I will, so I will. Kenneth, you ought to marry."

"What! on two hundred and twenty a year?"

"I married on less, long ago; a little bit of privation does young folk no harm. Kenneth, look me in the face. A girl is at the bottom of all this trouble."

"I would rather not talk about it, Aunt Judy."

"Forgive me, but I would rather you did. Kenneth, you cannot absolutely refuse to answer your mother's friend when she asks you a few questions. Is there a girl in the case?"

"Yes."

"Is she married?"

"No."

"Is she engaged to another man?"

"No."

"Have you told her that you care for her?"

"Aunt Judy, I can only tell you that the case is absolutely hopeless,—she is not for me. Please, and because you are my mother's friend, do not torture me."

"My boy, I could cry to give you any more pain, but I must ask a few questions. Have you any reason to believe that this girl returns your affection?"

"I—I have not asked her."

"Kenneth, don't equivocate. You can tell without words."

"I did hope for the best, but everything is changed now."

"Well, you have got to tell me why."

"Well, Aunt Judy, you will have it. Here are the mere facts. Her name is Kate Kennedy; she is twenty. I have known her for six months. I met her six months ago, at a musical party; she played and sang. I loved her from the moment we met. She was a poor girl, and very brave; she was a teacher in a school, and she also gave music lessons. Her father and mother were dead, and she had the care of, and half supported, three very silly step-sisters. Kate was poor, and I worked very hard, and I thought when I had three hundred a year, I might venture to speak to her. I fancied, too, that she would not give me an unfavourable answer. A month ago we met, and she told me that she had been left a fortune. It came—well, as a blow."

"Yes, Kenneth; go on, my poor boy."

"She was left £30,000 by an old uncle, who had never done anything for her while he lived. It seemed to put her above me, and beyond me, at once. Much as I loved her, I could not have it said that I married my wife for her money. I tried to put the thought of her away from me; I resolved not to go near her; I—I——"

"Oh, yes, Kenneth, you did just what any other young man would have done in your position,—any right-minded, honourable young man. Go on, my dear boy."

"I meant well, Aunt Judy; but, as the sequel shows, I should have been cut off from her in any case. Last evening I was told by a friend the nature of her uncle's will. He considered Kate quixotic,—he knew she was devoted to her step-sisters, and he resolved to guard his money, for I don't believe he really cared for her. The provisions of his will were as follows: If Kate did not marry before she was five-and-twenty, the money went from her to four of

the large London hospitals; if she did marry, she secured her fortune on the one and insuperable condition, that her husband brought an equal sum of money to meet her own. You see now, Aunt Judy, how absolutely hopeless my love is. You have forced the story from me,—now let us change the subject."

"But a moment, Kenneth. First of all, however, I want you to do something for me,—give me this girl's address."

"Why, what use will it be?"

"Do you object to my knowing her?"

"Certainly not; only, pardon me, I would rather not introduce her."

"You need not do so. Give me her address; I will manage to make her acquaintance."

Graham hesitated for a moment, then taking a card out of his pocket, he scribbled something on it, and handed it to Mrs. Alexis.

"Thank you, my boy; now we will really change the subject. First, however, let me say a brief word. I am very grateful for your confidence,—I will certainly not abuse it; and I bid you, my boy, not without reason, even at the eleventh hour, to hope. Now to my own business."

"I am so glad to be of the least use to you, Aunt Judy,—I mean that I hope you are going to consult me about something."

"Not exactly; I am going to tell you something."

"What is that?"

"Well, my dear, no sorrowful news—I am an old pilgrim, and I have had a summons home."

"Aunt Judy! I know what you mean by this—your life is in danger!"

"No, my boy, my life is safe for all eternity. The pilgrimage days are coming to an end, that is all."

Kenneth was silent. Mrs. Alexis sat quietly by the fire, a peaceful, happy smile playing about her gentle old face.

"You seem glad of this," said Graham, suddenly. "I presume that you are going to tell me you are very ill; I am more than grieved to hear it, but you look glad."

"I am tired of the pilgrimage, Kenneth, and the thought of going home and seeing old friends is very pleasant to me. The facts are these, my boy—the doctors say that I have but a very few weeks to live."

"Aunt Judy!"

"Yes—I shall die quite painlessly, and, perhaps, suddenly at the end. I have known for some time that I am ill, but it was only yesterday that my doctor told me how very few my days were. Kenneth, I should be truly glad, were it not for Jonas."

"It's very strange that you never hear anything about Jonas," said Kenneth, arousing himself from a little reverie; for he was truly attached to Mrs. Alexis, and felt real sorrow at the thought of losing her.

"He is my only son," answered the poor lady, "and I have not had word or line from him for fifteen years. I have advertised for him, and written to him, and set detectives on his track, and I longed for him,—God only knows how bitterly; but for fifteen years I have heard not one single word about my only boy. He was not handsome and bright like you, Kenneth, and he was always difficult to understand; but I, his mother, always believed in him, and when he got into disgrace in the Seacome Bank, years ago, I would have held out my arms to him, and never reproached him—no, not by a single word; but he never came back to me,—never. Oh, I suffered agonies, and I lost my faith in God, and I went through a dark, dark time. When Jonas ran away, I was very, very poor, and I was obliged to work for my own living. Five years afterwards I came in for money through the death of an old relation; and then I bought this house, and came to live here, and I have lived here ever since. My expenses have been very few, and Betty has been a faithful old servant, and my small fortune has increased. Kenneth, give we your hand, my boy—it has been borne in on me lately that Jonas is dead. I have wept so many tears for him, and prayed so many passionate, passionate prayers for him, and lately I have had quite a peace and rest, and no feeling of uncertainty or misery when I think of him; and it has been borne in on me that he has died and is in heaven, and will meet me there. He is one of the prodigals, but even the prodigals find a place and a welcome there. I feel certain he is dead, and I long very much to go and be with him again. Kenneth, I have made my will, and signed it to-day, and I sent for you this evening to tell you I have left my money to you."

"To me, Aunt Judy?"

Graham's face turned ghastly.

"Yes; and I am glad, for it will give you back hope. My private fortune amounts to exactly £30,000, and this house will also be yours."

Graham's face seemed to grow even a shade whiter; he tried to speak, but no words came.

"So you can marry Kate Kennedy, my boy," continued the gentle old lady; "and if Jonas is really dead, you and she will be well off."

"But—you are not certain of your son's death."

"I am not; but I believe in my strong intuition. However, I have provided for the emergency of his still being alive, and of his trying to seek me out. If he appears on the scene now, Kenneth, or at any time, half my £30,000 goes to him, and half to you. This old house, too, in that case, goes to Jonas; for I should like him, if some day he does come home, to occupy the old rooms where I have thought about him so often. But in any case, you can marry your Kate, Kenneth—in any case,—and it is about that I want to see her; for if she is the girl I take her to be, she will marry you with half your fortune."

"Aunt Judy, your news has astonished and agitated me, and I can't even begin to thank you at present; but I don't believe you quite understand. I cannot marry Kate in any case. If Jonas returns, I shall be the happy possessor of £15,000, but Kate's uncle declared in his will that her husband must have £30,000 to meet hers. I am as much cut off from Kate with half your fortune as if I had none."

Mrs. Alexis looked long and steadily into the young man's face. "Kenneth," she said, solemnly, "do you love this girl?"

"With all my soul—with all the strength of a most undisciplined nature."

"And you think she loves you?—you believe she could love well?"

"I don't know if she loves me, but I believe that one she cared for she would be very staunch to."

"Then marry her with half your fortune, Kenneth, should the necessity arise; and let her uncle's money go to enrich the hospitals!"

(*To be continued.*)

OF INTEREST TO YOUNG MEN.

THE best advice to give young men at the present moment would seem to be "Don't smoke cigarettes." Since the commencement of the present year, four boys and a fine young fellow of twenty-five years have died in the United States through excessive cigarette smoking, and another young man has been rendered deaf from the same cause. In the State of Rhode Island a large number of young men have been sent to the State Insane Asylum during the past eighteen months, nearly all of them being large consumers of cigarettes. This fact has given rise to the report that cigarette smoking was the cause of their insanity, and in several instances this is positively known to be the case.

The amount of money that is spent every year in tobacco pipes, cigar and cigarette holders, and other articles dear to smokers must be something enormous. The centre of the pipe manufacture is Ruhla, a mountain village of Thuringen, Germany. The yearly average of smokers' articles turned out of this village is somewhat as follows: 540,000 real meerschaums, varying in price from threepence to £12 each; 500,000 imitation meerschaums at from one shilling to one pound per dozen; 9,000,000 porcelain pipe-bowls, either plain white or gaily painted, ranging in price from fourpence to ten shillings and sixpence per dozen; 5,000,000 wooden pipes of infinite variety in size, form, ornamentation, and price, the common kinds being extremely cheap, and those artistically carved fetching a high price; 3,000,000 bowls of clay or lava, plain, at about threepence, and of better kinds at two shillings and eightpence, per dozen; 15,000,000 pipes composed of separate parts (bowl, stick-cover, etc.), from fivepence to five shillings per dozen.

It may not be uninteresting, perhaps, if I say something of the village where this industry is carried on. In the Middle Ages Ruhla was famous for its arms and armour, and at a later period for its knives. When the use of tobacco became common in Europe, it turned its attention to the manufacture of iron smoking pipes. In the seventeenth century meerschaum and wood were gradually adopted as more suitable material to work upon. The true meerschaum clay is to be procured only at Eski-Scher, in Asia Minor, where there are large deposits, and whence it is sent direct to the manufactories at Ruhla, of which there are at present forty, employing almost the whole population of the district.

Shorthand has been introduced into Rugby School. The instructor is a lady.

The Halifax (Yorkshire) Football Ground is lit up with electric light. Evening matches are to be arranged.

A country farmer told a friend, who had come from London for a few days' shooting, that he once had so excellent a gun, that it went off immediately upon a thief coming into the house, although not charged. "Why, how was that?" asked the friend. "Why," replied the farmer, "the thief carried it off, before I had time to charge it!"

OUR MONTHLY TALK.

BY THE EDITOR.

BARABBAS OR CHRIST?

DEAR FRIENDS,—

Heavy pressure of correspondence and various engagements often prevent my replying as promptly as I should like to the many letters received. Let me now thank the writers very heartily, and assure them how welcome are their communications.

"Our Monthly Talk" is a much-valued link,—permitting me, as it does, to speak with more freedom than I could otherwise do.

This is a day of ever-increasing activity. Forces for good and for evil seem to be acquiring increasing impetus, and we are carried along with almost irresistible energy in the current. What need then is there, that those who are on the side of Christ should be brave, bold, outspoken men and women, ready to do and dare, and, if need be, to *die* in the maintenance of God's truth,—and men who fear not to say that right is right, and wrong *is* wrong, in spite of the *vox populi*. Man is such a gregarious animal, that his whole bent is to go *with* the multitude, to swim down the stream, instead of bearing well up against it.

How forcibly one is reminded of, perhaps, the most stupendously critical moment in the world's history: "Knowest Thou not that I have power to release Thee, and power to crucify Thee?"

One solitary man at that moment stood between the Son of God and a surging, infatuated multitude; an uneasy, because too faithful conscience, had uttered the unqualified verdict; but the man was weak as water, and his mollusc nature was swayed by the gaunt ogre of unpopularity. The keen eye and instinct of the populace soon discovered the fatal wavering, and, as with one voice, "Not this Man, but Barabbas," was given as their unanimous vote. And though the Christ of God stands not to-day on the marbled or mosaic tiles of an Eastern palace, nor is clad in pseudo-regal robes, yet is it verily true, that the multitude is still passing its vote. To-day you, friend, and I, are recording our verdict. We are lifting up our voice *for* Christ, we are enthroning Him in our hearts and homes and lives, or we are practically re-echoing that terrifically solemn shout, "Not this Man, not this Man, but Barabbas." "Now Barabbas was a robber."

They chose Barabbas then, and you are choosing Barabbas now. And the arch-enemy whom you choose is not *a* robber—he is *your* robber, your murderer! Yet you deliberately, unhesitatingly choose him; you yield him allegiance, you obey his behests, you serve his interests, you get his pay.

So much for your side or his side—nothing but social, moral, and spiritual pillage—"a people robbed and spoiled."

Beloved friends, be not deceived. "He that committeth sin is the servant (slave) of sin." The tyrant may hold you with golden fetters; it matters not—you are as surely his slave, as if bound with iron chains. There is but the choice between "this Man" or Barabbas. Every moment records your choice; and what your choice is now,—that, in all probability, it will be throughout the endless ages to come. I set before you this day death and life, blessing and cursing; therefore choose life.

I would like to quote some most forcible words from Canon Farrar, on this very point:

"To all of us constantly a choice is offered: a choice of many names, but of one significance: a choice which may be described variously, but which is fundamentally the same. It is the choice between law and licence; between pleasure and duty; between the flesh and the spirit; between God and Satan; between worldly life and heavenly hope; between intemperate sensualism and sober chastity; between the love of self extended into forgetfulness of God, and the love of God victorious in the forgetfulness of self; between something which is near and seems sweet, but which in our heart of hearts we know to be fatal and ruinous, and something which is far off and hard, but which in our inmost hearts we acknowledge to be noble and Divine. In some form or other, great or small, this choice comes daily, and almost hourly, to all of us; daily, and almost hourly, we have to appeal to great principles to support us in the performance of little duties, or stimulate us to the resistance of small temptations."

The moment our *will* is yielded, and we are prepared to choose CHRIST,—that moment Christ extends pardon through His cross, and peace passing all understanding.

And now I must add one word about our Paper. The steadily-increasing circulation betokens no small amount of interest and hearty co-operation on the part of many friends, to whom we offer very hearty acknowledgments. We trust all will bear in mind how glad the Secretary in our London Office is, to be asked for parcels of specimen copies, when they can be advantageously distributed at meetings or Men's Bible Classes; or to send specimen copies on receipt of name and address. A clergyman has just sent me a suggestion, at once so unique and so simple, that I am sure many will be glad to adopt it. He is localizing "A. 1." by inserting the name of his Church and Parish in the panels of our headline on either side of "A. 1." For example, "St. Peter's" on the left side, and "Brixton" on the right.

The same plan could be adopted either by Y.M.C.A. or Y.W.C.A.; *e.g.*, "Brighton Y.M.C.A.," "Burton Y.W.C.A." If any Clergyman or Secretary would like to adopt this plan, we will insert this title, free of charge, on all orders of four dozen, either Weekly Numbers or Monthly Parts.

Trusting our Paper may be increasingly helpful,

Believe me, your true friend,

W. Jane Mewzies.

"*I find it an evil thing* for me to live with those who can give me no sympathy, however good and worthy they may be; for they teach me to lock up my heart and all its feelings, which produces spiritual congestion, as bad for the soul as the congestion of blood is in any bodily organ."—*Thomas Erskine.*

Inspiration is contagious. One man, dead in earnest, sets a hundred other men on fire.—*F. A. Noble.*

Each Sermon is a message spoken by an ambassador of God.

God makes the Earth bloom with roses, that we may not be discontented with our sojourn here; and He makes it bear thorns, that we may look for something better beyond.

ABOUT OURSELVES.

IN our next, a Special Paper for Young Men, by Thain Davidson, D.D.

See page 317 for Rules of our Second Spelling Chase. The Paragraph to be written out will appear next week. Don't fail to try for the Guinea Prize. Encourage your friends to take it up.

Those requiring parcels of the "Second Spelling Chase" Number for distribution will please write us early.

On March 24, our "Thirty Nouns" Competition closes. Still time to enter, if you are quick.

The results of our "£100" Competition Examination, given below, are satisfactory to successful competitors.

"PLEASE STOP!"—Please stop to think about it! One Guinea Prize for the one who can put right our mistakes in punctuating a paragraph! It *seems* perfectly easy; see "A.1." for Feb. 25, p. 260. Open until March 31.

Results of our Definition Competition (Husband and Wife), and our Double Acrostics, as soon as possible.

Thanks are due to our active helpers. "A.1." is fairly afloat, and has good way on. Won't *you* help? Send the name and address of some friend, for a Specimen Copy.

OUR "£100" COMPETITION.

BY far the majority of the Competitors have shown a great want of definiteness, contenting themselves with simply mentioning the various *qualities* they deem essential to success, or the principles which should guide those who have £100 to spend. Several have fallen into the error of counting not the profits from transactions, but the gross receipts.

There is also for the most part great inequality in the treatment of the two parts of the subject, most of the Competitors finding it much easier to say in detail how £100 should be spent, than how it should be made.

FIRST PRIZE.

DIVIDED BETWEEN

E. E. ARCHER, Sherbourne.
REV. J. STAFFORD, West Leigh.

SECOND PRIZES.

M. JOHNSTONE, Edinburgh.
HENRY VINDEN, Stourbridge.

COMMENDED.

L. EDWARDS, Northiam.
A. PALMER, New Wandsworth.

Not Sought but Found.—Some years ago two gentlemen were riding together, and, as they were about to separate, one addressed the other thus: "Do you ever read your Bible?" "Yes, but I get no benefit from it, because, to tell the truth, I feel I do not love God." "Neither did I," replied the other, "but God loved me." This answer produced such an effect upon his friend, that, to use his own words, it was as if one had lifted him off the saddle into the skies. It opened up to his soul at once the great truth that it is not how much I love God, but how much God loves me.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

CHAPTER XXXI.

THE STRUGGLE WITH THE PACK.

HAD it not been for the fact, apparent to all, that the danger was very real and very earnest, the sight which met the eyes of our adventurous tourists, as they steamed slowly through the berg-stream, would have been delightful beyond measure.

The ice was not only of immense height, and jagged and rugged beyond description, but some of the pieces were really floating islands. There was no land now visible, even from the crow's nest, and none likely to be for some time to come. The rate of speed was very small, and not for five consecutive minutes was the ship's head in the same direction. She had to wind in and out and round about, to escape a too close contact with the slowly moving and threatening bergs.

Steering the vessel was ticklish work in all conscience, but guiding her was a matter of even more difficulty. A boat had been detached, and was rowed slowly ahead, disappearing for a short time every now and then, but anon returning to beckon the *Oona* on, or to warn her back.

Captain Boyd was stationed at the bow-sprit, Desmond was near the foremast, Jack was on the bridge, and there were two men at the wheel.

Orders were therefore being constantly passed along from forward—orders to the engine-room, and orders to the men at the wheel; so that the officers on duty, at all events, had little time to look at and admire the terrible grandeur of the ice.

Sometimes the very yard-arms would rasp alongside a vast sea-green wall, as clear as crystal, and towering skywards as high as the mast-heads. To look upwards at this was awe-inspiring enough, but it was doubly so to immediately afterwards turn to the other quarter and probably notice a second such green wall, apparently approaching to slowly but surely crush the ship.

The swaying motion of the vessel, and, to a lesser extent that of these ice walls, gave the impression at times that the bergs were closing in, or even falling. It was a puzzling, giddy, dreadful sensation, that held every one who happened to be idle spellbound. But those who were at work had little time to think.

The day was exceedingly bright. This might appear, on first thoughts, to be an advantage. In reality it was not so, but rather the reverse. And the *Oona's* people soon had a proof of this, and one which showed how very real the danger was. Suddenly, and without the slightest warning, just as the vessel was passing—luckily not too near—a huge pinnacled berg, a report, loud as a salvo of artillery, rang out in the still air, followed by a heavy booming plash and a surging roar of water. A thousand smaller guns seemed to have been fired immediately after, and in all directions, and the great icebergs were shaken to their foundations, and many of their towers and steeples came thundering down. The masses of ice detached from the nearest berg rushed down its sides like an avalanche, raising a cataract of green water, that went foaming over the ship.

It was well, perhaps, those on the quarter-deck retreated below immediately after, for the same event was repeated more than once, and huge masses of ice fell right on the bulwarks, while a boat lying on deck was smashed to pieces in a moment, or less.

"No white man could exceed him in activity,—none was a better shot."

The explosions had been caused by the sun acting on the bergs, some of which had split, or completely turned over.

All hands were ordered below now, except those whom important duty kept on deck.

The ship was nearing the open water, and danger was for a time over. She cleared the ice-stream at last. The men in the boat cheered her as she steamed into safety, while those on board must needs rush into the rigging, wave their caps, and shout till almost hoarse. Even Sally, for the time being, took leave of her seven senses,—I feel sure Sally had *seven*,—and, waving her white cambric handkerchief, joined in the general rejoicing. So excited was she, that she turned and shook hands, on the spur of the moment, with the first person she met. This turned out to be old Chips, and as the ship's fiddler happened to strike up a merry jig at this very moment, what more natural than that Chips should shout, "Come along, old lady," as he seized her by the two hands, or that the pair of them should foot it together on the light fantastic toe, till, what with the unwonted exertion, and what with laughing, Sally was fain to reel back against the bulwarks for support?

"Oh, dear! gentlemen," she gasped; "but I be *so* glad to get to Ameriky at last; and my darter, sir, ah! she'll be delighted to see me."

Now, here is a very remarkable circumstance. On this very day, negotiations for the transfer of Alaska to America were all but completed; therefore Sally was not so very far out of her reckoning, after all.

There was much to be done yet before the *Oonalaska* could be made safe and snug in winter quarters. But as the day was far spent, the vessel was steered closer in-shore, and the anchor let go, and the evening, both fore and aft, was devoted to pleasure.

There was a conversazione round the galley fire, a concert and reading on the half-deck, and a dinner aft. Didn't they dine every day? True; but this meal, for more than a month back, had been anything but a comfortable one, because, somehow or other, it is usually about the dinner hour in an Arctic ship that something is sure to happen, in the shape of accident or incident, either of which is certain to upset the harmony of the table.

The *Oonalaska's* cook was a good one; but he had even excelled himself to-day; for here was soup that a Frenchman would not have despised, and here was halibut that an epicure would have gloried in,—that fish had been swimming in the bay at the very moment the anchor was let go. Game, too, graced the board,—ptarmigan, that Jack Silk had shot on an iceberg some days ago; and last,—though surely not least,—a joint of roast beef, so large that, sitting there at the head of the table, Captain Boyd's face could barely be seen looming over it. Need I mention plum-pudding, or need I say that the steward had spread the table with damask like snow, and brought out stores of all his prettiest glasses, or that the silver rivalled even the crystal in its brightness and sheen? Something else was light and bright, too. The captain's countenance, for instance, was bright, and Jack's heart was light, for Katie had actually told him, not an hour ago, that she had trembled for his safety as he walked the bridge. It was only a trifling thing to say, after all; Katie might have said the same to old Chips, only—she didn't, and therein lay the difference. And so happy was honest Jack about it, that he did not feel content till he had repeated Katie's words to Miss Graves, adding, with sparkling eyes,—

"But ain't I a booby, mother?"

Miss Graves simply laughed merrily, and nodded assent.

Captain Boyd's grace before meat was never a very long one, but to-day the honest sailor felt he had something more to be thankful for than the good things on the table. Did the same thought occur to others? Perhaps; for while the captain said his simple, earnest, heart-felt words there was silence in the saloon, every back was bent and every head was bowed.

All hopes were now abandoned of getting

farther east until spring should break up the ice; so preparations for winter quarters and winter comforts were gone into without delay.

The next thing to be done was to survey the stores; and for a day or two the decks presented a very busy and bustling scene, indeed; while the captain's snuggery, for the time being, was more like a clerk's office than anything else. At the table, right opposite Captain Boyd, sat Katie, with a huge quill pen in her hand, as busy as busy could be, writing and figuring. Very pretty and interesting she looked, too, while thus engaged, so Jack seemed to think; for I feel quite sure he made far more errands down to the snuggery, and stayed far longer when he was there, than there was any actual necessity for. Besides, there was really no occasion for him to look over Katie's shoulder quite so often as he did. He was putting her right, with his way of it. But Katie really did not want any putting right; she had quite as good a head for business as Jack Silk himself had, if not a better.

After the survey was finished, and the captain had satisfied himself indubitably that the *Oonalaska* was well provisioned for even a whole year (quite apart from anything in the shape of fish or game, which might fall to their lot), he felt contented and happy. All he had to do was to keep his men as much employed as possible, and so prevent them from feeling the time long.

This was a serious consideration, for during the long and unavoidable delays in the Arctic Regions undergone by ships, it has been uniformly found that the men succumb to low spirits and illness to a much greater extent than the officers. This is, perhaps, partly because Jack's resources in himself are but few, and as the little cherub who is popularly supposed to protect him, does not endow him with a taste for reading, time is apt to hang heavily on his hands. Captain Boyd, with all his experience, was aware that the next few months would be long ones, and he took measures accordingly.

"We must be as careful," he said, "to banish *ennui* as we shall be to keep out currents of cold air."

"I think, sir," said Chips, "we can manage to do the *two* things."

"Ah, yes, carpenter," returned Captain Boyd, smiling; "you and I have been at that game before, haven't we?"

"Yes, sir; more than once, too."

"Well, then, as there will be plenty of daylight for some months yet to come, the sooner we commence operations the better. The bad weather is all before us; we mustn't forget that."

No time was lost, therefore. The officers and crew were divided into two different corps, called "combatants" and "non-combatants." The name was suggested by Desmond, because, as he said, it had a Service ring about it.

The combatants were to be the sportsmen, and to include most of the active men. They were divided into two batches, or two watches; the first under the command of Jack Silk, with young Nat as his lieutenant, the second headed by Desmond and Godfrey.

The non-combatants were under the command of the captain himself, seconded by Nat, senior, Chips being a kind of head man among the men, and general referee; for it was currently reported forward that in all matters connected with life in the Arctic Regions, old Chips knew more even than the captain himself, and that what he—Chips—did not know was really not worth learning.

Every night now the frost got more and more intense, but while the open water lasted, boats were kept almost constantly on duty, watching for seals. Both Desmond and Dick were fairly good sportsmen, but neither were equal to Godfrey, so that most seals fell to his gun, whether they were killed in the water or on the ice.

If shot in the sea, the boat had to give way with a will indeed, in order to secure them, for unless shot dead through neck or skull, they speedily disappeared, and even when the ball penetrated the brain, they floated but a few minutes.

The Aleut in his kyak, was, as far as seals went, the best sportsman of all. No white man could exceed him in activity, none was a better shot, and he had tact and cunning as well. He preferred being alone, and often would be absent almost the whole day, never failing to bring back birds in his little skin-boat, or even a seal itself in tow. But his ordinary plan was to catch the seals asleep and club them; and to catch a weasel asleep is quite as easy.

One day he surprised and killed two enormous walruses on the beach. They were the last of the season, but their oil was most invaluable. As to the carcases, at a suggestion of Bob-a-link, they were cleaned and dragged to the lee side of a rock, and entirely buried in the snow.

"I hope," said Jack, who superintended the funeral, "they will rest in peace."

"There is no knowing," added the Aleut mysteriously, by which this active savage did not intend Jack to infer that there was the slightest chance of their ghosts appearing during the winter months, but that if provisions went short, the flesh of these huge monsters might come in handy.

While the combatants were busily engaged with gun and trap and fishing-rod, on shore and afloat, the "nons" as they were called for short, were by no means idle on board.

The top-gallant masts had been lowered to commence with, then all the spare canvas and spare spars and wood was got up from below, and preparations made to roof the whole ship over, as soon as the extra cold weather came on.

"We'll hardly have wood enough, after all, Chips, you see," said the captain one day, and the very next morning, the worthy old carpenter requested leave to go on shore in the dinghy, accompanied by his friend, the Aleut, in his kyak.

"There may be, and may not be," Chips was heard muttering to himself before he started.

He spent the whole day poking about along the coast, apparently studying the formation of the rocks, and whenever he was doubtful, he plied his axe, or made his man dig with pick and spade.

At long last, and just as the evening sun was tinging the spires and turrets of the lofty icebergs with tints of crimson, Chips stopped short beside a kind of cliff, that overhung the shore some little distance from the wash of the sea.

He eyed it for some time critically, comparing it as he did so with other cliffs not far from it, then he called Bob-a-link.

"Wood! wood! wood!" cried the savage exultingly. He seized an axe from the hands of one of the men, and in a few minutes he had unearthed and un-iced the treasure.

One morning they found the sea frozen hard and smooth around the ship. The night had been bitterly cold, with brilliant stars in the south, and a beautiful display of Aurora almost covering the northern half of the sky. The frost continued, and about noon on the second day, Jack ventured down upon the ice, and found it so firm and strong, that as he looked laughingly up to the row of faces peering at him over the bulwarks, he alleged it was thick enough to bear a Shetland pony.

"I'll prove it," cried Jack, and forthwith began to jump on the ice.

"That's quite enough, Jack," said Desmond, with a mischievous twinkle in his eyes; "there's no mistake about the pony now, Jack."

But another day elapsed before Captain Boyd would permit the ice to be used as a general resort, and after that the fun began.

(*To be continued.*)

THE STAR OF BETHLEHEM.

By the Rev. CANON DOBBIN, M.A.

[In view of the wide interest at present felt in the subject of the Star of Bethlehem, we are glad to commend Canon Dobbin's deeply thoughtful Article to the earnest attention of our readers.—ED.]

A GREAT deal of interest has been excited lately in connection with the supposed reappearance of the Star of Bethlehem. Letters have appeared in the newspapers discussing the question, some arguing in favour of the idea, others vigorously protesting against it. The origin of an expectation, possessing so many attractions for the popular mind, appears to have been the probable impending outburst of periodic brightness in one of the variable stars, which usually takes place at intervals of 312 years, and is now approximately due. The unusual brilliancy of Venus during the last month or so, glittering in the early morning sky, has served to intensify the feeling thus excited, and in some cases even kindle it into a dawning hope. It may not be amiss, then, to review some of the theories which have been put forward on this interesting subject, to consider how far they meet the requirements of the case, and what probabilities they afford that the sacred Star of Bethlehem will ever appear again.

How was it that the wise men from the East came to attach so much importance to the appearing of a star at that particular time, and what led them to associate it, as they did, with the birth of Him who was to be the King of the Jews? To explain this, we must go back to the prophecy of Balaam, some fourteen hundred years before, bearing in mind that it was probably in the very region of the East from which the wise men came that that prophecy was delivered. We can therefore easily understand how they came to be acquainted with it, and would be likely to treasure it up in their hearts, as one of the most precious traditions of the olden time. The prophecy to which we refer is that well-known Messianic prediction (Num. 24. 17): "I shall see Him, but not now: I shall behold Him, but not nigh: there shall come a Star out of Jacob, and a Sceptre shall rise out of Israel, and shall smite the corners of Moab, and destroy all the children of Sheth." From this it is easy to see how the idea of a star, in connection with a Jewish King, took possession of men's minds. And so it came to pass that when those Eastern sages, who, like most of their countrymen, were keen observers of the heavens, beheld a new and unfamiliar star shining in the sky, they immediately bethought them of this ancient prophecy, and came to the conclusion that the time of its fulfilment was near at hand.

It may be also, that even at this early period, rumours, to which the historians Tacitus and Suetonius afterwards refer as widely prevalent in their days, had already obtained currency in those far-off Asiatic regions, to the effect that the balance of power was about to be transferred to the East, and that men of Jewish race were destined to become the rulers of the world. But however this may be,—whether under the influence of such rumours, or simply as the result of Baalam's prophecy, or owing perhaps to some supernatural communication made to them in a dream, as afterwards,—the appearing of the star was the signal that led them from the East, and brought them all the way to the city of Jerusalem, in quest of the predicted King.

Reference has been already made to one

of the theories advanced in explanation of this star. The way in which it arose was this. Tycho Brahé, the eminent astronomer who lived three hundred years ago, was astonished one night by observing a star of unusual brightness shining in a quarter of the heavens where, a little while before, no such object had been visible. He at once noted its position, and subsequently followed, with absorbing interest, the various phases through which it passed, changing in a few short months from intense brilliancy to apparent extinction. From the fact that on two previous occasions, A.D. 1264 and A.D. 945, similar stars were reported to have suddenly blazed forth in the very same quarter, an inference was drawn, though not by him, that they were probably identical, and so now, after three hundred years more, astronomers are anxiously looking out for that star again, which, counting back, according to its periodic time, was due about the year of our Lord's nativity, and so has come to be identified in many minds with the Star of Bethlehem.

But there is another theory, started on the authority of Kepler, which has, in later times especially, found favour with a large number of thoughtful persons, scientific and otherwise. It appears that just at the commencement of our era, there was a remarkable conjunction, or series of conjunctions, between the planets Jupiter and Saturn. And as the appearance they would present to the naked eye would be that of a very brilliant constellation, shining in the Eastern heavens, it has been conjectured that this may have been the phenomenon which drew those wise men from the East, and led them to the place where the Infant Redeemer was laid. To this explanation the late Dean Alford lent his weighty sanction. He did so for this, among other reasons, that where a natural solution of the problem may be had, it is unnecessary to introduce a supernatural one.

But all such naturalistic explanations as these, to which we may add the notion that it was a comet, or possibly a meteor, which was seen, appear to lie under this insuperable objection, that they do not meet the requirements of the narrative, and therefore cannot be looked on as real explanations at all. For what does that narrative tell us? Clearly this, that when the wise men set out upon their journey, they lost sight of the star, and did not see it again until near their journey's end. It was on their way from Jerusalem to Bethlehem that it appeared to them once more, and they rejoiced when they saw it with exceeding great joy. Nor is this all. The star *went before them, and stood over where the young child was.* Now this, it need hardly be said, is an impossibility in the case of any of the heavenly bodies at present known to us. They are too far off to serve as earthly beacons of this kind. The light must have been low down in the atmosphere itself, thus visibly to go before the travellers from one town to another, and then to stand over a particular place in that town, as the Star of Bethlehem did. There was evidently a Divine intelligence at work in the whole matter, something over and above the ordinary laws of nature; either a special creation of God for the occasion, or else, what is much more likely, a special use of some already existing object controlled and directed by Him to that end. Of these two solutions, the latter is greatly to be preferred, not only as simpler in itself, but as being more in accordance with the Divine mode of procedure, and resting on a basis of Scriptural probability which the other altogether lacks.

How, then, it may be asked, is this solution to be applied, and what explanation does it afford of the enigma we have now in hand? To some, perhaps, the explanation may appear far-fetched and improbable. The very novelty of it,—although it is not entirely novel,—may tend to excite a prejudice against it, but the writer hopes that, notwithstanding this, a candid consideration may be given to what he has to say, not as being a positive dogmatic statement, but as an honest attempt to solve a very interesting and, at the same time, very difficult problem. What, then, is the solution that he ventures to propose? It is this—that the Star of Bethlehem may have been nothing less than the SHECHINAH, or glory of the Lord, that uncreated light, "or of the eternal co-eternal beam," which is so often spoken of in Scripture, and is invariably represented there as the visible symbol of the Divine Presence among men.

When Moses, at the burning bush, heard the voice of God calling to him out of the midst of the fire, and saying, "Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground," it was the Shechinah that glowed before him in all its awful splendour, and touched every branch and leaf and twig with living flame.

When Israel wandered through the wilderness of Sinai for forty years, it was the same Shechinah that led them all their journey through, from the shores of the Red Sea to the borders of the Promised Land. Is there anything unreasonable, then, in the conjecture that this too may have been the guiding light which led the wise men from the East, to the cradle of the Promised Seed? Does it not almost ripen into a conviction, when we find that, just at that very time, the glory of the Lord did actually appear at Bethlehem?—for so we read in the sweet story of the Nativity: "There were shepherds abiding in the field, keeping watch over their flocks by night: and lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid." Here then we have, all ready to our hand, and in close connection with the birth of Christ, a light from heaven of the most striking character, appearing on the very spot, and at the very time, when the visit of the wise men took place, leading us almost unavoidably to the conclusion that this may have been the beacon star which drew them thither, and brought them to the feet of the new-born King.

But it may be objected that the glory of the Lord is not a star, and therefore cannot be represented as such in the language of the Bible. True. But it is the language of the wise men we have here to deal with, and to them, no doubt, any luminous body seen in the heavens would wear the appearance of a star, and be called by that name. As astronomers, they would naturally speak astronomically.

And now, if this conjecture be accepted as true, there is no further difficulty in explaining the circumstances of the case, for it is easy to see how this celestial light might come, and go, and shine, and disappear, and move, and stand still, at the bidding of the Lord. There is not a single fact mentioned in the narrative which may not thus receive an adequate interpretation.

But it may be said, "Granting that the glory of the Lord did appear at the birth of Jesus, that is not the only point we have to explain. According to the story told by these wise men, it was also seen by them many months before, while they were still dwelling at home in their far-off land. How is this to be accounted for?" Very simply. We have only to suppose that the angel of the Annunciation was attended in his earthward flight by the same Shechinah glory as the angel of the Nativity, and then all is plain. Flashing through the upper heaven, it would become visible in the far East just about the very time the wise men began to prepare for their long journey; and if, as has been shown, the Shechinah be the appropriate symbol of the Divine presence, there would then be a peculiar fitness in its manifestation, at the first direct movement of heaven in bringing in the First-begotten into the world. The reappearing of the glory, after an absence of six hundred years, would be the clearest sign that could be given that God was about to visit His people once more, and to tabernacle among them as in the days of old. "Arise, shine, for thy light is come, and the glory of the Lord is risen upon thee." And in this connection it is, to say the least of it, a remarkable coincidence, that when, in the latter days, the glory does return to Israel, it is from the way of the East it shall come, for so (43. 2) Ezekiel tells us.

One other point remains to be noticed. If the solution of the matter now put forward be the right one, we are at once in a position to answer the question, Whether the Star of Bethlehem shall ever appear again? The answer to that question must be in the affirmative. For when Christ comes in the clouds of heaven, then we know "the glory of the Lord shall be revealed, and all flesh shall see it together." This, probably, is that Sign of the Son of Man, which the Lord has told us to expect as the token of His approaching advent. Not a luminous cross, as some suppose, which is a mere human fancy, without one particle of evidence to rest on, but the light of the Shechinah once more descending towards this earth, and gleaming in the distant heavens, where it will pause for a season on the way, while the Church is being gathered to her celestial Home; and then speeding downward with the Lord, will flash, and glow, and burn at the gates of the holy city, "a light to lighten the Gentiles, and to be the glory of His people Israel." When we bear in mind that His feet shall stand in that day upon the Mount of Olives, we are struck by the circumstance that, as the result of this, the Glory also shall return to Jerusalem by the same way that it departed so many centuries before. Slowly and reluctantly it left the sanctuary, lingered on the threshold, as if unwilling to depart, crossed the brook to Olivet in sad farewell, and thence mounted upward to the skies. So, though not reluctantly, shall it return, when the King comes to His own again. And speaking of its manifestation as the Sign of the Son of Man in heaven—its visible appearance to earthly eyes in the form of a star, we are reminded of that beautiful simile, which our Lord makes use of in reference to this very subject of His second advent: "I am the Root and the Offspring of David, and the bright and morning Star."

May we be ready to welcome that glorious herald of the Coming Day, as the wise men were, and, leaving all behind us, earth, and home, and old, familiar ties, take our journey hence with joy, far, far away to the New Jerusalem, there to see the King in His beauty, and to worship at His feet, and to offer unto Him the best gifts that we have,—the love, and praise, and adoration of redeemed and consecrated hearts,—our mystic gold, and frankincense, and myrrh.

INSTINCTIVE ARCHITECTS.

"In full and animated bustle over the erection of a winter home."

Venetian architects.

No. 1.

Furry Builders.

THERE were once beavers in Great Britain, but those days are past. It is said that as late as the twelfth century, beavers were seen in the Welsh rivers, and their fossil remains are still found here and there. The last Scandinavian beaver was killed in 1844, but in parts of Central Europe, isolated pairs are still to be met. There are a few on the Elbe, Rhone, and Weser, and a considerable number are strictly preserved in a park belonging to the Emperor of Austria, on the banks of the Danube.

These degenerate beavers live in burrows, and show no tendency to build either house or dam; but this degeneracy results probably from the change in their external surroundings, as one colony near Magdeburg did build themselves proper habitations and a proper dam. The beaver is also found sparingly in Russia and Poland, in the streams amongst the Ural Mountains, and also in those flowing into the Caspian Sea.

It has long been a matter of dispute as to whether the European and American beaver are as identical as their external appearance implies. It is now, however, generally agreed, on anatomical grounds, that the two species are distinct, the European beaver being known as *Castor fiber*, the American as *Castor canadensis*.

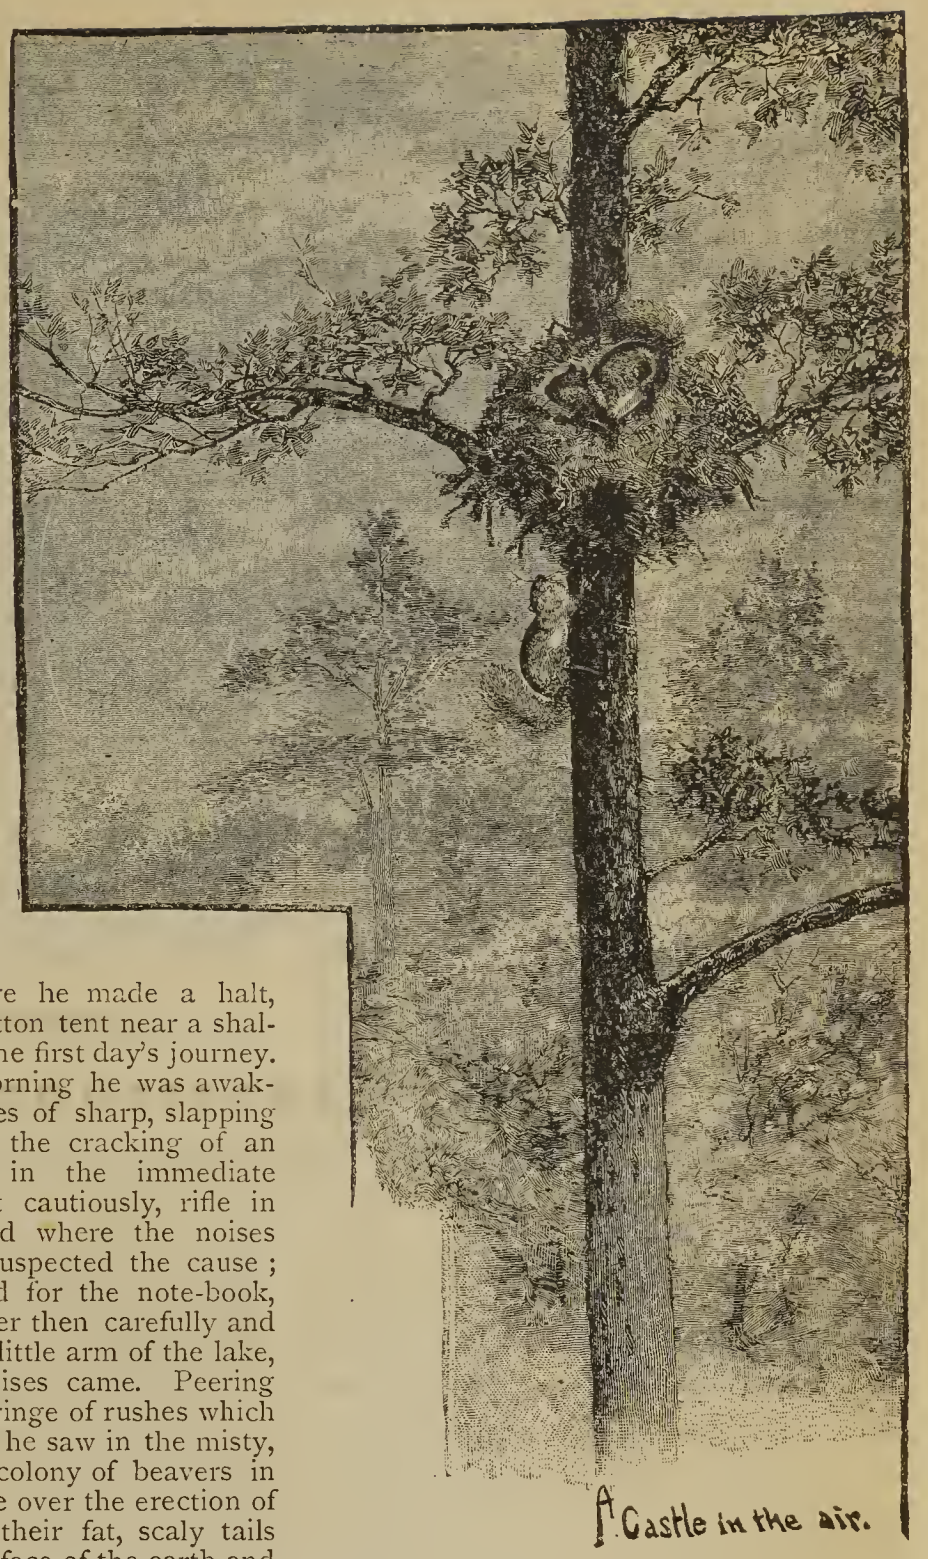
The American beaver is found in that part of the continent lying between the Arctic Circle and the Tropic of Cancer. It measures about two feet in length, exclusive of the tail, which is about ten inches in length. The body of the animal is covered with fur, part of which is close-set, silky, and grey in colour, while the rest is longer, coarser, and reddish in hue. Great commercial value is attached to beaver fur. At the end of the last century, and the beginning of this, the demand for beaver skins was so enormous, that the species were in imminent danger of extinction. 200,000 skins were annually exported to Europe. More recently, the use of silk and the hair of the South American coypu in the manufacture of hats, has lessened the demand, so the beavers have again multiplied.

The beaver is aquatic,—"a natatorial rodent," is its proper description,—and it never takes to land unless compelled to do so. Its hind feet are webbed down to the nails, and with these it swims, the fore feet hanging motionless, or being used for the transport of materials. The tail is very distinctive, differing from all other rodents in that it is flat and oval. It is used to help its owner in navigation,—not as a trowel for architectural purposes.

Rodents (of which there are over 900 species) are distinguished by their large, chisel-shaped incisor teeth, and the absence of canines. Owing to its work as a woodcutter, the beaver requires dental organs of considerable sharpness and power. The front incisor teeth in each jaw are possessed of a sharp, chisel-like edge. This edge is preserved through life by the structure of the teeth. They consist of two layers, one, the outer, made of hard, orange-coloured enamel, the other and inner one consisting of a softer material. The tooth grows from the root, and as the creature gnaws, the soft

inner layer is worn back more quickly than the hard outer edge, thus leaving the chisel edge. So hard is this enamel that, until the introduction of English files, the North American Indians used it for carving bone. Should one of the incisors be destroyed, the opposite tooth grows and grows, having nothing to wear off its edges. This unchecked dental development has been known to cause death, the extreme length of one tooth preventing the others from meeting.

American beavers are essentially social, inhabiting lakes, ponds, and rivers, as well as the narrow creeks between the lakes. Some of the males, however, elect to live in burrows apart, and are known as "old bachelors."



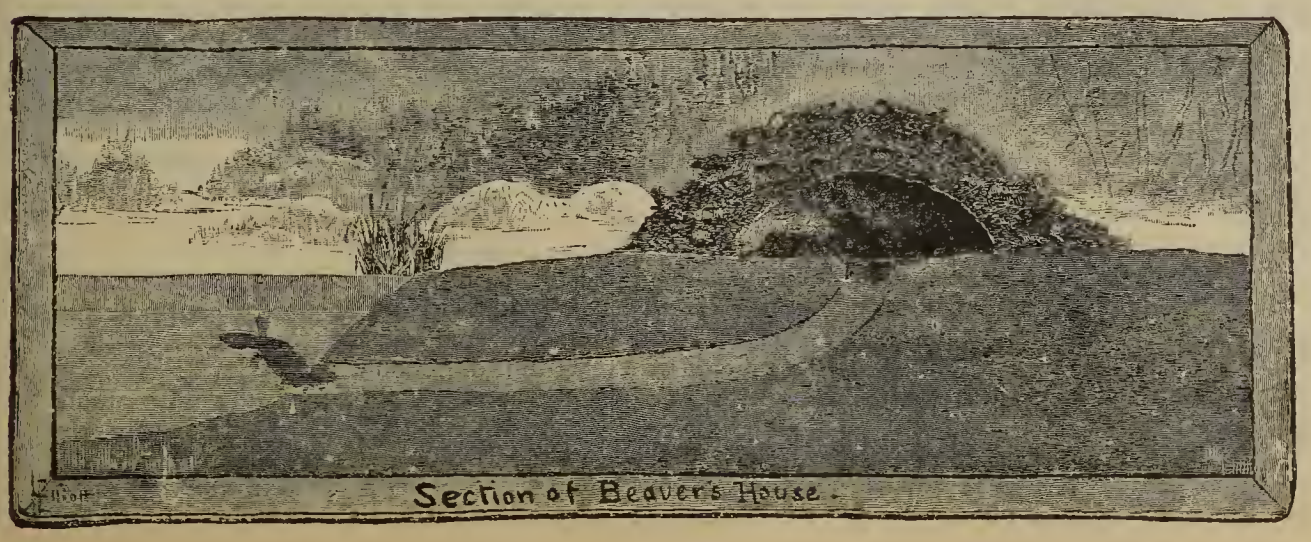
The favourite food of the beaver is a plant named *Nuphar luteum*, which bears a strong resemblance to our cabbage stalks, and grows at the bottom of the lakes and rivers where the beavers feed. They also gnaw the bark of the poplar or willow, logs of which they submerge near their dwellings for winter use. When the summer weather comes, and the ice breaks up, they vary their food with berries and herbage of various kinds. At the same time they leave their embankments, and wander about a little, until just before the fall of the leaf, when they return again to their old habitations, and lay in their winter stock of wood.

So much for the beaver itself. It is time for us to turn our attention to its architecture, which is the main subject of our "talk."

The beavers generally prefer a running stream, because it helps them in the transport of their building materials; also, in consequence of the severity of the frosts, they generally select water that is fairly deep, and will not freeze through. When the architects build in small creeks, or on rivers where the water supply is likely to fail, they make dams to ensure the safe keeping of the water. These dams are sometimes ten or twelve feet in width at the bottom, and as much as three hundred yards in length; they vary in shape according to locality.

Where the water has little motion, the dam runs straight across; where there is any marked current, the dam is curved in the centre, with its convexity towards the stream. The dams are made of driftwood, green willows, birch, and poplar, intermixed with mud and stones, in a way eminently calculated to strengthen them, but without any special method. The sweep of the dam is regular, and all parts are of equal strength. Where the architects have lived long undisturbed, the dam, by frequent repair, becomes a solid bank, capable of resisting a great pressure of ice and water. The trees used in its formation frequently take root and spring up, sometimes forming a regular close-set hedge, so tall that birds have been known to build their nests in it.

It is far from easy to watch the beavers at work, as they generally reserve their labours till after dark; but one American author, who, as the three accompanying drawings show, was a skilled artist too, was happy in alighting upon an active colony in his travels. He tells us that, during the last days of September, he was making a solitary excursion towards the eastward of Fraser's Lake, British Columbia, where he made a halt, and pitched a small cotton tent near a shallow lake, at the end of the first day's journey. Early in the frosty morning he was awakened by a strange series of sharp, slapping reports, somewhat like the cracking of an ox-whip, which arose in the immediate vicinity. Crawling out cautiously, rifle in hand, he quickly found where the noises came from, and then suspected the cause; the rifle was exchanged for the note-book, and the expectant writer then carefully and silently approached the little arm of the lake, from which the odd noises came. Peering through the thick, tall fringe of rushes which lined the water's edge, he saw in the misty, hazy morning light, a colony of beavers in full and animated bustle over the erection of a winter home, while their fat, scaly tails cheerfully smote the surface of the earth and water, ever and anon.



A Castle in the air.

Four beavers were engaged in this work. They had selected a tiny peninsula of the lake; the foundations of their circular hut were solidly laid, eight feet back from the water's nearest edge, as shown in the picture; they were piling up their sticks, tree-trunks, mud, and stones, and treading all together. They worked thus for more than half an hour longer, until the rising sun shone upon them, full and fair; then they suddenly plunged into the water, to reappear no more that day. They had, with true beaver sagacity, sought the privacy and safety of their "bank washes" elsewhere, until night should again call them out to safe feeding and to finish their architectural work.

The subject of our sketch represents a lakeside beaver-house in the process of erection. The beavers have, during the summer and early autumn, cut a large number of poplars and birch-tree trunks and branches into sections of some two or three feet in length each. Their sharp teeth work very much like the strokes made by the unpractised hand of a boy or woman when they first essay chopping. These pieces of timber are towed and carried by the rodents to the site of their proposed residence.

The beavers begin work by a common impulse, and lay this timber of their own cutting in a circular, "criss-cross," and horizontal fashion, piling mud, smaller sticks, driftwood, and stones over, under, and between these larger sections of wood, until they have reared a conical dome some five to seven feet in height from the build-

Section of Beaver's House.

ing level, and the walls varying in thickness from two to four feet, according to the instinctive understanding which these animals always have as to the ensuing winter being warmer or colder. While they labour, these building parties are usually made up of four old beavers (two males and two females), and the enclosed dome is just large enough to accommodate them, together with their six or eight young ones.

As they work, they place most of their timber horizontally, save the outside slabs and pieces. They preserve no other order than that of leaving the cavity in the middle; the branches which happen to project perceptibly inward and beyond the walls, are gnawed smoothly off, and the chipped ends, chips, etc., are thrown up and out upon the rising structure. All the materials, sticks, mud, etc., are mixed up together in the composition of the dome, from the foundation to the summit.

The constant pattering of the beavers' feet settle and cement the work as it rises; there is no trowelling of the mass by their queer, paddle-shaped tails, but occasionally the Castor seems to be so hilarious, or self-delighted, that it pauses for a moment in its busy labour to hump its back, and bring the tail down with a sharp, ringing slap upon the mud, or sticks, or water, as the case may be. The amusing stories of the use made of the beaver's caudal extremity as a sort of stone and mud drag or cart, are not founded on fact. Castor carries all the ooze, pebbles, etc., which he uses in building his walls, by holding these materials between his throat and fore-paws.

When the hut has been reared to the desired altitude, and arched over, the exterior roughness is somewhat smoothed down by the addition of numerous and repeated thin coatings of mud, which serve as a dampener, keeping the entire mass wet and moist, until the cold weather sets in, and congeals the dome into a structure almost invulnerable, even to a wolverine or a pickaxe.

The door (and it is the only opening or means of entrance or exit) is a submarine passage, or tunnel, from the lake bottom to the centre of the floor of the hut, as clearly shown in the accompanying section. Near the mouth of this watery hall, these Venetian architects usually have a large pile of green timber, cut during the summer and autumn, which they sink by stones and mud, so as to secure it at the bottom, where it is accessible at any time during the winter as a source of food supply. The floor of the domicile is sometimes covered with a carpet of pine stipules, leaves, etc., and sometimes the "lodge" is supported by props in the centre, or even divided by partitions.

Before we close, let us glance at another rodent, who is a favourite with every one, and whose instinctive architecture has often roused keen interest in our school-boy days. Who has not sought for a squirrel's nest, and admired the dainty structure of the "shadow-tail," as its scientific name, *Sciurus*, means? The leaves, moss, grass, and twigs are woven in so ingenious a manner that the nest is impervious to rain, and the fiercest storm of wind fails to dislodge it from its place. The fox-squirrel is a great builder in the extensive oaken forests of Illinois and Indiana. It constructs its castle in the air by cutting the smaller branches and twigs all round, which it arranges with cunning interweaving, so as to form a spheroidal brush and leaf shell, securely propped and lashed to the fork of the oaken trunk. Everything is carried in its teeth that is used in building, and it is laid and twisted in and out by the mouth, nose, and forepaws of the graceful rodent. It must be unusually well-built too, or the fierce whirl of the sudden, rushing tornado, the crash of hail-storms and heavy pressure of deluging rains, would carry the air-castle to the earth. But so skilful is the little architect, that his house withstands the storm, and with serene confidence the master of this house in the tree-top curls himself within, and lies down with his good wife and partner to dream anew of nuts and tender elm buds and coming summer.

RECTITUDE IN ACTION.

By the Rev. J. Hiles Hitchens, D.D., F.S.Sc.,
Author of "*Ecce Veritas*," "The Young Men of Scripture," etc.

THE HAND.

"What is it, fashioned wondrously, that twin-born with the brain,
Marks man from every meaner thing that bounds across the plain,
Or gambols in the mighty deep, or floats in summer air?
What is the helpmeet for the mind no lesser life may share?
It is the *hand*, the human hand, interpreter of will!
Was ever servant yet so great, and so obedient still?
Of all Creation's mysteries, with which the world is rife,
It seems a marvel to my soul but second unto life."

SO sings the poet of that instrument of the human organism with which so many deeds of undying renown have been performed—that member of our bodies which, with marvellous versatility, will effect all work allotted to the mind; which will strike or caress, hinder or help, kill or heal, take away or give, be idle or active, according to the dictates of our mental powers.

How much the hand expresses of what goes on within the *sanctum sanctorum* of our hearts! Next to the face, there is no silent member of our bodies that so clearly and quickly indicates the thoughts and feelings. Not only to the deaf and dumb is the hand true eloquence. To all of us it is a secretary to transcribe our ideas, a chamberlain to supply our necessities, and a sentinel to defend our persons.

Montaigne well says: "With the hand we demand, we promise, we call, dismiss, threaten, entreat, supplicate, deny, refuse, interrogate, admire, reckon, confess, repent; express fear, express shame, express doubt; we instruct, command, unite, encourage, swear, testify, accuse, condemn, acquit, insult, despise, defy, disdain, flatter, applaud, bless, abuse, ridicule, reconcile, recommend, exalt, regale, gladden, complain, afflict, discomfort, discourage, astonish, exclaim, indicate silence, and what not? with a variety and a multiplication that keep pace with the tongue."

This organ of feeling is capable of so quickly executing the behests of the will, by reason of the flexibility of all its parts. Subdivided into three segments, the *carpus*, or wrist; the *metacarpus*, or palm; and the *phalanges*, or fingers, it consists of not less than 27 separate bones, bound together and moved by 19 separate muscles.

It illustrates the unerring wisdom and loving care of the Divine Creator. He has so formed this complex member that it may be perfectly adapted to all the duties for which it is designed. Look where you may in the realms of animal life, you cannot discover a creature possessed of an organ comparable to the hand of man. The nearest approach is the Chimpanzee, but with it the thumb is considerably shorter, and the mobility greatly less.

Remembering, then, that the hand is a feature of our organism, distinguishing man from all other terrestrial beings, and remembering the multitudinous and mighty uses to which it has been devoted, we need not marvel that it occupies a conspicuous place in the volume of Holy Writ.

In order the better to teach the world concerning God, the inspired authors have represented the Infinite Spirit as possessed of hands. When His bounty and benevolence are being discussed, they say, "Thou openest Thine hand, and satisfiest the desire of every living thing." When His providence is under consideration, Job asks: "Shall we receive good at the hand of God?" When His help is being craved, Asaph cries: "Why withdrawest Thou Thy hand, even Thy right hand?" When meditating upon the experiences of life, David writes: "My times are in Thy hand." When the Lord would commend His mercy to men, He says, "I have spread out My hands all the day unto a rebellious people."

The Great Teacher, when referring to the power and love of God, says: "No man is able to pluck them (My followers) out of My Father's hand." The Apostle tells us that Christ was "by the right hand of God exalted," that He now "sitteth on the right hand of God," for the Father hath "set Him at His right hand in heavenly places." Thus, though God is a spirit, infinite and omnipresent, yet stooping to the darkness and weakness of our mental capacities, He describes Himself, and permits Himself to be portrayed figuratively, as possessed of hands.

Then, as the hand is so well adapted to express the thoughts and emotions of the mind, we find it referred to, in the Scriptures, as employed in many significant ways. Thus, to lift up the hand was regarded as taking a solemn oath. Abraham said to the monarch of Sodom: "I have lift up my hand unto the Lord." To offer one's hand to another signified of old, as it still does, amity and peace. Thus Jehu said to Jehonadab, "Is thine heart right, as my heart is with thy heart? If it be, give me thine hand. And he gave him his hand."

To pour water on the hands of another indicated that the person so pouring the water would serve the other. Thus it is written of Elisha, "Here is Elisha, the son of Shaphat, who poured water upon the hands of Elijah." To wash one's hands was regarded as an avowal of innocency. Thus, when Pilate found himself impotent to deliver from death the Redeemer of the world,

we read, "He took water and washed his hands."

To lay hands upon another was an emblem of setting the person apart for any particular duty or destiny. Thus the Lord is represented as saying to Moses, "Take thee Joshua, the son of Nun, a man in whom is the Spirit, and lay thine hand upon him, and set him before Eleazar the priest, and before all the congregation, and give him a charge in their sight." You will perceive that Joshua *had* the Spirit, before Moses' hands were laid upon him, so that the original intention of the imposition of hands was not to give the Spirit, but simply to point out and identify the man so separated.

Hands have been classified. There are some persons who believe in the physiognomy of the human hand. They maintain that the shape and size of the hand is a symbol of the temperament. Accordingly, they tell us of the *elemental* hand, which indicates "a mind lowly developed"; a *motor* hand, which "symbolises strength of will and aptness for strong sustained efforts of mind"; a *sensitive* hand, possessed of those who are distinguished by feeling, by fancy, and wit; and a *psychical* hand, "the most beautiful and the rarest of all," indicating "peculiar purity and interior grandeur of feeling, combined with simple clearness in knowledge and in will."

There may be much truth in this classification, but I prefer to take the Book of God for its description of hands, and then look round on Society, to see how the words of the Book are illustrated and expounded by the works of the world-life.

There is the hand of *disobedience;* such was the hand of Eve, which took the forbidden fruit and "gave also to her husband"; such was the hand of Adam, which participated in his wife's evil.

With some persons there seems to be an inexpressible impulse to touch what they know they ought not. The fact that certain things are carefully preserved and strictly forbidden, stirs the fires of obstinacy, opposition, and disobedience, and the hand tingles till the deed is done. There is the hand of *theft;* such was that of Achan. This hand works in different ways—by appropriation to self of that which belongs to another, by concealment of that which duty calls us to surrender to others, or by extortion and oppression. Against this the Lord has spoken most distinctly and positively. One of the ten commandments is, "Thou shalt not steal."

There is the hand of *bribery;* which gives or takes money, or aught else, as an inducement either to do, or cause to be done, that which under the circumstances is known to be evil. Such was the hand of Judas, who, for a bribe of 30 pieces of silver, betrayed into the hands of Roman soldiers that noblest, wisest, kindest, purest, and most loving Man the world ever knew.

There is the hand of *cruelty*, which is, alas! far too prevalent. Poor dumb animals and little helpless children are among its victims. This hand is trained and taught, for no man becomes capable of cruel actions all at once. He passes through many initiatory stages before the overt and horrible act is performed.

A lad was once passing through a field with his sister, when he found a nest of rabbits. The little girl was charmed with the helpless creatures. But the boy roughly seized them, and treated them cruelly. In vain the sister wept and implored him to desist. He continued his roughness till he killed them. Ten years afterwards that sister was again found weeping by her brother's side. He was in chains, sentenced to be hung for shooting a farmer, on whose land he was poaching. Just before he bade that sister the last farewell, he said, "Sister, do you remember the nest of rabbits, ten years ago, how you begged and prayed me, but I ridiculed? I believe from that day God forsook me, and left me to follow my own inclinations. If I had yielded to your tears then, you and I would not be weeping these bitter tears now." Thus the habit of cruelty gathers by unseen degrees.

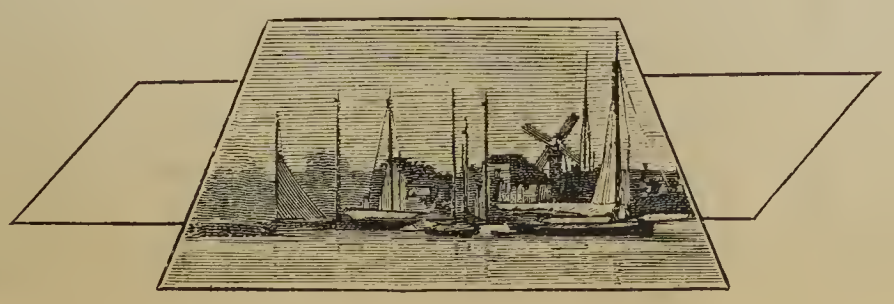
There is the hand of *murder*, at the thought of which we instinctively shudder. The terror of a conscience that stings like a scorpion follows the murderer wheresoever he may go. He is constrained to cry :—

"Will all the mighty ocean wash this blood
Clean from my hand? No; this my hand will rather
The multitudinous seas incarnadine,
Making the green one red."

Thus we see how unruly this member of our bodies can become. The Puritan Adams says, "Anaxagoras thought man the wisest of all creatures, because he hath hands whereby he can express all signs. He might have concluded him the wickedest of all creatures, because he hath hands; for no tiger or vulture under heaven is more hurtful with his claws and talons than man with his hands."

But, thank God! unlike the tongue, the hand has been tamed. It has been washed from its defilement, and devoted to all that is good, true, and noble. So in Isaiah's time God would not accept the sacrifices of the Jews because their "hands were full of blood." So the Apostle James says, "Cleanse your hands, ye sinners." The idea suggested is just this, that professions are vain unless the practice is right—that it is possible to utter our party *shibboleth* most distinctly and correctly, whilst there is a lie in our right hand.

Now, of the good, washen, pure hands let me mention some. There is the *hand of the diligent*—that is the hand of the man who, having determined upon the course of employment, works at it with perseverance and constancy. The word diligence comes from the Latin "*diligo*," which means to select, choose, love. The diligent hand, then, is that which selects its work, loves it, and pursues it with unflagging zeal.



If a man's heart be right, his hand will not be idle. There are some men of the present day who pride themselves in a white, soft, dainty hand, with numerous rings upon the fingers. They think it respectable to be thought to have nothing to do. Like Thomson, they revel in "the Castle of Indolence"; and one would not be at all surprised to find them, as it is said that author was found, standing at a peach tree, eating the fruit as it hung on the tree, whilst both hands were in his pockets.

But of all hands those devoted to *doing good* are most worthy of our praise. Among the schools of art there has long been a discussion as to which hands are best painted, those of Raphael or those of Coreggio. The artist of the cartoons portrays his hands as fleshy, muscular, and powerful; while those of Antonio Allegri are fair and delicate, with flesh-colouring so exquisite that the blue veins on the hand stand out with peculiar distinctness. Students of art may select to which school they prefer to give adhesion, but we, who are learners at the feet of Christ, affirm that the best hand in the estimation of the Divine and unerring Judge is that which doeth good. It matters not whether the hand be large or small, rough or smooth, hard or soft, coarse or delicate in texture, so long as it is devoted to the service of God and man; ready to help the needy, to dry the tears of the sorrowing, to minister to the necessities of the poor, and to scatter seeds of kindness all around.

There is a Turkish allegory that every man has two recording angels attending him, one on the right and the other on the left. When aught is done that is commendable, the angel over the right shoulder writes it down; when evil is wrought, the angel over the left shoulder makes a record. At midnight, the day's account is made up, and if the evil is not forgiven, the angel seals the record, whilst the bright intelligence on the right weeps. This is imagination; but it teaches the fact that God, the Eternal, observes every good and evil act. The smallest deed of godliness passes not unnoticed. Epictetus tells us that a person had compassion on a poor shipwrecked and dying pirate, took him home, fed, clothed, and cared for him. When reproached for so doing, he replied: "I have honoured not the man, but humanity in his person." So may we feel; ay, and in addition, we may sometimes have the consolation that Christ, in the person of the pauper, has received help at our hands.

"Not for ever on thy knees
Would Jehovah have thee found:
There are griefs Jehovah sees;
There are burdens thou canst ease;
Look around!

"Worship God by doing good
Works not words, kind acts not creeds;
He who loves God as he should,
Makes his heart's love understood
By kind deeds."

TALKS WITH MARRIED FOLK.

THE MANAGEMENT OF INCOME.

By PHYLLIS BROWNE.

No. 2.—PORTIONING OUT THE INCOME.

IN reading theoretical economy, it is very usual, in speaking of the Management of Income, for theorists to take various incomes, and portion them out in imagination, allotting so much for one item of expense and so much for another. I should not say that a calculation of this kind is very often of use, because circumstances differ so much, and it is impossible to make one rule fit all circumstances.

Thus, with an imaginary income of £300 a year, we might lay down the rule that £2 a week would be a reasonable allowance for cost of living. Yet it would be a very different thing to lay out £2 a week for husband, wife, and one child, and to make the same sum supply the necessities of a husband, wife, and six children. Imaginary families are remarkable for this peculiarity—they never have more than one child. In real life families are apt to extend their borders beyond the one, and this makes the imaginary calculations rather wide of the mark.

I do not propose, therefore, to lay out imaginary incomes in detail. I believe it would be more helpful if we carried out the idea we entertained with regard to rent; namely, find out what *proportion* of income it is safe to allot to the different departments of expenditure. In all households there are certain directions in which money *must* be spent. Yet we shall never cut our coat according to our cloth if we allow one department to encroach upon another. When this fact is forgotten, the management of the income becomes an anxiety. For, let it once more be insisted on, success and failure, and sometimes more than these, happiness and misery, do not depend upon the mount of income possessed—they depend upon whether or not the income is managed successfully.

If we master the management of our income, we, as it were, "get on the top of it," and we are free, no matter how small our means may be.

If we do not master its management, anxiety about the income "gets on the top of us," and then life becomes one continued painful grind; in other words, we arrive at "agony point." What we have to aim at in management is, therefore, the maintenance of a fair proportion between one department of expenditure and another.

It has been already said that it is the teaching of experience that rent ought not to cover more than a tenth of the income at disposal, although in places where rents are high, it is not always possible to keep to this limit. It should be remembered, however, that when a house has yet to be fixed upon, it is always a great hindrance to management to choose one with a rent that is high in proportion to the means. The amount of rent we pay influences not only our rates and taxes, but also our style of living. More is expected of people who live in a house with high rent than of those who live in a low-rented house, and curiously enough it often happens that higher or lower prices are asked, according to the rental of the purchaser.

Other things being equal, therefore, it is most desirable that the rent should not exceed the tenth, or at most the eighth, of the income already apportioned. If it should exceed this proportion, the excess will have to be taken out of some other item; and we generally find that in practice the sums allotted to Saving and to Household Expenses are the ones charged with all deficiencies. As this excess is disapproved here, we will, in drawing up the present estimate, allow for an approved rental.

It is believed that the following estimate will be a fairly safe one:—

Rent	$\frac{1}{8}$
Rates, Taxes, and Railway Fares	$\frac{1}{16}$
Rates and Taxes usually vary with the distance from a large town; therefore, where rates are lower, railway fare would probably be high, and *vice versâ*.	
Household Expenses, including provisions, coal, gas, servants' wages, laundry, repairs, and incidentals	$\frac{1}{2}$
Clothing and Charity	$\frac{1}{8}$
Education, Books, and Stationery.	$\frac{1}{16}$
Insurance, Doctor's Bills, and Saving	$\frac{1}{8}$

It is probable that in looking over this estimate a great many people will exclaim that the proportion allotted to household expenses is too large. I maintain, however, that it is very reasonable. First, it must be remembered that incidental expenses are to come out of it, and these include that nondescript series of expenses which vary according to the character and disposition of the man and woman who have to deal with them. Amusements, holidays, company, repairs and removals, postages, etc., with the many other extras which perpetually meet the harassed housekeeper, and which, if not fairly faced and disposed of, make the best-laid schemes prove a failure, are all to be classed amongst incidentals. It is not too much to say that of the half of available income apportioned to household expenses, at least one-fourth should be set aside for this item.

Household expenses proper are supposed to include cost of provisions, laundry, coal, gas, and servants' wages. These are the expenses which come under the jurisdiction of the mistress of the household.

Amongst people of limited income it is probable that with regard to them there is a greater difference of opinion, more discussion, and more unkind feeling arising from distrust and a fear of extravagance on the one hand, and discontent and a sense of injustice on the other, than there is in any other department of household management. It will help, therefore, to a clear understanding of the situation if we refer to and clear away one or two mistaken notions, and lay down one or two general principles for acceptance.

Inexperienced persons have an idea that all other expenses ought to be paid first, and that what is left ought to be made to defray the cost of living. A theory of this sort never answers in practice. As human nature is at present constituted, people must have wherewithal to eat and drink. If food is not supplied in quantity and quality sufficient to support the body, health will suffer, and the amount saved from the butcher and the baker will have to be handed over to the doctor and apothecary, or taken out in lack of energy and strength.

When a husband hands over to his wife money for household expenses, he does not thereby make her a recipient of his bounty. He simply furnishes the tool she needs for doing her share of their joint work.

Very few men realise that as the family increases, the amount handed over to the mother for household expenses should be increased also. A baby is a costly luxury in a house; although it is certainly a luxury, because a home is never so happy as when there is a baby in it. During the first month of life a baby does not cost much in food, but it costs in other ways.

It increases the work and the laundry expenses, and its advent takes away for a time the strength of the mother, and so makes her less able to make the most of things. Its necessities increase with every year, and this fact ought to be allowed for, both in dress and provision. It is true that though a newcomer adds to the expense, it does not add to the income. But this makes no difference to the rule. It only shows that the appearance of a new baby, or an addition to the family in any way, ought to be the signal for a new arrangement and a fresh order.

In drawing up an estimate of household expenses, company ought to be considered an extra; and, as already stated, ought to be entered amongst the incidentals. If expenses are closely calculated, according to the size of the family, there is no room for hospitality. Yet hospitality in reason is a virtue; and it is a hard thing when those who possess a home cannot share it with their friends. Let it be shared by all means, therefore, but let it be clearly understood where the payment thereof is to come from; and do not let all the enjoyment be on one side, and all the difficulty on the other.

In calculating expenses a balance should always be left over as a margin. This is necessary, because it is impossible to provide for every item, and if when the income was planned out every penny was appropriated, there would be certain to be a deficiency when the accounts were made up.

Speaking of accounts reminds us that accounts are of great value. Their chief use is that they act as a check upon the person who spends the money and who keeps their account. They do this most effectually when they are sacred, because then they may be turned into a true record both of mistake and of success. They can never be employed in this way when they are subjected to unpleasant scrutiny; and, therefore, unless at his wife's special request, a husband ought never to look over his wife's accounts; while a generous-minded man would hesitate to do so even though the wife should wish it. Some husbands, with the idea that their wives are improvident, make a practice of examining the household accounts regularly, and criticising the items there entered. To do this is to imply want of trust in a wife; and the husband who cannot trust his wife wronged her when he married her. The consciousness of this want of trust will take all the heart out of her when she tries to economise; it will prevent her acting up to her full capacity, and thus the whole household, including the husband, will suffer.

The ground now being cleared, we will go on to the subject of Household Expenses generally, and the most effectual way of saving therein. This part of the subject must be dealt with in another paper.

£1. 1s. Prize.

ALSO A NUMBER OF HANDSOME CERTIFICATES.

SECOND SPELLING COMPETITION.

RULES.

I.—The Competition is open to all.
II.—No dictionary may be used, nor is any help to be in any way obtained as to the spelling of any word.
III.—Two consecutive hours is the time allowed for writing out the paragraph. It must not be written from dictation, nor be re-copied after it has once been written out. All writing, indeed each letter, must be so clearly formed as to be unmistakable.
IV.—A certificate, signed by some responsible person, must be appended to the paragraph, as a guarantee that the Rules have been kept.
V.—No MS. can be returned.
VI.—Questions may be asked (stamped addressed envelope for reply), but each needless one will deduct from the total marks awarded to the questioner.

Open for three weeks only. The Paragraph to be written out will be given in our Number for March 24th.
The Five Prize Winners in former Spelling Chase are not eligible for Competition.

TO PAST AND FUTURE COMPETITORS.

KEEN expectation is being felt as to our forthcoming Second Spelling Chase, which is in process of preparation, and will be published in our next Number. The last was so successful in stimulating enterprise and curiosity, that this new one can scarcely fail to surpass it in interest and popularity.

These Spelling Tests have real educational value, and are just as useful as amusing. We hope the Principals of Schools will encourage their higher forms and senior pupils to make an attempt. In our last Competition the men did remarkably well, though the final reward was gained by a lady. This time we expect the men will have a "try" for the first place! Competitors, please read the Rules beforehand. This is everything. We are glad to notice Mrs. M. Mathers, of Maynard, Los Angelos, California, whose Paragraph, late for our first Spelling Chase, is deserving of Honourable Mention.

A GRANDDAUGHTER OF OLIVER CROMWELL.

THE STORY OF MRS. BENDISH.

By the Rev. R. Shindler.

BRIDGET CROMWELL, the eldest daughter of the Protector, became the wife of Henry Ireton, Esq., who was Lord Lieutenant of Ireland during a period of the Commonwealth. Their third daughter was named after her mother, and was born in or about 1648. She was educated mainly under the eye of her grandfather, Oliver, and was to him an object of engrossing interest and affectionate tenderness. Bridget Ireton was regarded as a feminine counterpart of her illustrious grandfather, being generally considered as more closely resembling him in her features, the general expression of her countenance, and the chief points of her character, than any of his descendants.

It is a favourable trait in the character of the distinguished Oliver,—than whom no man has been more cavilled at and misrepresented by his enemies,—that he could bend himself to be the teacher, and almost the playmate, of a child of five or six years of age. One lesson he taught her as a child she never forgot,—a lesson, judging from the experiences of common life, which it is hard to learn, and still harder to practise—to know how to keep a secret.

On one occasion she sat between her grandfather's knees at a meeting of the Privy Council, when some very important affairs were discussed. One of the Councillors objected to her being present, but the Protector replied, "There is not a secret I would trust to any of you that I would not trust to this child." To prove that his confidence in her was not mistaken, he made known to her some secret, and then directed her mother and grandmother to try to induce her to divulge it by any means, promises, threatenings, bribes, punishment, and even caresses. Against all their endeavours she was proof. Though acknowledging her duty to her mother, she regarded the prior claim of her grandfather as paramount. In consequence of their endearing intimacy, and the Protector's well-placed confidence in her, she ever retained the highest possible regard for him, and her devoted fidelity to his interests, character, and memory amounted to enthusiasm.

Bridget married Thomas Bendish, son of Sir Thomas Bendish, Baronet, who was for fourteen years English Ambassador to Turkey. The son was not equal to his father, either in gifts or fame.

Mrs. Bendish's character had some very strong points, and her courage was next to invincible; her benevolence and generosity were often beyond her means; and she was "the common friend, advocate, and patroness of all the poor and miserable," without distinction of religion, opinion, or character. It mattered not whether a needy object had acted the part of an enemy or a friend to her and hers, their want was a sufficient recommendation to her warm and tender heart.

All her days she was a staunch, sturdy Nonconformist, and was connected with a church in London, which had gathered many of the *élite* of Nonconformist society under the pastorate of the great independent theologian, Dr. John Owen. Kind to all as she had opportunity, she was in an especial manner a friend to all who suffered for their religious opinions. Dr. Isaac Watts was numbered among her friends, and to her the doctor addressed his poem, "Against tears." The last verse must have chimed in well with her martial spirit:—

> "If 'tis a rugged path you go,
> And thousand foes your steps surround,
> Tread the thorns down, charge through the foe;
> The hardest fight is highest crowned."

Her martial spirit was displayed in a serious encounter with a gentleman, while travelling in a stage-coach to London. The only occupants of the interior of the coach besides herself were two gentlemen, whose

conversation turned upon Oliver Cromwell, whom they criticized with unsparing acrimony. Impatient at the indignities done to the name of her grandfather, whom she revered as a Christian of a superior character, and esteemed as a patriot and a great general and ruler, she stood up in his defence; and though she conducted the argument with some spirit and force, extolling the maligned person to the extent of enthusiastic admiration, neither of her opponents was convinced, one of them, in particular, rising to a great heat in branding his name with every term of opprobrium, deriding his claims to patriotism and piety, and denouncing him as a cold-blooded traitor and tyrant.

When they alighted from the coach at the end of the stage, and had taken some refreshment, Mrs. Bendish requested her principal opponent to allow her an opportunity of speaking to him in private. Having withdrawn to another apartment, she told him, with manifest composure, that he had in the grossest manner belied and abused one of the best of men that ever lived; that the blood of Oliver Cromwell which flowed in her veins would not allow her to pass over the indignities cast on his memory in her presence; that though she could not handle a sword, she could fire a pistol as well as he; and she demanded "immediate satisfaction to the injured honour of her family, insisting that, if he would not incur the charge of cowardice, he should not make her sex the pretence for declining her challenge."

Amazed at the remarkable, though far from commendable, strain of this address, the gentleman, who was ignorant of her relationship to the man whom he had so unsparingly reviled, at once proceeded to soften down her resentment. "Notwithstanding," said he, "all that I have said in disparagement of Oliver Cromwell, whom I now understand to have been your grandfather, he unquestionably possessed many great qualities, which I honour as much as you or any one, and had I known or suspected your relation to him, I would certainly not have said one word on the subject to give you offence. I regret having wounded your feelings by the asperity with which, in the heat of contradiction, I may have treated his memory, and I sincerely ask your pardon for my rudeness."

By this apology her resentment was appeased, and the rest of the journey was passed with a considerable degree of good humour and friendly feeling between the fellow-passengers.

This display of the military spirit is what is seldom met with in a Puritan, and especially in one of the weaker sex; but she was no ordinary woman. She knew well, too, how to endure, as well as how to do and dare. Courage and cheerfulness marked her every-day character and spirit,—gladness of heart she regarded as necessary not only to bear her troubles, but to exemplify her piety.

At the age of fifty-nine she was left a widow. She resided then at Great Yarmouth, at a place within a mile of the town, where she carried on the salt-works, which gave the name of Salt Pans to that district. She had a private income of some two or three hundreds per annum, but her profuse liberality, and her not very successful business operations, hampered her resources, and led her to try other schemes to put matters right.

One of these schemes was the grazing of cattle, which led her to attend fairs for the purchase and sale of her stock. She usually travelled in a single horse chair; and neither darkness nor bad roads, unknown ways nor stormy nights, seemed to have any power to intimidate her. She would sing a psalm or one of Dr. Watts' hymns, and was happy in the assurance that she was under the protection of guardian angels.

In her salt-works she spared neither labour nor toil, from an early hour to the close of day performing all sorts of duties, and mixing freely with her work-people.

When at home, and occupied in household duties and in her garden, she was not very careful in her dress and as to personal appearance. Hewling Leeson, in one of his letters in Hughes's correspondence, thus describes her, with some degree, perhaps, of exaggeration :—

"At her residence, which was quite open to the road, I have very often seen her in the morning, stumping about with an old straw hat on her head, her hair about her ears, without stays, and, when it was cold, an old blanket about her shoulders, and a staff in her hand; in a word, exactly accoutred to mount the stage as a witch in Macbeth. Yet if, at such a time, she was accosted by any person of rank or breeding, that dignity of manner and politeness of style, which nothing could efface, would instantly break through the veil of debasement which concealed her native grandeur, and a stranger to her customs might be astonished to find himself addressed by a princess while he was looking at a mumper."

When Mrs. Bendish had ended the labours of the day, she would eat and drink heartily whatever was set before her, and then throw herself down on a couch or bed and sleep soundly, rising refreshed and invigorated; and as if ready for a new day's work, she would dress, and set out on her visits of ceremony, business, or charity.

These visits generally commenced at nine o'clock, but sometimes at ten or even eleven o'clock, and they would last until about one in the morning. These habits were very diverse from the general custom of "early to bed" at that sober age; but she was so esteemed by her friends, and her visits also were so welcome, so instructive, so frequently interesting, and often edifying, that those who received them never complained of their unseasonableness.

Her dress did not conform to the prevailing fashion. "Splendid she never was," says Dr. Brookes, "her highest dress being a plain silk; but it was usually of the richest sort, though, as far as I can remember, of what is called a Quaker's colour. And she wore besides a kind of silk hood or scarf, that I rarely if ever observed to be worn by ladies of her time; and though hoops were in fashion long before her death, nothing, I suppose, could have induced her to wear one.

"Yet there was something in her person, when she was in company, that could not fail of at once attracting the notice and respect of any stranger that entered the room; wherever she was, though the company might be ever so numerous, and though many of them might be more splendid in their appearance."

The visits she paid, and which were so well received by her friends, were not mere visits of ceremony; friendship was the attractive and uniting force. The subject of discourse might be current events, but oftener the old times of her grandfather, and oftener still religion. In all these her conversation possessed a powerful charm; she was sprightly, animated, emphatic, racy; and all she said was marked by good sound sense, and aided by dignity of manner. After mutual interchange of thought and feeling with her friends, especially if religion had been the theme of discourse, she was generally so elated, that it was a common thing, even at twelve o'clock at night, or later, for her to propose the singing of a psalm before she took her leave, which she would then do in high spirits.

In making these visits she rode an old mare, which had been for many years the companion of her adventures. The mare was well known in Yarmouth, and was long remembered for her freaks and peculiarities. Towards the close of her life Mrs. Bendish found the saddle rather difficult, and she drove in a chaise, which, after a good deal of coaxing, she persuaded the old mare to draw. Down to the last, however, she would never allow a servant to accompany her in her night excursions. The presence of a companion would have been an intrusion on the meditations of her solitary rides.

Fear she was an entire stranger to, and her old friend the mare understood her movements. No sooner had she mounted the saddle or the chaise, than the faithful old creature began to move off at a quiet trot, while the mistress would strike up a psalm or one of Watts' hymns. "This," says a writer quoted above, "I have often heard; and thus the two old souls, the mare and her mistress, the one gently trotting, and the other loudly singing, jogged on" until they reached their home.

This remarkable woman died in 1729, aged eighty years.

THREE P'S FOR THE TEACHERS.

By Rev. J. H. Thorpe, M.A.

BREVITY is said to be "the soul of wit," and if the law be true, then the Articles in —"A. 1."— ought to get some credit for wit; for our Editor's general order is "short and sharp." That we may obey the latter, we shall just pack our preface into these few words.

We want to say some things helpful to the S.S. Teachers. *We* shall not mind if the sentences are somewhat rugged and unfinished, and hope *they* won't. We take it for granted they all want to be A. 1. in their work. We doubt if any others will take the trouble to read this. We shall dwell more specially on *the human* side of S.S. work, having first given in our absolute acceptance of the Master's own words, "Without Me ye can *do nothing*."

The first thing we would impress on our readers is the primary qualification for all work for God—Prayer.

You may be clever, you may be hard-working, you may keep the children's attention right through, you may win their affections and the praise of all who see your work, but you will be a *downright failure* if you do not pray. If you have only an hour to prepare your lesson, give the best part to prayer. Teaching begun on your knees is half accomplished. You want *power* for your work (there is lots of work in the world in which there is *no power*). Prayer gives you power with God; study of the Word gives you power with men. Pray for the Holy Spirit to guide your mind in preparation of your subject—the Bible without the Spirit is like a sun-dial by moonlight. Pray for yourself that you may be wise and winsome in your work; pray for your scholars, and thus you will acquire another needful thing in a teacher, sympathy with them. Don't pray only on Saturday night or Sunday morning for the class—pray every day, pray for them as often as you do for yourself. Prayer is to your work what the fire was to the sacrifice; so mind the first P!

The next is Pains. Sunday School work cannot be well done extempore. We have heard of men who never prepared their lesson, but we never heard of any one being the better of it. If

you would succeed, you must take pains with your preparation. This should be twofold: (1) Special—that is, the reading of notes, etc., on the day's lesson; and be sure with this you *begin early* in the week. Shame on you if you only look at the lesson late on Saturday night for the first time! (2) General. Perhaps you may not see this at first. This is what we mean, think it out at your leisure—*your teaching power will be the average of your general study.* Therefore read your Bible and books on the Bible; read for illustrations, read everything you can get which bears on your work. You must take pains with the delivery of the lesson, and try to do without notes; this you will succeed in if you begin your preparation in time. Take pains with the class in the way of visiting. In a word, put *pains* into every department of your work, and remember that Prayer, Pains, and Preparation can do anything!

The last P is PERSEVERANCE. Remember the promise, "in due season we shall reap, if we faint not"; and see in the words "in due season" a hint that it may not be all at once. Having entered on your work, keep at it! If it is worth beginning, it is surely worth sticking to. You may not see results; you may find many temptations to give it up—a nervous mother or aunt or even wife, who tells you it is "really too much, after your long week," etc., etc. Hard work won't kill you, and least of all Sunday School work. We heard of a missionary who was taunted with having made only one real convert in twenty years. "And is it really true," said he, "that I have won a soul to Christ in twenty years? Then here goes another twenty years, if I'm spared, for *one more!*"

My dear readers, mind the three P's—Prayer, Pains, and Perseverance; and may the God of peace be with you in your work!

INTERNATIONAL SUNDAY SCHOOL LESSON.

MARCH 25TH.

REVIEW LESSON.

GOLDEN TEXT.—*Matt.* 16. 16.

IT is the practice in many American Sunday Schools to give but a summary of the quarter's lessons, and then have either a lesson on temperance or on missions. Lesson on temperance, Gal. 5. 16. 6; Missions, Ps. 2. 1–12. Should this plan not be adopted, it is, nevertheless, a good opportunity for teachers to speak upon any subject particularly impressed upon them.

"In the first quarter's lessons taken from Matthew we had *The coming of the kingdom.* In the second, *Its principles.* In the last, *The opposition it met with.*"

Reviews should be mostly worked out by questionings.

Take 1st. *The Journeyings.* Galilee. Desert near Bethsaida. Gennesareth. Tyre and Sidon. Cæsarea Phillipi. Mount Hermon. Capernaum. Thence by Jordan valley to Jericho, Bethany, Jerusalem.

2nd, *Personages.* John, Herod, Herodias and daughter, CHRIST, Disciples, Little lad, Syrophœnician woman, Salome, Group of little children, the Rich Young Man, Owner of Ass, Visitors in Jerusalem, Scribes and Pharisees.

3rd, *Scenes.* In Prison. Desert. On the Sea. On the Mountain. Entering Jerusalem. (Work out details).

4th, *Miracles.* Multitude Fed. Walking on Sea. Healing of the Daughter.

5th, *Conversations* (including parables). With John's Disciples. Twice with Peter. Moses and Elias. Rich Young Man. Scribes.

OPPOSITION SHOWN by Herod, disease, riches, ambition, rejectors. MET by Courage; by Christ's *word, spirit,* and miraculous powers. *Final Triumph* foreshadowed in Lessons 5, 6, and 11.

We have in these twelve Lessons something like a

BOUQUET OF FLOWERS,

each representing a Christian grace. Let us gather them up by *name, explain* their meaning, and then bind them round by the cords of memory, and make them our own by showing them forth in our lives.

Illustrate by attractiveness of flowers, especially at this season of the year.

No.	*Name.*	*Meaning applied.*
I.	Courage	A soldier of Jesus Christ.
II.	Trust	In the dark as well as the light.
III.	Prayer	"I need Thee every hour."
IV.	Healing	"Lord, help *me.*"
V.	Confession	"Now, just a word for Jesus."
VI.	Visions	We shall see the King in His beauty.
VII.	Humility	Give me a childlike spirit.
VIII.	Forgiveness	As I hope to be forgiven.
IX.	Love	Love must be shown in deeds.
X.	Greatness	Make me a lowly servant.
XI.	Preparation	The King is coming.
XII.	Victory	"Even the victory that overcometh the world."

C. SKINNER.

Y.M.C.A. BIBLE CLASS LESSON.

MARCH 25TH.

Prov. 3. 27–35.

Vers. 27, 28. *Passive Injury.* A word against procrastination. Do not postpone the discharge of obligations when you have the power to perform them. 1. You may cause trouble to others. 2. To-morrow you may, from some cause, be unable to do it. 3. You foster a bad habit. Be prompt in paying debts.

Some persons are very thoughtless for their poor neighbours in this respect. When the poor shoemaker brings home his work on Saturday night, it may be very easy to you to say,—"Call for the money on Monday"; but it may mean a hungry Sunday to him.

Ver. 29. *Positive Injury.* Vers. 27 and 28 give a caution against injury to another by *neglect in doing.* Ver. 29 is a warning against *active injury.* Do not abuse the confidence of thy neighbour. Do not take advantage of his unsuspicious behaviour to do him harm. Do not be mean, sly, snakelike in your dealings with him.

Ver. 30. As ver. 29 relates to *secret* injury, so ver. 30 relates to *open* attack. Do not pick a quarrel. Jezebel picked a quarrel with good Naboth, and slew him.

Vers. 31, 32. On these verses consult Psalm 37.; the whole Psalm bears on them. Do not be uneasy because the wicked prosper by their wickedness. The right shall triumph at last. Ponder Eccles. 3. 16, 17; Mal. 3. 15-18; 4. 1, 2, 3. Maintain your belief in the government of God, and in the rectitude of His rule. See Psalm 73.

Ver. 33. Here is *part* of the explanation of verses 31, 32 (compare Hosea 5. 12). How solemn the reflection—curse *in* the house, etc.

"But he blesseth," etc.—glorious contrast! God protects and prospers. "His blessing maketh rich."

Vers. 32 and 33 should be taken together as part explanation of ver. 31.

"His *secret* is with the righteous." See Ps. 25. 14. Not some one particular communication, but *all* God's secret intercourse with the soul. It denotes closest friendship.

Ver. 34. On this verse see Exod. 28. 11; Dan. 4. 37. Observe the *majesty* of the words in first clause: calm superiority. Read Ps. 2. 4, "But He giveth grace," etc. To the proud so severe, to the lowly so gentle and generous. The proud lose all—the lowly gain all.

Ver. 35. Connect "grace," ver. 34, and "glory" in this, with Ps. 84. 11 and Exod. 33. 17, 18.

JAMES L. STANLEY.

IN our lesson there are two main points.

1. A command. 2. A contrast.

I. A COMMAND (vers. 27–31). You may point it by the five "*Nots*" in the verses.

1. "*Withhold not.*" Why? (1) Because all we have received—"Freely ye have received, freely give." (2) Because we are debtors (Rom. 1. 14; 13. 7). (3) Because it is a command (Gal. 6. 10). (4) Because it is well-pleasing to God (Heb. 13. 16). (5) Because it is enforced by Christ (Luke 10. 37). (6) Because it is an evidence that we are following in the footsteps of Christ (Acts 13. 38). (7) Because it will return in blessing upon yourself (Matt. 25. 34–40).

Arnot says: "Every possessor of the good things, either of this life or the next, is bound by the command of the Giver to distribute a portion to those who have none."

There are some good people who mean well, but they fail being "instant in season." Now the word is—"When it is in the power of thine hand to do it." For, as one has said, "The *abundance* may be taken from you, or *you* taken from the abundance. The secret of a happy life is to set the house in order, and to keep it in order. Above all, keep as few good intentions hovering about as possible.

2. "*Say not,*" etc. (ver. 28). Say is no stay. Say is no supply. Some are big at saying, but little in serving.

3. "*Devise not,*" etc. (ver. 29). "Practise no evil," the margin has it. "Do thyself no harm," said St. Paul to the jailor when about to commit suicide, we may apply it here, and say, "Do thy neighbour no harm."

4. "*Strive not,*" etc. (ver. 30). Paul, in writing to Timothy, distinctly told him, "that the man of God must not strive" (1 Tim. 2. 24). There are four things we are to strive after—(1) As sinners to enter into the strait gate—conversion (Luke 13. 34). (2) As servants, for the furtherance of the Gospel (Phil. 1. 27). (3) As runners in the race to win the prize (1 Cor. 9. 25). And (4) as labourers, to strive by the Spirit's power (Col. 1. 29). But we are not to strive with each other as the herdmen of Isaac and Gerar did (Gen. 26. 20), or as the Hebrews did (Exod. 2. 13).

5. "*Envy thou not,*" etc. (ver. 31). Envy was the cause of Christ's murder (Matt. 27. 18); the cause of division among the Church at Corinth (1 Cor. 3. 3); the cause of Joseph being sold (Gen. 37. 11; Acts 7. 9); the cause of Isaac's departure from Gerar (Gen. 26. 14); the cause of Rachel being jealous of her sister (Gen. 30. 1); the cause of Korah's ruin (Ps. 106. 16; Num. 16. 1); the cause of the Jews contradicting Paul and Barnabas (Acts 13. 45).

II. A CONTRAST. Fourfold (vers. 32–35).

1. *The froward and the righteous.* The first is an abomination to the Lord, even as the antediluvians were; but the latter is in God's confidence, even as Noah was.

2. *The wicked and the just.* The first is under the curse of God, even as Cain was; but the other is blest, even as Abel was.

3. *The scorner and the lowly.* The former is as Pharoah, but the latter as Moses. He overthrew the one and graced the other.

4. *The wise man and the fool.* The first is like the man who built his house on the rock, and the second like unto him who built on the sand.

Sunderland. F. E. MARSH.

CRISP CORRESPONDENCE.

ANSWERS.

A Well-Wisher.—We are exceedingly obliged for your hearty and helpful letter, and are sure that from the warm interest which you express in our Paper, you would be willing to render us effective service. Please send us your name and address. Meanwhile, the suggestions you give are being carefully considered.

A Protestant.—We exceedingly regret that you could for a moment have believed that the verse quoted could be intended by God as a sanction for sin. It is impossible for the Word of God to contradict itself, and we have many passages solemnly denouncing the sin to which you refer. We trust you will at once give up the company of any one thus unblushingly pursuing a sinful course, and by your open protest and conduct, show that you can have nothing to do with the workers of ungodliness.

Remedy for Chilblains.—Boil a turnip until quite soft, take it out and mash it well; put your feet into as hot water as can be borne, and gradually stir in the turnip. The longer the feet can be kept in this the better. Wrap them up, and get into bed.

T. B. G.—Thank you for your interesting letter in reference to sneezing, in Shakspeare, and also in 2 Kings 4. 35, and Job. 41. 18.

M. F.—We have made inquiry in reference to the collecting boxes, and from the most reliable quarter have received the following communication:—"Only a few weeks ago, when we wanted a supply of the 'Negro Boxes,' it was found that the Firm who supplied them had disappeared. We have written to Germany, where they were actually made, but have no answer. We are trying to find some new makers, but no *English* firm will make them at the price (4*s.* 6*d.* each)."

Herbalist.—The reply which appeared in reference to examinations to be passed in order to become a "Herbalist Doctor" was from the pen of an M.D. This, however, has been challenged by a correspondent, who sends us the following information, which we gladly pass on:—

"Your remarks on this interesting and important subject are not wisely made. *First,* it is the most natural and best medical system. *Second,* those who hold Diplomæ in the Herbal Society are not "ignorant" or "quacks." *Third,* there *is* an "examination." For further information, refer to Dr. George Brown, President of "the Society of United Medical Herbalists," Drake Street, Rochdale.

Justice.—The estate of the surety only, would be liable for any responsibility he had incurred; and his brothers could only be called upon, in so far as they had charge of the administration of the estate as his executors or representatives, and then only to the extent of the property realised.

Mac.—There is no reason why you should avoid members of your family because they are not Christians. On the contrary, love them, help them, win them. We imagine the difficulty comes from your not boldly taking your stand as a decided Christian. Begin at once; it is little use to yearn after "higher life," if you are untrue to the life God has already given. Stand clear of worldliness, when amongst worldly friends.

R. F.—A Homœopathic Chemist replies to your question about treatment of enlarged tonsils,—"Chronic cases are obstinate; the sufferer should persevere under skilled Homœpathic treatment. The most useful remedies are Baryta carb., 6 or 12 strength; Cal. Carb., 6; or Cal. Phos. 3. Advice is generally required as to strength, quantity, etc. Gargling the throat with cold water, either fresh or salt (Bangor Sea), 2 or 3 times a day, is very necessary. Attend to digestion; take no hot drinks; apply a cold water compress; take a few doses of Bell. 3, if the throat is inflamed.

E. S. F. and **Jeanne.**—The Cookery Primer by Agnes Maitland (Publisher, Hogg, 13, Paternoster Row) is a very good small cookery book, containing recipes suitable for the poor. You would probably hear of books of the kind you refer to by writing to the Ladies' Sanitary Association: publishers, Messrs. Gerald & Sons, Norwich.

Musical Glasses.—A correspondent offers information on this subject, if inquirer will call or write to M. Johnson, 2, Queen's Buildings, Queen's Road, Buckhurst Hill: who offers to give suggestions as to how they may be made.

Save your back Nos.—We are already being asked if binding cases for —"A. 1."— will be issued at the end of the year. We shall be able to supply these and bound volumes.

Localising —"A. 1."—The Vicar of St. Paul's, Southwark, has been most ingenious in the way he has devised of localising our Paper in his parish. Upon every copy are fixed two small labels in the blank panels on either side of our heading —"A. 1."—; on the left-hand side "St. Paul's," on the right, "Southwark." This unique and at the same time very simple plan, we have at once patented, so far as advising all our friends that we are willing to supply, gratis, labels with their own name and address, to any who wish thus to localise our Paper in their own Parish, District, or School.

Just the thing for all our Associations; advertising their existence without expense. Send us your order, and labels shall at once be specially made.

INQUIRIES.

Can any reader tell me the author of the following lines?—

"Forgiveness to the injured doth belong,—
They ne'er forgive who do the wrong."

Old Postage Stamps.—Can any one tell me whether a collection of a million used postage stamps will obtain a nomination for a child into one of our London Asylums, and if so, to which?—M. N. H.

DUTIES SMALL AND GREAT.

"WORK, not pleasure, ought to be the aim of one's life," were the words of the late Princess Alice, who, indeed, as we know from her charming letters, nobly carried out this maxim in her own busy life.

Mr. Matthew Arnold, too, has somewhere said that our highest aim is to be of use. And no doubt there is a great and growing earnestness of purpose and of work in all thoughtful men and women of this busy, restless nineteenth century.

But on the other hand, we cannot but see that there is also a growing love of pleasure—a constant restless seeking after amusement in all classes of society. And although it is undoubtedly a diminishing class, still there is a very large class of men and women—in England especially—who are merely "seekers after pleasure." Now, may this not arise from the fact that not only has the word "duty" rather gone out of fashion, but also that many of us, young and old, have not got very *clear* ideas on the subject of duty, and especially have not very *high* ones?

Education has made enormous strides during the last few years—that of girls particularly has been improved and extended to a wonderful degree; but perhaps there is a slight danger in our thinking only of examinations, of degrees, and of our children "getting on" well, and neglecting "the weightier matters" of character and a sense of duty.

In the words of a thoughtful preacher of the day, "Education, from the point of view of those who believe in an enduring result, is the presentation to children of life-shaping motives; it is more than giving fragments of knowledge, it is moulding character. . . .

"Not by what you teach, but by the way you teach, you mould character."

These are words that all of us who are parents, and who wish to see our children grow up into useful men and women, doing good in God's world—the purpose for which He made them, should lay to heart. All of us, whether clever or simple, rich or poor, *can* teach our children this one thing—to have a high sense of duty, and to get their duties into the right light. That can only be done by a realised sense of our dignity as children of God, as "workers together with Him," knowing that since our blessed Lord redeemed this world, and glorified our life by His Incarnation and Death, nothing can be called "common or unclean," and that the meanest duties of life can be transformed into a consecrated service. Women especially need often to remind themselves of this truth; the daily routine of so very many women's lives seems so dull and petty.

Men have monotonous duties, no doubt; only to many women the little things they have to do day by day seem almost too small to be dignified by the name of duties, and they think that if they had to lead the lives of their husbands, brothers, or fathers, the greatness of the work would to a great extent compensate for the toil and routine. We do not think this would really be the case, and at any rate we women have to take our lives as they are sent to us, and our duty is to shape them as nobly as we can. Let us begin by realising that each little duty is as much given us by God to do as if it were one of the greatest works. As an eminent preacher has said, "It is not by doing great things, but by getting little things into great lights, that we live the life of God." And surely the education of our children *is* a great work. Not the teaching them "fragments of knowledge," which, with so many of us, must necessarily be left to the schoolmaster or mistress; but the moulding of their characters, the teaching of "life-shaping" motives, and the formation of good habits of mind and body.

Surely this is a high, a noble, a great duty; and mothers, perhaps, better than any one, can do this by their quiet, gentle influence, by careful study of their children's natures, and last, but not least, by self-discipline, which surely is a "great" duty. Then, as their daughters grow up, mothers can do much in giving them high views of duty, and in showing them that even while they are young, they can and ought to live for something more than pleasure, or even than mere self-cultivation. How many a hard-worked, self-sacrificing mother will not allow her daughters, as they leave the schoolroom, to help her in household matters. No,—in her love and her spirit of self-sacrifice, which to many mothers becomes a sort of second nature,—she says, "Oh, let them enjoy themselves while they can. I do not want them to have domestic troubles before they are obliged to have their own."

She does not realise that this unselfish spirit tends to make her daughters selfish, which is a grievous thing; and what is still more grievous, is that these girls' characters are not being formed by her to bear the duties of life, which must come to all, sooner or later. Then these girls marry, have to give up some of their many amusements, perhaps have a great many duties which they ought to perform, but which are irksome to them; and then one wonders that there are so many peevish, fretful women in the world, and that one sees so many unhappy marriages! Yes, those of us who are mothers have, indeed, *great* duties, as well as the small ones of our daily life: the forming of the characters of our children, the bringing up of the future men and women, who will, we trust, live more and more for good, for work, for usefulness, for God. Shall we not, therefore, try and get *all* our duties, *all* our work, into "great lights"—try and realise that our work is eternal, that eternity *is now;* that all our duties, well done, intensely felt, will produce eternal good; that we are the temples of the Holy Ghost; and that the Christ-life in us will transfigure all our duties, small and great, and make them one great service of love, done for Christ's sake and the love of God?

THE INUNDATION IN CHINA.

By J. Dick Arthur.

THE bursting of the Yellow River in China exceeds in horror anything that has ever happened in our time. Larger and swifter than the Ganges, it contains perhaps more water than five Danubes, and flows through a territory ten thousand square miles larger than England and Wales.

The soil is so fertile that almost everything will grow upon it. Pine apples, planted with rice, yield 160-fold, and produce, almost without manure and with but little ploughing, two crops a year. The surplus water of autumn, being probably nine times the usual outflow, rushes down from the hills in great volumes, at a speed of twelve miles an hour, and the embankments, strong as they are, are not always sufficient to prevent the bursting of the barriers.

Every two centuries or so they are swept away, a new bed is cut, and a whole province ruined. Nine such beds are known, but this danger is not sufficient to prevent the people swarming in again, building new dykes; and once more the place assumes the appearance of a cultivated garden.

On September 27th the river was at its fullest, and its speed tremendous. A bit of dyke giving way, the rent soon spread for 1,200 yards; the floods were loosed, and water amounting to five Danubes came pouring down upon the plain—a vast, open, flat plain, studded with 3,000 villages, and swarming with men, women, and children.

The huge torrent threw out rivers on every side; its central stream being thirty miles wide and ten feet deep. Pouring on with such impetuosity, it carried everything before it—houses, trees, whole villages were swept away. Travelling, probably, at twenty miles an hour—a force as irresistible as lava, what could withstand it?

Every living thing was destroyed. There was no place to fly to; it would take hours to reach the nearest hillock; escape there was none. Those Chinese who awaited their fate and refused to struggle were the happiest of all, because the soonest dead.

The amount of lives lost possibly will never be known; some estimate the loss at two millions, others go as high as seven. Three thousand villages, which but a short time ago were teeming with population and alive with children, are lying beneath the flood, and such a scene has hardly been rivalled since the Deluge. Remedy for such a catastrophe there is none.

It comes like an earthquake or an irruption, and there is no more escape from such a flood than there is escape from the will of God.

The Chinese Government has given £500,000 to repair the dykes, and also the whole revenue of Honan till the work is finished; has stopped 32,000,000 pounds of rice on its way to the capital, and given it to the survivors, and has ordered all who are ruined to work on the dykes under military discipline. These labourers are to receive no wages, but food will be provided for them.

The channel being new, it will not be necessary at first to make the embankments cyclopæan; and at the cost of many lives which will be sacrificed to the malaria which is sure to develop itself as the waters retire, the great Yellow River will once more be chained up.

The attraction of the place will again be irresistible. A new generation will appear, and take possession of the soil; fruit trees will be planted, rice sown, human habitations built, and probably in five years Honan will be just as it was before.

So is it with Mount Vesuvius after an irruption. Terrified at the first signs of danger, the people fly from their homes. The richness of the soil, however, entices them back, and soon again they are to be found cultivating their vines and manufacturing their famous wine on the slopes of the burning mountain.

If the Yellow River is simply dyked, nothing can prevent another catastrophe when it reaches a certain height. If the Chinese Government would open up a broad and deep canal, running 300 miles to the ocean, or construct a huge reservoir, vast as an inland sea, amid the hills from whence the river flows, it is just possible the overspill might be drained away sufficiently to arrest such gigantic calamities; but the Government is too fatalistic and too weak for so great an undertaking. It will be satisfied with making the river secure for its own generation, leaving the next to suffer or escape as the case might be.

MAR. 24, 1888. ONE PENNY.

"A.1."

WEEKLY — Edited by MRS. STEPHEN MENZIES.

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "Water Gipsies," etc.

"'You did not think I had found you out. . . . Allow me to be the first to congratulate you.'"

CHAPTER VII.

ALICE, Polly, and Nellie were in a high state of excitement. They were all at home in Kate's lodgings. Alice had not yet given up her situation at Miss Connor's school at Sydenham, and Nellie was still supposed to be nursery governess to three or four little children at Hendon. Polly was avowedly out of work; but out of work or not, the three girls were keeping holiday to-day, and were assembled together in the bay window of Mrs. Minchin's drawing-room. watching for Kate. Kate was expected home at any moment, and then they *did* hope she would explain a little mystery which was a source of perplexity to them.

Standing together they made a pretty trio, and more than one passer-by glanced up at them approvingly. Alice was tall and very

fair ; Polly was all smiles and dimples, all curves and graces ; and little Nellie, with her hair cut in a curly crop, and her almost infantile face, looked like some sweet cherub, and not at all like what she was—a young lady supposed to be able to earn her own living.

"Polly, can you explain Kate's letter?" exclaimed Alice.

"No, I can't; don't worry me about it," answered Polly. "Kate's as queer as queer, and as changed as possible. The hours I've had to spend alone are simply past telling. The dulness has been almost unendurable. But for Mabel Minchin, I simply could not have lived; but Mabel is a nice girl, very sympathising, and we have exchanged some confidences. Ah, my dear Alice, I have had experiences since I saw you last; but I'll tell you all about them another time. What do you think of the cut of this jacket, both of you? Mabel Minchin said she considered it rather stingy of Kate not to have a better fur put on it."

"Oh, it's very pretty," said little Nellie, admiringly, stroking down the soft grey fur with her dimpled hand. "I have not anything half so nice. I cannot think how Kate found money to buy it for you; she must have had a tremendous rise in her salary."

"Here she comes!" exclaimed Alice, as a cab drew up at the door, and Kate, putting her head out of the window, beckoned to her sisters to come down. They tripped downstairs laughing and chattering, and Mabel Minchin glanced enviously at them as the little party drove away.

"Victoria Station," Kate called out to the driver.

"Oh, Katie, where are we going?" exclaimed the three.

"Never mind; you'll know presently," said Kate, with a happy laugh.

"It is exciting," said Nellie.

Alice, who was, perhaps, the wisest of the three, was silent, although deeply interested; Polly, gazing out of the cab window, made numerous remarks *apropos* of the fashions, etc., in the shop windows.

When they got to Victoria, Kate took tickets for Croydon. The girls were more and more mystified and delighted. An express train brought them quickly to their destination, and then they started to walk up a rather steep hill which led country-wise.

Kate, who had been chatting and laughing with them all in turn, now became silent. Her bright colour faded a little, her eyes grew full of thought, and round her mouth some lines even of care became visible.

It was a moment of triumph: she was about to introduce her sisters to the home she had newly provided for them; but even now her burden was pressing on her, and she was wondering how, with every care, she could guide these frail little barks into shelter.

They turned in at a pretty avenue, shaded by old-fashioned trees, and drew up before a rose-covered porch, where a neat little servant stood smiling and curtseying.

"Is lunch ready, Susan?" said Kate. "Come in, girls—dear girls, dear sisters—let me welcome you home."

"Home?" exclaimed the three. "Katie, Katie, do explain! This lovely house—oh, what a drawing-room; do see, and a flower-garden in front, and a dear little wee tennis-lawn. Home! Kate, what do you mean? Explain to us."

"Just come into the drawing-room and I will tell you," said Kate. "Stand here, by this window, and look out at the sweet landscape, and be thankful and happy. My darlings—my three dear girls—I have found a little nest for you, a little nest where we may all live together for the next six years at least. I have been left some money, dears—some money which I never looked for nor expected—and I have bought this house. Now do you understand?"

"And I needn't go back to Sydenham?" exclaimed Alice.

"And I needn't worry about those troublesome children any more!" put in Nellie, beginning to caper gaily about.

"Oh, Kate, do speak; we need none of us do any more work?"

This came in a chorus from all three.

"I will talk about that another time," replied Kate. "You, Alice, and you, Nellie, will resign your present situations; but as I hinted just now, our home is not a certainty. We may have to leave it at the end of some years—we must all be wise girls, and prepare for a possible future. I propose you should have good masters, and be really well taught; but we will talk about that later on. Now you have not half seen the house. I have got a sweet little bedroom a-piece for you; come up, and let me introduce each of you to your little nests."

"Kate," suddenly exclaimed Polly, in a tone of deep interest, "who do you think is coming up the avenue?"

"Who, dear? Nobody knows that we are here as yet."

"Oh, yes, somebody does; Mr. Graham has just gone into the porch, and is about to ring the bell. I rather like Mr. Graham; I think he has grown very handsome. Why, Kate, you have turned perfectly white! Are you tired? If you are, I'll go and talk to Mr. Graham."

There was a little bustle just then at the door. Susan ushered in the unexpected visitor, and the four girls rose in a body to meet him.

Kenneth Graham looked as bright and handsome, as full of hope and animation, as when Kate unexpectedly met him, six weeks ago now, at Victoria Station. Then bright hope had animated his eyes, he had held himself erect, and had the air of a man who meant to conquer the world, and to bring all good and fair and beautiful things into his life.

Graham without hope—Graham as Mrs. Alexis had seen him—was a totally changed being; his face could even assume a repellent aspect, its sternness would forbid, its self-repression and yet its self-engrossment would make it appear absolutely unsympathetic.

Graham to-day, however, was at his brightest and best.

"Ah, Miss Kennedy," he said, laughing, as he took her hand, "you did not think I had found you out. You thought this pretty secret of yours absolutely safe, but I have traced you home. Allow me to be the first to congratulate you."

Kate's pallor left her. A rosy glow revisited her cheeks; her eyes shone,—Graham seemed so happy, that his pleasure infected her. She had thought that her riches meant the giving up of Kenneth Graham's friendship; she had so plainly understood, six weeks ago, that now their paths must diverge, that she and her wealth must go one way, and he and his poverty another; and from that hour until now she had not seen him, nor had a line from him. Her surprise, therefore, was as great as her pleasure, and she considered this early visit of Graham's of good omen, and greeted him accordingly.

"I am surprised to see you, and greatly delighted," she said, when at last, as the whole little party trooped out to examine Kate's small domain, and the girls were tripping about here, there, and everywhere, she found herself for a moment walking alone by Graham's side. "I am delighted and surprised," she repeated, "for you gave me to understand that in future you and I were to be strangers."

"Yes; but I have changed my mind. If I have my will, we are to be anything but strangers in the time to come."

"I am glad of that. I did not know why a little money—for money is surely not such a great thing—was to punish me by making me lose an old friend."

"It shall not do so. Everything is changed. I shall often come here, Kate. I have called you 'Kate' once or twice before,—may I do so now? Kate, look at me,—everything is changed."

The girls came rushing back,—they were quite wild with mirth and spirits, and Kate at that moment put her arm round Nellie, and kissed her tenderly.

"I am so hungry," said Polly. "Did not our new maid, Susan, say that lunch was ready?"

They all went in, and the very picturesque little house which Kate had secured, quite echoed with the laughter and witticisms of five perfectly happy young people.

"I have a letter in my pocket for you," said Graham, suddenly giving one from Mrs. Alexis to Kate.

She opened it, and read its contents gravely.

"This old lady writes me a sweet letter," she said, when she had finished; "but I do not know her."

"That is no matter; she is my dearest and best friend. She is ill, and wants to see you. You will call to-morrow, will you not?"

"I certainly cannot refuse."

"May I go with you, Kate?" asked Polly.

Graham frowned slightly. "I think not," he said, answering for Kate; "Mrs. Alexis is ill, and only wants your sister."

Polly pouted, and leaving the table, began to examine some pretty knick-knacks on the mantelpiece.

"Can you go and see Mrs. Alexis at three o'clock to-morrow?" continued Graham.

"Yes; that hour will suit me very well."

"That is right. I will meet you when you come out. I will see you home, if I may."

Kate raised her clear brown eyes to his face. "What did this sudden change in Graham mean?" the happy eyes asked.

"May I see you home?" repeated the young man.

"Yes," Kate said, and then she glanced at her sisters, and sighed, and a shadow came over her face. "For my life is theirs,—I have promised," she said to herself.

CHAPTER VIII.

"I AM glad to see you, dear; it was kind of you to come to me."

Mrs. Alexis was looking very ill to-day—the slight excitement which had brought a little animation to her old face when she saw Graham a short time ago had now left her, and it was a very frail-looking old lady who held Kate Kennedy's hand, and made her welcome.

"Sit down, dear; I am sorry to have had to ask you up to my bedroom, but I was very ill last night, and the doctor would not allow me to venture downstairs to-day. It was

good of you to humour an old woman's whim."

"Mr. Graham gave me your letter. I could not but come," answered Kate; then she added, a sweet, pleased look lighting up her face,—"I think the honour is mine; it is more than good of you to wish to see a girl who is a stranger."

"Yes, my dear, that is a very nice way of speaking, but many girls would care little to attend to the whim of a dying old woman. You are not, however, a stranger to me, Miss Kennedy, for Kenneth Graham has told me much about you. I have known him all my life, and I am glad, my dear—yes, now that I look in your honest face,—I am very glad that you and he are friends."

A rich colour rose in Kate's cheeks.

"We have known each other for six months," she said gravely. "Mr. Graham is kind to take an interest in me. I was a rather lonely and friendless girl, and it was good to have the acquaintance of so pleasant a person as Mr. Graham. We had some tastes in common—music, for instance. Now things are a good deal altered for me; I mean,—it is most difficult to explain, but I have three young sisters to look after. My life in the future is likely to be very full."

"You are a rich girl, my dear; Kenneth tells me you have been left a large sum of money."

"Yes, that is so. Most unexpectedly, I find myself rich; my three sisters are younger than I—they are absolutely penniless and orphans—they are my great charge."

"I understand, my dear. Come and sit in this little chair by my side. Even if an old woman appears to you impertinent, you will forgive her, dear, for you will never meet her again on this side eternity. My dear, how old are you?"

"Twenty," answered Kate.

"I see—quite a young thing, and although brave, I fancy a bit over-determined. You have not had experience yet to show you that your own way, even when it looks right, may often be just as wrong as possible. Now look here, my dear, I am not going to plead the cause of any man with a girl—each lad and lass must do their own wooing, and it isn't for old women to interfere.

"My dear Miss Kennedy, I take the deepest interest in that boy Kenneth; I have known him almost from his birth; his mother was my best and greatest earthly friend. Ah, what a good woman his mother was, and how she prayed for that lad of hers! Well, well, we won't go into that subject any more; only one word before I ask you to tell me all about yourself and those young sisters of yours.

"It may be that you owe a duty to another besides them; it may be that a life which can be great and noble with you, without you may sink to despair and even to evil. I say what I have to say after great thought, child, after hours and hours of most anxious care; for after my own poor son, I love no one like Kenneth. Now, my dear, we will change the subject. I have sent for you to say this—I honestly confess that I have done so, that that was my true motive in wishing to see you; but you must not imagine that Kenneth knew I would even mention his name. Now, my dear, I have taken a fancy to you on your own account, I should like to hear all about your life that you care to tell me. Those sisters of yours—that money you have been left—all, and everything."

"I will tell you with pleasure," said Kate.

Then she began in a low voice, and at first somewhat shyly, to talk of past days of privation and care—of the time when her stepmother died, and left the girls in her charge; of her father's sudden death in the prime of life, of her many little devices, of her many struggles to get situations for the pretty, heedless girls, of her own tolerable success as a music teacher, and then of her delight when she was made organist of a small and out-of-the-way little church. Finally, her wonder and astonishment when the money came, and then of her troubles with Polly, who was so beautiful and so giddy; her purchase of a house for her sisters, and of her hope that they might now live happily together, and that in the six years of certainty that lay before her she might either thoroughly educate her sisters, so that they might support themselves, or even provide good homes and husbands for them.

Mrs. Alexis did not interrupt the young narrator by a single word. When she had quite finished, she said, however, simply, "It seems to me that things are likely to go well with everybody but Kate Kennedy herself. Have you no thought for your own future, child?"

Kate laughed.

"I suppose I have," she said; "but just now I must own that my principal thoughts are for the girls."

"Well, dear, don't give up too much to them. You owe a certain portion of your life to them, undoubtedly, but, most emphatically and decidedly, you do not owe all. Now, my dear, I must wish you good-bye. I am glad we have met. I hope we shall meet again some day; not here, dear—we are never likely to meet again here—but I shall look out for you some day, nevertheless."

Kate smiled, and tears rose to her eyes.

"Good-bye," she said. "My talk with you has comforted me. I shall not forget your words. I earnestly trust and hope we shall meet again. I am a weak girl, and, somehow, my sisters' leaning on me does not make me any stronger, but I most earnestly desire to do right, and not to be selfish; and I want my money to be so well spent that it will bring me a blessing. I do most earnestly desire that, and I am glad to be able to say it now to you."

"You will ask God to help you about that, dear; you will pray. Remember, there is great power in prayer, Miss Kennedy. In my day I have gone through very deep sorrows; nothing could have saved me but prayer—nothing, nothing else. It is a wonderful power, and it lands those who use it in a higher atmosphere—not a doubt of that, my dear, not a doubt of that."

Then Kate kissed the old lady, and went downstairs, and Betty Carew, staring at her well from head to foot, let her out.

At the corner of the square, Graham met her.

"Well," he said, eagerly, "what do you think of Mrs. Alexis?"

"She is very sweet; she has said wonderful things to me; I am glad to have met her."

Kate's eyes were shining; there was a dewy, happy light about them, and her firm lips—almost too firm for so young a girl—owned to some softened and gentle curves just now. For the time being she forgot her sisters, and the special cares which pressed upon her young shoulders, and gave herself up absolutely to the delight of the moment. Graham could not mistake the pleasure she felt in his society. He must read aright the pleased glance of her eyes, and the happy smiles which accompanied her greeting.

"I am glad to know Mrs. Alexis," she repeated; "I wish I had known her sooner. Such a friend would have helped me much. Is she really so very ill?"

"She tells me she is dying," answered Graham. "She has gone through a great deal of trouble, and she seems quite glad at the thought of having done with life. She has been a good friend to me, and I am much attached to her. Now I want to talk about something quite apart from Mrs. Alexis. I have come to meet you to-day with a very definite purpose in my mind; with a great hope, and yet with an awful and terrible fear in my heart. Shall we walk round this square, Miss Kennedy?—I mean—I mean—if I might call you Kate?"

"Have you not done so before now?" answered Kate, but her voice trembled.

Graham took courage from these signs of emotion.

"I will do so again," he exclaimed, joyfully; "even to say the word strengthens my hopes and lessens my fears. Now, Kate, listen to me; you are trembling—what is it? Kate, my—what is it, dear?"

"Just this," answered Kate—"I—I—I will listen to anything you have got to say; I will gladly listen—I like to feel that I am your friend, and that you can talk to me, and I will gladly listen, provided you will remember one thing."

"One thing! I will remember everything you say; nay, I was only jesting. What was the one thing that frightens you, Kate?"

"My sisters. I am as a mother to my three young sisters; bear that in mind when you speak to me."

"Look me in the face, Kate; here it is dark, but this lamplight falls upon your face. I see that steadfast look in your eyes, and I see—something else. Kate, you must have guessed my secret, or you would not remind me of your sisters. Now I am not a bit afraid of them, and I will speak."

"Then, Kenneth, you will give me pain," answered the girl.

"I can't help it; I will speak—my chance has come. I thought everything was all over with me, but it is not so—all good things are but beginning. Kate, my dear, my darling, I love you better than all the wide world, and you love me—you know you do. Look me in the face, give me one glance from your eyes; of course I read their secret. You love me, Kate; I dare you to deny it."

"I do love you, Kenneth," answered Kate. "I do love you, most absolutely; but that is not the question."

"Pardon me, it is very much the question—it is so completely the only question, that nothing at all matters beside it. Oh, my darling, what a happy fellow I am! What a good, grand thing it is to live!"

"Don't, Kenneth! you know—you know this must mean nothing between you and me."

"Oh, mustn't it?—I take a totally different view of the case. Unless you can prove to me that you love your sisters ever so much better than me, I have no intention whatever of resigning you to them."

"You are cruel to me, Kenneth."

"Only to be kind. Now, my dear little Kate, is it true, are they dearer to you than I am?"

"I must tell the truth—I do care for you more than for any one," answered Kate in her gentle yet simple way. "But that is not the point, Kenneth; no, no, it is not, and you must not try to overmaster me. Although I love you—yes, I will say it now, though

perhaps never again—I cannot possibly marry you. Because of my sisters, and by the terms of my uncle's will, I can never marry you. Oh, I am an unhappy girl. I did think—I did hope that matters might never have come to this."

Kate looked so miserable, and the few sobs that came from her torn heart were so full of suffering, that for the moment Graham felt his cheek turning pale, and a strange sensation of fear overcame him.

"Darling!" he whispered, drawing the agitated girl's arm through his own, "by the terms of your uncle's will you shall marry me, and we will both together take care of your sisters. Kate, my dear, my darling, listen to me. I have a story, a wonderful story to tell you. Mrs. Alexis did not send for you for nothing. She wanted to see with her own eyes what this bonny, brave Kate of mine is like. She had a feeling, a feeling which I shared, that you and I were made for one another, that apart our lives would be poor and nothing, that together they would be blessed and great. I have heard the terms of your uncle's will, Kate, and Mrs. Alexis enables me to fulfil them. At her death, I inherit a fortune equal to yours. Now, if I promise to take the girls, and help you in your care of them, and if you and I together can always provide for them, while you alone can only help them for six short years, can you for an instant hesitate? My darling—even for the girls' sakes, if not for your own, it is your duty to yield, Kate."

Poor foolish Kate, she was not, after all, any wiser or stronger than other girls of her race and time; she read no secret kept back in Graham's dark and deeply-set eyes; she saw only truth, and honour, and loyalty in the handsome face that bent over her, and she said yes, because she was too happy to make any other reply.

(*To be continued.*)

HONESTY THE BEST POLICY.

By Rev. THAIN DAVIDSON, D.D.

I HEAR on every side that the commerce of this country is honey-combed with fraudulence. The immorality of trade is become a national reproach, and swindling is now elevated almost to a science.

As many of you know, who are clerks in mercantile offices, your masters in too many cases have one code of virtue for domestic life, and another for business—one system of morals for Sunday and the church-pew, and another for Monday in the busy City. Acts which they would condemn in the family circle, they condone and justify in the commercial world. As so many are cheating all around them, they persuade themselves they are at liberty to cheat too.

I have heard this rotten morality advocated by men who called themselves Christians. Because such-and-such a practice is general, and you will be losers if you do not fall in with it, it is therefore right.

Why, the plea amounts simply to this, that if you can only make a dishonest act widespread, it ceases to be a sin. A man's conscience must have become hardened indeed, when it does not protest against such teaching. I know that the matter comes home to some of you, and puts you in a painful dilemma. You are required to write letters, or sign papers, or make statements, which you know to be not strictly true. What are you to do? "Oh," says one, "you are a mere irresponsible tool; obey orders, and ask no questions." "Write that lying letter, or prepare that cooked account, as you are instructed; and don't bother yourself about its morality. That's the governor's look-out, not yours." I have to tell you that such teaching is utterly un-Christian and wrong.

By knowingly conniving at what is evil, you contract your own share of the guilt. For, is it not so, that the very men who are over you, and who cheat by wholesale, are just the men who will be the first to crush—"on principle," as they would say—the wretchedly-paid clerk who makes a fraudulent entry in the cash-book, or pilfers from the coffers the most trifling sum?

Oh, ye hard City men and merchants, "with what measure ye mete, it shall be measured to you again!" Young men! if my words have any weight with you, I bid you sternly refuse to be the tool of the unrighteous man. It may cost you much at the time, but your integrity will find its reward. Bad as the times are, strict honesty is an article of high value in the market.

From the errand boy to the millionaire, conscientiousness is a precious endowment. Charteris, one of the most notorious scoundrels of his time, once said to a man distinguished for his integrity, "I would give £1,000 for your good name." "Why?" said the other. "Because I could make £10,000 by it," rejoined the consummate rogue.

There is talk of revival of trade, and we all hope that better times are coming; but do you suppose that there can be real mercantile prosperity in the land, or that we can have God's smile upon our commerce, if merchants are to make their gain by fraudulence, and the youth of England are silently to abet and sanction it? No, no; it is only righteousness that truly exalteth a nation.

"Exhort young men," never, under any circumstances, to get into debt. "Owe no man anything," says the Apostle; which does not mean that you are to pay all your debts, but that you are never to have any to pay. If you adopt the borrowing system, and begin to live on credit, all I have to say is, Pity on you! You have no right to any pleasure or comfort, for which you cannot pay cash down. Extravagance is a common epidemic of our times; and if you once get infected, you will not have your sorrows to seek in the future. I would rather wear moleskin, feeling that I owed no one a penny, than the best broadcloth, with a big bill lying in my desk unpaid. Never be ashamed of your limited means. Don't envy your fellow-clerk his finery; a silver watch keeps as good time as a gold one any day. Thomas Binney, preaching to young men, once told a story of a worthy Scotch couple, who somewhat sadly contrasted their son's mode of beginning life with their own.

"When we started life," said these honest souls, "we had hard work of it for a long time. We got on very slowly.

"At first, and for years, we kept to oatmeal porridge for supper. But, as things improved and prospered, we felt that we could venture on something else; so we had often a bit of cheese, and then a chop, and then at last we felt that we could afford a chucky (*i.e.*, a fowl).

"Our son Andrew has now got a shop, and a wife too. He is trying his hand both at business and housekeeping; but oh, sir, he has made an awful mistake!—*he has begun with the chucky!*"

Now, the little story may be droll; but I will pardon your laugh if you will take home the lesson.

Never spend more than you earn. Never spend all that you possess. Always leave some margin; you don't know what is before you. Be your wages ever so small, set apart a portion for the Lord's service. If, through a change of circumstances, any of you have to retrench a little, let the first reduction be in your amusements, the second in your dress, the third in your food, and the last in your contributions for religion and charity. Keep accurate accounts, and seek the blessing of God alike in all your losses, and on all your gains. "Live righteously."

After all, straightforwardness and conscientiousness meet with their reward, even in the present world: you will find the old adage still as true as ever:—"Honesty is the best policy."

ABOUT OURSELVES.

OUR Second Spelling Chase, published on page 332, will be eagerly welcomed. Plenty of time to enter. Enlist your friends.

The results of our Definition (Husband and Wife) Competition, will be given next week.

Names of successful Competitors in our Acrostic Competition at the earliest possible date.

Our "Thirty Nouns" Competition closes to-day (March 24); many have been interested and puzzled!!

One week more for our Punctuation Competition. See —"A. 1."— for February 25, page 260. Try for a guinea.

Competitors in our Literary Competition are asked to exercise patience as to the return of their MSS. We are doing our best, but the office pressure of such an enormous bulk of MSS. is great.

The Third Chapter of our "Talks with Married Folk on the Management of Income," by Phyllis Browne, will appear in our next. Topic—"When and How to Save."

£1 1s. PRIZE.
SECOND SPELLING CHASE.

OPENS TO-DAY—CLOSES APRIL 14.

OPEN to all our readers, save five! In fairness to others we are compelled to exclude those who gained a Prize in our former Spelling Chase. Now here is a seemingly simple exercise,—every child is taught to spell!—with a Guinea Prize at the end of it. We expect all our readers will have a "try," and half smother the Office with papers. If you want to amuse a clever friend, or rouse a dull one, just send him a copy of this Number, and advise him to enter for the Competition too. What would you say to sending a parcel to puzzle the senior pupils in that large school near you?

"*The New Testament* is the best book that ever was, or will be known to the world, and teaches the best lessons by which any human creature who tries to be truthful and faithful to duty can possibly be guided."—*Charles Dickens.*

"*Read not to Cavil* and find fault, not to agree and take for granted, but to weigh and consider."—*Lord Bacon.*

Author of "The Cruise of the 'Snowbird,'" "Stanley Graham," "From Pole to Pole," "Kennet the Alpine," etc., etc.

CHAPTER XXXII.

SPORTS ON THE ICE.

IT is not very often, it must be confessed, that skating can be enjoyed in the Arctic Regions, but so still had the weather been for days, while this portion of the sea was freezing, that the ice was as smooth as that on a Scottish lake.

It need hardly be added, therefore, that the combatant party took one whole day off duty. To their honour be it told, however, that they did not take a second. There were still birds on the moors and by the seashore, and there were bears on the hills and in the glens. Moreover, the seals had not yet taken their departure, for these creatures are like the swallows in our own country, the main body takes its departure before winter comes on, but stragglers still remain.

"Mother," said Jack Silk one day at dinner, "I've got an idea."

"I've observed," said Miss Graves, "that you have been unusually quiet for the last half-hour or so."

"Yes, mother," said Jack, "I always am when an idea is working in my brain. Well, my idea is this:—

"While admiring the forethought of Mr. Graves in bringing a cask of skates out with him, I wonder that it did not also occur to the gentleman that we might manage to enjoy a bit of tob—tob—what d'ye call it?"

"The idea is really a good one," said Captain Boyd.

Every one was delighted with the notion, especially Katie. "I never knew you were clever before," she told Jack in the course of the evening.

"Didn't you?" said Jack doubtfully, for, poor fellow, he really did not know whether to take the remark as complimentary or quite the reverse.

Perhaps Chips did knock up the needful in a brace of shakes. There is one thing certain: he and his merry men were not long in building half a dozen tobogganing sledges. While he was thus actively employed, Jack and Desmond, all by themselves—though followed by Robin Hood and Little John, both of whom thought there was no finer fun in the world than racing in the snow—went off to choose the site.

Winter seemed to have made up its mind to commence early this year; at all events the frost continued black and hard.

Soon after breakfast one morning, Jack and Desmond and Godfrey put on their skates, and with their guns under their arms, started off for the heavy ice.

When the forenoon was further advanced, and the world a little better aired, the tobogganing party was to follow, under the command of the captain himself, if there was any command in the matter.

Along with the young men went three of the crew, carrying a pole, and armed with ice axes.

"I don't know how you fellows feel this morning," said Jack, "but I feel hard."

"And I," said Desmond, "though not so big as you two youngsters, feel not only hard and hopeful, but tough as well. I believe I could knock a hole in the ship's side, if I was going to hit out straight, you know. I——"

He did not finish the sentence, but turned up his toes and fell on his back.

"Don't knock a hole in the ice, anyhow," laughed Jack.

"I hope the ladies weren't looking," said Desmond, gathering himself up, so quickly that if Godfrey had not caught him he would have "gone to earth" again.

"Come on then," cried Desmond; "there is no time to lose."

"No, of course not, we must hurry up; but suppose we take a turn up and down first."

"That would be taking the longest way round," said Godfrey, "by way of a short cut."

"Yes; but then you know we would be trying the ice, and making certain it was all safe and firm for the ladies."

This was the way they compounded with their consciences, and quite accounted for their being seen tearing up and down in front of the ice pack even half an hour afterwards. But away they went at last, straight for the very tallest hill of ice they could find. It was a tough climb to the top, and before all hands had gained it, more than one of their number had engaged in a species of involuntary toboganning, and gone sliding to the bottom again, disappearing at the bottom in a wreath of snow, emerging only to get laughed at, and have to begin the climb over again.

But they surmounted all difficulties at last, and in a very short time the pole was raised and a flag unfurled, after which they would not have been Britons had they not given the regulation number of hearty cheers.

"There it is then," Jack said, looking up; "and I'll wager it won't float long straight."

"And if it does curl itself up round the pole and goes to sleep," said Godfrey, "we could hardly blame it. But look, yonder comes the tobogganing party."

"Well, suppose we toboggan down to meet them."

That is precisely what they did do as far as the ice-hill was concerned; and by the time they met the party, what with running, and racing, and jumping, and falling and getting up again, Jack and his friends were as warm as toast.

It seems that Desmond and his friend Jack considered it their bounden duty to take the first slide, and amid a good deal of merriment and joking, they both got on a sledge together, and away they started. They descended the upper half safely and speedily, and so would have gone merrily on to the end, had it not happened that, just as they reached the top of the second incline, a bear, who had been half asleep in a hole near by, alarmed at the unusual sound, got up and started across the ice-hill at a shambling trot. The sledge and bear met and collided. The *denoûement* was as unlooked for as, for the time being, it must have been unpleasant for Jack and Desmond; for Bruin naturally caught hold of the sledge, and down to the very bottom they went sliding together, very much all of a heap. Here they were buried alive for a few seconds; but when the young men scrambled out, behold the bear had fled.

The weather continued firm for many days; and while constant exercise was taken by both officers and crew, fishing was still continued,

"The architecture was humble but effective, some of the ideas having been borrowed from the savages."

through the ice holes. Nor was it fish only that was caught, for several seals were captured by the cunning and prowess of the Aleut, Bob-a-link.

So the time flew on, and every one on board began to think that wintering in the Arctic regions was not half so bad as it had been called.

CHAPTER XXXIII.

SAVAGES.

ONE morning every one on board had a pleasant surprise in the arrival of a tribe of Innuits.

In all probability those savages had never seen a white man before, far less a lady of civilization. But this, to them, seemed a matter of but little moment. The white men did not look very formidable, so the Innuits only waited until the boats touched the shore, when they rushed forward in a body to meet them. They were far less ugly and forbidding in countenance than Katie, at all events, had expected them to be. The general character of the men's faces was that of good nature, blended with contentment and a dash of independence—not surly independence, however, such as you meet with among some of the savage tribes of Africa.

The women, however, looked pitifully subdued and shy. They kept in the back-ground for some time, until Chips sallied round and had a little earnest conversation with them, finally leading one forward to introduce to Miss Graves. This woman carried a baby, which certainly was not so pretty as the little fur-seals Katie had nursed, but it looked innocent and interesting enough, and absurdly happy.

When it laughed in a roguish way, not *to* the lady, but *at* her, remember, the mother laughed also, and Jack chucked it under the chin and said "Agoo!" whatever that means. Then everybody laughed, and a bond of friendship seemed at once to be cemented betwixt the white man and the ignorant savage.

Jack dived his hand into his capacious pocket and dragged forth about a yard of twist tobacco, which he fashioned forthwith into a kind of garland, and threw it over baby's head.

This ceremony was what Jack Silk called "the investiture of the noble order of Sir Raleigh."

He made a happy mother if not a happy child; in fact, the little thing proceeded most nimbly to get the end of the order into its chubby mouth, and but for its mother would have proceeded to chew it.

There were a great many savages in that crowd who would have given their sealskin coats to be invested with the same order. Wherever they learned the word "tabak" I cannot say, but they not only said it now, but *sang* it. A score of dirty hands were held out to beg, and a score of faces shone radiant with seal oil and comprehensive smiles.

Jack got out his knife and proceeded to cut up into little pieces about three yards more of twist; then he told them, through Chips, they would have to scramble for it.

"Are you all ready?" said Jack.

"Kans oo rach a ransee koff?" cried Chips, or words to that effect.

Jack took a few steps seaward, and then commenced scattering the fragrant morsels on the ice.

The scramble that ensued passed speedily into the realms of the indescribable; football would have been nothing to it, not even on the Rugby system. However, it passed off peaceably, and quiet was restored.

Jack was king, or rather, he was a hero,—for though they do not have kings among these wandering tribes they have heroes.

And Katie was queen, though I think the dignity would have rested far better on the stately brow of her cousin, Miss Graves.

Chips was busy now, and so was Bob-a-link. Both had to act as interpreters, for with the exception of the one word of doubtful English, "*tabak*," these strange savages had none other.

Bob-a-link was attached to the gentlemen, and Chips to the ladies. It is therefore needless to add that Chips had far more to do than Bob.

"How long do you intend to stop here?" That was one of the questions Captain Boyd asked. The answer was simple enough.

"Till the 'tabak' is finished!"

They pointed to the ship as they spoke, and as soon as the captain laughed, they were ready with a rattling chorus.

"Where did they come from?"

The answer was one of signs. They pointed south, east, and west, in every direction except the north.

"Ask them what they can do, Bob-a-link."

The Aleut Bob-a-link's answer was pat enough; "They fight plenty,—fish plenty,—shoot plenty bear,—harness plenty dog—build plenty good house (igloos)."

"I say, sir," said Desmond, "they must be very handy fellows, and no doubt could give us a lesson or two."

The savages, indeed, soon set about doing so.

Chips informed them that the ladies would be glad to see the way they made their houses, and if they were active, perhaps they (the Innuits) would "get something."

Active? Yes, these savages really can be active when they please; in fact, when they work they do work, and when they do nothing (a very favourite occupation, by the bye) they do it thoroughly, though not gracefully.

They now laid aside their arms—rude muskets, with which, nevertheless, they manage to do some very fair shooting—and prepared at once to build their village. While they were actively employed erecting their winter tents, they told Chips that they would presently build igloos, and at a suggestion from the worthy old carpenter, Captain Boyd despatched Boy Bates to the ship with orders to send along a working party with saws, axes, and spades.

Nor were the Innuits slow to appreciate the superiority of these implements of civilization, though in handling them they were at first somewhat awkward.

Chips showed them where to get driftwood, and with this they made the spars or frame-work of their tents.

They were put together as soldiers pile arms. Then they were covered with skins, and finally built right up to the apex with snow, a smoke-hole being left at the top. Then the tent was complete. The igloos were stronger and bigger in construction, and built of bricks formed of ice cut from the sea, and roofed dome-fashioned. A considerable amount of art was displayed in the construction of the latter.

When they had commenced building their central house—a kind of Town Hall—the village was rapidly approaching completion.

Now the men of the *Oonalaska* were not slow to appreciate the benefits of work and exercise as a means for keeping out the cold, and when next day Captain Boyd proposed building on shore quite a large house of entertainment, they were all delighted.

It was to be a very ambitious edifice, too, and a whole forenoon was spent in finding a good site, levelling the ground, and laying the foundation.

It was a kind of a composite concern altogether, and consisted, when complete, of three rooms, each with a separate door. The first was the principal hall, or men's room, concert-room, and coffee-palace, all combined. The other two rooms were a snuggery or saloon, and a private room for the ladies.

The architecture was humble but effective, some of the ideas being borrowed from the savages, who, having completed their own village, willingly lent the white men two score helping hands.

The supply of drift-wood seemed inexhaustible. This wood had, no doubt, been carried down on the broad bosom of the mighty Yakon, drifted into the north seas, and stranded here.

The frame-work of the English house was, like that of the native huts, made of wood, but in a more pretentious style. On this was nailed canvass and seal-skins, so that even before the building was strengthened, it formed a perfect shelter. But so frail a construction as this alone would soon succumb to the wild gales of winter that sweep along this dreary coast, so walls of ice were carried as high as the canvas, and snow thrown up against this.

The rafters of the roof leant against the cliff of rocks which, lined with wood and canvas, formed the back wall and were covered with boards and snow.

The savages admired the work, but freely criticised it.

The parts of the business they did not like were the fire-places and chimneys. These were of stone and wood, very ample and very cosy.

"No plenty good." That was the verdict of the Innuits. When asked the reason of so adverse an opinion, they explained,—

"Smoke get away too much. Smoke fly away. Smoke keep plenty heat, and make man sleep sound!"

"Look here," said Jack Silk to the oldest native, a dumpy little fellow, whom Chips called a chief, and whose name was Dresky; "look here, my bold buccaneer. You may say what you like about smoke, but '*chacun à son goût*,' which means, that if there were no different tastes, there would be no fancy waistcoats. You understand?"

By the way Dresky laughed and nodded, and said, "tabak," it was evident that his knowledge of French and English was rather wanting in profundity.

Every day, while the work of building the large house went on, coffee was made and served out, whenever the men wanted it, a fire having been built in the native *kashga* for that purpose. Here also stood, on a rude table, two boiled hams and a biscuit barge, with pepper and mustard cruets flanking the whole, and knives and forks and plates in abundance. Turlough and Boy Bates presided in this tent. It was never empty all day long, and great was the laughing and chaffing that went on as relay after relay of the blue-jackets came in for refreshments.

Old Dresky had a plateful and asked for more, again and again. His wife—she who carried the baby—also came humbly in for a share. She, however, had a well-founded notion that fingers were made before forks, and had the courage of her convictions. This was all right as far as she herself was concerned, but when she proceeded to feed her infant on a piece of ham-rind, Turlough thought it time to interfere, and stop the whole performance.

A day or two after, the whole village, both Innuit and English, was finished, and fires had blazed for hours in the rooms of the latter to air them, if such a thing as airing an ice-house is possible. Dresky called upon Jack on board the ship, and after begging for "tabak," intimated to him through the medium of Chips, that he, Dresky, had advised his people to give a play, and they would be very pleased to see him and the ladies, with the other white men, in their large *kashga* or town-hall.

So gracious an invitation was not to be refused, but in view of the probability that the edible portion of the entertainment might not be quite in accordance with English or American tastes, Jack took the precaution to order the cook to get supper ready in their own rooms on shore; for, however palatable stewed seal may be to Innuits, as far as Englishmen are concerned, it is a taste that needs to be acquired, and requires a lifetime to develop.

Dresky was delighted that Jack had fallen in with his plans. He was shown over the ship, and duly marvelled at everything he saw. He was taken all aback at the appearance of the big gun, and begged Jack to have it fired. Jack consented, previously sending Boy Bates aft to warn the ladies.

But when Dresky heard the terrible sound, he gave vent to one wild, eldritch scream, and would have jumped overboard, had his feet not caught in a coil of ropes which brought him down, all in a heap, on the deck. He was, however, soon picked up and re-assured; and then, with many chuckles of delight (for he had been given *tabak*), he took his leave.

(*To be continued.*)

HOMELY HOBBIES.

By W. H. HARRIS, B.A., B.Sc.

No. II.—THE COPPER AND TIN OF OUR KITCHEN UTENSILS.

IT is said that Sydney Smith once defined *etymology* as "that part of grammar in which the vowels go for nothing, and the consonants for next to nothing." Possibly the corruption of many of our words warrants the above witty reproach. At all events, it is, at first sight, a little difficult to realise that our word "currant" is derived from "Corinth," that the name of the "damson" plum is a modification of "Damascene," and that the well-known metal, "copper," is so-called from "Cyprus," in which island valuable mines were formerly worked.

We must not, however, be led away into the regions of philology. In connection with our present subject, it may be more to the point to remark, that from extremely early times, so far as history informs us, metals have been used in different countries. The writer of the book of Job was evidently well acquainted with metallurgy. And very early in the history of the Adamic race, there lived Tubal Cain, who is called "an instructor of every artificer in brass and iron."

Archæological discoveries, moreover, in many countries have shown that peoples widely separated, and struggling independently into the arts of life, have succeeded in turning to their use the metallic ores. In fact, anthropologists distinguish, as we have before remarked, a particular stage of human civilization as "the Age of Bronze," which seems generally to have been the precursor of an "Age" of iron implements.

COPPER occurs chiefly in the rocks we have before mentioned as the metamorphic and igneous series. In some cases it is found diffused in small particles amongst earthy matter. Sometimes it exists pure, or "native," in threads, strings, or veins. Occasionally the miner is so happy in his explorations as to come upon considerable masses. Some such masses, varying in weight even from 1,600 to 6,000 lbs., have been discovered near Lake Superior. Then, too, it is met with in branching and tree-like incrustations, indicating deposition from solutions; and again it has, in other cases, been precipitated from water containing a sulphate of the metal, much in the same way as the process of electrotyping is effected.

But it is not the most deeply-seated rocks alone which furnish this metal. It is true that in our own country it does not occur much higher in geologic position than the Cambrian and Silurian rocks; but there is in Germany a distinctly stratified deposit, corresponding in age with some of our Permian beds, which is called the Kupferschiefer, or "copper-slate," which yields considerable and paying quantities of the ore. This stratum is evidently the result of the breaking up into clay of much older rocks, probably of igneous origin, which contained the metal as it is usually found, that is, in veins of greater or less dimensions.

In our own country, copper ores are raised chiefly in Cornwall, Devon, and Cheshire. They are worked also in Anglesey, and in Ireland. They consist of various ingredients in combination, or in intimate mixture, with the metal. Those most commonly of use to the metallurgist are the red oxide, called *cuprite*, the black oxide, or *melaconite*, and the grey sulphide, known as *Redruthite*, from the Cornish town near which are situated the most productive sources of this variety of ore. There is also what is called copper *pyrites*, consisting of copper and iron combined with sulphur, beside a somewhat similar mineral, named *erubescite*, from its iridescent colours, which greatly resemble the tints adorning the peacock's feathers.

There is another compound of copper—the green carbonate called *malachite*, which is very valuable for ornamental purposes. It is found in some abundance in the mines of the Ural and Altai Mountains of Russia, and in the Burra Burra mines of Australia. In the year 1851, the Emperor of Russia sent to the International Exhibition held in Hyde Park, a magnificent vase made of this material. It was presented to our Queen, and is now to be seen in the State Apartments at Windsor Castle.

This substance occurs in kidney-shaped, or concretionary, or stalactitiform masses. These, when cut across, show plainly concentric coatings, and it is clear that they are due to water holding the carbonate of the metal in solution. Such water trickling into cavities of rocks, and falling drop by drop, lost by evaporation a portion of its liquid, the solid material being left behind, and forming thus a series of films one upon the other. When cut and polished, malachite is used for a variety of ornamental purposes, but its comparative softness detracts, to some extent, from its value to the jeweller, and for decorative uses.

A collection of the ores of copper, with their associated minerals, together with small pieces of the metal in various stages of its manufacture, will afford much pleasure both to the collector and to friends who may have opportunities of examining such a series of specimens.

The uses of this metal are numerous and important. In domestic economy it has given a name to a particular utensil, which, as a matter of fact, is now frequently made of iron. Various culinary vessels are manufactured of copper, and these are used not without a certain amount of danger to health from the following cause, *i.e.*, that many of the salts of the metal are poisonous. These salts are somewhat easily formed under the influence of some vegetable acids, as well as of the more powerful mineral ones.

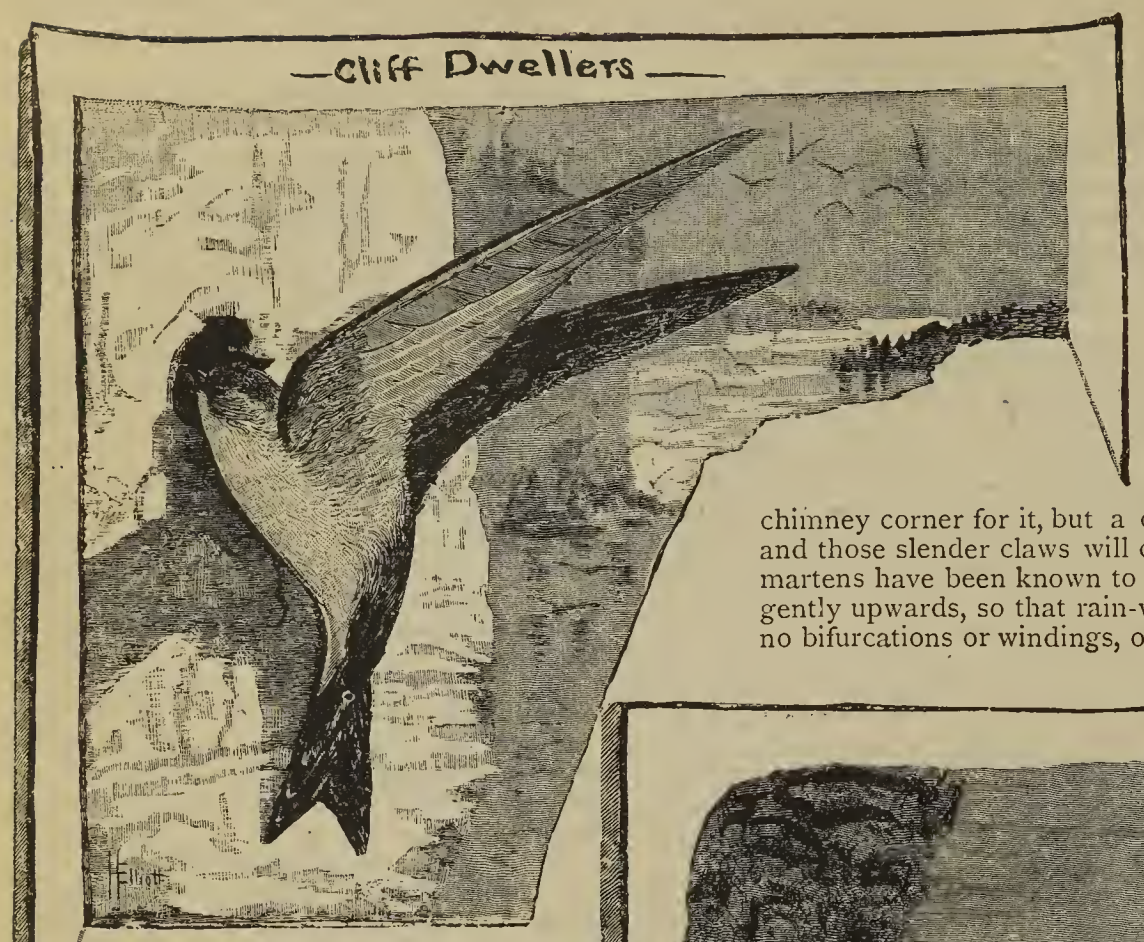
A modern and extensive application of this metal is for the sheathing of wooden ships, as this covering prevents the ravages of the *teredo*, a boring mollusc.

Copper wire of various thicknesses is largely employed for bell-communication in houses, and still more for telegraphic and telephonic purposes all over the civilized globe.

In combination with zinc, copper forms brass, which is employed in many useful and ornamental ways in our households. When united with tin, copper yields bronze, which is hard and brittle, if much of the alloying metal be used. The ancients manufactured this substance into sword-blades, spear-heads, hatchets, and even into their surgical instruments. Gun-metal, bell-metal, and speculum-metal (for large reflectors) are other alloys of copper and tin in various proportions. These all possess the remarkable property of being hard and brittle when slowly cooled, but becoming soft and malleable if dipped, while red hot, into cold water.

TIN, although known to men from very early times, is a somewhat scarce metal. It never occurs native, but always in ores. For hundreds of years the mines of Cornwall have given supplies to our own country and to other nations. It is even said that the Phœnicians used to sail to Britain for this mineral, and that the Scilly Islands, off the Cornish coast, were called Cassiterides, from the Greek *cassiteros*—tin. It is probable that the Romans also obtained from the mines of that district all the tin they used in making their bronze.

Some of its more striking properties are worthy of mention. It is harder than lead. but melts at a much lower temperature, When heated to about 200° Fahr., it becomes very malleable, and is easily beaten into thin sheets, called tin-foil. It is not very ductile, *i.e.*, able to be drawn into thin wire, but it is flexible, and in bending makes a curious crackling noise, probably from its crystalline nature. It is silver-grey in colour, has a peculiar taste, and an odour which is readily recognised if a piece of the metal is held for a short time in the warm hand.



Geologically its occurrence is very similar to that of copper. In our own country it is found both in veins traversing the granite and metamorphic rocks, and in the gravels which have resulted from the wearing down of such crystalline masses. When in veins, it is said to be in their upper portion, while copper is met with below. Similar geologic formations in other parts of the world are now yielding this metal. Large deposits have been worked in Banca, to the east of Sumatra, in the mining districts of Siberia, Saxony, Bolivia, and Peru. In quite recent times, also, extensive discoveries of tin ore have been made in Queensland and New South Wales. The drifts in these latter countries cover a considerable area, and have proved very valuable. They traverse the oldest rocks—granites, porphyries, and crystalline schists.

The best known tin ore is the oxide, called *cassiterite*, but there are various other kinds called by special names. Thus certain masses, which have a fibrous or radiated structure, are designated *wood tin*, and when the concretions are small and rounded, they are spoken of as *toad's-eye tin*. When the ore occurs in a gravelly form, it is called *stream tin*. Nuggets are sometimes met with, even at considerable depths below the soil, and are known in Cornwall as *Jews' tin*. As these occur usually in connection with charcoal, and near old smelting houses, they are manifestly of human production, and represent the results of ancient metallurgical operations, in which Jewish miners and smelters were probably concerned. It is well known that a considerable colony of that nationality was settled in Cornwall centuries ago. They have left their impress in the name of the town *Marazion*.

Tin is applied to various uses in the arts. It does not readily oxidize, and hence is very serviceable for culinary vessels, and as a coating for iron and copper. With other metals it forms, as we have already seen, valuable alloys. With lead it makes *pewter*, with antimony *Britannia metal*, with zinc the *leaf silver* of commerce. With mercury or quicksilver, it constitutes the amalgam or foil, which when applied to the surface of glass, reflects images almost perfectly, and is in general use for this purpose in our looking-glasses and larger mirrors. The salts of tin have a special value in the art of dyeing, and for calico-printing, and tin-foil is employed very widely for packing tea, chocolate, and other substances, to protect them against the action of the moisture and the absorptive properties of the air.

HOW ANIMALS BUILD THEIR HOUSES.

OR, INSTINCTIVE ARCHITECTURE.

No. 2.

FEATHERED FRIENDS.

SEE here,—that beaver last week was a clever old chap, and I don't wonder that you thought the squirrel in his tree-top a "cute" little fellow, but they were a mere nothing compared with the wonders I mean to talk about to-day. Open your eyes wide to look at those pictures, and your ears to hearken to me.

That squirrel took us up into the air. Next week I want to take you amongst the architects of the water; but for to-day let us take the squirrel's hut, and wander amongst the birds.

They say it is no use talking to a hungry man; may I offer you a little birds' nest soup? "What? No, thank you!" Well, at least it will serve as a hospitable introduction to our swallow friends, with whom we will begin. You are already looking forward to that first swallow, who does not make the summer, but is so welcome a harbinger thereof, nevertheless. The swallow is a most interesting bird, widely travelled, and of select architectural tastes. It is first cousin to those pretty cliff-dwellers, the sand-martens, who flit so gracefully about that sandstone cliff by the roadside.

The house-swallow is so civilized a bird that it claims our first attention by a sort of right. It loves to build under our eaves, or close beside our chimney-pots, and occasionally earns a feeling the reverse of gratitude because of its predilection for the upper openings of water-shoots. The swallow is a mason by profession, carrying up little lumps of clay wherewith to make its house of mud. The interior of the nest is lined with grass and other vegetable substances, to make it soft and cosy for the young. Though the swallow leaves our shores in the middle of September, and does not return until the second week in April, it wings its way to the old spot, and settles down happily into its last year's quarters. Well for us when our flight into purer, brighter scenes leaves so untouched our love of "Home, sweet Home."

The sand-marten has not selected the swallow's profession; it is a miner, not a mason. Such a pretty, soft, brown bird, slightly built and graceful, yet "up" for any amount of hard work. No warm chimney corner for it, but a cliff of friable sandstone, into which that little beak and those slender claws will drive a tunnel of no inconsiderable extent. The sand-martens have been known to burrow to the depth of five feet. The tunnels slope gently upwards, so that rain-water cannot trickle in to spoil the eggs; but there are no bifurcations or windings, only a slight globular enlargement at the end, where

the nest is placed. The sand martens are very gregarious ; sometimes a piece of cliff is quite honeycombed with their excavations.

In marked contrast to the gentle, soft-voiced bird which makes its nest within the the cliff, we may glance in passing at the savage eagle architect, who scorns to seek shelter for itself or its offspring, but builds a rough nest upon some jutting crag, piling tree-branches into a rude resting-place, and strewing the carcases of the slain around the eagle's cradle.

But about that birds' nest soup? Ah, yes! I do not think you would get much nutriment by boiling down our home birds' nests, but the Esculent Swallow (who, by the way, is not esculent at all) makes a most curious esculent nest in the great Javan caves. These nests are built in places extremely difficult to reach, and are so highly appreciated that good ones, in which a brood of young swallows has not yet been reared, are worth their weight in silver. The trade in these swallows' nests is quite an extensive one, the annual weight of nests obtained being over 50,000 pounds, valued at more than £2,000. A single nest takes about two months to build, and as the old, discoloured ones are worthless, the nest-gatherers tear them off the side of the cliff, that the birds may be compelled to build afresh. The substance of which the nest consists is partly formed from seaweeds and fuci, collected on the surface of the waves, and partly from a viscid substance (secreted in some special glands) which the bird has the power of pouring from its mouth. The nests are highly nutritious when cooked, and are esteemed a very great luxury by the Chinese, though to our European palate they seem tasteless.

Many of the architectural birds range themselves under recognised professions. Let us interview a chemist, before we descend to the humbler ranks of tailors, weavers, and such-like. Here is the *Megapodius tumulus*—the Australian Jungle Fowl, if you share my preference for its English name. That bird's nest has been mistaken for the tomb of a native, and even represented in pictures as such! Instead of building a nest for its eggs, and sitting on them until the young birds break the shell, this extraordinary creature gathers together an immense mound of earth, fallen leaves, and other vegetable matter, which, by the chemical process of fermentation, generates heat enough to hatch the eggs deposited within it. The Jungle Fowl grasps a "handful" of earth or grass in one of its huge feet, and standing on one leg, casts the stuff backwards upon the pile. The heaps are sometimes as much as fifteen feet high, and measure sixty feet in circumference. The bird burrows about in this mound, making long tunnels, wherein the eggs are laid. The natives dig with their hands in the mould, and are thus able to follow the course of the bird. The Native Pheasant of Australia is also a chemist, leaving its eggs to be hatched by fermentation. It builds a mound like a large ant-heap,—indeed, the ants are very fond of sharing it,—the lower part of which grows so hard that it needs to be broken with a chisel. It is by no means easy to find a pheasant's nest, as the birds select shady spots in the midst of thick and almost impenetrable brushwood ; but when found, the nest is a treasure, for the birds are prolific layers, and when the nest is rifled, it is speedily re-supplied with eggs.

After all, the instinct of these chemists is more admirable than their architecture, for they have little idea of structure. Let us turn to some proper nest-building birds, selecting as our first illustration of them some members of the Titmouse family.

These pretty, brisk, pugnacious little birds are familiar to us all, and do good service in our gardens by their enormous consumption of insects. "In the course of a single day," writes the Rev. J. G. Wood, "a pair of blue Titmice were seen to visit their nest four hundred and fifty-seven times, never bringing less than one large caterpillar, and generally two or three small ones. These birds, therefore, destroyed on the average upwards of five hundred caterpillars daily, being a minimum of fifteen thousand during the few weeks employed in rearing their young."

Some of these refined little builders make their nests in hollow stumps, or any odd receptacle ; others prefer the branches of trees. The nests are wonderfully soft and warm, and are lined with a quantity of down. The Long-tailed Tit-mouse sometimes lays as many as sixteen eggs, so that before the young birds are able to fly, the nest is literally crammed with them. The mossy walls heave and pulsate as the restless little creatures stretch themselves inside. How papa and mamma Titmouse manage to feed in proper order such a "mixum-gatherum" of babies is a perplexing mystery!

Our native Finches have some architect cousins, who deserve mention here. The Sociable Weaver Birds of South Africa are among the most remarkable of nest-builders. They build in a colony, under one common roof. A quantity of very long stiff grass is hung from a tree, generally a "kameldoom," whereon the giraffe loves to feed, as a sort of thatch, and beneath it the birds build their nests. These clusters of nests are so large that they can be seen at a distance of some miles. We read of one huge colony in which there were three hundred and twenty inhabited cells, each with two birds ; this total of six hundred and forty inhabitants was of course largely increased when the young birds were in the nests. These huge structures have ere now been mistaken by weary travellers for houses with thatched roofs. Another of the Weaver Birds really does *weave* stems of grass into an ingenious bottle-shaped nest, all the sharp ends being allowed to protrude, as a pretection from the inroad of enemies.

Our dear little Golden-Crested Wren has a clever cousin, who is a tailor, in India. This Tailor Bird is even more deft than my lady readers, for whilst they can sew neatly with a needle and thread, it uses its beak as a needle, and, with some vegetable fibres as

The refined builders—

thread, manage to sew two leaves together, making a dainty pensile nest. This, when filled with down, is ready to receive the eggs. The nest generally hangs from the extreme end of a bough, in order to be safe.

There is a Butcher Bird,—as it is more remarkable for greed and cruelty than for architecture, it does not come before us to-day,—and I suppose there ought to be a Baker Bird, but I am not aware of its existence. However, the Oven Bird is near enough in name, perhaps, so its curious nest shall find mention here. It is exactly like an ordinary baker's oven, with an entrance at one side. The quaint structure is made of grass, leaves, and such-like, woven together and mixed with mud in so skilful a way that, when dried by the sun, the inch-thick wall is quite hard. The bird builds in two stories; the nursery, where the eggs are softly cradled on down, being on the "second floor."

Here is a problem. You know a Flamingo when you see it? Now, if you were a Flamingo, how would you hatch your eggs? Where ever could you stow those long, lean legs whilst you kept your future babies warm? The Flamingo has completely solved the puzzle by the instinctive architecture of its nest. The bird scrapes up a narrow conical heap of mud on the ground, so as to form a tall hillock, with a cavity at the summit. The whole concern looks rather like a flower-pot turned upside down. The eggs are laid in a hollow on top of the cone, and the bird sits comfortably on them, a long leg hanging on either side of its nest.

Our last architect shall be a cousin of the familiar starling, *i.e.*, the Bower Bird of Australia. The nest of this bird has rarely, if ever, been seen, but the male and female birds build a regular bower, wherein they play and disport themselves. Several pairs will sometimes use the same bower. A great authority on Australian birds writes thus of them :—

"On visiting the cedar bushes of the Liverpool range, I discovered several of these bowers or playing places; they are usually placed under the shelter of the branches of some overhanging tree in the most retired part of the forest; they differ considerably in size, some being larger, while others are much smaller. The base consists of an exterior and rather convex platform of sticks, firmly interwoven, on the centre of which the bower itself is built. This, like the platform on which it is placed, and with which it is interwoven, is formed of sticks and twigs, but of a more slender and flexible description, the tips of the twigs being so arranged as to come inwards and nearly meet at the top; in the interior of the bower, the materials are so placed that the forks of the twigs are always presented outwards, by which arrangement not the slightest obstruction is offered to the passage of the birds.

"The interest of this curious bower is much enhanced by the manner in which it is decorated, at and near the entrance, with the most gaily coloured articles that can be collected, such as the blue tail-feathers of the Rose Hill and Lory Parrots, bleached bones, the shells of snails, etc. Some of the feathers are stuck in among the twigs, while others, with the bones and shells, are strewed about near the entrance. The propensity of these birds to fly off with any attractive object is so well known, that the blacks always search the runs for any missing article."

This bird's architectural instinct has a curious flavour of the eccentricities of our modern "fashion."

AN INTRODUCTION TO MYSELF.

By Edward Butler.

SOME years ago, in the gaol at Leeds, gruesome rumours arose of a ghost that had been seen by a warder in one of the long corridors that radiate like the spokes of a wheel from a central nave. A few days before the apparition, two murderers had been executed in the precincts of the gaol; so there could be no reasonable doubt that it was one of them that had returned to make night hideous in the building where soul and body had been violently rent asunder. The warder, lamp in hand, was pacing down the corridor, when he became aware of a figure advancing to meet him. One terrified stare convinced him it was no man of flesh and blood. He dropped his light and fled.

Alas! for any interest which might be awakened in the breast of the Secretary of the Society for Psychical Research; I am in subjection to the rule that compels me to tell "the whole truth," as well as "nothing but the truth." Midway in this corridor there is, or there was, a swinging glass door. The reflection of the warder, illuminated by the lamp he carried, thrown from this forgotten glass door, with its background of dark passage, made the ghost,—a "Pepper's ghost." The poor man had fled in terror from himself. He had seen his "fetch."

The moral of this little story is—Dare you meet *yourself?* Sooner or later we must be a good deal alone with ourselves; how do you like the prospect? Possibly you have not yet had formal introduction to yourself, not to speak of a *tête-à-tête*. Pray seek it. You may not know what yourself is like.

I remember, in the early days of mesmerism, being one of a row of ladies and gentlemen, who unconsciously furnished unspeakable amusement to the rest of the party. We were to be mesmerised; and were directed to hold dinner plates in our hands and imitate the mesmeriser. He drew his finger along the bottom of his plate, and marked circles and crosses on his face. We did so too, with all gravity.

But ere long I caught sight of an aunt in suppressed convulsions. I looked round. The bottom of *our* plates had been lamp-blacked. It is too painful to continue the narrative. But are there no men and women who, in following the ways of the world, have been hoaxed thus by the devil, and who sorely need to look into a mirror! Yea! verily! and the first sight of one's self in the soul's mirror is apt to be very disconcerting.

The Apostle James hands us the mirror: it is the Word of God; and happy is he who, having looked therein, does not "go his way and forget what manner of man he was," but sets himself to discover what manner of man he ought to be, and how he can attain to the gracious semblance he would like to see in the mirror that introduces him to himself. And the same mirror gives him the aid he seeks. I used to read—where, I have forgotten—of a certain magic mirror: when the prince (there was generally a prince in those stories) first looked into it, whilst the wizard wove his spells, he saw himself. Then wreaths of smoke arose and curled, and hid all vision in the mirror.

When they cleared away, and he gazed again, he saw, not himself, but the king, his father, and his court; and he saw the king was sorrowful, and knew that it was because his son the prince had gone away, and it was not known where he was, nor whether alive or dead. So do we look into the mirror of God's Word. We see ourselves, and it is not at first a pleasant sight. But when the mists of shame and sorrow and doubt have so far cleared away that we can look again steadily into the mirror, we see "the King in His beauty, and the land that is very far off"; and the King is our Father, and the Father's heart is sorrowful, and we say: "I will arise, and go to my Father," and with the quickness of light the far is near, and the Father is at hand. Then the restored prince in his new raiment, ringed and newly shod, fears not to encounter himself in the palace mirrors.

OF INTEREST TO YOUNG MEN.

THE Boston, U.S.A., *Globe* printed in a recent issue the views of many prominent men, in answer to three questions asked in regard to pugilism, namely: What is the reason for the public interest in pugilism? What the moral effect of it upon young men? What its value as a means of physical culture? The general agreement as to the first question seems to be, that the newspapers have exaggerated the public interest in pugilism; and the answers to the second question, that the moral effect of it is largely, if not wholly, bad. Colonel Higginson thinks that it is of small value as an education of courage. "If," he says, "I were recruiting a company or a regiment, I should rather enlist ten sober, steady young men from Mr. Baldwin's Christian Union, or Father Scully's gymnasium, than twenty professional pugilists; and any man of actual experience would say the same." George William Curtis attributes the interest in pugilism to the savage which remains in civilised man, and regards the moral effect of it as debasing. George W. Cable thinks it wholly bad, and believes that "any skilful gymnastic trainer can find forms of exercise to supply the place of boxing."

Senator Joe Brown, of Georgia, U.S.A., one of the richest men in the Southern States, makes large gifts to young men for educational purposes, and his methods of giving tend to make men and not mendicants out of the students. Governor Brown gave £10,000 to the Southern Baptist Theological Seminary at Louisville, Ky., and another £10,000 to the State University of Georgia. The interest of this money is for the helping of indigent students; and each student so helped gives the obligation that on leaving the college he will pay back the money to the university as soon as he can earn it. Such payments are added to the principal, and thus the capital fund is increased. No student at Athens College is permitted to spend over £40 a year. The student who wishes to be aided by the fund must be a worthy young man, unable to pay for his tuition. This fund keeps from twenty-two to twenty-five young men constantly at college, and as one set passes off by graduation others follow, and the places are all the time occupied.

The plan upon which the charity is founded would seem to be the best one ever invented. The endowment increases continually, and the students can avail themselves of it without feeling that they are beggars or charity students.

The age of liability to military duty in Austria is raised from twenty to twenty-one.

In New York, as a result of the work of the Y.M.C.A., it is said that over 800 young men joined the churches in that State during 1887.

An Evangelistic Secretary is to be employed by the San Francisco Y.M.C.A., who will devote his whole time to the religious work of the Association.

UNIVERSITY DEGREES FOR WOMEN.

By M. F. Billington.

THE Countess of Shrewsbury, in a recent article, has stated it as her belief that we are fast tending to a condition in which Kingsley's famous line will have to be rerendered thus :—

"Women must work, and men must weep;"

and she deplores the fact that female labour is rapidly crushing itself down to the very lowest minimum on which human existence can be supported. Not only does it affect women, but it is felt in those fields in which men have hitherto laboured; for, as two women can be got to work for less than one man, the employer naturally tries to save, and so the male sex find themselves out of work, while excessive female intercompetition reduces all wages to starvation point.

This fierce struggle enters into every branch of occupation that women can by any possibility fill, and in order to arm themselves for the fray, they are educating themselves to the very highest standard. Medicine has opened a niche in its doorway through which they may creep, the long-closed portals of the Universities have swung back, though into the holiest of holy chambers they do not yet penetrate.

And with true feminine desire for forbidden fruit, therein lies the hidden thing they covet. I do not propose to discuss the physiological questions raised in the subject of the higher education of women. That excessive exertion of the brain is a thing to be condemned, none in his senses disputes, but the same arguments apply to men, and University distinctions have never been deprecated for them, simply because they have shown that they can attain them without injury to their health.

"Surely," asks the looker-on, proverbially said to see most of the game, "if Miss Ramsay, whose brilliant place as the Senior Classic of the year at Cambridge has only been equalled, if not indeed surpassed by a young Indian Christian lady named Sobrabji, obtained her distinction of place in a fair field with no favour, why withhold from her the letters after her name that indicate her proud achievement?"

Certain arguments, such as the keener emulation of rivalry among girls, their more rapid physical development rendering it necessary to observe greater caution in overtaxing the mental energies young, and all those regarding the dangers of destroying those sweet womanly attributes which we rightly regard as the most precious heritage of the sex, have been used over and over again, and their answer is found in the fact that girls leave Girton and Newnham, Somerville Hall and Lady Margaret's, as sound in health as their uneducated sisters, and as gentle, as refined, and in brief, as *womanly* as their cousins, educated under a mother's eye. Again, therefore, why not give them the degrees that would have been given to men who had shown to the examiners the possession of the same amount of erudition?

That "fools rush in where angels fear to tread" is a trite proverb, and without wishing to apply to those who ask such questions the descriptive epithet which Carlyle applied to the majority, I must ask them first to consider some of the enormously complicated difficulties in which either of the Universities would find themselves did they embark upon the untried paths of leading women into the Senate House.

It is not merely a matter of allowing a girl to write the letters on her card which imply that she is a "Bachelor" of Arts —when she advances to M.A. the signification will do as well for "Mistress" as for "Master" of Arts!—but it involves their right to vote, and to become members of the Senate. Reduced to its ultimate basis, the question becomes that of the complete equality of the sexes at the Universities. At present female students feel that they are at Oxford or Cambridge on a kind of polite sufferance, and this is galling to their dignity.

They can attend, after formal application, any of the lectures which the individual colleges or the Universities provide. This permission is not necessary on the part of an undergraduate, and yet, as far as the legality of their presence is concerned, they could be excluded at the sweet will of a lecturer. Women are allowed the use of the various science laboratories,—always, of course, excepting the dissecting room.

They have a distinct advantage over men regarding the University library, as they are admitted there during the whole of the day, whereas men are excluded until the afternoon. All the examinations are open to them, and the lists which show the results are posted on the Senate house doors, side by side with those of the men. There, at that door, the sufferance ends, and while the brother passes in to receive his tangible yet abstract honours, the sister may gaze and feel like the Peri outside the gates.

Now the real difficulty in lessening the sense of toleration would be felt in this way. A girl might say, "Here am I, treated exactly as my brother, save that I must go to a new building expressly designed for women, and that is really only like a glorified girls' school. I am hampered by certain regulations there; I may not invite that nice young Mr. Blank, who attends the same chemistry lectures as I do, to tea with me. The foundation here is poor, the scholarships are few, the prizes are small. Why should not I compete at St. John's or Trinity for a scholarship, and if I win it, go into residence there? If the nominal distinctions are open to me, at least let me, in fairness, take my share in the advantages that were destined to assist financially and to encourage the students."

The objections to a girl's doing that would be strongly and widely felt, and yet, though one feels in one's own mind the actual reasons for disliking so subversive a proposal, it would be somewhat difficult to formulate a really convincing, by the laws of strict logic, reply to her. Then there would be no reason why she should not go yet further, and claim her fellowship at her college, supposing her place in the examination list to be sufficiently high for her justifiably to do this.

It is precisely the same difficulty as that which lies in granting political suffrage to women. If men were assured that they would ask no more than the right to vote in a Parliamentary election, it would be given without hesitation. But men are not yet prepared to see women sitting in Parliament, nor usurping the places which have been exclusively theirs throughout the history of the world.

A degree would undoubtedly be a useful as well as ornamental appendage to many a woman's name, especially in cases where she intended to make teaching her profession. Indeed, I heard recently of a lady who was bracketted equal to 8th wrangler at Cambridge, and who, on a visit to America, had the greatest difficulty in making people believe in her distinction, as, in that land of lady mayors, steamer pilots, and insurance agents, she was invariably asked, "What degree do you hold?"

It seems to me that there is something rather abnormal on the part of women in their intense present craving to do men's work, and to own their prerogatives. Let us go to Nature herself for the proof, and we see that God made woman to be an help-meet for man. He gave to her differing functions in the work of life, and He constituted her for her own sphere. Physically she is weaker, mentally she is more emotional, less practical than man.

I am aware that I shall hear the retort, "You don't know what she was in the beginning—you only know her as she is, when her body has been diminished by never having been called in all the ages to its highest capabilities, and her brain has atrophied to the extent of five ounces below the masculine average, because she has never been allowed to develop its potentialities."

But I have no proof afforded me that this actually was the case, and I do know that no amount of evolutionary talk will ever prove that men and women were created to be rivals. Women now are inclined to assume a kind of aggressive attitude towards men, and to regard them as their natural oppressors, who, if they had their own way, would keep them in ignorance and slavery.

This is very far from being the case, for the true man—the *gentleman*—is the one, perhaps, who realises most truly his obligations and his duties towards womanhood. Women would serve their own ends far, far better, if, instead of a jealous assumption of masculine labours, they would try not to stifle the natural instincts of reverence and desire to please towards a good man. Girls should try to realise that men respect them for the distinctively feminine attributes rather than for what they appropriate of the male ones.

And that is why I should unhesitatingly negative a proposal to confer degrees upon women. I do not at all think that the ideal female education is found in that of men. Probably the experience of a greater increase of University training will prove this, for though, as I have previously said, girls *can* leave without suffering the loss of their womanly qualities, I am *not* prepared to say that this invariably happens. That we live in strange times, and that a strange undercurrent of volcanic tempest is agitating society, none will deny. After storm, calm.

When the throes have somewhat subsided, and we look round again, it will be seen, I venture to think, that woman will fill her place better, and gain a truer equality of the sexes, by the highest cultivation of those indefinably lovely qualities which render a good man and a good woman the climax of God's created work.

£1. 1s. PRIZE.

SECOND SPELLING CHASE.

FEILD MARTIAL AND MRS. BLUNDER.

[*The Paragraph which Competitors are required to write out correctly.*]

THE Feild Martial's wife lay back on the luxureous cusheons, rapt in a beautious mantel, eating areated bread, siping evervessing temperence syrrup, and perusing a Gazzete of currant events. She could not hybernate in Brittain,—this was a mear predjudice,—so sought a more exhilirating climb. Her marshal spouze sat oposite her, apeering statutesque as he purformed on the flagolet. They were traveling under desguyse to the Mediteranean, finding it an apreceable conveneince to be unknown, to avoid the embarasment of being recognized on the weigh. As they left Dover, the Feild Martial's wife sighed for a subteranean pasage, condeming the Goverment for retarrding the proggres of her cavalcade by the necesity for so grate an atcheivment as crosing the tied. "My deer," sayed she, "I shall be fane to subscumb, if the manoverrings of the vesel do not speadily subsighed. I am not amfibious." Ultimetely, Calais was reeched, and the Martial wrecklessly left his retched wife to supperintend the bagage. He showed his passpoured, boughing awkardly to the forieners mienwhile. His wife stood upon a bundel of rugs, while the oficials harassed her by invesstigating the labarinths of her portmantoe. Putting her nuckles to her eyes, she comited the solechism of thretening the oficials with condine vengance if they made the egregeous mistake of disarangeing her posessions. When she had suficiently sensured them, she and the Martial resoomed their itinery towards Mount Blanc, whose sumit they wished to clime. The Martial was no sculpter, but he liked a carricature. He took an unceiled dispach from his vallise, and aressted by the attitude of his wife, endevored to sketch her profeel. She had in her hand a boukay, maid of crisanthemums and minonete, mixed with sycomore leafs. A varegated caterpiler was patroling on the surface of one of the flours. The carricaturist was in an extacy of delite. "Francis," said he to her, "that reptyle amid your blosoms is meat subject for a satyrist." With a shreik, the nervus crecher cast the flours from her; they broak through the window pain, and fell in a minature cascayed upon the tooms in a cemetory beside the narrow gage line, close to a vinyard. She cryed histericaly, "I am not an iota affrayed of beests, but reptyles give me nuralga. That thing had a face like the Sphyncks."

He simpatheticaly southed her, saying patheticaly, "That was an inapropriate and irevalent remark. I suplicate forgivness. Reed the indexes of Guyed Books to illucidate our root. I will reed a scedhule of the 'Afiliated Asociations for the Ammalgamation of Impoverished Persons and Milionares,' or else these reckondite analisises of the quodrilatteral aria of an isosceles triangle."

At last the assending slops of Mount Blank ware reeched, and the assent comenced. The Martial ascented to the request that he would proceed his wife, and assist her asspiring steps. At an atitude of 2,000 feat, they wear fane to admeyer the view. "Like a calydoschope," sayed the Martial's wife. "See the colour on those iredecent piques! But hire! hire! Ecselsoire!" And on they climed. They passed an eagle's eyrie, and saw the wild shamois leaping from bolder to bolder, in longditunal movments, pictureske in aerated purspecktive. The Martial envelopped himself in his cloke. "The temperature is Artic," he mutered, "worse than on the Saskatchewan.

An apauling reverbration eckoed through the atmosfere. "This is the climacks," cryed the afrited pear, "we shall be anihilated!" Voluminus whirlling reeths of chrystalyne whitness, each partickle acelarating momentarrily in velosity, ware bourn down the incline.

"Fairwell!" cryed the Martial to Francis, his wife.

When the avalannch desolved, too corps were ecshumed from a cravats in a glazier, which had thus lambmentably become a Mausolum for the rashleigh adventurus pare.

COMPETITORS! NOTICE!

NOW for the work! How our distorted Paragraph is scanned by thousands of eager eyes! We can picture the puzzlement of those who thought they could spell, but whose faith in their own knowledge is sadly shaken at the outset! At least, every one is sure to "try," and we ourselves feel quite fresh for the second Examination. As before, a Standard Dictionary will be our final reference, and debated words—if there are any—will be allowed. Clearness in writing is indispensable, also absolute observance of the Rules. Competitors are "on honour" as to the rigid keeping of Rule II.; a word on this subject is not needed, as we have good reason to know that the prohibition has been faithfully regarded.

Soon after the Examination, the Results in full will be published in our columns. Handsome illustrated Certificates of Merit will be awarded to the successful competitors, while if two or more "tie" for the Guinea Prize, a further test will be given.

Several members of one family may compete, but in this case a statement that the work has been done *quite* independently must be affixed to each paper sent in.

RULES.

I.—The Competition is open to all.

II.—No dictionary may be used, nor is any help to be in any way obtained as to spelling any word.

III.—Two consecutive hours is the time allowed for writing out the paragraph. One side only of the paper may be used. The paragraph must not be written from dictation, nor be re-copied after it has once been written out. All writing, indeed each letter, must be so clearly formed as to be unmistakable.

IV.—A certificate, signed by some responsible person, must be appended to the paragraph, as a guarantee that the Rules have been kept.

V.—No MS. can be returned.

VI.—Questions may be asked (stamped addressed envelope for reply), but each needless one will deduct from the total marks awarded to the questioner.

The Competition remains open until Saturday, April 14th; all papers, endorsed outside "Second Spelling Chase," must reach our Office, 62, Ludgate Hill, London, E.C., not later than Tuesday, April 17th.

"ON THE QUAY."

A TRUE TALE.

By L. ORMAN COOPER.

"HALLO! What have we here?" The speaker, a stalwart, bronze-faced British seaman, stumbled forward as he spoke, and was only saved from falling by his companion's outstretched ready hand.

"Sakes alive! it's a *man*."

So it was—a prostrate, sleeping figure, with its face hidden on its folded arms, and only a few inches away from the turbid waters of the harbour.

Captain Reuben Vince looked sorely troubled as he regained the equilibrium he had nearly lost. Surely a man must be mad to sleep on the very edge of the quay, or else he must be *drunk!*

At this thought, the captain stooped to look more closely at the slumbering figure. No, it was not sleep, but its very dreadful imitation, intoxication.

"Come on, skipper! Never mind him. He'll sleep off his booze, and be all right."

Captain Vince looked sternly at his companion, then pitifully at the prostrate form.

"Where would one roll take him, Robert Carter?" he queried expressively, pointing to an inch of granite that separated the sleeper from a watery grave. "No, my boy! we must wake him if we can."

But all their shaking and thumping and hauling seemed in vain. They might as well have tried to move or arouse an image of lead.

"We must leave him, after all," decided the younger man again, as one by one the twinkling lights in cottage and hull went out. "It is nearly midnight, skipper."

"We must *not* leave him here," responded Reuben Vince. "One more try, my lad."

At last their efforts were crowned with success. The man staggered to his feet, and, but for the stalwart arms around him, his next move would have been into the darkling, slimy water.

"Why, it's the new mate of the *Geraldine*," exclaimed Captain Vince, as a lamp light fell on the bloated, stupid features. "We must see him to his vessel now, comrade."

It was a difficult task—that of guiding the drunken man along the quay, but it succeeded at last. Safely past the heaps of cordage; safely over the big iron chain; safely between the towing posts; safely on board the *Geraldine;* and safely down to the saloon. There they left him.

"We have done a good night's work, my hearty," said Captain Reuben Vince cheerily, as he bid his friend farewell. "We'll sleep sound, never fear."

If they did so sleep, Reuben Vince for one did not sleep for long. The first beams of the rising sun called him, as usual, from his bunk, and out into the open air. Not, however, before he had taken a look at the "chart" the Captain of his salvation had prepared for him, and not before he had boxed the compass of his daily life in prayer.

There was a good deal to be seen to that particular morning, and Captain Reuben Vince was not one to hurry over or slur his duties. But the church clock close by was only just striking eight when he walked across the gangway of the *Geraldine*.

His acquaintance of the night before was leaning over the bulwarks, very miserable, very sullen, very unhappy, and he started violently as a firm hand touched his arm.

"Nerves not strong, my lad," said Skipper Vince's cheery tones. "Can't expect it after the booze of last night.'

The unfortunate man turned a dark face to his earthly saviour. "Was it *you* who brought me home last night?" he queried.

"It was I, my lad. And do you know where I found ye? On the very edge of the quay!"

"Why didn't you leave me there?" he asked with a muttered oath.

"Because you wouldn't have been there long! One roll, and you would have been in——"

Captain Vince's voice was very solemn; but the man broke out with a bitter laugh,—

"In the water, to be sure; and it would have cooled me."

For one instant a wave of intense feeling passed over the skipper s brow. Then he leant forward. "You would have been IN HELL."

All the sullenness and anger were gone from the unhappy face before him, and were succeeded by a look of biting, awful fear.

"*Where?*" he said, tremulously.

"In hell," repeated Reuben Vince. "For in your state you would have sunk like lead. Dead in a moment! and '*no* drunkard shall inherit the kingdom of God.'"

"Oh, my God!" It was the cry of an agonised soul, brought for the first time face to face with the awful truths contained in God's word. "What shall I do?"

"Promise me never to drink another glass of spirits, for the first thing," replied Reuben Vince. "The stone will be rolled away from the mouth o' the sepulchre if you do. Then there'll be a chance of your *living*, my lad."

Slowly—very slowly—the palm of the drunkard was held out and laid in the strong right hand of God's servant.

"I promise never to touch another drop; so help me, God."

Firmly Reuben Vince's fingers closed over the trembling, shaking ones held out to him.

"That's right, my man! By God's help! Let us ask Him for it."

Right down on the recently holy-stoned deck of the good brig *Geraldine;* right down beneath the blaze of God's sun; right down before the eyes of any one who might chance to be looking on, knelt the captain of the *Veronica* and the mate of the *Geraldine.* Right down, above all, in the presence of Him who has said, "They have also erred through strong drink." Right down, with Skipper Vince's face upturned to the Father of all, pleading for this, His drunken son.

Tears were chasing each other over the mate's pale cheeks as Reuben Vince finished; no maudlin, sentimental tears, but honest manly ones of penitence and sorrow.

"I promise, by God's help," he repeated, as, at last, they arose from their knees, and Captain Reuben Vince replied, "Amen."

* * * *

Three years had passed away before the *Veronica* sailed into that busy, bustling port again—three years in which the *Veronica* had changed skippers more than once—three years, in which Captain Reuben Vince had been transferred to another vessel, leaving his comrade, Robert Carter, in charge of the *Veronica.*

Captain Carter was walking along the quay, still littered, as of old, with heaps of rope and ends of rusty chains, when he was accosted by a stranger.

"Is Captain Vince in port?" said the gentleman, for such he seemed to be in his suit of handsome tweed and comfortable cloth coat.

"No, sir! Skipper Vince is out o' the *Veronica*, sailing to the West Indies. May you be wanting him, sir?"

"Were not *you* with him in this dock three years ago?" continued the stranger, looking—not curiously or impertinently, but earnestly and eagerly—into his face.

"Ay, sir! That I was."

"So I thought. Do you remember finding a man asleep on the quay, at midnight?"

For a moment Robert Carter hesitated. Then he brightened up. Of course he remembered the weary waiting beside the prostrate figure, the painful journey along the quay, Skipper Vince's cheery, "We have done a good work to-night, my lad," and the pledge that he had seen signed on the old capstan on board the *Geraldine.*

"I mind it well, your Honour," he said, as he thought of it all. "But—surely—you—mayn't—be——"

For, somehow, on the frank, manly face before him was a something that reminded him of the bloated, senseless drunkard of years gone by. The height was the same. The eyes were somehow the same, though so different in expression. The mouth was the same, only with its sensual, feeble curves straightened into firm, pleasant lines.

"Surely—you—mayn't—be——"

"Yes! I am the man you helped. God bless you both!"

Together the gentleman and the seaman turned to walk away.

"You must come and see where I live, Carter, so that you can tell Captain Vince what he, by God's help, has done for me."

Robert Carter was quite dazzled.

Across a smooth, well-shaven lawn he followed his guide into a comfortable, well-to-do mansion. "*Plenty*" was written on the walls, and the ceilings, and the floors of the house. "*Comfort*" peeped out of every corner and nestled in every chair. "*Happiness*" beamed on the faces of the sometime drunkard and his "Lady wife," as Robert Carter always called her. "Godliness" spoke out of every printed text and conspicuous Bible.

"This is what I was always used to," said Mr. Bell. "I was brought up as a gentleman, and, but for my love of strong drink, I should always have had enough. But, alas! I squandered my money, insulted my God, and nearly broke my wife's heart;" he drew her hand under his arm as he spoke. "Then I was so poor that I engaged myself as mate on board the *Geraldine.* I had a fair knowledge of seamanship, learned on board my father's yacht, and the skipper was glad to have me. I was to have started on my first voyage the morning after you and Captain Vince picked me up on the quay. Thank God, I was saved, body and soul. I bought myself off, and by the good Lord's help, have kept my pledge. Drunkenness was the stone at the door of the sepulchre. Captain Vince rolled it away, and I was able to hear the Saviour's voice bidding me come forth. The grave-clothes were still about me—the craving, and the desire, and the wish for strong drink; but my wife's hands and prayers helped to loose me and let me go. Thank God, I am a saved man."

And "Thank God," fervently echoed Reuben Vince, when Robert Carter gave him Mr. Bell's card, on their next meeting, and told him the story.

Never again in this world did the sometime drunkard and his greatest earthly benefactor ever meet. But one day we are sure that "above the bright blue sky," where there is no room for the impenitent drunkard, Reuben Vince will gladly welcome the sinner, saved by grace, who has been "washed, sanctified, and justified in the name of the Lord Jesus."

A SAD STORY.

By the Rev. B. G. RICHARDSON.

A PREACHER was once discoursing from the text, "Boast not thyself of to-morrow," and to enforce its lessons he recited several instances of persons intending to be saved, but putting off their acceptances of Christ till some future season, and in many cases, when least expecting death, being suddenly launched into eternity.

Sitting near to the front, he observed a young man, apparently about twenty-five years of age, the solemnity of whose face told of an inward struggle with deep conviction. Mentally praying that the word might be blest, he finished the service and went to his home; but that face, with its yearning look of intense longing, haunted his memory; he could not forget it, and it was with not a little pleasure that he hailed an opportunity, a few days after, of speaking to the object of his solicitude.

Walking along a quiet country road, he overtook a solitary pedestrian, proceeding slowly and in deep thought. Upon nearer approach, he recognised the young man who had arrested his attention on the previous Sunday evening. Resolving to embrace the opportunity which God, he doubted not, had given him, the minister said: "Pardon me, sir, but you appear to be in some deep anxiety; I do not wish to intrude, but if, as a minister of the gospel, I can render you any help, it will afford me great pleasure to do so."

"Sir," replied the young man, "it is very good of you; I am truly in deep anxiety. Your sermon last Sunday evening has renewed impressions and desires which stirred my soul in days gone by."

"And why," said the preacher, "has their continuity been broken?"

"Well," the young man answered, "I will tell you. I left my home when I was sixteen, to enter the office of a solicitor. At that time I was what would be called religious, that is to say, the study of the Bible and prayer received more attention than is given to them by most; but I soon found that the young men whom I learned to know were so indifferent to all this, that to join with them my views must be modified, if not altogether altered. It was a terrible struggle, and I blush to say Satan gained the victory. My whole life was changed, and for six years sinful pleasure monopolized my affections, till one day a letter from home summoned me to my mother's death-bed.

"It was evening when I reached the place, and the sun was nearing the west as I entered my mother's room. The sight that met me is carved on my heart!

"There upon her bed, her dear old face distorted with pain, her glazing eyes fixed upon the door, watching for her boy's arrival, lay the mother at whose knees my first prayer was lisped; and as I gazed upon her through my falling tears, my mind went back to the quiet Sabbath afternoons, when, with grand simplicity and humble faith, she told me the stories of the Bible, and with patient gentleness tried to answer my eager questions about Divine things. There she lay, entering the valley of the shadow of death! I knelt beside the bed, and my mother, kissing my forehead, said with an effort, 'Arthur, my boy, I must leave you, and—and it may be we part now to meet again in heaven, but it may be—oh, God forbid! it may be we part for ever. Oh! my darling child, my only son, take Christ as your Saviour *now*, and "boast not thyself of to-morrow."'

"Just as the sun sank behind the hills, my mother gave my hand one last loving pressure, and she was gone. That solemn scene made a deep impression upon me, but, alas! my heart was in the world, and the world was in my heart, and soon my old courses were resumed, with greater excesses than before. It was curiosity which led me into your church last Sunday, and it was as though an arrow from heaven had pierced my heart—when I heard you announce as your text my mother's dying words to me."

The sorrow on the young man's face deepened as he finished speaking, and the clergyman invited him into his house. "You feel," he said, "your need, your manner tells me that; now see, that God whose laws have been violated, whose sentence is passed upon all the unrenewed sons of Adam, has Himself provided a Substitute in the person of His own Son, and that Son, by the shedding of His own life's blood, has purchased a pardon which is offered freely to all—*who will take it?* Life for death. And life in Christ. Let me read to you from 1 John 5. 11: 'And this is the record, that God hath given to us eternal life, and this life is in His Son.' Do you believe it? Will you take it?"

"I cannot, sir, to-night, but your kind sympathy and advice shall not be forgotten, and I do fully intend to take God's gift"; saying which the young man rose to leave, the minister's last words to him being, "Boast not thyself of to-morrow."

"Ah! sir," the man replied as he passed out, "there is no fear of my life being terminated by one of those fearful catastrophes you described, but I will, I will be saved, some day."

And so they parted.

* * * *

In a small back room at the top of a block of model dwellings, in East London, a Bible-woman was speaking very earnestly to a sick man. The thin emaciated cheeks mantled with a hectic flush, the hollow voice interrupted by frequent coughing, all told of advanced consumption. "No! madam," the poor sufferer exclaimed, "it cannot be! not only am I fully convinced that I am not one of the elect, but my frequent and determined resistance of God's Holy Spirit has quenched for ever His strivings."

"But," said the visitor, "this is only an endeavour of Satan to keep you from accepting Christ and sheltering yourself, as an unworthy sinner, beneath His atoning work. The great enemy sees your time on earth is very brief, and so with increased activity, he tries to make you his captive for ever. But Jesus is willing and able to save them to the uttermost that come unto God by Him."

"It is kindness prompting you to try and persuade me," the dying man answered, "but it is too late now. I—am—for ever,—O God!—for ever—for ever—outside." He spoke with great violence, the exertion caused a blood-vessel to burst, and in a few moments he had passed to his account.

The woman in the front room, with whom the deceased man had been a lodger, told the visitor all she knew about him, and when the latter reported the case to the clergyman under whom she worked, he at once connected her story with a young man who some years previously had been deeply impressed under one of his sermons, from the text, "Boast not thyself of to-morrow."

Every time God's Holy Spirit strives with a man a battle is fought which leaves him either nearer God and heaven, or more firmly in the grasp of the powers of darkness.

Y.M.C.A. ITEMS.

The Hon. John V. Farwell, of Chicago, Ill., a warm supporter of Y.M.C.A. work in the United States, is on a visit to this country.

The Y.M.C.A. at Stirling (Scotland) has been offered £500, in accordance with the wish of the late Henry Drummond, for purchase of premises for the Association, if built or purchased within the next three years.

The committee elected at the annual business meeting of the Bradford Y.M.C.A., on February 16th, is composed mainly of *young* men. A Recreation Committee has been formed to provide for the physical wants of the members. An athletic ground is to be procured for the use of the clubs in connection with the Association.

The Plymouth Y.M.C.A. is doing a good work under General Secretary Roberts. The new building of this Association is admirably arranged for young men, and has a well-fitted gymnasium.

BIBLE JOTTINGS.

The Lord said that man was to do seven things to Him.—Mark 10. 33, 34.

Deliver Him to chief priests	Mark 14. 43, 53.
Condemn Him	Matt. 27. 3.
Deliver Him to Gentiles .	Luke 23. 7.
Mock Him	Luke 23. 11.
Scourge Him	John 19. 1.
Spit upon Him	Mark 15. 19.
Kill Him	Mark 15. 37.

"The Secret of the Lord."

"They saw My works, but they have not known My ways."—Heb. 3. 9, 10.

He *made known His ways* to Moses.—Ps. 103. 7.

Matt. 2. 11.

Fell down and worshipped Him, and then presented, etc.

Presented *themselves* first, and THEN their gift.—Rom. 12. 1; 2 Cor. 8. 4, 5.

God had respect to Abel, and then to his offering.—Gen. 4. 4.

CRISP CORRESPONDENCE.

ANSWERS.

H. H.—Capital punishment—does the Bible uphold or condemn it?—The best argument in favour of capital punishment, as the penalty for murder, to which it is now generally confined, is the fact that, without it, the sacredness of human life, which is the very basis of society, could not be maintained. And therefore, God, when reconstructing the social fabric after the flood, gave this commandment to Noah: "At the hand of every man's brother will I require the life of man. Whoso sheddeth man's blood, by man shall his blood be shed, for in the image of God made He man" (Gen. 9. 5, 6). And so in the New Testament, where we are told that the ruler "beareth not the sword in vain, for he is the minister of God, a revenger to execute wrath upon him that doeth evil" (Rom. 13. 4). The testimony of the Bible, then, is explicit; but we cannot recommend any special books on the subject.

Anor.—We know that many Bible students thoroughly concur in Canon Taylor's judgment as to the Revised Version, and instead of reading the latter, we would suggest that those who have but little time for God's Word, should rather give it to prayerful study of our old Authorized Version. We thank you for such unqualified commendation of our Paper.

Economical.—In reply to your question as to the proportion of income which should be spent upon house-rent, we should say about one-eighth. Thus, with an income of £150, a house at £24 per annum, exclusive of rates, should suffice.

A.B.C.—This author's works are now hardly up to the spirit of the age, and though popular with a certain class of readers, they so often approach the region of the ridiculous that, though not exactly *unwholesome*, they are far from elevating or instructive, save in a phase of "life on the ocean wave" which is disappearing with wooden ships and the belaying-pin, and the advent of swift steamers. The works of Kingston, Henty, Ballantyne, and, if you want the spice of a generation back, Fenimore Cooper, are more in the line of your seeking.

Suglio, and F.O.L. are asked to accept our hearty thanks for sending addresses of friends to whom Specimen Copies should be sent. We are always glad to send these, if friends will kindly give us name and address.

W. G., Sydenham.—We have with pleasure sent specimens to the names and addresses you were good enough to send us; we very much appreciate such hearty co-operation.

Murical.—Thank you for your hearty expressions in reference to our Paper. The matter of a Bible Competition is under consideration.

A correspondent requests us to send a copy of our Paper for the benefit of the stewards on board one of our merchant steamers. We pass on the suggestion. Both stewards and stewardesses of vessels lead uncomfortable and isolated lives, and therefore have more leisure for reading than many of our home workers. Would it not be an opportunity of helping many of these, if friends combined to subscribe for copies of our Paper to be sent to each steamship? For instance, two or three of OUR OWN GAZETTE for the stewardesses, and half a dozen of —"A. 1."— for stewards; this would be seed-sowing of which the harvest might be incalculably great.

Perhaps some of the Lord's people may be disposed to take up this little bit of work for Him.

Encouraging Suggestions.—"You may perhaps have wondered whether I have got rid of all the nine dozen copies that I had too much. I am glad to say I have disposed of a good many when taking round my copies of —'A.1.'—every Saturday. When I have seen a woman cleaning a window or doorstep, or a girl minding a baby (or anything like that), I have spoken to her about the Paper and pressed her to take one to look at; then I have asked their address, and in the course of a few days have called to see how they like it. By doing this I have got a great many to take them in; and some who did not wish to take the Paper paid me for the specimen."—F. J. J.

We think this little history of an energetic worker may be suggestive to others who would be willing to help us in a similar manner.

DOUBLE ACROSTIC.

MY first's a noun of multitude; possessive case.
My second long ago subdued a noble race.
My whole they call the one they'd put in highest place.

1. The youth had sought me, but he left me, hasting—
2. As he believed—according to my word,
3. Ere darkness fell upon him by my wasting;
4. This was the sentence afterwards he heard;
5. Of all my sons, the one he most revered,
6. For him, alas, this ending should not be,
7. Although, when long ago it first appeared,
   My race was blessed o'er all exceedingly.

The answer to this will be given in our Number for March 31.

NOTES ON THE INTERNATIONAL SUNDAY SCHOOL LESSONS.

APRIL 1ST.

THE MARRIAGE FEAST.—*Matt.* 22. 1-14.

GOLDEN TEXT.—*Rev.* 19. 9.

THIS parable, in its primary application, sets forth the rejection of the Gospel Message by the Jews, and its acceptance by the Gentiles. God's purposes of love will not be defeated. We have also here an example of God's judgments:—(1) National, (2) Individual.

I. *The Kingdom of Heaven as a Feast, for—*

(1) Salvation is provided for us. We are to come to Christ to receive, not to give. To bring some merit of your own is to say in effect, "Christ's work is insufficient, and I can add to it."

(2) All invited are welcome. If one asks, "May I come to Jesus?" what fuller answer can be than "All things are ready, Come!"?

(3) There is plenty and variety. At a feast all find some dish to suit them. Jesus can satisfy the hungry soul, and His gospel suits all sorts of minds and all sorts of men.

(4) Feasts are joyful occasions. They have an end, of course, but to know Jesus as your Saviour is a "continual feast."

II. *The Guests.*

(1) Two sorts of guests. Some were indifferent, neglectful, careless; some were actively hostile. But note in the end they were all alike, for none partook. Hostility to the gospel will bring ruin. Note that one class were kept away by over-attention to things not wrong in themselves.

(2) Those who came were of two sorts—the real and the unreal. A man may be lost in the company even of good people. See how far a man may carry his hypocrisy—into the presence of the King! See two things are required for heaven: (1) A title; this you get by repentance and faith in the Crucified: (2) A meetness; this you get by "putting on Christ," the wedding garment.

III. *The King.*

How gracious! "Go ye therefore into the highways." There was but one unworthy guest in the crowd, BUT THE KING SAW HIM. How terrible in judgment! "Bind him hand and foot." In Christ He is "Our Father;" out of Christ He is "a consuming fire," who will smite with His rod of judgment both open foe and false friend.

REFER to close of last lesson, March 18th. Christ still in temple. "Jesus answered." To what? *Murderous designs* (ch. 21. ver. 46). *Unspoken thoughts.* Similar instance, Luke 7. 40. "By parables." Matthew chooses the chief for insertion. Must not be confounded with parable of supper in Luke 14. 16. They are similar, but given at different times. Christ from necessity had to give "line upon line."

Children's interest could be aroused by giving as title—

ALL ABOUT A PARTY.

Seniors' thoughts could also be directed in the same direction.

Our interest in private and public assemblies.

The King's Party. No unknown, unimportant individual. Hence the party assumes special interest. What king would Christ's hearers most naturally think of? *David.*

We think of *God*, who is the greatest King of all. The Bridegroom? Christ. Get scholars to give a verse in Revelation where this marriage is referred to. Who is the Bride? The Church in its entirety, or *humanity.*

The Preparations. Getting ready. Killing of oxen and younger animals. Laying the tables. "I go to prepare."

The King's Invitations. Picture the excitement that would naturally prevail.

The Servants. "Such as were called among Romans 'inviters.'" They were invited *three times.* First, the formal invitation; then, as still according to Eastern customs, the reminder, or "bidding"; and the third time, the message "All things ready." An illustration of God's patience with Jews and world in general.

The King's Rebels. "How did these people receive the invitation? First with cool unconcern, then with contempt, followed by violence.

The Rebel's Reward. "His armies." Enumerate some of the things in nature God uses as "armies," besides the "armies of the sky" the prophet's servant saw.

The King's Guests. Was not to be disappointed. Where did He get them? Man can never in the end defeat God. "His purposes ripen." "As many as ye shall find." No limit. "God so loved *the world.*"

The King's Anger. King came to make them welcome. A sudden flash of grieved surprise crosses His face. He goes up to a man—the only one who shrank back. "Comrade, how did you get in like this?" Had not on wedding garment. His own fault. *Rule* of the house to wear *a wedding garment.* Expulsion. "The outer darkness." The lights from within seeming to mock the wretched, foolish outcast.

Here a splendid opportunity for teachers to ask the following four questions and elicit replies:—

1st, Have you received an invitation to the heavenly party?

2nd, Have you made any excuses or "light of it"?

3rd, Would you not really like to go?

4th. Are you getting ready?

"How shall I get ready." Answer: Get wedding garment.

"What is the wedding garment?" (See Rev. 19. 8.)

"Where shall I get it?" (1 Cor. 1. 30.)

"What shall I pay for it?" It is a gift (Rom. 5. 17).

C. SKINNER.

Y.M.C.A. BIBLE CLASS LESSON.

APRIL 1ST.

RESURRECTION.—*Ps.* 2; *Acts* 13. 30-38.

IF Christ be NOT risen from the dead, there is this sevenfold result.

I. *Christ is a Liar, for He said He would rise again.* Three times especially, He said He would rise. (1) When the Pharisees said that Herod would kill Him (Luke 13. 31). (2) When He took the twelve as they went up to Jerusalem (Luke 18. 31-33). (3) When He instituted the Supper of Remembrance (Matt. 26. 26-28).

II. *The Apostles are False Witnesses.* (1) Peter testified of the resurrection on the Day of Pentecost (Acts 2. 32); at the gate Beautiful (Acts 3. 14, 15); to the elders, scribes, rulers, and priests (Acts 4. 10); to those in the house of Cornelius (Acts 10. 38-41). The apostles, when they had been told not to speak of Christ's resurrection, continued to do so (Acts 4. 33; Acts 5. 29-32). Paul at Antioch did the same (Acts 13. 29-33). The apostles must have been fools and madmen to have hazarded their lives, if their testimony was not true.

III. *Preaching the Gospel is useless.* Shut up your churches, chapels, and mission halls.

IV. *Our Faith is in vain.* The faith that has made men pure, good, and true.

V. *We are yet in our Sins.* Still under God's wrath, the curse of the law; still exposed to judgment; still hastening to perdition—"if Christ is not risen."

VI. *Our Loved Ones are lost.* Vain are your hopes, mother, of seeing that loved boy or girl, or yours, husband, of seeing that beloved wife. Look at the cold clay, you will never see them again—"if Christ be not risen."

VII. *We are of all Men most Miserable.* The worldlings have their pleasures. But what have we? A bubble, a disappointment, a delusion, "if Christ be not risen."

But **we know** "He is risen."

This is the *heart* of Christianity. This is the *key-stone* of the arch; the *foundation* of the Church; the *main-spring* of Christian activity; the *lever* of power that shall move the world; and the *link* that unites all believers.

A. Testimony to the fact of Christ's resurrection.

B. The facts and truths it brings before us.

A. *Testimony to the Fact of Christ's Resurrection.*

There is the Testimony of the Soldiers who were set to watch, and who were bribed to hold their peace (Matt. 28. 11-15).

There are the testimonies of His followers. There are at least fourteen recorded appearances.

B. *The Facts and Truths it brings before us*

1. Christ has accomplished His work. 2. It tells us that God is satisfied. 3. He has defeated our enemies. 4. Our salvation is secured. 5. He is the First-fruits of those that sleep. 6. He is accepted for us and we in Him. 7. Our inheritance is guaranteed.

Sunderland. F. E. MARSH.

THE second Psalm relates to the *two* advents.

Its reference to the *first* is evident from Acts 13. 33, and Acts 4. 25-27.

The *first* advent does not exhaust the meaning, as is evident from the Psalm, vers. 8, 9.

Observe the majesty and lofty scorn with which the Psalm opens, and the calm tranquillity with which God looks upon the opposition of men.

Verses 1 and 2 were *in part* fulfilled at the mock trial of Christ (see Acts 4. 25-27). Note (1) *who* are the opposers —"kings and rulers," earthly potentates; those who hold authority; not the subjects, though they join in the strife.

Observe, too, (2) *how* they oppose—"set themselves," "take counsel,"—deliberation, combination.

(3) The aim of their opposition—"let us break," etc. Is not this at the root of all antagonism to religion? To have done with God. Yet, though it be "kings and rulers," and though they "SET themselves," and combine their powers, their aim being to cast off Divine restraint, "He that sitteth in the heavens shall laugh," etc. Sublime composure! Like giant cliffs which stand for ages, while the waves dash and break at their feet.

How does the Psalm apply to the resurrection? The powers of earth were leagued against Christ—the object was to upset God's purposes by destroying Christ.

With what majestic ease God puts down His foes. He *sits*, He *laughs*, He *speaks.*

The *exaltation* of Christ, as described in ver. 6, may be applied to His exaltation in heaven (see Acts 2. 33; Phil. 2. 9). Men combined to degrade Him; God, in spite of all, enthrones Him.

This Psalm furnishes infinite comfort and encouragement to God's people. They are associated with Christ, and share His triumph. "No weapon formed against *Thee* shall prosper," etc. (Isa. 54. 17).

As God's purposes concerning Christ were fulfilled, so also shall they be concerning His people.

Those who war against God are engaged in a hopeless struggle.

From the fact that men deliberate how to cast off God's bonds, it is evident that they are firmly rivetted and felt. And so they are; they are part of our very nature (Rom. 2. 15). If not, these men could cast them off without saying, "*let* us." It is easier to do right single-handed than it is to do wrong. Is it not evident, too, that men find some difficulty in casting off these restraints? Infidelity is an unnatural sin.

The wise course is pointed out in vers. 10-12. It is advice for subjects as well as kings. On "*kiss the Son*," compare 1 Sam. 10. 1; implies *acknowledgment* and *friendship.*

JAMES L. STANLEY.

A TALK BY THE TOWING-PATH;

OR, LEARNING TO TEACH.

"Learn of Me, for I am meek and lowly in heart, and ye shall find rest."

A SPRING afternoon—fields brilliantly green, the river flashing back the dazzling sunshine, the birds noisily mirthful with glad surprise that winter has gone already.

The people and the trees are not so thoroughly assured that cheerless Winter means this sudden disappearance as his final farewell, and they show their doubts by an uncertainty of attire, the people wavering between cottons and furs, the trees maintaining their bold outlines, but casting about themselves a summer-like gossamer sheen of foliage, serving to veil, but not to hide the perfect outline of trunk, branch, and twig.

People, for the most part, loiter lazily along, some oppressed by their winter clothing; others give themselves up to the new delights of Spring, and feast on the varied beauties so lavishly laid before them. One couple, evincing keen enjoyment by their looks and mien, are not letting their pleasure turn them into loiterers, though their set purpose seems to have as its object only the gaining of a shaded seat a little way back from the towing-path.

Ensconced in this, with an easy grace,—a grace not impaired in either case by any deforming prank of fashion,—they show their satisfaction by a hushed pause, an unspoken psalm of praise, from which the elder brings herself back with an effort.

A gracious woman, not lifted out of sympathy with the young, eager, impulsive character beside her by any over self-consciousness, but having rather an added tenderness of sympathy to bestow, from the fact that her own angles have been rounded off by more of life's experiences (teachably received), and her enthusiasm not frittered away, but solidified into quiet, strong intensity of character; while in the other a loving receptivity, having for its accompaniment a keen intellectual grasp of truth, gives a zest to their happy intercourse.

"Now for some wrinkles on teaching!" It came out with a jerk, as if from the fear that the precious opportunity might even now slip away before the object was attained.

"Oh, that is what we are to talk over, is it, in prospect of your Sunday class? But where do you get your word 'wrinkle' from?"

"If you mean as to derivation, I don't in the least know, and I don't suppose Trench gives it, and——" a slight tapping of the foot on a gnarled tree-root finishes the sentence.

"It certainly did not seem quite fair that I should go off at a tangent from our subject, when our time together is so short; but in reality I had not travelled very far away, for the thought struck me as you said the word 'wrinkle,' that perhaps the association of ideas was between the *brow contraction* and the *thought* of which that is expressive; and this set me thinking that there is but *one* Teacher who associates *learning* with *rest*.

"It is in His school, dear, that you are going to teach; and above all things, I would exhort you to be a *pupil teacher*. *Learn* of Him, and then *teach*. As regards *discipline*, enter into the meaning of the centurion's words, 'I am a man under authority, having soldiers under me'; and as regards the *teaching*, pass on to your class what has been taught to yourself. 'Cast *thy* bread' to them—that which has fed thyself."

"Yes, I know what you mean. That lesson has come forcibly home to me; but I feel that you do well to remind me of it; one cannot recollect it too well."

"There are very few things, I think, which we learn once for all, and God's great patience with us in this respect impresses me most powerfully. If one of us has laid hold of any truth, and found great enjoyment in it, we are apt to force it wholesale on others, and to be disappointed if the effect on them is not just what it has been in our own case.

"But God, though He has 'many things to say' unto us, sees that it is very often with us as with the disciples of old, we 'cannot bear them now;' so He holds them back, and gives His teaching only as we are able to bear it. I heard this described once by a friend in this way. She said: 'It seems to me that when God has a lesson, He brings home to me by some dealings of His providence, and my learning it depends on my own willingness. But He does not stop there. Perhaps the first time enough has been conveyed to me to be represented by the bare outline of a map; but the lesson is repeated, and this time more is filled in. The map is marked out now into counties. But a third, perhaps a fourth time, it has to be taught me; and each time more and more effectually, so that at last my map shows rivers, and mountain ranges, and towns.'"

"What a good thought, and how helpful to recognize God's loving plan in the oft-repeated lessons; for to see His hand in the teaching is, to my mind, half the battle.

"But is there anything in this which I can make use of in my capacity of 'pupil teacher,' beyond the lesson of not forcing my experience wholesale on others?"

"Yes, I think it has in it St. Paul's admonition to Timothy to 'show thyself a good workman' by 'rightly dividing the word of truth'; and this as to quantity as well as to quality. Let it be line upon line, line upon line, here a little and there a little,' not impatiently, but adapting yourself as much as may be to the individual capacity of your scholars, as St. Paul did in feeding the Corinthians with milk, and not with strong meat, which was then unsuitable for them.

"And this suggests to me another 'moral' from the map—Make sure that the outline, however faint, is *true*, otherwise there will only be confusion and failure when you try to fill in the counties. In other words, be very sure that it is the *sincere* milk of the Word with which you are feeding them, even the truth 'as it is in Jesus.' And let it all be in the spirit of the great Teacher, who surely meant not only 'Learn of Me because of My meekness and lowliness,' but also 'Learn of Me to be meek and lowly.'

"This lesson extends even to the tone of voice, which is powerful in its very gentleness; and my advice on this point would be, not 'Speak so loud that you can be heard above the shuffling of the feet,' but 'Speak so low that your scholars must stop shuffling in order to hear you!'"

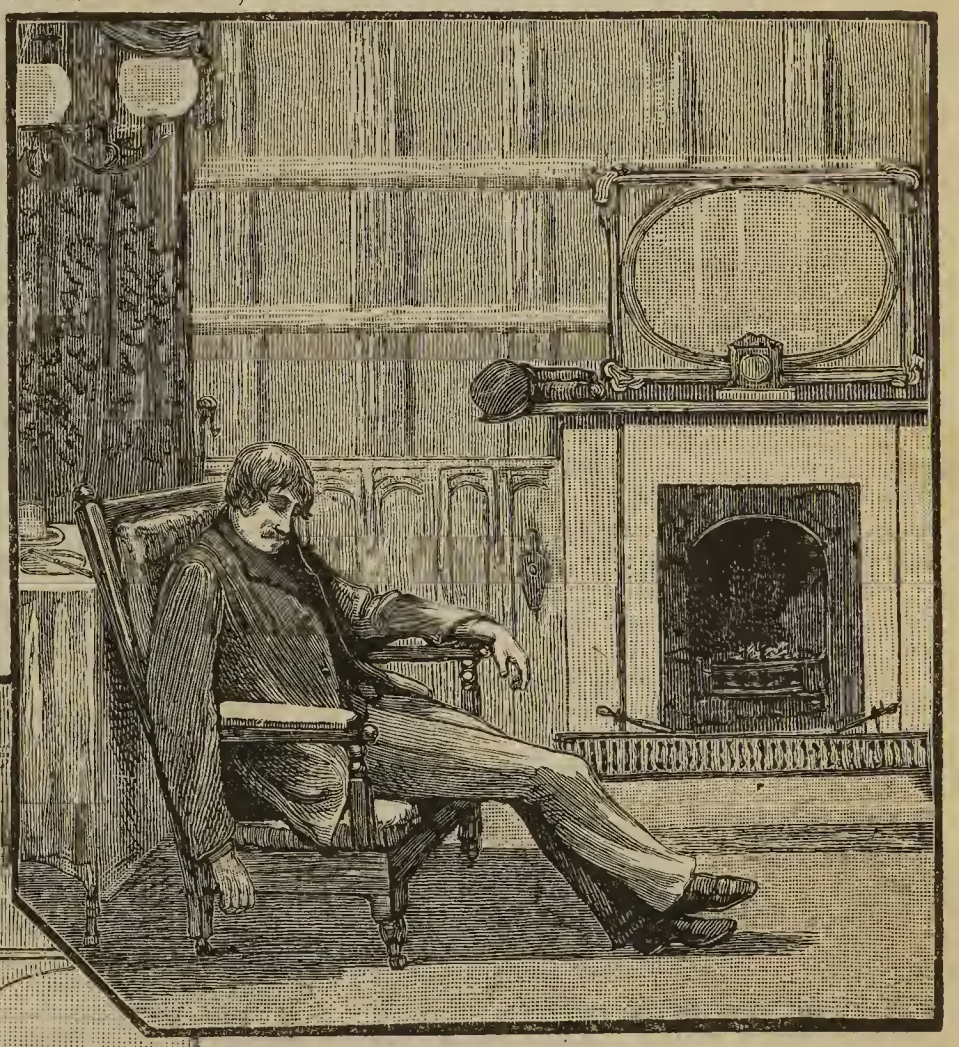
"I shall certainly try that recipe for making myself heard. But then there comes the question of getting it not only into the ears, but through into the *minds*, and further still, even into the heart."

"Very true! Well, as regards the minds, I would say, 'Do not be satisfied with simply giving a carefully prepared lesson, but keep on probing by questions to see that it is being received. And as regards reaching the hearts, I can only advise you to set it before you as your one supreme object, and then pray, pray, and pray!"

The young teacher did not lightly forget that talk. All her short life she had been eager, anxious, "go-ahead." Now, in the tender, chastened beauty of the budding spring, had come to her fresh thoughts of the gentle patience and wondrous forbearance of the great Teacher Himself. Even Nature echoed the words of her friend, for the leaves were not unfolded by the fierce glare of intense sunlight, but by alternations of warm rain and mild, glancing rays. Yes! she would work as like Him as she could; He would show her how.

And He did. The big boys who were noisy and truculent when injudiciously curbed, were tractable under the quiet rule of the young girl. Her low voice won their attention, her patience in teaching "line by line" ensured recollection, whilst the power of a prayerful spirit was felt, even if not fully understood.

Long years after, stalwart, hard-working men were restrained from crime by the memory of what that low soft voice had said, and more than one soul, travelling Zionwards, had first learned the Way in that Sunday class. The real secret of it all lay in earnest prayer. Ever since that day on the towing-path, the burden of souls had lain on the teacher's heart, a burden too heavy to be borne unless shared by Christ. So, whilst she had taught others, day by day she had been learning of Him, and not in vain.



MAR. 31, 1888. "A.1." ONE PENNY.

WEEKLY—Edited by MRS. STEPHEN MENZIES.

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," etc., etc.

"He lay sound asleep in an arm-chair by the fireless grate."

CHAPTER IX.

THERE are times in a man's life when everything seems to go well with him; he has, as he terms it, a "run of luck"; his enterprises are successful, his schemes prosper. In love and in war alike, he is victorious. Such a time, from the moment of his interview with Mrs. Alexis, came to Kenneth Graham. The world had just begun to look very black to him; he had almost parted with hope, he had seen no life before him but a life of daily self-denial, of hard, uninteresting drudgery; a life with the desire of his eyes taken away, and poverty penning him down, and the demons of despair and faithlessness, and almost atheism dogging his footsteps. All these things he had accepted as his daily portion, for he was just a young man with ordinary abilities and ordinary means, and, perhaps, a more tempestuous and easily-shaken nature than most. He was just a young man with a very calm exterior, and a great power of self-control; but all the more because of these was the citadel of his heart easily besieged.

"'You are old Ken,' he exclaimed, 'of course you are.'"

Graham had never felt worse than he did on the day when Mrs. Alexis sent for him; he saw her, he spent a few hours in her society, and, lo and behold! the entire scene changed. He was no longer poor, he was no longer hopeless, he was no longer loveless. Faith returned to him, he believed in a very good and merciful God, he thought the earth an excellent place, and was glad that he was still young enough to enjoy it.

The next day at his office, his fellow-clerks, it is true, remarked no special change in him; he was always kind and considerate to those about him, and he was neither more nor less so on this special day.

Young Martin, however, when he talked with his friend, wondered if his brain had grown in power, so ably did he discuss the great Firm's rather jeopardised condition, and so admirable were his suggestions as to the best means to adopt to avert ruin.

Graham felt that there was nothing at all now between him and Kate. Far from avoiding her, he might seek to see her daily—he could not spend too much time in the society of the woman who was to be his wife.

They were engaged, and strange as it may seem, from the moment of Kate's acceptance of him came the first faint cloud in the perfect blue of the young man's horizon.

In a weak moment, he had not given Miss Kennedy his full confidence. He had told her nothing about Jonas Alexis. This fact troubled him a little—he felt it would be very awkward if Jonas did return ; but there was very little fear of that—it was so absolutely impossible to suppose that a young man could live for fifteen years on the same earth with his mother and make no sign whatever of his existence to her. Graham quite inclined to the belief held by Mrs. Alexis herself, that her erring and unhappy son had done with earth, and would meet her in another world. Graham thought in his private heart that the world would be very well rid of a weak young man, who had never done anything to make it a wiser or a happier place, and he was very sure that he and Kate could do better with the half of Mrs. Alexis' fortune than Jonas could.

Kate and Graham were therefore engaged, and all her friends thought she had done very well, and the two trustees to her uncle's will, Mr. Simpkins and Mr. Martin, senior, who had now returned to see after his troublesome business, considered the girl remarkably lucky ; they both had the greatest possible respect for Graham, and there was no doubt whatever with regard to Mrs. Alexis' balance at her banker's.

And now the old lady did an extraordinary thing ; she sent for Graham again, and told him about her will.

"In my will," she said, "I leave my property to you. I make no mention of my boy, I do not even breathe his name ; I leave my property, my money, and this house, to you. I wish you to keep on Betty Carew as your servant, and when she is past work, you are to provide for her, and to see that she wants nothing. I leave you all my property on conditions which you know of. I do not mention the conditions in my will. The fact is, Kenneth, I feel more and more convinced that my poor boy has joined many other forgiven prodigals in the blessed city of God. I look to meeting him there, and I don't want his poor name, which has been almost forgotten in this world, to be dragged up again and talked over by the lawyers, who will feel it their duty to have numerous false quests made in search of him. I trust to you, Kenneth, and to that bright pretty girl who is to be your wife, and I feel sure, if Jonas does come home, that you will act as his mother would wish towards him."

* * * *

Not many days after this conversation, Mrs. Alexis died. She was found dead in her bed one morning by her faithful servant Betty, who cried and wept, and broke her heart after her.

In due course followed the funeral, and then the reading of the will. Both Mr. Simpkins and Mr. Martin were present, and the will itself was read aloud by Mrs. Alexis' own lawyer, a certain Mr. Davenport.

Kenneth, who had followed his old friend to the grave, and Betty Carew, were both in the room. No one was surprised at the contents of the will, for all present knew that Graham was to be the old lady's heir ; but a certain clause, almost at the end, was sufficiently unusual to attract a little attention.

"I give and bequeath not only all my own personal estate and moneys herein menjoined, to the said Kenneth Graham, but I give to him in trust, to be safely delivered to her on her wedding-day, a sealed letter for his wife. She is not to open the letter without her husband's special permission ; but she too is to accept it in trust, and is to open it on the day Kenneth Graham asks her to. Should it ever be necessary to open the letter, he and she together must look for a dying mother's curse, if they do not faithfully carry out the sacred trust imposed upon them in it. I desire further that Kenneth Graham reveals to no one, not even to his wife, what he knows of the contents of this letter, unless opportunity arises. I also desire Kenneth Graham to deliver this sealed letter to his wife on her wedding-day, not before."

"You are a lucky fellow, Graham," exclaimed young Martin in a tone of genuine envy. "An unhampered fortune of £30,000 and a jolly big house like this, are by no means to be despised in these hard times. You *are* a lucky dog,—the exact sum you wanted dropping into your mouth in the very nick of time ! How artfully you tried to conceal your secret about Miss Kennedy from me, and how badly you succeeded ! Well, Ken, I congratulate you ; the girl you are going to marry is as handsome and bright and pleasant as man could wish. With her fortune and yours you won't do badly, old man. I congratulate you from my heart."

Young Martin's good wishes were warmly echoed by the other gentlemen present, and Mr. Martin even threw out some strong hints with regard to taking Graham into partnership. But amongst all this chorus of good wishes one person was silent, and one person raised scowling and dissatisfied eyes to the handsome young man who took his honours so gracefully.

"You'll remember, Mr. Graham, about the letter," said Betty Carew, as Graham was leaving the room ; "the letter don't mean nothing, as you know and I know, and you'll give it to the lady sure and certain, sir, and you'll remember that a curse goes with the letter if it ain't obeyed faithful."

Here Betty bobbed a curtsey, put on a shrewish expression, and disappeared down a long dark passage.

"What a disagreeable body !" exclaimed young Martin ; "you are not going to keep her in your service, are you, Graham ?"

"Certainly I am," replied Graham. "I promised Mrs. Alexis I would see after Betty, and never let her want."

CHAPTER X.

ALL arrangements were made, and just in the most beautiful time of the year, just in the time when even smoky, dismal London partially decks herself in spring leaves and spring flowers,—just when the streets are least dirty, and the air is clearest, Kate Kennedy prepared for her wedding.

She was to be married on the fifteenth of May. Now it is well known that May is not considered a lucky month for weddings, and Alice, Polly, and Nellie were loud in their remonstrances with their sister. Why could she not put it off till leafy June ? they all cried ; but Kate was far too happy not to laugh at their idle fears ; and the sight of bridesmaids' dresses, of orange flowers, and all the finery and gaiety attendant on a happy wedding, caused these light-hearted girls to forget their little panic.

"After all," said Polly, "Kate is sure to be happy. We need not trouble."

"Only if anything does happen," continued Nellie, "we'll be sure to remark, all of us, that it was because our darling Kate was married in May."

"Well, don't let's remark it beforehand," said Alice, who was intensely attached to her sister.

Kate had made all her arrangements—the girls were to stay on in the pretty home she had provided for them, during the greater part of the summer, a certain Miss Beale, a little under-paid teacher in the school where Kate had worked, coming to act as their chaperon. Miss Beale was plain and middle-aged, and very firm, and Kate gave her special directions with regard to Polly, and trusted that all would go well.

It had been finally decided that for a year at least Kate's three sisters were to occupy the pretty home she had provided for them at Croydon ; and Kate and her husband, after a three months' visit to the Continent, were to settle down in the old house in Exmoor Square.

The girls were horrified at this idea ; but as Kenneth did not mean to give up his work in the city, Kate was determined that their home should be in a convenient neighbourhood, and her heart was far too light and happy just then to feel any dread of dismal rooms or dismal memories.

The night before the wedding came, and all was bustle and confusion at Croydon. Kenneth spent some hours there, and came up to town by a late train. It was nearly eleven o'clock when he got to Victoria, but late as it was, he took a hansom, and drove straight off to Exmoor Square. He expected Betty to be in bed, and let himself into the house, which was now his own, with a latch-key. The hall and staircase had been repapered and painted in preparation for Kate, but the lofty and dismal dining-room had not been touched, and Kenneth going in now, turned on the gas and looked about him with a certain expression of dismay. The room missed the genial presence of its late gentle owner. The wide grate, which had looked cheery and home-like when a bright fire burned in it, was now cold, forsaken ; the few shavings which Betty had thrust in as ornament being of the dirtiest and shabbiest description.

Kenneth turned on all the gas the room contained, and wondered if even Kate's presence could make it bright. The little house at Croydon was so flower-like, so fresh, so sweet ; this dismal old abode seemed to Kenneth to-night anything but a desirable residence.

"Ahem !"

The young man started.

Betty, looking more shrewish than usual, with an almost spiteful expression on her queer old face, had come noiselessly into the room, and was standing beside him.

"Why, Mrs. Carew," he exclaimed, "you quite startled me ! I came in for a moment to look round, as I shall not have time to make any arrangements here to-morrow. I am glad, however, you are not in bed, as I want to speak to you. I have made up my mind that the whole house must be repapered and painted, and, to a certain extent, refurnished. You must, therefore, be prepared to receive paper-hangers and painters. I wish I had decided on this sooner, as I cannot now choose the papers. I shall, however, put the house into the hands of Seely, in Oxford Street,—he has excellent taste. I can run round to him in the morning. Eh, Mrs. Carew ? did you speak ?"

"I was about to remark," said Betty, "that

it would be more decent-like to leave the old missis's room untouched; and as to my attic, if paper and paint goes near it, I sleep there no more. I don't hold with fresh paper and paint,—it's a waste of good money."

Kenneth looked down at the old woman, and laughed.

"Your room shall not be touched, Betty," he said, good-humouredly, "nor—nor—my good old friend's room either. Does that satisfy you? All right; then I will arrange it so. Good-night, Betty. Wish me good luck,—I am going to be a very happy man to-morrow."

"I have no blessings to give," mumbled old Betty; "you and the lady may have to go out as poor as you come in., I'm not a-saying nothing. You'll give the letter sure to your bonny bride to-morrow,—the letter that means a curse if it ain't followed."

Kenneth frowned; he felt inclined to say something hasty, but restrained himself.

"Miss Kennedy has engaged some servants, who are coming here in two months' time," he said coldly; "see that you receive them properly, Mrs. Carew. Good-night."

He strode out of the house, and heard Betty immediately locking and bolting the door. He had made nothing of her words, but, nevertheless, they impressed him.

"If I could wish anything different about my good friend Mrs. Alexis," he said to himself, "it would be that she had not saddled that old body on my bonny Kate and myself. Well, never mind, we are certainly quite happy enough to put up with her disagreeables, and I should not be surprised if Kate won her yet."

He walked on rapidly, for the distance between his lodgings and Exmoor Square was not very considerable. He let himself into the house, and ran quickly up the stairs to his sitting-room. The gas was turned full on here, and the room bore all the tokens of a room from which a flitting is about to be made. The bookshelves were empty, photographs had been removed from the walls, and a large portmanteau stood ready packed and labelled in one corner.

"But why is the gas up?" said Kenneth to himself. Then he started, and strode hastily forward into the room. A man lay sound asleep in an arm-chair by the fireless grate. A tray, which contained the remains of supper, stood on the table.

"What does this mean? What stranger has taken possession of my room?" exclaimed the young man.

Then he bent forward, and peered attentively into the face of the man who occupied the arm-chair. It was a fair face—fair in complexion—with soft, thin, curling hair about the brows, a weak semblance of a moustache, and scarcely any whiskers. It was ghastly pale, and thin almost to emaciation; the figure was slight, with narrow shoulders; the hands were well made, but were roughened by toil, and the tips of the fingers, naturally fine and tapered, were, for some reason, much disfigured. The man was dressed in a very seedy suit of clothes, which Kenneth's practical eyes instantly saw were never made for him.

He was sleeping heavily, snoring slightly as he slept; his whole attitude testified to the deepest exhaustion; and so sound were his slumbers that he never moved when Kenneth bent over him, and even exclaimed aloud in his astonishment.

Graham hesitated for a moment, then rang his bell. Late as it was his landlady was up; she answered the hasty summons in person, coming into the room curtseying.

"I'm ever so sorry, sir. I know I shouldn't have let the poor gent in; but he did ask me so piteous like to let him wait for you, and said as he was a werry old friend; and he seemed that driven with exhaustion, and his language was all that a gentleman's should be; so I brought him up, and made bold to furnish him with a little bit of supper, which, if not agreeable, needn't be made no charge for in the bills. Poor fellow, he did turn to at the food most famishing-like."

"Did he give you his name?" inquired Graham.

"No, sir; he said as his name would keep, and that you knew it werry well indeed. Oh, there now, he's waking. I'll leave you to have your talk out alone with him, Mr. Graham."

The landlady withdrew, and Graham, moved by an impulse which he could not quite understand, went over and shut and locked the door.

The sleeper stretched himself, yawned, and opened two sleepy and dull blue eyes. Suddenly he perceived Graham, and sprang to his feet. He was of small stature, and trembled a good deal.

"You—you—you are, of course you are?"

"I am what?" asked Kenneth, in a kind tone.

"Oh, yes, I know the voice, although you are so much altered; you are old Ken, of course you are."

"Kenneth Graham, that it my name."

"Then you don't know me? What then! am I so changed? Ken, don't you know me in the least?"

The man in his shabbiness and dust, and with that piteously careworn look on his still young face came up close. He raised his dim blue eyes to Kenneth's. For the first time Graham recognised an old memory in their glance. His face turned ghastly white, his heart began to beat heavily.

"You are,"—he exclaimed, and then he stopped.

"O Ken, old fellow, dear old fellow, I am that miserable, unlucky dog, Jonas Alexis!"

CHAPTER XI.

JONAS half held out his hand, which to his surprise and evident disappointment Kenneth did not take. His faltering appeal and his trembling confession had made a very deep impression, however, for Graham turned ghastly, a queer and dangerous light blazed for a moment in his eyes, he half opened his lips, and then shut them firmly. Jonas gazed at him in bewilderment. Graham's feeling was most perceptible, but it only lasted for half a minute; then, like a veil, that wonderful self-control, which was his strongest characteristic, covered every trace of feeling; the hand, which at the first shock had refused to grasp Jonas's, was now held out with cordiality.

"You startled me, Alexis," he said, in an apologetic tone. "Of course, I am delighted to see you; but, forgive me, I had long looked on you as one dead—in fact,—forgive me once more—I had forgotten that you ever existed."

"But I never forgot you, Ken," broke out the other man, still in that weak voice of piteous entreaty. "I—I—may I sit down, Graham? I am a bit weakly on my legs. I have often thought of you, Ken, old fellow. Don't you remember how we both used to go fishing together, and how both our mothers used to make hot cakes for our suppers? My word! those hot cakes of your mother's were delicious!"

"Sit in the arm-chair, Alexis," said Graham, in as cordial a tone as he could assume. "I will get you some food—you look very cold and famished."

"Some hot coffee or some tea would be more to my taste, Ken; I've had a rough life of it since, old chap,—a very rough life, and I've absolutely forgotten the ways of civilization; but something hot would be quite to my taste."

"I can get it for you," said Graham; "I've got a gas stove here, and can boil the kettle at once. Just sit where you are, and let me wait on you."

Graham moved about, and attended to the comforts of his guest. Emotion of all kinds had now on his side been put quite out of sight. Alexis looked at him anxiously, following his every movement with something of the wistful expression of a dog.

"How and why have you found me out?" said Graham presently, when Jonas had finished his first cup of steaming coffee. "You never wrote to any one for fifteen years; your friends thought you dead—your friends naturally quite forgot you. Why did you hide yourself from everybody? and why have you come back to-night?"

"You speak as if you didn't want me, Graham," said poor Alexis, in a piteous tone. "I did think you'd have been friendly, and remembered the old days when we went fishing together, and birds' nesting; oh, *can't* you remember when we found the kingfisher's egg?"

"It's a mistake for any one to go away for fifteen years, and make no sign," answered Graham, in a cold voice. "The man who does that must expect to find his place filled up. Why did you do it, Alexis?"

"Don't ask me; that is my story. You are not a bit like your old self, Ken; you speak almost cruelly. I *can't* tell you why I hid myself, only I had reasons—good reasons—the best. Don't press me for them, Ken."

"No, I won't," said Graham in a kinder voice; "only, why did you seek me out?"

"I thought you'd have been glad, for the sake of old times, and also I wanted to learn about my mother."

"Your mother? Oh!"

"Yes; I went down to the old place, and asked about her, but I heard she left ten or twelve years ago, and nobody knew where she was; scarcely any one even remembered her name, and no one recognised me, so I came away. Then, quite by accident, I came across your name in a paper, and I got your city address, and went there; and some one gave me this address, and I came here to-night. I see I'm not wanted, Graham, so I'll go; thank you very much for the hot coffee, it has warmed me. You are very much changed, Kenneth; you have grown into a very fine man, and I suppose you are thought handsome, and no end of a swell. Well, good-bye; I'm the last person to intrude. Oh! please, can you tell me anything about my mother?"

Alexis had risen from his seat, had moved a step or two towards the door, when he turned and made this sudden inquiry. The clock on the mantel-piece ticked perhaps six times before Graham answered. Then he said quietly,—

"I am sorry, Alexis, I know nothing about your mother."

"Oh, I thought you might; you have not seen her then for some time? You don't know whether she is living or dead?"

"I don't know whether she is living or dead; I have not seen her for years. Must you go?"

"I think I must. I'm a miserable, unhappy dog. I should have liked to have seen my poor old mother once again. Good-bye, Ken; shake hands for the sake of the past, old chum."

Kenneth roused himself; he did not take the proffered hand, but he spoke with some eagerness.

"Look here, Alexis, you seem to be terribly poor, would a £10 note serve you?"

"Oh, wouldn't it just? Why, I don't mind confessing, I am half starving."

"Here are ten sovereigns for you; use them carefully. Do you propose to stay in London?"

"I don't know. I'll look about for my mother for a little while. I don't quite know what I'll do."

"Your mother is sure to be dead. Hadn't you better go to America?"

"I don't know. I can't make plans to-night."

Graham thought again for a moment or two.

"See here, Alexis," he then added suddenly, "I am not quite so hard as I seem; any one can perceive that you are awfully down on your luck, and America is the best place for you. If you like to go, I'll help you to get there. If the fancy takes you to try the New World, you write to me to this address."

"I could drop in here, couldn't I, some evening?"

"No, for I shan't be here; I am going out of town to-morrow; but this address will find me. Good-night."

(*To be continued.*)

REALITY.

By M. F. Freeman.

PERHAPS a tighter grip of Reality is what is wanted now-a-days, to put more backbone into people generally.

There is a phrase, "the stern realities of life"; but the realities of life are not always *stern*. Solid they are, and sharply defined against the background of shadowy *un*realities; but they are not all repellent and grim. Yet there is a universal tendency in men and women to shrink from reality, a widespread antipathy to it, and in not a few, a cowardly retreat from it, accompanied by the attempt to drown all sense of it in unreality.

My object in this paper is to rouse young people to face life with more courage, to take hold of the real facts that go to make real life, more resolutely, and to more determinedly set themselves to turn both those facts and that life to a very real account. My object is, not because I am grim and "stern," and want to see you the same, but because I want to see you drinking deeply of Life's deepest delights, because these good things are what I myself have handled and tasted and felt, and because I know that they will touch your life into issues so sublime as will lift your whole being into quite a higher level of existence.

What, then, is reality? It is something altogether antagonistic to fickleness, to fiction, and to form; it is something that pierces deeper down, and soars higher up, than mere semblance; it is something so *certainly* solid that it endures beyond all affliction, and outlives all death.

Reality, kept outside your life, will be hindrance, trouble, doom; reality *in* your life will be strength; reality, when your life gets lost in *it*, will be everlasting glory.

Look at these three pictures: A youth, good-looking enough, good-natured enough, well-meaning enough, but a little fond—perhaps very fond—of the sweets youth is apt to suck. He does not much like work, although of course he is obliged to do it; he therefore despatches it with all possible speed, gets as many holidays as he can, and spends them smoking and amusing himself. He falls in love with a maiden, probably as unrealistic as himself, and they have an intoxicating, delirious courtship, and then get married.

After that, life gets a little more implacable and ungracious, and both have to buckle to a little more in earnest, and probably grow a little wiser under the discipline. But the old habit of shirking the Real and cherishing the Unreal clings; and if, with the sober side of life there comes a little leaning towards religion, a little sighing for something more stable, there is scarcely energy left to put out a feeler far enough to grasp it. And so old age creeps on with a smattering of pious sentiments, like a heap of withered leaves blown over the grave of youthful frivolities. Look now at No. 2:—

A young man, with as much fun and frolic in him as the last, nearly as inexperienced as he, but with a steady look in his eye, and a firm look about his mouth, as though he had some object in life, and thought life more worth living well than playing with. Not averse to holidays in the least, but with a relish for work as well—with a very real enjoyment of work, for work's sake, and for the sake of the good to be accomplished by work.

Probably he enjoys courtship, too, as much or even more than the other did, and gets married at the end of it. But afterwards life's sorrows do not come so hard on him,—though he may have deeper ones; all that he has set his hopes upon becomes more solid and more real for every storm that assails him; and his life grows on in beauty, in grace, in strength for himself and for those who have to do with him. Now take the 3rd picture:—

An old man, with the sunset rays falling on his grey hairs, all earthly joys fading away, and his life spent. Is that life lost? or is it gained? All its lines have been graven in the rock of reality; all its goings and its doings have been set and sealed therein; and now all its issues are gilded with as pure a radiance as that which falls on the old man's head.

The life is not lost; it is not even past, as earthly things are passing: its own little course outrun, it lives on in holy impulse, in earnest endeavour, in high aspiration in other lives; it lives on in its own grand possession of victory, conquest, and glory.

Where shall we look, to whom shall we turn, for this which is to give such point, such zest, such crowning joy to our lives? Let us look to the fountain head.

Jesus Christ is the very essence of all that is real in Life, in Time, in Eternity. And as I write His Name I think I feel the shrinking distaste and the yawning indifference with which that Name is always greeted by those who know not and will not prove its worth.

Have any of you ever conceived a passionate admiration for some man or woman? Have you sought every opportunity of becoming better acquainted and getting into closer relations with such an one? And if there was anything worthy of admiration in him or her, has it not done you good to admire? has it not given you many moments of ecstatic joy, and helped you to embody their goodness, into the bargain?

Now, if you want some one to admire, nay, to *adore*, look with me at the Lord Jesus.

I know that there is some humiliation to be gone through in surrendering oneself to adore Him.

It involves heart-searching, heart-cleansing, heart-pruning. But did you not for your earthly beloveds suffer something of this? Were there no weaknesses in you that were bared to their eyes when you put yourself into their power? And did you not endure the pang of letting them see you ashamed, for the exquisite joy of coming into such close contact with them? And shall not we have courage to let Him probe our secret sins and shortcomings, and show us ourselves in a true light?—Him, who will do this only to bring us to true repentance, only to cleanse us from all that is unreal and false, and will bring us into living receptive union with His reality!

I know there is some self-renunciation in thus coming to Him. Did you give up nothing—no cherished plans, no favourite pursuits, for your other friends? Perhaps the joy of your friendship was such, that all you denied yourself seemed as nothing, did not seem like giving up. And do you think that when you yield yourself to Christ, *His* friendship will be less absorbing, and that you will not find it a joy to give up for *Him?*

Now, what shall we say to these things? Let us think of St. Paul, and Luther, and Carey, and Moffat—men who have taken their lives in their hands for the sake of Him who is Reality—the Strength of Israel—men whose lives have been real and strong, accordingly.

Do not their lives and their strength inspire you to live and to be strong likewise? You know how they came to their estate; you know that it was by this path of humiliation and renunciation that we have just been sketching out.

One word of warning in conclusion. There are many in our days who are content with off-streams from the Fountain of Strength, streams perhaps mixed with much that is insidiously evil.

There are people who idolize Morals, Principles, and Influences, in the room of a *Personal God*, and who talk about the Good as if it were diffusive quality, with no Source and with no Centre in particular.

Now where there is an atmosphere there are substances from which that atmosphere emanates; where there is a diffused light, there is a nucleus, and substances which produce light. Do not let the subtle doctrine of Influences divert your thoughts from Christ; and do not let even the word Reality take the place in your mind of the Name which is above every name.

Take this real Christ; let Him disperse the clouds of unreality that envelop your life and your spirit; and let Him usher in, in His own living, indwelling Person, the advent of the real, and the lasting, and the true!

"*The longer I live*, the more I am certain that the great difference between men, between the feeble and the powerful, the great and the insignificant, is energy—invincible determination, a purpose once fixed, and then death or victory."—*Fowell Buxton.*

Many of our Cares are but a morbid way of looking at our privileges. We let our blessings get mouldy, and then call them curses.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

CHAPTER XXXIV.

"BLUE JACK" GOES HUNTING.

THE days were getting very short, and though the morning and evening twilights were long, it was evident that gloaming alone would soon be all the day around the *Oonalaska*, and that even this would speedily deepen into the dreary night of an Arctic winter.

The "forenichts," as the doctor called the time between darkness and bedtime, were spent on shore when the weather was fine. It was so pleasant to gather round the fire of wood and coals, and to converse about old times and old friends."

"Old times," did I say? Yes, verily yes, and there really was not a soul in the ship, except perhaps ancient "stagers" like the captain and Chips, who did not feel as if something like a score of years had passed away since last they stood on English shores. They felt also as if England were an immeasurable distance away, in another planet, for example.

The fireside in the officers' quarters of the English kashga was a very roomy one, as well it needed to be, for although one or two had always to stop on board on duty, the circle was never a small one. At its best, and on one of the *best* nights, it would run something like this: Captain Boyd in an easy chair at the left-hand corner, the ship's mother at the opposite, or right, next to her Katie, and between them—snuggled up on a bear skin — merry old Sally, all smiles and wrinkles, Jack or Dess in the centre, with the doctor by his side, and old Nat, young Nat, and Godfrey to fill in the gaps. Well, either Robin Hood or Little John always lay in front of the fire. They were not both allowed to leave the ship at the same time; but they took it in turns, and knew their turns too.

Boy Bates always went along lashed to the shore-going dog, for fear the noble animal might attempt to punish the Yack dogs for their extreme impudence. Boy Bates had many duties to perform. He was loblolly boy, doctor's mate, Jack's servant, cook's assistant, and kennelman, to say nothing of sundry little offices which he held in the saloon. In fact he was just what Jack called him, "Odd boy all round."

It was an understood thing, or rule, during those evenings round the kashga fire that nobody was to plan or think of any way of amusing either himself or his neighbours beforehand. They were Quakers' meetings in a measure, for no one spoke, or was expected to speak, unless the spirit moved him or her. The result was, that there was no restraint, and the conversation was much more pleasant and easy in consequence.

The only regular institution was Katie's zither.

Oh, how soft and sweet and dreamy the music sounded that she wooed therefrom! And as an accompaniment to her own simple songs, those of Miss Graves, Jack, or the captain, nothing could excel her touch. I fear that Jack looked at Katie as she sat playing, with the firelight flickering over her bonnie face and hair, oftener than he had a right to do. But we must forgive him, because we know something of his history.

"I do not know," said Miss Graves one evening, when Jack came in and told them the aurora was turned on and in full blaze, "which to admire most, the *cloud*scapes by day, or the wonderful aurora at night."

"The pillars of cloud by day, or the pillars of fire by night, eh, mother?" said Captain Boyd.

"Which I was at the Cremorne Gardens once," quoth Sally, "but la! bless you, gentlemen, they be nothink to those 'rorers, not to be compared.'"

"'*Fire—you, Godfrey,' said Jack.*
Bang! Bang!—Bruin fell, never more to rise."

"Can't hold the candle to them, Sally, can they?" said Jack.

"Ah! bless the purty dear gentleman, he's a-poking fun at his grandmother now. The 'rorers don't want no candle to light them to bed. Ah!"

"Yes, mother," continued the captain, "the cloud scenery is sometimes very grand at sunrise and sunset. I have seen cloudscapes in many lands, but nothing to these. The constant changing of shapes and lights, the fierce fiery brightness of the reds, and the glowing yellows dying away into duller purples and fading into grey!"

"Yes, Captain Boyd, but not always fading, for there are curtains of cloud hung over curtains, and the glory of one is often revealed through a rent in the other; or, just as all beauty seems to have gone from one, suddenly it is raised, or spread, or dissolved, and the dazzling beauty of the cloudscape behind is almost blinding to behold."

"Come out, Miss Katie, and see to-night's display," said Jack.

"Put your fur hood on, dear," said Miss Graves.

"I'll take care, mother, she doesn't catch cold. Any of you fellows coming too?"

None of "you fellows" cared to go, and, strange to say, Jack did not seem to be disappointed. In fact, he looked relieved.

The aurora to-night surpassed in beauty and brilliancy anything they had yet witnessed. The whole world appeared to be ablaze, nay, but the very universe itself looked alit, and the stars on fire, the colours exceedingly bright, changing in the twinkling of an eye from crimson to orange or green, and the movements of the curtains and garlands and lances were exceedingly rapid, while now and then, as a change, the light was spread out in swift rolling clouds.

Katie was entranced,—delighted.

All sounds were hushed. The very dogs were silent, and hardly a murmur came from the tents of the Innuits, who, truth to say, were all wrapped in skins and fast asleep.

They stood together there, Jack and Katie, for many minutes; but I do not think that our sailor boy's eyes were turned all the time towards the sky—perhaps hardly at all, for he was watching the play of the aurora on Katie's wondering face. He liked it best in the rosy tints, though in the wan lights she appeared in poor Jack's eyes—as he told Dess next day—something spirit-like.

"A ghost, or an angel, Jack?"

"Sometimes one, sometimes the other. And, Dess, when the blue glare fell on her face, I was a little afraid; *but*, Dess, when those rosy glints came, oh! lad, I would have given ten years of my life to possess the courage to tell her how I love her."

Well, Jack had meant to, but it fell through. He began thus:

"I could stay here for ever, dear Miss Katie. It's like listening to the nightingales at home, isn't it?"

If Katie had only said, "Yes, Jack, it is very like listening to the nightingales," Jack would have skipped for joy. But she did not. What she did reply was briefly this:

"Oh, dear! I shall be sneezing all day to-morrow! Come!"

"It strikes me, Jack," said Dess, when he was told this, "that your Katie is a mischievous puss."

Dresky was at the ship again early one morning. "Would Blue Jack like to follow a bear?"

I do not know why Dresky should have called our friend Blue Jack. But there it was. Perhaps some dim recollection of having heard in his travels sailors called blue-jackets may have been meandering through Dresky's mind, and hearing his messmates speak of Mr. Silk as Jack, Dresky may have added the word "blue" out of compliment, or believing it to be the correct thing.

"You don't mind it, do you, Jack Silk?" said Miss Graves.

"Me mind it!" cried Jack, murdering his grammar. "Me mind it, mother! No! but if old Dresky had called me Green Jack, he would have come nearer hitting the nail on the head. Don't you think so, mother?"

"Yes, Jack Silk."

"Humph!" grunted Jack. The fact is, he had been fishing for a compliment, and had not even secured a nibble.

"Would Blue Jack follow a bear?"

"Yes, Blue Jack would follow a round dozen."

"Would Blue Jack be ready soon?"

"In half an hour."

That was right. Blue Jack was only an Englishman, after all. Englishmen had to dress and eat and look for their guns; perhaps even wash their hands and perform various other ridiculous acts of effete refinement, before going on a big shoot. Dresky had the advantage of Blue Jack. Dresky, in this respect, was on a par with Robin Hood and Little John; to wit: when he awoke he had only to shake himself, and, lo! his toilet was complete.

"Yes, half an hour would do. Had Blue Jack any tabak?"

In half an hour Jack was over the side. With him went Godfrey. Robin Hood would fain have followed his adopted master, but this was not advisable, for Robin would have fought with the Yack dogs, or even attacked the bear himself.

Two servants also went with Jack; and each servant carried a knapsack, in which were several little articles of comfort and utility.

As usual, the whole village turned out to meet Blue Jack and his friend, and Dresky's wife even brought the baby for him to see.

"Funny little rascal," said Jack, touching its soft cheek with a gloved forefinger. "Funny little rascal!'

"Tabak!" said the mamma.

"Is it a boy or a girl, ma'am?"

"Tabak!" said the mother, smiling from side to side of her turnip-shaped face.

"Be good to it, ma'am; it is no end of an interesting little savage!"

"Tabak!"

"Good-morning, ma'am!"

Blue Jack lifted his sealskin cap, and grinning, bowed.

"Tabak!" said the mother, and off went Jack.

Over the hills and far away; across ponds and streams covered hard with ice; across moorlands clear as virgin snow.

Jack stamped his foot hard, looked at Dresky, and said "Good!" eliciting the following extraordinary answer:

"Goodee. Ah! Plenty goodee. By-me-by. Sun come; makee plenty hot. No goodee for Englis'man. Go downee, downee. Makee close, hah! Tabak."

By the words "makee elose" Dresky did not refer to sartorial art; he wanted Jack to infer that if he erossed this moor in summer, or tried to, he would sink, and the slime would close over his head, which was not pleasant to think about.

Jack and Godfrey were tired and hungry before twelve o'clock, for they must have walked fifteen miles at least since morning; so a halt was called, and pies were produced, and cheerfully discussed. Dresky had a share. But this did not suit him quite. A share, indeed! Why, he could have eaten all that the men carried! So as soon as Jack and Godfrey had finished dinner, and there appeared no chance of any more coming in his direction, Dresky unfastened his coat, and out tumbled a nine or ten-pound piece of seal steak, which he and the two Yack dogs discussed with intense satisfaction, and very speedily.

They had not left the spot five minutes, and disappeared round the brow of a hill, ere a huge bear came to sniff around. Bruin grunted, and gasped, and groaned, because they had not left him a morsel. Then he was struck with a happy thought. He was determined to dine somehow, so he took up the trail, and started off after the hunters.

Presently another ice-king started with an ugly roar from behind a rock not fifty yards away, and headed for the southern hills. Jack fired, and missed. Godfrey fired, and fur flew.

The bear howled and ran. He left brown blood-stains on the snow. The ehase continued half an hour, and all the while the hunters were being hunted. The wounded bear had by this time disappeared, so they followed his tracks, too eager to think of looking behind. They came at length to a snow-plain, and then they spied Bruin rolling in the snow.

"Fire—you, Godfrey," said Jack.

Both knelt. Bang, bang. Bruin's head fell, never more to rise.

But where was Bruin No. 2?—Bruin the avenger? Why, even as the young men knelt to shoot, he erouched for a spring. How terrible he looked in his ferocity and strength! How eunning, how determined! And he was not twenty yards away. It was Dresky that the brute had made up his mind to jump at. This was good policy. The bear had never seen white men before. He was not sure about them, *but* he knew the taste of an Eskimo savage.

The bear quivered all over, as a cat does when she sees a bird; and his great jaws made short snapping sounds. It was well for Dresky he stumbled at that moment, and fell, else never again would he have sat beside the lamp in his igloo, and nursed his oily babe.

"Look! look! look!" cried Godfrey.

"Honolulu!" roared Jack.

The bear was on them, and Bluc Jack actually fired into his mouth.

Over the hills and far away once more. And two other bears were bagged. Then, as evening was eoming on, knapsacks were unpacked, dinner was eaten, and just as the sun was sinking low on the horizon, Jack and Godfrey put on their fur-lined bags, and crept in to sleep under a hurriedly made tent. The others eurled up also, and the faithful dogs took watch and watch. While the one slept the other stood sentry. They were watching thus when the men lay down, and at early morning they were watching still.

CHAPTER XXXV.

SHE WAS SIGHING FOR THE SUN.

THE days got shorter and shorter, till at last the sun sank behind the southern hills, and the day after, if day it eould be called, was only two twilights joined together. There were no more gloamings after that, because for a whole week a wild storm of wind and snow swept over land and sea, and darkness reigned supreme.

The ship had been by this time completely covered over, and stoves and oil-lamps everywhere were kept burning.

"I guess, sir," said Chips one day to the eaptain, "those Innuit chaps are pretty well on their beam-ends for want of food. They can't fish, you see, in this storm."

"Why," said Godfrey, "myself and Jack Silk were just planning a little visit on shore."

"Well, Mr. Godfrey, I'll be glad if you'll both go, if you think you can weather it."

"Bob-a-link should go too," said Chips; "the young gentlemen shouldn't venture else. Them Aleuts, sir, can see in the dark like as the cats can. But there ain't a bit o' hurry, sir. Starving does them people good. It is a provision o' nature. They do eat so heartily, sir, that if bad times didn't come on them now and then, why, they'd die of—of——"

"Of surfeit?"

"Sore feet, sir? no; but indigestion, more likely. But first fine day, sir, as they say in the south, I'd have all the walrus and seal meat brought along here and stored and guarded."

"What, and then dole it out to them?"

"That's it, sir. Why, they're just like children at Christmas; they'd spoil their little selves, and never think o' the morning."

The three men, Jack, Godfrey, and the Aleut, wrapped in their furs, looked more like bears than anything else as they left the ship's side.

There was a blink of starlight, and the snow had ceased to fall, but the wind had not gone down, and the drift at times on the ice was a continuous smother. It cut the breath short away from the lips, and it cut the very words away.

Where was the village? Where the tents and kashgas? Were those hummocks of snow, dimly seen in the uncertain light, the abode of human beings? Yes, for look! the blue smoke is curling up from the roof of the Innuit meeting-house.

Oil, and oil only from great smoky lamps would have been preferred by these savages as a means of light and heat; but they had been persuaded to make a sacrifice to civilisation, and have a fireplace and chimney. It was evident that they did not know much about its management, for the smoke was so dense when Jack and his friends got inside, that they eould see nothing.

But matters were soon put straighter, and as the blaze roared up the chimney, it took the smoke with it, so that it became possible for those inside to see each other's faces.

"Well, Dresky, old man, how have you been enjoying yourself?"

"Makee tea, drinkce tea; plenty mooch sleep, plenty mooch puff-puff."

"Enjoying the *dolce far niente*, eh?"

"Take eatee too plenty."

"Well," said Jack, "it is a good thing you have plenty in such weather as this. What will you do," he added, "when all your food is done?"

The Aleut Bob-a-link translated and Dresky replied—

"Plenty shipee. No go bad. Ha! ha!"

"It is pretty evident," said Godfrey, "that these savages aren't very frugal, and that they depend upon us when their stores are done."

"Well, we'll make them work for their living, though I suppose they would rather sleep."

Assuredly activity could not be alleged as one of the crowning virtues of these savages. They lay or lolled two or three deep on the raised seats and on the floor-skins all round the kashga. The body of one made a capital pillow for the head of the other. Some slept and snored; the eyes of others were half open, and they appeared to be in a kind of dreamy daze, while the most energetic of this dusky crew sat half up and smoked crazy pipes of wood and clay.

Suddenly there was the storm-muffled barking, or yapping rather, of the dogs outside. One or two rushed in, jumping madly over everything.

This was the signal for a general awakening; the Innuits "pulled themselves together," as Jack phrased it, and sat up. Then first in came Dresky's wife and presented him with two dishes—one containing tea, another a terribly Irish stew. Other wives entered and followed Dresky's wife's example. Jack asked kindly after the baby; Dresky's wife said "*tabak*," which seemed to relieve her feelings, and then she retired.

The white men were not sorry. It was really getting warm in here, and the odour of that Irish stew was not fragrant.

Dresky nodded to Jack and offered him tea.

Jack shook his head. The bowl also passed Godfrey untouched, but the Aleut did more than justice to it—in fact, he drank it all. Good-natured Dresky said never a word, but presently went to his family tent to replenish.

It was evident that this tribe of Eskimos had some pretensions to civilization, else tea would have formed no part of their diet.

Presently back came Dresky, and with him about a dozen dogs, who at once began to fight and snarl over some seal-meat that lay in a corner. The inside of the tent was less agreeable to Jack's feelings now than ever, so, after giving Dresky orders to come off as soon as the weather should moderate, he and his companions left.

"I only wonder," said Jack, as he was describing his visit to the kashga, "that these creatures do not follow the example of the bears, and go to sleep in a hole until the sun reappears."

"Bob-a-link tells us," said Captain Boyd, "that they are a tribe of what we might call Bedouin Innuits, and it is pretty evident that they have settled here because they or their chief, Dresky, seem to be acquainted with the generous habits of white men."

"Yes; they expect we will share our food with them all winter."

(*To be continued.*)

TALKS WITH MARRIED FOLK

ABOUT THE MANAGEMENT OF INCOME.

By Phyllis Browne.

No. 3.—When and How to Save.

THERE is always a danger when we begin to enter into practical details about saving, that we shall harm some people quite as much as we may help others. For in matters connected with money and expense, so few persons know how to be reasonable.

There are a great many men, for instance, who are doubtless finding it difficult to pay their way, and therefore are very excusable, but who still, when they see in magazines or periodicals, what is very common in these days, directions for making all sorts of wonderful dishes out of almost nothing, say,—

"Why does not my wife contrive to economise as does the woman who wrote these receipts?"

And so they go home, and are cross and disagreeable, and inclined to think their wives incapable persons, because they require necessary money for necessary expenses. Yet all the while, if the truth were known, the poor wives are almost wearing out their lives, and nearly breaking their hearts, in trying to do the best they can.

In household management it ought to be clearly taken for granted that the old proverb is true, "Circumstances alter cases." It does not follow that because one woman is clever enough to provide dinner for a family for a penny, that therefore the woman who pays twopence for a similar meal is not equally clever, and equally doing her best. The two women may be so differently situated, that to compare them is unfair.

Thus the woman who lives near a large market, where she can buy food at wholesale prices, is much more favourably situated than is the woman who has to purchase her goods at large, expensive shops; the woman who has plenty of help, or whose children are grown up, and whose daughters have learnt to assist in the house, is much more likely to distinguish herself than is the woman who has only her own pair of hands to trust to. The woman who has nothing else to do but cook and prepare dainty morsels is much more likely to provide appetising meals than is the one who has a baby to look after, or any number of stockings to darn, small garments to repair, or a sick child to nurse; the woman who has a garden into which she can run at any moment to get a carrot, an onion or two, or a bunch of herbs, or she who has a store of odds and ends at her disposal, can much more easily and cheaply make a savoury dish, than can the woman who has to pay hard cash on the spot for every ingredient. Last, but not least, the woman who is strong and in vigorous health is much more likely to have energy for effort than is the woman who is weakly and ailing.

Before we consider ourselves competent to judge of another's performances, therefore, we ought to know thoroughly every circumstance of the case.

But the writers of clever recipes know none of these circumstances. They simply tell what *can* be done when everything is favourable. It is quite right and proper that they should do this; their hints may be most valuable in informing people how to make the most of the means at their disposal. But if, instead of being used as hints, they are converted into standards of conduct, by which the work of other wives, mothers, and sisters is to be judged, then they are turned to a bad use, and the chances are ninety-nine to a hundred that they are misunderstood.

I never hear extraordinary statements made of the successes certain women have made in housekeeping, doing wonders with trifling sums, but I think of a certain bonnet which was brought out one day by a friend for my inspection. It was a marvellous bonnet, gorgeous to a degree; trimmed with handsome silk, an elegant feather, and, if anything, rather too much lace.

The peculiarity about it was, however, that it was said to have been bought for sixpence.

"But surely," I said, "the straw shape cost more than that?"

"Oh, the shape was an old one; I brushed it up," was the reply.

"And the silk; it is lovely silk, rich and thick. How much did it cost?"

"I count nothing for the silk; I had it given me by an old lady, who bought it in Paris."

"And the feather?"

"The feather I found when I was turning out a box of trimmings in the garret?"

And so on, until in the end it turned out that the sixpence, which was supposed to be the price of the bonnet, had been spent only upon head lining and elastic!

A good many of the wonderful achievements which make a great noise are of this nature, and we never ought to accept them without putting with them a very large grain of salt. For here is a truth from which there is no escape—in this world we never get anything for nothing, we always pay its price, either in money, time, skill, self-respect and independence, strength, or feeling. And though there is no doubt that good management and skill, aided by experience, can accomplish marvels, they cannot do everything; they will not enable any one to provide handsomely for a family on nothing a year, and leave a balance in the bank.

As a great American writer once said, "Nothing from nothing is one of the laws of the universe"; and when we hear that a woman has kept open house, entertained the parish, brought up a family, dressed her children handsomely, and spent scarcely anything, common sense and experience tell us that there have been some special circumstances which have not been brought to the front.

If, therefore, there are any husbands or wives who read these lines, and who feel painfully conscious that though they have tried hard, they have still been weighed in the balance and found wanting, by the friends and relatives who ought to have been most appreciative of them, I should like to say one word to them.

It is this: "Have you done your best? Does your conscience tell you that you have tried to lay out your income and manage your household 'as under the great Taskmaster's eye'?" If to this question you can answer, "Yes," do not waste a moment's thought in troubling as to what people say."

Household management which has to be accomplished on the lines of the strictest, closest economy, is often very dreary business; it consists in a constant niggling at small things, which is very wearing, and which is apt to take the spirit or the heart out of those who begin by being most hopeful and energetic.

Still, those do well who do their best. A weary housekeeper once wrote some lines which will find an echo in many a woman's heart. They were these:—

"When I lie in the green churchyard,
With the turf upon my breast;
Say not, 'She hath done well or ill,'
But just, 'She did her best.'"

Any one who can say this honestly, ought to feel quite indifferent to what others may say of her.

After this long proviso, we come once more back to the question of "When and How we are to save in our Household Expenses," or in other words, "What shall we do to make a little go a long way?"

Curiously enough, experience teaches that by far the most effectual means of getting much out of little is to act on the advice already given in these papers; that is, draw up an estimate of how much we can afford to spend, and then plan our expenses beforehand, so that they shall come within the prescribed line. People who do this frequently find that they can provide liberally, and yet keep within bounds, while, if they simply aim at never spending a halfpenny when they can help it, they yet somehow exceed their means. So many people have an idea that economy means simply refusing to spend; locking up your cash-box, and doing without whatever is going.

This is a mistake; economy is not merely saving, it is wise spending; and wise spending is generally broad, liberal spending. This sounds dangerous doctrine, but it is true; and here is an example. The people who buy their goods at the dearest rate are the people who buy in the smallest quantities.

Thus the housekeeper who buys her coal by the half hundredweight receives coal of an inferior quality, and pays for it at a higher rate than does the well-to-do housekeeper, who, when coals are at their cheapest, buys a large supply to last her through the winter. The housekeeper who buys sixpenny worth of potatoes at a time, will probably pay twice as much for them as will the housekeeper who lays in a sack at the best season. So also with eggs.

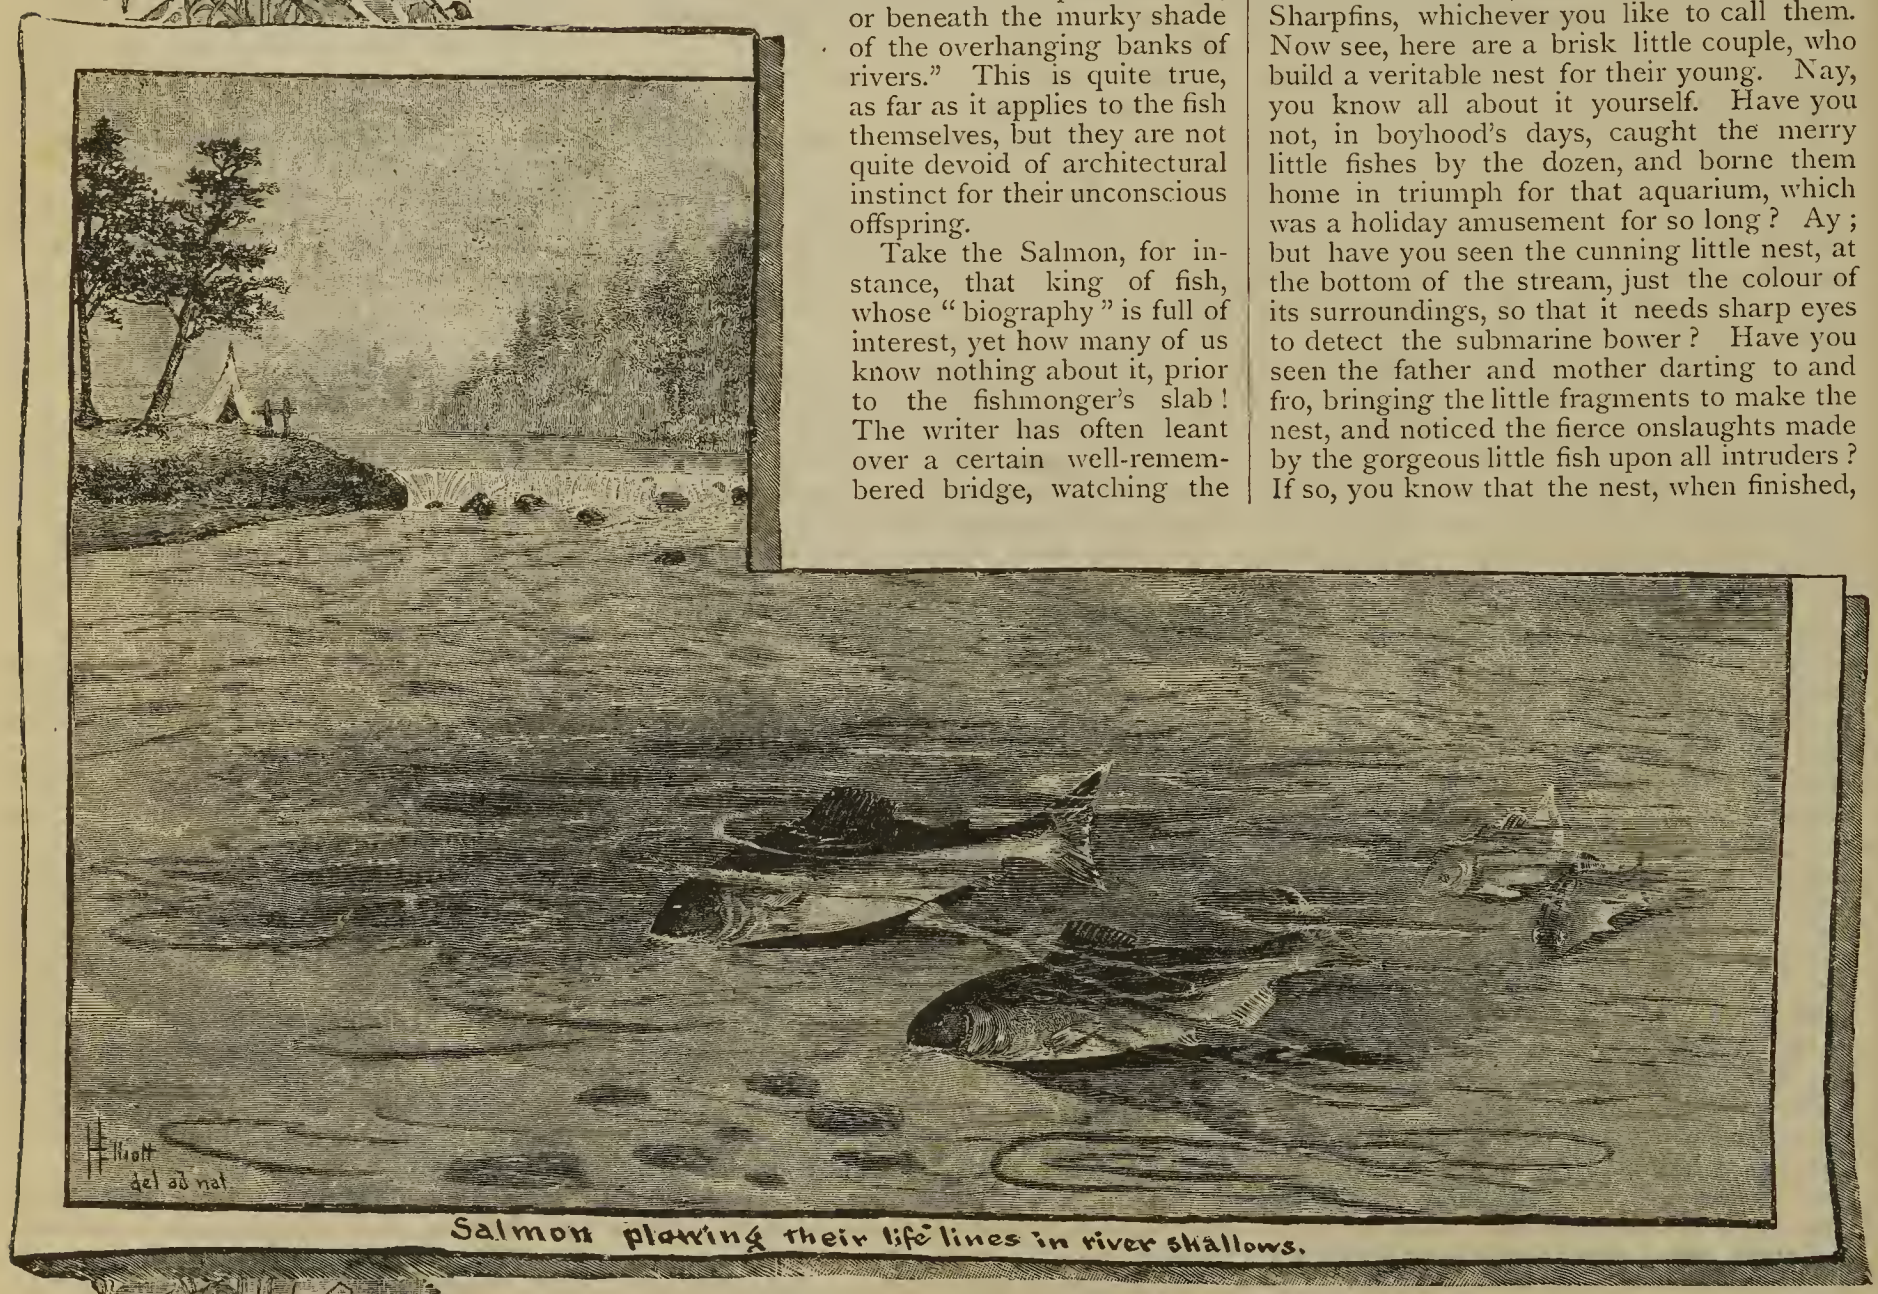
How very often in winter time we hear housekeepers say, "I cannot afford puddings with eggs, they are so dear at this time of year. When I use them I feel as if I were using money." True. Buying them at winter prices they are most costly. Yet they were not dear two or three months ago; and if then a quantity had been bought and preserved for winter use, either in lime water or in common dry salt, there would have been no need to abstain from puddings made with eggs now, and there would have been plenty of eggs for cooking purposes, although maybe not for boiling or poaching.

At any rate, eggs thus preserved would be quite as fresh as those bought at the shop; while we have the best authority for saying that even when eggs are dear, they are, considering the amount of nourishment they contain, cheaper than the cheapest meat.

[We regret that we have not room for the remainder of this valuable Article. It will be found in our next.—Ed.]

INSTINCTIVE ARCHITECTURE.

No. 3.—WATER WORKERS.



IN the preceding Numbers, we have already talked together concerning some of the Instinctive Architects of earth and air; to-day we shall look at some of the water workers, and note the wonders of their homes and haunts.

Fish at once come to the front, but an authority on the subject has remarked that *they* "construct no dwelling, merely sheltering themselves from danger amongst the cavernous depths of ocean, or beneath the murky shade of the overhanging banks of rivers." This is quite true, as far as it applies to the fish themselves, but they are not quite devoid of architectural instinct for their unconscious offspring.

Take the Salmon, for instance, that king of fish, whose "biography" is full of interest, yet how many of us know nothing about it, prior to the fishmonger's slab! The writer has often leant over a certain well-remembered bridge, watching the times, or "freshes," to change from place to place. From too many of our rivers the noble fish has been banished, because of the pollution of the water by our towns and manufactories; but it is still far from extinct in our land. It inhabits all the seas round Great Britain, as well as the North of Europe and Asia. It penetrates up the Elbe into Bohemia, up the Loire as far as Luz, and also ascends the Rhine into Switzerland, where the Schaffhausen Falls check its onward career.

From the lordly Salmon we turn to the little Sticklebacks, Tittlebats, Pricklefish, or Sharpfins, whichever you like to call them. Now see, here are a brisk little couple, who build a veritable nest for their young. Nay, you know all about it yourself. Have you not, in boyhood's days, caught the merry little fishes by the dozen, and borne them home in triumph for that aquarium, which was a holiday amusement for so long? Ay; but have you seen the cunning little nest, at the bottom of the stream, just the colour of its surroundings, so that it needs sharp eyes to detect the submarine bower? Have you seen the father and mother darting to and fro, bringing the little fragments to make the nest, and noticed the fierce onslaughts made by the gorgeous little fish upon all intruders? If so, you know that the nest, when finished,

Salmon playing their life lines in river shallows.

fish, then divested of their shining silver, and coloured dull copper and rose, moving to and fro in the shallows, preparing a hiding-place for their eggs. By persistent rooting, a trench or furrow some six or nine inches deep is made on the gravelly bottom, and in it the eggs are deposited. Then the gravel is replaced, and the parents depart, having done all that nature requires of them for their young. The ova remain covered by the gravel until March or April, when they vivify, and finally, out come the tiny, colourless fish, so helpless that they cannot feed themselves, and carry clinging to them a small portion of the egg, which nourishes them by absorption.

By the way, several of our bird architects were great travellers. We may note, in passing, that the Salmon is a sturdy voyager too. Up and down our rivers, year by year, he goes, taking advantages of flood

will be about the size of a nut, and the bright orange eggs as fine as poppy seed. Careful as these little creatures are to make a safe nest, they will readily eat their own eggs if they are scattered amongst them.

The Common Stickleback is naturally a fresh-water architect, though he can be educated to live in a salt-water aquarium; but he has a marine cousin, the Fifteen-spined Stickleback, who is a bit of an architect too. The jaws of this creature are much elongated, giving it an unpleasant aspect, which has earned for it the popular name of Sea-adder. A well-known writer on British Fishes, quoted by Rev. J. G. Wood, gives the following interesting account of a nest made by these little fish. He says:—

"The situation selected was the loose end of a rope, from which the separated strands hung out about a yard from the surface, over a depth of four or five fathoms, and to which the materials could only have been brought, of course in the mouth of the fish, from a distance of about thirty feet.

"They were formed of the usual aggregation of the finer sorts of green and red seaweed, but they were so matted together in the hollow formed by the untwisted strands of the rope, that the mass constituted an oblong ball of nearly the size of the fist, in which had been deposited the scattered assemblages of spawn, and which was bound into shape with the thread of animal substances already described, which was passed through and through in various directions, while the rope itself formed an outside covering to the whole."

So much for the finny architects; we now turn our thoughts to those less highly organized creatures, who do still more wonderful building work.

Amongst our architects of the air, we noticed some miners. In the watery world, still more wonderful excavations are revealed. The *Pholas dactylus*, for instance, commonly known as the Piddock, can drive its way into the chalky rock by means of a rotatory movement of its shell. When the creature has completely buried itself, it ceases to burrow, and protrudes its siphon through the opening at the top in search of food. The Ship-worm, or *Teredo navalis*, is so powerful a burrower, that for long he was a veritable terror of the sailor. The writer has picked up good-sized pieces of timber, and found them as light as honeycomb, pierced through and through with a series of long, narrow tunnels, set quite close to one another. The slight pressure of the hand was sufficient to crumble the mass almost to powder. This worm commits terrible devastation on wooden ships, and all submerged wooden structures, many piers having been entirely destroyed by it. It is found that a coating of rust prevents the worm from beginning its work. Hence such portions of wooden piers as are submerged, are now frequently studded with short, broad-headed nails, between which the rust quickly spreads. Iron piers and copper-plated ships are now being so generally used, that the poor Teredo must feel himself in danger of being thrown out of work! When removed from its burrow, the creature is about a foot long, half an inch in diameter, and of a greyish white colour. Its burrow is wholly or partially lined with shell; its form and method of manufacture have been considered worthy of imitation by no less a person than Sir J. Brunell, and in no less an enterprise than the Thames Tunnel.

Those of my readers who are familiar with the Stickleback in his fresh-water haunts, are sure also to know the Caddis-flies, so delightfully familiar since the "Water-babies" became a household book. In its larval state, the Caddis, being a dainty much desired by the occupants of the stream, conceals its fat white body in a tube, ingeniously formed of odd scraps and fragments, and left open at both ends. Little bits of stick, broken shells—sometimes even shells with living occupants—grains of sand, anything, in fact, which will conceal the Caddis, and not hinder locomotion, is appropriate.

Another tube-builder, but of a different family altogether, is a favourite with those who note the lovely creatures which have their home on the sea-shore, between high and low water mark. The shell-binder, or Terebella, is often to be seen on our sandy coasts, with its long tuft of tentacles protruding from its shelly tube. The tentacles will speedily disappear if touched; if you desire to find out where they have gone to, off with your coat, and prepare for warm work. The worm has retreated to the end of his foot-long tube, which is pretty certain to be carried round a bit of rock as a holdfast. The tube is tough enough to bear a good hard tug; but it will break rather than permit the dislodgment of its entire length. The Terebella retires to its farthest extremity, and unless you are exceptionally active, the returning tide will drive you shorewards, baffled and *minus* your worm.

One pretty tiny tube-builder, a special favourite of my own, I must introduce to your notice here. Put your eye to this microscope; we have a good inch lens on, so our little architect will be plainly seen. Don't shake the table, for he is a modest fellow, and objects to work in public. There, he is quite unconscious of your presence, and is working away. "Wheels on his head?" Well, apparently so; he belongs to the family of Rotifera, or wheel-bearers; but in reality the wheels are only hairs, or cilia, which lash backwards and forwards so rapidly in the water that the effect of rotary motion is given. That tube in which he lives is home-made; our friend is a brick-maker by trade. Those hairs make a current in the water, and draw small floating particles of animal or vegetable matter into their eddy. These particles are

The Sub-marine bower of the Stickleback.

captured by the brick-maker : part go for his food, and part pass into the "brick mould" just below his "wheels," where they gather until a tiny pellet is formed. Then the active worker leans over, and deposits the "brick" upon the edge of the tube. Sprinkle a little finely powered carmine or indigo on the drop of water, and ere long you will see a red or blue brick decorating the edge of the tube. One ill-judged movement, and the brick-maker gathers up his tools, and in one instant retreats into his tube like a "Jack-in-the-box," not to reappear until we have had ample time to repent our rashness, and exhaust our stock of patience.

But all our water architects pale before the wonders of the coral polype, whose colossal workings are the marvel of tropical seas. These tiny creatures are devoid of all elaborate structure themselves, being cousins of the sea anemone so familiar on our coasts ; but they have the power of secreting, from the surrounding sea, a hard substance of the nature of a skeleton.

The "coral islands of the Pacific" are an oft-repeated phrase ; a few details about them are sure to be welcome. The reef-building corals are shallow water forms, flourishing between low-water mark and a depth of from twenty to twenty-five fathoms ; the polypes are most active about ten fathoms down. The distribution of coral in the seas depends mainly upon the mean temperature of the water ; the polypes will not live where the winter temperature of the water is lower than from 66° to 68° Fahrenheit. Therefore coral is practically limited to a zone of eighteen hundred miles on either side of the equator. The metropolis of the reef-builders is amongst the Pacific Isles ; but coral reefs are also found in the Indian Ocean, the Persian Gulf, the Red Sea, along the coast of Zanzibar and Madagascar, round the Mauritius, in the Gulf of Panama, along the shores of Florida and Brazil, and amongst the West Indies.

The coral-reef formations may be classed under three heads, which, as we shall presently see, are stages in the development of the same reef.

Fringing reefs are those in shallow water, in the immediate neighbourhood of land. They either surround an island, or skirt along a continent. No channel of depth is found between them and the land, and on the outer edge they slope gradually down into the ocean.

Barrier reefs also skirt the land, but at a much greater distance. The channel inside them is generally deep, and the seaward side indicates profound depths. Along the north-east coast of Australia there is a great barrier reef, over one thousand miles in length ; its average distance from the shore is from twenty to thirty miles, the depth of the inner channel is from ten to sixty fathoms, and the sea outside the reef is sometimes over two thousand feet in depth.

Atolls are circular or ring-shaped reefs, which enclose an expanse of water, no land. Sometimes the whole ring is filled in by the coral, as is the case with Whitsunday Island.

The coral polypes can only work between the limits of thirty fathoms below the surface, and low-water mark. How then does it come to pass that we find coral reefs of enormous depth, and also some raised well above high-water mark? The latter problem is easily solved by the action of the sea, which breaks off great pieces of coral, and washes them up by the action of the waves. The crevices left by the polypes are filled by a deposit from the sea, some of the coral is ground into sand, by degrees the substance is disintegrated, and becomes soil, dead fish are cast up upon it, and sea-birds make it their resting-place. Then a seed is wafted to the tiny new-born island by a shore wind, or dropped there by a bird, and lo ! the vegetation once begun, it is but a question of time as to how soon the work of the coral polypes shall become a fairy isle of the sea.

The depth of the coral reefs can only be explained by the slow subsidence of the sea bottom on which they build.

Take, for instance, an island surrounded by a fringing reef. The central peak rises high above the level of the sea, whilst at its base the little polypes build steadily on. Time passes ; the coral should now have reached the level of low-water mark, but no ! slowly, gradually, the island and the submerged land round its base are sinking, sinking, and fresh generations of busy polypes build on ever upward, the work of their predecessors sinking further and further below. As the peaked island sinks, the distance between the land and the reef widens, and the channel is deeper year by year. The subsidence continues, and the polypes still build on, until the island round which they circled has vanished from sight, and the depression has ceased. Then the patient builders, who have seen generations of toil sink unnoticed in the depths of ocean, at last prevail ; the low-water mark is reached ; the reef which was only formed because of the island, is now an *atoll*, the sole proof that the island did once exist. It is needless to point out the glowing lesson : the individual work lost in darkness and oblivion, but the grand resultant of the force of all standing firm and sure.

Better to be a coral-worker, a nameless part of one glorious whole, than a free floating cell, with no future, only a trivial present work.

In the two previous papers we glanced at the commercial value of our Instinctive Architects. We noted the value of the Beaver's fur, and the Edible Swallow's nest. The work of a cousin of our reef-building coral polype, an inhabitant of the Mediterranean, is also a commercial article.

Amongst the islands of the Mediterranean the coral beds vary in depth from thirty to one hundred fathoms, and are found from two to ten miles from land. The best fisheries are along the coasts of Tunis, Algiers, and Morocco. Unlike the reef-building polypes, these prefer a muddy bottom. The polypes are pretty milk-white creatures, and were for long ages believed to be flowers ! From the Middle Ages, the right of controlling the Mediterranean coral fisheries has been a bone of contention. Italy, Spain, France, England, have all had their turn, and now again they are under the French rule. Two kinds of boats are used—one large, of from twelve to fourteen tons, with ten or twelve hands ; the other smaller, about three or four tons, with a crew of five or six. The large boats, dredging from March to October, gather about seven hundred pounds of coral, the small ones about four hundred and fifty pounds. The Algerian coral beds are divided into ten portions, one of which is dredged each year ; it is estimated that the coral takes ten years to grow. It is not easy to obtain any official returns of the value of these fisheries, but in 1878, those on the Algerian coast alone yielded raw coral to the value of £13,000. The finest rose-pink coral is worth from £80 to £120 per oz. ; the small red pieces cost about £2 per oz. ; and the little fragments used for babies' necklets, about 5s. per oz.

STRAIGHT PATHS AND PITFALLS.

By the Rev. J. Hiles-Hitchens, D.D., F.S.Sc., Author of "*Ecce Veritas*," etc.

The Foot ; or, Caution in Walking.

WE come now, in our study of man, to the foot.

It is divided into three parts, denominated in science the *Tarsus*, *Metatarsus*, and *Phalanges*.

Each division contains a number of bones, varying in shape and size ; some remarkable for solidity and strength, and others designed to contribute chiefly to the elasticity of the member. Attaching these bones are two groups of muscles—those on the *dorsum* and those on the *plantar* surface, the latter being similar to the muscles of the hand.

These are also supplied with nerves, along which travels the sense of hardness or softness, heat or cold, smoothness or roughness, firmness or insecurity, according to the object upon which the foot is planted.

As a whole, the foot serves very materially in supporting our bodies—it plays a fundamental part in our locomotion, and can be so trained as to be capable of writing, drawing, and other acts usually known as *handy-crafts*.

Now, in Scripture, the word "foot" is employed in various senses, which a glance at some of the passages where it occurs will amply prove. In Exodus 3. 5 we read that when the Eternal One appeared to Moses He said, "Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground"; thus showing that nakedness of the feet was regarded in ancient times, and by the Orientals, as an indication of respect.

Uncovering the feet was with them what uncovering the head is with us. Even modern Orientals regard it as a mark of disrespect to enter your habitation without first removing the outer covering of the feet. But *nakedness* of the feet was also taken as an indication of sorrow.

Hence the prophet Ezekiel writes : "Forbear to cry, make no mourning for the dead, bind the tire of thine head upon thee, and put on thy shoes upon thy feet."

To be *under one's feet* is a phrase used figuratively to signify subjection, and was most probably derived from the action of ancient conquerors, who were wont to place the foot upon the neck of the vanquished, as indicative of their triumph. Representations of this kind can be seen upon ancient Egyptian and Roman monuments.

So the psalmist, referring to the dignity of humanity, and the regal position our race holds in relation to all created objects, says : "Thou hast put all things under his feet." And in the Messianic Psalm, the Eternal Father is represented as saying to the Son, "Sit Thou at My right hand until I make Thine enemies Thy footstool."

Very nearly allied to this expression is another, *to be at one's feet—at*, not *under*. This is used to signify service, voluntary submission, ready teachableness. Thus we read, "And Barak called Zebulun . . . and he went up with ten thousand men at his feet." So the evangelist tells us that Mary sat at Jesus' feet ; and Paul tells us that he was trained "at the feet of Gamaliel."

To *wash one's feet in blood of another* is equivalent to taking vengeance. David says, "'The righteous shall rejoice when he seeth the vengeance ; he shall wash his feet in the blood of the wicked.'

To *wash the feet of another* person was taken as a sign of affectionate regard and true humility. We read of this custom in the days of the patriarch Abraham. The loose sandals worn in the East left the foot exposed to the heat of the atmosphere, and the dryness of the soil; hence, washing the feet after a journey was a grateful relief.

When Jesus would show His humility, He took a towel, girded Himself, and proceeded to wash His disciples' feet.

Thus, in varied ways, the word "foot," or "feet," is used in Holy Writ as indicative of many relationships of one person to another. Reverence toward another; sorrow for another; submission to another; vengeance on another; and affection for another, are all signified by the use of the word "foot."

But, generally, the word is used as suggesting the affections, inclinations, and actions of the individual. "Keep thy foot when thou goest to the house of God." "I turned my feet unto Thy testimonies." All these are passages to the point.

Hence, *walking* has been used as denoting the conversation, manner of life, and prevailing habits of mind and body.

We read of those who "walk in darkness," that is, those who live in ignorance and sin; of those who "walk after the flesh," that is, those who follow the dictates of their corrupt nature, and are governed mainly by sensual desires; of those who "walk by faith," that is, those who, by simple confidence in the Lord Jesus Christ and His exceeding precious promises, are endeavouring to live so as to secure His approbation; of those who "walk after the Spirit," that is, those who are guided and taught by the inspired counsels, and by the indwelling of the Holy Ghost. And then we read of some who "walked with God," that is, they held sweet, close, endearing communion with the Divine Spirit, and did all they could to please Him.

So, also, we are exhorted to "walk in wisdom," and to "walk in the sight of the Lord."

By taking heed to such advice, we may "walk in all the commandments and ordinances of the Lord blamelessly." In the same manner, the general course of a person's life, the ends for which he lives, the means he adopts to secure those ends, and the companions he selects in the prosecution of his purposes, are referred to in Scripture as the "*path*" a man takes. Thus, "Teach me Thy way, lead me in a plain path"; "Thy word is a lamp unto my feet, and a light unto my path"; "Enter not into the paths of the wicked."

I am anxious, dear reader, and I trust you are also, that you should select the right path. There are feet which are swift to shed blood; there are fugitive feet, which run from the God-appointed Nineveh, to come to self-chosen Tarshish; there are rebellious feet, which kick against the pricks; and there are impure feet, that tread a path at the end of which is death.

But there are also Divinely guided, heaven illumined, and spiritually upheld feet, which run the way of God's command with a daily enlarging heart. It is feet of this last order that I desire for you. If you are anxious to walk safely, securely, happily through life, then remember that you must

Take the Bible as your guide. See that foreigner, standing in yonder recess in the busy thoroughfare, intently studying a map. He is tracing, by the map of London, the nearest and best way to a certain locality. See that tourist in the Highland district, ever and anon drawing from his pocket a volume and consulting its pages. What book is that? It is a Guide, which gives him minute particulars of every spot.

See that old captain bending over the chart, and glancing at his compass, whilst he gives directions to the man at the helm. What is that chart to him? It is the rule of his course. It tells him where are rocks, where quicksands, and where deep, safe water for sailing. Just what that map is to the foreigner in our great city, what that guide is to the traveller, what that chart is to the naval captain, that, and more than that, the Bible is to you.

It lays down distinct laws for our militant pilgrimage. It marks out the road—the narrow road—which leadeth unto life. It enumerates the many and multiform dangers of the way. It denotes where bye-paths of error and sin strike out of the road. It enlarges upon the pleasures and prospects discoverable as we progress. It glowingly depicts the blessed rest which awaits us at the end of our pilgrimage.

There can come no period in our career, no circumstance in our history, when this book will fail to be our instructor.

In the dire hour of our grief, when

"Like a grotto of icicles under the noonday beams,"

all our vain hopes, all our cherished aspirations, are melting into a rain of tears; in the hour of our disappointment, when we wake up to find that the staff in our hand is but a broken reed, and the ground beneath our feet but shifting sand; in the hour of our loss, when the persons and possessions we prized so highly have fallen like the petals of the full-blown rose; in the hour of our temptation, when syren voices have been followed by the furious charge and fierce din of hell's artillery; in the hour of sickness, when, as "down the lonely corridors of some haunted house, we hear far off the monotonous footfall of approaching death"; in all stages of our life-walk we can turn to the sacred volume, with the certainty of finding wise instruction.

There, like a lighthouse to the mariner, the truth shines forth unwaveringly, irrespective of the fierce hurricane of persecution.

A vessel was once cruising in the Mediterranean, in search of a shoal, reported to exist beneath the treacherous waters. After a search of some time, the captain abandoned the enterprise, affirming that the reported danger was all a dream. An officer on board made his own observations, and formed a different opinion.

He resolved, upon his own responsibility, to make an experiment in the same latitude and longitude. He did so, and discovered a reef of rocks. This he reported to the Admiralty, and his discovery was inserted in the charts.

The old captain, however, was indignant that a subordinate officer should have thus outstripped him. With obstinate incredulity he exclaimed: "The whole thing is a falsehood, and if ever I have the keel of the *Thetis* under me in those waters again, if I don't carry her right over where the chart marks a rock, call me a liar and no seaman!"

Two years afterwards he was conveying, in the same vessel, the British Ambassador to Naples. One night, examining the chart with the first officer, his attention was called to the sunken rock. "What?" exclaimed he, "is this invention to meet me in the teeth again? No, I swore I would sail over that spot the first chance I had, and I'll do it." So, giving final instructions for the vessel's course, he went below and related all the story to the company. With elated spirits, he told them that within five minutes they would have passed the spot. Then, taking out his watch, he said, triumphantly: "Oh! the time is past, we have gone over the wonderful reef."

Scarcely had the words escaped his lips, when a grating noise was heard, then followed a terrible shock, a fatal crash, and the vessel began to sink. The occupants of the ship were all saved, with the exception of the captain, who, clinging to the foundering vessel, perished, the victim of his own obstinacy and unbelief.

Just as unwise, just as unsafe, just as deserving of condemnation are multitudes to-day, who, casting aside the stern denunciations of sin, the awful threatenings of punishment, and the tried promises of Holy Writ, determine to direct their own steps without the Divine rule of faith and practice.

Take the Son of God and the Son of Man as your *companion.* Doubtless you have often desired, when journeying through a strange country, to have the presence and counsel of one well acquainted with the place. The path has been described in the guide-map, but when you have come to it, you have questioned whether it is the one meant. Then the presence of a second party to consult has been of immense comfort. So, in our way through life to immortality, we need a wise, experienced, unerring Friend and Adviser. There is such a Companion and Leader in Christ. Following Him, we cannot err, and joy, peace, prosperity, safety, and heaven at the end must be our lot.

There is a Bohemian story of a pious king, who was travelling one winter night to a remote church, in order to engage in devotion. He was barefooted, despite the snow and jagged ice. His servant, desirous of imitating and accompanying his master, followed him with bare feet. They had not travelled far before the servant found his feet fearfully cut by the sharp ice. Loss of blood, with the severity of the cold, so affected him, that he was about to faint, when the king directed him to place his feet in the footmarks he left. The servant did so, and from the footprints of his master, there came forth healing and strength, so that he reached his destination with comparative ease.

The story suggests the truth. King Jesus has gone before us through all the rugged road of life. He cries, "Follow Me!" In our attempt we often take steps aside, we walk irregularly, and become depressed and way-worn. But Jesus says to us: "Place your feet where Mine have been!" and, by heeding His directions, we shall safely and pleasantly pass the dangers of life.

The Puritan Adams very quaintly classifies the ways in which men walk. He says there is a "reeling" way and a "railing" way. The "reeling" is the drunkard's walk, and the "railing" the swearer's. Then there is a "ruffling way and a scuffling way," by which he means the proud walk and the litigious life. There is a "burning way and a turning way," that is the envious man's career and the hypocrite's course. There is a "thorny way and a miry way," by which he signifies the sinful course of deceivers.

But there is a good way, a steady way, an upright walk, which is the way of peace, the way of holiness, the way of God. Reader, go not into the other paths. Turn from them, turn away! Look up to Him, who "keepeth the feet of His saints."

"I BELIEVE IN NOTHING."

"I BELIEVE in nothing," said Charles Lester, as he walked home one evening, after hearing a lecture against Christianity.

"I am sorry for you, then," said his companion.

"Of course; I expected your pity, knowing what an enthusiast you are. You believe—kindly no doubt—that, like all who dare to be free-thinkers, I am now destined for the worst place in the universe. You must ex-excuse me if I am rather ungrateful."

"I will excuse any amount of ingratitude," replied his friend, "if you will thoughtfully answer a few plain, earnest questions."

"Oh, as to questions," exclaimed Lester, "I hate them! Don't lecture, Phil! You know if there was one thing that could drive me mad, in the old time at school, it was the doctor's everlasting 'Do' and 'Don't.' 'Be good,' and 'Resist the devil!'"

"Ah, yes, I remember how angry you were sometimes, and how you always called it 'stuff,'" said Hutchinson.

"And so it was! We were 'tempted,' he used to tell us, by this arch enemy, and if we did not pray for strength to 'resist,' we should all become his property. When that little imp, the Doctor's nephew, ran away while we were at church, I remember that we had to bring our Bibles into the school-room, and read the fourth of Matthew,—that we might learn 'how to do better!'"

"Poor Tom!" said Hutchinson. "He was drowned at sea, three years after."

"Yes, and it served him right," said Lester, "the unprincipled rascal! He stole a sovereign which I was fool enough to leave in my locker, and put his own likeness in its place! I declare I was glad when I heard he had gone to the bottom."

"How kind and forgiving!" said Hutchinson.

"Well, I hated him. That sovereign was my mother's birthday gift, and I had planned to have a world of pleasure out of it. Depend upon it, if he had lived to come home, he would have made acquaintance with the interior of a prison before I had done with him!"

"You regard prisons as necessary institutions?"

"Of course I do! Highly necessary. What's your 'tack,' now, Phil? I can't tell, for the life of me!"

"And do you think the people who *build* prisons fools?" persisted Hutchinson.

"Do I think that you and I are fools?" said Lester, smiling. "*We* build them, we who are honest, for rogues whose liberty would be our destruction."

"How?"

"How?" exclaimed Lester, plunging eagerly into the argument. "Can you ask 'How?' Do you believe we could be safe for an hour if no punishment were inflicted on thieves and murderers?"

"Do *you* believe that honest men have a right to punish knaves?"

"Assuredly."

"May I ask who gave that right?"

"Why, common sense and common justice."

"You believe in justice then? May I ask —*What is Justice?*"

There was a significant pause, during which Lester seemed to meditate an escape, while Hutchinson, with a quiet smile, walked rapidly beside him. The question 'What is justice?' was, as Charles phrased it afterwards, a 'poser.' He who had openly professed his belief in nothing had been entrapped into a confession that he believed in justice; he who had refused to hear a lecture or answer questions, had been decoyed into the meshes of a controversy out of which it was impossible to escape. He chafed and struggled like a bird in the snare of the fowler; until at last, growing desperate, he tried to break through by saying, dogmatically,—

"Rubbish!"

"Which? justice, or your belief in it?"

"Oh, I don't care! You are too long-headed for me! Didn't I tell you that I wished you at Halifax when you came upon me at the door of the lecture-room, just now? Wherever I go you dodge me, because I have the misfortune to be your cousin. What can it matter to you whether I believe in justice or not?"

"It does matter," replied his cousin, earnestly. "If you have lost your faith in right, you must be unhappy,—if you have no longer any hatred of wrong, you must be dangerous. It cannot be a matter of indifference to me whether you end your days on the scaffold——"

Lester started. "Do you mean to insult me?" he inquired, angrily. "Why should I end my days on the scaffold more than you?"

"If you don't believe in right——"

"Who said I didn't?"

"You said you believed in nothing, so I conclude that you don't think right is right, or wrong wrong. How can you, if you hold that there is neither God nor devil, neither heaven nor hell? You imagine that you are only an animal of superior instinct, soulless, and destined to be annihilated at death; your own master—because you owe obedience to no laws; your own property—because (although you did not make yourself) nobody made you. How can you possibly hate crime? How can you know what *is* crime and what is not? What reason have you to suppose that you understand right and wrong better than the wretch who last month killed his master, stole his money, and escaped to America? The murderer thinks himself fortunate in having secured wealth for the rest of his life,—how do you prove him a fool, since there is, according to your creed, no after state? He will be annihilated at death,—why should he be condemned for securing the highest possible enjoyment in the only state of being which chance allows him?"

"You ask no end of questions," exclaimed Charles Lester. "Suppose I say that I don't want to prove the man a fool—How does that affect your argument?"

"It shows that you are a dangerous member of society, since you hold that a rogue is wise unless he is caught," replied Hutchinson.

"But suppose I say what I think, namely, that he *is* a fool, because I am sure that ever since the murder he has been haunted by the feeling that he has committed a dreadful wrong, does that, too, assist your argument?"

"Certainly, for as soon as you own that any man can have a consciousness that he has done wrong, you give me the right to ask—How came he by that consciousness?"

"You are easily answered," said Lester. "It came by training;—he was taught that murder was crime, and he believed it."

"Why?"

"Can you ask why? Wouldn't it strike every rational being that such teaching had sense in it?"

"Yes;—but *why?*"

"I suppose because we have in us an echo, anything you like, that says such teaching is just."

"Are we 'taught' to have the 'echo' as well as the consciousness?"

"No, that comes naturally. Every rational man has it, more or less,—you and I have it."

"Who gave it to us?" persisted Hutchinson.

"That I can't say," returned Lester, thoughtfully. "I suppose it came by chance. It is natural to us to have this echo. We can't explain it."

"You mean to say that it is quite a 'chance' that human beings feel it to be criminal to murder their fellows,—and that the thing would be right, if no one 'chanced' to know that it was wrong?"

"I mean to say quite the opposite; and you totally misunderstand me," said Lester, angrily; "wrong must be wrong, right must be right, apart from opinion; and murder would be crime, though every human voice declared it honourable."

"You believe that?"

"I do."

"Then you admit that the decision of the question, 'What is right?' does not belong to men, that it was settled before they came into existence?"

"I suppose so. Yes."

"Who settled it?"

"Oh I don't know," said Lester; "perhaps I was a fool to admit that it *was* settled. All men know more or less of the difference between right and wrong; nobody settled it; it can't be explained, but the fact remains all the same: a thing is right because it is right, and there is an end of the matter."

"Not quite. I want to know *how* men obtained this moral consciousness. I *must* have an answer, Charles, and I charge you solemnly not to trifle with this question—Whence, if you had no Creator, if all things came by chance, if you are to be annihilated at death, if you are only an animal of superior instinct,—whence have you your moral consciousness?"

Lester hesitated, and at last said, "I cannot tell; I suppose you would have me say—from God."

"It seems to be the only answer possible," said Philip. "Be true to yourself, and give it."

"Perhaps I may," replied Charles, "if you give me time; yet I confess that I do not like to abandon liberty,—no man is free who owns that there is a God."

"You are mistaken. It is quite as possible for you to acknowledge God and enjoy liberty, as it was for you to live in your father's house and obey him, and retain your freedom."

"I ought to be one of God's 'children,' you would say? I know that is how people of your stamp talk—it seems jargon to me. I

tried to believe that there was no God because I wished it; it isn't likely He would adopt me if I asked Him; I don't intend to humble myself to do it; if I did He wouldn't have me; so there's an end."

"'Wherefore come out from among them, and be ye separate, saith the Lord, and touch not the unclean thing; and I will receive you, and will be a father unto you, and ye shall be my sons and daughters, saith the Lord Almighty.'"

"A verse of the Bible!" said Lester, almost scornfully. "Didn't I tell you I had thrown that overboard?"

"Without reading it,—but that was unfair!" exclaimed Hutchinson. "Condemned without a hearing!"

"Not exactly. I had been bored with Christianity at school, till I hated it, but still I was Englishman enough to try to be impartial. I read the New Testament through before I burnt it."

"How did it affect you?" asked Hutchinson.

"Oh, I was rather interested by the Gospels, but I yawned over the Epistles dreadfully; and of course I left off where I had begun—convinced that it was just a clever fiction."

"And now?"

"And now," said Lester, "although I may possibly grant that there is a God, I do not intend to believe in the God of the Bible. No, Hutchinson, I am too old to be caught in that way!"

"I hope not," said his cousin; "for the Bible is God's message to you, and there is no escape if you die neglecting it. Take mine home with you, and read it, if you value your soul,—and if you would not have the remembrance of the copy which you destroyed become the curse of the world that is assuredly 'to come.'"

"I yield, for I rather want to rub up my Sacred History," said Lester, languidly; "can't understand a picture gallery without it. But still I warn you to expect no conversion,—I am proof against it all! A God there *may* be—a soul I *may* have, an eternity is possible; but that the Godhead should unite itself with manhood, and suffer instead of its creatures, is incredible. I will never believe it, never!"

So Lester spoke as, with the Bible in his hand, he parted with his friend. The words were proud, the heart that prompted them was cold and hard, and all he meant to do was to obtain a knowledge which might enable him to comprehend the cartoons of Raphael, which, during a recent visit to Hampton Court, had somewhat puzzled him. He had so often been ashamed of his ignorance of Sacred History that he resolved to master the contents of the little volume, before he returned it to its by no means impatient owner. But even while he thus ventured to trifle with "the sword of the Spirit," he was compelled to admire the beauty of its standard of morality, the grandeur of its conception of a God; and long before he restored the Bible to his cousin, Lester knew something of the requirements of the law, and something also of the provisions of the gospel.

It was very little, after all, but it was enough to induce him to purchase a few books on the Christian evidences, and subsequently, a new copy of the Scriptures. All these he secretly perused, and as a result he began, at last, to pray. In answer to his cry, God said, "Let there be light," and there *was* light. In that hour Lester felt that he had sinned, and realised that his Creator had as much right to imprison *him*, as *he* had to imprison a thief or a murderer, and that perpetual durance must in justice be his lot, unless he consented to be rescued in the way marked out in the Bible. It was the story of Calvary which convinced him; before the spectacle of the self-devotion of the cross his soul was finally subdued; relying on Christ for salvation, Charles Lester for the first time tasted happiness.

Years have gone by since then, but Lester is happy still, and in his new life he aids others in coming to the true Light.

THE TWO DOGS: A POEM WITH A MORAL.

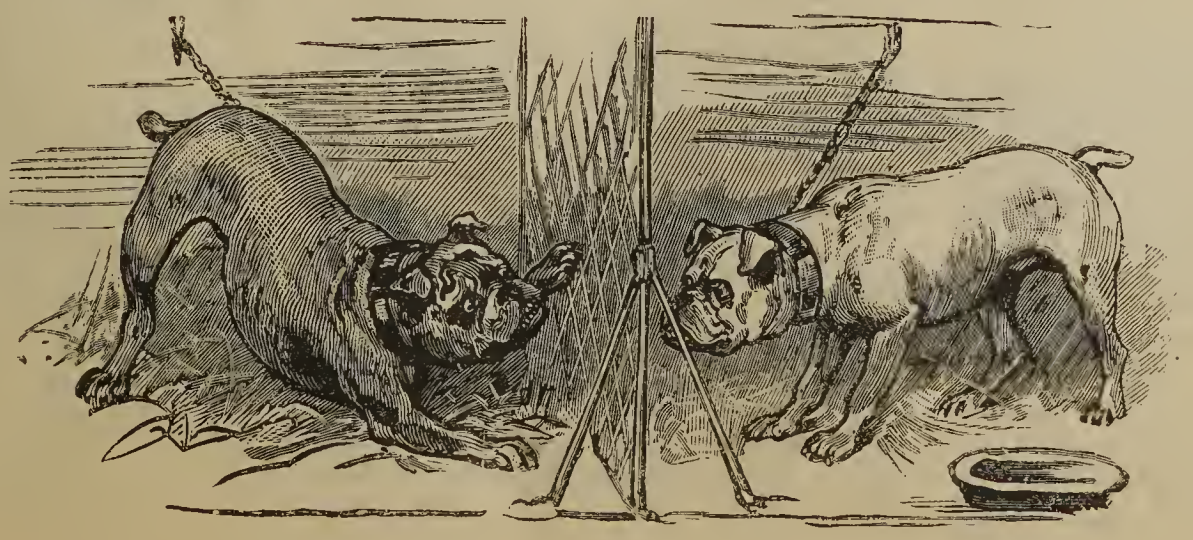
FOR ALL WHOM IT MAY CONCERN!

MY lady's dog! and so you're tied
  Close up to Tom, the grocer's;
And fain would you his throttle seize
  But that those wires are posers.

'Tis at a dog show, where, you know,
  The dogs lie close together,
And touch the screens that run between
  By straining at their tether.

My lady's dog, in spotless white,
  Is grieved at such a neighbour,
A common dog, who serves a man,
  Who lives by common labour.

The grocer's dog has feelings too;
  It is an aggravation
That this fine dame who snarls at him
  Is quite a near relation.



"Same flesh and blood! What right have [you
  To scorn an honest cousin?
Your father and my mother, ma'am,
  Were two of half a dozen."

The two stand glaring through the screen,
  Their chains will stretch no further,
They have perforce to curb their ire,
  Looking and feeling murther.

"Poor foolish dogs!" Of course they are,—
  Are you, my brothers, wiser?
Have you ne'er snarled at lady's dog,
  And stopped to criticise her?

Her dainty ways are not her fault,
  She has been sadly pampered,
And all development in her,
  By luxury is hampered.

And you who, clad in spotless robes,
  Look down on honest grocer,
Remember you and he are kin,
  And could not well be closer.

OUR DEFINITION COMPETITION.

A MODEL HUSBAND.

By a Lady.

A MODEL WIFE.

By a Gentleman.

Award of Money Prizes.

IN announcing this Competition, we expressed a hope that it would evoke earnestness rather than drollery. This has been the case. The Reports of our Examiner, given below, are sufficient proof. We hope that Competitors of both sexes will select their future partners in accordance with the ideals they have set up! If so, England will have a noted increase of "happy homes."

A MODEL HUSBAND.

A large number of Papers have been sent in under this head. Thirteen of the writers convey their views in verse, the rest either in form of a short essay, or by some illustrative story, or by letter supposed to be addressed to a friend. Two competitors give the requisites for their ideal in alphabetic order.

We have one nice Paper written by a foreigner, another from a lady who is engaged to her ideal. There are also two nice Papers from "domestic servants." In some cases the writer states her age; the youngest of these is "16 years and 3 months," she says. She writes in the character of an old lady with grey hair and wrinkles, and gives us a very pretty, simple sketch of her aged partner.

It is chiefly in minor particulars that the writers differ with regard to their ideal of the model husband. They are unanimous, we might almost say, in their conviction that he must be a Christian, whose Christianity is manifested in his daily life and conduct. Three or four alone, out of all the Papers, fail to touch on this point. A large majority insist upon Temperance or Total Abstinence in their model, and there is an evident preference for the non-smoker. Music seems to possess great charms. One lady even requires that her ideal should play well on several instruments! Next to music, athletics seem to rank high. Almost all are agreed that looks are of no great consequence. A few other points are noted by some of the writers, and are briefly these: that the model husband should not grumble at his wife if his food is not to his liking, or his meals not up to time; that he should be fond of his home; that he should be a good son; that he should make provision for the future maintenance of his wife; and that he should be active in influencing others for good.

An essay by Mrs. Paterson is by far the ablest of the Papers sent in; but its length—considerably over the 1,000 words allowed—disqualifies it for the competition.

A MODEL WIFE.

The Competition for the prizes given under this subject was not so large, but the quality and the tone of almost all the Papers received are excellent. After selecting the best from these, there still remain several in many respects most excellent. One of the Prize-winners gives us his definition of a model wife in some well-written stanzas; two other candidates express themselves in verse. A young fellow of 14½ contributed a good paper. We have also a contributor who confined the expression of his views to twelve words only.

According to the evidence of these papers, the model wife should be a God-fearing woman; she should also have a knowledge of cooking, and be a good housekeeper; she should be of a cheerful, good-tempered disposition, and always have a smile to welcome her husband's return home; she should sympathise with him, both in his successes and his failures; she should be a Total Abstainer; she should dress neatly and becomingly; she should be beautiful, if her beauty be the index of her mind. A. L.

FIRST PRIZE, 10s. 6d.

F. H. STEANE, Balham.

SECOND PRIZES, 5s. each,

F. P. RAMSDEN, Sandown, I. W.
D. ALLINGHAM.

HIGHLY COMMENDED.

ATKINSON, M. L., Oldham.
BLACKMORE, A. A., Lowestoft.
CAREY, H. D. M., Bardon.
COMPTON, P., Doncaster.
"EDA."
GALE, A. E., Southsea.
GLADWIN, J. F., Manchester.
KEMP, A. A., Whitstaple.
LIEBSTEIN, E., Highbury.
MACCARTHY, F., London.
"OLD MAID."
PATERSON, J. B., Innerleithen, N.B.
PINNEGER, K., London.
ROBINSON, C., Cork.
RÔBIN, E.
SAYERS, A. H., Ardingly.
STERMES, J. E., Kilburn.
"SOMERSET."
WARNINGTON, M., Evesham
WOOD, A., Ilford.
YOUNG, W. A., Cambridge.

COMMENDED.

ASHBURY, A., Swansea.
ALEXANDER, F. A., Lenzie, Dumbarton.
BARBER, W. H., Manchester.
BONNY, M. A., Monk Sherborne, Basingstoke.
BURTON, C. A., Blandford, Dorset.
CARRUTHERS, R. C., Plymouth.
CARROL, M., Canterbury.
COXETER, C. A., Potters Bar, Herts.
HIGHFIELD, J., Bath.
"JUSTICUS." Hastings.
LEADER, M. J., Oakley Square.
LIEBSTEIN, A., Highbury.
LIEBSTEIN, M., Highbury.
NETTLETON, A. C. C., Barrow-in-Furness.
NOLAN, A., London.
PRATT, E. A., Stoke-on-Trent.
PREDDY, C., Borough, S.E.
R. C. C. [ham.
REYNOLDS, F., Farning-
RICE, R. A., Stow Bedon, Norfolk.
SCOTT, C., Glasgow.
STEANE, E. A. Balham.
SWAN, G. H., Commercial Road, London.
TANNER, K., Crondall, Herts.
TATE, J. A., North Shields.
WELCH, C., Glastonbury.
ZUICK, R., South Kensington.

OF INTEREST TO YOUNG MEN.

TWENTY-SIX years ago, an "Apprentice Class" was formed in connection with the Priory Street Wesleyan Chapel, in the ancient cathedral town of York. As the outcome of this small effort on behalf of young men, there now exists a flourishing Young Men's Class, which has a membership of 520. This class is managed by a "Workers' Band," which meets once a month, when reports are presented by nineteen visitors of as many districts, into which the city is divided. Two services are held every Sunday. In the morning, at half-past nine, the meeting is confined to the reading of an essay by one of the members, and to discussion on it. The afternoon service commences at two, and lasts one hour. The meeting is opened with singing and prayer, followed by the reading of a chapter of Scripture. Collections for class expenses and Foreign Missions are then made, and after the leader has given a short and practical address, the service is concluded by singing, led by a trained choir.

The members of this model class have the use of a free library and a reading-room. A weekly entertainment given by the members; the publication of a monthly magazine; the general government of the class, mission, and other work, are all managed by separate committees, elected by the members. The success of the class is in a great measure due to the efforts of its leader, Mr. Robert Kay, who has held the office of president since 1876.

If every Y.M.C.A. Football Club would follow the example of the club connected with the Bolton Y.M.C.A., it would result in much good, and elevate a noble and manly game. The Bolton Association has a Bible Class attended by over fifty young men, and seventeen of the most regular attendants at this class are football players in the Association team. The club never plays a match without the members previously having prayer together, and the captain and sub-captain of the club frequently give Gospel addresses on subjects in relation to Christianity and athletics.

Stagg, the famous baseball player in the Yale nine, says that he never enters the athletic field without having first prayed for Divine guidance.

Such examples are most encouraging. We cannot have too much "muscular Christianity" in these days. But let it be thorough and "out-and-out."

At the recent Annual Meeting of the Heath Street Hall Science Classes at Crewe, Mr. Swire Smith (Royal Commissioner on Technical Education), in the course of his address, said: "I firmly believe in the value of the out-door exercises of our people, in the development of physical strength, skill, and manliness which they promote, and in the pleasure which they afford. Give to cricket its place in the long evenings of the summer, and to football its Saturday afternoons in winter; and give also to the steadier of our artisans the garden plots, which supply so healthy and refining an exercise during their hours of leisure. But every young man who is true to himself and to his country will consecrate a fair share of his evenings to the improvement of his mind."

Four hundred and sixty-five cases of young men and boys, chiefly from the factories, have been benefited by the Sydney (New South Wales) Young Workmen's Club, which is carried on at a cost of £8 per week.

As a result of the Y.M.C.A. at Northampton removing into larger and pleasanter rooms, the membership has risen from 90 to 170.

The Junior Section which the Callander Y.M.C.A. started last year has proved highly successful.

The second Annual Meeting of the Westbourne Grove Y.M.C.A. was held February 21st. The yearly expenses amounted to £500, and the year was closed with £2 5s. 9d. in hand.

Twenty-three Members and 153 Associates joined the Geneva (Switzerland) Y.M.C.A. during the past year.

CRISP CORRESPONDENCE.

ANSWERS.

Herbs.—If you will write to Dr. George Brown, Drake Street, Rochdale, you will get full information as to the best means of procuring herbs.

A Lover of—"A.1."—The above will give you information asked.

Ulster.—Yes, the Rules of our "Punctuation Competition" restrict a competitor from looking into *any* book, or at any similar passage. The standard of punctuation will be that of the author of the paragraph, which is from a "Standard" work.

The Unmerciful Servant (Matt. 18. 34, 35).—Three possible explanations may be given of the difficulty referred to by "Toby" in this parable. 1. That we are not to insist upon every item or fold in the drapery of the parable, as if it were an essential part of the parable itself; but must look to its general scope and meaning, which is, that unless we forgive we cannot be forgiven. 2 That the pardon of sin being conditional, God retains in His own hands the power of revoking that pardon, when the conditions are broken or unfulfilled; an unforgiving spirit being one of the gravest breaches thereof, and showing that any one who indulges in it, is, while doing so, unfitted for forgiveness. 3. That as "God was in Christ reconciling the world unto Himself, not imputing their trespasses unto them," He did thereby, in the widest sense of the word, cancel on the cross the mighty debt we owed to Him, and thus bestowed the grace of pardon on the world; but that to realise this pardon, and make it individually our own, a believing heart is necessary, and that will lead to a forgiving spirit. Whereas, if these be wanting, we not only forfeit our potential interest in the covenant of grace, but the debt actually returns upon our own heads, as though it had remained unpaid.

As to the question whether it is possible to be a believer in Christ and be saved, without having assurance of salvation—quite possible. For it is through faith we are saved, and not through assurance. Moreover, how can we be sure that we have a thing unless, as a matter of fact, we actually have it? Therefore, salvation not only *may* but *must* be ours prior to assurance. Otherwise we never could be sure that we are saved at all. At the same time, we should not rest content without endeavouring to grasp this higher grace as a blessing that may be ours; for "the joy of the Lord is our strength."

Readers longing to "do something."—A correspondent writes: "I should like to suggest to those of your readers who are longing to do something for the Master, that much good may be done by placing a little book on the tables of Waiting-Rooms. Having occasion to go into the City last week, I went into a station waiting-room which was empty at the time, and put a little leaflet on the table. As the people came in, each took up my little book and read it; it was read by five persons in as many minutes. God has promised, 'My word shall not return unto Me void'; so let us first ask Him to choose the right books for us, and then believe that they will be made a blessing."

Total Abstinence.—Your four questions open up too much matter for our limited space. But briefly—1. The difference is this? The Church of England Temperance Society, while enrolling as Total *Abstainers* thousands of the best men and women of the land, also admits into its "Moderate" section those who deplore intemperance, but do not yet see that the only true security from and cure of "*too much*" is "*none*." *Total Abstainers* accept and act upon this conclusion. The curate who preached that total abstinence was wrong, and maintained that "*all* things were sent for our good" must be a shallow thinker! He surely does not mean *for good*. What about poisonous herbs? What about straw and chaff? Does the curate eat these, because "*nothing* is to be refused"? Does he eat cabbage-stalk, potato-skin, and apple-core, because God "created" them?

Then comes in the question of how far anything of man's "invention" can be called "God's creature," and whether the unintermittent *decomposition* inseparably connected with fermentation is not a very questionable use of those "good creatures," grapes and corn. 2. As to the Miracle at Cana, which is a favourite with moderate drinkers, it may be true that Christ "meant" the guests "to drink" what He made. But how does it follow that we, in another country, eighteen centuries after, must drink modern wines? And is not the very fact of our Lord's special making of that "good wine" a proof that it was an innocent and *not* hurtful wine—not the wine warned against in Scripture?—*not* the wine which John the Baptist had been commanded *not* to drink. 3. Is there a text to say it is a sin to taste"? No—but when our hearts are eager to do God's will, we do not wait for a text. God promises to guide us by His "eye." Our duty is to study His mind, as revealed in His word; and finding that "priests and prophets have gone astray through strong drink"; that kings and princes were told that it was "not for them to drink wine. . . . lest they forget the law and pervert judgment"; that wine is spoken of as a "mocker" and "deceiving," that its tendency at *the last* is to "*bite like a serpent*"; that Paul declared if meat made his brother "to stumble," he would abstain, *is* it a wonder that godly men and women and young people "agree to abstain"? 4. Total abstinence is founded upon the foregoing principles, and upon consideration for *others*, due concern for "myself," the common sense view that if *no one* drank, no one could be intoxicated, upon a glad readiness, with Paul, to be "all things to all men. . . . if we may save some,"—on a practical desire to make Right easy and Wrong difficult—a fervent admiration of the good Samaritan, who did not pass by "on the *other* side," and a yearning to be allowed to co-operate with the Master in "destroying the works of the devil."

NOTES ON THE INTERNATIONAL SUNDAY SCHOOL LESSONS.

By Rev. J. H. Thorpe, M.A.

April 8th.

Christ's Last Warning.—*Matt.* 23. 23-39.

Golden Text.—*Ps.* 51. 10.

THIS is only portion of a large division of the chapter, beginning at verse 13. At beginning of Christ's ministry He uttered seven beatitudes, at the close He uttered seven woes (the eighth is a summary of the seven, and the ninth is changed into a lamentation over Jerusalem). Blessings rejected will be followed by woes. Note, during Christ's ministry He constantly rebuked Pharisaic formalism—hypocrisy—but almost ignored the unbelief of Sadducees. Hypocrite literally means a stage-player—one who assumes a character he does not possess. Christ regards and judges what *we are*, not what we wish *to be thought*. He notes our *character*, not our *reputation*.

The nearest attempt at a division of the lesson will perhaps be vers. 23-33, the blind leaders; vers. 34-36, the blind followers; vers. 37-39, the blind city. All through, we see excessive attention to outward observances with utter disregard of heart religion; this is ever the tendency of unregenerate man.

Ver. 23. The scrupulosity of hypocrites. M. Henry: "They buy reputation cheap." Godless men are often great sticklers for *little points;* for the devil will occupy men's minds with such, to keep them from the "weightier matters." Punctuality, diligence, and decent behaviour are excellent in scholars when they have "given themselves to the Lord"—if not, what are they worth? *N.B.*—Ver. 24, R.V., "strain *out*."

Ver. 25. So many cleanse themselves from scandalous sins that would injure men's opinion of them, and let sin run riot in their hearts, where only God sees. Remember, we are *really* what we are *within*. "Hypocrisy is a hard game to play at, for it is one deceiver against many observers."—*Henry*.

Ver. 27 sets forth the active effect (as vers. 25, 26 the passive) of such a character. Graves were whitened to warn men off, as they made men ceremonially unclean. These the words of Him who "knew what was in man." Hypocrites are like rusty nails—bad themselves, and fretting the wood around them.

Vers. 29, 30. The world is ever willing to give *post-mortem* honour to God's messengers, for they are *then* silent. See here also a common folly—men flatter themselves they would swim against the stream of former days when they are drifting down the stream of their own; to-day's sins are not last year's.

Vers. 34-36. See, the persevering mercy of Jesus—fresh messengers sent; see, He knows the fate of His servants when He sends them; see, He does not forget the injury done to *one* of His messengers; see, He will pay back in good measure to His Church's persecutors, though He give them repeated opportunity to repent; see, in a word, God "visits the sins of the fathers upon the children," and that bad men will reap the sowing of bad men who went before "this generation."

Vers. 37-39. Note, the willingness of Christ to receive is only limited by the unwillingness of sinners to seek. Contrast "*I would*" and "*ye would not*." Man's free will places it in his own power to "lose his own soul." Men are lost by their *own will*, not by God's. No man can save his soul, but any man can cast it away. On ver. 39 note, Jesus did not show Himself after His resurrection to any but disciples.

Care should be taken to show that in every verse of this lesson, the words of which burn and scorch, the gentle Christ is still true to His nature; we catch a wail with every "woe."

"An infidel came to Dr. Chalmers, and said that Christ could not be so good as He claimed, or He would never have spoken such harsh words as He did to the scribes and Pharisees. Dr. Chalmers asked him to point out the words. He pointed to this chapter. Then the doctor read them so tenderly, with such infinite pathos and love, the unbeliever acknowledged that Christ might *so* have uttered them."

A Warning. *When given.* Same day as last lesson. In temple. After questions about paying taxes, resurrection, and Christ's puzzling, silencing question about David's son.

A Warning. *About what?* Hypocrisy—"to act on a stage." Wearing the "livery of religion" without having its character.

"Next stood *hypocrisy* with holy leer,
Soft smiling and demurely looking down,
But hid the dagger underneath the gown."—*Dryden.*

A Warning. *Why given?* Yet a few hours left to repent.

A Warning. *The last.* Previous ones passed by. The last, the most solemn, most momentous.

A Study of the Verses.

A Glimpse Backward. Vers. 30, 31, 35. Children of murderers. Children who took not warning, but were filling up the measure. Zacharias (see 2 Chron. 24. 20-22). Zachariah's father was *Jehoiada*, but he may have had two names. The books of Chronicles, last in Hebrew Canon, "and the expression 'from blood of Abel to Zacharias,' may naturally be understood as meaning from the first murder recorded in Scripture till last."

"The only Zechariah, son of Barachias, in the Old Testament, is the minor prophet of that name. Of his death we know nothing."

A Glimpse Around. Vers. 14, 15, 23, 25, 29. So far they would pass in the eyes of men.

A Glimpse Within. Vers. 25, 27, 28. God searcheth the heart.

A Glimpse Forward. Vers. 34, 38. 39.

Or, as follows, getting scholars to pick out verses as proofs.

W oes. How many?
A cting Religion.
R evelations.

I nconsistencies.
N ational ruin.
G rief and her ray of hope.

The Charge—put forth.
The Charge—proved.
The Charge—and sentence.

Thoughts for us in the present time—
The hypocrite is not dead.
Hypocrisy works its own ruin.
God the great Dctector (Isa. 29. 15, 16).
A clean heart produces a clean life.

Two or three minutes might profitably be spent in finding Bible Emblems of hypocrisy and Bible Warnings.

Emblems—Matt. 7. 15; Prov. 26. 23; 2 Pet. 2. 17; Luke 11. 44. *Examples*—Herod, Judas, Ananias and Sapphira, Simon Magus.

Warnings—Isa. 30. 1-3; Jer. 42. 18; Amos. 6. 1; Isa. 45. 9.

C. Skinner.

Y.M.C.A. BIBLE CLASS LESSON.

April 8th.

The Fig Tree—Favoured but Fruitless.
Luke 13. 6-9.

By the Rev. F. E. Marsh.

I. *Favoured.*

1. Because of its position—in the vineyard. Like unconverted ones who are surrounded by the preaching of the Gospel, Christian parents, and blessings of God.

2. Because of its relationship; it belonged to the owner of the vineyard. Like the sinner, who belongs to God by right of creation (Acts 17. 28) and by right of purchase (2 Pet. 2. 1).

3. Because of the care and pains taken with it. For three years he came seeking fruit, and after that, at the request of the vine-dresser, it was digged and dunged about. Like God's action to the unsaved—He has made provision for their salvation in the all-sufficient atonement of Christ; He has lengthened out their lives; He has striven with them by His Holy Spirit.

II. *Fruitless.*

Men may make loud professions. Pretensions are not practice. They may be like—

Ananias for profession (Acts 5. 2);
Balaam for preaching (Num. 23.);
Cain for religiousness (Gen. 4);
Demas for promising well (2 Tim. 2. 10);
Esau for repentance (Heb. 12. 16);
Felix for trembling beneath the truth (Acts 24. 25);
Gamaliel for learning (Acts 5. 24);
Haziel for self-confidence (2 Kings 8. 13);
Israel for blessings bestowed from God (Isa. 5.);
Korah for office (Num. 16. 6);
Laodicea for riches (Rev. 3. 14);
Micah for ceremonies (Jud. 17. 1-12);
Nadab for ministry (Num. 3. 4);
Orphah in starting right (Ruth 1. 4);
Pilate in declaring their innocency (Matt. 27. 24);
Reuben for position (Gen. 49. 4);
Simon in being baptized (Acts 8. 13).

Observe the previous context. This passage has a close connection. Some came to Christ to elicit from Him a condemnation of others, but He turned the tables on themselves.

Fig Tree in Vineyard type of the Jewish nation—a people placed under the most favourable conditions as to righteousness; fenced, cultivated, fertilized. Type also of those who possess *Christian Privileges*, country, home, Bible, teachers, friends, ministry, etc.

The Tree had an Owner. So have you. You belong to God. He placed you where you are. You are His workmanship, for He made you.

The Owner Looked for Fruit. Nothing unreasonable here: result expected from care bestowed. So God looks for fruit from men: the fruits of *repentance, faith, holiness.*

The Owner was Disappointed—he "found none." Does He find fruit in us? What return are we making? Have we any faith in, or love to, Him?

The Owner was Patient. "These three years." God is *long-suffering.* Here is no hasty judgment. Time is given for repentance.

The Owner Resolves to Destroy it. "Cut it Down." The voice of justice speaks at last. There is a limit even to Divine patience.

The Tree is Condemned as a Cumberer. It was not only useless, but injurious. It occupied the room which might have been occupied by a fruitful tree. It drained nourishment from the soil which might have gone to nourish a fruitful tree. Barren professors are *in the way*—they are hinderers of others.

Mercy is Reluctant to Abandon the Case. "Let it alone," etc. Further efforts are to be made. Hope is cherished. A reprieve is entreated and granted. "He willeth not the death of a sinner."

Yet even Mercy has to acquiesce in a sentence at last. "*If not*," "*after that.*" How awful is that condition from which even mercy and long-suffering have to retire, beaten and baffled! Some may be very near that point.

James L. Stanley.

THE MAN WHO CAN'T LOOK AHEAD.

By the Rev. J. H. Thorpe, M.A.

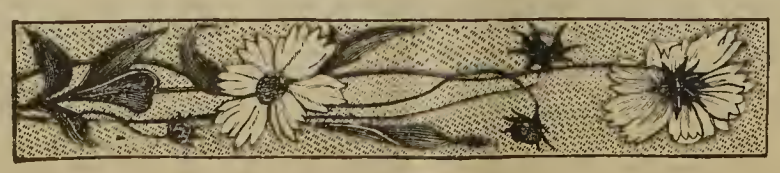
OPTICAL science has done much in these last days to overcome defects of vision. Spectacles of all sorts and shapes (we had almost written "colours") are now to be seen resting on the noses of many of Her Majesty's liege subjects, to their great convenience and advantage. Whether these useful articles are capable of being made ornamental to their wearers' faces we know not, but we know from personal experience the benefits they bring. But we fear there will never be invented a pair of spectacles to cure the subject of this article of his short-sightedness. We are constantly meeting the man who can't look ahead, and we regret to say that he is usually a very woebegone, ragged-looking, "won't-you-give-me-a-shilling" sort of poor fellow. Sometimes we meet him in his earlier days, before the effects of his ailments have begun; he is then usually a careless, whistling, don't-care, have-a-lark sort of a customer.

We have noticed that there are three forms of the evil to which "the man who can't look ahead" is liable.

The first is the most aggravated. It may be called *total blindness*. The man who never can see beyond to-day. The man who lives in the present. The man whose mind is absorbed in present thoughts. In a word, the man who mentally, morally, and physically lets the future take care of itself—and poor care it usually is. The most obvious example is the pleasure-seeker. We do not mean for a moment that men are to live, or indeed *can* live, without amusement. We agree with the well-known proverb, "All work and no play, makes Jack a dull boy." We refer rather to the other side of the matter, "All play and no work, makes Jack a mere toy." How many of our young men seem to have no thought beyond the amusement of the day—at the outside, that of the week. They look on study and business as a disagreeable necessity, a sort of tax and tribute, which of course *must* be paid. But with them the real business of life, that which really commands their interest, energy, and keen sympathy, is pleasure, amusement, fun. And so their youth is spent in a constant rush after some new thing; in arranging some enterprise of pleasure, discussing last night's party or play, debating, perhaps, on some nicety of dress.

We believe it must have been his observation of such men which caused the elder D'Israeli to write, "Youth is a mistake, manhood a struggle, and old age a regret." Is it not written, "She that liveth in pleasure is dead while she liveth"? and is it not true that these men are dead to the true business of life? Point to any one of them who has done anything which has benefited others. Point to one of them who has ever done well for himself! Not to describe the failure in life caused by this living for the pleasure of the moment, not to speak of its practical infidelity, not to dwell on its deep-dyed iniquity, let us notice how completely it destroys even its own immediate object. Is it not true that the men who devote most time and thought to the pursuit of pleasure are the men who have least of its enjoyment? Who enjoys the picnic the more—he who goes to two or three a week in the season, or the man who has stuck to the work God has given him till he earned his holiday? We say that the truest pleasure, the true intoxication of pleasure (if we may use the phrase), is the feeling of duty done—God, your employer, and your home faithfully served. The man who makes a business of pleasure, to him it becomes a mere business; the man who makes business his business, is the man who really reaps the pleasure of pleasure. Need we dwell on the fact that those we write of, even from their own point of view, are grievously in error? We take it there is a legitimate amount of amusement a man may take in his life. Now if he insists on taking it all at once, what about the rest? What about the proportion which, if right, belongs to his old age? What would become of our city if all the gas-lamps were collected in one spot? No doubt the light there would be very brilliant, but what about the rest? Do you see any analogy in the case of the man who tries to fill his younger years with gaiety and amusement? So we would say Take amusement by all means, but *look ahead!* There is a mental form of what we now write about. It shows itself in a readiness to "run away" with new opinions, an inability, or want of inclination, perhaps, to look at the other side. We are living in days when the religious world is full of energetic apostles of old-fashioned heresies, which they dignify as "modern thought." We believe a very good antidote is the habit of asking, "But where does this lead to?" In almost all schools of thought you meet with enthusiastic expounders of their own opinions, who deprecate calm reasoning, cry up faith (by which they mean credulity), and denounce men who ask disagreeable questions as "narrow-minded," etc. We therefore earnestly ask our readers "to look ahead" about doctrines. It may be a very good plan in mountain climbing to take only one step at a time, but it is a very *unwise* plan in religion. We know who wrote—

> "I do not ask to see the distant scene;
> One step enough for me,"—



and we know where he ended on this principle. "*Prove all things; hold fast that which is good*"!

One word to the strong and healthy. With respect to your bodily health, "look ahead!" We have known many fine young men before whom lay, as far as human foresight could judge, a lifetime of usefulness. But they have passed away, or are to-day confirmed invalids, because they forgot this. We have specially in our mind earnest young men in a large city, who were engaged in mission meetings and such-like noble work. What was their case? After working all day in offices or places of business, they went home, partook somewhat hastily of food, rushed off to a meeting, spent all the evening in an atmosphere vitiated by gas and the presence of a large and not too clean crowd. This went on week after week, till a crash came, and by-and-by we heard that one or another had to go home broken down. Thus many a worker, capable of doing great things for God, has passed from our view. We do not say a word to encourage idlers or to discourage workers in Christ's vineyard. We want Christian young men and women not to wear out their health by over-work. We want them to stay at home some evenings, read their Bibles, and improve their minds.

The second form of the evil our friend "the man who can't look ahead" may be said to suffer from is *long-sight*. This you will see at once is only partial blindness. It is an inability to see things near at hand. This is the man who lives in the future. He may be a very good man, or a very worthless man, but in either case he is a useless man—except as a warning to others. We have from time to time met earnest men who seemed to think about little else but the Millennium, or the future of the Jews, or the character and particulars of the Day of Judgment, or the occupations of Heaven. Most important all these are in their own place. But our friends were so occupied with these subjects that they seemed never to think of practical Christian work. It never crossed their minds to ask if the Rector wanted Sunday School teachers. District visiting was quite too earthly a pursuit for them, and they positively hated the sound of a collection. Why will they refuse to notice the plain lessons of the Word of God? Why, let us ask them, are we told so little comparatively about heaven, for example? We believe because God's will is, that His people should be rather concerned to obey and serve Him, to do His will and advance His work on earth, than to dwell on the future. He tells us just enough to stimulate us to service, and not enough to occupy our imagination or gratify our curiosity. Let us, then, "act, act in the living present." The same mistake may be made in purely secular matters. Have you not met at times a man who seems to dwell altogether in the future? When he makes his fortune, he will buy that old family residence, he will go into Parliament, introduce a Bill to do dear knows what, and so on. Oh yes, he will do wonders in the sweet by-and-by! Dear, innocent dreamer, forgive us if we rudely rouse you, but truth compels us to tell you that while you are dreaming, your future is being formed for you; and that future will be in kind an exact counterpart of your present. If your to-day is spent in dreams, your future will be made up of the same flimsy texture. To-day is the seed of to-morrow.

Our third point may be described as *short sight*. This, too, is a form of blindness, for now the man who "can't look ahead" sees things very plainly that are close at hand, but is quite blind to things afar. The man looks ahead, but *he does not look far enough*. We mean, his horizon is the present life. He rises early and late takes rest; he eats the bread of carefulness. He works hard and well, that he may have a comfortable and easy old age. Every shilling he can spare goes into the bank for the "rainy day." But he seems to stop there. He seems to forget he has a soul. He takes no trouble about the things of God. He ignores the great eternity which lies before him. Alas for his folly! "What shall it profit a man if he shall gain the whole world and lose his own soul?" What a poor thing to lay up a few thousands for an old age, which, after all, he must soon leave behind him, and then enter on eternity—a pauper!

Perhaps there is a reader of this article who is engaged in work which has many difficulties and discouragements. Perhaps there is one who has tried hard to do good, and failed through the apathy of his helpers. Perhaps there is one who is downcast by the divisions and discords of the professing Christian world. Perhaps there is a worker, weary and almost ready to faint, with a daily load which enlists but little sympathy, perhaps no practical help. To each we venture to say, "Look ahead!" Remember, it will not be always as it is to-day. Failure cannot be for ever; your day of work, if wearying, is short. Remember the day is fast approaching when "the whole family in heaven and earth" will be gathered together; then there will be no more bigotry, suspicion, and distrust; then those who could ill agree on earth will be all of one heart and mind; then your hopes and prayers will be amply fulfilled. Therefore, in your trials, in your work, in your desires for the Church of God, do not forget to Look ahead!

EXPECTANCY.

#4313

APRIL 7, 1888. "A.1." ONE PENNY.

THAT HOUSE IN LONDON.

By L. T. MEADE,
Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "Water Gipsies," etc., etc.

CHAPTER XII.

BETTY CAREW stood before a small cracked glass in her attic bedroom.

On the bed behind her lay a white cap, decked with white bridal ribbons; beside the cap was a snowy kerchief, and a large old-fashioned bib apron. Betty had attired herself in a black gown, made of the finest merino. The gown had crape round the wrists and collar, and had been purchased by Betty as mourning for her late mistress, about a week since.

She looked at it now with great complacency, smoothing down its soft folds, and twisting her head to see the effect at the back. Then she turned to the bed, and, taking up the large white apron, put it on. Above the apron came the kerchief, which she fastened in its place with a black brooch. Lastly she came to the cap; this she twisted round and round on her bony old hand, with a depreciatory movement.

"Come, come, Mr. Graham," she said to herself, "this ain't fair, this ain't. White ribbons for the bride, but where's mourning for the old missis? This cap don't show nothing of a decent, mourning spirit, and if you think, Mr. Graham, that Betty Carew is going to be disrespectful to the past, you are mighty mistaken. Here, this will set the cap right, and I'll be dressed as I should—mourning one side of me, and rejoicing at the other, though, if truth will out, there's little of the spirit of rejoicing in my heart."

Betty unlocked a small drawer, and taking out a huge crape bow, pinned it in front of her white cap; then, much pleased with her appearance, she tripped downstairs.

No. 10, Exmoor Square, had undergone many improvements since the night before Graham's wedding. Paperers and painters had done their work; the hall and staircase were now decked in the most exquisite tints of artistic green; thick, warm, Axminster carpets clothed the old worn stairs; the handsome mahogany rails shone with constant rubbing; a very large and hideous landing window had now been softened and rendered beautiful with stained glass.

In various niches in the wall were placed lovely little statuettes, and here and there—most beautiful and effective of all—were large stands of lovely exotics. In the entrance hall were more flowers, and an aviary full of bright, gay-plumaged little birds.

Betty sniffed as she walked downstairs.

"Very fine, very fine," she muttered; "no thought at all of the old missis, and what she give to him; all for self, and old memories put aside. Things would have been different if Master Jonas had lived. Well, well, come what may, I has taken care that the bridal chamber shall be as it ought."

Betty turned aside on the first landing, and opened a door, which, unlike the other doors, bore no tokens of fresh paint.

The room inside was large and lofty, the ceiling almost black from the smoke of much gas and many fires, the walls covered with a dark and hideous old paper; the furniture was of the antiquated and ponderous type, the bed—a four-poster—had dark moreen curtains, as also had the windows. The

"Graham . . felt almost happy."

time of year was September; and although the evening was chilly and wet, Betty would have thought it the height of wickedness to light a fire in any room except the kitchen before the end of October.

She sniffed now in an appreciative manner.

"Eh!" she said, "this now looks as it ought; there's memories here, there's no disrespect here. Old-fashioned! What of that? I like old fashions, and so did the missis. No pandering to vanities in this room; but respect, and an air of decent mourning reigns in the bridal chamber. Here, I'll put the missis's arm-chair into its old place, and her cushion, and her footstool, and her little three-legged table by the side of the chair; there, there's memories for them. Let them reflect on the ways of that saint! Maybe they'd like a bit of ornament; here's the missis's picture, her profile done in black, and very tasty,—that'll ornament the mantelpiece, and this of poor Master Jonas, when he was a lad, will stand well by the side of it. Saints in glory now, both of them; but they that come after shall have their memories, least-way."

Betty left the room, well satisfied with its appearance, and tripped downstairs.

Here all was brightness and light, flowers, gaiety, and bridal favours. The doors of both dining and drawing-room stood open, and all that tasteful decoration and beautiful furniture could achieve, had conspired to render these rooms attractive for the reception of Graham's bride.

Betty was met by a smart maid-servant, who, in white apron and cap, with bridal ribbons, came to meet her.

"Lor, Mrs. Carew!" she exclaimed; "you haven't got on your proper cap; do let me run up and bring it down to you! Why, you've got a great black bow on the front of this one, and the missis expected any minute. Do let me run up and bring down the right one, ma'am."

Betty stepped back a pace or two in horror.

"Mind your own business, Susan Hastings," she said, in her tartest tones. "The missis has been carried out from these doors, feet foremost, head low, and I mourns for her; my cap means memories; and them as likes to look for the bridal white under the crape bow may do so; but Betty Carew without her mourning for the past shall never be seen in this here house."

"What a horrid old creature!" exclaimed Susan Hastings to herself. "I calls it unlucky to have such a woman about the place; and to greet a sweet romantic bride after such a fashion! It quite curdles one's blood, I declare!

"Well, well, I expect Mrs. Graham will make short work with her," she continued, "and I hope she will, for I don't think she and I can long stay in the same house; she gives one the creeps, no mistake."

Susan ran down to communicate some of her feelings to the new cook and kitchen-maid. She had scarcely done so before carriage wheels stopping short outside the door proclaimed the arrival of Graham and his four months' bride. Never did a sweeter or sunnier face appear on any threshold than Kate's, as she stepped buoyantly into her husband's house.

So good looked the face, so honest and straightforward the candid eyes, so sweet were the lines round the pretty curving lips, that even old Betty, who headed the little procession of waiting servants, was momentarily appeased.

"How do you do, Mrs. Carew?" said Kate; "I am very glad to be at home. How bright and sweet everything looks! Kenneth, dear, is this really the old dining-room? Why, it is transformed!"

"Ye'll find the bedroom as it should be," said Betty, following the pair, and dropping one or two curtseys. "Memories there, and nothing disturbed. The missis's room—the best in the house, got ready as it should be, for the bride. Ay, ay, such is life—last time a funeral, now a bridal."

Betty half muttered her words, and Mrs. Graham, who was flitting about the room, now exclaiming at this thing, now at that, scarcely heard her remark. Graham did, however; he turned round abruptly.

"You haven't given my wife and me Mrs. Alexis's bedroom!" he exclaimed.

"Yes, I have, though," answered Betty, raising her eyes defiantly to the young man's face; "what could be better and more suitable?—the largest room, and the one from which the funeral was taken."

"I gave orders that Mrs. Graham was to have the bedroom at the other side of the passage. Why were not my directions obeyed?"

Betty dropped a curtsey, and was about to speak, when Kate came forward.

"It doesn't matter, dear, in the least," she said. "I shall like to sleep in the room where I saw dear old Mrs. Alexis. You are quite right, Betty; take me upstairs now, I should like to wash my hands."

Betty walked out of the room followed by Kate, and Graham, walking over to the mantelpiece, leant his back against it and looked about him moodily.

"I am glad you respects memories, my dear," said the old servant, turning round and speaking with a certain amount of cordiality, as she ushered the bonny bride into her chamber. "Here's everything as it used to be, barring the fire. Here's the arm-chair where the dear saintly lady sat; here's her footstool, and here's the cushion agin which she often pressed her head. And here's her likeness, my dear, and Mr. Jonas's likeness—bless him, my bonny boy!"

"Mr. Jonas!" exclaimed Kate; "who was he?"

"Oh, my dear, don't you know? Well, well, here comes Mr. Graham, so I must go. I'm glad you find the room quite exactly to your liking, Mrs. Graham."

Betty left the room, casting back many shrewish glances as she did so, at the couple who stood together near the dressing-table. Kate began to take off her travelling coat and hat, and then to arrange her bright chestnut hair before a small and very old-fashioned mirror.

Graham stood quite motionless in the centre of the room.

"What is the matter, dear?" said his wife, presently; "you don't look well."

At her word the young man made a great effort to shake off his despondency.

"My sweet," he said, tenderly kissing her, and pushing the hair from her brow, "I ought never to be despondent when I have you by my side; but coming home means that our honeymoon is over—and—and—I shall have to work, and I shan't have you all to myself any more."

"Work is good," said Kate, in her bright way. "I love hard work; in some ways my happiest days are those when I have a little more to do than I can well manage. Hard work rouses the best in me, so I must not pity you for that, Ken; and, my dear," she added, gravely, "we can, if we like, make our lives one long honeymoon."

"No, dearest," he replied to this, "that is impossible; we may love each other always, but troubles will come. There, I don't want to be superstitious, but I feel trouble in the very air of this room. I wish that horrid old woman had not put us here."

"We can move to-morrow, if you really dislike the room," said Kate; "but I think it old-fashioned and comfortable, and I don't want to hurt the old woman's feelings. How fond she seems of her mistress's memory!"

"Come downstairs, Kate, do; the drawing-room and dining-room are much more to my taste. I hope you are not going in for morbid fancies, dear; they don't suit me a bit."

Graham's tone was almost harsh, and Kate glanced at him with a momentary feeling of slight surprise.

Downstairs, however, he shook off his gloom. The dining-room and drawing-room were both so cheerful, the servants were so attentive and well trained, and above all things, his beautiful Kate wore so bright and contented an expression, that he could not long give way to low spirits.

Betty, too, did not put in an appearance, and the rooms were now so altered and transformed that they scarcely reminded him of Mrs. Alexis.

After tea the young people repaired to the drawing-room, where Kate played and sang, and Graham, on whom music had always a great effect, felt almost happy by bed-time.

When they went upstairs, however, Kate made a remark which startled her husband a good deal.

"Kenneth, dear, who was Jonas Alexis?"

Graham had a small glass in his hand; when his wife spoke, he suddenly dropped it.

"Oh, my dear Ken, you have broken my little looking-glass—how unlucky!"

"Don't, don't say that, Kate. Aren't you tired? Won't you get into bed?"

"Yes; but do answer my question—who was Jonas Alexis?"

"How have you heard of him?"

"Betty mentioned his name, and that is his likeness on the mantelpiece; who was he?"

"The son of Mrs. Alexis, of course."

"Oh, I did not know she had a son. Is he alive, Ken?"

There was a slight pause.

"No," answered Kenneth; "he is dead."

Kate went over to the mantelpiece, and taking up the faded photograph, examined it attentively.

"Poor fellow!" she said. "What a gentle face, but not very strong; he has a weak mouth, Kenneth, but his eyes are very kind, and rather sad-looking. His mother must have suffered very much when he died."

While Kate was speaking her husband came over to her side.

"Put down that likeness, Kate," he said sternly. "I don't want to talk of Alexis. He was not good to his mother; he is dead years ago. That photograph does not please me."

"Kenneth, dear, you are ill," said Kate suddenly. "Your hand shakes. There, we won't talk of anything more; you must lie down and rest."

No gloomy room, no old memories could keep Kenneth Graham's happy wife awake, and very soon she was lost in a pleasant world of dreams. Smiles, and blessings, and laughter seemed hers, and she saw no shadow on the horizon, nor guessed how miserable were the feelings of the wretched man who lay awake by her side.

CHAPTER XIII.

KENNETH GRAHAM fell very suddenly. A swift temptation was presented to him; a brief pause, measured by seconds, was his, and then he took the fatal leap. When Jonas Alexis asked after his mother, Kenneth replied that he knew nothing about her. No sooner had this falsehood passed his lips, than he became conscious all through his being that his fate was sealed. He had chosen the side of the evil and the bad, and henceforth Rectitude and he, Honesty and he, Faithfulness and he, Truth and he, must be strangers. The instant the words passed his lips he knew it—he knew what lay before him.

He said to himself,—for he and his conscience had still many parleys together,—he said that his fall had been sudden, that the temptation had been so swift and terrible that he had no time to reflect.

Had he told the truth then to the wretched Alexis, his marriage would have been postponed, probably broken off; the golden cup which all but touched his lips would have been dashed aside; Kate and he would have been parted. Would any man, under such a crisis, have acted differently? Give a man five seconds to make a resolve so momentous, and surely no man, no man could have acted otherwise.

So Graham reflected; and always, at the end of his reflections, he comforted himself with the assurance that the suddenness of his temptation must be his excuse. He fell, as he was fond of saying to himself, in one brief moment.

Here he made a great mistake; he did not in reality fall suddenly—perhaps no one takes this swift leap from good to evil in so hasty a manner; the fortifications must be undermined to cause the strong citadel suddenly to crumble into ruins.

As a boy Graham had been as sweet, and frank, and truthful, and honourable as boy could be. He had a very loving and sensible mother, and she had shown him, by example as well as by words, the straight and upright path of virtue, and had prayed and hoped that he might walk therein.

His mother died, and Graham came to London; and then, little by little, scarcely noticing it himself, he left off all the good old habits of his boyhood. "They were not absolutely necessary," he said to himself; "a man could be very good without them. It was not absolutely necessary to go church every Sunday. Of course he meant God to help him, but it was not really essential to make long prayers. Not for worlds would he give up real spiritual religion; but he need not talk about it, nor make a fuss about it—to talk about one's innermost feelings was bad taste, and no one could expect one so reserved as he was to mention them."

So, little by little, Graham's friends and companions spoke of him as a right good fellow; but they never associated him and religion in the same breath.

He was very steady and very upright—not for worlds in those days would he do a mean thing; but his life was full, crowded, and certainly God was not in all his thoughts.

Then his story came to him, as it comes to us all; he loved, and he loved wisely—no one ever made a better choice than he. He loved, and he suffered, and he struggled; he thought he was to do without Kate, and he was instantly all rebellion and despair. Then, most unexpected, most unlooked for, succour came to him. From being a poor man of no special repute, he found himself suddenly rich, and able to marry the girl whom he loved. He told Kate of his feelings, he gave her a glimpse into a heart full of adoration for her; but even while he spoke to her, even while his whole being hung in suspense on her words, he knew in his heart of hearts that he was not the man he was ten years ago. He was not the bright, frank, ingenuous boy who had kissed his mother's cheek as for the last time he bade her good-bye.

He did not mention, in telling his story to Kate, even the name of Jonas Alexis. Ten years ago he could not possibly have kept this fact back from her.

So in reality, Kenneth's fall was not sudden; the way had been paved all along for the great catastrophe; prayers said at longer and longer intervals; thoughts of God coming seldomer and seldomer; the world taking stronger possession each day of a frail human heart, and when the final blow came the victim had no strength to resist.

It is the first step that costs. Graham, when he told that lie to Jonas Alexis, felt on the instant a perfect agony of remorse; but when Kate asked him, on their return home, her innocent question about the young man, his second great untruth came glibly from his lips.

He lay in bed, however, that night, wide awake and wretched, and felt that even from a worldly point of view he had committed a great error. He had been absolutely unprepared for Kate's question; it was no longer a point with him whether he should choose the truth and virtue, or a lie and evil. The point now for him to consider was which was his safest course, which course would be least likely to lead to eventual discovery. As he lay in bed, in the very room where Mrs. Alexis had died, he saw only too clearly that in telling the lie about Jonas he had endangered himself.

Jonas might or might not be now in London, but any day the possibility arose of his meeting Kate and her husband together. Should such a thing happen, no hints that Graham might be able to throw out would be sufficient to prevent the rather slow-witted Alexis from alluding to their last meeting. Kate would then discover that her husband had deceived her. In addition to the pain which this knowledge would be sure to evoke, she would wonder why he deceived her—she might connect this deception with that curious sealed letter which lay in her possession—in short, by a very simple train of reasoning she might find out the truth. Graham trembled as this fearful idea occurred to him. His love for this woman was still so strong and deep that he would rather all the world knew what he had done than that she knew. That night, had the choice been given him, he would have elected to let all other men and women scorn him, provided Kate still believed him to be true.

What a fool he was to tell that lie about Alexis; if he had not done so, in the event of their meeting him, he might have made up some story which would have satisfied Kate. Now such a course was absolutely impossible.

He thought so much about the mistake he had made, that he had no time to be absolutely sorry for his sin that night; his thoughts were so busy, that remorse had not a chance of getting into his heart, and making havoc there. Otherwise his special surroundings would have been quite enough to make him wretched.

In this very room the woman who had been his benefactress had lived and died; on this very bed she had died, and he, whom she had so implicitly trusted, whom she had so largely served, had broken his faith with her before she was many months dead.

She had said something in her will about a mother's curse. Such a curse resting on a man's head was enough to make him nervous, even though his nerves were made of iron.

The evening, which had been very wet and cloudy, had ended in bright moonlight and a cloudless sky. The ghostly light now came in through the ill-fitting chinks of some very obsolete venetian blinds, and even caught a queer reflection from the glass frame which covered poor Alexis's photograph. Graham, tossing about on his sleepless couch, suddenly caught sight of it.

He started up in bed with a smothered cry, and then began to tremble violently. The ghostly light, the weird effect, had absolutely frightened him for the moment. He could not endure that photograph in the room; he could not look at it himself, and he certainly would not leave it for Kate to look at, to study, to pity.

He stole very softly out of bed, he slipped on his dressing-gown, and taking the photograph, frame and all, in his hand, he managed to open the room door without awakening his wife. The thick carpet on the stone stairs would have prevented even a heavier footfall than his being audible. He went downstairs, down and down, until he reached the kitchen. A little fire still burned in the kitchen range; into this he dropped the photograph, then he deliberately broke the frame and smashed the glass, and threw the broken bits into the dust-bin. Somewhat relieved, he now returned to his room, and lying down by his innocent wife, fell asleep.

The moon set, and the sun, bright, and strong, and beautiful, arose to bid all toilers be of good courage, and to commence a new day with the hope of victory. Kate arose with the song of the lark in her heart, but Kenneth knew that sunset and sunrise alike meant only evil for him. He had chosen wealth, and the woman he loved, —and Evil. He said to himself, "There is no turning back now."

(*To be continued.*)

DOUBLE ACROSTIC.

MY first is a simple word,
And neither uncommon nor new;
And yet it is seldom heard,
But when friends apply it to you.

My second, at swiftest pace,
Will run by the hour for ever;
And yet from its own fixed place
Removed can it be? No, never.

But were you as quick as the last,
And, bird-like, could fly to the goal,
Ten centuries would be past
When you had arrived at my whole.

1. Among the cattle in the pasture sward
   Beware of getting this;
2. Or where the colley o'er the sheep keeps guard,
   'Tis well if me you miss.
3. Foreseeing danger, do not go this way,
4. But turn while you in this condition stay.

The answer to this will be given in our Number for April 28th.

RAILWAY TICKETS.

By ANDREW T. SIEBALD,

Author of "Indian Railways," "Railway Signalling," "Russian Railways," etc., etc.

IN the infancy of the railway system, it was customary to issue small paper billets at the booking-offices, in exchange for the money-fare. The billets were torn out of a book; and some of them needed a little writing by the clerk, in addition to the printing which they bore.

As the system extended, however, the bits of paper were superseded by little tickets of cardboard, more convenient and durable. It became necessary to devise some mode of registering or numbering these tickets, to facilitate the adjustment of accounts; and, in recognition of this necessity, Mr. Edmondson invented a machine, which enabled him to number each ticket while printing, and to give each a number different from that of every other. So useful has the system become, that every railway company gradually adopted it; and now there are from 150,000,000 to 200,000,000 such tickets made, printed, issued, paid for, used, and destroyed in the course of twelve months in the United Kingdom, mostly for one journey each, but some for return-journeys, and others as excursion, tourist, market, weekly, monthly, and season tickets.

As at present managed, some of the larger companies print their own tickets; but the others buy them ready printed. The cardboard is made on purpose, at the various country paper-mills. Many, perhaps most, of the varieties are coloured; and some, especially return tickets, bear two colours each, for more easy identification.

This colouring is executed by such firms as that of Messrs. De la Rue, manufacturing stationers. A cutting-machine, working with great rapidity, cuts up the sheets of cardboard into the well-known tickets, all of which are of the same size, to whichever company they may belong. The railway companies themselves, Messrs. Edmondson of Manchester, and Messrs. Waterlow of London, are the chief printers of the tickets, all using machines similar in general principle, though varying in detail. A pile of blank tickets, containing many hundreds, is enclosed in a kind of vertical shoot or pipe, open at the top and bottom. On turning a handle, the undermost ticket is made to slide out and pass over the bed of a small printing-machine. The type is set up in the usual way, with the necessary particulars concerning the name of the company, the two stations which mark the beginning and ending of the journey, the class of carriage, the fare, and so forth.

The number of varieties is necessarily immense, seeing that journeys are made from almost every station to almost every other; and unless the stations are of small importance, different tickets are used for each couplet; so that the system is a complex one. Even if there were only four stations concerned—say London, Rugby, Coventry, and Birmingham—the permutations would amount to twelve. If there were five stations—by adding Stafford to the list—the number of couplets would be twenty. If there were six stations—by adding Crewe—the number of couplets would be thirty; if seven—by adding Manchester—forty-two; and so on. It follows that, where the stations are reckoned by hundreds, or even thousands, the number of couplets increases enormously.

And each couplet is itself greatly varied, according as the ticket is for a single or a return journey, and as the class is first, second, or third. The ticket-printer, therefore, has to be repeatedly varying his form of type, printing off a certain number from each form, and then resetting it up, either in whole or in part. The same turning of a handle which prints the ticket also makes a small number-wheel rotate, and brings a different number, or different combinations of numerals, uppermost each time.

This is an application, on a small scale, of the beautiful principle on which Mr. Babbage's calculating-machine acts.

In the small fraction of a second, which follows the printing of No. 4875, for instance, the apparatus changes the digit figure to 6, and is ready to print 4876 on the next ticket. Error is scarcely possible here, for the wheels and axles of the apparatus can only rotate in one direction, and in certain relations with each other.

Two tickets are under operation at the same time, side by side, one being printed while the other is being numbered. The tickets enter the machine as an unprinted pile, and quit it as a printed pile, without being touched by the hand.

The blank tickets are furnished at a shilling to eighteenpence per thousand; but the cost of the printed tickets varies with the number of each kind printed, a smaller rate per thousand being charged when the number is large. An ingenious verifying machine is used to examine the tickets before being made up into packets to send to the station-clerks. The tickets descend through a shoot, display their numbers openly one by one, pass on, and form another pile a little further on; while they do this, a number-wheel as rapidly changes its uppermost number.

When fifty or a hundred tickets have thus passed, the attendant stops the handle, and compares the exposed ticket with the exposed number-wheel; if they agree in the numeral, all is right, and the operation proceeds. The tickets are tied up into small packets of a hundred or more each, and those packets are literally as hard as solid wood. Two or three of the great companies require twenty million tickets a year each; but the actual number is constantly varying, owing to the extension of the through-booking system.

Each booking-clerk at the stations is responsible for the tickets entrusted to him; he must apply for a renewal of each kind in sufficient time, and must hold the money forthcoming for such as have been issued. Each kind of ticket is piled, with the lowest number undermost, in a separate cell in his ticket-case; and the cell is so contrived that he can draw out the undermost ticket without disturbing the others.

So regular and certain is this action, that he does not require to count his remaining tickets, to see how many he has sold; if his lowest number before was 807, and his lowest number now is 849, he knows for a certainty that he has issued forty-two of those tickets. It is generally the custom for the booking-clerk to pass each ticket, as he is about to issue it, into an upright cylindrical machine, where it is instantly printed with a date; but where the issue of tickets is very great, this date-printing is done beforehand, to save time.

When the journey has been completed, and the ticket handed up by the passenger, all the tickets are sent to the accountant, or some other officer of the company. Many of them require to pass through the Clearing House, while the rest are dealt with by the companies to whom they more immediately belong.

All being duly verified, checked, and audited, the tickets have done their work. They are put into a mincing or shredding machine, and cut up into fragments, in order to prevent any possible use of them again in a surreptitious way; and then the fragments are sold to the paper-makers, at so much per hundredweight, to be re-converted into cardboard, and to contribute to the formation of fresh tickets. Such is the process of ticket manufacture and usage, the whole routine being typical of that gigantic and accurate system to which railway affairs have at length attained.

As is generally known, it is a serious offence against railway law to occupy a seat in a carriage of a higher class than that for which the ticket is issued. Tricks of this kind occasionally take place; but as prevention is better than punishment, the obligation to show tickets before starting generally insures attention to the peremptory rule of neither travelling without a ticket, nor with one of a wrong denomination. The tickets are usually collected before the passengers leave the carriages; but on the Metropolitan, the Blackwall, the North London, and some other lines having a heavy traffic, the collection is made as the passengers leave the station. This saves time, but the arrangement tempts unscrupulous persons to travel in a carriage higher than that for which they have paid, seeing that the liability to detection is lessened. Many people, indeed, seem to think that cheating a "Company" is not essentially the same as any other dishonesty.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

CHAPTER XXXVI.

THE INNUITS' PARTY.

BY breakfast-time next morning the storm had worn itself out. It howled no longer round the ship. The clouds had gone with the wind, and the stars were now very bright indeed. There was, too, a new moon, lying low on the horizon like a gilded scimitar, and independent of the Aurora, which danced among the Northern ice-bergs. There was light enough to see a party of the Innuits, with their dogs, leaving the shore, and making straight for the slip.

"Now then," cried the captain, rubbing his hands, "what say you, men, to a good hard day's work? I would like to start those savages to do something."

"I'm in fine form," said Jack.

"So are we, I think, Godfrey," said Dess.

Young Nat stretched himself lazily. "I was going to read a book——"

"Nonsense!" said his cousin. "Leave books to the ladies."

"Oh! I assure you *we* are not going to read books at prescnt, are we, Katie?"

"No," answered Katie. "I want to do something to make me feel tired. We can read in the evening."

"After sunset, eh?" said Captain Boyd, laughing.

"Well, Captain Boyd, I mean after what would be sunset if the sun hadn't gone south to keep himself warm."

The people of the *Oona*, at all events, were in good spirits, and when the bell rang, all hands — combatants and non-combatants — appeared on deck, and Dresky was there too.

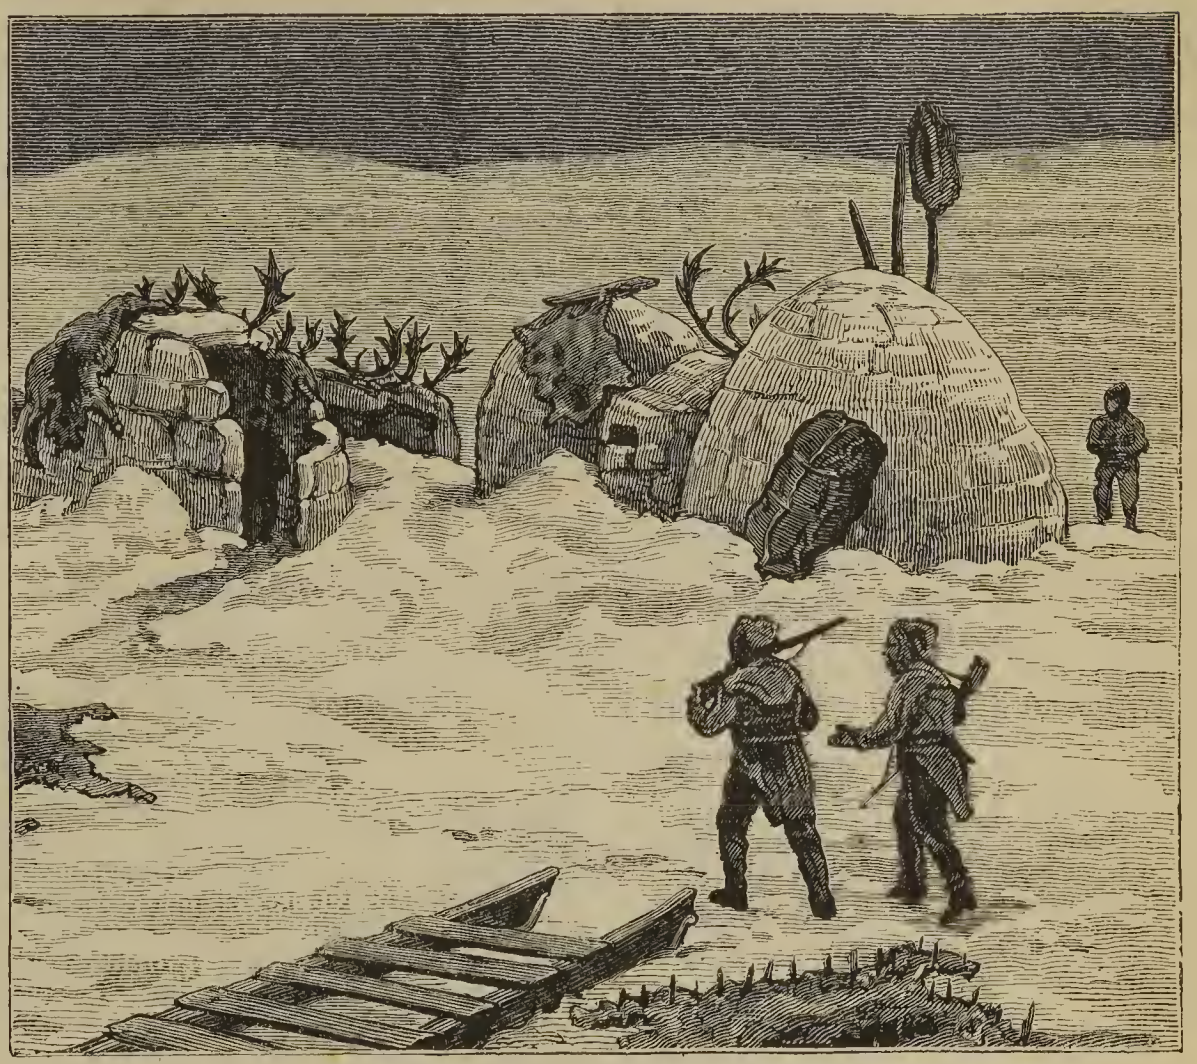
"How can we induce your people to work?"

It was evident the savage chief understood the captain. He proceeded to act interpreter.

"No workee, no eatee. No workee, no plenty tabak."

"Tabak" was the keynote, this was evident.

"Merrily does it then!" cried Jack, who took command of all the parties. And in a few minutes all hands were over the side and busy at work.



The snow was not deep, having blown away almost as soon as it fell. But a large space was thoroughly cleared around the vessel, and the fishing holes and water hole were re-opened. Besides this, a path was made all the way to the shore, Jack explaining to Dresky, and Dresky telling his men, that to keep these portions of the ice clear would be their duty all the winter, and their payment would be tea, "tabak," and plenty of food.

The last seal had probably now gone far away south, the last bird had assuredly fled; but, on inquiry, Dresky informed our people that it would be possible to beat up a bear now and then, and that bear's flesh was "plenty good eatee."

Two long months went slowly past, but Boyd and his officers never once relaxed their efforts to keep the men at work and at play, and therefore in health and spirits. And he was nobly seconded in his efforts by the two Nats, and by the ladies. Katie continued her readings. Concerts of all kinds were got up, and recitations as well. To some of the former the more respectable Innuits were invited, and Dresky even contributed to the harmony. But after all said and done, it was

"A weary time, a weary time,"

and one day Katie let her head drop on her cousin's shoulder, as she sat beside her on the sofa.

"Jack and Desmond would sally forth."

"I wish all this darkness was over," she whispered, in a most melancholy voice.

Poor Katie! she was sighing and longing for the sun.

A day or two later came the festive evening, on which the *Oona's* people had been invited by old Dresky.

"Going to a party, my ladies!" said old Sally, in amazement. "Oh! poor dears! Why, both o' ye will freeze wi' low-bodied dresses."

Miss Graves laughed as she explained that evening costume would not be a necessity on this occasion, and that furs must take the place of satin and lace.

The kashga, where the Innuit gathering was to take place, was quite a large affair, and on this auspicious occasion, was thronged with the *élite* and beauty of the tribe.

There was, however, a place of honour retained for the party from the *Oona*, including raised seats for the ladies, these and the floor in front being comfortably covered with bear skins.

The chief attraction of the entertainment was its novelty. As, however, the white folks did not understand it, any more than an Innuit would the Italian opera, much of its beauty was doubtless thrown away on them. But Chips and old Bob-a-link,—both of whom were honoured guests,—seemed quite to appreciate the fun, and laughed immoderately; and it was a treat for the ladies to watch the effects of the fun and recitations on the listening savages.

Every face there was a study, in brown and white, for when they laughed, their sun-coloured faces were wreathed in smiles, their eyes twinkled and sparkled with merriment, and their by-no-means limited expanse of mouths showed teeth like alabaster, or like real ivory.

It would be impossible to describe so strange a performance. It was fantastic, if not funny. There was a deal of singing, to the accompaniment of a kind of rude feather-adorned drum, the musicians themselves being plentifully adorned with foxes' tails and feathers, and strings of sea-gull eggs. The performer not only sang but moved rhythmically to the tap of the drum, while the song itself was at once a story and a chant. Chips said it described great deeds done in the hunting-fields, and in chase of walrus or whale by sea, in boats; but was everywhere pleasantly and copiously interlarded with allusions to scenes of domestic life and village incident.

But on this particular night, there was something very special indeed, for Dresky himself favoured the audience with "Auld Lang Syne," of all songs in the world. His voice was peculiarly drone-like, and as he sang he came constantly moving round and round, so as to face and sing to every point of the compass. If I remember rightly, our own song of "Auld Lang Syne" consists of about eight verses; Dresky's had fifty, if it had five.

It was quite evident that Dresky was quite as much the great traveller to these simple Innuit savages as Livingstone was to Englishmen. He had been everywhere, and learned everything. According to Jack Silk, the following is the first verse of the "Auld Lang Syne" which Dresky droned—and Jack assured Katie next morning at breakfast that the diction was quite correct, for he had taken it down word for word as Dresky droned it.

Those of my readers who are musically inclined, may adapt it to the air, and try it. They may also be glad to learn that it is not copyright, and may therefore be performed in public,—by those who like it sufficiently.

"O rinky, ransky, cora leesh,
O chonga tilkee ree;
O kotsko, chilkee, oonee hah
Cheeka tonga lee."
Chorus.—"O rinsky, ransky, coraleesh," *ad. lib.*

It was worthy of remark, Jack added, that old Dresky did not let anybody join in the chorus but himself, and that the air, as set, was peculiarly well suited to his voice—a minor-major key, with five and twenty flats, extras and accidentals not charged for.

However, there is no doubt about one thing. Dresky's droning gave the greatest satisfaction, and was *encored*, upon which he immediately droned fifty verses more.

Immediately after this, afraid perhaps that they would have to listen to another half-hundred stanzas, Miss Graves looked at Captain Boyd, and glanced significantly at Jack, and hereupon all rose and smiled, and bowed and retired.

It was a beautiful starlight night, and the air felt infinitely cold on coming out of the hot tent, but it was also infinitely fresh and exhilarating, and nobody would have returned to the concert-room for a good deal.

Then their quarters did seem snug and delightful now. The inside of both the parlour and retiring room was lined with skins, and beautiful fires of coal and wood were burning on the low hearths, and sending quite a cheerful glow round the apartments. Though the table was in itself a rough one, no fault could be found with the snowy cloth that covered it, nor with the well-cooked dishes that graced the board.

When the party entered the house, the sky was well starred all over, not a cloud being visible, and only a faint phosphorescent light on the northern horizon. When they left to go on board, after a cosy two hours spent around the fire, talking of their homes in the far-off States and merry England, a sight was presented to their eyes such as those who have once seen it are never likely to forget while life does last.

The poet Burns talks about

"The Aurora Borealis race,
That flit ere you can point their place;"

but half the display did not seem so much in the sky as about them, on every side. It is difficult to give any correct idea of those curling curtains of phosphorescent lace-work hung so close overhead.

They seemed almost tangible, changing shape, and form, and colour every second, glimmering like ghosts, leaping, dancing, quivering, flickering, here, there, and everywhere; advancing in rows and regiments spear-armed, meeting, mingling, battling, dancing, retiring, hurrying up again in squadrons, mixing, fighting; emitting a sound (the sound may or may not be all imagination; I have heard it in the deep silence of an Arctic night, and can only liken it to the noise you make by rubbing the forefinger rapidly up and down the page of a book), a sibilant, whispering, hissing sound, which Innuits tell us only the good can hear; suddenly going out to appear in the millionth part of a second on the southern hill-tops, there to dance, stream, and gleam, and glow, and burn, as if unseen suns were casting rosy-red rays on them, or pale greens, or saffrons.

The display ceased almost at once, and in silence the party returned to the vessel.

* * * *

Snow fell again next morning, but not much, and by ten o'clock a party of non-combatants had so far cleared the ice that skating could be resumed.

It must not be supposed that the good people of the *Oonalaska* had determined to devote *all* the winter to sporting on the ice.

No; but Captain Boyd, as an old Arctic sailor, knew very well that plenty of exercise, and that, too, taken in the open air, is the best preventive of sickness, and of that harrowing, gloomy forerunner of all evil to those who winter here, namely, *ennui*, and its attendant misery.

That must be kept at bay at all hazards, so the doctor and his captain had many a talk about it. McPhee was really a long-headed fellow, and knew a good deal about his profession, both theoretically and practically, and he was never tired of planning for the comfort of those under his charge.

Winter customs had, however, already been inaugurated. No lazy habits, either fore or aft, were encouraged. As regularly as the chronometer itself did the bell ring for breakfast at eight o'clock, and the stewards march in with it. Even before this, not only the men folks, but the ladies as well, had gone for a turn on deck, so every one was fully prepared to do ample justice to the good things put on the table.

After breakfast, Jack and Desmond would take their guns and sally out, generally taking one of the Innuits with them from the village.

After dinner came work or pleasure, or both combined. Even on days when the wind blew too keenly to make going from home enjoyable, exercise of many kinds, and many sorts of games, were carried on, on board ship.

The ship's fiddler was in great request; he could accompany a song well, and many an old-fashioned melody, that brought tears to the listener's eyes, he used to play of an evening: for sailors will think of home at times, you know.

(*To be continued.*)

TALKS WITH MARRIED FOLK

ABOUT THE MANAGEMENT OF INCOME.

By PHYLLIS BROWNE.

No. 4.—WHEN AND HOW TO SAVE.

(*Continued.*)

S with eggs and potatoes, so with many other things. Butter can often be bought by the barrel much cheaper than by the pound; apples by the barrel; oranges by the hundred; flour by the sack; and bacon by the side. Where there are cheap markets in the neighbourhood, fish, meat, and vegetables may often be bought in quantities at exceedingly low prices, and during three-quarters of the year there is no reason why this advantage should not be gained, if only the meals can be planned beforehand, and the ready money is at hand. But the pity is, that so many housekeepers are hampered for want of ready money; they cannot market economically, because they have to market by driblets. The way to gain this ready money is to estimate beforehand, and draw a plan; and by this means not only money, but time and trouble will be saved.

Yet a good many people say, "I do not approve of buying in large quantities, because I find that to do so leads to extravagance. What is easily got is freely used, and so, in the long run, nothing is saved."

In reply, all we can say is, that here management comes in; food *must not* be extravagantly used. Consumption must be watched, and necessities calculated. But in making our limitation we have to remember that when we buy economically we can more easily dispense liberally. If we buy oranges at 3s. a hundred, for instance, we can give them away much more freely than if we buy them at two for three halfpence.

I should say, then, that wise buying was one of the most effectual ways of saving. Yet, even for this, physical strength and a certain leisure are needed; and these are not at the disposal of every one.

If we agree that economy does not mean only saving, but means much more "wise spending," we shall also agree that "wise spending" involves spending money upon what is best of its kind.

To buy cheap things because they *are* cheap, is one of the greatest extravagances which married people can commit. The best things endure; they answer their purpose; they "stand in some stead"; they accomplish a good end. Cheap things are made to sell; they rarely answer any other purpose; and therefore people who have very little money to spend, are the very last who can afford to get them. Yet, unfortunately, these people are the very ones to buy them. Whenever you meet with people who have got well hold of their income, and who are succeeding in managing it, you find them most careful to buy the *best*. They cheerfully pay a halfpenny more here, and a penny more there; but they invariably think of quality before price.

The people who have nothing are exactly the ones who fritter money away. Of course the one fact explains the other; for if they did not fritter money away, they would not be so very poor; if they had a plan for their expenditure, and understood exactly how much was to be spent in this department, and exactly how much was to be spent in the other, they would have realised that to spend a penny here or a penny there, was to land themselves in difficulties. The more experience we have in saving and spending, the more thoroughly we realise how quickly trifles piled one on the top of another mount to a respectable sum.

If we could collect together, for example, all the pennies that are spent on cheap sweet stuffs on any one Saturday, in any large town, we should have a sum large enough to do very good service. Yet, if we were to say this to the fathers and mothers who buy the sweets, they would very likely answer,—

"It's very hard if the poor children cannot have a few sweets now and again!"

To a remark like this I should reply: "I think it is very hard that the poor children have them! The sweets do nothing but mischief. They help to ruin the teeth; they injure the digestion; they take away the appetite for good wholesome food; and they help to create that desire to be constantly sucking something, and swallowing something, which is very hurtful, and which, once acquired, *may* lead to drunkenness in later life. Mothers and fathers who give their children sweets, do not know what they are about on the children's account; and on their own account, if once they form the habit of squandering trifling sums on nonsense of this kind, they never know where they are."

There is another consideration that ought to make us willing and determined to buy what is excellent of its kind, and to turn away from cheap rubbish of all sorts. It is, that for making the cheap rubbish, low wages have been paid. In these days a great deal of the suffering that arises from people having to struggle to manage with insufficient means, is the result of cutting down prices, and trying to get as much as possible without paying a fair price.

In the long run this leads to loss for every one. The people who are paid low wages, and who are beaten down in their bargains, do not give the same good work that they would do, if they were trusted and paid properly; their great aim is to make their work *seem* good, without being so. Thus the employer is paid out in his own coin, and there is dishonesty all round; but the workers who are least able to stand up for themselves suffer the most.

If, however, people would aim at having

what was good, instead of having what was cheap, this evil would be considerably lessened, and at the same time the purchasers would be benefited even in their pockets, for they would have laid out their money to better advantage.

And surely, if the sensible married people who are trying to manage their income intelligently, who want to pay their way honourably, and make much out of little ; who have the desire to be thrifty, independent, and yet just—if they could realise that through buying cheap goods they were making it very hard for others, and increasing the suffering of the weak and the unfortunate, they would turn away from so miserable a business, and keep their hands clean of it.

"It must needs be that offences come," the greatest of Teachers once said ; "it must needs be that offences come ; but woe to the man through whom they come." Decidedly the people who buy the cheap goods, because they are cheap, are not free from this condemnation.

But perhaps some one feels inclined to say, "This is a painfully serious way of talking about managing the income. We have never thought about it in this way. We wanted to find out how we could make a little go a long way ; what little dodges we could adopt to spend little and get much, to save here and save there, and yet enjoy all the advantage of having lived as if we were millionaires. You speak as if expenditure, marketing, and housekeeping had to do with religion, and our duty to God and our neighbour, and as if the management of the income were a most solemn affair."

So it is. Looked at aright, there is nothing more serious or more solemn with which we have to do. The "dodges" come in certainly, and of them we will speak in a moment, though we will not call them dodges ; we will call them "the teachings of experience." But we must have a fair understanding of what we are aiming at ; and it must be remembered that we are aiming at getting on the top of our income, at escaping from its power, preventing anxiety about it weighing down our lives. We can only do this by entering on our task in a right spirit,—the spirit which accepts economy as a duty, and makes it simply a means to an end ; that end the highest and best welfare of those whom we love, and of all with whom we have to do, including ourselves. To accomplish this we must spend wisely, but we must also do without wisely ; and we must not let either spending or doing without be the chief or only concern of life.

It was said a little while ago that one way of saving was to buy in quantities—to refuse to buy in driblets,—because people who buy in driblets throw away advantages, and "let money run out at the heels of their boots" ; and that the reason why so few can do this was that they are short of ready money. The question then comes, How are we to provide that ready money? The answer is the one that has been given before : Look ahead ; arrange and prepare beforehand. Thus, when we were planning out our income, we found that we must set aside one-half for household expenses, which included coal, gas, cost of living, servant's wages, and various other items. Now, if our expenditure is too large, and we feel it necessary to retrench, we shall probably fix on the household expenses as the detail which must first be dealt with in the way of reduction. A very clever woman once said that "a good manager was a person who had learnt to do without, and who knew *what* to do without." This is exceedingly true. Bad managers do without, and generally a good deal of it, but they do without the wrong things,—the things which by rights they ought to have. They are not entirely destitute ; they spend something ; if they did not, there would be no question of managing at all ; but they choose to save on the wrong thing. We want, then, to discover what is the right thing.

And now for the practical aspect of this question. If I were asked to say, straight out, in what departments saving might be made in the majority of household expenses, I should reply, in butcher's meat, in the laundry, in coal, gas, prevention of waste, and dress. We will take these departments one by one.

All housekeepers know that the butcher's bills are the heaviest bills they have to pay. And yet it is not unlikely that, if they were advised to buy less meat, they would think that they were being advised to live miserably, and to starve themselves. People who have been accustomed to it like meat ; they like the flavour, and the feeling it gives of hunger satisfied ; and they imagine that if they are deprived of it, they are deprived of something which makes life endurable.

Now, I am not opposed to meat. I am by no means a vegetarian ; and I think well-cooked meat once a day is very excellent. But I am equally certain that a great many people would be better both in health and pocket, if they would not depend quite so much on meat.

For meat is very stimulating food ; it throws a good deal of work upon the digestive organs ; it loads the blood with impurities, and taxes the liver and other organs sorely. When taken in excess, it even affects the character ; it makes people full blooded and likely to get angry quickly, and it also makes them bilious and indolent.

Writers on cookery very often compare the human system to a common fire, and the food that is taken to keep us strong and well they liken to the fuel which is put on the fire, and consumed to keep the fire alight. If we might continue this simile, we should say that people who use much meat are trying to make a good fire by putting on huge lumps, while the stove is choked up with ashes.

The lumps are very good, but they will not burn quickly, and there is just a chance that they will not burn at all. If the stove could be cleared out, so that air could get in, and some small nobbles were put on judiciously, we should have a fire blazing merrily in a very short time.

Especially does this condition apply to children going to school. Very often mothers, anxious to do the best they know, say to themselves, "Oh, my children are working hard at school ; I must provide them with plenty of meat. They will never be able to work hard and thrive on anything else. There is nothing so good for them as mutton chops and beef steaks, and no matter how expensive they may be, mutton chops and beef steaks my children shall have."

Yet, to buy these chops and steaks is a heavy drain on the household expenses ; and if the housekeeper who buys them keeps accounts, and will examine those accounts for the last six months, she will find that her heaviest item has been butcher's meat ; and she will see that if the butcher's bill could be very considerably lessened, she would manage very much more easily.

The pity of it is, that both children and grown-up people who are in a normal state of health would be positively better if they had meat in moderation, and a more liberal supply of less stimulating food. To make this change in their nourishment would for them be equivalent to feeding the fire with easily burning nobbles, instead of loading it with hugh unmanageable lumps. The saving of expense produced by this alteration would be very material.

Housekeepers would perhaps be more likely to believe this statement if they realised what food does for us. There is a proverb which says, "Strength goes in at the mouth," and some people seem to think that in swallowing food they swallow strength.

But it does not necessarily follow at all. Different foods are made up of different elements, as they are called, and one element will no more do the work of another than a housemaid in a large establishment, where there are many servants, will set to work and cook the dinner, when it is her business to be dusting her top bedrooms. Now it happens that the element for which meat, poultry, and fish are valued is present also in foods which are much cheaper, namely, in eggs, milk, peas, beans, lentils, oatmeal, maize, and flour.

The housekeeper, therefore, who will introduce these foods into the diet of the family will be furnishing the same elements that she would supply if she furnished chops and steaks. As for the young people, they will thrive better if they have simple foods, bread, milk, vegetables, and fruit, with the stimulating food once a day.

We often wonder that the Scotch are such a hardy race ; but the reason is evident : in country districts they are fed largely on oatmeal, and they get plenty of fresh air. To quote the words of a lady who has given much study to the subject of food : "One pound of oatmeal will give a man as much strength as three pounds of lean beef, or three pounds of veal, or three pounds of boiled ham."

There is no doubt that amongst people who have not been accustomed to them there is a strong prejudice against lentils and haricot beans. I once heard a woman say, "I'm tired of the name of lentils. Your good managers are always throwing lentils and haricot beans at our heads, and my people cannot endure either ; whilst, as for porridge, they hate the sight of it." It is a little unfortunate when people who have very little money "cannot endure" nourishing food which can be bought for a few pence, and have a liking for food which costs shillings. The probability is, that unless these people conquer their prejudices they will spend the rest of their lives at Agony Point. Let us hope they will enjoy their rump steaks and their mutton chops there.

I do not care, however, to talk on a subject like this with people who think only of what they like and what they fancy. I suppose myself to be conferring with those who want to manage an income which they feel is small for their needs in such a way that health shall not suffer, comfort not be sacrificed, nor honesty and self-respect thrown overboard. And I maintain that one of the most effectual means of securing these ends through lessening the household expenses, is by lessening (not abolishing, mind,) the butcher's bills through varying the diet, and obtaining from cheaper kinds of food, and also from cheaper parts of meat, the nourishment and the appetising meals which ordinary humanity would obtain from the best and most expensive joints.

A DARING DEED; OR, LEILA'S LEAP AND LEILA'S LOVER.

By G. de la Plante.

"'I presume you are aware that his brother was a thief?'"

THAT long limestone cliff cropped up in the midst of a fertile plain. Its bare, rugged surface fronted the road by the river, whilst at the back it sloped down gently, until it regained the level of the rich tillage lands. Two miles long at least was the bluff, and right in its centre, almost overhanging the road, was a quaint old mansion, rearing its gabled roof towards the sky, and defying the stormy gales from its coigne of vantage.

The situation of Cliff Castle was less convenient than picturesque. The land at the back was laid out in large farms, with distant houses dotted here and there; all the civilization of the country lay right below the cliff, so that though the occupants of the Castle could look down on the pretty little village, and could almost hear words spoken on the road below, they had no way of reaching the lower level, except by going round the end of the bluff, a distance of two miles at least.

If adventurous schoolboys had lived at the Castle, no doubt a ladder would have been constructed down the face of the cliff, or else the overhanging branches would have been experimented upon with more or less success; but school-boys,—except a stray "trespasser" from the village,—had not set foot in the old Castle for long, long years, nor were they likely to do so.

The place belonged to an elderly man, Burton Trench by name, who shared few interests with the homely people around. He was eminently respectable in his habits, and regular in his attendance at church; he encouraged local trade, and did not set his servants' tongues a-wagging; in short, there was no reason to dislike the man, except that he had a sort of half-veiled contempt for the narrow mental horizons of his neighbours, and made them feel that he, and he alone, was possessed of culture and refinement. In the matter of horizons, his was the limited one, after all, for whilst the village folk were happy in a simple piety, that looked for a life to come, the rich man in the Castle had his view bounded by the things of time and sense.

Burton Trench was a man of refinement in all his tastes. Books, pictures, curios of various kinds, above all, jewels; these he collected, and on them he lavished his care. He was not a miser,—gold was only valued by him for its power of enlarging his "Collections" with rare and costly things.

Suddenly, he brought an orphan niece to live with him in his Castle on the cliff. Conjecture was rife as to his motive, but conjecture was as resultless as usual. There the niece was, without a doubt, and there she seemed likely to stay. Leila Montarn quietly took her place amongst the collections, an object of less interest and responsibility to the proprietor of both. When Burton Trench spoke of the girl, he laid a delicate emphasis on "*my* niece," which conveyed to a discerning hearer that Leila was one of her uncle's chattels—nothing more. The village folk instinctively learned the lesson, and never, even by their cottage firesides, questioned the uncle's right to his niece.

But after a year or so, one man did. Some five miles away, across the plain behind the cliff, was a large old homestead, in the midst of broad acres of rich tillage land. The best farm in the townland was Harley Haugh; but the Harleys themselves had somewhat fallen from their once high estate. The old couple were tottering on the verge of the grave, prematurely aged by sorrow. Of their twin sons, one had turned out a hopeless scapegrace, and after inducing his father to mortgage every acre of land, had absconded with the money, leaving numerous heavy debts unpaid, which the old man was too proud to repudiate. This burden, added to the interest on the mortgages, sorely crippled the family resources. Hugh, the remaining son, had stood by his father in the struggle, spending but little himself, and working both early and late on the farm. His hands were hardened from toil, and his face was bronzed from exposure to all weathers, but for all that, Hugh Harley was every inch an English gentleman. His clear eye had not a shadow of dulness; his firm lips were not relaxed, and his broad, white brow told of no degeneration in mental power. This was the man who dared to claim the hand of Burton Trench's niece,—and the chattel was refused him.

Now Leila had a will of her own. She and Hugh Harley were one in heart and aim, and no uncle's prohibition could part them. She would not disobey the man who had given her a home, and made himself her protector; but she was not going to give up Hugh.

She told her uncle so one day. He sat by his table reading the record of some recent sales. Leila came close to his side. "Uncle," she said gravely, "I wish you to know that I love Hugh Harley, and have promised to be his wife some day."

Burton Trench took no notice of the girl, so she turned from him, and walked to the door. As the handle slowly turned, the paper slid from her uncle's hands, and he glanced over his shoulder to where she stood. "I presume you are aware that his brother was a thief? Those things run in families, I understand."

"I don't care *what* his brother was," cried the girl; "he himself is noble and true!"

"Really?" was the cynical reply, as the paper was resumed; "oblige me by not

referring to the matter in my presence again."

Henceforth Leila's life would have been gloomy if she had not had sunshine in her heart. She could see Hugh but seldom, for he was busy now with his men, as they sowed the seed in the rich red soil, and letters from him her uncle had forbidden.

A month passed by. Burton Trench was more than ever absorbed in his jewels, adding now and then to his precious stores, and devising all sorts of precautions for their safe keeping. Reports had reached his ears that his jewels were of wide repute, and began to be unenviably notorious. It was scarcely possible that treasure to such amount should escape assault; but Burton Trench flattered himself that it was one thing to wish for the rare contents of his cabinets, and quite another thing to reach them. Even Leila did not know the secret of those mysterious springs and locks.

One fine Spring night, when the young moon peeped in and out amongst the broken clouds, some one possessed with a longing for those jewels made entry into the old Castle on the cliff. Leila was late that night, and heard the stealthy movements in the room below. No thought of jewels or robbers came to her mind; she imagined that her uncle was ill, and needed her. Ten o'clock was his usual bed-time; it was now a little past midnight.

The girl, shading her candle with her hand, crept gently downstairs. Her uncle never liked her to fuss about him, so she would not disclose her presence until she was sure he needed her help. Some one else had heard the noises too. Outside the door of the study stood her uncle himself, his face pressed close to the chink of the door, through which shone a faint gleam of light. Instinctively the girl blew out her candle, and, drawn by some strange fascination, came on noiselessly and unseen, until she too could see through the open door. There was a look of almost cruel expectancy on her uncle's face, which froze her to the heart. Whom was he watching? If it were a robber, why did he not rush forward to rescue his treasures from the thief? Suddenly a low sob of terror and dismay burst from the girl's white lips. What had she seen? Bending over her uncle's jewel case, his deft fingers seeking to undo the lock, was—oh! could it be real, or was it a hideous dream?—Hugh, her Hugh! The sound she made caused her uncle to look round; his face softened one moment into pity as he saw the anguish of the girl, then he held up a warning finger to her, and again bent forward, fixing his eye on the man still intent on his midnight work.

Leila longed to cry out, but her tongue was paralyzed and refused its work. Those moments seemed like hours of agony to the girl, but at last the suspense was broken by a quick sharp report, a flash of light, a cloud of smoke, and then a heavy fall. The figure standing over the cabinet had vanished, and Burton Trench bent over a prostrate form on the floor. Leila stood one moment transfixed. Then from the midst of the smoke came her uncle's voice, hoarse and broken,—

"Get the doctor, quick, child, quick;—I believe it has killed him."

To Leila it seemed in that awful moment as if death were the best end of Hugh's dishonour; rather, far rather, would she have lost her lover, than have thus had to lose her faith in him. As she turned quickly to obey her uncle, the first movement brought a rush of blood to her frozen heart; her faith revived; some dread mystery there was, some awful mistake, but Hugh was not, could not be, a common thief. She sprang forward, without a thought of the chill night air; a cloud of shame would rest on her lover's name if her footsteps failed to bring relief in time; but alas! an hour at least must elapse before she could reach and rouse the doctor, if she took the long road round by the cliff.

Leila's fleet steps had already reached the old lime tree on the carriage drive; there she stopped short and stood waiting, looking up as if for a heavenly light. Was that daring thought God-sent, or the creature of her fevered brain? Dared she risk her life by trying that awful climb down the face of the limestone bluff? Had she nerve enough to do what no woman had ever done before? Life, honour, love hung upon her action. God helping her, she dared do all. One swift, fervent prayer went up to the cloudy sky, then Leila hastened across the narrow strip of greensward, and took one long look down the dark face of the cliff. As her eyes strove to pierce the darkness, the moon burst through the clouds, as if its light were Heaven-sent to guide her on her way.

In a moment the paling was surmounted, and slowly, slowly the girl swung herself over the edge of the cliff. Her face was white and resolute, her dark hair was dishevelled and undone, and her short, panting breath told that she realized her danger indeed. Still, though the flesh yielded to terror, the girl's heart was strong, and she firmly held the branches that overhung the cliff. Down, down she went, treading in the uncertain moonlight, where, in the fuller revelation of the day, she would have feared to step. It was an awful strain. Her light, loose dress helped her, by leaving free her limbs; but those slender arms were ill used to bearing the whole weight of her body, and more than once it seemed as if they must give way.

At last, long last, came the final descent. So much had been safely passed, surely failure could not await her now.

"Her short, panting breath told that she realised her danger."

Below her in the uncertain moonlight lay the road, how far distant she was afraid to guess, and between her and it a smooth space of rock, with not an inch of foothold. The branch from which she hung was the lowest within reach; with both hands she clung to it, pausing to gather courage for her final leap. One thought of Hugh, one cry for strength from Heaven, her hands unclasped the branches, and she fell to the road below.

Not in vain had been the brave girl's venture; shaken she was, and bruised, but when her breath returned after the shock, she was able to hasten forward to the village, and in a few minutes was knocking at the doctor's door. The good man sped away to the Castle, as soon as his gig could be got ready, whilst Leila, completely unhinged, now that the need for action was over, frightened his old servant by a long death-like faint.

Thus it came to pass that the early morning was dawning before Leila returned to the Castle on the cliff. Slowly, fearing to hear the worst, she crossed the drive before the door-way, and began to ascend the steps. The door was opened gently, and before her stood Hugh, pale but unhurt. Without a moment's pause, the girl sprang towards him, the last flutter of distrust banished by a glance at those clear blue eyes; she did not understand, but love is cold indeed when it only follows reason.

Some one was hurt. The house was hushed; the doctor's hat was in the hall; quiet figures flitted to and fro, and through the study door came now and then a moan, as if from one in pain.

"What is it, Hugh?" asked Leila, her face blanching again,—"not uncle?"

"No," said Hugh, "I don't know how to tell you. It is—my brother, Leila."

With a cry of joy Leila buried her face in her hands. "Oh! Hugh, Hugh! so it was not you! So like, so like!"

"My darling, did you think I could be a thief?"

"Hugh, I could not understand,—he is so like you,—but I could *trust*."

"I cannot forgive him, Leila. He came back last night,—we never expected him—so, early this morning I was summoned here, as the doctor thought he was dying. To appear in this house as the brother of a captured thief—it will set your uncle still more against me."

"I am yours, Hugh," said Leila: "Can you not afford to forgive the sinner who may soon be past forgiveness? Do not be harder than God."

"You are right," said Hugh briefly; "who am I that I should judge? Go to him, Leila, he may want you;" and the young girl passed into the sick room.

The wounded man was so strikingly like Hugh that Leila could not suppress a shudder, as she watched him tossing to and fro in uneasy slumber. Her uncle, at the far end of the room, was bending over his jewel cabinet, with eager hands removing the complicated arrangement of springs whereby the concealed pistol had been discharged at the would-be thief. His precaution had succeeded only too well, and he bitterly repented the skill which had enabled him to put a human life into the balance. The doctor sat beside the patient, and looked critically at Leila as she entered the room. He rose, and taking her by the arm, led her to the window. "If that fellow lives," he said, "it will be due to your fleetness. How did you get to me so fast?"

"Down the cliff," said the girl.

The doctor drew his lips together as if to whistle, then changing his mind, he asked, "Down the face of the limestone bluff?"

"Yes."

"Ah! I see," said the doctor, after a pause, as if he had grasped the whole situation; "troublesome climb, wasn't it? You go straight to bed, and drink what I send you."

"I may be wanted——"

"Probably—to-morrow. Meanwhile, be a good girl, and do what you are told."

The doctor made little of Leila's exploit when with her—not so afterwards to her uncle and to Hugh.

"I tell you, sir, many a man would have failed to do it, much less a girl." Then he turned to Burton Trench. "You understand the full motive? She mistook yonder poor thief for his brother, and it was to save *him* she risked her life. There's stuff in that girl."

"She risked her life for me when her senses told her I was a thief—God bless her," said Hugh brokenly; "but I'd rather have died than let her down that awful cliff."

"I was a brute," said Burton Trench, his cynicism fairly giving way; "I thought it was you, and I gloried in it. I watched through the door, and waited for the pistol to go off. Harley—can you forgive me? I can't forgive myself. As for Leila—I can't speak of her yet!"

And so it all came round at last. Slowly Hugh's brother weighed down the life side of the balance. Those weeks of suffering were not in vain. Hugh's brother was Leila's brother too, and the prodigal's heart was softened by a pure woman's pity and prayers. Years after, an altered life proved that the sick-bed repentance was real; this, God's son, who had been lost, was found.

Burton Trench no longer opposed Leila's marriage; before the summer was over she and Hugh were man and wife. The old couple at Harley Haugh ended their days in peace, and the farm, when sold, sufficed to pay all debts, so that Hugh, though penniless, could start unhampered in the world. He would have taken Leila away with him in search of work, but Burton Trench pleaded that she might be kept near him. He settled a sum of money upon her, and put Hugh in charge of all his land.

Though years have long passed away, and bright-faced children play round the Castle on the cliff, Leila's leap is not forgotten, and Leila's lover is just as much her lover as of old.

THE STILL HOUR.

RESPICE FINEM.

OH, not her gentle, silent forces most
Doth Nature use to purify the world;
But raging hurricanes, in tumult hurl'd,
And blasting winds and tempests are her boast.
With thundering whir of ebon wings, from coast
To coast they fly, by might resistless whirl'd;
Then, in their central calm, betimes are furl'd
And rest content; for lo! a new born host,
Of stronger life and fresher bloom, arise.
And thus have all the greatest eras wrought
Those changes that have made our earth so wise.
Weak, doubting heart, receive the lesson taught,
Beyond each storm of grief, a blessing lies
Becalmed, within the soul of God's best thought.

IULIA H. THAYER.

HOMELY HOBBIES.

By W. H. HARRIS, B.A., B.Sc.

No. 12.—THE SALT OF OUR FOOD.

IT is said that a child under examination being asked, "What is salt?" answered, "It is that substance which, if we have none of it, makes potatoes taste nasty!"

This definition, though not remarkable for logical correctness, hit the main point connected with salt as related to our food; for it is the vegetable portion of our diet which especially excites a craving for saline material.

Mungo Park, in his "Travels," says, "I have myself suffered great inconvenience from the scarcity of this article. The long use of vegetable food creates so painful a longing for salt that no words can sufficiently describe it." He tells us, further, that in the interior of Africa "the greatest of all luxuries is salt. It would appear strange to a European to see a child suck a piece of rock-salt as if it were sugar. This, however, I have frequently seen; although in the inland parts the poorer class of inhabitants are so very rarely indulged with this precious article, that to say a man eats salt with his victuals is the same as saying he is a rich man."

Nor are we the only animals benefited by this mineral addition to vegetable food. Many of the *herbivora* visit natural deposits of rock-salt; and we have geologic evidence that in past ages huge beasts, like the extinct mastodon and mammoth, not unfrequently became hopelessly buried (by their eagerness to obtain this substance) in saline marshes and bogs.

Moreover, our horses and cattle show a distinct appreciation of salt when added to their forage and fodder, or when supplied in large lumps which they can lick at their pleasure. Its utility to their constitutions is seen in improved "condition" and in an increased sleekness of "coat"—a general sign of excellence of health.

Now, if we remember that several of the secretions, notably the tears, are saline; that the bile, manufactured constantly in large quantities by the liver, owes its alkalinity to one of the ingredients of salt; that in the blood an appreciable amount of this substance occurs; that the gastric juice of the stomach contains free hydrochloric acid; and that we must attribute the supply of each of these materials to the salt we take with or in our food, we shall understand its importance to a diet of a perfect kind.

Its occurrence in blood affords an explanation why carnivorous animals need it less than the *herbivora*, as a separate article of nourishment. It is remarkable as being the only completely mineral substance taken as food by man.

Chemically, it is a compound of chlorine and sodium, and is called *sodium chloride*. It occurs to the amount of about 3 per cent. in the waters of the ocean; and it was from this inexhaustible source that it was formerly manufactured.

Now it is, at least in our own country, obtained almost entirely from mines and brine springs; and as it is with the geological aspects of the subject that we are concerned, we shall devote our attention almost wholly to the way in which it has been deposited among the strata of the earth's crust.

Like coal and limestone, it is not the product of any one epoch in the history of the globe. It is true that in England the most important saline beds belong to what is

known as the Triassic group of rocks ; but deposits of equal magnitude are worked among the Oolitic series of the Salzburgh district in Austria, and in Spain large quantities are met with in the Cretaceous formation and even in strata of the Tertiary Age. Nay more, there is good reason to believe that, in certain localities, salt is being deposited from water at the present day.

As we endeavoured to reason about the production of coal and limestone by the aid of facts within our actual observation in different parts of the globe, so we may, with great probability, learn, from certain phenomena of our own period, how salt-beds originated in times indefinitely remote.

In the Holy Land there is a well-known lake, usually called the Dead Sea. It is about 46 miles long, by 8 or 10 broad in its widest part, and in some places it is as much as from 1,000 to 1,300 feet deep. There are two remarkable facts connected with it : the first being, that its surface is some 1,300 feet below that of the Mediterranean ; the second, that its waters contain so large an amount of mineral matter in solution, that its specific gravity is sufficiently high to sustain persons bathing in it, without any effort on their part to keep their heads above water. The explanation of this great salinity is, that the lake has no outlet, and, consequently, a continual addition is being made to its mineral contents.

At its southern end there is an extensive salt marsh, at its south-west corner is a ridge of rock-salt, and at its diagonally opposite or north-east corner another salt plain occurs. It is, moreover, believed that, at certain places, an actual deposit of sodium chloride is taking place at the bottom, for cubic crystals of pure salt are said to have been dredged up from the mud. That the amount of water in the lake is gradually diminishing is proved by the fact that on its borders are seen former beaches, at various heights above the present surface. If evaporation continues to go on faster than the Jordan can make up the loss of liquid, beds of various minerals will be formed in the order of their solubility ; and if by any means the course of the river should be diverted, the whole lake would dry up, and immense masses of solid material—chiefly salt—would be left behind.

In various parts of the world, notably in Africa and North America, similarly shut-in and river-fed lakes occur, all characterized by the great quantities of saline matter which they contain ; and it seems likely that at all epochs since the earliest in the geologic record, there have been such collections of water subject to the conditions we have been describing. In these we manifestly have the possible source of beds of rock-salt.

Again, along the sea coast it happens, from time to time, that inlets or narrow gulfs are gradually cut off from the main body of waters, by the throwing up of sand-bars, over which, at high tides only, or during storms, waves can flow. When such events take place in latitudes where great evaporation goes on, there will be a constant loss of liquid, whose dissolved mineral matters will remain behind. Then, as replenishment will be frequently occurring from the sea, saline substances will be constantly accumulating in amount, till at length deposition of the solid ingredients will begin. We may suppose these processes to continue for long periods, but, at last, all communication between the sea and the lake to be stopped by the heightening of the sand-bar. There will now come to pass a still more rapid precipitation, until at last the whole area is reduced to dry land, consisting of strata of different mineral composition. Those substances which are least soluble will be the first laid down ; afterwards those which the water can longer retain. In this fact we have the explanation of another remarkable circumstance, viz., the constant occurrence of strata of gypsum and magnesian limestone among the salt beds of our own and other countries.

For the further elucidation of this last point, we have only to imagine two sets of circumstances, which are by no means infrequent at the present day, and evidences of which are plain in past geologic periods.

The first of these is, changes in the level of the land, which would give again access of sea-water to districts from which it has been evaporated as before described.

The second is the intermittent river-carriage of earthy and saline material to lakes having no outlet, but subject to copious evaporation. We should then expect to find, when all the water had disappeared, seams of marl, magnesian limestone, gypsum, and rock-salt of varying thickness, and repeated so often as similar sets of conditions had occurred. Now this is precisely the sort of succession of beds which we do see in Cheshire, Worcestershire, and other saliferous localities.

In the former of the two counties just mentioned, the deposits of rock-salt are worked along the valley of the river Weaver. The beds are not uniform in extent, but occur in patches, and at varying depths. There are records to prove that the works have been carried on in that neighbourhood from the reign of Edward the Confessor ; and it is evident that even in still remoter times there were settlements of some note in that district. It is, indeed, worthy of remark that the names of the places where the manufacture is carried on in England, end for the most part in "wich"—a termination pointing to the days of the Roman occupation, as it is derived from the Latin *vicus*, a village (Saxon *wic* or *wyc*). As examples we may mention Nantwich, Middlewich, Northwich, and Droitwich.

In Cheshire there are two main beds of salt, lying under more than 100 feet of coloured marls, sands, and irregular seams of gypsum. The upper of the two beds is 75 feet thick. The lower is more than 100 feet in thickness, and between the two there occur strata similar to those overlying the bed nearer the surface. The purity of the salt in these deposits is very variable. Considerable admixtures of earthy material are found, especially towards the top and middle portions of the beds. It is rarely sufficiently free from impurities to be crushed for direct use. The separation of marly and sandy matters has to be effected by water, which will dissolve the salt, and leave behind the earthy substances.

When, from any cause, water finds its way from the surface of the ground to salt-bearing strata, and can accumulate in cavities and old workings, we have a brine spring, and as in past days, so also at the present time, it is found more advantageous to pump up such brine, and to extract by evaporation the contained salt, than to mine for it in the solid condition. William Camden, who has been called "the Strabo of England," and who lived in the latter half of the sixteenth and first part of the seventeenth centuries, tells us that then the brine was lifted by human labour. He speaks of "a deep and plentiful brine-pit at Northwich, with stairs about it, by which, when the people have drawn the water in their leathern buckets, they ascend half-naked to their troughs, and fill them, from whence it is conveyed to the wich-houses."

So great is the quantity of solid matter thus carried away by underground streams dissolving the salt bands, that in many places considerable subsidences of the surface have taken place, and fresh-water lakes now occupy the hollows thus made.

The total quantity of salt annually manufactured in England must border closely on a million and a half tons. In Ireland some 30,000 tons are produced yearly. Very large amounts are exported to all parts of the world. The different qualities are known by such names as *square salt*, or that made in moulds ; *butter salt*, *brisk salt*, *basket salt*, *broad* or *coarse salt*, *bough salt* (made once a year in winter, and crystallized on branches of trees), and lastly, *agricultural salt*, consisting of the sweepings of the works and the evaporating-pans.

The uses of this substance are numerous and important. Beside its great utility in food, it is valuable for its preservative qualities. It owes this character probably to its acting as a poison to those low forms of life, which are believed to be the agents of putrefactive change. In view of this fact, how exceedingly suggestive are the words of our Lord to and regarding His disciples : "Ye are the salt of the earth."

It is largely used in various arts. It is one of the chief ingredients employed in the glazing of pottery, earthenware, and china. From it are manufactured soda and chlorine, and it is used also in the preparation of sal-ammoniac. Tanning, metallurgy, and agriculture, require large quantities annually.

We have been able to give a bare outline of this interesting subject. It merits, from our readers who are geologically inclined, a fuller investigation.

A TALK ABOUT HORSES.

By A. L.

WALKING along a crowded street one day, I was startled by the sudden sound of wild shouts, the swift rattle of wheels, and the rushing gallop of horses. Quick as thought the crowd parted on either side, and made way for what dashed past us like a lightning flash!

Such of our readers as happen to be dwellers in London, or any other large city, will know that it was a fire-engine, with its fine team of horses, and its bright-helmeted firemen, which was flying full speed to the rescue of life and property without a second's delay.

It was a stirring sight, as it always is, to see a body of brave fellows ready at a moment's notice to risk life or limb for the relief of their fellow-creatures.

With the exception of the drivers of the fire-engine, the firemen have almost all, at one time, been sailors, and it is thus that they have acquired that fearlessness and skill in climbing which distinguishes them, and which so well fits them for this service of danger. It is not, however, of the firemen that I am going to write just now, but of their horses. The generality of horses dread a fire, which makes them grow quite timid; but those of the firemen seem to enjoy the scamper to one, and the shouts and the attendant excitement do but arouse their courage. The horses belonging to a certain fire brigade at the West End are remarkably well-bred, strong, swift, and handsome.

Now a horse, if in good health, rarely lies down in his stall except to sleep, or after any great fatigue; but one of the horses of the brigade mentioned has his own peculiar views on this and another matter: he always lies down except when feeding. You may do all you can at other times to make him get up; it will be to no purpose.

On some occasions, when it has happened that there was little work for the horse to do, he has been put into a cab to give him exercise; but this he hates and resents—so much so, that it is often a full twenty minutes before he can be harnessed to it; but once let him hear the fire-bell ring, and he is up in a moment, eager to be off, and then will even thrust his neck into the collar quite of his own accord! So it looks as if he considered himself pledged to the fire brigade, and was determined to have nothing to do with any other service if he could help it.

Those who are accustomed to be much with horses know them to be very intelligent animals. In deeds of valour and daring the horse is a fitting companion for man. The horse, indeed, seems sometimes to have learnt, with the soldier, that the foe must be faced and that duty must be done. Many a time in battle, his master having fallen, killed or wounded, the riderless horse will lead on the charge; and countless are the stories on record in which we are told how the faithful steed strained every nerve and sinew to the utmost, as though conscious that on his speed alone his rider's life depended, and then, the goal won, the danger over, the brave animal, whose high courage had been beyond his strength, has lain down, panting and gasping, and died at his master's feet.

It has been questioned if horses have the same power of attaching themselves to persons as dogs have; but it must be remembered that they are apt to change hands far more frequently, and that they can never—in this country, at least—be so domesticated as the dog is. The Arabs, who are accustomed to live in camp with their horses, could probably throw some light on this question.

There can be no doubt that horses have their decided likes and dislikes, and will readily trust those who use them kindly; but it is by no means safe to abuse their confidence, as they have remarkably good memories, and have been known to pay out an offender long after the offence was committed, and therefore supposed to be forgotten.

"The shouts and attendant excitement do but arouse their courage."

There is almost as great a difference in the dispositions of horses as in their form and colour. Some grooms tell you that the disposition has its outward characteristics: thus, for instance, that a white or grey horse loves to cover itself with dust and dirt; that a chestnut is fiery tempered; that a "flare in the face" is a bad sign; that a horse which lolls its tongue out of its mouth is invariably well-disposed, and so on.

Bad tempers in horses may be subdued by judicious treatment, and there have been wonderful cases of success obtained by professional horse-tamers. I remember hearing of a curious mode adopted once upon a time in some racing stables with an ill-tempered racer.

He had maltreated the grooms who tended him, biting and kicking at all who approached. At length it was agreed that a donkey should share his stall with him, and feed at the same manger. At first the horse bit and mauled poor Neddy sadly; but the donkey's hide was thick and his will stubborn. A series of battles commenced between them, and they fought incessantly; but ere long the horse had recognised his master, and might be seen patiently waiting whilst the donkey took his food first, and from that time his temper and ways began to improve.

The following story is also authentic:—A gentleman was one morning lamenting to his family the difficulty there was in clipping and trimming a young horse of his; it would not suffer any one to touch its heels, kicking violently if this was attempted.

We may imagine his alarm and astonishment, then, when, shortly after, on going to the stable, he saw his little girl, aged three, seated on a low stool, endeavouring, with a pair of large scissors held in both hands, to trim this horse's fetlocks. The horse was standing quite still under the operation, as if pleased with the attention.

The anxious father commanded his feelings sufficiently to bid the child quietly to come away. Luckily, she was accustomed to obey implicitly, and therefore rose at once, although vexed at not having been able to complete the work neatly. The chief idea which seems to have possessed her infant mind, when she heard her father's regrets about the horse, was that she would do something to please him.

And here, for to-day, my "Talk about Horses" must end. What I have related will, doubtless, enable readers of "A. L." to recall story upon story of like interest; for the subject is not only attractive, but well-nigh inexhaustible as regards materials.

Y.M.C.A. ITEMS.

THE Committee of the Bradford Y.M.C.A. has decided to admit Members of local Mutual Improvement Societies, Adult Schools, and kindred Societies to membership of the Association at the following rates: Societies of not less than ten and under fifty members, 2s. 6d. each member (members between the ages of 16 and 18 will be admitted at 2s. each); over fifty members (irrespective of age), 2s. each. The ordinary subscription to the Association is, under 18 years of age, 2s. 6d. per annum; over 18, 5s.

We have received a copy of *Pass it on*, the organ of the Bradford Y.M.C.A., and must congratulate the new editor on the excellent account given of the doings of this energetic Branch of the various organizations in connection with the Association. The public Evangelistic Service, held every Sunday evening, seems particularly flourishing, the average attendance being over 200.

On March 8th, the third party of young men sent out this year by that active and very useful branch of the Manchester Y.M.C.A., known as the "Young Men's Emigration Advice Society," sailed, per the S.S. *Vancouver*, to take situations on farms in Manitoba.

The party numbered thirty young men from London, Newcastle, Sale, York, Blackley, Chester, Mossley, Manchester, Hazlegrove, Bradford, etc. Each young man went out with the consent of his friends, and, as usual, the party met at the Y.M.C.A. rooms the day before sailing, when General Secretary Newett gave them information and advice about the sea voyage, rail journey on the other side, etc.

A Little Song of Sadness.

By Samuel Gee, A.R.A.M.

PLEASANT SUNDAY AFTERNOON CLASSES.

By one who has tried the plan.

[A short sketch of this interesting movement will doubtless stimulate other workers. Space forbids the full account sent us.—ED.]

MR. BLACKHAM, of West Bromwich, had been long impressed with the fact, that a great gap existed between the Sunday School and the Church. For twenty years he had dreamed of a large Bible Class, to which young men and maidens might be invited, and often had he been urged to take the superintendence of such a meeting, but this he refused.

Early in the year 1875, he went to Birmingham, with the intention of hearing Mr. Moody; but the Town Hall was so crowded that he could not get in.

He then asked, "Where can I see one of the largest Bible Classes at work?" and to this he went.

There were thirty students, with a "splendid fellow" at their head. The address was good and interesting, but so long that both back and head ached before the close. But one important lesson was learned, viz., "How *not* to do it!"

Mr. Blackham returned to West Bromwich, and agreed to take a Bible Class on two conditions:—(1) That the other teachers would pray for him; (2) That they would not hamper him with rules.

Then he began what he called a "Pleasant Afternoon Class," from 2.30 to 3.15; and the first afternoon he had over 100 young men. The class grew and grew, until it now numbers several hundreds. Twelve similar meetings have sprung up; and so successful have they proved in attracting hundreds of young men, that our friend is quite besieged with invitations to establish these classes.

We pass on now to describe the methods of the "P.S.A.C.," as it is called.

When Mr. Blackham first gave his invitation to young men, he had no idea of associating with the movement the marking of attendance, or the giving of books to the most regular, but simply to hold a bright, brief, brotherly service, for three-quarters of an hour. When, however, more than 100 came, it was a serious consideration how to keep these young men together; and the following Sunday Mr. Blackham addressed them somewhat in this way:—

"My lads, I did not think so many of you would turn up. It will take me two months to get you all comfortably settled down, but I don't want to lose one of you. If you'll come every Sunday, I'll give you a tract to read, and all who bring eight tracts at the end of two months shall have a book."

They all agreed to this, and the books were soon contributed by donations from friends. These benefactors, however, were removed later by death or other causes.

Mr. Blackham at once appealed to his increasing class:—

"My lads, we must either give up the class, or the books. Which is it to be?"

"Neither!" shouted several.

"Well, *I* can't go on begging money. Will *you* help?"

"Yes, we will."

"Will you all give or beg a halfpenny a Sunday?"

"Yes."

"Very well, then, the thing is done! You'll pay for your own books; and we'll keep on the class."

Speaking roughly—but within the bounds of truth—there are in West Bromwich twenty classes, with an average attendance of 5,000; in Walsall 7 classes, with 3,000.

About my own class upon this plan, permit me to say—In 1885, I issued 100 large posters and 10,000 handbills, thus:—

'Sunday Afternoons for the People,"
Conducted by ——— and friends.
3 p.m. to 4 p.m.
All seats free. 1d. Collection.
Sacred Songs and Solos used.
Subject of Address—"Birthdays."

Sunday afternoon came. I wondered what would the result be? About 250 people came. I at once openly and briskly said: "My friends, there will be nothing stiff and formal here. We'll be bright and brief. Let us sing."

Then followed a few verses from the Bible (not lasting more than three or four minutes), then prayer (three minutes), another hymn; the address (twenty minutes) and another hymn; and then:—

"My friends, a few words of explanation before the collection is made. I hope to hold a class here every Sunday afternoon. Will you all become members, and endeavour to get others? Membership consists in receiving a card properly divided into spaces (holding one up) and presenting it at the door as you come in every Sunday; when it will be stamped by an officer appointed. You will also undertake to pay at least 1d. each Sunday. These pennies, at the end of the half-year, will be spent in the purchase of books, which will be given to those who have made 24, 18, or 12 attendances out of 26. This service is your own; will you nominate half a dozen men to work with me and my friends on the committee?"

The next Sunday came; and 300 or more people were present. Two members of the committee stood at the doors, and stamped the cards of those who had received them the Sunday before. The rest conducted the strangers to seats, and endeavoured to make them feel at home; and we all had a happy time. I again explained the movement and the method; seventy more gave in their names as members.

In July I gave away about 250 volumes of books to those who had made the required number of attendances, and at the close 100 members were added, and the class has grown until now we have 1,100 members, raising a total income of about £180, all of which is given back in books, after deducting necessary expenses.

"The people" are ready and thankful to be helped, if Christian men and women will only aid them in the way they like. It is no use endeavouring to force the gospel upon men on the old lines; the very people our churches want won't come to hear it, unless under exceptional circumstances. The plan suggested, and carried out in the way suggested, will fill any building. Since starting the meeting on this plan, two years ago, six other such Sunday afternoon meetings have been begun in the town, the last being in the parish church under the care of the Rev. E. M. Fitzgerald, M.A. Mr. Fitzgerald, however, proposes to mark attendances for the year, and to give books for that period. And this plan will, I think, have to be adopted by all large classes; it is no light work to select and distribute books twice a year.

On the front of the member's card is the title of the class, space for the member's name, and number of attendances required. The back is divided as shown below.

1888.

January	1	8	15	22	29
February	5	12	19	26	...
March	4	11	18	25	...
April	1	8	15	22	29
May	6	13	20	27	...
June	3	10	17	24	...

Back of the card.

This card is presented every Sunday by the member upon entering the building, and is stamped on the date upon which it is presented. On Sunday, "June 24th," the card is exchanged for another, marked in a similar way from July to December. The attendances are counted, and a book given according to the attendances made. The Presentation Day usually takes place within the month following the delivering up of the card.

Such is an outline of the work which has resulted from Mr. Blackham's visit to Birmingham fourteen years ago, where, as he listened to the good and learned teacher of a Young Men's Bible Class, he learned how *not* to do it.

Further information may be had, if desired, from any of the following: Mr. Blackham, Hill Top, West Bromwich; Rev. A. F. Barfield, Walsall; Dr. Dingley, Wednesbury; R. Hodder, Esq., Derby; T. H. Lloyd, Esq., President of Y.M.C.A., Leicester, and others.

THE TWO "EXCEPTS."

THEY ring right down the Ages—God's "except," and man's.

"*Except* ye be circumcised after the manner of Moses, ye cannot be saved," said "certain men from Judæa," to the brethren (Acts 15. 1). So say "certain men" to-day. "*Except* ye agree to this form or to that; *except* ye bear the mark of outward conformity; *except* ye do it after the manner of this man or that sect, ye cannot be saved." Tell me, my friends, who made *you* the janitors of heaven? It was not heaven's King. What right have you to set up your "except" beside, or instead of, God's "except"? How can you dare to "limit the Holy One of Israel"? You are doing the devil's work—in God's name. The door of salvation opened by Jesus Christ has only the one "except," and that He placed there Himself.

Except a man be born again, he cannot enter the kingdom of heaven" (Jno. 3. 3). Here is God's "except"; and God means what He says. No use to explain away that barrier; there it stands, firm as the Rock of Ages. No use to beat against it; force will not avail. *Except* you humble yourself to become again a child, to enter heaven by the lowly doorway of the Cross, you cannot be saved. Have you realised what it means to be lost? The blood of Jesus applied to your soul can alone re-create you; but praise God! the cleansing tide was out-poured on Calvary, and is waiting for you even now.

"Except," says an unchanging God.

"Lord, I *accept*," is the helpless sinner's cry.

CRISP CORRESPONDENCE.

ANSWERS.

Pilgrim.—The China Inland Mission accept missionaries who are considered thoroughly qualified for mission work in China, without insisting upon any definite training. If your path is clear, and you have the consent of your parents to offer yourself for mission work in China, we would advise your communicating at once with the Rev. J. Hudson Taylor, 4, Pyrland Road, London, N. In reference to discerning the Lord's will in such a matter as this, we would say that He guides in a threefold manner; first, by the voice of His Word, commanding, "Go"; secondly, by the the voice of His Spirit within, creating willingness to obey the command; and thirdly, by the voice of His providential dealings, as manifested in the circumstances around us.

Socrates.—Professor Roscoe's set of apparatus suitable for a course of lectures on chemistry would be £4 7s. 6d., and can be obtained from Messrs. Griffin & Sons, 22, Garrick Street, Covent Garden, and this Firm will supply any chemicals required in whatever quantity may be convenient.

To Letter the Backs of Cloth Books in Gold.—The cloth where the lettering is to appear should be sized with white of egg diluted with ⅓ water, applied with a sponge. When dry, moisten with a rag slightly greased with olive or palm oil, lay the gold leaf on of the required dimensions, and make the impression with a heated type or brass letters; the surplus gold to be wiped off with a rag, and the letters touched lightly with Indiarubber to brighten and clean them.

Infant Baptism, when was it instituted, and by whom?—It seems to have been practised by the Jews before our Lord's time: for when receiving Gentile proselytes into their religion, they not only circumcised, but baptized them, and offered a sacrifice on their behalf. So, when our Lord commanded His disciples to teach, or make disciples of, all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost, He was only instituting anew, and consecrating to a higher purpose, a sacred rite already existing.

The fact, then, that children were admitted into the Jewish covenant, and not specially excluded by Christ from admission into His own, as they would have been if a change were contemplated, is a strong proof that in baptizing all nations, infants as well as adults were included. And although we do not read in the New Testament of any cases of infant baptism, any more than of women receiving the Lord's Supper, yet we have no reason, in either case, to doubt that the fact was so.

The baptisms of entire households makes strongly in favour of this view, for it is scarcely credible that there were not some infants amongst them, and such expressions as "Children, obey your parents *in the Lord*," show that the young as well as the old were included in and bound by the covenant of His grace. It also stands to reason, for if infants are capable of salvation, the full spiritual blessing of that covenant, why should they be thought incapable of baptism, its outward sign and seal?

But the question is one which would require a treatise to unfold, and not a simple answer to a correspondent.—Rev. CANON DOBBIN, M.A.

F.L.—In answer to the question—"When infant baptism was instituted and by whom taught?" we must reply,—

That those who hold believers' baptism can find no trace of it in the New Testament. Those who hold infant baptism found their principal arguments on the facts that three households are mentioned as having been baptized; but in none of them is there mention made of young children.

The household of Lydia probably consisted of her assistants in the dyeing trade, and there is nothing to show that she was either a wife or mother.

The household of the Jailor consisted of those who were old enough to believe in Christ for themselves (Acts 16. 34).

The household of Stephanus also consisted of those who were old enough to assist him in ministering to the saints (1 Cor. 16. 15).

The first mention of infant baptism is in the works of Tertullian, about 150 years after Christ. But it was not until the fifth century that it became fully established as a general practice of the Christian Church.

In the rude pictures on the walls of the Catacombs there is no trace of infant baptism, and the spacious baptistries of the ancient churches and basilicas are a strong evidence that believers' baptism was the practice in the first age of the Christian Church.—Rev. F. B. MEYER, B.A.

[Whilst we are most anxious to help our correspondents, we cannot open our columns to controversial discussion. We have given the above replies, indicating the two main lines of argument for believers' baptism and infant baptism, and now recommend the prayerful and intelligent reading of God's Word, under the teaching of the Holy Spirit.—ED.]

Zillah.—The best paper to use for writing a story for publication is ordinary foolscap. Articles should always be written on one side of the paper only, and all the sheets should be pinned together at the left hand top corner with a paper pin. Name and address should in every case be written fully at the end of every MS. Foolscap paper can be obtained at any stationer's.

CHRISTIAN WATCHFULNESS.—*Matt.* 24. 42-51.

GOLDEN TEXT.—*Mark* 13. 37.

COMMAND to Watch, most impressive. As to "that day," note it will be—

I. A SURPRISING DAY.

See this in picture drawn, "days of Noe." How? (1) Days of *Sensuality*—their sole business "eating and drinking," etc. Beware of losing sight of the "Day of Christ" in lawful things. (2) *Of Security*, false, of course. Cause? Wilful ignorance. "Those that *will* not know by faith, shall be *made* to know by feeling," but then it is too late. The nature of their doom: (1) immediate, (2) irresistible, (3) irrecoverable. See how like the days of Noe are to the coming of the Son of Man: (1) both predicted for a long time, (2) both received by the world with unbelief, (3) both coming when least expected, (4) and in time of excessive worldliness, (5) both final in effects.

II. A SEPARATING DAY—between God's people and the World.

Note (vers. 40, 41) position of God's people at Christ's appearing. (1) Some in menial positions (grinding at the mill was the work of female slaves), (2) Scattered up and down through the world, (3) quietly doing their usual work.

Mark the permanence of the Separation, "taken," "left."

III. A SEARCHING DAY. Two instances:—

1. The *faithful* servant. He working for God, Conscientiously, Constantly, Continuously. The way to be ready is to attend not so much to *thought* about "that day" as to faithful doing of duty.

2. The *unfaithful* servant. His unfaithfulness began in unbelief. His faults were (1) profaneness, (2) persecution, (3) open ungodliness of company and life.

The general command is "*Watch.*" This implies (1) belief in the Master's coming, (2) desire for it, (3) thought about it, (4) practical preparation.

JESUS and His disciples are standing on Mount Olivet, overlooking city of Jerusalem, after watching the widow put in her two mites. Our Lesson part of a conversation. SUBJECT: *Watchfulness.* What led the Lord to this subject? *The foretelling of destruction of Jerusalem, and coming of Son of Man.*

A Christian should WATCH

W arily. Ver. 43: Dangers come in disguise.
A ctively. Watch *and* work. Ver. 45; Nah. 2. 1. An all-round watch, going from post to post.
T rustfully. Ver. 42: No uncertainty. The Lord *doth* come, not may. A trustful watch is a happy one.
C onstantly. Ver. 44; Eph. 6. 18: Dangers, privileges, and opportunities come mostly unexpectedly.
H eroically. Ver. 13: Brave to attack, defend, wait. If the eye of the hunter watching the cruel tiger quails, he perishes.

AGAINST

F ormality. Ver. 51: This servant pretended to watch, and so got his portion among the hypocrites. "Having the form of godliness," etc.
U nkindness. Ver. 49: Do not say, I should never be so bad as that servant. Unkind words are so quickly spoken, unkind deeds so quickly done.
L ukewarmness. Ver. 48; Rev. 3. 15: Because we have to *wait* as well as watch, comes lukewarmness. Wanted, enthusiastic watchers.
N egligence. Ver. 45, 46: Neglected duties. The need of faithful workers.
E nemies. Sin, in all its forms. Satan in all his disguises.

FOR

S ouls. They are not easily won (Heb. 13.17). Their worth. What they cost the Saviour.
S aviour. Ver. 42: Emphasise fact, He *is* coming. The joy! Know not when. Fulfilled and unfulfilled prophecies.

CONSTANT.—There is an Eastern fable that a man waited 1,000 years before the gates of Paradise, watching for them to open, that he might enter. Alas! he fell asleep for one short hour. But during that hour the gates opened and were shut, and he was left out.

C. SKINNER.

Y.M.C.A. BIBLE CLASS LESSONS.

APRIL 15TH.

THE SYRO-PHŒNICIAN WOMAN.—*Mark* 7. 24-30.

THE lesson may be arranged thus—observe the *four characters* in the narrative:—

I. The afflicted daughter. II. The distressed and interceding mother. III. The unsympathizing disciples. IV. The sympathizing and powerful Saviour.

I. THE AFFLICTED DAUGHTER.

1. *Possessed by a Demon.* Consider the real and awful nature of this affliction. Under the power of an evil spirit. All the faculties controlled by this foreign power. Such is *sin.*

2. *An unclean Spirit* (Mark). Sin is always *unclean.* It is a departure from purity. It may not be what *men* call unclean, but it is what God calls *unclean.*

3. *Grievously vexed* (Matthew). The devil always torments those whom he possesses. There is no rest, no peace, no ease. Sin makes people restless and troubled. It troubles every part of our nature.

II. THE DISTRESSED AND INTERCEDING MOTHER.

1. *Her Sympathy.* She suffered too: suffered by sympathy. The capacity for joy is also the capacity for pain.

"He that would be barred capacity of pain
Courts incapacity of bliss."

2. *Her Effort.* Not an *idle* sympathy—it was a do-something sympathy. When too overwhelmed to plead for ourselves, *then* we feel the value of praying friends, who *really can* plead for us.

3. *Her Courage.* She was under a great disadvantage, being a Gentile. Yet she came *boldly.* The *urgency* of the case, and her pure disinterestedness, made her bold.

4. *Her intense Earnestness.* "Fell at His feet." Helpless misery! She lay in His path, as if she would say, "No further shalt Thou go until Thou bless me." Blessed obstruction! You cannot cast yourself at Christ's feet in vain.

5. *Her touching Confidence.* It was confidence that brought her at first. Her confidence surmounted all obstacles. Like a kite, it rose with the wind.

6. *Her Perseverance.* In spite of delay, apparent inattention, apparent refusal, still she held on, Jacob-like. "I will not let Thee go." This was what He wanted; this is what He wants now. In spite, too, of the discouragement of the disciples, she persevered.

III. THE UNSYMPATHIZING DISCIPLES.

"Send her away, for she crieth after us." They did not like the noise; it disturbed them. Go, poor woman, anywhere, so long as thou dost not trouble *us.* Ah! she was *not* crying after *them*, but after *Christ.* Had she cried after them, she might have cried. This sort of people are not extinct yet. We ought to encourage people when we see them crying and seeking after Christ, not try to shut them up.

IV. THE SYMPATHIZING AND LOVING SAVIOUR.

1. *His Method.* Silence. Then objections. Apparent disinclination. Object of this, to discipline her soul, quicken its graces. *He* saw what was there, and, like a skilful gardener with a plant; developed it. He knew just *how much* she could bear, and measured the strain.

2. *His real Sympathy. Veiled*, but present, and afterwards expressed in word and deed. That is not always the truest sympathy which talks most and is very gushing.

3. *His Delight.* The pleasure which the woman's faith afforded. See what kind of things delight the Saviour. He is pleased with our faith; then let Him have it all.

4. *His Power.* Seen in the domain of spirit. How the spirits acknowledge and bow to His authority. He has all power in heaven and earth. Little know we how much we owe to it.

5. *His Deliverance.* It came at length. So it always will. None can appeal or trust in vain. It was instant and complete. See the *rest* that followed: "laid upon the bed."

JAMES L. STANLEY.

In future, our Monthly Part will contain the Bible Class Notes for the current month, instead of those for the previous one. We are sure the large and increasing number of Teachers who use our Notes, will appreciate this change.

ANDREW FORSYTH;

OR,

THROUGH DARKNESS TO LIGHT.

CHAPTER I.

CONFLICT.

"Whoever may discern true ends here, shall grow
pure enough to see them,
Brave enough to strive for them, and strong enough
to reach them,
Though the way be rough."

—BROWNING.

THE sun is sinking beneath the western horizon. The day is dying; fading slowly away, with a grace and loveliness worthy of the exquisite beauty of its noontide hours. The sun has been making a hard fight against the lengthening shadows; even now that he has disappeared, he still prolongs the contest, sending forth quivering shafts of light that shoot up far into the heavens, until the long banks of cloud gathering there are transformed into masses of living glory, and the sad-coloured grey gives place to gorgeous hues of crimson, orange, green, and violet. For a few brief moments it seems as if light had conquered darkness; but suddenly the brightness fades, fainter grow the brilliant colourings, longer the shadows, a cold chill creeps over the world, and—the day is dead.

The sudden darkening recalls the present to a woman who has forgotten it, while gazing at the sunset from her cottage windows, and she turns hastily away, with a deep sigh.

The past is present to Janet Forsyth. She is thinking of her twin boys, and of the resolve made by their father and herself to educate one of them for the ministry; of her husband's sudden death, and the hard struggle of the after years; of her determination to carry out the resolve, if possible; of the difficulty in choosing between the two boys; of her relief when Andrew voluntarily offered to let Robert go to college, and at the age of twelve, took up the burden of toil which he had now borne so bravely for five years. Then come thoughts of the future; Robert's bright prospects, the coming separation, and the breaking up of the family group. Her reflections are interrupted by the entrance of her son Robert, who looks handsome and happy, as he sits down in the firelight.

"Well, Robert, you're back; did you see Andrew?" she asks.

"No," replies Robert; "but I'll go and look for him, if you like."

"Verra weel, an' I'll hae the supper ready by the time you come in." Then, as if moved by a sudden impulse, she adds, in a broken voice, "Robert, laddie, you wad never forget Andrew; he is a guid lad."

"Ay, he is; I'll never forget." And without another word he is gone.

Meanwhile, Andrew is sitting, with his face buried in his hands, beneath a majestic beech tree, on the border of the wood between the village and the river. He has sought its shadow on his way home from the factory, that he might witness the contest raging in the heavens; and now that it is over, it seems to him that for himself, as well as for the world, there is nothing left but darkness. For the time being, he has identified this with the struggle going on within him, and is overwhelmed with the consciousness of defeat.

He is seized with a sudden and terrible temptation to give up the hopeless struggle, to refuse to sacrifice himself longer for his brother, to be false to his better nature. Nor does he realise that the noble impulses which he is thus tempted to silence are the avenues along which the Father's voice is calling to His wandering child. He does not think of looking to Him for help; the creed which has been to so many a bridge between the natural and the spiritual, has, for his sensitive nature, with its unutterable cravings after love and sympathy, led to nothing and nowhere. But if he has not been able to believe, he has, at least, tried to obey,—has seldom been deliberately false to the light within him; it is this persistent allegiance to what has seemed right and true, that makes it possible for him to resist now. After a long struggle, he raises his bowed head, and mutters, "I canna mak' mysel' willin'; but I can and will do it." As he speaks, the moon, emerging from a cloud, illumines the surrounding darkness; and into his soul there steals a reflected light, not hope, but rather the faint expectation of her advent. Through his determination to be true, perhaps also through the discovery of his own impotence, he is catching a glimpse of that light which shines on the path of duty. But, like the tired earth, Andrew is too exhausted to do more than sit still and wait for the falling of that misty curtain that makes life seem so indistinct. So it is with a thrill, almost of pain, that he hears footsteps, and looking round, sees his brother approaching. He rises mechanically, and begins to move homewards.

After a while, Robert says, "What's wrang, Andrew? Can I no' help you? Mind, we are brithers."

"No, no," Andrew replies, "you canna help me, Robert; I canna help mysel'."

They are walking on in silence, when suddenly Robert grasps Andrew's hand, and looking earnestly into his face, exclaims, "Andrew, if ever I can help you, God forgive me if I refuse."

For a moment the brothers stand hand in hand, while their spirits beat against the barriers that separate them. Then they move on, without speaking, till home is reached.

The two cats have an unusually large share of the porridge and milk to-night, for neither mother nor sons have much appetite. After the table is cleared, the mother brings a big Bible from the inner room, but she does not read the chapter marked; she turns to the twenty-eighth chapter of Genesis, and reads from the tenth verse to the end, with a decided quaver in her voice. In the prayer which follows, she makes no allusion to the special experiences through which they are passing, except that after the final petition for forgiveness, she adds brokenly: "And, oh, bring my boy again to his father's home in peace." Then mother and sons go off to bed, but not to sleep.

Once again the sun is setting on the little village of Ash, but now it is one of the longest days of summer that is closing, and both sun and earth seem to be welcoming the coming of night. There is no warfare in the heavens, where the sun is dipping beneath the horizon; and as there is peace in heaven, so there is peace on earth.

It has indeed been an ideal Sabbath, a day of rest and gladness. The sun's last rays are burnishing the windows of a row of cottages, one of which we entered eight years ago. Mother and sons are again together in the old home. Robert sits gazing dreamily into the fire, his bright face bearing an impress of thought and culture which was absent when we saw it last. Andrew is standing by the window. The peace of the sunset seems reflected in his face, which has lost the expression of unrest it used to wear. The mother is lying on a little sofa made for her by Andrew, as she often has to do now. Her face is haggard and pain-worn, but it lights up with a smile of supreme content as she looks at "the laddies." She has lived to have her heart's desire granted; she has seen her boy to-day in the pulpit of their own little church. Each moment the sense of their father's presence, which has been haunting her all day, becomes more intense. She thinks it must be because this evening, she went with "the laddies" to his grave in the little churchyard.

There is perfect silence in the room, except for the ticking of the old clock, and it seems drowsy to-night, for it is delivering its message in faint, uncertain tones. Presently it stops, apparently from sheer exhaustion, for Janet, in her excitement, had forgotten to wind it yesterday, as usual. The sudden silence startles the young men; they look first at the clock and then at their mother, and both hasten to her side. She opens her eyes, takes a hand in each of hers, then lies still, smiling faintly. Suddenly she cries: "Lift me, Andrew," and his strong arm supports her, while her head droops on his shoulder. He hears her whisper, "I'm coming," and something about "the laddies." Then her hands relax their grasp, her head falls back. She is with their father, and "the laddies" are alone.

(*To be continued.*)

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," etc., etc.

"'I am a miserable man! the game is not worth the candle.'"

CHAPTER XIV.

GRAHAM was now a very busy and important man—the firm of Martin & Co. had offered him a small partnership in the business, and he was, truly and indeed, hastening to be rich.

Six months ago he had all the desire of an honourable man, for a good income and a certain share of life's good things; but now the passion for wealth, for its own sake, had seized him. His fortune, and his wife's, combined, seemed but a drop in the ocean to his desires. What, after all, was a capital of £60,000? Had he an income of that sum, he imagined that he might begin to feel satisfied!

In the old days he had worked hard, and had been considered by his employers an invaluable and painstaking clerk, but now, as junior partner, his exertions were redoubled.

Early morning and late night saw him at his post, and he sat up until the short hours, studying the great questions of commerce, and the laws of supply and demand.

He grew pale, his eyes became more sunken than ever, his dark hair even began to be slightly sprinkled with grey. Before they had been more than three months in the old house, Kate had sadly to confess that as far as her husband's companionship went, their honeymoon was indeed at an end.

She was naturally a very bright woman, not fanciful, not nervous, not given to vain speculation. She had not married with the idea of finding her husband perfect, but when she discovered, which she very soon did, that his temper could often be irritable, that his moods could vary, that he was sometimes too busy even to be affectionate, she did not sit down and cry, and consider herself a martyr.

Kate was quite willing to overlook small faults in her husband. So essentially womanly was she, that perhaps she would have loved him all the better because of them.

Sometimes, when he tried her patience most, she murmured something of the kind

to herself, but she was thinking then of those failings which might be put under the head of trivial. Had any one whispered to her, "The husband you adore is wanting in honour, he is a thief, a scoundrel," she would have desired that person to leave her presence, no words could have expressed her passion and her anger. *She* give credence to such a slander?—never—never—or if, God help her, the whole ugly truth was forced on her, it would have broken her heart.

Kenneth had learned enough of his wife's true character before they were six months married, to be well aware of this. With every glance of her true and sweet eyes, with each tender inflection in her loving voice, with each little service she delighted to render to him, he read the fact more plainly day by day—did she know the truth, her heart would break.

Now, however, in these early days, no suspicion of any ugly secret entered into Kate's happy life. She was busy from morning to night—she was even busier and more active than she had been before her marriage. Never was there a fuller life than hers. She had her sisters to watch, and love, and guard more faithfully than ever. She had, to a certain extent, two houses to manage, for it was arranged that for a year at least the three Misses Kennedy were to live in the pretty cottage at Croydon under the care of Miss Beale.

Kate was very much pleased with Miss Beale's influence over her sisters; and knowing, although he never said so, that their presence irritated her husband, she resolved to leave them at Croydon for the present.

Polly was not flirting too outrageously, Alice was devoting herself very creditably to her musical studies, and Nellie was developing quite a nice taste for cookery and art needlework.

Kate's mind was at rest about her sisters, but she made a point of going to see them at Croydon twice a week; and she generally asked them to spend Saturday with her in the old house in Exmoor Square.

In addition to working for her sisters, and interesting herself in their lives,—in addition to looking after her own house well and thoroughly, this active-minded young woman found plenty of time for outside interest.

The claims of those not exactly belonging to her filled her heart. She wanted to do good with her money, and she believed thoroughly in the greater good done by sympathy and love.

So Kate took up a district and visited the poor, and had classes at her own house for little children; and as the winter approached, and she saw hungry faces, and half-clothed little bodies, she drew the cold and hungry children into her own comfortable home, and clothed them and fed them.

The only claims which Kate perhaps, to a certain degree, neglected, were the claims of society.

But when Kenneth expostulated with her, and said that he wished her to receive his friends, and to accept their invitations, it did not occur to her even to dream of objecting; yet she was once or twice heard to say that if any duty connected with her present life could be irksome, it was the duty which required her to be civil, and to waste her time over these so-called friends.

With all these changes, the old house in Exmoor Square certainly no longer presented a deserted or gloomy appearance; it was always bright, always busy.

Visitors of one sort or another came and went at all hours; the drawing-rooms and dining-room were kept sweet and bright and fresh with flowers; the servants delighted in their new mistress, and showed happy faces whenever they were seen. Betty Carew alone retained her unbroken gloom. She could not absolutely quarrel with Kate, perhaps she tolerated her as well as she could tolerate any one, but it was not in her nature to be cordial with one who was bright and happy.

"I mourns with them that mourns," she was often heard to say, "but as to rejoicing with them that is foolish enough to laugh in this 'ere wale of tears,—no, no, that's not me—that's not Betty Carew."

At Kenneth's request, Kate and he had long ago moved into one of the cheerful and modernly-furnished bedrooms. Betty could never forgive what she considered a downright insult to the old missis.

Without saying a word to any one, she locked the door of the slighted chamber, and refused to give up the key. Kate felt annoyed, and would have mentioned the fact to her husband, but she could not help noticing how he shrank from all mention of this room.

"I always knew that Kenneth had deep feelings," thought Kate to herself, "but I did not know he was so fond of Mrs. Alexis. Poor fellow, poor fellow, if he feels the death of an old friend so much, what would become of him if anything happened to me?—why, it would break his heart."

Meanwhile Betty lived between her own attic and the old missis's room, and seldom troubled herself, except by giving short snorts of disapproval, with what was going on in the rest of the house.

CHAPTER XV.

"How do you like me in this dress, Miss Beale? What a tiresome old woman you are! Alice, do see if the flowers are nicely arranged in my back hair. Do you like this rose a little above or below my ear? Mr. Fitzhugh says he likes it best a little below; he says with the hair worn low on the neck, and the rose just so, I have such a purely Grecian profile. Ah, Nell, here you are, dressed, too, and not bad; upon my word, you look something like a daisy. Now, Miss Beale, are you ready? and has the cab arrived?"

Polly Kennedy was of course the speaker; Polly, all in white, with soft, white roses in her golden hair; Polly looking as charming and lovely as even she could look, uttering of course, as usual, the silliest nothings, and yet put up with and even adored because of her rare beauty by her two sisters, and by that most patient of all companions, Miss Beale.

The three girls and their chaperon were going out to an evening party, and in consequence Polly's spirits were at their highest, and more sober-minded Alice and Nellie were equally pleased.

"A letter has just come by the post, my dears," said Miss Beale, as she rose from her chair, and drew a rather old-maidish white scarf, with what she considered a graceful movement, round her thin shoulders. "A letter has come, Polly, and it is from Kate, and she says something about coming down to see you all to-night; she and Mr. Graham are both coming; it seems such a pity you should be out."

"Oh, we can't help it," replied Polly. "Dear old Kate, but we see her very often. Come on, girls, do. Miss Beale, you'll drive me wild if you stand in that mooning attitude any longer."

"My dear, I was just considering. It will be extremely disrespectful to Kate and Mr. Graham to have no one here to see them. Of course I can't stay, for I must chaperon you, my dears, or I would most gladly; but perhaps, under the circumstances, one of you dear girls would give up your evening's pleasure for your sister's sake."

Alice and Nellie immediately put on wistful glances. They knew perfectly that Polly would not be the one to offer to remain behind; and as they both had their own special ideas with regard to the charms of the evening, their two bright young faces became proportionately gloomy.

Polly, however, was equal to the occasion.

"You go first, Miss Beale," she said; "no more time for loitering. Now, girls, you next. Pack into the cab as fast as you can, and leave plenty of room for my skirts. Now, then, off we go. Miss Beale, you're a dear old thing, but as to any of us giving up our party, how *can* you imagine that Kate would allow us to do such a thing?"

Miss Beale sighed, yielded to the inexorable hand of fate in the shape of Polly's determined will, and sank back into her seat as resignedly as she could.

"We'll come back early, on that point I am resolved," she murmured to herself. "Kate and her husband are sure to remain for the night; and I have given Susan directions to prepare a room for them."

Any further meditations were interrupted by the cab drawing up at their destination, and the three girls and their companion were soon ushered into a scene of much brilliance and gaiety.

Polly was quite accustomed to being admired, and the glances, some envious, some adoring, which were cast upon her, she took as a matter of course. Hers was truly a slight and fickle nature. She had long ago absolutely forgotten her old adorer, Charlie Segrave. Many another good-looking youth had since then been fortunate enough to secure Miss Polly Kennedy's heart—for a week.

Segrave, however, had not ceased to remember the pretty girl who had taken his fancy some months ago. He had not seen her since the day when Kate had told him that their engagement must come to an end. He was present to-night, however, and was not long in making his way to her side.

"Polly—Miss Kennedy, I mean—have you forgotten me?"

"Oh, dear me, how tiresome you are, Charlie!—Mr. Segrave, I mean. Of course I had ceased to remember you even existed."

"But I had not ceased to think about *you*. I am so enraptured we should meet again."

"Now, look here, we're not going to flirt, you know. I won't have it. You're a great deal too young, and I have met much nicer people since I knew you. There's Charles Fitzhugh. Do you know him? No? Ah, well, I call *him* Charlie now. You don't look at all as presentable as you used to look, Mr. Segrave, so I hope you're not going to keep by my side all the evening. Oh, I say, how that individual by the door does stare!"

"Look here, Polly," said Segrave, with some spirit, "honestly, I do not want to begin flirting with you again. I've quite come to the conclusion that your sister was right when she broke off our engagement. I never could care long for a girl who thought a lot about other fellows, and forgot my existence. You need not be a bit afraid of my wanting to flirt with you, for I really have no intention of doing so."

Polly coloured, tapped the floor impatiently with her little foot, and began fanning her-

self vigorously. Segrave of course rose in her estimation the moment he showed that he was not under her spell.

"There is nothing in the world for it but to make him jealous," she said to herself. "Charlie," she said aloud, "it is very sweet of you to say you won't flirt with me, and I am greatly obliged. Now we shall get on comfortably together. Do you know the name of the man who stands by the door? Oh, I say, how he does stare!"

"He is a friend of mine. Shall I introduce him?"

"I wish you would. What is his name?"

"Verney — James Verney. I have not known him long; but he seems a good kind of chap, only melancholy. You won't find him very entertaining."

"I like melancholy people enormously. Do introduce him."

Segrave raised his brows in wonder, crossed the room to where Verney stood, and very soon brought him back a willing captive to the beautiful Polly's side. She had been quite right in saying that he had looked at her from afar; her brilliant appearance, the soft young curves about her face, the exquisitely candid expression which to all appearance filled her deep-blue eyes, quite dazzled Verney. He said to himself, "Never, never before have I seen anything so lovely."

Polly greeted this too evident adorer with all those airs and graces for which she was so distinguished.

After five minutes' conversation, however, she quite echoed Segrave's opinion that Verney was dull. He was not only dull, he was nervous. He was always pulling himself up short, and glancing in a queer, startled way towards the door, and making statements which the next moment he contradicted. He evidently knew nothing of the arts of flirtation, and though his sad eyes expressed volumes, he was unable to say any of the pretty nothings to which Polly was accustomed. His admiration, however, was genuine, and once at her side he could not leave it. Presently Segrave came back and joined in the conversation.

"I wish you would get Mr. Verney to talk," said Polly, again stamping her little foot, and giving Segrave a far more favourable glance than she had done an hour ago. "Mr. Verney won't confide in me. I like my friends to confide in me."

Segrave smiled slightly.

"Verney, you look like a fellow who has had adventures," he said. "Pray dish one up now for Miss Kennedy's benefit."

Verney turned pale. Instead of replying in a light and mocking spirit, he said, half under his breath, "I have not been very long in London; only London life interests young ladies."

Polly tried to suppress a yawn.

James Verney again retreated to his post of observation near the door, and again watched Polly with his quiet, persistent, melancholy stare

"He must have fallen in love with me, Charlie," said she. "Oh, he is queer."

"Yes, no one seems quite to understand him; but I believe he is a good fellow."

"Charlie, Kate is going to give a party for us next week at Myrtle Cottage."

"How good of Kate!"

"Yes, she is a darling. I mean you to be there."

"Oh, do you think I dare to come?"

"Of course. We are not going to flirt any more. I'll tell Kate, and she'll send you an invitation; and, Charlie, you may bring your friend Mr. Verney with you."

"Thanks. Then you do rather like Verney?"

"No, I don't. He's the slowest of the slow; but he likes me most awfully."

CHAPTER XVI.

THE girls came home some time in the small hours, in the highest of spirits. Kate and her husband both awaited them at Myrtle Cottage. Kate listened to their raptures with sympathetic interest—Kenneth with ill-concealed boredom. After a time he rose from his seat, suppressed a yawn, and said a word or two to his wife.

"You and the girls evidently mean to chatter until daybreak. I shall go out for a stroll for half an hour."

"Oh, do, there's a dear, Ken," exclaimed Polly, "we have not half described Mr. Verney yet. Kate, dear, he has such delicious, melancholy eyes."

"Bosh!" exclaimed Graham. He escaped from the room, Polly's peal of laughter following him into the passage.

"That girl will drive me wild," he said to himself, as he put on his hat, and went out into the night air. "What a remarkable contrast my dear, good, sweet Kate is to the rest of her family."

He walked on rather quickly, sometimes raising his hat to get the benefit of the cool night breeze on his heated brow. Very soon he forgot Polly, and the petty worries she occasioned him, he even after a fashion forgot Kate, and walked slowly, his hands in his pockets, his head slightly bent. He felt none of the beauty of the tranquil autumn night, but the quiet of this comparative country scene insensibly soothed him, and he was in no hurry to return home.

"The girls and Kate will talk for an hour or two," he muttered. "During that time the stars and I will keep each other company."

He walked more quickly, as if spurred by some invisible stings. Suddenly he stopped, leant against a telegraph post, and said aloud,—

"I am a miserable man!—*the game is not worth the candle.*"

These words he uttered aloud. He was indeed startled when they were taken up, when a voice almost by his side said in a quiet, nervous manner,—

"Forgive me, Graham, I could not help recognising your voice, I am sorry for you. I, too, am wretched."

"Alexis!"

Graham turned; he was thankful that the darkness of the night concealed the piteous tell-tale white which overspread his features.

"Alexis, you here?" he said; after a moment, quite steadily,—"I thought you had left London long ago."

Alexis laughed and rubbed his hands.

"Not I," he said, "not I. London is the best hiding-place on earth. I'm there still, and after a fashion I've fallen on my feet. I met a man who knew my mother years and years ago, and he got me a berth—a small thing, but enough to keep that gaunt enemy, starvation, at bay. I'm known as James Verney now, and I have friends. Jonas Alexis is dead and buried. I don't mind confessing my little secret to you, Ken, old fellow—you'd be the last to betray me."

All the time Alexis was speaking Graham was thinking hard. His acute mind instantly grasped two facts—first, that Alexis, as well as he, had a secret to preserve; second, that Polly Kennedy had spoken of having met James Verney that evening; furthermore, he perceived that his companion's character was a most timorous one, and he could be very easily suppressed.

"Walk a little way with me, Alexis," he said in a genial tone. "Not this way—this ——" He took the road which led towards London. "So you are now known as Verney, and have sunk the name of Alexis. I think that is a good plan, for when a fellow has anything to conceal, his first and primary object must be to suppress his name."

"If a fellow has anything to conceal?" repeated Alexis, his voice shaking. I—I—never said that—I never, never said that, Graham."

"My dear fellow, you did not say it, but—never mind, your secrets are safe with me. I shall recognise you as Verney in the future. I shall suppose again that Jonas Alexis rests in his quiet grave. By-the-way, Verney, you met my sisters-in-law to-night."

"Your sisters-in-law? I was at a party with a new friend of mine—Segrave; there were a great many girls— one beautiful girl——"

"I think I know whom you mean. She is my wife's sister, Mary Kennedy."

"Her name was Kennedy; she impressed me very much. Such beauty as hers gives pleasure. Segrave has been good enough to promise that I shall meet her again."

"Listen to me, Alexis, I must be plain in this matter. Don't follow up any inclinations you may have felt towards Miss Kennedy. You can come to the house, of course. I mean, I leave that to your sense of good-breeding; but between you and Miss Kennedy nothing can ever be. You have a secret—if you wish me to guard it, attend to my wishes."

Alexis turned pale.

"You rather alarm me, Kenneth," he said, "I—I—I mean, you would not really do a shabby turn to a chap?"

"No, and therefore I give him fair warning; if he chooses to disregard it, the consequence be upon his own head."

(*To be continued.*)

TWO RECORDS;

OR,

"WELL DONE, YOUNG MAN!"

PASSING with a companion along Oxford Street last Sunday to my Bible Class, I saw coming towards me a slight, small-sized young fellow, with a small Bible under his arm, and a packet of Notices in his hand. Just in front of me was a fine young soldier, sauntering carelessly along. As the two passed each other, the young man held out a Notice towards the soldier, who made a half move to take it, let it fall to the ground, and passed on. The young man stopped, there was a brief struggle, then the victory was won. He stooped, picked up the Notice, hurried after the big soldier, and again placed it in his hand. The battle was fought in a moment. My companion exclaimed, "Well done, young man!" and the quiet worker slipped by us, and was lost in the crowd.

A few yards further on we saw the soldier crush the unread Notice, and drop it on the pavement.

Two records were made in God's Book in that moment of time. A record of faithful service, of ready "answering to the helm," on the part of that youth, and alas! a record of one more refusal on the soldier's part to hear the message of a Saviour's love.

AN AFGHAN CHIEF'S VISIT TO CALCUTTA.

By A. L.

THE famous Khyber Pass, in the range of mountains which divides our Indian Empire from the country of Afghanistan, may be called the north gate of India. It is under the charge of certain Afghan chiefs, whom the present Governor, or Viceroy (Lord Dufferin), lately invited as his guests to Calcutta.

They were very much gratified and impressed by all they saw and did on the occasion, and one of them wrote the following interesting account of the visit. We give it as he put it, *i.e.* :—

"This is a king's country. Every one ought to be amazed at the wonderful things to be seen in it. That which has most astonished us is the regularity with which everything is conducted. During our railway journey, we arrived at the different stations, and left again with great regularity as arranged. There is nothing like this at home. A country which is ill governed is not good.

"We arrived at Calcutta early in the morning, and, being tired, stayed in our lodgings the whole day.

"On the day following, we went to see the railway station and workshops. There are nothing like them in our land, which is poor. We were then taken to the mint, and saw the *pice* and *four-anna* pieces that are being coined there. The 'Cabul pieces,' namely, those of Afghanistan, are stamped with a die, and a hammer.

"There is nothing equal to this government, either in its silver, or its general management, or anything else. We visited the fort next day, and considered it very strong. We saw all the cannon and big guns there. They are very good.

"We were then taken to the Botanical Gardens in a steam launch. This is the first time we have been on board a steamer, and we enjoyed the trip very much. The gardens are by far the finest we have ever seen.

"We were then taken to the Zoological Gardens. Some of the animals here we had seen before at Cabul, but some of them were quite foreign to us, and greatly puzzled us, as we could not tell to what country they belonged.

"We also paid a visit to the *Bacchante*, and were truly astonished by the big guns and everything on board. We never saw such a ship. No other government could make them like that. The chiefs wanted to distribute money amongst the crew for showing all these wonders, but the captain said the *Sirkar* (Governor) would be very angry at their accepting a present.

"We again wanted to give the sailors something, but were again told that we could not be allowed to do so, as what had been shown to us was for our amusement. When we went down into the hold, we saw the men's tables spread in a minute and taken up again, their beds put down and taken up—all done in a minute—and in a moment the ship was made ready for a fight.

"The big guns were fired, but only with fuses. We saw the sailors going up the rigging very quickly, at the double, and run up the masts and remain there. We have never seen these things before. We were presented to the Lord Sahib of the sea—'the Admiral'—who was very kind to us.

"We were then taken to a small arms manufactory to see the workmen making cartridges and bullets. Another day we visited the *Englishman* newspaper office, and saw them printing, and making lead letters. . . . We also spoke through the telephone.

"Some of us were at the *Englishman* office and some at Messrs. King Hamilton's, and we recognised each other's voices. Then we visited the telegraph office, where we spoke with a friend at Peshawur—all in a few minutes. One of us asked a relative at Peshawur how he was, as he had been suffering from fever. He replied, 'Quite well; how's your boil?' Now these words astonished us very much, because none of us knew that this chief had a boil,—only his friend at Peshawur. Great are the ways of the Sirkar.

"We were then taken to a jute mill, where we saw the manufacture of gunny bags and cloth. We admired this more than anything else, as we had never seen cloth made in such a way. This sight struck us as much as the *Bacchante*, and the way in which that monster could be got ready for fighting. . . .

"India is indeed a wonderful country, and we are deeply grateful to the Viceroy Sahib for having brought us down to see such wonders."

A MOTHER'S LOVE.

WHAT human love is like to that a mother bears her child?
So self-renouncing in its aims—so deep, so undefiled:
One love, alone, surpasses it, descending from above,
But this is ne'er in Nature found; it is not human love.

* * * *

Long years gone by, from Albion's shores, a British workman sailed,
His native land no work would yield; he sought it long, but failed.
At last, in dire necessity, he sailed for the far West,
But left his wife behind him, with an infant at her breast.
Then, like a man, he promised soon to make for them a home,
And send for both his wife and babe, when prosperous times should come.

At last, the longed-for missive came, which brought the cheering news.
How tight her grasp upon the note, as tho' she feared to lose
The very thing she waited for, long years, with aching heart:
She soon would join the one she loved, and ne'er from him would part.
"Dear Susie,"—thus the note began—"our troubles near their end;
Cheer up, my lass! good times at last—enclosed some cash I send.
I've built a house, am master man—have lots of money too,
The *Mary Jane* sails this day month; and so I'll look for you."

The sailing day at last arrived, and they were ready too—
"Good-bye" to dear old England's shores! to all old friends, "Adieu!"
On sped the ship; the winds soon filled the sails, and on she flew,
The sun shot forth his brightest beams from skies of deepest blue.
Right merry were the passengers, right gay the sailors all;
The ocean showed no threatening wave, the sky no cloudy pall.
Some had their minds engaged with thoughts of those they soon should meet,
Whilst others thought of those they left; not those they hoped to greet.

Two weeks had pass'd, they neared the port; 'twas now but one day's sail,
When hark! a cry of "Fire" is raised, and many a face turns pale;
The passengers rush to the deck, thither the smoke comes too,
The Captain cries: "Let down the boats." "Ay! ay!" respond the crew.
Forthwith the boats are lower'd, and with women first are fill'd,
The Captain stands to duty firm, tho' every nerve is thrilled.
The last boat now is lower'd, and 'tis filled as quickly too,
And some are left upon the deck—alas! what will they do?
Some plunge into the water, and others curse their fate,
Many are praying on their knees for mercy—not too late!
But from their midst a woman cries, as forth the boat departs,
"For God's sake save us! Are you men, or have you human hearts?"
They hear her cry and back they pull. "There is but room for one,
Which shall it be that we're to save—the mother, or her son?"
"Why, take the mother," cry they all; "quick! time is slipping by."
"No! no! not me, but save my boy. I'll stay; he shall not die."
The boy is lowered to the boat, already overfull,
The mother gazes on her child, as from the side they pull,
"Willie," cries she, "if you but live to see your father's face,
"Tell him, my boy, I died for you; and that I took your place."

That boat, although through hardships great, arrived all safe to shore,
But the *Mary Jane*, with her living freight, was never heard of more.
Yet the story of that mother's love shall last till time has run,
And earn from ev'ry lip the words—the inspiring words: "Well done!"
And well this story pictures forth the story of the cross,
Which tells of One who took thy place; who bore thy shame and loss;
Who suffered e'en God's righteous ire 'gainst sin on Calvary,
Who saith in tenderest tones to all: "I gave Myself for thee."

WILLIAM HENRY ROSS.

A Mistake Somewhere. — In America, nearly all paper-covered novels are entered in the Post Office Department as "second-class matter," and can be sent by post from the publishers at 1 cent per pound, and by the public at about 4 cents per pound. All other books,—school, law, science, even the Bible itself, can only be sent at 8 cents per pound. It would be well if this were reversed!

It was said of Charles Lamb: "Whether he had won for his greedy listener only some raw lad, or a charmed circle of beauty, rank, and wit, who hung breathless on his words, he talked with equal eloquence; for his subject, not his audience, inspired him."

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

CHAPTER XXXVII.

SPENCER RAE TAKES UP THE TRAIL.

IT is the age of wonderful—extra wonderful inventions,—this latter end of the nineteenth century, I mean, and there is no saying where they will end. Since I began to write this tale, Edison has brought out his marvellous phonograph. By its means, instead of writing a letter, you speak it; it is sent to your correspondent, and instead of reading it, he simply puts it in a box and listens, and lo! the letter speaks all it was told!

What a convenience it will be when books are printed in this way! Instead of turning over the leaves and reading, you will put your magic book into your magic box, touch a spring, and while you sit on your easy chair, or lie on a couch, your author will speak to you; every tone, every rise and fall of his voice, will be heard, so that he can to some extent combine the actor with the author.

People will not ask in those days, "Have you *read* so and so?" but, "Have you heard so and so?" And you will be able to reply in the affirmative, although you may have gone to sleep in the middle of the story, or after listening to the talking book for only a few minutes.

Wonders will never cease, and there really is a possibility of our grandchildren, if we ever have any, being able to talk to each other by means of electricity, and quite independent of wires, from one end of the globe to the other. Sight may be added to sound, though this might be awkward at times.

But at present the only individual who can see from pole to pole, and hear from Cape Horn to the Highlands of Banff, is the intelligent tale-teller.

While, for example, the good folk of the *Oonalaska* are beset in Arctic seas, and doing all they can to make things pleasant, I and my reader (without leave of Edison) can fly to England, to Yorkshire, to the village of Allandene itself, and to the very firesides of its peaceful inhabitants.

Here it is, the dear old drowsy place that Godfrey, lying in his snow-lined* bunk in the Polar Ocean, so often dreams about. Here are the "Dew Drop" Inn, and the old houses. The leaves on the great elms are dark and crisp and curly now, for it is the "fa' o' the year," and it is evening too.

"Peace seemed to reign upon earth. All sounds were in harmony blended.
Voices of children at play, the crowing of cocks in the barnyards,
Whir of wings on the drowsy air, and the cooing of pigeons.
All were subdued and low as the murmur of love; and the great Sun
Looked with eyes of love through the golden vapours around him."

Out under the elms, through which the gentle gloaming winds are whispering, sit Gossip Gray and his neighbour.

"Ah, neighbour," says Gossip Gray, "they were never separated. Foine lads both—foine lads!"

"And they *do* say, Gossip, that Spencer be a-goin' to look for Godfrey all the world over."

"God send he may find him, neighbour."

"Amen, amen."

We pass up the road, and meet the Doctor jogging away in his trap. The good old man looks part and parcel of the place, looks as if he had grown up with the elm trees yonder, and would still be driving that same horse and trap a hundred years hence; for some of these old-fashioned Yorkshire villages give one the impression that they never have changed, and never will.

Old Mr. Lea is walking in his garden, communing with his thoughts. It is the evening of life with him, but he is very calm and very happy.

We open the little wicket gate of Mr. Neil's compound. We have to hold aside the trailing roses as we do so, and we glide into the parlour. No one there. But the piano is open, and there, on a chair, lies Mrs. Neil's knitting, and on a book her husband's spectacles. The birds have not long fled, and we easily guess where they have gone to.

Yes, we find them here in Dennis's drawing-room. All are here. Something more than usual is on the *tapis*. For Spencer tomorrow begins his search, or rather he leaves home to cross the sea for its commencement. He might have gone before, but thought it prudent to wait, and correspond with San Francisco.

Poor Mrs. Dennis!

"I have less hope," she says, "than any of you. But if it be His will to restore my boy, Godfrey will return."

"Mother," said Spencer Rae,—he always called her mother now,—"I have hope. I will hope for every one——"

"If," continued Mrs. Dennis, as though she hardly heard what Spencer said, "if it be His will—if not—well—*this* life will not always last."

Rosa went over to the sofa whereon Mrs. Dennis sat. She did not speak, but only took her hand and nursed it.

"Life will not always last."

There was a weary ring in her voice. It was as though she cared but little how soon she laid down the burden of her existence.

Oh! if Godfrey had but seen her thus in his dreams, had but heard her speak as she now did, how broken-hearted he would have felt, how unutterably wretched! But he was far, far away; and ever since that evening on the island of St. Paul's, when he had confided his sorrows to Miss Graves, he had been far less wretched in his mind, and there were times when he even caught himself hoping that things were not so bad as he—— And just as I with my pen cut that sentence short, so did he—Godfrey—always dash away the cup which Hope held to his lips.

"No, no, no," he would say to himself, "I have no right to do anything else but suffer." And, easier in mind though Miss Graves' counsel had rendered him, he still firmly adhered to his determination to remain in the Arctic Regions. When the ship should sail, he would be missing. This was his own sweet secret, that not even Miss Graves must know. When the time came he would act.

Yes, he often thought of his mother, his father and sister, and—Rosa. His consolation, when he did so, was that they knew him, and knew he would never return, and that they must have given him up long ago, as one gives up the dead, only to think of sweet reunion beyond the skies.

Spencer Rae was well liked in Allandene. He had mounted his big horse this afternoon, and ridden into the village to bid his friends good-bye, for he was to start late that night. He went to Parson Lea's first, and received an informal but heart-felt blessing.

"I'll pray for you, boy," said Mr. Lea.

"Oh, yes, mind you do that," said Spencer, turning serious immediately, "and not once, but always. And, I say, Mr. Lea——"

"Well, boy?"

"You've always been a friend to our family; now do go as often as you can to see Mother Dennis. Ah! do you know, I fear I'll not meet *her* again."

"Hope on, lad, hope for the best."

"Yes, I'll do that. And, of course, you'll often see Miss Neil. Keep her heart up. *You* can. Good-bye, sir."

But there was scarcely a house in the village where Spencer had not a farewell to say; and to tell you the whole truth, he had more good wishes for his welfare and success than fall to the lot of many brides, and they were all sincere.

Before they parted that night, Rosa gave Spencer a letter for Godfrey. Like Spencer himself, she was as full of bright hopes as a rainbow is of bright colours.

The young man had a long way to drive to the nearest civilised station,—for there really *are* uncivilised railway stations, you know.

When he took his ticket by the night express for London, his heart and brain were full of a not unpleasant kind of excitement. Spencer was in fine form. He was healthy mentally and corporally, and therefore exertion of both mind and body was the only thing that could really do him good. While at home, he fretted and moped, but now his barque was launched on the ocean of life, and Hope was at the helm.

There was, for the most part, an abiding smile on his face, an abiding light in his eye, that told of the joy within. He had not thought about, nor taken the time nor the pains to reckon, the difficulties and the dangers he would have to go through. If he had considered them at all, it was to treat them as lightly as one treats the clouds that obscure a summer moon; they would vanish one by one, and all would go well, even to the blissful end.

The train was late that night, but seated there, all alone on a daïs, with his luggage near him, he had such a deal that was jolly to think about, and so many bright castles to build in the air, that impatience was out of the question. When the sleepy porter rang the bell at long last, and the train came fussing and tearing into the station, Spencer picked up his heavy hand-bags as if they had been only a set of cricket gear, and

* At night the sleeper's breath speedily freezes, and lines the roof and sides deep with hoar frost, which also lies thick on the coverlet.

pitching them into a compartment, followed and took his seat.

He spent an hour or two talking with a fellow-passenger. The conversation was very tame, but all subjects were tame now to Spencer, except *the* one that filled his life and soul.

He threw himself on the cushion at full length next, and was soon sound asleep.

When he awoke it was early morning. The train was swinging along through green flat meadows, where cattle grazed; past plantations of stunted elms and ashes; past ponds in fields, where ducks and geese were feeding, and rooks, intent on finding the matutinal worm; past farms and villages; the scenery all half enveloped in fog.

In a short time he was in London. It was damp, and dreary, and comfortless; but Spencer was not downcast. He had much to do, and his thoughts had an atmosphere of his own.

* * * *

We find him a week after this walking the quarter-deck of an Atlantic liner, still looking fresh, and hard, and rosy—the Yorkshireman all over. Men envied him his very appearance and happy looks, and to more than one lady he was an individual worthy of study.

Spencer might have looked what he was, a farmer, but soft or green, no! He took to travelling as a duckling takes to water; he found his way about New York, and after arriving at San Francisco, one night's rest sufficed to chase away his fatigue, and free his brain from that cobweb feeling of fulness that long journeying induces in most people.

Then Spencer went to work in earnest.

So anxious was he, so well did he work, not leaving a single stone unturned, that in three days' time he had found out all he was likely to find out for a time.

He found relations of Mr. Graves; he found his banker, his solicitor, and many men in the city who had known him and bidden him good-bye, and who had even spoken to and shaken hands with his cousin Godfrey. But to Spencer's sorrow no one knew definitely what Mr. Graves had sailed in the *Oonalaska* for, unless for change and adventure, coupled with his insatiable craving to see, as he himself expressed it, "both ends of the world, and how it looked upside down."

With his banker and an old uncle of his, Nat senior had been dining an evening or two before sailing. He laughingly told them that he was going to give his sister Mary a treat.

"Suppose you get lost up North, eh?" said his banker.

"Well, man, if I don't come home in time, why, send out and seek me. Come yourself, too, and I'll make you sure of a good day's shooting. I've got some cash in your old stocking."

But as to his intention of trying to force a passage through to Baffin's Bay, he had breathed no hint; and the probability is he had not even formed it until he had been for some time at sea.

He ought to have been back at 'Frisco months before.

"Frozen up," the banker said; "they must be." And he added, "His friends must wait and hope."

Wait and hope? a bad look-out for Spencer. He could work and hope; but waiting is wearisome to the young and ardent.

So far, however, fortune favoured Spencer. A ship came in from the Pribyloo islands, laden with fur-skins. It was the identical Russian barque that had seen the *Oonalaska*, and seen her sail away for the North.

"Do you think they will get round?"

"No; they never will. They do not know the country. They stayed too long at Pribyloo."

"But if frozen in for the winter, may they not try again in spring?"

"Impossible; they are not provisioned."

"Where do you sail next to?"

"I go down south to thaw out. Back here in spring, and on to Alaska."

Hope relit her lamp in Spencer's heart. He would wait till the captain returned, and sail with him, if the *Oonalaska* did not return ere then.

Meanwhile he would daily read the shipping news; for, notwithstanding all the Russian had told him, he considered there might be a possibility of the *Oona's* success, and of her eventually arriving at New York.

(*To be continued.*)

TRAVELLING IN INDIA.

A HINDOO, having had his conscience awakened, inquired of various Brahmins how he might make atonement to God for his sins. All agreed that it was by torturing his body that his guilt was to be expiated; and the mode recommended was:—

"Thou must drive a number of iron spikes through thy sandals; and on these sandals thou must place thy naked feet, and walk to the sacred station at the Godavery River (distant 480 miles). If, through loss of blood, or weakness of body, thou art unable to proceed, thou mayest halt, and wait for healing and strength. When thou hast performed this, thou mayest '*hope*' that thy soul will be cleansed."

The poor Hindoo was in earnest to save his soul; and, severe as the penance was, he did not hesitate, but immediately set out on his painful journey. At length he felt compelled to halt beneath a wide-spreading tree.

It happened that a Christian missionary was accustomed to take his stand beneath this very tree, and to proclaim the words of life. The poor foot-sore devotee had not been there long before the missionary came to his wonted labour, and cried aloud, "The blood of Jesus Christ, the Son of God, cleanseth from all sin." He began to describe what sin was in the sight of God, and pressed guilt home; he showed the utter hopelessness of man's saving himself by any self-imposed suffering, and pointed out God's way of salvation, through the blood-shedding of His own well-beloved Son.

These glad sounds fell upon the Hindoo's ears like rain on a thirsty soil. He drank in every word; and at length, plucking off his sandals, sprang up and cried out, "This is what I want! This is what I want!" He gladly received the word, and believed it, and became a living witness, that the blood of Jesus Christ *does indeed* cleanse from *all* sin.

58 SUNDAYS IN A YEAR.

A PERSON who values his Sundays can, if he will, add to their value six and a half days every year, by the simple process of rising one hour earlier than his custom. General habit makes it one hour later to get up, and often one hour earlier to bed. "The best of all the seven" is woefully pared down.

TALKS WITH MARRIED FOLK

ABOUT THE MANAGEMENT OF INCOME.

By PHYLLIS BROWNE.

NO. 5.—WHEN AND HOW TO SAVE.

(*Continued.*)

THERE is very little doubt that the chief reasons why so much money is spent on meat in our families is, first, that people do not know what to get instead of joints, or how to cook other foods; and, secondly, that they like to have what can be quickly prepared. This is a pity. So far as knowing what to get instead of the best joints goes, all I can say is, that those who wish to effect an alteration will have to set themselves to learn not only to choose, but also how to cook the cheaper parts of meat.

This is not a simple business. It calls for pains, careful thought, and perseverance; and those who will not pay the price cannot have the advantage. As the proverb says, "Those who will not take pains, pains will take them."

We sometimes hear people talk as if good management and good cookery were affairs of course, quite easy of accomplishment. They are not at all easy; and those who know most about them would be the least likely to under-rate them. Skill of this kind is not to be acquired by reading a book, or copying out a recipe; it is gained by practice, patience, observation, and experiment.

It may be comparatively easy to follow an expensive recipe and produce an elegant dish at a great expense. But economical cookery is not easy; it requires intelligence, discrimination, and many other high qualities. Let no one think slightingly of good cookery. There was never a woman yet who could do it well and economically, who did not possess ability above the average.

Then as to rapid cookery. "Haste makes waste." It is no use for people to think they can prepare economical meals unless they can give time to them; or, at any rate, I am afraid *I* shall not be able to tell them how they can dispense with time. A tender steak we can broil over a large fire a few minutes before dinner, but the coarser and cheaper pieces of meat require long gentle stewing to make them nourishing and appetising. Fortunately, this long stewing requires to be carried on over a gentle fire, and thus we are enabled to save fuel as well as cash; but Time we *must* have. This long preparation may sound difficult, yet it only means that with it we shall have to arrange our meals beforehand, take time by the forelock, and not leave everything to the last minute.

As a matter of fact, we shall probably not give many more minutes to the preparation of the economical food than we should to the preparation of the expensive food. Only, with the former, we should have to commence in good time. Thus we come back to the same old story, "Be beforehand." The secret of thrift lies in looking ahead, and preparing for what is to come.

Before I end these papers, I will give a few recipes for inexpensive nourishing dishes. But we need to understand that to have a good recipe is only the fringe of the business. A recipe can never be considered valuable until it has been tried and proved by the person who has to use it. A recipe which we know from personal experience is

suited to our individual requirements, and to the taste and needs of our family, is worth writing down in letters of gold.

Still another word I must say about "leguminous foods," as peas, beans, lentils, etc., are called. People who decide to use them should be careful in what quantities they give them to children. We should none of us think of putting as much roast beef or roast mutton before a child as we should put before a grown man. Yet the legumes are quite as strong and rich as meat, though it is difficult to realise the fact, because when well boiled they are soft, and they are generally served in liquid form.

They should therefore be eaten with plenty of rice, bread, potatoes, and other vegetables; otherwise they are likely to disagree. Also, they should be introduced gradually, and as the skins are often a little irritating to the digestive organs of those unaccustomed to the food, it is wise to remove them by crushing the beans or peas through a sieve, and keeping back what will not go through. There is one encouragement to the employment of these foods, namely, that the taste for them is very easily acquired, while the saving in expense which can be effected thereby, is very considerable.

After butcher's bills, the next item on which there is a chance of saving, is in the washing bills. Saving in the laundry department is effected by washing at home, instead of putting the washing out. Once on a time it was quite exceptional for people of moderate income to put out their washing; now it is quite exceptional for them to do anything else. And yet it is marvellous what a difference there is between the comparative cost of the two methods. By washing at home we save not only in the weekly bills, but also in the wear and tear of our linen. Linen sent out to the ordinary professional laundress is in rags and tatters years earlier than linen which is carefully cleansed at home. The average laundress *will* use chemicals in her manipulations, and these chemicals ruin our goods. If we wish to preserve them, to keep them a good colour, and to save time in darning, making, and mending, we shall make arrangements to wash them at home.

To busy housekeepers, who are accustomed to enjoy the relief of sending dirty linen out of the house, and receiving it back clean, this suggestion is likely to be unwelcome. Yet, if they will look into the subject, they will find that a very real saving can be very speedily effected through a "better order" in the laundry department; and they will be wise not to decide too quickly that such a saving for them is quite an impossibility.

When it is necessary to hire special help in washing, it is certainly open to question whether the evils of the arrangement will not outweigh the benefits. In small establishments, the hiring and extra keep very often prove exceedingly demoralizing, and the introduction of a new claimant to advantage into the household, makes settled assistants disposed to discontent. The house-mother would be wise to think twice before she ran the risk of any mischance of this sort. Yet if, with the ordinary help, she can have even part of the family wash done at home, she will undoubtedly economise. Sometimes, where there are girls in the family, it can be arranged that each one shall undertake special washing of small things. One girl, for instance, might wash the stockings and laces; another might undertake the small flannels and vests. Little duties of this kind are not onerous; they give the person who does them a practical knowledge of laundry work, which is sure to be useful, and the arrangement is most economical. Stockings carefully washed at home do not need to be darned nearly so much as do stockings which are put out; for really it is quite cruel to see how, occasionally, in high-class laundries, good stockings are torn and made hard and unwearable.

When kitchen cloths and dusters are allowed to accumulate, they will at the end of a week or a fortnight form a small wash by themselves, especially if they are allowed to get very dirty. One way of conquering this difficulty is to wash out every night those which have been used during the day. When this is done, the wash at the end of the week does not look nearly as formidable as it would do, if the kitchen cloths were added to it. When the oven has been used, clever managers often arrange to have the kitchen cloths soaked and slightly soaped, then put into an earthenware jar with a little ammonia, or a small lump of soda, and left in the oven all night. In the morning the dirt is so much loosened, that they need only to be rinsed out, and they are clean.

Still one other way of reducing the laundry expenses is for the gentler members of the household to wear rational under-garments. On this subject we must speak when we talk of dress; but it may be remarked, by the way, that one of the chief advantages of rational underclothing is that, besides being healthier and more comfortable, it effects an economy in washing, as well as in material. Where there are two or three girls in a family, it is keeping quite within the mark to say that if washing were put out, the difference in the washing bills for rational dress and ordinary dress would not be less than 2s. a week, and 2s. per week, it must be remembered, is more than £5 in a year.

Having done what we can in the laundry, we find that the next item upon which we can save is in the consumption of beer and intoxicants. The advocates of temperance very often tell us of the harm done to health and morality by spirituous liquors; they tell us that comfort, happiness, and progress are destroyed by them. With considerations of that kind we have nothing to do here; we have simply to do with economy. Looked at from that standpoint only, we have to confess that there is no more costly item in household expenses than beer and wine; and the worst thing about them is that you can never make an accurate estimate of what they will amount to. Once admitted, their cost grows.

In the majority of cases, the only way to lessen this expense is to get rid of it altogether; then we begin to have hopes, and to have a chance of saving. The item of alcoholic drinks in an estimate of household expenditure is like a hole in a pocket where money is kept; we never know how much we shall lose by it.

If even moderate people could draw up the same sort of statement about intoxicants, which we drew of general expenses at the beginning of these talks, and put the money spent on beer and wine on one side, and the benefit received from them on the other, and then add up and compare the two sums, there is no question as to which would be the larger.

When people who have got into money difficulties begin in real earnest to try to save, they almost invariably attack first this one item of expense. As a rule, they find it easier to dispense altogether with beer and wine, than to regulate the consumption thereof. The troubles connected with abstention from beer and spirits grow less with every day. Those who have been accustomed to the use of alcohol will probably feel the longing for it come over them at intervals; but if the desire is conquered, it will grow feebler and feebler, and at length will disappear altogether. Then the victory over appetite will be won, and a huge stride will be made in the road which leads to economy.

We have all heard of the drunkard who resolved to reform, and who put a glass of spirits in front of him, and said he would fight his enemy while facing him. The poor fellow would have been much safer if he had kept his enemy out of the house. The same rule holds good when this particular enemy attacks our pockets, instead of our character. If we keep it out of the house, we have not very much to fear from it.

It is probable that there would be less difficulty in effecting this one economy if householders would realise that when beer and spirits are not supplied, something else must take their place. Despise and fear them as much as we will, there is no denying that these beverages supply a want; to an extent they constitute food; and they act as a stimulant, which, in this hard work-a-day world, is frequently very much needed. When householders, therefore, turn this foe out of doors, they would be much more likely to keep him out if, at the same time, they admitted a friend in his place.

If, when beer was banished, pains were taken to supply good coffee or cocoa, or refreshing, harmless beverages in its stead, its absence would not be missed. We ought not to forget that those who save the cost of beer can afford to furnish other beverages; their families will need more coffee, cocoa, or lemonade than others. Therefore, it is a prudent arrangement, and a positive economy, to acknowledge this fact and act upon it. It is very hard work, especially when the change is first made, for people who have been accustomed to take a glass of beer with their meals, or the last thing at night, to resign themselves to drinking cold water. They would be much more content if an acceptable substitute for the former beverage were provided. The house-mother should tax her ingenuity to supply this.

The number of beverages at her command is great and varied. Amongst them may be named coffee, cocoa, boiled milk, lime juice, lemonade, gingerbeer; in summer time fruit-syrups of all kinds, mixed with water, toast water and barley-water. Of late years many people have learnt to enjoy and to believe in the value of hot water as a drink. Its advocates say that, taken with food, and last thing at night, it is most comforting and wholesome; it aids digestion, and through habit becomes as acceptable as beer used to be. Certainly, no objection can be raised to hot water on account of its cost!

(*To be continued.*)

THE SQUIRE'S PROBLEM: "MUCH—SOME—OR NONE?"

By G. DE LA PLANTE.

CHAPTER I.

TWO EXPERIMENTS.

WYNYARD WHYTE and his sister were "inseparables." Everything these two did was invested with keen interest for the whole of the neighbourhood, for young Whyte was squire of the parish, and a "great man" amongst the small folk around.

He and Mary had been under tutors and governors until they both came of age; then all restraints were laid aside, and brother and sister began life in earnest.

The squire was a manly, straight-limbed fellow, with a clear head and a kindly heart. Not very clever, perhaps, nor gifted with fine susceptibilities, but at least a pleasant, good-hearted gentleman. Mary was smaller and slighter in build, with a clear-cut profile, and wistful brown eyes.

Life looked very fair to these two, when, after all the guests had departed, they took sole possession of the old Hall, and prepared to start "on their own account." Young, strong, wealthy, what might they not do? Already Mary had begun to plan for the future, and where she went the squire was sure to follow.

"Come for a walk, Wyn?" said she, as her brother strolled into the library one sunny morning. "I have written five 'polite' letters, and feel as if I wanted a bit of nature, after so much art."

"All right!" said the squire; "let us go up the hill and have a good long talk. We ought to do something worth while now, Mary, you and I."

Up the hill they went, winding in and out amongst the patches of gorse and heather, until they reached the highest point. There they paused, breathless, and turned to see the view. Nestling to the right hand, far below them, lay the Hall, while its broad acres of demesne stretched away as far as eye could reach. At their feet lay the fishing village, beneath a cloud of smoke, which hung lazily in the still air; and out on the sparkling ocean were scores of little fishing-boats making for the trawling-grounds.

"All yours, Wynyard," said Mary, seating herself amongst the heather.

"Yes," said the squire thoughtfully.

It felt strange to stand on that hill-top, and realise his own power.

"The old Hall is in the sunlight, but the village is in a cloud of smoke," said Mary again.

"Yes," repeated the squire.

"It doesn't seem right," said the girl. "I wonder *why* you were made squire, Wynyard? You did nothing to deserve it."

"I see."

"But you *are* the squire, and you can't help it."

"I suppose not. What are you driving at, Mary?"

"Only this: ought we not to try to make these people better, happier? You see you can do it, so I suppose you are responsible about them."

"Well done, Sis! Never knew you were a preacher! Why shouldn't we work this notion of yours into part of our fun? Those fishing people scarcely know me from any other fellow, though I own the very roofs over their heads. Let us have a grand dinner for them at the Hall, and give them a real good time for once."

"Capital!" said Mary. "The Forsyths and the Brentons would come to help. We would put up a tent near the tennis lawn, and have a Band down from town."

"That's settled," said the squire, with a sigh of relief; "if you see to the provisioning, I'll see to the fun. You'd better have invitations printed, and left round at the houses."

"I wonder ——" began Mary. Then she stopped. "We'll try it anyhow, Wyn; it will be something to get to know the people. Come along, sir; down the hill again, or we shall be late for lunch."

The day for the great dinner came at last. Quite a large company of the fisher folk assembled, and a number of the gentry round, looking with genial amusement on the young squire's benevolence, came to share in the fun. Fair ladies waited on the rough, care-worn men, and as the evening wore on, the fun grew fast and furious.

"Wynyard," said Mary, touching her brother's arm, "can you not stop this? Many of the men have had too much."

"I know," said the squire; "but what can I do? You and the ladies had better go to the house. Let the poor fellows have enough for once."

"Enough?" said Mary. "I doubt if this will do them much good. Can't you say a word?"

"How can I cut off supplies?" asked the squire rather angrily. "They must go their own way for to-night."

Mary turned aside, and listened with a sick heart to the congratulations on her brother's benevolence which greeted her in the drawing-room: this was not the way in which the people could be helped.

Breakfast was a silent meal next morning, and after it, Wynyard strolled down to the village in a puzzled frame of mind. Evidently Mary was not satisfied with their initial effort; he was not satisfied himself.

Two men leant over a wooden railing, watching a coasting vessel lazily drying her sails. The squire, as he passed, overheard what they said.

"Yes, 'twere well enough, but what's a good dinner once in a way? It spoils a man's taste for his salted herrin'."

"There'll be none too many herrin's to salt to-day," said the other; "half the boats 'ont go out. The men are a-bed yet."

"St! man; th' squire's close to hand."

Old Betty came to the door of the post-office a few yards farther on. She evidently had a "word in season" for the squire.

"Ay, ay, Squire; 'twas kindly meant, an' Miss Mary sent me a gey bit o' beef, an' a tasty puddin', but there's two sides to most things,—there's two sides to this."

"What's the matter now, old friend?" asked the squire, for Betty was one of his few acquaintances in the village. "Did I do more harm than good last night? It seems like it."

Betty pointed across the street to the Black Bull. "You did him a good turn, anyhow. Th' place was crowded half the night; little sleep had I."

"The men had enough to drink at the Hall," said the squire sternly.

"Enough's a matter o' 'pinion," said Betty; "'pears they didn't think so; they had enough to start 'em, anyhow. There's many a wife cryin' to-day because her man went back to drink last night. Th' dinner brought you more'n blessings, Squire. Likely they told you 'bout Big Bill?"

"No—that great strong fellow who made a speech last night?"

"As like as not; he'd better ha' stayed at home. Comin' back, he turned in to the Black Bull, and took all he could drink. Tryin' to walk home, he tripped on the kerb-stone, an' pitched right down a flight o' steps, broke his leg, an' knocked his skull near to pieces. They *do* say 'twill be a near thing with him now. Last six weeks he kep' sober, but before that—well, he was a one! Goin' to see him, sir? First turn to the left down the lane. Hope his missus 'll be civil."

The squire walked on, sad at heart. If only Mary had let him be; but now that he had begun he could not go back. Indifference, once broken, cannot be resumed.

Faugh! what a sickening place! Every sense offended by the close contact of unpleasant sight, and smell, and sound. How could men be good and women pure in such a den as this? yet Big Ben's cottage was far from being one of the worst. The injured giant tossed restlessly on his comfortless bed; two children fought by the hearth-stone, and the housewife, uncombed and unwashen, sullenly went through her work. For that week she had money for food, but who was to care for the future?

The squire's form darkened the doorway. The woman looked up. Here was hope. Uncivil to him? She knew better than that. A minute before she had been muttering hard things against him for having enticed her husband back to drink. Now she was all smiles and curtsies; for the squire could help her to find bread.

Ten minutes later, Wynyard Whyte left the house, a sadder and a wiser man. He saw through the woman's obsequious words; he knew why she did not dare to show her anger openly, and it cut him that poverty should compel her to dissemble with him. Substantial help he gave her, of course, but food for the body could not do much for those steeped in surroundings of misery and sin.

"Are the other cottages like yours?" he asked.

"Well, sir, we're respectabler than most. Since Bill took to be sober, I've got a stick or two o' things together again. I was just

thinkin' which would have to go first, when your honour came in."

"Wyn, you are utterly dispirited to-night," said Mary, stirring the fire to a blaze. It was after dinner, and the brother and sister were alone.

Wynyard told her something of his experience that morning. "No wonder I feel out of sorts, as I've made things worse, not better."

"Drink seems to be at the bottom of it all. Couldn't you stop that, Wynyard?"

"I don't see how. I don't hold with taking away a man's liberty."

"Nor do I. But you might show them how wrong it is to take too much."

"So I might. I wish I'd thought of that last night."

"Here's an idea! Why not go straight off now to the Black Bull, and have a talk with the men there? That landlord seemed such a pleasant man last night. Do, Wynyard."

"Look here, Mary, it's rather a nasty job." The squire took a turn up and down the room. "I believe I'll face it," he said at last; "it's better than being haunted by that house to-day. Ugh! it was horrible!"

The landlord of the Black Bull gave a smiling welcome to the young squire. A murmur of surprise went round the crowded bar-parlour, hats were touched, and a general hush fell upon the assembly. How warm the room was, and how bright it seemed compared with Big Ben's hovel! No wonder that more than half the fishermen gathered here every night.

"Glass o' beer, Squire?" called out a half-tipsy man. "We'll stand treat in return for yours."

"No, thanks," said the squire; "I've had my two glasses of wine at dinner. I never take more. May I say a word or two to your customers, landlord?"

"Surely, Squire," said the publican. "Real jolly I call this—us dining with the Squire last night, and he dropping in so friendly now."

"Hear, hear!"—this from the audience.

"I would not say a word against the Black Bull behind his back," said the squire, raising his voice, "but I want to warn you fellows against taking too much drink. 'Enough is as good as a feast.' People say you can't have too much of a good thing. Now the Black Bull's beer is a *very* good thing, as we all know, but it's quite possible to take too much of it. I blame myself about last night——"

"How's Big Bill, missus?" broke in a sailor, speaking to a woman who was trying to keep out of sight. All eyes were turned towards her corner, and the squire saw the wife and mother, whose place was at home, just finishing a glass of what had been her husband's ruin. The woman slunk away ashamed, fearing she had lost all chance of further help from the squire.

The young man went on,—

"You know more of the harm of too much drink than I do. I don't want to keep any of you from your social glass, but I do want to keep you from being drunkards. Look here,—will you make up your minds to-night that you'll never again take too much, either here or elsewhere? You agree to that, landlord?"

"Surely, Squire, surely," said the landlord, stepping to the front, "that's what I say, too. Come in here every night, boys; the bar parlour is at your service, and the best the house can give. But don't get drunk. I

"Betty had evidently a 'word in season' for the squire."

never like a man to take too much, though two or three glasses are good for us all. As for them as want to take away the liberty of a man to have his drink when he likes, I say they're robbers. We're free Britons, who never, *never*, NEVER will be slaves."

In the midst of the applause which followed, a sailor got upon his legs. "Th' squire's right," said he, "an' so are you, sir. But there's two things I'd like to be told. *How're we to know when we've had enough, and how're we to stop when we know it?*"

The squire racked his brains for a satisfactory measure of sufficiency, but none could he find. "That's a point you must decide for yourselves," he said at last. "I don't ask you to decide it for me. I take my glass or two every night, and then I stop. Can't you do the same? Be men, every one of you; make up your minds to do a thing, and stick to it. Will you remember what I say?"

"Ay, ay, sir," came in a somewhat sullen chorus; whilst one man remarked, "'Tis easy for the squire to be sober, with a good meat dinner and a warm fire"; and another muttered, "Th' landlord knows his business, that he do. 'Tisn't like that the men, when once they begin, will stop while they can hold a drop."

"A free glass all round, lads, to drink the squire's health," called the landlord, who was far from pleased at the turn things were taking; and amid loud, unsteady cheers, the young squire left the Black Bull, not very hopeful about his effort at reform.

CHAPTER II.

A LIGHT ON THE WAY.

"I SAY, Mary, do let us get out of this for a while; I'm sick of the place. They had another fight in the village last night. Big Bill's keeping sober, but his wife drinks like a fish. I wish I could forget all about them; but the worst of beginning to take an interest in people is that you can't stop when you want to. What on earth can I do to keep them sober? It's a regular problem."

"I think you've done something, Wynyard; but certainly not much. Yes, we'll have a run to the Lakes, and get fresh ideas amongst the hills."

There was a crying baby in the only first class carriage when the squire and his sister reached the little roadside station, so their wraps were put to engage two corner seats in a second class compartment, where one passenger, a quiet-looking young fellow, already sat.

Wynyard bought a paper, then sprang in, and the train started. For the first half-hour there was silence; then the stranger finished his paper and laid it aside. Wynyard, not caring to have leisure for thought, proposed an exchange, as he had also finished his.

"Gladly, but mine is the *Temperance Chronicle;* you may not care for it?"

"Mine is the *Temperance Times*," said Wynyard, laughing; "the subject interests me specially just now."

"Really? May I ask if you are a worker in the cause?"

"I scarcely know whether 'the cause' would own me. I have a fishing village on my estate, and have been trying to teach the people not to drink too much."

"And the result has been——?"

"Practically *nil*."

"Excuse me, but I expected that answer. You do not hold with my 'bit o' blue'"; and the stranger touched his button-hole.

The squire smiled rather scornfully.

"Assuredly not. I believe in teaching men self-control—not in chaining them up."

"Yet you have not been successful in your teaching."

"I admit that, but I do not see that it touches the principle."

"The principle may be right enough, but it won't work. How is a man to know when he has had enough, and how is he to stop when he knows it?"

Why, here was the sailor's question again! The squire was silent.

"You see we have to deal with men as they are, not as they ought to be; now men, as they are, cannot continue moderate drinkers without danger of becoming drunkards. Of course there are exceptions; probably you yourself are one. We total abstainers hold that you moderate drinkers do the 'cause' more harm than drunkards."

"You speak strongly."

"I mean no offence. A drunkard shows the horrors of drink; his very face proclaims its degrading power; he may deter some one from following in his steps; but a man like you,—why, every glass of wine you take is an advertisement for the publicans! You drink, yet it does not affect you; the poor wretch, who with weakened will is struggling against his tyrant, fondly hopes—because he *wishes* to hope—that what is so good for you cannot be bad for him."

"I never taught the villagers to drink," said the squire, looking rather frigid; "they knew it well enough before I came."

"Perhaps; but don't you see that you are a daily excuse for them? If not directly causing crime, you are hindering reformation."

"Wine means nothing to me," said the squire; "I only take it from habit. If I really believed——" and he paused.

"It is a heavy responsibility to let a mere *habit* stand in another's way," said the stranger. "I am only a clerk in a city office, with no influence, as the world counts it, whilst you have evidently a great deal; but I dare not be neutral in the matter. The little I can do I must not leave undone."

"You feel it to be so vital?"

"I feel it to be the most vital question, next to the gospel itself; in fact, the two should ever work side by side."

"And you have no faith in moderate drinking?"

"Absolutely none."

"But it would not be possible for me to practise Total Abstinence. My position would put it out of the question. I must keep my guests in countenance; it would amount to a reproach to them if I refused to drink what they drank."

"Quite so; but that could be easily met."

"In what way? A man cannot always keep on explaining his actions."

"No; but what is simpler than to banish all intoxicants from your table and your household? Then you and your guests would be water-drinkers alike."

Mary sat forward and listened eagerly. This going to the root of the matter commended itself to her impulsive nature. "If only that were possible, Wynyard!" she said wistfully.

"You have no conception of the difficulty it would cause. I should get the name of being stingy and inhospitable. The Hall would be deserted."

"Better that, perhaps," said the stranger, "than that you should feel that the loss of even one drunkard's soul lay at your door."

"I have not yet realised that feeling," said the squire, a little stiffly; "when I do, it will be time enough for such marked action. Up to the present, I am scarcely convinced that it is even possible for these hard-worked men to get on well without a glass of beer."

"The statistics of the subject, if you wil study them, as well as the chemistry of intoxicants, will soon settle that. When a man does not drink beer, he has more money free for the real necessaries of life."

"Perhaps so, but as I tell you, I am not convinced. Until I am——"

"You can take no action, of course; but at least put yourself prayerfully in the way of conviction."

"We change here, Mary," said the squire, as the train slackened speed. "May I know your name and address, sir? Here is my card."

"This is the card of the firm I travel for," said the stranger frankly. "I will write my name below."

"Good-bye; I hope we shall meet again," said the squire, grasping his hand.

"Forgive one word more—even Total Abstinence will never work, unless it goes hand in hand with the gospel of Christ. If you love Him yourself, sir, lead your men to seek Him as their Saviour. Nowhere else will they get the strength they need to keep them from drink."

(*To be continued.*)

WHAT MEDICAL MEN SAY.

DR. CHEYNE writes: "Nothing can be more prejudicial to tender constitutions, and studious or contemplative persons, than lying in bed after one is distinctly awake, or has slept a reasonable time."

Dr. Wilson Philip says: "Although it is of consequence to the weakly to go early to bed, there are few things more hurtful to them than remaining in it too long. Getting up an hour or two earlier often gives a degree of vigour which nothing else can produce. For those who are not weak and sleep well, the best rule is to get out of bed soon after awakening in the morning. This at first may appear too early, for the sickly require more sleep than the healthy; but rising early will gradually prolong the sleep on the succeeding night, till the quantity the patient enjoys is equal to his demands for it."

THE MEANING OF THE WORD TIME.

THE word Time is derived from the Greek word "Temnō," to cut,—a piece cut off. Time, therefore, is a piece of Eternity cut off for man's present use. We cannot claim from God anything beyond the present; we only live by the day, taking each piece of time as it is cut off for us, moment after moment. Time is something opposed to Eternity; one is measurable, adapted to the small, finite ideas of human imagination; the other is a vast, unknown, incomprehensible perpetuity, far, far beyond the grasp of finite man.

None can conceive a state of existence that is without beginning or end, without bottom to be sounded, without shore to be reached; yet this is Eternity, an infinitesimal part of which is broken off, for all born on this earth to use, or abuse, as each lists.

ENTHUSIASM CONDEMNED BY GOOD PEOPLE.

By the Rev. JOHN WATSON, M.A., Liverpool.

IT is, perhaps, unfortunate when honest, sincere, and intense enthusiasm is criticised and condemned and vilified by a hostile world. One has, however, this consolation when viewing such a spectacle, that nothing else could have been expected in the circumstances, and that opposition so natural will only encourage brave hearts.

But when the people who are heart and soul with your cause, say—the progress of the kingdom of God—take up a critical attitude, and pour cold water on your efforts, and make out that you are doing more harm than good, and that you had better at once give up what you are doing, the warmest heart is apt to be chilled, and the highest spirit wounded. You never expected your own allies to desert you, far less to attack you; and those who would have faced all for the honour of God and the happiness of man, are wounded unto death by this Brutus' stroke.

Viewed in this light, I have always regarded, as indeed one of the most painful incidents in the life of Jesus, the interference of His mother and brethren at Capernaum, when they came to seek Him.

He was, alas! quite accustomed to receive the bitterest abuse at the hand of the Pharisees, and was told three times at least that He had a devil. So far as one can judge, He was not much hurt by this insult, probably because He had discounted any rivalry from the Pharisee party, and also because He knew that when a Jew said any one had a devil, he only meant to say that the person had different opinions from his own. Just as some good people now-a-days will call one who differs from them on election or inspiration, a Socinian or an infidel. But it was another thing to have His own brethren, and it seems also His mother,—who ought to have sympathised with Him, and who, in fact, had the kindliest feelings towards Him, —coming down from Nazareth to Capernaum, pushing their way through the crowds, striving to get near Jesus, and actually intending to place Him under restraint as one who had gone out of His mind.

Mark the circumstances of this incident, and you will see in a moment why His own family were so concerned about Jesus. It was not, remember, because He had been preaching the gospel of the kingdom to all Galilee, nor because He had been healing diseased people by scores, nor because He was idolised by the grateful people, nor because He was hated by the Pharisees. No! it was because He was hurrying hither and thither, and working double tides as it were, and taking so little care of Himself, that He had not time so much as to eat. It was all very well to say He was doing good, and blessing multitudes, and making happy homes, but surely He could do all this in a more sensible way. Was it necessary He should kill Himself for the sake of these people? Would it not be better for their sake that He should moderate His hot zeal, and take care of His body? They—His mother and brethren—would persuade Him to leave Capernaum, to return with them to Nazareth, and to live quietly with them till His brain should grow cool again; then He might resume His public work with renewed strength and in a more leisurely way. In short, it was not His work they condemned —certainly not; with that they no doubt entirely sympathised—but His way of doing it. They called Him mad because He was enthusiastic.

Well, circumstances being changed, the situation is constantly being repeated. We do not venture to say that one could find anywhere the pure enthusiasm of Jesus, in whom the fire of Divine love was guided by the Spirit of Divine wisdom; but we do not hesitate to say that there are thousands of men in this land to-day, whose zeal for God's kingdom, and passion for precious souls, are so intense as to carry them to great extremes both in word and deed. They are neglecting health, hazarding life, flinging away great chances, offending the world, dropping old customs, outraging conventionalities, very much as Jesus did in Galilee, and for the same reason. The method may be imperfect, but the spirit is the Spirit of Jesus.

Enthusiasm is not dead, in this composed and conventional age; and the kindly and good-hearted, but I venture to think, mistaken, critics of this enthusiasm, are also present. Some of the most loyal friends Jesus has in the world—as loyal, doubtless, as His mother—are inclined to be rather unfriendly to what they would call the extravagance of certain persons. They cheerfully admit that the people in question are sincere, call their work good work; "but!"—and when they unburden their minds, you find they regard with rooted suspicion, and sometimes with angry impatience, aggressive temperance work, the White Cross movement, efforts to evangelise the masses and purify their home-life, schemes for teaching them provident habits, and other forms of enthusiasm.

Now let me at once make an admission. Some enthusiasts are very foolish and very irritating; they are quite destitute of good taste; they are very unpractical; they are unreasonable in argument; they are thoughtless in action; they violate a thousand rules of plain common sense. Enthusiasm is not always a very high or heroic thing. It is often vulgar and coarse. It lays itself open to attacks from irreligious people, and gives many grounds of complaint.

There are, however, reasons why a man who wishes God's kingdom to come, should smile on hearty and honest zeal, although it is a little extravagant, and though he himself may be cold and phlegmatic. And the first is, that enthusiasts within the sphere of religion are not yet very numerous. If they were to become a majority, then we might have to put a check upon their doings. But although I hear, now and again, severe rebukes and solemn warnings administered to men and women who have been doing something extreme in helping their suffering and lost fellow-creatures, it does not appear to me that the prohibition of enthusiasm has come within the range of practical politics.

Now and again one does hear some very outrageous statement about drink; but we have also read how hundreds and thousands of people scrambled for shares in a Stock brewery.

Take, for instance, that remarkable body which is called the Salvation Army, and whose leader speaks of it as a new denomination. Well, there are many of their doings and actions we would be inclined to condemn, and we would all like the Army to be just a little more devout. But the leaders are engaged in a wondrous enterprise, and are doing all they can to make it successful. They don't appeal to us of the middle and respectable classes, nor to working men, but to the residuum of the people. Their minds and hearts have been filled with the idea of saving this mortal waste, and they are ready to use any means that will serve this purpose. Some years ago, I heard Mrs. Booth state her case, and one remark she made has stuck to my memory: "Do not suppose," she said, or words to that effect, "that we do the things you dislike, because we love to be vulgar. I hate vulgarity as much as any one" (and any one who has seen or heard Mrs. Booth will believe that); "but we would rather be vulgar than leave men and women to perish in ignorance and vice."

Besides, let us never forget how enthusiasm revives the spirit of the Christian Church. Suppose the enthusiast was not a great man; suppose he was unwise in his methods; suppose he was unsuccessful in gaining immediate results; suppose he died in his effort—yet this man has not failed, nor has the world lost. It is a mistake and a shame to think so, and indicates a want of moral insight and moral sensibility. This poor struggling world wants more than deeds —deeds to be tabulated in columns and published in report; it wants what must go before deeds, and what alone is the potential force of deeds. It wants the torrent to drive the wheel. It wants *spirit*, a spirit that does not calculate and does not hesitate, a spirit unhindered by prudence and forgetful of self.

Many readers can still remember the Crimean war, and no one who does can forget the charge of the Light Brigade. "Magnificent!" said a French guard; "but not war." It *was* magnificent, and perhaps it *was* war, though not in a narrow and limited sense. It appealed to the imagination of England, and raised a standard of heroic duty for her sons. It was our Marathon; and the death of the men of Marathon was a heritage to their nation.

We were all mourning a short time since for General Gordon. He should not have volunteered to go; he should not have been sent; he should have left; he should have been relieved. Every one thought there was a mistake somewhere, and that Gordon sacrificed himself. Of what use is the death of such a man in the prime of life? No victory, no glory, no spoil. Only a grand soldier cut down! What a waste! Do not be so fast! Would we have had Gordon Institutes all over the land? Would we have had this Christian soldier made a type for the young officers of the Army? Would we have had this illustration of honour to set before young men, had not Gordon thrown away his life?

When a man dies in the conflict, it does not so much matter whether he won or lost, as that he did his part like a man. Every man that has seen him dare and die, departs from the lists more a man and less a coward. It appears to me that is something, and a great thing. One who can plan is rare; one who can organize is rarer still; but for a hundred such, you can hardly get a man who can stimulate. Get him, and he is priceless.

Results! They are secondary. When Hannington died at Uganda, and one missionary after another falls at the Congo Mission, the gain is not one of numerical, but of moral, gain. It is worth while for the

Churches to see that the spirit of the martyrs still lives in her members, and for the world to know that Jesus Christ has only to command, and men and women will go as martyrs to death for His sake, as even officers to lead a forlorn hope.

But do not suppose that enthusiasm has not achieved direct results of the most practical kind. You cannot do anything without enthusiasm. You cannot carry on a charity relief society, or a political club, with cold-blooded men. And Christianity is more than a society or a club. There is no enterprise in the world which depends so much on enthusiasm as the cause of Christianity. It utilises all resources, but its great generals have belonged to the impetuous rather than the calm set of men. George Buchanan was the greatest Scottish scholar of the 16th century; but it was fiery John Knox, and not the Latin writer, that recast Scotland. Erasmus was the first scholar anywhere of that century, but Luther led the European Reformation. It was not the learned Alexandrian Apollos that converted the cities of the Roman Empire, but that madman, St. Paul.

What we should do, instead of sneering at extreme plans, and giving the cold shoulder to extreme men, is to assist and guide; and, instead of letting enthusiasm run wild, give it a course in which to run, and a chariot to drive. It will then pursue a level path, and will draw a callous world after it.

RULE O' THUMB.

By Felix Ferry.

THE majority of proverbial expressions are volumes of experience condensed. They are the shorthand of life's philosophy.

To this order belongs the term—"Rule o' Thumb." A glance at its significance will show that it has grown marvellously in meaning since it slipped into vogue. The proof is in the comparison between its origin, and present usage.

Perhaps it is not quite universally known that a whole literature of antiquarian and legendary lore clusters about the thumb. But such is the case. Let us imagine that we have looked in, with curiosity fast merging into abhorrence, upon some old Roman amphitheatre in the days of desolating luxury, and sinister delight in human suffering, which marked the period of Rome's decline and fall.

It is a wide, vast circle, and around, tier above tier, ries the seats of the noble, in name only; of the fair, in face and form alone; of the gay and careless citizens. A deadly struggle between men who have no real quarrel with one another, who fight merely to thrill with an evil excitement the jaded senses of emperor, empress, and courtiers, has reached its last act. One gladiator is prostrate upon the blood-stained sand of the arena, and over him stands his antagonist, gripping with triumphant malice the sword that, with one final stroke, may send a soul into eternity. But the blow does not fall. There is a pause, a silence that may be felt, ending in a clamour of applause. The empress has pressed her thumb down, and the defeated gladiator is reprieved. Had the haughty beauty reversed her thumb, the issue would have been—death.

The historian Tacitus states that the custom between Iberian kings, when they met and had a treaty of amity to arrange, was to join right hands, "interlacing their thumbs and squeezing them tightly." When the blood was forced to the tips, an incision was made in these extremities, and the kings mutually sucked each other's blood. It is argued by some investigators, that herein is to be found the origin of an ancient Scottish manner of ratifying a bargain or an agreement, *i.e.*, by thumb licking.

In Chambers' "Book of Days" it is said that the latter custom has "remained to a late period in Scotland as a legalised form of undertaking a bargain"; that proverbs and snatches of northern song prove and illustrate the fact, and that "in the parts of Ulster, where the inhabitants are of Scottish descent, it is still a common saying, when two persons have a community of opinion on any subject, 'We may lick thooms upo' that.'"

The stamp of a thumb upon melted wax answered for a signature amongst the knights of the Middle Ages, who were more familiar with the use of sword than of pen; and solemn indeed was the bond entered into with the thumb upon the sword-blade.

It is related by an old chronicler that a certain princess, tired of the world, took to the cloister. But her kinsfolk had determined to marry her to a neighbour whose lands adjoined her own. In all ages sharp ears have now and again detected the refrain "land to land, gold to gold," in the clamour of wedding bells. But the lady scorned the suitor, and with thumb upon the naked steel vowed to remain a nun. A papal dispensation to abrogate her earlier "religious obligation" had been obtained, but this oath the Pope declared to be decisive, and he declined to set it aside. The obstinate maiden was therefore left to her beads, and her books of devotion.

And these are but specimens of an extensive variety of interesting traditions concerned with the thumb. The title at the head of this paper carries us, however, a stage further. It suggests measurement. And in primitive conditions of life and labour the expression "Rule o' Thumb" came thus into existence.

Across the Channel, in comparatively recent years, until the introduction of the decimal system, a thumb was commonly regarded as a fair fractional part of a foot. The reckoning was not of thumb lengths, but of thumb breadths; and as twelve of the latter were counted to a foot, it is obvious that the average thumb width was supposed to equal the span of our inch.

But the meaning of the phrase under discussion has enormously widened out, and the term lingers with us long after the adoption of more exact methods of getting at lengths and distances, as a word-picture of rough and ready modes of making calculations or transacting affairs.

Rule o' Thumb is a principle of life and conduct greatly in favour with Mr. and Mrs. Happy-go-Lucky and their large and troublesome household, Master Careless, Master Just-as-it-Happens, Misses Any-How, Little-Heed, and the rest. Very severe censors are apt to group all these well-meaning but helter-skelter folk together, in a class which they deliberately label the "ne'er-do-wells." But if any reader of this page should be consciously tempted to join their company, let me plead for a wiser course. It does not pay to contract reckless or slovenly habits.

Success in life is not to be compassed by those who are shiftless, and who, like Mr. Micawber in Dickens' famous novel, are always "waiting for something to turn up." It is clearly defined purpose, and resolution to carry that purpose through, that win in the battle—a battle which year by year is growing harder.

Sir T. Fowell Buxton was wont to say: "The longer I live, the more I am certain that the great difference between men—between the feeble and the powerful, the great and the insignificant—is energy, invincible determination; a purpose once fixed, and then death or victory! That quality will do anything that can be done in this world; and no talents, no circumstances, no opportunities, will make a two-legged creature a man without it."

We are told of the celebrated philosopher, Dr. Paley, that when he first went to the University he mixed with men above himself in social station. His light-hearted adherence to Rule o' Thumb principles—ready in season and out of season for the jest and the frolic, and heedless of the future—made him an acceptable companion to some of the wildest and wealthiest young fellows in Cambridge, and Paley was on the high-road to ruin.

One morning, before he was up, a comrade entered his bed-chamber. "Paley," said the intruder, "I have not slept a wink this night for thinking of you! I am, as you know, heir to a fortune, and whether I ever look into a book at Cambridge does not signify a farthing. But this is not the case with you. You have only your abilities to look to, and no man has better, if you do but make the proper use of them. But if you go on in this way, you are ruined, and from this time forward I am determined not to associate with you for your own sake. You know I like your company, and it is a great sacrifice to give it up; but give it up I will, as a matter of conscience." All that day Paley remained in seclusion, thinking. A great resolve was being reached. In the evening he gave his bed-maker orders to lay his fire over-night, and call him at five in the morning. And henceforth he invariably rose at that hour. He went out from Cambridge first wrangler of his year.

This anecdote conducts naturally to a word of warning about the employment of Rule o' Thumb in the measuring out and disposal of time. Time is money in more senses than one. With it the most of us may do much or little as we choose.

If good interest is wanted, the precious capital must be prudently invested and drawn upon with discretion—not paid out over the

counter of life as so much dross. A shilling squandered may conceivably find its way back again into the pocket—even by some curious chance, the same identical coin. But never will a minute or an hour return, once it has ebbed into eternity. There is no retracing the mystic track of the past to gather up wasted fragments. And no man or woman knows until essay is made what can be accomplished with even odd scraps of time, the "chips" of the twenty-four daily hours.

There is a story somewhere of a young working lad who read Macaulay's noble "History of England" from beginning to end in a marvellously short space of time, while he was waiting for luncheon day after day in a quiet corner of a city restaurant. He was no believer in the wilful waste of a Rule o' Thumb policy with regard to time.

Elihu Burritt, blacksmith and linguist—a prince amongst the sons of the people—attributed his striking attainments in the study of languages to his habit of properly employing "those invaluable fragments of time called 'odd moments.'" And multitudes of similar examples are on record.

One of those clever people who take infinite delight in statistics, and play with numbers as jugglers do with balls, has made the interesting calculation that all the people in the world, 12,000 millions, more or less, could find standing room, if they were packed as in a place of public entertainment, on the surface of the Isle of Wight. That may be true or not, but depend upon it there is room in the average human life for almost every species of good work and useful acquisition, if we only get the knack of packing our engagements and avocations into reasonably close compass.

Again, to live by Rule o' Thumb is to live in chronic muddle; and prosperity or happiness never came into a single home on this planet by that road. Muddle destroys peace, shatters the nerves, and deflects the judgment. How many husbands, alas! has Rule o' Thumb on the wife's part—in the regulation of household affairs—sent into questionable haunts where temptation has foamed at their elbow? It cannot be too often remembered that, in the old but still serviceable adage, "Order is Heaven's first law."

A word in passing about Rule o' Thumb in speech and in reading.

It is clear that conversational Rule o' Thumb results in exaggeration. The pity is that so many otherwise estimable persons are victims of this failing. They appear to entertain an audacious disregard for such a trivial matter as even the approximate accuracy of what they say. It certainly happens sometimes that there is evidence of "smartness" and wit in their "drawing of the long bow" (as their friends euphemistically style their pet vice). But wit and cleverness cannot adequately justify the continual resort to distortion of fact for effect's sake. Is there not a stern condemnation in the Sacred Volume of—"idle words"?

What shall be written about hap-hazard reading—the careless choice of books and magazines? This, surely,—avoid it. Promiscuous reading by those who have a real desire for self-improvement is a pitiful mistake. The need for method and for wise selection was never more pressing than in these days of numberless periodicals and prevailing sensationalism. A little truism may be entered here, which is extremely deserving of remembrance: It takes just as long to read a weak or worthless book as a good and helpful one of similar length. Fiction abounds; but we would earnestly urge that fiction should not be all that is read. The claims should be honoured of Poetry, History, Biography, and Science. And let all reading be with purpose and system.

Finally, to live by Rule o' Thumb, in the deepest and saddest of all senses, is to live without an aim beyond the narrow confines of time. And how many—what misguided hundreds and thousands—do this! What the eye can see and the fingers touch and the ear listen to is all in which heart and brain are interested. Life's fleeting pleasures are enjoyed as they come, and regretted as they depart; and beyond all is a blank darkness that already affrights the spirit, whenever transiently confronted. The Greatest of all Teachers spoke of a foolish rich man who said to his own soul, "Take thine ease, eat, drink, and be merry." Terrible words for such as he to utter! True Rule o' Thumb philosophy, reckless and improvident. Even where the highest of all interests are concerned, is such a sentiment spoken by human lips or enacted in human life today? Let it be ours to care sedulously for those things which make for our eternal peace, to rule our lives on the pattern of the Blessed Model Life. Following patiently in the Saviour's footsteps, even though the way shall lead through many a sore trial and temptation, the pilgrim shall be happy, and safe at last.

THE NERVOUS SYSTEM.

By Dr. Alfred Wright.

THE brain is a great mass of nerve matter, which is contained within the cranium. It is divided into three parts; namely, the cerebrum or proper brain, the cerebellum or little brain (the latter being situated below and behind the first-named), and another portion called the *medulla oblongata* — the oblong marrow, which is the commencement of the *medulla spinalis*—spinal marrow. Thus the nerve matter is continuous, from the head, throughout the whole length of the spine.

From the base of the brain are given off the nerves of the special senses, such as the optic, the auditory, etc.; these convey to the centre of the nervous system—the brain, from which they arise—the peculiar sensations produced by external objects, such as vision and hearing.

The cerebrum is divided into two hemispheres, in keeping with the dual arrangements of all nature; for, as we know, all life is conducted on the principles of a twofold partnership; hence we have a double arrangement of limbs, muscles, and nerves. If we had not, we should not be able to walk, to work, or to balance ourselves on our own centre, but should move in spasmodic jerks, for want of proper poise and counterpoise. But as it is, our muscles and nerves are in a twofold manner so beautifully arranged and accurately balanced, that, while one leg is put forth, the other bears the weight of the body, and while one hand holds the other moves, and so on; thus, with all our limbs and senses in pairs, we go on working and journeying through life, with our thoughts and actions accurately balanced.

The nervous system consists of several parts, each of them having distinct offices, but they administer to one grand object, namely, the subjection of living matter to the purposes of consciousness and volition.

It would be restricting its influence to very narrow limits, were it said that it merely receives impressions from without, and transmits volition from within. Man's nervous system has been likened to a tree, the brain being considered as the root, the spinal marrow as the trunk, and the nerves as the branches arising from these parts.

This view serves the purpose of conveying to the mind the idea that the nervous system, though complex and subdivided, forms one whole, all its parts being ultimately connected and associated, at the same time that some are placed under the control of others.

The nervous system, then, is divided into three parts—(1) the cerebral (those nerves which are derived from the brain); (2) the spinal (those given off from the spinal marrow); and (3) the ganglionic. With the brain are connected thought, will, and feeling; with the spinal marrow, reflex or excited action; and with the ganglionic system, all that is essential to the chemistry of animal life.

It is at the base of the brain that we find given off the nerves of seeing, hearing, and smelling (namely, the optic, auditory, and olfactory), and certain others, which, acting in sympathy with sensation, or states of mind, excite expression of the features, and so, in the face, indicate emotional feeling.

The nerves which come off from the spinal cord number about forty pairs, all of which answer peculiar and important purposes, for, in their physiological action, is included all those muscular operations which go to sustain man's life, such as breathing and swallowing, all those which tend to perpetuate the species; in addition to the movements of all the other muscles in the body, which muscles they endow with the power to act.

The nerves themselves which issue from or communicate with, the central masses, are firm cords, consisting of a white substance enclosed in a sheath, and on the course of some of them are small reddish-grey swellings termed "ganglia."

It has been already stated that the nerves

are classified as cerebral and spinal, according as they arise from the brain or spinal marrow; but besides this cerebro-spinal system, there is another termed the "ganglionic," or great sympathetic, which consists in a chain of "ganglia," which, commencing at the upper part of the neck, passes down the spinal column, at the lower part of which it terminates. This third system communicates freely above with the cerebral; and along its whole course with the spinal nerves, by means of off-shooting fibres, and from it are derived the principal branches which supply the lungs, heart, stomach, liver, and the other internal organs.

By physiologists, nerves are divided, according to their functions, into nerves of sensation, nerves of motion, and nerves of peculiar sensation, or what we term the senses. Dr. Carpenter shows that each spinal nerve consists of four sets of fibres. These he distributes as follows:—(1) A *sensory* bundle, passing upwards to the brain; (2) a *motor* set, conveying the influence of volition and emotion downwards from the brain; (3) a set of *excitor* or *centripetal* fibres, terminating in the true spinal cord or ganglion, and conveying impression to it; (4) a *motor* or *centrifugal* set, arising from the ganglionic, and conveying the *motor* influence reflected from it to the muscles. Of these the first and third are united in those roots which carry *sensation to* the brain, the second and fourth in those which convey *motion from* the brain.

Now with regard to the sense of touch, although that sense be in some measure diffused over the whole external surface of the body, still it is principally developed in the points of the fingers, and there it seems to depend on the arrangement of the extremities of the nerves in the pulps at the end of the fingers.

The term *excito-motory* nerve signifies that such nerve, or offshoot of one, causes motion indirectly by a reflex action; in other words, that such nerve being acted on, the sensation is communicated by it through the central nervous mass, or motor nerve, which then throws the muscle of the part into action, motion being thus indirectly excited by means of the stimulus applied to the sensitive nerve. An itching, with an immediate scratching to relieve it, is an example of this.

Consciousness and discrimination, voluntary muscular contraction, and every variety of feeling in man, must be ascribed to the soul resident within his organism, and operating through the permeating nerve-power. From a number of experiments which has been made, it has been determined that there exists in the nerves an imponderable fluid, which may be considered as somewhat intermediate between the electric and magnetic.

Motion is dependent on our will; every act of ours would seem to imply an intention, and we have seen that that will acts on the muscles, through the medium of appropriate nerves. There is something in the muscle and nerve ready to act when excited by a suitable stimulus, and this stimulus is directed into the muscle by the mind, or else the mind acts directly on the stimulus proper to each part.

Every visible action of a voluntary muscle looks like a voluntary action, because the organism of motion was designed to obey will.

Now, consciousness and will being both connected with the brain, and their influence on the spinal system of nerves in the human body being effected by the substance of the brain-matter being prolonged, as described, into the spinal cord, and mixed with its centre, it follows that any disturbance in the connecting nervous organisation, interferes with perception and volition to a proportionate degree.

When we consider that a nerve-tube has a place in almost every visible fibre of the body, that it is in some instances not larger than a silkworm's thread, and may be distinctly traced in an unbroken line from the foot, for instance, up through the spinal cord to the base of the brain, we cannot be surprised that a very slight derangement in the nervous apparatus is sufficient to disturb its functions.

Each nerve-tube is distinct and isolated, never transferring its stimulus to another of any kind; and if a nerve be impressed on any part of its course, it is equally affected throughout; and whether it be impressed at one end or the other, the sensation is the same. Thus, a man who has lost his leg will imagine he feels a sensation in his toe whenever the nerve which was once connected with it is irritated.

Insanity may in some measure be explained on this principle, for actions similar to those induced by impression through the senses may be supposed to take place in the brain, so that a man *shall* believe that he sees, hears, feels, smells, or tastes what exists only in idea.

On the mental functions, I shall, however, have more to say in another article.

CRISP CORRESPONDENCE.

ANSWERS.

WE would specially ask our correspondents to bear in mind that we do not undertake to reply to any inquiries unless a stamped and addressed envelope he enclosed. We fear that several of our correspondents may be disappointed in not receiving replies to communications, but we are strongly obliged to adhere to the above rule.

J. A.—If there is anything in the Entertainments which is unworthy of the name of Christ, by all means stay away. We must not be sweeping in condemnation, but we do wish the Christian Church would abolish the secular and often jocose element, which is gaining ground in our Social Meetings. The Gospel, alone and unaided, is the greatest "drawing" power on earth.

"Just Nineteen."—Your letter is full of "feelings," or lack of them. You did not learn *that* from the Bible. Peace will only come through what your Saviour has *done*, not through what you *feel*. You think you ought to have "experiences" like other people,—that is no business of yours; God will deal with you as He sees best for His child. You say you have not the Holy Spirit. Read Luke 11. 13,—Can you doubt God's word? *Ask*, believingly, and you will receive. Do not envy other Christians; "the same Lord over all is rich unto all," there is no blessing too great for Him to give you,—even *you*.

U. L. S.—So "A.1." *has* been helping you, and now you want it to help you to "find out your talent." The simplest thing in the world! God gave you talents, and God gave you work He never puts things in wrong places. *We* put a "round peg in a square hole" sometimes. Just where you are, do your *very* best, and be sure it will develop your "talent." That is the reason God put you there. Don't fall into the mistake of thinking a talent must have a grand name, a "talent for music," for languages, or drawing, or mathematics. It is simply the power of doing *anything* so as to glorify God. Your "talent" may lie in farm-work, or in being a neat accountant, or a punctual clerk.

Spelling Chase.—If E. Reynolds and E. D. Mason will send us their addresses, we can forward the Certificates awarded to them.

T. J. H.—(1) To enter the various Medical Schools, and to ascertain the courses of study prescribed, apply to the Deans of the Schools attached to the various London Hospitals for syllabus, etc.; or the Student's number of the *Lancet*, issued every September, will afford the same intelligence only in an abbreviated form. The office of the *Lancet* is 423, Strand, W.C.

(2) The stains on the nickel-plated parts of a tricycle caused by allowing the oil put on during the winter to stay long, will wear away in time if the parts are cleaned often. To brighten nickel-plated parts use sperm oil only, and beware of "Plate-powders," or "Silver-powders," as they are sometimes called.

Alpha.—The best Latin Dictionary is Lewis and Short's (Henry Froude, London, 25s.). Andrews' Edition of Freund's Latin Dictionary (on which this is based), is, for ordinary purposes, equally good, and may often be obtained second-hand at from 9s. to 12s. The best Greek Lexicon is Liddell and Scott's (Henry Froude, 36s., and an abridged edition, quite good enough, except for advanced scholars, 7s. 6d.). This also may often be obtained second-hand.

Seaside Lodgings (A Scotch Girl).—See Advertisements in OUR OWN GAZETTE for Y.W.C.A. Sea-Side Homes. By writing to the postmasters of villages, you may often get information about Farm-houses. Mrs. Baxenhall, Greenlea Farm, Norton Selsey, near Chichester, offers lodging in her delightful Farm-house, in the country, but close to the sea. This can be well recommended. Thank you for your enthusiastic words about our paper; and for extending its circulation so energetically.

I fear the root of all the trouble of which you write is not in the Y.W.C.A., but, as you suggested very truly to your friend, in the pride of our own heart. And as the Association earnestly aims at winning those who are, as yet, proud and unyielded to Christ,—it seeks to meet them as they are, and to provide Bible Classes for all. We do not agree with you that Servants are looked down upon, provided they dignify their calling by faithfulness and devotion to their employers. The same rule applies to Shop Assistants. No calling can demean any woman, and every true woman ennobles her calling from the scullery right up to the house-keeper's room. But, even supposing that your friend *has* a just ground of offence,—does she think that will be sufficient satisfaction to her in the day when she discovers she has permitted such a flimsy reason to have turned her aside from pressing into the Kingdom? We trust you will not be in *any* way responsible, by your example in neglecting the Bible Class, for thus advancing her present course of danger. If we can help you further, be assured that it will give us sincere pleasure to do so.

Ivy.—Yes, we send parcels of specimens quite free to anybody who is likely to secure for us a few subscribers; or afterwards take a parcel for distribution themselves. We shall be very pleased to send you a parcel, if you will kindly let us know how many you require.

What does the Catholic Religion consist of? This is rather an ambiguous question. Does it mean, what are the doctrines of the Catholic Faith? They are to be found in the three ancient creeds of the Church, contained in the Book of Common Prayer. But if by "Catholic" is meant *Roman* Catholic, then its distinctive doctrines are of comparatively modern date, and are formulated in the Creed of Pope Pius IV., A.D. 1564. To which we must add two other dogmas, still more recently defined, as articles of faith: the Immaculate Conception of the Virgin Mary, 1854, and the personal Infallibility of the Pope, 1870.

Comsay.—We cannot find space to criticise verses. Any questions of real interest we shall gladly answer here.

Gretchen.—The decoration of a drawing-room with pretty and artistic things is certainly not unsuitable for your leisure time. God has given you your talent, and means you to use it. Do not *live* for house decoration, nor let it unduly absorb your time. Read all the good and helpful books you can,—Ruskin and Carlyle will be of great use to you. Your mind is God's gift, and He wants it to be cultivated to the full. The novels you mention are better than many others, but in our opinion it is wiser for Christians to have nothing at all to do with them.

Ruby.—Probationers are received in Hospitals from 20 to 30 years of age; the time of training varies from one to three years. A small salary and uniform are sometimes given. Write for further information to Guy's Hospital, London, S.E., or to the London Hospital, Whitechapel Road, London, E. Your other question we shall answer presently.

C. S. F.—The Cookery Primer by Agnes Maitland (publisher: Hogg, 13, Paternoster Row) is a very good small cookery book, containing recipes suitable for the poor. You would probably hear of books of the kind to which you refer by writing to the Ladies' Sanitary Association (publishers: Messrs. Gerald & Sons, Norwich).

Pussy.—The following gentlemen devote their attention to the cure of stammering and other impediments of speech: Rev. A. J. D'Orsey, B.D., 13, Princes Square, W.; Dr. Altschul, 9, Old Bond Street, W.

Country Cousin.—With respect to the machine for enabling invalids to go up steps, inquiry has been made at all the chief makers and dealers in apparatus of the kind, but none can be found such as you are in search of.

An Odd One.—We cannot give advice under such circumstances, but would suggest your consulting an experienced friend or doctor.

Sunday School Libraries.—With a short article on this subject in a recent number of that excellent publication, the *Sunday School Chronicle*, we entirely agree. The office of school librarian is a most important one, though unfortunately its importance is as a rule scarcely recognised. A good librarian has it in his power to second the efforts of the teachers most materially, by advising scholars as to the books suitable for them, creating in them an enthusiasm for the best books, introducing them to the records of noble lives, and inculcating in them, especially in the elder lads just leaving school, a desire to follow a course of systematic reading. Surely the article in question, and the editor's note in the same issue, will have practical results.

QUESTION.

Is there any difference between the Church of England Temperance Society and total abstainers who wear the blue ribbon? A curate lately preached that it was wrong to join, as all things are sent for our good, and St. Paul said—"Every creature of God is good, and *nothing* is to be refused, if it be received with thanksgiving (1 Tim. 4. 3, 4), taking the miracle of turning water into wine as an example that Christ meant them to drink it and *not* abstain. Is there any text in Scripture which says it is *a sin to taste of* intoxicating liquors?

WHY DID HE GO THERE?

By F. B. Irving.

AWAY in Carolina there used to be, some years ago, a well-attended Friends' Meeting, called "Spring." It was a strange name, and came about through a circumstance so unusual that it seemed worth while to disinter it from the burial-place of an old history, and give it fame again by this Paper.

Had any of our readers been at "Spring" about 1790, they would have seen an unused building, sombre and deserted, with grass-grown paths and rusty locks. When the key was turned, and the outer door opened, rows of plain benches, unvarnished, unpainted, and well preserved, though dusty from disuse, were revealed. Faithful men and women were wont to assemble themselves there; but hoary heads, that had worn crowns of righteousness on earth, had gone where the King gives crowns of glory; and younger men had removed to busier centres, seeking wider fields for Commerce or for Art.

The assembly grew less and less, and, being small, had no attraction for the young; then, too, the meeting had been weakened by unfaithful men—Judases, who had betrayed the "Light," until at last the dozen folk who came dwindled to six, and the six to two or three, and the two or three to one, who thought it equally profitable, and far more comfortable, to worship by her own fireside.

So the lock grew rusty, and the white deal benches were covered by an ever-increasing quantity of dust. The building was not called "Spring" in those days, and other religious bodies spoke of the Society of Friends as having died out in the town. This might have been true, and the empty seats might have still remained unoccupied, had not one young man, under the influences of the good Spirit of God, begun to feel a sense of religious awakening, and being predisposed to the customs of "Friends," thought he would like to visit the old place.

Procuring the key, and permission to enter, from a resident who had an interest in the property, he resorted from time to time to the deserted building to meditate on the things of God, and to offer in solitude spiritual worship. It would not have seemed an attractive spot to a stranger, especially if that stranger had been a young man whose pulses were beating with the vigour of manhood; but then the stranger would not see the forms that Carter saw.

Up to this time he simply followed his inclination, loving like another Isaac his quiet meditations in this quiet place. One day, as he was sitting, there came to him a great concern to proclaim there and then the "love of God, through Jesus Christ, towards sinful men." With his convictions, he dare not resist the influence of the Spirit, though he marvelled greatly as to why the Master required him to give an audible witness of his faith and feelings, to bare walls, bare floors, and in an empty house. But he knew God to be His own Interpreter, and though it was a great trial to his faith, and the carnal question, "Why?" would arise, yet he yielded to the "apprehended duty," and having delivered his soul, sat down again with the quiet solemnity characteristic of "Friends," when they have liberated themselves by giving God's message.

Soon after, hushed footsteps—not the echo of his own—fell on his ears. He looked up, and several young men, companions of the mill and market, took their seats beside him in serious silence, with a bowed manner that evidenced their brokenness of heart.

After the meeting closed, his friends told him they had noticed that they never saw him at certain hours on certain days; and their curiosity was at last so greatly aroused, that they decided to follow him, and see where he went.

They did so, and to their surprise their following ended outside the disused meeting-house. When he entered it, their wonderment grew instead of diminished, and they said to one another, "What can Carter be after?" Not being able to find any motive, they settled to go softly down the grassy path, and stand at the porch. At first all was still, but after a little they heard him speak; the bow he drew at God's venture went home; they were arrested, touched, converted.

Some of them continued to meet with him, and became valuable Friends. The meeting grew vigorous and healthy. It had been dead; but through one man's faithfulness it lived again, and they called it the "Spring" Meeting.

In the year 1800 the eminent Friend Stephen Grellet paid it a visit, and wrote in his diary the significant words,—

"We had a refreshing meeting at 'Spring'; it was a large one."

We cannot trace the Christian name of young Carter, but his record is on high.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

By Rev. J. H. Thorpe, M.A.

May 20th.

Jesus in Gethsemane.—*Matt.* 26. 31-46.

Golden Text.—*Heb.* 5. 8.

THE lesson really consists of two distinct portions.

I. Incidents on the Way from the Supper Room to the Garden.

1. Jesus fully knows the weakness of His people, but this does not diminish His love for them. 2. He often reveals ourselves to ourselves as a preparation for great trials. 3. Though they forsook Him, yet He would meet them again. "I will go before you into Galilee." 4. Peter's fault was not in his profession, but his dependence on his own strength. "Yet will I not," etc. 5. Christ is the Bond of His people; when He was taken, they were scattered. 6. Lesson about professions. Not to promise good is unbelief; to promise without earnest will is hypocrisy; to promise in reliance upon our own strength is presumption. 7. Those are least safe who are most secure.

II. In the Garden.

1. Here we see Jesus truly as the Man of Sorrows, laden with our sorrows.

2. Lost opportunity. Never had man an opportunity like this—of watching with, and helping by sympathy, Jesus in His agony; yet this one opportunity lost through indolence.

3. Our Lord's sufferings in the garden were (1) isolated—"He trod the wine-press alone"; (2) intense—"exceeding sorrowful, even unto death"; (3) intelligent—"this cup," etc. Never forget that our Saviour saw from the beginning the garden, the cross, and the tomb before Him; yet for our sakes He turned not aside.

Contrast another scene with this (2 Sam. 15. 20). When David wept at this Mount of Olives, all his followers wept with him; but when the Son of David was in tears at the same mount, all His followers were asleep.

Contrast also—In the Garden of Eden the battle was fought and lost (Eve and the tempter); in the Garden of Gethsemane the battle was fought and *won!*

In Christ's sufferings consider their (1) depth, (2) cause, (3) fruit. Learn that the time of suffering should be the time of supplication.

Before reading verses, give Scripture references to gardens—Gen. 2. 15; 1 Kings 21. 2; Isa. 58. 11; John 19. 41.

After the supper the disciples have *a walk with Jesus.* Refer to other walks, and with scholars follow the little group. Bade farewell to owner of house; into the streets of city, through small gate, over brook, up the grassy slope of Olivet; conversation by the way; enter a garden. Our lesson—

All about a Garden, and what Happened there.

Its name means *oil*-press. A favourite resort of Christ's (Luke 22. 39). An olive garden still on Olivet with eight venerable trees. What other place is mentioned as apparently a favourite place of Christ's for prayer?

A Pause at the Gate.

Canaan was described as a garden (Gen. 13. 10).

The Church like a garden (Cant. 4. 15).

Our souls should be like a garden (Jer. 31. 12).

Five things form a well-kept garden; *i.e.*, Beauty, Growth (read with scholars Ezek. 31. 3-9; note the beauty of language), Fragrance, Promise, Fruit. Our souls should have the same—only found in a *watered* garden. How can we water the garden of our souls?

In the Garden of Gethsemane. How many disciples near the gate? Eight. How many further on? Their names? How many times previously have those three been chosen for special purposes? Why? Where is Christ?

Night in a garden. A time for inactivity and rest, but here—

1. Watching. For what? *Judas and his band.* See how intent and alert they are!

2. Prayer. All are not watching. How short the prayer! What is it for? What was the "cup"? How many times?

3. Suffering. What proof is there? A physical fact that great mental distress induces blood through the skin. It was not dying that caused Christ to suffer, *it was the weight of sin.*

4. Strengthening. The white gleam of angels' wings mid the dark olives (see Heb. 1. 14; Ps. 34. 7; Dan. 3. 28).

5. Sleeping. Look at them. Could not watch one hour. In constant. We not in a position to condemn.

While in the garden, let us gather as food for our souls and minds

A Little Basket of Fruit.

We may have the sorrow of Gethsemane, but may have its victory also.

By prayer we conquer every difficulty.

"God's will" our unfailing motto.

Faith sweetens every trial.

Watch as well as pray.

C. Skinner.

ANDREW FORSYTH;

OR,

THROUGH DARKNESS TO LIGHT.

CHAPTER II.

THE sun has set four days later, when the brothers emerge from the home that seems so empty now, and walk slowly along the road. All is quiet in the village; only in one of the cottages is a solitary light beaming. Both brothers look at it as they pass, and both faces brighten. Then Robert says: "Mary seems to be busy yet"; and presently adds, in tones that show he is deeply moved: "Andrew, there is something I have often thought of telling you, but somehow I never could." Then, after a pause, he goes on to tell of his love for Mary Gray, and his cherished hope that he may some day call her his.

He is too engrossed to notice Andrew's silence, and through the gloom of night he cannot see how pale his face is. He does not guess that his words have pierced his brother's heart, and rung the death knell of hopes that made sweet music there. And Andrew is hearing every word with startling distinctness; yet he feels as if some one else, and not himself, were listening. He is only aroused from his stupor when Robert, still speaking of his hope for the future, grasps his hand and exclaims: "Andrew, if ever I win her, I shall owe it to you; it is you who have made it possible for me to hope for such happiness. I can never repay you, but oh, if ever the day comes that I can help you in any way, God forgive me if I forget."

They have been walking on, and the last words are spoken near the old beech tree, almost on the very spot where they were uttered eight years ago.

Presently Andrew says, and his voice sounds strangely: "God bless you, Robert; but go home now, I want to be quiet awhile. Don't sit up for me." Then, before Robert can answer, he hurries away, and throws himself on the ground.

All stupor is gone now, and he is fully aroused; yet only two or three distinct impressions stand out like rocks amongst the wild sea of passionate feeling raging within him. Robert loves Mary. He too loves her better than life; he has made it possible for Robert to win her, and, high above all, he hears Robert's twice-repeated vow. The wild inward storm rages more and more fiercely, and a mocking cry seems to say: "This is the reward of self-sacrifice!" Is there no help for the solitary soul, struggling amid the billows of bitter sorrow and temptation? Yes! there is help in his past allegiance to duty; more help in the brother to whom he clings; most help, though he knows it not, in the Divine love which is supporting him through all. The voice that stilled the storm with a "Peace, be still!" is speaking to this storm-tossed soul now, as he is carried by a current of unselfish love, away out of the raging flood of passion into a quiet haven. At last he lifts his head, and murmurs quietly and firmly: "It would be easier to die than to give her up; but for their sakes I can do it."

And lo, in the sky the first faint streaks of dawn are visible! With the same intense consciousness of oneness with Nature, with which he watched the sunset eight years ago, Andrew gazes at the breaking of the day. As the sun rises above the horizon, and the shadows flee, and the birds awake and flood the air with song, a strange expectant stillness falls on his spirit. Through it there comes floating to his memory the words of Robert's text last Sabbath: "But God commendeth His love toward us, in that while we were yet sinners, Christ died for us." Again and again they echo through the silence, while a bright light illumines them, and reveals hidden depths of meaning. Through the cost of his own sacrifice, Andrew is realising, as he never did before, the cost of this transcendent, Divine sacrifice. The closed door of his heart flies open at the touch of Divine love, and he knows that "the Christ" has come to him through the storm.

* * * *

The sun is again bidding farewell to earth at the close of the summer's day. He is shining upon the windows of a plain but substantial house, kissing the roses that climb around them, and stealing down through the leafy trees to dance upon the lawn in front, and on the flower-beds that surround it, where rich and varied hues are linked in harmonious beauty, by a chain of living green.

Backwards and forwards along the gravelled walks Andrew is thoughtfully pacing. He is little changed. It is exactly eight years to-night since we left him under the beech tree, and his thoughts are busied with the past. The years between that night and this are forgotten, and he is living over his experiences as if they belonged to the present. Presently the tones of a sweet voice singing an old Psalm tune, come floating through the open window, and so completely has the present been forgotten that, for a moment, he fancies it is his mother's voice, singing as she so often used to do, to her "laddies."

Then his thoughts wander from his own childhood to the children asleep within the house. Very tender is his love for Robert and Mary's little ones, and the love of the two boys for him is not less true. To them Uncle Andrew is, next to father and mother, the dearest on earth, and they long that he will stay with them always. But Andrew clings to the old home. The sacred memories of the past, and the interests that have sprung up in his life since Christ became its centre, alike combine to keep him there. He often visits his brother's home; a sight of the children's faces never fails to dispel shadows flung on his spirit by the gloom of the past. His love for Andrew, the little four-year-old, is especially great. The child is a complete contrast to his brother Robert, and resembles his uncle, both in feature and in disposition, so that Andrew often dreads the future for the child, as he sees in him the evidences of a capacity for suffering, that may yet be tested.

To-night he is haunted by the little one's words after he had listened to the story of Elijah's translation in the fiery chariot: "I think I should like to go home that way, uncle, if you were there." Touched by the child's implicit confidence, he prays now as he has often prayed before: "O Lord, if the storm must come to him, give him to know that Thou art with him."

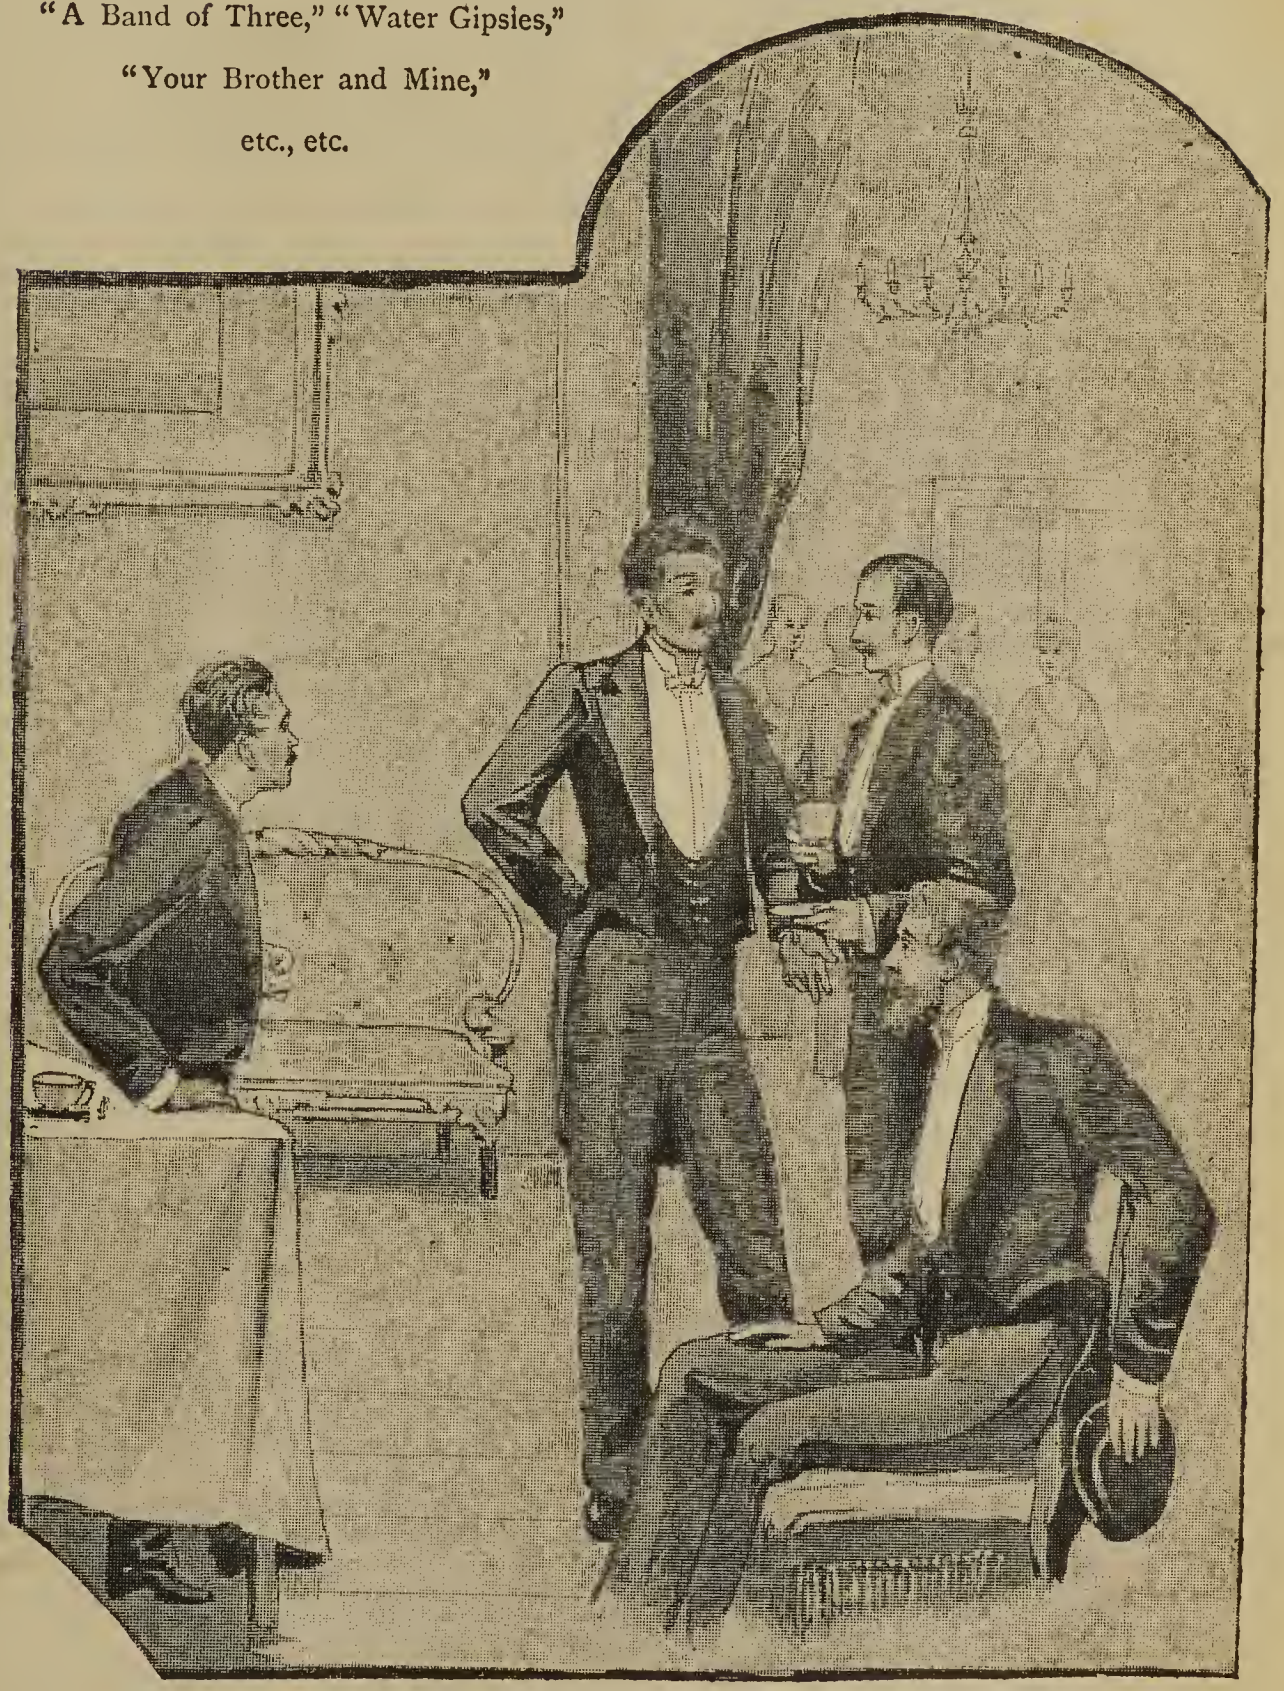
It is long before Andrew can sleep that night, but when he does, his dreams are of his mother. He is a child again, and she is reading to him the story of Elijah and the fiery chariot. Then his dream changes. He is a solitary man once more, and suddenly, from the opened heavens, there descends something so dazzlingly glorious that his eyes refuse to look upon it, and he knows that "the chariot of fire" has come for him. He awakes with a start to find that day has dawned.

But what is it that obscures the light? He springs up hastily to find wreaths of dense smoke drifting in through the open door. He rushes to his brother's room, and rouses the sleepers with the news of fire; then, blinded by the smoke that grows ever denser, hurries downstairs and along the passage, to find the back staircase which leads to the children's room in flames. He knows nothing more until he finds himself outside, placing a ladder against the window, and pushing away Robert, who is about to climb it, with a "No, no, not you; let me go; I will save them." Now he is at the window. As he opens it, awful tongues of flame burst forth and meet him, but he does not hesitate to step in and struggle through them to the bed. He can see nothing for the clouds of smoke, but he seizes hold of a little form which he knows must be Robert's, and wrapping a blanket round himself and the child, he makes for the window. He has reached it. He sees his brother's agonized look as he stands at the top of the ladder, and holds out his arms for his child, and he calls out to the stricken mother below: "Please God, I'll save Andrew too."

Again he reaches the bed. The child lies so still that he fears the spirit must have fled; but he is only stupefied, for, as the little head sinks on his shoulder, Andrew hears him say: "Is it the chariot, uncle?" And as he turns his face to the window and sees only a living sheet of flame, he whispers softly: "Yes, darling, but Uncle Andrew is here, and we are going to God. You'll not be frightened." Then he plunges into the fire with the child tightly clasped to his breast. There is a sudden, awful crash, and the two lie buried beneath a pile of blazing rafters.

The pure child-spirit which has known so little of sorrow, and nothing of struggle, and the heart which has been purified by suffering, and has found rest through warfare, have gone home together in "the chariot of fire."

THAT HOUSE IN LONDON.



By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn,"

"A Band of Three," "Water Gipsies,"

"Your Brother and Mine,"

etc., etc.

"'The curious part of the story,' said Graham, 'is this—it is six months since the prisoner escaped; and he has not yet been found.'"

CHAPTER XVI.

THERE was great excitement at Myrtle Cottage—bright young girls flying from room to room, messengers coming and going, parcels arriving, upholsterers putting up awnings, florists bringing profusions of beautiful flowers, and confectioners' carts stopping the way; for on this night Kate's great party was to be given at Myrtle Cottage for her young sisters' pleasure.

Mrs. Graham was not only fond, but after a fashion she was also proud, of these girls; her husband often chaffed her about the intense regard and interest she felt for them.

"One would think they were your children," he said, "instead of being girls nearly as old as you are, and with half your sense."

"You must not laugh at my girls' want of wisdom," she answered brightly in reply. "I always, always have been something of an old woman. I am more than glad they should enjoy their bright youth to the full."

Graham, who could see no charm in these three rather silly young people, shook his head at his wife. "Ah, my dear, you are infatuated!" he said.

Nevertheless, he was thoroughly good-natured about the great entertainment; he interested himself in all the arrangements, and even gave a word of advice on the all-important subject of the girls' dresses.

"Let them wear white," he said; "white suits every good-looking girl under twenty. It is always fresh, always cool and pleasant to look at. You can't improve on it, Kate—even Polly looks best in white."

Polly had lately been taken up with an idea that rich colours and heavy materials suited her. She was too beautiful not to look well in anything she chose to wear; but Graham was right when he advised his wife on this occasion to dress the girl simply, with no attempt at ornament or colour.

Graham knew Polly was lovely, but perhaps until to-night he had never honestly admired her. As she entered the pretty room where the party was to be held, he could not help starting—so radiant, so young, and so fair she looked, with her quiet movements and her beautiful face, which seemed to betoken a whole world of suppressed sympathy and feeling.

"She *is* lovely!" said her brother-in-law under his breath; "and if only she could keep her mouth shut, I shouldn't wonder at any fellow falling in love with her."

Polly, however, very rarely was silent, and, in consequence, even her most ardent and outspoken admirers very seldom absolutely broke their hearts about her. By and by guests arrived, the rooms filled rapidly, and all went merrily. One of the last to put in an appearance was James Verney. Contrary to expectation, Segrave did not accompany him. The rooms were very full now, and Verney had some little difficulty

in making his way to his hostess. Kate and her husband stood together near one of the principal doors.

Graham was chatting with one or two friends, whose opinion he valued very highly, when Verney came up. In the interest of an animated discussion he had for a moment or two forgotten Verney, although he was intensely conscious all the evening that he would be there.

Verney came in, looking shy, seedy, and ill at ease. His evening coat showed plainly that it had never been made for him. He was a man who always appeared to be more or less in a state of depression ; and he felt now not only depressed, but awkward, as he had expected to meet Segrave, and trusted to him to introduce him generally, and to make things go well.

He looked now almost beseechingly at Graham, and then glanced at the beautiful woman who stood so happy by her husband's side.

"Introduce me to your wife," said his timid, pathetic eyes ; and Graham, though he loathed the task, and never thought it would have been thrust upon him, was forced to comply.

Kate took kindly to the stranger ; she saw at once that he felt lonely, awkward, and ill at ease. No other man presenting quite his appearance was in the room.

Instinctively Kate felt that he did not quite belong to their set. She wondered how her husband had made his acquaintance ; she pitied him, and went out of her way to be extra kind.

"I must introduce you to one or two people," she said ; and she moved slowly through the rooms, with Verney by her side.

Polly had been in a great many of his thoughts, and when he saw her he started, and changed colour ; half remembering Graham's words to beware of this too fascinating young lady, and half resolving to defy them, and act according to his own will and pleasure.

Polly herself turned the scale. She saw Verney standing by her sister's side, smiled, and made a step forward.

"I had the pleasure of meeting Miss Kennedy the other night," said Verney. "I hope you have not forgotten me?" he added, going up to the young lady, and taking her proffered hand. Polly replied with one of her most truly coquettish smiles, and Kate left them together.

Verney in his queer life had not met many women—never, never had he seen any one who in his eyes looked so beautiful as Miss Kennedy. The silly nothings she uttered, the absolute emptiness of her little mind, which might have prevented a better and a wiser man from falling in love with her, had no deterrent effect on Verney. Had she been very wise, very learned, very sensible, she would not have suited him half so well. He was behind his day, decidedly behind his present surroundings ; but Polly's pleasantries, and Polly's silly nothings he could thoroughly understand and appreciate. He was too nervous and ill at ease to offer her any repartee himself, but he laughed at her small jokes, and thought her not only beautiful, but witty.

Polly knew perfectly that she was lovely ; but more than one admirer had told her with his eyes, if not with his lips, how very small and silly he considered her utterances. It was quite a new experience to see some one brightening and expanding genially under the small fire of her little nothings. She took very graciously to Verney — allowed him to sit by her side, and to show her all the attentions in his power.

Verney had not been so happy for years. He took the beautiful Miss Kennedy in to supper, and his elation reached its crowning point when he saw one or two good-looking, fashionably dressed men glancing enviously at him.

His hour of triumph, however, was not destined to last long.

All through the evening Graham had watched him ; this rather insignificant individual occupied a large portion of Kenneth Graham's thoughts just now, and soon after supper he approached his side.

"Ah, Polly," he said, nodding carelessly to his pretty sister-in-law, "you are not tired of all this dissipation yet, I presume."

Polly laughed in her musical and yet silly manner, assured Kenneth that never, never could she know fatigue in connection with so fascinating an evening, and just then, another admirer coming up, she left Verney with a slight nod of dismissal.

With her departure, all his nervous uneasiness returned ; he looked wistfully up at Graham—Graham was much taller than he, —and wondered if he might venture to talk to this terribly changed old chum of by-gone days.

Graham glanced at him from top to toe. A friend of his came up at the moment, he introduced Verney to him, and then the three began to talk, Verney, it is true, only adding monosyllables to the conversation.

Presently even these ceased ; he stood rooted to the spot, his eyes sought the ground, and he felt that his knees were trembling.

Graham had begun to tell a story—he told it with his full gaze directly bent on Verney.

It was a tale about a wonderful escape which a prisoner had made some six months ago from Portland prison. Graham said he had seen it in the Papers, and it had impressed him very much. He went on to describe the prisoner, who was slight and small, thin in appearance, with a somewhat uncertain glance.

"Just the opposite of all you are, Verney," he said, with a slight laugh, in which his companion joined.

"The curious part of the story," said Graham, in conclusion, "is this—it is six months since the prisoner escaped, *and he has not yet been found.* Such a thing has scarcely ever been known, and I understand a large reward has been offered for his capture. Curious, is it not? These cases always interest me."

"And me too," said the friend who had joined the little group.

"He is certain to be found," said Verney, raising his absolutely bloodless face, and speaking with sudden decision. "The hunted wretch will get into his lair, but the hounds will track him out, never fear. Is not that a comfort to all right-minded and honest Englishmen? Good-night, Graham."

"Good-night, Verney. Must you go?"

"Yes. Good-bye—old chum."

"What a curious person!" said Graham's friend to him ; "is he really an acquaintance of olden days, Graham?"

"I knew him very slightly as a boy, and he presumes upon it," said Graham.

"Your story seems to have touched him. Any one would suppose that *he* was the escaped prisoner."

"Who? James Verney? My dear Champion, don't run away with such a preposterous idea. James Verney's good little life might be set forth in a child's copy-book."

CHAPTER XVII.

EARLY the next morning Kate went home ; she and her husband came up to Victoria together ; then he started for his place of business, and she took a hansom to Exmoor Square.

The servants welcomed their bright young mistress with pleasure ; she was so genial, so happy, so honestly and sincerely sympathetic, that, wonderful to relate, they preferred her presence to her absence.

She said a kind word or two to the pretty parlour-maid, and then ran upstairs to her own room.

She had not been expected quite so soon, and perhaps that was the reason that the always-locked door of Mrs. Alexis's bedroom stood open.

It stood about half open, and Kate in passing saw that the old lady's arm-chair was occupied. Betty sat in it, with her feet on the footstool, and her head pressed against the pillow, which was fastened across the top of the chair. In that position Betty faced the door, and Kate saw that her eyes were wide open, although she seemed to be looking nowhere in particular.

Nothing could be more absolutely desolate than the old woman's attitude, as she sat thus by the side of the fireless grate.

Kate could not honestly say that she liked Betty ; but she was so happy herself, that she pitied all those who were sorrowful. She went boldly into the room now.

"Well, Mrs. Carew, I have come back quite safely, you see."

"I never supposed you wouldn't," said Betty, in a curt voice. She got up from her chair, her eyes awoke from their dream, and an angry light filled them.

"If you must sit in this room, Betty," said Kate, "why don't you have a fire? It smells very cold and damp."

"I wants no fire," replied Betty ; "I wants no fire, I thank you ma'am,—I likes it damp."

"Oh, come now, Betty, it is very bad for your rheumatism." Then she added, moved by a sudden impulse of great pity, "Poor Mrs. Carew! I feel for you from my heart. I wish you would make a friend of me ; you don't suppose I would like you any the less for mourning for your old mistress? I can't bear to see you going about the house with your sad, sad face. Do make a friend of me, Betty,—your mistress, Mrs. Alexis, liked me very much."

"Don't name her!" said Betty, with a sudden gesture ; "don't name the saint that's gone! You and Mr. Graham spends her money, and grows rich on the spoils. Betty Carew is the only one left to mourn ; and mourn she will."

"Very well, Betty ; but that need not prevent your making a friend of me. You don't dislike me, do you?"

"No, I can't say I do. You means well, I'm not denying that. This is your season of laughter, and that mirth which is spoken of in Scripture as the crackling of thorns under a pot ; but the days of mourning will come, and I'll like you better then. My mind misdoubts me if I don't like you much better when the mourning times come."

Kate went up to the old woman, and put her hand on her shoulder.

"You shall come into my room," she said, "and help me to put away my things. I have often noticed how extremely neat-handed you are. Come with me, Betty, and I will tell you about last night ; it will do you good, even if you do scold us all for being merry."

Betty was flattered at the allusion to her

neatness, and, although she grumbled and shook her head, and took care to turn the key in the door of the room of mourning, as she called it, she did not refuse to follow Kate to her own cheerful apartment.

Here a bright fire burned, and the late autumn sun shone in at one of the windows. Mrs. Graham took care to give Betty plenty to do; she sat by the fire herself, and allowed the grim old woman to wait on her, for it had suddenly entered into her astute mind that half Betty's melancholy must be caused by want of occupation.

While she pottered about, Kate talked, telling her all she thought would interest her of last night's proceedings.

"It was really a very bright and happy scene, Betty," she said, in conclusion.

Mrs. Carew coughed, and sniffed ominously. "Not one present with a grain of thought in them," she said. "Ah, the crackling of thorns; but their time of mourning is coming."

"There was one person present who seemed quite sad enough even to please you, Betty," continued Kate; "a man of about my husband's age, but very thin and shabby-looking. Do you know, his face quite haunts me, and he had such melancholy eyes,—a thin face, very pale, but with such pathetic eyes."

"What colour was they?" asked Betty.

"What colour? Brown, I think, although he was very fair. It was their expression which rendered them conspicuous."

"He must have had a look of Mr. Jonas," said Betty; "it's many and many and many a day since I clapped eyes on him, but he was the moral image of that young man,—pale? yes; fair? yes; brown eyes? yes; and, my word, that sorrowful in expression? yes. Ah, poor dear! poor dear! his time of mourning came early."

"The gentleman whom I met last night had a look of your Mr. Jonas's photograph," said Kate suddenly. "I remember being puzzled by an indefinable likeness, but now you mention Mr. Jonas, I see it quite plainly. By the way, my husband knew him; perhaps he is a relation of Mrs. Alexis's; his name is Mr. Verney."

"I don't think that's likely, ma'am,—my missis had no relations. I'd be obliged to you and Mr. Graham, ma'am, to give me back that photograph of poor Mr. Jonas."

"What photograph, Betty?"

"The one as you seed—the one as was on the mantel-piece along with the likeness of the old missis, in the room of mourning the night you comed back a bride. The likeness is put away, and I'd be glad if you'd give it back to me, ma'am, that I may put the poor young gentleman along with his 'ma on the chimney-piece."

"But I have not got it, Betty; I saw it that one night and never again; I really did not dream of touching it."

"It's gone, ma'am; things don't go without hands."

"True, Betty; but these hands are innocent."

Betty's face paled, she glanced suspiciously at Mrs. Graham; then she coughed, and then she looked again.

"We'll say nothing more about it," she said suddenly. "May I ask, ma'am, if you've got the sealed letter safe?"

Kate rose from her seat somewhat angrily.

"What do you think of me, Mrs. Carew?" she said. "Have I got a solemn trust letter like that safe? Of course I have. Now I must go downstairs. Thank you for putting my things so tidily away."

CHAPTER XVIII.

AFTER Kenneth's little story, James Verney left Myrtle Cottage as though he had wings to his feet. He did not wait to say good-bye to Polly; he did not dream of troubling himself to go through the small ceremony of bidding his hostess adieu; he left the house and walked fast, fast, as though he were running, in the direction of the railway station.

Here he was fortunate in instantly catching a train; he got to Victoria not very long after midnight, and from there walked to his lodgings.

His lodgings were quite two miles away; they were somewhere off the Fulham Road, in a low, damp, unhealthy part of the town. He let himself in with his latch-key, and went upstairs at once to his bedroom. This room did duty also as a sitting-room; it was small and ill-furnished, and there was no fire in the grate.

Verney shivered as he lit his gas; then he went to a little looking-glass, took it up, brought it to the light, and examined his features therein attentively.

"No doubt of it," he said to himself, "no doubt whatever. Kenneth Graham knew what he was talking about. So much—for old chums!"

He put the glass back in its place, and turned hungrily to some bread and cheese which stood on the table. He made a hearty meal, devouring every crumb of the bread, and almost all the hard piece of cheese.

When he had eaten he felt better, his face was not quite so pale, nor did his hand shake so much. A fire was laid in the grate, and he even so far plucked up courage as to go to the extravagance of lighting it. When it blazed merrily up the chimney, he spread out his thin hands to the genial warmth, and even smiled faintly.

"No doubt at all what Ken meant," he said once or twice under his breath; then he muttered in a tone of great pain, "So much for old chums!"

The nearest church clock sounded the hours—two, then three, then four. At four o'clock Verney was still crouching over the fire; he had not dreamt of going to bed. But about then he began to bestir himself; he rose from his stooping attitude over the now fading fire, and, moving about his room, put his few possessions into a little hand-bag.

The bag was small, but his all fitted in easily. He looked round the room to see that nothing at all was left. Yes, on that topmost shelf was a little Testament which his mother had given him ages ago. He took it down, it was worn and shabby, her name was next to his on the title page; he started, and turned deadly white as he saw the name which he no longer used. Tearing out the fly-leaf he flung it into the fire, but the little Testament found a place in the hand-bag. Now he took some money out of his pocket—four, five sovereigns—he had been paid his month's salary yesterday. He laid on the table five shillings for his landlady, the rest he put carefully back into his waistcoat pocket.

The church clock struck five; everything was done now, except the last thing of all. From a carefully locked drawer he took out a bottle of dye. With this he quickly changed the colour of his hair and moustache to black. After doing so he looked at himself again in the little hand-glass. He was more hopeful now.

"Not quite so like," he muttered. With some more of the dye he darkened his eyebrows, then, opening the window, he threw bottle and all into the street.

"Good-bye my last little try after being a gentleman," he muttered to himself, as he slipped downstairs in the early, early morning. "Good-bye, old chum; you won't be troubled with Jonas Alexis any more."

He went out into the street, and walking to the right terminus, took the first third class train to Liverpool.

It was still early in the day when he reached his destination. He went straight to the docks and began to make casual and apparently uninterested inquiries with regard to different sailing vessels.

He avoided the larger craft, but looked with ill-concealed envy at those boats which were being laden with small merchandise, for he knew that many of them were destined to reach safe and distant ports. His money, however, was now reduced to something over £3. Such a sum would take him, even in the poorest vessel, to no far distant scene. He was too weak and effeminate-looking to offer to go before the mast. He walked up and down, up and down, however, hoping against hope that some burly captain might appear who would take him on board his ship, for the sake of the little money, and the small services he might offer. As he paced about, feeling starved and cold and wretched, he suddenly noticed a man, who in rough but comfortable sailor dress seemed to keep pace with him. The man never once to Verney's knowledge looked at him, but when Verney turned he turned, walking with the same slow, indifferent step. This was enough!

"I am watched!" muttered the wretched fugitive; he sought his opportunity, he had learnt many a lesson in cunning, and before the burly stranger was aware of it, he had slipped out of sight.

For the next few days James Verney lost himself in the low parts of Liverpool. He took the humblest sort of lodging, and retired to it as a rat to its shelter. At the end of a few days he had broken into his last sovereign. He was now almost desperate; he felt that if he did not escape now, while he had a few shillings to call his own, he would never escape at all. Once more, thinner, whiter, more haggard-looking than ever, he strolled down to the docks. There were the ships, the mighty as well as the small, there were the passengers coming and going, there were the tearful friends, and there also was the burly, red-faced sailor, calmly smoking his pipe. The moment Verney found himself on the quay he saw him; the sailor did not pay the smallest attention to Verney. Not once did he glance at him, only he came up a little nearer, and took his constitutional just in front of where Verney stood.

"No escape," muttered James Verney. "I have fifteen shillings still in my pocket; shall I go back to my lair for another twenty-four hours, or shall I die to-day? Faugh! it is sickening in that hole; I will give up the battle to-day."

The moment he had made this resolve he went up to the burly-faced sailor.

"Good morning," he said.

"Good morning," answered the man, taking his pipe out of his mouth, but still not glancing at Verney.

"You want me," said Verney.

The man shuffled from one foot to another, took his pipe again out of his mouth, and finally deposited it with a sigh of regret in his pocket.

"I rather fancy I've been standing about long enough," he said. "I may as well run

you in now—save a sight of worry. Your name is——"

"My name is Jonas Alexis."

"Ay, ay; well, my fine fellow, you'll do your cause no harm by coming back peaceable. They're a bit lonely for you at Portland; you'll get a right welcome back, and no mistake. Take my arm, will you?"

"Thanks—I owe this to an old—chum—is it not so?"

The burly man winked profoundly.

"We tell no tales," he said; "the Government is indebted, very deeply indebted, to those parties as gives them the straight tip. What was it you was a-muttering? I wouldn't, if I was you; no malice is meant to you, and don't you bear none to nobody."

"I was thinking," said Alexis, with sudden fire, as he walked swiftly now by the side of his companion, "I was thinking of friendship—what it is worth, particularly old friendship, the friendship of those who have known you when you were a boy. I was thinking also that two years wear themselves out, even in Portland. In two years I shall be free, and then—why, then *I* may prove myself a nice old chum."

(*To be continued.*)

ITEMS.

CIVIL Service Reform, under the Merit Service rules, is making good headway in the United States. The Civil Service Commissioners of the State of Massachusetts—where the new rules have been thoroughly tested and tried—report that their experience during the past year has proved the fallacy of the argument, that only college graduates have the best chance at the examinations; on the contrary, out of 938 applicants who passed successfully, only 19 were college graduates; and even the test of age indicated an average of one year more for those who passed over those who failed. In the matter of physical examination, the higher standard of excellence required has been reached, to the great advantage of such branches as the Police and Fire departments.

The contest for the Scottish Cross Country Championship was decided on March 10, at Edinburgh, resulting in a victory for the Clydesdale Harriers. The Edinburgh Harriers were second, and the West of Scotland Harriers third. The first man was A. P. Findlay (Clydesdale Harriers).

The Christian Chinese have several branches of the Y.M.C.A. in different parts of the Sandwich Islands. Each member of the Y.M.C.A. pays £1 a year to the Central Association at Honolulu; and he has the privilege of lodging there, when he comes from other places, to visit the capital of the Islands.

A gentleman has promised £50 towards a gymnasium for the Portsmouth Y.M.C.A., on condition that a further sum of £150 is raised in six months.

The second Annual Report of the Wakefield Y.M.C.A. shows that the membership has more than doubled in the last twelve months, there being now on the books 175 members and 92 associates, or a total of 269, as against 126 a year ago, giving an increase of 143. A very encouraging state of affairs for so young an Association!

"*If the people* who want to do good among the poor would give up patronizing them, would cease from trying to convert them, before they have gained the smallest personal influence with them, and visit them as those who have just as good a right to be here as they have, it would be all the better for both—perhaps chiefly for themselves." —*George Macdonald.*

A DOUBLE-MINDED MAN.

By EDWARD BUTLER.

A DOUBLE-MINDED man is a wobbler,—not having one fixed aim, he hits nothing. He is like a man firing at two birds, and sending his harmless shot between them. A description of his life would resemble a photograph of a family group, in which the members could not make up their minds to sit still. Baby crows; mother smiles sweetly on it; the camera makes violent efforts to report all it sees; and the result is as if three or four faces had been melted up together. The double-minded man does not go straight at anything. He blunders up against it sideways. He is like an old quintain-player, who did not strike the mark plumb in the centre, but hit one of the revolving arms, so that the other, with the bag of flour, whirled round and buffeted him.

"Great is the man who doeth one thing." The whole mind fastened on one object at one time is a great secret of success. Have we not heard of battles won by a sudden concentration of the attack on one point of the opposing lines? That fierce and single onslaught broke up the enemy's organization, and led to rout and ruin. The immediate object being achieved, the victorious general would instantly wheel round, and be equally definite, compact, and concentrated on some other service; developing that, too, with all his strength and all his heart. On the other hand, it is a common stratagem in war to make "feints," and to effect diversions, so as to destroy in some way the single-mindedness of the adversary.

It was not without deep meaning that David prayed, "*Unite* my heart to fear Thy name." If a fraction of David's heart had feared God, and a fraction feared the Philistines, and another fraction feared Baal, he would have done no heroic work in the name and for the glory of God. No man with a divided mind rises to the rank of hero. Even a man's own welfare in spiritual things—commonly and rightly put in the first rank of demands upon the mind and heart—must sometimes, in the stress of lofty endeavour, disappear from view. Some men, with the best intentions, expressed to Wilberforce the fear that in his tremendous exertions against slavery, he might be unduly neglecting the culture of his own soul. But Wilberforce replied, in a fashion that must have troubled his kindly monitor as bordering on irreverence, "I cannot leave my work; it must be done. I must leave God to take care of my soul." St. Paul soared, in the same ethereal region, when he "could wish that he himself were anathema from Christ for his brethren's sake."

For the picture of a miserable double-minded man take Pilate. Is there a more pitiable spectacle in all sacred or secular history than that Roman governor, swaying about between his sense of duty and his fear of Cæsar; his desire to pronounce the discharge of the august and innocent prisoner at his bar, and his terror of the Jews? In his double-mindedness he was a man beside himself, two men in one, wrestling with each other, now this one uppermost and now that. Then his wife comes in, trying to put an end to his imbecile vacillation with a dream; and then follows the preposterous performance with soap and water, ended by his mind being made up for him by the savage cries of the scribes, Pharisees, and Jews, "Crucify Him."

Compare the wretched irresolution of the oscillating Pilate, with the granite firmness of Shadrach, Meshach, and Abed-nego, "If it be so, our God, whom we serve, is able to deliver us from the burning fiery furnace, and He will deliver us out of thine hand, O king. BUT IF NOT, be it known unto thee, O king, that we will not serve thy gods." Those words, "but if not," deserve to be printed in gold. They bespeak a purpose, a conviction, deep as the roots of the everlasting hills.

At this point it is well to ask oneself the question, How is a double-minded man to become single-minded? If a man find himself "in two minds," which is he to cleave to, and which shall he abandon? We do not forget the ass that starved between two bundles of hay, the equilibrium being so perfect that the creature could not move. Real difficulties of this sort do arise, in which one is almost reduced to the fatuousness of "tossing up." I have heard credible stories of juries resorting to this method of arriving at a verdict. But suspense and hesitation of this sort, have no connection with the vice of double-mindedness.

The circumstances in which we are called to act may be complicated, and the facts obscure; they may require patient and protracted investigation, careful weighing of evidence, balancing of probabilities, estimation of the relative claims of conflicting duties; and yet, throughout the long suspense of judgment and anxious thought, there may be, in the moral sense, the single mind.

If the aim of the judge be to do justice, at all costs of time and trouble, and all hazards to himself, he is a single-minded judge, though he be as incorrigible a doubter as Lord Eldon. If the young man making his start in life resolve that his primary aim, his paramount purpose, shall be truth and righteousness in word and deed, he is a single-minded young man. "Honesty" may be "the best policy," "*but if not*," he will be honest. Truthfulness in the description of the wares he sells may be—probably is—the best road to permanent success as a merchant; "*but if not*," he will tell the truth. When asked questions he is "not careful to answer," in the sense of looking all round the corner, to see how the answer will square with what he has said before, or with his supposed self-interest. If it be a question that the questioner has a right to put (I presuppose that important condition), he answers promptly, according to the facts.

How simple life becomes to the simple-minded man! His life has the tremendous directness of the mysterious creatures seen by Ezekiel. "They went every one straight forward: whither the spirit was to go they went; they turned not when they went. . . . And when the living creatures went, the wheels went beside them. . . . Whithersoever the spirit was to go they went; thither was their spirit to go; and the wheels were lifted up beside them, for the spirit of the living creature was in the wheels."

The Spirit of God, working without hindrance in the spirit of man, and the spirit of man, thus guided, controlling the wheels of all his faculties, there is rapid decision and straightforward action in the line of what is seen to be the will of God. The soul's resolution to "seek first the kingdom of God and His righteousness" braces and girds it with a noble unity; the vice, the weakness, the wretchedness of the "double-mind" disappear; the ship has one commander, and the helmsman obeys one voice.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

CHAPTER XXXVIII.

A WEARY TIME.

POOR Katie! Sighing for the sun!

She had been on deck, and had asked Chips, as she often did, to draw aside a little bit of the canvas that formed the lee doorway of the great deck tent. Chips had done so, and she had gazed forth upon the dreary darkness of the Arctic night.

Never a star was to be seen, only the pale suspicion of yellow light from a quarter moon, that just sufficed to reveal the rapidly drifting cumulous clouds; only the snow lying like a winding-sheet over the ice around the ship, over the dim hills, over the spectre-like bergs; only this, and the mournful howling of the wind, rising and falling in uncertain gusts, and bringing with it, as it swept over the Innuit village, the dismal yap—yap—yee—ow—ow of the Indian dogs.

Chips felt her shudder, as she leant a hand on his arm, and he quickly dropped the curtain and shut the darkness out. But it was there all the same. Katie knew it, felt it—felt that the dismal night of the North was all around the ship, all over those awful fields of ice, and stretching far, far South, over a lonesome barren land. Night had crept round her very heart. No wonder then that she laid her head so closely down on "the mother's" shoulder, and sighed for the sunlight.

Miss Graves put her arm tenderly round her, and drew her shawl partly over her head, as if Katie were indeed the baby Captain Boyd called her. Then she talked low and soothingly to her—talked to her of other lands, of southern climes, of home—till the child's eyes closed, and she slept.

Presently Jack came down below, humming a tune to himself, and perhaps making more noise than there was any occasion for; he never did walk very gently at any time. But Miss Graves raised a warning finger at him, as he entered. He took in the situation at a glance, and advanced on tiptoe.

How sweetly pretty the girl looked in her sleep; pretty at any time, but now so child-like, so innocent, so helpless! So ran Jack's thoughts as he stood there as if spell-bound.

What possessed him, I wonder? An impulse of some kind, that he had no control over, else Jack would have held it under; but he lifted one of Katie's soft tresses in his hand and gently kissed it. Then he patted Miss Graves's hand as tenderly as if she really were his mother, and retired on tiptoe as he had come.

A moment after, Katie awoke, and looked somewhat wildly round her.

"Were you dreaming, dear?"

Katie heard her not; she was fast asleep once more.

* * * *

Sighing for the sun? Yes, and many more were longing to see the southern horizon lit up once again, with the golden and crimson glories of the sunrise. In truth, a weary time had commenced for all hands.

Christmas was past and gone. They had kept it as it should be kept, as a time of thankfulness and rejoicing; but in the very midst of their joy, sad thoughts would come, which, however well they tried to conceal them, cast a gloom over even their smiling faces. Christmas had been to these beleaguered travellers like a green oasis in a desert. But it had vanished, and they were out in the desert as before.

"A solitary cross . . . marking the lonely grave of some ill-fated explorer."

Work to the men had now become a toil, and play itself no longer a pleasure.

Sighing for the sun? The crew forward did indeed long for his cheering beams, to come and chase away this night. They did not hesitate to say so to each other, although it must be allowed they went manfully to work every evening to dispel the gloom that hung about them, and to cheer each other up.

Sometimes, when sitting round the half-deck stove, listening to the wondrous yarns of old Chips, which he could tell so graphically and truthfully; or to the more humorous experiences of Turlough O'Brady, who had been everything in his time, and tried all trades, one of the hands would jump up and sing out,—

"I say, lads, we're all down in the mouth! We're moping. We're spoiling ourselves, by thinking too often about home, and wives, and children, and sweethearts. Boy Bates!"

"Ay, ay, to you."

"Pass the word for the ship's fiddler. Chips, old man, we're going to have some music."

Then the fiddler would be found, and for the next hour or so that part of the ship would present a cheerful scene indeed, as they listened to the strains of the fiddle.

But I have this to add—the merriment was forced. And one by one the men would resume their pipes, while the musician, as if following the lead of his thoughts, would glide into some beautiful but melancholy

"Lilt o' dool and sorrow,"

till the very fiddle itself seemed sighing for the sun.

The crew would go earlier to bed of a night now, although at times the cold was so extreme, that sleep for fully an hour after they turned in, was entirely out of the question.

They used to turn out more wearily, too, of a morning; and, indeed, showed an entire want of heart in everything.

Sighing for the sun? Neither of the Nats, nor Jack, nor Desmond, I believe, grieved much on account of the darkness. Or, if they did, they managed to hide their feelings. But poor Godfrey at times seemed laden down with sorrow.

"I think so much of home," he said once to Miss Graves; "and oh, mother, I've no business to do so. I am dead to everything, and have no right even to hope."

"Godfrey! don't talk thus. It is presumptuous, it is sinful. Do you know," she added, after a pause, "that I dreamt of you last night, and of your friend Spencer—dreamt that you had met here on the snow-field?

And you both looked so happy, and he had such pleasant news to tell you. Godfrey, Spencer lives!"

"Mother!" cried Godfrey. "Mother, kind and good, don't speak to me thus. Your dreams, alas! are but the reflection of your waking thoughts."

Miss Graves put her hand on the young man's shoulder, and looked earnestly into his handsome but clouded face, as she made reply.

"I pray, Godfrey, that He who permitted this great sorrow to fall shadow-like over your young life, may sanctify your heart thereby. Nothing is impossible to Him, Godfrey, and hope is His gift too, and no human being should refuse its solace; for, mind you, not to hope may sometimes be a sin."

"Heaven bless your kind heart, dear Miss Graves; I'd been dead long ere now, had you not found me that evening and given me comfort. Why, mother, I sometimes think you really are an angel!"

"Rather a heavy one," said Miss Graves, smiling. "I haven't got wings, Godfrey, and if I had—heigho! I fear I'm too fat to fly far."

"I wouldn't let you fly far, mother; I'd clip your pinions on one side, so that you couldn't leave me."

"Ah! now there is a more cheery ring in your voice. Come below, and I'll sing for you. This deck makes one feel dreary."

Sighing for the sun! Why, even old Sally began to sigh for it.

"I feels, my dear lady," she confidingly told Miss Graves one evening, "I feels as how I be gettin' old. I feels more stiff-like, and my poor legs be so cold of a night, ma'am. Only I bustles about, and Boy Bates, he do tease me so!"

Boy Bates did. There was no sighing for the sun about him! He teased Sally, and made her laugh, and he sometimes chased her, and made her run; and really, I think the exercise did her good.

But sighing for the sun would not make that luminary appear one single half-hour sooner. And many weeks of the very coldest weather had yet to elapse, ere he should send the golden clouds and the gloaming over the hills, to announce his coming.

Terrible storms still swept almost constantly over these lonesome wastes, and while they lasted, all communication with the shore was impracticable. But there were intervals, or spells, of what might well be called beautiful and even blessed weather.

For was it not a blessing when the winds died down; when those glittering stars, "so near and yet so far," shone brightly down on the wild snow-land; when a great moon shed radiant light from over the southern hills; or when the aurora danced and flickered around the ship, and lit up the pinnacled icebergs with its glorious tints of crimson, green, and orange? It *was* a blessing, and it was felt to be so.

On such still nights, a party was always held in the kashga. This was *such* a change from the ship. And the steward on shore vied with the steward on board, in keeping up fires that roared up the flues, fires that crackled, and flickered, and blazed, and lent brightness not only to the faces, but to the very hearts of those who sat round them.

The walk home to the ship, though—it was always called going home—was a cold one, despite the furs the ladies wore, and despite the very decided and very undaunted way the gentlemen stamped their feet, as they went tramping through the snow.

They always went home early, because, after they got there and went down below, it really was a *sine quâ non* of nocturnal comfort to have an hour's basking around the saloon or snuggery stoves, before retiring.

So Winter wore away, and daylight opened its eye at last.

* * * *

It was a starry night in the early Spring, a night so still and quiet, that even at the distance of half a mile, it was possible to hear the sound of a morsel of ice rolling down the slope of a berg. There was not a breath of air stirring; the silence was deep, impressive, awesome, a silence that could be felt; a silence that entered one's very soul.

Jack, keeping the solitary middle watch, had gone on deck, and, pulling the gang-way canvas aside, gazed out into the night. Nothing to be seen, only a dreary waste of snow, and a solitary cross, which loomed black, doubtless marking the lonely grave of some ill-fated explorer, and the glorious moon, touching the tips of the tallest bergs, and sliding over the southern hills.

Jack Silk went below again, and seating himself by the stove, took up a book, which he set himself to study seriously.

But he could not read to-night. His thoughts went wandering away from one subject to another. Jack had not many home ties. His father was busy in the battle of political life, and too actively employed to think much about his absent sailor son. A mother Jack had not. He was therefore free to do very much as he pleased, without interfering with any one. But he had many friends, and he kept thinking about them to-night, and wondering what they were doing, and what they would say, and how they would look, were he to suddenly stalk into their presence, and recount his adventures since the last time they had seen him.

"My head must be queer," Jack said to himself, "else why such silly thoughts? Well, anyhow I'll go and have a look at the glass. They do say that changes in the atmosphere have a wonderful effect on the mind in this strange country."

He took up a lamp and walked to the other end of the saloon.

"Honolulu!" he exclaimed aloud. And it was not surprising he should give vent to his harmless interjection—the glass was wondrous low, and *falling still.*

He replaced the lamp on the table and made his way forward now. There was a big fire in the galley, and near it, with his palms spread out to catch the grateful warmth, sat Chips.

He looked up as Jack came down.

"Ha! Chips, old friend, I thought I'd find somebody here. But it isn't your sentry-go, is it?"

"No; I'm doing it for a messmate. Besides, sir, I could not possibly sleep. I feel my old head all of a buzz."

"And so is my old head, Chips," said Jack, laughing; "and I say, Chips, the glass is lower than ever I saw it before, and still going tumbling down."

"I thought as much," replied Chips, "though I waited to hear you speak first. We'll have a storm. And it'll be a sneezer, sir—a sneezer!"

"It will start from the south?"

"Yes, it'll start from the south or thereabouts, but *it won't stop there.*"

TALKS WITH MARRIED FOLK

ABOUT THE MANAGEMENT OF INCOME.

By PHYLLIS BROWNE.

No. 6.—When and How to Save.

(*Continued.*)

THE *Prevention of Waste* is the next item in which saving can be made; and this opens so large a field for examination, that one scarcely knows where to begin.

If waste *is* to be prevented, however, every one in the house must be its foe. It is very little use for one person to avoid waste, if every one else is heedless on the subject. If employers and employed, parents and children, do not pull together in this matter, very little will be accomplished.

Sometimes we go into houses where the wife walks a mile to buy at a cheap shop, and the husband hails a cab whenever he is rather pressed for time. In other houses, it is not at all unusual to see mothers making their meals of unsatisfactory scraps, odds and ends which have been left, and which no one else will touch; and the children turning fastidiously away from homely but excellent food, or leaving wholesome morsels of fat, or meat slightly underdressed, on the side of their plates.

The result of this kind of saving usually is, that the mother becomes ill, through not being properly nourished; and that her unselfishness makes her children selfish. Again, we find mistresses anxiously trying to sew in the gloaming, because they do not like to light the gas too soon, and servants allowing the gas to flare away in empty rooms. Individual efforts for the prevention of waste under these circumstances always prove disappointing.

Another point upon which we have to be on our guard, is to prevent waste all the way through the household; not in one department only. Very often people who pride themselves on their thrift will be parsimonious in one direction, and very extravagant in others. Some have what have been styled "pet economies"; they will carefully preserve small pieces of string, or use scraps of paper, and recklessly leave books lying open downwards; or poke the fire incessantly, so that they burn twice as much coal as they need do. Persons who can act thus have no right to call themselves thrifty; they are only crotchety.

A very common notion, held by a great many people, is that it is in groceries alone, that there can be waste. This idea leads them to keep strict watch over the sugar and tea; when all the time cinders may be thrown out unsifted and unnoticed. Others are specially anxious that bones should be stewed for stock, and fat rendered down for frying, yet take no heed when brushes, which ought to be kept for the stairs and carpets, are used to sweep the hearth; or when scrubbing brushes are left in a pail of water.

Some waste by putting things to the wrong use; some by giving out provisions too liberally, so that more is used than is necessary; others by giving out provisions too sparingly, so that deficiencies have to be made up in a hurry; and "haste makes waste." Where there is lack of ready money there is a great temptation to waste by not having furniture and domestic utensils repaired directly they need it, by which means bad becomes worse, and shillings have to be spent, when pence, employed earlier, would have done the business.

Thoughtless people waste through throwing out little drops of sauce, milk, or vinegar. The careless waste through peeling fruit and potatoes too thickly, and allowing furniture and silver to spoil, through not being properly cared for. Also when they put knives, handles and all, into hot water; when they let saucepans burn over the fire; when they cut into a new loaf, and allow the piece of an old loaf to become dry and mouldy; when they buy new house-flannels and new dusters, when old woollen stockings cut open, old flannels, old chintzes, and old cotton dresses cut into neat squares and hemmed, would answer the purpose equally well; when they pile coal on the fire, so that half the heat goes up the chimney, or when they let the fire go out, and have to take fresh wood to light it again; or when they do not sift and burn cinders.

Some waste because they do not check the bills, or weigh the joints, and so allow small errors to pass unchallenged; others by not taking care of and duly filing paid bills, so that, in case there is a mistake, they may not be called upon to pay a second time.

Small escapes of gas are a fruitful source of waste. In many households there is a waste through matches being struck unnecessarily, and candles being left burning when not needed. In very many others, there is waste, through workers not being allowed food enough, rest enough, and change enough to keep them well and in good spirits; a very "penny wise and pound foolish" policy. In short, the ways in which waste may occur in a house are so numerous, that it would scarcely be possible to name them all; the most experienced housekeeper would omit some of them.

Heads of households very often waste when they endeavour too anxiously to avoid waste; though what is consumed here is not money, but strength, nerve, and temper.

Money and material are not by any means the only things we waste in life; Time, Labour, Character, are all treasures which are expended in domestic management, and we waste when we do not measure carefully what we pay against what we receive, and in parting with our treasure do not get its worth. Thus we very often find that industrious people give hours to work which answers no purpose but that of display; then they congratulate themselves that they have accomplished something, and it has "cost them nothing."

It is a mistake; it has cost them so much of life, energy, thought, and strength. The minutes, the half-hours, spent over this worthless business might have been used in enriching the mind with helpful thoughts from good books, in cultivating the powers which have been given us, or in helping others. We manage but poorly when we give our labour without real profit.

To avoid waste thoroughly and successfully, constant watchfulness is required, unceasing, unresting. As a wise writer once said, "Economy is like liberty; to maintain it there must be eternal vigilance." Order must be the rule of the household, thrift the habit of every member thereof. Even children will have to be trained to orderly ways, so as to save trouble, and to save expense. It is astonishing how children may be trained thus to habits of thrift, when the habits of their elders are thrifty.

Children learn by example, not by precept. If they see that it is the rule with father and mother to take off dirty boots, before stepping upon a carpet, they unconsciously get into the same way. But if father and mother talk anxiously about saving, and heedlessly waste all the while, children will quickly follow suit, and pecuniary muddle will be the result.

But it may be said, "If waste and pecuniary muddle are to be avoided through a better order, what is this better order that is to do so much for us?" To this question I should reply, "In your house, I do not know. In my own house, it will be a disgrace to me if I do not arrive at it." This is a sum we must each one work out for ourselves. If we were to take a street with two hundred houses in it, we should probably need two hundred different arrangements if we wanted to arrive at order in every one.

In trying to give advice, therefore, about the management of the income, all one can do, is to persuade people to get at this order. It can be arrived at; or rather, as we said at the beginning, it *must* be arrived at, if disaster is to be prevented.

The way to arrive at it is very simple; it is to face the situation, and deal with it. The way to disaster is very simple also; it is to let things slide.

Still, though I cannot tell you your order, I may confess how I arrive at mine. By way of discovering the true order in living expenses for both of us, let us turn again to the pencil and paper which we had at the beginning of our talk, and which we have neglected for awhile.

(And, by the way, may I remark that pencil and paper are most valuable aids to economy. We never economise so successfully as when we plan our economies in black and white before we carry them into practice). In our first estimate we decided that we were to set aside one-half of the available income for living expenses, and that one-fourth of this sum was to be deducted for incidentals. The amount of these incidentals ought to be set aside straight away; not interfered with on any account.

The demands on it will be so large that we are sure eventually to have to scheme and contrive to make it do. If we have something to contrive with, we can scheme hopefully; the pain comes when the necessity is there, and there is nothing wherewith to meet it.

The sum for incidentals having been laid away, the sum for the household expenses is to be handed over to the house-mother regularly, once a week. She has to say to herself, "This is the amount with which I have to do my work; it is a talent that is entrusted to me by the great Master. I am to make the most of it. If I go beyond it, I shall be violating the contract which has been entered into between myself and my husband. In keeping within it, I must get the utmost possible value out of it, consistent with doing justice to others. In receiving this money I have accepted a sacred trust. May I have strength given to fulfil the obligations thus accepted by me."

If I might advise a house-mother thus circumstanced, I should once more say, "Before you spend any of that money, plan it out." Perhaps my friends who are talking with me feel a little impatient with this continued return on my part to the method of "planning it out." If they are, I am very sorry; but really, it is the secret of the whole business. At any rate, I cannot tell them a better one. Be beforehand, be prepared, look ahead—this is thrift. Let things go; take the chance; trust to something turning up; this is unthrift. So I must return to my humdrum way; and try, my friends, to have patience with me.

To the house-mother I say, therefore, "Plan out your expenditure."

You recollect that living expenses were to include coal, gas, servants' wages, laundry expenses and repairs, as well as provisions. Find out from the last three months' bills what these separate items came to. Now calculate how much per week will be required for each sum; add the various items together, and put the money away.

This is the only way in which you can be secure. By acting thus you will never be in a corner; you will always have the wherewithal to meet what is coming upon you. What is of almost as much importance, you will always have the feeling that you are not destitute of ready money; and not entirely penniless.

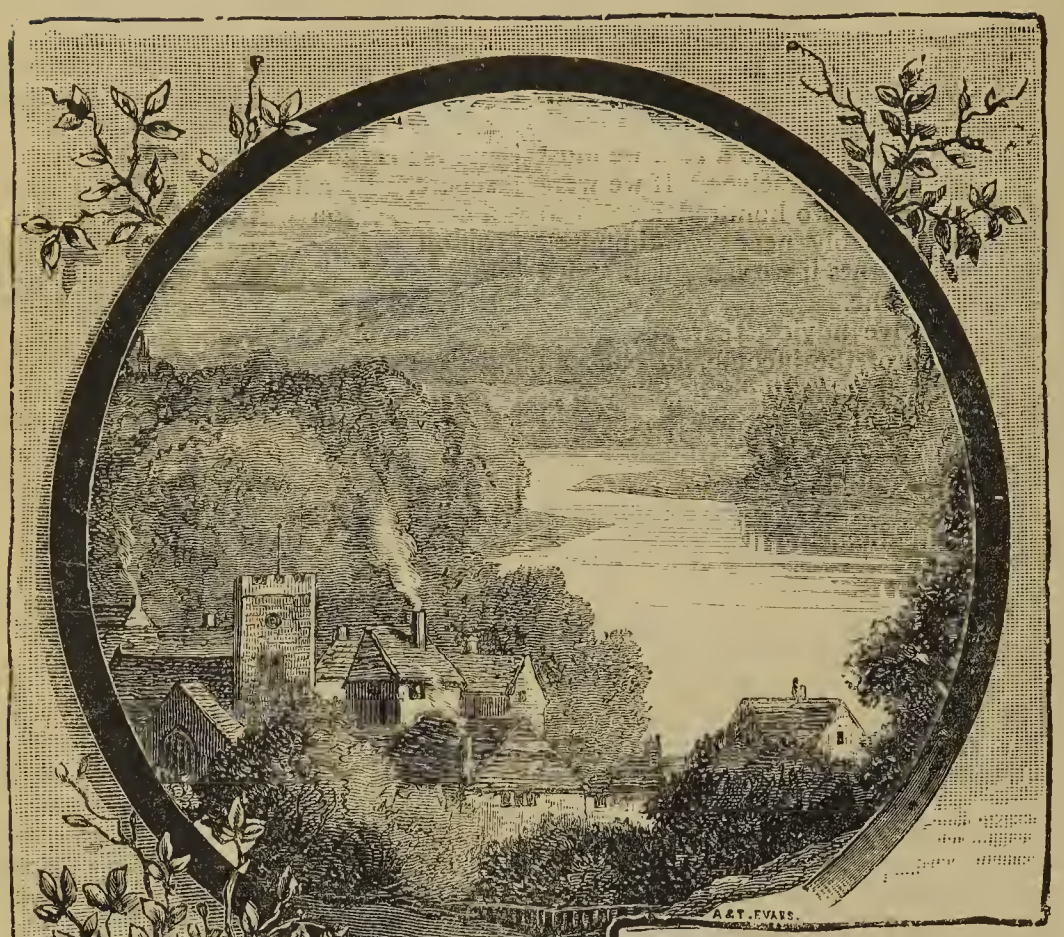
To be entirely penniless is a very unpleasant sensation; it robs the house-mother of nerve, and makes her feel the unhappy slave of circumstances, instead of being the mistress of the situation. Moreover, it ought not to be.

Put these sums away, therefore, and I should say, Put each one into a box, labelled with the object for which it is intended. Have a number of boxes, and let each one be labelled, and keep them locked up; or, if the money amounts to any sum which makes it worth while, put it into the post office savings bank, and get the interest while keeping it safe, for it is never safe to have much money in the house. In this case, make a statement saying what is the destination of the various sums which make up the whole amounts, and keep the statement in the bank book. By this means everything will be kept straight.

Perhaps all this will be clearer if I give an illustration. We will suppose that, after incidental expenses have been laid away, the sum left for the housewife to deal with is £2 10s. Out of this she will ultimately have to pay £12 per year for wages, £4 per year for gas, £10 per year for coal.

Now £12 per year is equal to 4s.7¼d. a week. Before the money is used, therefore, 4s. 7¼d. must be put away in a box labelled "Wages." £4 per year, which is the sum needed for gas, is equal to 1s. 6½d. per week. In a box labelled "Gas," 1s. 6½d. must therefore be deposited. The sum needed for coal, *i.e.*, £10 per year, is equal to 3s. 10d. per week. The 3s. 10d., therefore, must be put away in its place. If this is due every week, when the time comes for the wage to be paid, there the money will be; and so with the amounts needed for gas and coal.

If we adopt this plan, and persevere in it concerning these items, there will be no need for anxiety.



It is quite possible that if we thus plan, and persevere in following the plan, we shall be so thoroughly imbued with the folly of waste that we shall find, when the time for paying for gas and coal arrives, that the estimate taken from last year's bills was too large, and that we do not need to pay quite as much as we expected. But it will never do to count on this reduction. If the bills are less than we anticipated, we are so much to the good. But on no account must we presume on the possibility that this will be the case.

"The worth of a state in the long run is the worth of the individuals composing it."

"No sadder proof can be given by a man of his own littleness, than disbelief in great men."—*Carlyle.*

THE SQUIRE'S PROBLEM: "MUCH—SOME—OR NONE?"

By G. DE LA PLANTE.

"In the quiet . . . the squire worked at his problem."

CHAPTER III.

THE SQUIRE RESOLVES TO TRY IT.

IN the quiet of the wild woodland dells, beside the brawling streamlets, the squire worked at his problem alone. Even Mary could not help him. How could he sit by and see his men friends wishing for something that was not upon his hospitable board? Was it needful to ask such self-denial for the sake of those fishermen? He saw plainly enough that merely abstaining himself, as a matter of personal opinion, would lack force, and fail of real effect; but was it right to force this compulsory abstinence on men who were not convinced of its need? Then there came to his mind the memory of more than one in his own rank of life, who had become a prey to drink. Nay, in the estate next to his own, was not the son and heir an alien and a wanderer, because he would too frequently spend his evenings at the Black Bull?

Out amongst the fern by the stream side, the squire made up his mind at last. A total abstainer he would be, and his whole household should follow him. He did not like the necessity, but a necessity it was.

The squire's face was brighter than it had been for days, as he sauntered into the pleasant balconied room, where Mary sat by the window.

"Look here!" said the young man earnestly, leaning his folded arms on the railing, and bringing his face close to hers; "Mary, I've tried Much, I've tried Some, and now I've made up my mind to try None at all! We'll lock up the wine-cellar when we go home, and drink only water. We'll turn the Black Bull into a Coffee House, and the village will be a model of comfort and beauty in six months' time. I am sure it will, for drink, and drink chiefly, is what degrades our fisher-people so. Take away the habit of haunting the Black Bull, and spending time and money there; and we shall have the 'old order' most thoroughly changed. It took me a long time to think it all out, but now I see clearly."

"Oh, I am glad!" cried Mary. "I knew you were thinking about it, Wynyard. *I* made up my mind that day in the train. How well it was we met that young fellow, as we did."

"He knew what he was about," said Wynyard, frankly. "He hit me hard. Pity he went in for cant; that spoiled him."

"Oh, not cant!" said Mary; "he was so earnest about it. And, Wynyard—perhaps he was right."

"About what?"

"That—that total abstinence is not possible for tempted men, unless they have God's grace in their hearts."

Wynyard laughed uneasily. "I know nothing about it, Sis; you can preach while I work the pledge cards."

"I am not fit to preach," said Mary, sadly; "but I want to know more. Wynyard, won't you think about it too?"

"Not in my line, little sister. You have got moped all alone here; come for a row on the lake."

A few days later, Mary and the squire were back at the old Hall. Somehow distance had lent enchantment to the view of the proposed reformation. It did not seem at all easy to the squire as he drove through the village, and nodded in return to the obsequious bow of the landlord of the Black Bull.

"I'll have a fine piece of work with that fellow," said the squire, rather pettishly; he had all a man's hatred of a fuss. "He has a long lease, too, and I can't shake his license; so he can defy me if he likes."

"Right must ever win," said Mary softly; and the frown left her brother's face.

Dinner was ready when they arrived. As usual wine sparkled on the table. Mary turned to the old butler,—

"Remove the wine, please, Austin," she said clearly. "The squire and I are both total abstainers, and will have wine on the table no more."

In silent amazement the old man obeyed, inwardly hoping that the change would spread to the servants' hall, where he saw too often the ill effects of an unstinted supply of drink.

The first step thus taken, the squire set out boldly on his new line of work. He called a meeting of the fishermen at the Hall, told them what he meant to do, signed his name just beneath the pledge which he had written out on a large sheet of paper, and invited those who were willing to sign below. Not a man stirred at first. Then, one by one, about a dozen of the best and soberest men came forward, and affixed their name or their mark; but of the tempted or drunken ones, not a man came to the front. The landlord of the Black Bull stood gloomily in the background, looking on.

"Now," said the squire, "I mean to carry this thing through. My first proposal is this,—I am willing to take the Black Bull and turn it into a Coffee House at my own expense, put the present landlord in possession of it again, and pay him, at the end of the year, anything he may have lost by the change. What say you, landlord?"

"Meaning no offence, Squire," said the landlord in thick, angry tones, "I've my lease, and I've my license, and I mean to stick to them both. The men what's used to beer will never do with a wash of coffee. We're all free to use our own mouths as we please."

"Very well," said the squire. "That's your answer. Then I shall take a cottage, turn it into a Coffee House; my sister will have a room for the women, and we'll give you due notice when we are ready to begin the work. The Room will be open free every evening, and a hearty welcome for all."

"Three cheers for the squire," called out one of the men; then "Three cheers for the landlord," called out some one else. So, amid confused hurrahs for squire and publican, total abstinence and drink, the gathering dispersed.

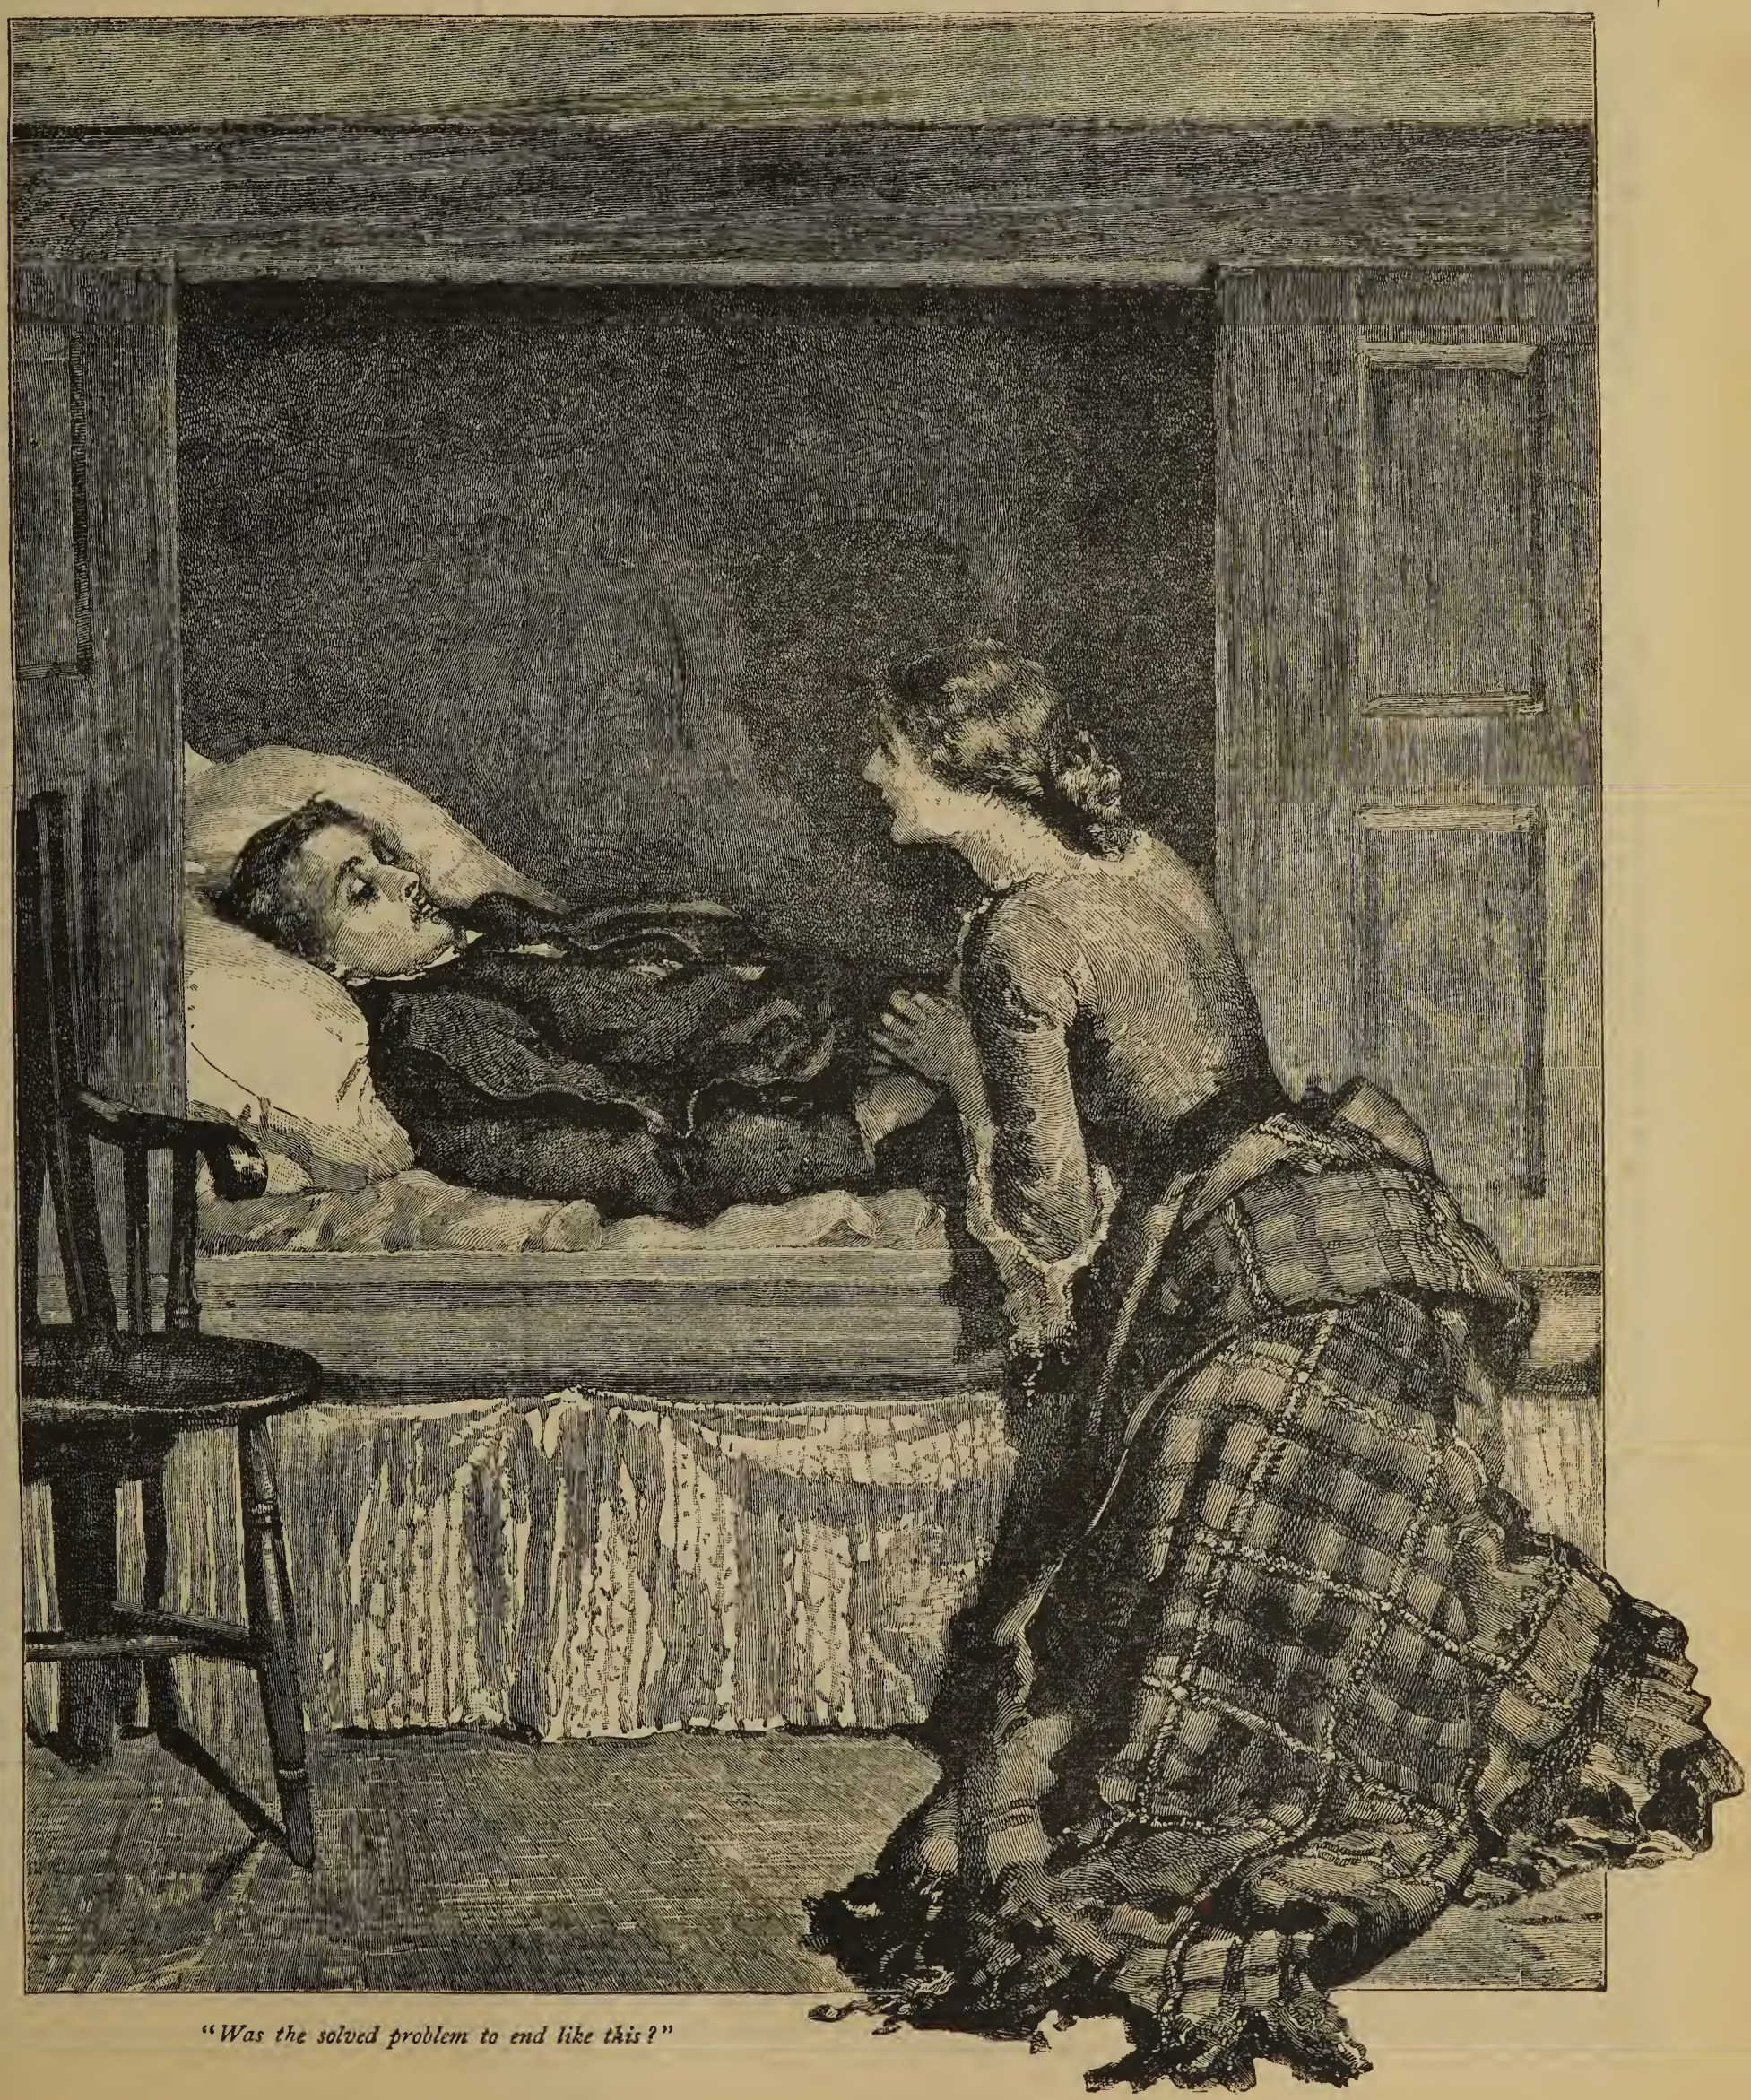
CHAPTER IV.

"SOMEHOW WE CAN'T."

THE Coffee House was a formidable rival for the Black Bull, as far as comfort went. But the Black Bull held its ground. All hope of keeping the squire's favour being gone, the landlord laid aside his mask, and the house sank lower and lower in character.

Wynyard and his sister stuck to their resolution. Not one drop of stimulant was used at the Hall. Certainly the example had some effect. The steadier fishermen followed the squire's example, and no longer sent their boys out for a jug of beer to adorn the dinner table; but, for the really tempted ones, not much was done. Coffee could not stand against drink. A few looked longingly at the Coffee House, but passed it, drawn to the Black Bull by cravings which they could not subdue; a few—a very few—signed the pledge, and broke it within a month; but the greater number laughed at the whole movement, regarded the squire's action as an infringement of their rights, and exalted the publican into a much-enduring man, who defended their rights at a great personal sacrifice, and deserved their thirstiest support.

"'Big Bill' wants to see you, sir," said the care-



taker's wife, opening the door of the squire's little room at the Coffee House.

"Show him in," said the squire gladly; for "Big Bill" was one of his "hopeful cases." He and his wife had both signed the pledge a few weeks since. There was a despondent look about the burly giant, as he turned his cap uneasily in his hand.

"What is it, Bill? How's the wife?"

"We can't hold on, squire, that's the truth," said the poor fellow. "Missus and me do want to be sober, but somehow we can't."

"Both pledges broken, Bill!" said the squire sadly. Then he was silent. He had no more to say, though much to think of.

"Was the solved problem to end like this?"

"I don't want to be a drunkard, sir," said Bill despairingly, "nor the missus. But what's to do next? We've tried our honest best, we have, but somehow we can't. Isn't there nothin' you could put behind th' pledge, Squire? Somethin' that 'd hold on to a man, an' not let him go? There's no *drawin'* in a pledge an' coffee, like there is in drink."

"God help you, Bill," said the squire brokenly, "for I can't. If there's anything to put behind the pledge, I know nothing of it myself."

The man turned and left the place. The squire bowed his head on his hands in an agony of doubt and despair. He had failed again. Self-sacrifice and human resolution were utterly vain; it needed a force without a man to control his evil passions. The words of the stranger in the train echoed in his ears. He had called them cant—he knew now that they were truth itself. "If you love Him yourself, sir, lead your men to seek Him as their Saviour. Nowhere else will they get the strength they need to keep them from drink."

CHAPTER V.

THE PROBLEM SOLVED.

MARY gathered much of what had passed from her brother; but for her the true Light had come, and the problem was solved. She had turned to her Bible, a book she and her brother had scarcely been taught to read, in search of passages on total abstinence, and at first had been sorely puzzled at finding some that seemed to point just the other way. But as she drank deeper of the spirit of the Book, she saw that below all the surface incidents and injunctions connected with special individuals and circumstances lay the broad principle of do "nothing whereby thy brother stumbleth, . . . or is made weak." But Mary came upon one little verse which flashed a light on all the unsuccessful work of the past. "I, if I be lifted up . . . will draw all men unto Me." That was it—the drawing power of the loving, living Saviour, could alone hold men back from drink. She showed the verse to Wynyard, as he sat beside her, and then rose softly, leaving the young squire with the open Bible in his hands.

The squire started next evening for Bill's cottage. All day long, he had struggled towards the light, feeling for a foothold step by step. "If you love Him yourself,"—those words barred his way; dare he say that he loved this Saviour of whom he had scarcely thought till yesterday? "I will draw all men unto Me," said the Christ; and as this young man turned the pages of his Bible, the love and forgiveness that gleamed from every page melted his heart, and he cried with Thomas of old, "My Lord and my God."

Bill was out, his "missus" said; she "guessed he had gone to the Bull, as he was kind o' despairin' when the squire could do nothin' more for him."

"Ah, but I can to-night!" said the squire, with a light on his face. "I'll go fetch him home myself."

"Don't go into the Bull, Squire," called out the woman; "the landlord 'll set his bull-dog on you—he said he would."

"Never fear," said the squire; "I must fetch Bill"; and off he went.

The door of the Bull swung to behind the squire, and he stood, the only sober man in the crowded room. An angry buzz went round; only Bill hid his face in his hands.

"Come home, Bill," said the squire, holding out his hands beseechingly; "I've got good news."

"Let's share the news, Squire," said the publican, insolently; "Bill has no secrets from his friends here. "He'll stand us a treat, if the news is good."

The squire's face flushed. "My news will be good for you all. I have found a power that is able to keep a drunkard sober, and take away the craving for drink. The Lord Jesus Christ, whom I have found to-day, as my own Saviour, is able and willing to be a real Saviour to-night to all you men. He will forgive you everything, and His power alone is strong enough to draw you away from drink."

There was a moment's dead silence as the squire stopped. Then the infuriated landlord fulfilled his threat, and the great bull-dog sprang fiercely at the squire. The young man stepped hastily aside, to escape those savage fangs, tripped over a fallen chair, and fell to the ground, striking his head heavily against the corner of a table.

In twos and threes the sobered men crept out. Bill sobbed like a child. The frightened landlord sent for the doctor and "Miss Mary," and the still unconscious squire was carried across the road to the Post Office, and laid on old Betty's bed. In half an hour Mary was beside him, holding his hand in hers. He had not moved or spoken. Was the solved problem to end like this?

Not so. After weeks of suffering, the young man regained his hold on life. When he was well enough to see them, the men would come, one by one, to his bedside, and listen whilst he told them of the Saviour, who could draw tempted souls to Him. In those quiet hours, too, he learned to know his Bible, and to wield it as the "sword of the Spirit" against all unrighteousness and sin.

"Big Bill" no longer complained that he had "nothing behind the pledge"; he and his "missus" could stand firm in the new strength. The publican found the tide of public opinion so strongly set against him, since the bull-dog affair, that he sold his lease, and left the place. The Black Bull was bought up for another Coffee-House, and at last, long last, the village grew sober and happy, and the squire's problem was solved.

AN OLD LEGEND.

A PAGAN Prince in ancient days,
His servants round him drew;
"Your choice of serving *either* God
This day I give to you."

Each one a Christian convert is:
"Will ye still own your God?
Or will ye serve my images,
And tread where I have trod?"

Then, fearing to offend their Prince,
Those servants, in a breath
(All except three), declared themselves
Idolaters till death.

All except three; and those brave three
Their flag for Christ unfurled;
Unflinching stood to own their Lord,
Prepared to face the world.

Then turned the Prince in bitter scorn,
And spoke to them again;
"*Three* only are there, of you all,
Whose service I retain.

"Go! get you gone! no longer stay;
My servants are but three;
For they who to their God are false,
Will faithless be to me!"

FIVE WEEKS' HOLIDAY.

LET any young man go to his employer, and stipulate that he must have five weeks' holiday every year to improve his mind, how he would be laughed at and shown the door. Yet, this he can get every year without asking, or being indebted to any one for the gift. Let him get up one hour earlier every day, and he has it in a better way and manner than if he had all the five weeks together; for one hour every day devoted to any one special object, would accomplish vastly more than five weeks' successive poring over some study or inquiry; the brain would be clearer, the mind more active, the body less wearied, the memory more retentive.

RECREATIONS IN GEOLOGY.

By W. H. HARRIS, B.A., B.Sc.

THE GEMS OF OUR JEWELLERY.

THERE seems to be in human nature an inherent love of light and brightness. We must all have noticed that one of the earliest indications of intelligence in very young babies, is their turning towards a candle-flame or gas-jet, and following with their eyes any brilliant object which is being moved near to them. Possibly this instinctive liking may be the origin of the interest and attraction manifested by man in all ages, and in nearly all nations, for sparkling gems.

But various stones have other qualities beside mere glitter to recommend them. Their hardness and resistance to wear: their portability, enabling large values to be kept or carried in small space; their complete immunity from change through atmospheric influences; their permanent retention of colour, or of reflective qualities—all these circumstances have combined to render jewels of great worth in all countries, and at all periods of time.

Within the space of a short article it would be quite impossible to give even a very brief account of the many varieties of gems. We can, therefore, select for notice only a few of the most remarkable. A certain sort of distinction is sometimes drawn between *Gems* and *Precious Stones*, the former being made to include the most valuable, such as the diamond, sapphire, emerald, ruby, and topaz, the latter comprising the less-esteemed kinds, such as rock-crystal, amethyst, opal, agate, jasper, and malachite. But such a classification is entirely unscientific. We shall therefore group together for description those which have certain mineral characters in common. And we shall begin with a set which, rather remarkably, includes both the most valuable, and the least so, of the minerals used for jewellery purposes.

The *Carbon Group.* In one of our articles, on "the coal of our fires," we just alluded to the fact, that there is good ground for believing the last change which vegetable matter has undergone, in its series of transformations, is into the crystalline condition of the *diamond.* It is true that neither chemistry nor geology has yet revealed to us the actual passage from the amorphous into this crystalline form, but we know that this most precious of gems consists almost wholly of carbon. When burnt in air or oxygen, the same compound results as from the combustion, under similar conditions, of graphite, or black lead so-called. Moreover, some observers have thought they detected traces of vegetable structure in the exceedingly minute portions of ash from consumed diamonds; but this is very doubtful.

Other investigators have imagined the possibility of an *inorganic* origin for these stones, and have urged that, as sulphur is precipitated from hydro-sulphuretted vapour by contact with oxygen, in like manner carbon in a crystalline form might be the result of the oxidation of a hydro-carburetted gas. But, supposing this to be the case, there is still the probability of such a gas owing its existence, in the first instance, to animal or vegetable remains. Geologists have urged that the combustible nature of the stones excludes the idea of intense heat, in connection with their formation; but a review of all the facts leads to the conclusion that

an exceedingly high temperature, acting under very great pressure, or a lower degree of heat, continued through long periods, will account most reasonably for the production of diamonds.

These gems are found usually, and most abundantly, in old drifts or gravels, derived from the wearing away of igneous rocks of various ages. In India they are met with in a matrix of sandstone ; in Brazil, they occur in mica-slate. The former of these is considered to belong to the Tertiary period, while the latter is probably as low down in the geologic series as the most ancient stratified deposits—the Cambrian and Laurentian. Intermediate between these, the diamonds of South Africa are met with in rocks supposed to be of Jurassic, *i.e.*, Mesozoic age. Dr. Gardener informs us that the diamantiferous diggings of Brazil consist of between 30 and 40 feet of sandy clay, reddish sand, loose gravel, and then hard clay lying on schistose rocks. Of course these last were the birthplace of the gems.

From the three countries mentioned, the largest quantities of these stones have been and are still procured. From a single mine in the Transvaal, as many as £100,000 worth are sometimes obtained in a month. They occur of various sizes, from mere tiny grains to a weight of several hundred carats, in their rough state. In the process of cutting, a great reduction in size of necessity takes place. For instance, the celebrated Koh-i-noor, now the property of our Queen, is said formerly to have weighed 900 carats, but at present, after its final cuttings, to be only 123 carats.

Space forbids our giving particulars as to the size and value of other remarkable gems of this kind, or our telling some of their romantic histories. We may, however, mention that diamonds are the hardest substance known, and that only their own dust is capable of cutting and polishing them. They are used for many purposes, as in the arts of the glazier, the lapidary, and the jeweller. Recently they have been largely and effectively employed in the boring of rocks. It may interest some of our readers to know that the cut made in glass by glaziers is not more than $\frac{1}{200}$ in. in depth, yet is sufficient to render the line of fracture sure.

Another substance of the carbon group is *jet*. This is manifestly an altered form of vegetable matter, a variety of highly bituminous coal, almost crystalline in structure. It is found in many localities—Turkey, Spain, France, Prussia, and England. In our own country it comes chiefly from Whitby, where it is obtained from the Upper Lias Shale, mixed with fragments of coniferous bituminised wood. It occurs in lumps and branching pieces, which often reveal their ligneous origin. It is remarkable for its black and compact appearance, its resinous lustre, its light weight, and its development of electricity when rubbed.

Amber hardly ranks as a precious *stone*, but is well known for ornamental purposes, and, as a fossil resin, might be classed in the carbon group of valuable minerals, being used for the manufacture of necklaces, bracelets, ear-drops, and other small ornaments. It is, geologically, extremely interesting, as there have often been found, enclosed and perfectly preserved in it, remains of insects, and even small fishes of bygone ages.

But it is time we referred to the next set of valuable stones—the *Alumina* Group. Of these the chief are the ruby, the sapphire, and the turquoise. Chemically, these consist almost wholly of the same substances as form the constituents of clay, that is, alumina, with water of crystallization, and traces of lime, magnesia, and silica.

The *ruby* derives its name from the Lat: *rubeo*, I flush with red. There are, however, various shades of this colour, with yellowish, orange, and even violet hues. The finest of these gems come from Ceylon, Pegu, and from our latest acquisition, Burmah. They occur abundantly in alluvial deposits, derived from the breaking up of crystalline rocks into gravel and sand. They have also been met with in their original matrices of granite, gneiss, mica-schist, and quartzite. There is little doubt that they owe their production to the action of heat, and great pressure on certain minerals, far below the surface of the earth, and in the presence of some amount of entangled water.

Sapphires are closely allied to rubies in composition, but their colours are blue, yellow, white, and violet, while sometimes they are translucent. They occur in prismatic crystals, under circumstances closely analogous to those in which rubies are found. They are next in hardness to diamonds, and can only be cut and polished by diamond dust.

There are two kinds of *turquoise*, but one hardly deserves the name of a precious stone, being nothing more than bone, or ivory, coloured (naturally) by phosphate of iron. This variety is met with in the drifts of N. Asia, in which occur immense quantities of remains of the now extinct mammoth. The mineral variety consists chiefly of alumina, in combination with phosphoric acid, a little lime, traces of copper and iron, and 19 per cent. of water. It is said to exist embedded in certain sandstones of unknown age in Arabia, Persia, and Thibet. The gem is specially valued because its colour is not affected by gas or candle-light.

The next group contains such stones as the topaz, emerald, garnet, and beryl. Fundamentally, these consist of varying combinations of silica and alumina, with certain other ingredients, such as fluorine, lime, and chromium.

The *topaz* derives its name from a small island, Topazos, in the Red Sea. Its birthplace is, like that of several of the preceding gems, in the granitic and oldest crystalline rocks. In these, certain small cavities occasionally occur, and it is in such hollows that precious stones are especially common. The countries most noted for them are Brazil, Burmah, Ceylon, Bohemia, and Australia. Specimens are met with also in the Highlands of Scotland and the Mourne Mountains of Ireland.

The *emerald* has long been highly esteemed for its rich velvety-green colour. It is not found in many localities. The finest have long been obtained from S. America, where they are got from crystalline veins in clay-slate, and from granite, near S. Fé de Bogota. They occur also in the Ural Mountains, and ancient mines for the stones have been discovered in Upper Egypt. The gem has been in repute from very early times, and it is said that a very perfect specimen of only 6 carats in weight, has fetched as much as £1,000.

The *beryl* is really an emerald of less brilliant colour than the fine varieties. It is found in quite large crystals, some being more than a foot in length, and several inches in diameter. Some kinds are colourless, and might then easily be mistaken for quartz. They may, however, be always distinguished from the fact that beryl-crystals are striated in the direction of their long axis, while those of quartz are striated transversely, or at right angles to the longer axis. Moreover, the latter mineral fractures conchoidally, or like thick shells do when broken by a blow, while the beryl splits in smooth planes.

Garnets are so variable in composition that they are ranked by lapidaries in six sections, according to their predominant minerals. Silica is the essential constituent, forming about one-half of their total weight. Other ingredients are lime, alumina, iron, magnesia, and manganese, in various admixture. The stones occur, for the most part, in gneiss, mica-schist, and rocks of an allied character.

They are sometimes so thickly interspersed, as to give the name of *garnet-rock* to the beds in which they are found. Such rock is often reduced to powder, and used for polishing purposes under the name of "red emery." The colours of garnets are most commonly deep-red, reddish-brown, or black ; but occasionally olive-green, and even yellow specimens, are met with. The largest quantities for commercial purposes are imported from Bohemia, Ceylon, Pegu, and Brazil ; but they are found in all parts of the world, where the igneous rocks have been raised above the surface, and have been "weathered."

The *Silica Group* of stones contains some of the less valuable kinds. *Rock-crystal*, which consists of little else than quartz, is usually colourless ; but, when tinted, goes by different names. So, when violet-blue, it is called *amethyst*, from two Greek words, meaning "not drunken," for the curious belief prevailed in old time, that this mineral had the effect of immediately curing intoxication. The cinnamon-yellow or brown kinds are known as *smoky quartz* or *cairngorms*, from the Scottish mountain in the neighbourhood of which they occur. When reddish-pink, the mineral is styled *rose-quartz*. The colourless sorts have received such titles as Irish diamonds, Bristol diamonds, etc.

These last are used for a great variety of purposes, some simply ornamental, some highly useful. Among the latter may be mentioned their employment for spectacle-lenses. The coloured varieties are much esteemed for the less expensive articles of jewellery. This is especially the case with the amethysts and cairngorms.

Chalcedonies and *agates*, *carnelians* and *onyxes*, are other stones of the silica group, which possess a certain value in the hands of the lapidary ; but space forbids of our speaking of them in detail. We may just notice what are called "fortification-agates," from the zig-zag arrangement of their silica bands of different colours. It is evident that these have been formed in cavities of rocks, into which water holding silica in solution has found its way. Either by evaporation of some of the liquid, or by chemical precipitation, the solid matter has been deposited, layer upon layer, and of hues varying according to other ingredients in combination with the flinty matter. We find also "moss-agates," which look as if a vegetable growth had been entangled amidst the silicious deposit.

We can cordially recommend to our young readers the pleasure of making, by slow degrees, a collection of various kinds of gems and precious stones. A search along many of our shores, and among the pebbles of our hilly districts would, with the help of a lapidary, enable an inexpensive beginning of such a series to be made.

With this Paper we end our present suggestions for Recreations in Geology.

What in a Name?

By WILLIAM TIREBUCK,
Author of "Great Minds in Art," etc.

A GREAT deal is in a name. Many a book is read, many a picture sought, many an article bought, and many a woman loved in the first instance, because of her beautiful name. A beautiful name, in fact, imperceptibly influences the mind, it plays upon the fancy, dwells in the memory, and even acts upon the emotions.

At the sound of Florence, or Violet, or Marian, or May, one has a keener anticipation than in the case of Jane or Ann or Lizzie.

True, Florence and Violet, in reality, are sometimes disappointing, while Ann and Lizzie please us beyond expectations; but these are among the apparent contradictions in human nature, which must be allowed for. The perfect realization is when Florence is a characteristic Florence, May a representative May, and Margaret a creature full worthy of the name.

Then we see character in harmony with the sounds. Why, a name when first heard in association with a new acquaintance, has quite a magical influence. In the presence of any one called Jack, or Ted, or Tommy, or Sandy, we are at once inclined to slacken in manner, under the impression that a fellow who sails under the name of Jack, or Ted, or Tommy, is not likely to demand much from us; but let him be called John, or Edward, or Thomas, or Alexander, and we brace ourselves up to our best. In the same way, Pat or Mick are demoralizing; whereas Patrick or Michael straighten us, if only out of respect for the saints. Charlie suggests a joke and a laugh; but Charles at once turns us into courtiers. One would be playful with Milly, but romantic with Millicent; skittish with Kitty, careful with Kate, but very, very cautious with Catharine. Of course it is quite possible for a Ted, or a Pat, or a Mick, or a Kitty, to be as dignified as Edward, Patrick, Michael, or Catharine; but it is by no means probable.

The reason is not far to seek. Whatever name may be originally given to us, our own individuality usually evolves an index-name by which our friends know us, and by which the world may read us. Mary will not turn into Polly, or Elizabeth Liz, or Janet Jennie, unless her own individuality brings it about. Sometimes, of course, a girl is called Jennie, or Pollie, or Liz from childhood, quite apart from characteristics—but she unconsciously acts up to the name, and so becomes a characteristic Pollie or Liz.

Naturally, too, the parents who would call her Pollie or Liz, would quite as unconsciously also mould her character in the same direction. And so with boys. No one would call Oliver, Noll; or William, Bill; or Samuel, Sam; or Richard, Dick, if Noll, Bill, Sam, or Dick did not predominate in the boy himself. When a boy is nick-named by his companions, it usually has an aptness which the lad himself feels so true that he does not resent it—and it sticks. If he resents it, he clears himself of it, and his character has more freedom. On the other hand, the fact that the nick-name does stick, daily operates upon him. It hourly influences him. It develops strongly and quickly what was simply latent—a weak trait, which under purer influences might have been stamped out.

But the name fixes it, and then comes that harmony between an individual and a name which so often seems inseparable. The individual and the name have grown together—the individual always tending to act up to and justify his title.

A name, indeed, is like an ideal. It is always with us. It helps to mould us to a greater extent than is usually thought. The idea is not to have even a beautiful name, for the mere sake of the name, but for its beautifying influence upon the character that is to bear it daily and hourly company through life.

RED TAPE.

By FELIX FERRY.

"RED Tape," and "The Circumlocution Office," are terms first introduced into everyday speech by Charles Dickens. Referring to the caustic description in "Little Dorrit" of a certain public department, which the novelist represents as possessing over and above all competitors the art of "how *not* to do it,"—Professor Masson has said: "The Administration Reform Association" might have worked for ten years without producing half the effect which Mr. Dickens has produced in the same direction by flinging out the phrase, "The Circumlocution Office."

"Red Tape" is the official formality which rules in the above office, and in many less imaginary associations and organizations. The origin of the expression is of course found in the practice of lawyers and Government servants of tying together their documents with bands of this particular colour. As in the case of Rule o' Thumb, the technical meaning of the term has now become practically lost, in the metaphorical interpretation and application.

The life principle which is currently understood to be implied in the phrase "Red Tape," is diametrically opposed to the happy-go-lucky method of doing, or at least attempting to do, things which we have elsewhere seen to be symbolised by Rule o' Thumb. The stately, formidable system which bears the former title is, being translated, the sacrifice of common sense and simplicity for a vain exactitude, and ultra compliance with the letter, very often to the thwarting and denial of the spirit, of an injunction. It is a euphemistic synonym for a frozen formalism. As determining forces of conduct, both "Rule o' Thumb" and "Red Tape" are highly mischievous, abounding in peril, and should be forsaken for a far wiser middle course, which, sailing from Scylla, will not suffer wreckage on Charybdis.

Many amusing examples of the lengths to which Red Tape will stretch in its first and more superficial meaning are to hand. A story was printed in a notable book a few years ago of a high functionary, who had accepted a post in the English Foreign Office. He went in due course to take possession of his rooms. To his surprise he found a sentinel pacing with military precision to and fro the length of a dark passage.

The reason for this was not immediately obvious, nor why the soldier bade every passer-by "keep to the left." The newcomer asked the sentinel for an explanation; but the man had none to give. All he knew was that he was under orders to walk this passage, and issue ever and anon his curious warning. It was not for him "to reason why."

The Civil Servant of the Crown took the trouble to inquire further, and after immense pains it was disclosed, that on the walls of the corridor to the right being painted, some fifty years before, an orderly had been told off to keep people from spoiling the paint by suggesting that they should "keep to the left." The order, by some strange accident, was left uncancelled for fifty years.

Almost a parallel instance, and one quite as startling in its absurdity, appears in Prince Bismarck's "Table and Other Talk," collected by Dr. Busch. It purports to be given in the German Chancellor's own words.

"One day," says Bismarck, "I was walking with the Emperor of Russia in the Summer Garden of St. Petersburg, when, coming upon a sentinel in the centre of a lawn, I took the liberty of inquiring why the man was placed there. The Emperor did not know. The adjutant did not know. The sentinel did not know, except that he had been ordered there. The adjutant was then despatched to ask the officer of the watch, whose reply tallied with the sentinel's,—'Ordered.'

"Curiosity being awakened, military records were searched, without yielding any satisfactory solution. At last an old serving man was routed out, who remembered hearing his father relate that the Empress Catherine II., 100 years ago, had found a snowdrop on that particular spot, and given orders to protect it from being plucked. No other device could be thought of than guarding it by a sentinel. The order, once issued, was left in force for a century."

Believers in Red Tape, and in its sovereign efficacy to hold this strange, erratic world of ours on safe and steady lines, are numerous. The worthy folk who must have a rule for everything, and everything according to a fixed rule; who would, if the power were at their disposal, bend all their neighbours under the yoke of rigid obedience to their arbitrary laws; who are inveterate sticklers for ideas (we do not mean for moral principles, in which questions of right and wrong are involved—it is every one's duty to be a faithful standard-bearer of moral truth) in defiance of changed or changing conditions; who cling like limpets to every successive article in the code of etiquette, whether or not circumstances justify the waiving of ceremony;—these people are ardent "Red Tapists."

Some individuals champion rules that must have no exception. In season and out of season they are staunch advocates of their special "fads." Peace of mind only comes to them when these fads are honoured.

A story is somewhere told of a professor who belonged to this class. He was a most profound believer in ventilation. Compelled at a crowded inn to occupy a room in company with a fellow-traveller, he asked the latter to be good enough to open the window. "I can't raise the sash," said the gentleman, after essaying to grant the request. "Then knock a pane of glass out," retorted the determined professor. It was done. But

still, to the mind of the scientist, there was not sufficient air. He could not rest. At last he got up, and himself knocked out another pane of glass. The effect was magical; he was now able to sleep. In the morning, to the astonishment of the pair of travellers, it was discovered that the improved ventilation had been a figment of the imagination only. They had broken into a bookcase!

Even more troublesome to deal with are those men and women who will accept no excuse for unwitting infractions of social custom, and condone no trivial and accidental breach of professional etiquette.

People of this description are not absolutely unknown in any walk of life. And it occasionally happens that the tables are turned on the stickler for Red Tape. Such is said to have been the case with Lord St. Vincent, once the Commander-in-Chief of the British Navy. He was exacting upon minute points of discipline to a degree that was most irksome to his officers. One day a spirited young Lieutenant went on board the ship of the Admiral—who was then Sir John Jervis—for orders. The commander refused to give his instructions because the young fellow had no buckles in his shoes. The Lieutenant retreated, repaired the omission, and returned, meditating a clever retort.

The budget of orders was opened, but, to Jervis's surprise, the officer declined to accept them, pleading that from his superior's dress he could not discover at all in whose presence he stood. Sir John was fairly caught. Without another word he retired into his cabin, whence he soon emerged in the full costume of an Admiral, instead of in the simple undress he had before affected. The Lieutenant demurely expressed his satisfaction, took his chief's commands, and was shortly after promoted; for Jervis had the good sense to appreciate his spirit and wit.

"Red Tape," in the wider reading now given, as we have said, to the phrase under discussion, represents a sounding, but empty and infinitely dreary formalism. First, formalism carried to its extreme in behaviour and over-riding benevolence, generosity, and amiability. It ought to be shunned. True politeness is in no way dependent upon bondage to Red Tape. It has been well said that the foundation of all good breeding lies in Christianity.

If habits of self-abnegation and of kindly thought for others are cultivated, they will surely fashion a true and noble courtesy, which shall triumphantly endure the strain of the most awkward test.

It was an exhibition of this better politeness which had struck an old scholar of Westminster, who some years since gave evidence before the Commission on Public Schools. The witness said:

"I remember hearing of Lord Mansfield's brother being very ill in one of the boarding houses, and his mother, Lady Mansfield, coming there to see him. There was only one chair in the room, upon which the poor sick boy was reclining, and a friend, who was with him, was sitting on the coal-scuttle. When Lady Mansfield entered the room, the lad who was sitting on the coal-scuttle got up, and with perfectly natural politeness and good breeding offered it to her ladyship to sit down upon."

And on the contrary the want of this instinctive consideration for others often brings those who are only polite on Red Tape principles—because it is "good form"—into trouble and difficulty. It was a guest in a great house, who, man of fashion as he might be, evinced a glaring lack of delicacy to his own discomfiture by addressing a Lord North of a bygone generation thus:

"What an ugly woman that is," indicating a lady present.

"Sir!" replied the statesman, in tones of natural hauteur, "that lady is my wife!"

Whereupon the ill-bred speaker tried to atone for his rudeness, and floundered deeper into the mire.

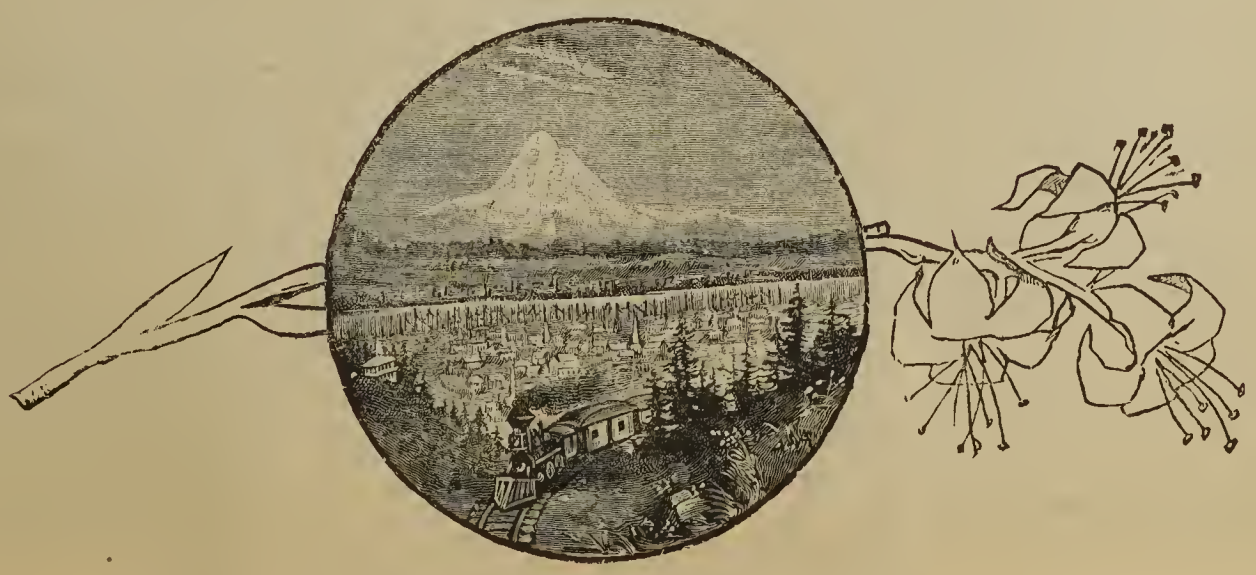
"You mistake," he said; "I mean the lady sitting near her."

"And that lady," responded Lord North, "is my sister."

The society in which we mix, voicelessly demands at our hands what the New Testament inculcates,—the culture of charity, gentleness, and long-suffering. From these roots the flower of genuine courtesy springs.

Again, Red Tape may not unfairly stand for *caste*, which exists in England as well as in India. Indeed, the tendency of the race to divide into sharply defined classes is a world-wide phenomenon. It should ever be kept in check by a remembrance of the revealed truth that we are all of one blood, in spite of our differences of colour, rank, or occupation; and that we are all bound—if we will accept for our Elder Brother, Him who is the Way, the Truth, and the Life—to the same Father's home.

Another common and mischievous manifestation of Red Tape bondage is in the sphere of thought and character. Not a few otherwise estimable people would apparently aspire to regulate the lives and habits of their fellows to one pattern, as the clocks of a town are timed together. They are quite convinced that the character of some neighbour or relative is growing awry if it does not conform to their own model. Half the bitterness of criticism may be traced to the captivity of the censor's mind to this sort of Red Tape. What eyes these folk have for an all-round perfection—no flaw anywhere. What a dull uniformity they would inaugurate if their individual views could possibly triumph. What to them is unusual they call eccentric, and what is eccentric they very industriously cry down. To argue with them is to waste breath, trouble, and time. They are a bundle of animated, discursive prejudices. They cannot release themselves from their shackles, and they will not suffer another to set them free. All that the pitying observer can do, is to take warning, and avoid sharing in their spirit of narrowness.



Without becoming in the smallest degree reckless or unwary—and thus adherents of the policy of Rule o' Thumb—we may struggle to have at all times an open and unbiassed mind, and a readiness to discern and follow the truth, even though it comes forth from somebody else's school, and not our own. We may strive in the Master's strength to crush into impotence

> "The low desire, the base design,
> That makes another's virtues less.
> * * * *
> The longing for ignoble things;
> The strife for triumph more than truth;
> The hardening of the heart that brings
> Irreverence for the dreams of youth."

Once more, "Red Tape" may symbolise to us, in the loftiest of all regions, devotion to religious form for form's sake, the religion of outward show instead of the love and obedience of the heart. In the old days when the Blessed Son of the Highest walked the fields of far-off Palestine, the Pharisees were a numerous body, who thus lived in conformity to the letter of the law, and denied the spirit which should have vitalized every commandment. The Evangelists record again and again the scathing rebukes with which Christ exposed their hollowness and uselessness. And even yet the formalist is with us.

Oh, let no reader of this paper be content with the mere husk and shell of religion, but instead, seek and find the salvation which makes all things new. Christ in the heart, the hope of glory, will deliver on the one hand from the terrible mistake of squandering the fast-fleeting year on things that perish in the using, and on the other, from the not less serious error of acting a religious part, while lacking a consecrated soul.

With this richest of all blessings—free to all who seek, knock, ask—life will be full of true peace and happiness, and animated by lofty purpose.

"YE ARE MY WITNESSES."

A STORY by the Rev. B. G. RICHARDSON, M.A., F.S.Sc.

PASSING along the street, on his way from the office where he was employed as a clerk, Henry Bernard was presented with a tract, having the somewhat striking title, "*What are your intentions? A friendly word to business men.*" Its contents were as follows:—

"You mean to do your duty, for your own sake, that from the bottom step you may reach, if not the top, at least a good altitude on the ladder of success. Unless some extraordinary event should hasten your progress, you cannot expect the attainment of your wishes for some years to come; and during those years, *what are your intentions?* Oh, you will be very diligent, and by integrity and industry, gain a creditable reputation with your employers; and, as to yourself, your motto will be, 'Work now, in order that the season of rest may be certain by-and-by.' Good! but if your most sanguine anticipations are realised, what are your intentions when the rest-day comes? Oh, then you will be the moving spirit in your social circle, and thus enjoy the remainder of life."

"Well," thought Mr. Bernard, "talk about delineation of character, mind-reading, and kindred sciences, here are my plans nicely noted down, and without my knowledge, too. I wonder what follows; perhaps the length of my life, the place of my retirement, or even the name of my future wife, may be predicted." He read on: "And now, dear reader, if I have expressed your intentions for the future, up to the quiet sail down the remainder of life's stream, let me seriously ask, what are your intentions when that journey is ended? Are you making arrangements for the launch out on the sea of eternity?"

Mr. Bernard's countenance assumed a serious expression as he read the closing words. "Ah," thought he, "that is just what I have failed to do. My plans only reach to the end of *this* life, and I am making no provision for the life to come. In my earnestness in seeking the things of Time, I am losing the things of Eternity." A sense of deep anxiety took possession of his mind; something must be done; how should he find out what it was?

The following Saturday he resolved to visit a friend in the country, and spend a Sunday with him, not because he expected much help from his friend, but that he might accompany him to church, where, he knew, a very earnest clergyman officiated. His friend was a professing Christian, but he had not yet realised the meaning of out-and-out consecration to Christ. He resided in a locality famed for its beautiful surroundings, and the Sunday after his friend's arrival being a charming day, he proposed a drive. Harry protested that, knowing as he did his friend's pleasure in attending the services, conducted by the clergyman referred to, he would not, for any consideration, be a party to his absenting himself. "Oh," the other replied, "I have so many opportunities of hearing him, and so few of seeing you." "But," said Harry, "is it quite right to go for this drive, when, by doing so, we neglect our duty to God?" "Perhaps it is not quite correct," answered Mr. Allen, "but I know you are saying one thing and meaning another, for church-going is not—as you have often put it—'in your line.'"

Harry was persuaded, and the two set off together, returning, after a tiring day, late in the evening.

The next day, soon after his friend had left, Mr. Allen received a visit from his minister, in answer to whose inquiry as to the cause of his absence from church, he remarked, "I was very sorry not to come, but a friend from London unexpectedly came down on a visit, and he prevented my coming; in fact, I took him for a long drive."

"May I ask," said the clergyman, "is your friend a converted man?"

"Well, sir," the other replied, "of some I should not like to say yea or nay, but of Harry Bernard I can assert that nothing is further from his mind than even the idea of his being a Christian."

"May I ask," the minister continued, "have you done all you can, as a follower of Jesus, to lead him to see his need of Christ?"

"Well, to tell the truth," said Mr. Allen, "I see him so seldom, that when we do meet, the time seems too short for even family topics of a general nature."

"But, my dear friend," the pastor rejoined, "God requires our services as His witnesses, and in Ezekiel xxxiii. He tells us how solemn and responsible a position we, as Christians, occupy. Look at the eighth verse, addressed to us believers as watchmen: 'When I say unto the wicked, O wicked man, thou shalt surely die; if thou dost not speak to warn the wicked from his way, that wicked man shall die in his iniquity; but his blood will I require at thine hand.' I daresay it would have seemed unkind not to drive your friend out yesterday, but your duty to God should have been placed first, and you know, dear friend, you not only neglected to warn the young man, but actually assisted him to wander farther from God."

Mr. Allen's conscience smote him during this address, for did not the young man beg to be allowed to accompany him to church, instead of going for the drive? Yes, he was verily guilty concerning this! And turning to the clergyman, who had risen to leave, he said, "Thank you for your faithful words, and when my young friend pays his next visit, God helping me, I will be faithful to him and to Christ."

That evening the sad news reached the town where Mr. Allen resided, that the midday up train had got off the track, while crossing a viaduct, and that ten persons were killed and many injured.

"Good heavens!" exclaimed Mr. Allen, "that was Harry Bernard's train; God grant he is not among the injured ones!"

The matter was solved next day, when, in the list of names published, that of Henry Bernard was found in the fatal column. Later on, a letter came from Henry's sister, who had been sent for to the injured man, a letter from her being found upon him.

"I reached the place," she wrote, "just before he died. He whispered, as I knelt beside him, 'Pray for me, Mary, and ask God to receive me as I am, for I didn't know how to mend my life, and there was no one to tell me; but,'—here his voice began to fail—'but, Mary, I longed to be saved. God be merciful to me, a sinner! Lord Jesus, I come to Thee, don't, don't cast me out!' These were his last words, and in a few moments, after a brief struggle, he was gone."

The sorrow of Mr. Allen was heart-rending, but he learnt a lesson he will never forget.

Dear reader! are *you* allowing precious opportunities of spiritual usefulness to pass away? Oh, live in the expectation of eternity, and put GOD FIRST in everything! In your homes, among your children, in your business, in your social circle, are there any who will be able to say in the great day of reckoning, as they turn their despairing gaze upon you, "You never warned me of my danger, or directed me to Christ"?

"Ye are My witnesses, saith the Lord;" "therefore thou shalt hear the word at My mouth, and warn them from Me. Be instant in season, out of season; reprove, rebuke, exhort"; "for ye know neither the day nor the hour when the Son of Man cometh."

CRISP CORRESPONDENCE.

"Model Husband and Wife" Competition.—If "D. Allingham" sends us her address, she will receive her Prize. In future, we cannot undertake to forward Prizes or Certificates to those who give no address. Any one may select a pseudonym for publication in our lists, but it gives us unnecessary trouble when full information is withheld from us.

Mrs. H., Linlithgow.—So glad you find our Notes so helpful. Yours is a capital plan. If other fathers would take up the Sabbath School lesson at family worship, as your good husband does, how interested the children would be! The subject is kept before the mind right through the week. Your free distribution of our Paper, if watered with believing prayer, is sure to bear good fruit. The Spelling Chase diphthongs are to be written like any others; "æ" and "œ" were frequently quite indistinguishable. *To glaze collars and shirt-fronts*, soak in lukewarm water to draw out previous stiffening, wash until clean in moderately warm water, rub on both sides with soap, and scald by pouring boiling water over, or else boiling in a perfectly clean, white-lined saucepan. Rinse repeatedly in cold water, till it comes off quite clear, and in the last rinse mix a little blue. Dry, but *not* in strong sunlight. With 4 ozs. of starch, mix two small teaspoonfuls of powdered borax, the same of turpentine, and as much water as will bring it to the thickness of cream. Linen dressed with this starch can be ironed at once. Keep your iron *very* clean. Rub its flat surface now and then with a piece of white wax. Do not lay muslin over the article to be ironed; it lessens the gloss.

A Seeker in God's Word.—"While I am seeking the Saviour, I am always doing wrong." Then why keep on *seeking*? Can you not trust His own Word that "he that believeth HATH everlasting life" (John 3. 36)? Of course you will be "always doing wrong" until you give up groping, and seeking, and doubting, and simply TRUST the Lord Jesus as your Saviour. He is waiting to save you. There is no need for you to keep "seeking" for the One who stands knocking at the door of your heart. We have not space for all the references you ask for. *Search* your Bible, and get a Cruden's Concordance.

How to Crystallize Fruit. An American Recipe. Boil one cupful of granulate sugar and one cupful of water together for half an hour. Let the water be hot when added to the sugar, and count the time from the moment the boiling begins. At the end of the time, dip the point of a skewer into the syrup, and then in water. If the thread formed breaks off brittle, then the syrup is ready; if it does not, boil a few minutes longer, and test again. The syrup must never be stirred, and must boil slowly, not furiously. When done, set saucepan in pan of boiling water, or pour syrup into a bowl, and treat that in same way, in order to keep syrup from candying. Take the prepared fruits or nuts on the point of a large needle or fine skewer; dip them in the syrup, and lay them on a dish which has been lightly oiled or buttered. When oranges are used, divide them into flakes, and wipe off all moisture. Cherries should be stoned. English walnuts are specially nice prepared this way.

No Joke.—If a young man persists in such a questionable habit as smoking, when conscious that it is far from agreeable to the young woman to whom he is engaged, does it not indicate an amount of selfishness which should make both parties face the important question: "Are we suited to each other, and are we prepared to make such mutual sacrifice of our own preferences as will ensure the future happiness of both?" It is better to face such questions *before* the happiness of two lives is wrecked.

E. M. L.—Bravo, plucky Competitor! You have tried two competitions, failed in the first, and are "quite sure you have not succeeded" in the second. Nevertheless you mean to go on, because you believe "it is a capital exercise, and a good thing, even if it only makes the competitors find out their ignorance." If you could see some of the "growlery" letters we get, you would know how welcome is yours! People almost affronted at a Certificate of Merit! How our poor tempers vary, to be sure! Some people are *so* pleasant, others—well, we will not be hard on them, poor things! We shall try to answer your question presently, but as you have been "asking about it for more than a year, and never got an answer," you must allow even our wisdom a little time for thought.

From the last Annual Report of the Birkenhead Y.M.C.A., a copy of which has just been sent us, it is evident that the Committee, and the energetic Secretary, Mr. T. Forsyth, are determined to make the future as successful as the past. The membership increased 50 per cent. during 1887; the attendance at the Educational classes in the same proportion; the various agencies for the spread of the gospel were well sustained, and a Gymnasium was organised. Encouraged by these tokens of appreciation on the part of the young men of the town, the Committee have decided to erect new and commodious premises at a cost of £5,000, a not inconsiderable proportion of which has already been promised; and have already purchased a suitable site.

RAIN.

By Rev. J. B. FAUNTHORPE.

RAIN! Very few have considered how beautiful is rain. I do not mean the beauty of the rain-drop, or the pearly dew-drop, but the simple beauty of rain, as when we say after a month's sultry heat, "Thank God, it rains."

Things are beautiful in various ways—beautiful to look at, beautiful to touch, to taste, and to smell; but rain is all these at once.

The sight of a few drops of rain on the pavement is a thing of beauty. And to allow a few of those drops to fall on us bareheaded is a pleasure of sense not often surpassed.

It is not very possible to catch a rain-drop in the mouth; but if it were, then at such times we could eat the rain even with more avidity than the English eat the air in the cool, dark evenings of the hot season in India.

And the smell of the rain—well, it is difficult to describe or remember a smell, but the smell of the rain is delicious. Perhaps it is the smell of the washed air. Perhaps the air is so dry, so dusty, so burnt up, that all the beautiful, all the delicious odours of all the summer flowers and summer leaves are imperceptible to us until the rain comes.

> "The rain, the rain, the beautiful rain,
> Sent from heaven o'er land and main,
> To fill man's heart with gladness."

Of course, if we were invited to a tennis party, and just as we were setting off, down came the pouring rain, we should be inclined to say that all this about the beauty of rain was just nonsense, and that rain was horrible, or perhaps horrid! And this goes to show that things are very much what we make them—a wider truth that than one can spell all at once. For instance, the sunshine, or laughter, or a beautiful rose, or a bunch of violets and toothache.

I remember once in Italy, in August, after a long, dry season, running out of the house into a thunder-storm, for the mere pleasure of it. And I remember travelling in Norway when every rain-storm invariably gave me a day's illness.

There are two things about rain that we English people know nothing about, so long as we remain in England. One is the entire absence of rain. What strange feelings most travellers across the desert feel—seas of sand, seas, but no rain. The other is the deluging of rain in the tropical rainy seasons, when in a short time it rains a foot or more of water. At certain places in India, for example, as much as six hundred inches of rain fall in a year. The rainiest part of England—Seathwaite, in Cumberland—is said to have two hundred inches in a year. London has about twenty-four, Liverpool nearer forty-two; Ireland more than England; England more than the Continent; France more than Russia, for reasons you can perhaps think out.

These rains differ according to the winds that bring them. Trees and mountains in reality, and the whistling of sailors by supposition, are said to have influence on rain.

A rainy day is Nature's working day, and plants are too wise to drink of working water. They let the water drop off to earth, and there be purified, and then they drink away. All their water is filtered, and perhaps that is why Shakespeare said there were sermons in stones. For plants work, and so do cats, but some humans ought to work more.

If you were actually in a rain cloud on a mountain, you would be in a cold, shuddery fog.

Typical of spiritual blessings, and chiefest of earthly, is rain.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

NOTES ON THE INTERNATIONAL S.S. LESSON.

By Rev. J. H. THORPE, M.A.

MAY 27TH.

PETER'S DENIAL.—*Matt.* 26. 58-75.

GOLDEN TEXT.—1 *Cor.* 10. 12.

THE lesson properly consists of two portions, ver. 58-68, and ver. 69-75. So that two general heads might be: (1) The Master; (2) The disciple; or, The Sufferings of Christ: (1) From His enemies; (2) From His friends. (1) The Faithful Witness, and (2) the unfaithful; (1) Jesus not ashamed of His Church, (2) His Church denying Him, etc.

I. Compare (1) the Martyrdom of Stephen; (*a*) accused by false witnesses; (*b*) accused of speaking against the temple. (2) The scene here was illegal, for both Jewish and Roman law regarded trials held, and sentences pronounced at night-time, as void. (3) Lessons from the *Silence of Christ* here and elsewhere. (4) The gentleness of Jesus (1 Pet. 2. 23). (5) Every sort of indignity was offered to Christ. His sufferings were of every possible sort—mental, spiritual, and bodily.

II. As to Peter's Denial (the main subject of the lesson).

1. The danger of fellowship with the world. A Christian out of place, and in bad company. Beware of bad companions; bad company in this world is sure to lead to worse company in the world to come.
2. How sin grows and increases when not resisted.
3. See what self-confidence and presumption may lead to.
4. The disciple of Christ cannot be long hid among men of the world.
5. (Peter and Malchus.) Times of fanatical defence of the faith may be followed by seasons of open denial.
6. A small matter makes us fall when God does not support us (the maid); a small matter can raise us again when His grace makes use of it (cock).
7. Causes of Peter's sin: (1) Distance from Christ; (2) Fellowship with the world; (3) Fear.
8. A weak creature may be a strong tempter.
9. Peter's Repentance: (1) *Secret*, "went out." (2) *Sincere*, "wept bitterly." (3) *Sustained*—his whole subsequent life showed this. "Those that have sinned sweetly must weep bitterly."—*M. Henry.*
10. *Oaths.* "None but the devil's sayings need the devil's proofs."—*Henry.*
11. Peter's Recovery by means of (1) Crowing of a cock (compare any event or providence); (2) The look of Jesus (to us by the Holy Spirit, His Word, etc.).
12. See the extent of the world's opposition to Christ: (1) How intense—to death. (2) How general—from the High Priest to the slave-maid.

S.S. NOTES (*continued*).

THE teacher should read the four narratives to gain perfect conception of scene. Peter stands at the outer porch; John gains him admittance. Stands round the fire in open court on account of cold. There occurred first denial. Retreats to outer porch, ready for flight, if necessary. Scene of second denial. Returns to fire, stands opposite door leading into judgment hall, from where, on third denial, Christ's look falls upon him (Luke 22. 61).

To give the lesson *force*, something of Peter's previous history and character must be introduced. Refer in the *first* place to

Peter's DEVOTION. His courageous promise (Matt. 26. 33 and 35). His evident attachment (Matt. 14. 28). His impetuous, valiant defence (John 18. 10).

Peter's ESCAPE. In spite of all this devotion, Peter with the rest "forsook Him and fled." Cowardly desertion; abject fear. If scholars should be thinking, "I would not have fled away like that," work in Golden Text, which should truly be a golden thread through whole lesson.

Peter's "No." Follows Jesus afar off. Cannot bear to leave Him entirely. Gains admittance to palace of Caiaphas. Three times asked if he knew prisoner. In each answer used the word "not" or "no." The presence of that one word soiled his character. One lie leads to another. "Peter drew his sword in presence of an armed band, but lied to a bantering maid." Could walk on the waves of Galilee, but fell before a taunt. We are known by our speech. "Happy he whose speech bewrays him to be a disciple of Christ."—*Henry.*

Peter's IMPIETY. One sin leads to another. Profane language. Probably an old habit come back. Force of habit.

Peter's AGONY. The simple crowing of a cock reminds him of the Master's words. Describe the Master's look. The two glances meeting. Rushes out. The strong man's tears. Difference between his sorrow and that of Judas. Sin *always* brings punishment.

Peter's LOVE. Was tested. Failed through weak elements—ignorance, selfishness, too much feeling and too little principle, weakness, cowardice. John, who took the bold stand by the Master, was unattacked: Peter, who slunk away among His enemies, was "hounded and taunted." Weak love meets with the most opposition.

Plan for blackboard:—

PETER'S { DEVOTION / ESCAPE / "NO" / IMPIETY / AGONY / LOVE. } Teach us to be { Distrustful of self. / Brave in love. / True in speech.

C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSON.

MAY 27TH.

THE TONGUE.—*Prov.* 10. 18-21; 31, 32.

IN ver. 18, two faults condemned—*flattery* and *slander*. On the first clause compare Psalm 55. 21, and beware of these reptiles. To profess love where there is only dislike and aversion, is to hide hatred with lying lips. Uttering a slander is the opposite vice, and equally condemned. Abstain from both.

Ver. 19. A word to great talkers. "He that tells *all* that he knows is very likely to tell *more* than he knows." It is impossible to be an incessant talker, and yet avoid error in some way. The outpourings of our hearts need filtering; but where a great volume of words is discharged, there is no time to filter. Quantity at the expense of quality. Wisdom is seen in due restraint. Consult the Epistle of James (ch. 3.).

Ver. 20. "*Choice Silver*," refined, cleansed from dross. There is solid worth in it. It is valuable material. Being silver, it is like those delicate instruments used in surgical operations, which will not poison and aggravate a wound. The tongue of the just may reprove without irritating. The "*heart of the wicked.*" Note the point of contrast—while the tongue, the *channel* of converse in the first, is so valuable, in the wicked, the very *fountain itself* is valueless.

Ver. 21. "*Lips of the righteous*," not the lips of the *learned*. It is those who *practise* well that are best fitted to teach. Ezra set his heart "to seek the law of the Lord, and *to do* it, and to teach. Observe the order.

> "*Think* truly, and thy thoughts
> Shall the world's famine feed;
> *Speak* truly, and each word of thine
> Shall be a fruitful seed;
> *Live* truly, and thy life shall be
> A great and noble creed."

The antithesis in the verse seems to be, the righteous has wisdom enough for himself, and to feed others too, while the fool dies because he has not enough for himself.

Ver. 31. Here, again, note the *moral*, rather than the intellectual qualification, though of course the latter is not excluded.

"Bringeth forth wisdom"—out of the abundance of the heart the mouth speaketh. The mouth of the just *gives forth* a blessing; the mouth of the froward *receives* a curse.

Ver. 32. The *moral* quality again. Discontent, "what is acceptable." See Eccles. 12. 10, not in the sense of being merely palatable, but profitable.

Ver. 31 sets forth the *readiness* of utterance in good things: ver. 32, the *discrimination* in the discourse.

JAMES L. STANLEY.

CHRISTMAS EVANS: THE BUNYAN OF WALES.

CHAPTER I.

"POOR little Wales" has been prolific of remarkable, if not absolutely great, preachers.

The names best known and cherished in England, are only as the quartz sparkling on the surface, indicating the wealth of reserves underneath.

If the "poor" Principality has not been eminently productive of politicians, philosophers, statesmen and scientists, it gives ample compensation in the great cloud of famous and original preachers, who rose from its hamlets, villages, and towns; causing the rocks to ring with their eloquence, and the people to be smitten by their fiery appeals.

Foremost amongst those prophets stands the mystic Christmas Evans, who for fifty years was a mighty force in the land. He was charged with a sacred electricity, which magnetised multitudes, and entranced all who came under the spell of his marvellous voice.

He held myriads captive with his forcible reasoning, he charmed them with the brilliance of his eloquence, and lifted them to heaven with the beauty and majesty of his imagery. His oratory was not the mere flow of a torrent of words, but the fervid outpouring of a soul aglow with heavenly fire.

The result of his immense power is seen in the fact that, though fifty years have passed since he passed through the pearly gates into the "palace of the King," his memory is still fresh, and his name an inspiration.

His personal appearance, though striking, was by no means prepossessing; his limbs were massive but unequal, his forehead was lofty and broad, his head so large that you can easily believe he had to be measured for a hat; beneath those dark and lofty eyebrows there flashed the light of one eye, and hence the reason he was known for years as the "one-eyed preacher of Anglesea."

So penetrating and fierce was the glance of that one optic, that sinners winced under his steadfast gaze, that Robert Hall asserted "it was sufficient to light an army through a thicket." His face was broad and open, his walk slow and slovenly, owing doubtless to the strange inequality of his limbs.

One writer, in describing Christmas Evans, aptly says that he was as one who had been formed the day after a battle, out of scattered and broken limbs of various victims. He made no attempt to improve his personal appearance, evidently giving a very literal interpretation to the words, "Is not the life more than meat, and the body more than raiment?"

But the strange countenance was illuminated with the intelligence which marked him out as a man of powerful mind.

He indeed possessed a mind of no mean order,—capacious, well balanced, and evenly developed. What are the qualities of a great mind? They are fourfold,—a clear perception, a strong and authoritative reason, a correct and faithful memory, and a fruitful and lofty imagination.

Perception is the power which hews the stones from the great quarry of truth. Reason selects out of those stores the choicest, and rears with them a structure of noble proportions; the Imagination gilds and adorns it, and Memory preserves it.

Christmas Evans possessed all these qualities of mind. He went to the rock of truth, Holy Writ, and hewed stones to his own mind, set them in order according to sacred science, rearing beautiful structures; which he adorned with graceful and lovely figures sculptured in the chambers of his imagination. Some of his productions are regarded as masterpieces of literature.

He was born in 1766 of humble parents; his father being a shoemaker in the obscure village of Ysgairwen, Cardiganshire.

Ben Johnson, in his "Life of Sydenham," remarks: "That the strength of his mind, the accuracy of his understanding, and the ardour of his curiosity might have been remarked upon from his infancy, by a diligent observer, there is no doubt; for there is no instance of any man whose history has been minutely related, that did not in every part of life discover the same proportion of intellectual vigour."

Hence the interest attached to the early days of great men, for the boy is father of the man. The escapes of Christmas during the period of childhood and youth,—like those of John Wesley and others, revealed a ruling Providence.

He fell from a tree, and was as one dead for a season; he was carried into a chasm made by a flood, and narrowly escaped being buried alive; he was run away with by a terrified animal; and he was stabbed, so that his life was despaired of; yet he lived, preserved and protected by Divine power for sacred purposes.

As a youth, he was thoughtful and meditative beyond his years; his thirst for knowledge was great, and his acquirements in those days, compared with his circumstances with means, were very remarkable.

When but nine years old, Christmas was subject to religious impressions. A great fear of death came upon him, haunting him for a long time, and it was not until he was seventeen that he enjoyed that blessed sense of peace which "passeth all understanding."

This joyous result was brought about through the instrumentality of that great preacher, Daniel Rowlands. He it was who established that powerful body, the Calvinistic Methodists. To this sect the young convert joined himself, and derived much blessing, profit, and encouragement from them.

The pastor of the church which he joined was a Mr. Davies, a singular man, and at the same time an eloquent and pathetic preacher. It is related of him that being caught in a storm and having no umbrella, he called at a farm-house and got a bundle of straw, which he opened in the middle, put on his head, and went on his way. One of his hearers, meeting him, expressed astonishment at his strange appearance, but his only answer was, "A roof of straw well becomes a man of clay."

Christmas Evans preached his first sermon, as many others have done, at a prayer-meeting, and created a profound impression. An intelligent hearer expressed his astonishment that one so young and uncultivated could preach so excellently; but the mystery of the masterly sermon was solved the following day.

The first sermon Christmas Evans preached was stolen, word for word, from a volume of sermons by the famous Mr. Rowlands.

"Even then," said his admirer, "there is something remarkable in that son of Samuel the shoemaker, for his prayer was as good as his sermon." The opinion of the youthful preacher would have suffered 100 per cent. had they known (what was afterwards discovered), that the prayer also was a verbatim plagiarism, and was, like the sermon, a mere recitation.

This was a bad and inexcusable beginning; and spoke ill indeed of his morals. This he afterwards frankly confessed, greatly condemning himself.

Christmas Evans was only eighteen when he delivered his first sermon, and for some time afterwards he suffered great spiritual darkness, passing through a furnace of fiery trials. But the night passed and day dawned; and this was the way in which the clouds scattered:—

Coming home from a fair, whither he had been with cattle, he was attacked by six young men who beat him unmercifully.

The night following this dastardly occurrence he had a terrible dream. He imagined that the day of judgment had arrived, and he says, "I saw Jesus in the clouds, and all the world in flames. I was in great fear, and cried piteously, though I felt some confidence and peace, and the Lord said to me, "Thou oughtest to be a preacher; but what wilt thou do now, the world is on fire and it is too late?" On this he awoke.

That dream he regarded as the Divine call to the ministry; it influenced his whole career, and all his sermons seem to have been dipped in the liquid fire he saw that night.

(*To be continued.*)

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "Water Gipsies," etc., etc.

CHAPTER XIX.

IT is a well-known fact, that when a good man falls, he falls indeed. A little meaner does he become, a little blacker; a little more despicable than the weaker brother, who was never, perhaps, remarkable for goodness, who was always a little uncertain and a little faltering. Graham had been considered good; he had been looked up to and made an example of; other young men had been asked to copy him; other young men had been entreated to make him their friend.

"Look at him," fathers, and mothers, and guardians had said; "see how steady he is, —how he refuses the evil, and chooses the good. He is the son of a Christian mother; ay, her prayers have been answered for him; he is indeed religious, indeed and truly one of the sons of God."

They thought that Graham was especially chosen and elected as a shining light of the Christian world.

"'As to that hundred pounds of yours, keep it! I prefer beggary and starvation to bread bought with that money.'"

They did not know that the goodness that simply comes from example, that the goodness that is not strengthened and supported by God Himself, that the goodness which has never clasped the strong hand of Christ, was all that Kenneth Graham could ever lay claim to. Consequently, in the evil day, the man who had never prayed for help from on high fell, and his fall was great.

On the evening of the day when poor Jonas Alexis was re-arrested, Kenneth Graham received notification of the fact. Shortly afterwards, also, he was given a cheque which contained the somewhat substantial reward offered by the Government for the capture of its prisoner. When he received this, he did feel stunned at heart.

"It is the price of blood," he kept saying to himself. He sent it, by the very next post, to one of the London hospitals, and hoped that he had whitened his soul a little by so doing.

But now a curious, and yet a natural change came over him. Hitherto he had sinned and been wretched. He had told his wife lie upon lie; he had told his early friend lie upon lie; he had been unfaithful to a dying mother's trust; he was a thief, for the money he used was not his.

Finally, deepest sin of all, he had betrayed his old friend, and to ensure his own greater safety, destroyed that friend's last chance in life, and sent him back to penal servitude.

This last sin, he knew well, was the worst of all; for this last sin was the result of the lowest form of cowardice. Graham feared for his own safety, therefore his old friend must be absolutely sacrificed.

He wondered himself that, after this last cruel deed, after this blackest of all his sins, his conscience should sleep, the pains of remorse should cease to trouble him, the heavy burden which weighed upon him day and night, like an awful nightmare, should be to all appearance lifted, and he should feel once again at ease and at rest.

It did not occur to him that his might be the ease of a seared conscience. He was much relieved by the change in his mental condition; and once more began to enjoy life.

He felt that he had two years of perfect safety before him, for during that time Alexis would be safely away from him, working out the remainder of his sentence at Portland. At the end of that time he was fully resolved, by hook or by crook, to send his old chum to the other side of the world.

In the meantime, however, he was quite happy and comfortable. He was a very tender and indulgent husband, and he lost the little fretful and worried look which had been as a slight shadow to his wife during the first months of their marriage.

Kate was a very sensible woman, but as regarded her husband she was somewhat of a hero-worshipper. She thought her Kenneth one of the best of men.

One thing alone troubled Kate about her husband: he never would go to church with her.

"No, no," he said to himself, "I have chosen this world. Although my sin does not cause my heart to ache any more, yet I cannot deny that I am an awful villain; I cannot deny that God thinks my soul very black. I will not go to church, and pretend that I have any hope of heaven, too. I have chosen earth; I do not suppose I have the most remote chance of heaven."

Kate, therefore, who loved God better and better every day, to whom religion meant much,—the life of her life, the strength of her soul,—was not angry, but sorrowful, when she saw that in this her husband would not follow her.

She prayed most earnestly, most passionately for Kenneth; these prayers comforted her, for she felt certain that God would answer them, and she and Betty went to church together.

The other inhabitants of Exmoor Square once again saw the queer old servant accompanying her mistress to church; but now the mistress was young, and bright, and fair; and she knew most of her neighbours, and had a cheery word for each. It was the servant alone who was morose, and had a scowl and a frown, to meet each gleam of sunshine that fell across her path.

Two years, after all, are not a long period of life. To Kenneth the days seemed to fly; he was working hard, all his enterprises were prospering; he was fast growing rich. Kate's three sisters still lived with their chaperon at Croydon. Two of the three girls were still unmarried; but just after Kate and Kenneth had been married two years, Alice became engaged, and very soon afterwards was married. She and her husband went to India, and Kate knew that she had one charge the less.

Just then, to her surprise, Graham made a proposal to her.

"It seems folly to keep up that house at Croydon any longer, Kate; you had better bring the other two girls here to live."

"Oh, Ken; but you know you are not as fond of my sisters as I am."

"I honestly confess I'm not fond of them at all, but that is no matter; our honeymoon has long been over. We must learn not to be always *tête-à-tête;* and besides—and most important—it seems the height of folly to keep up a separate house for two girls. We cannot, and ought not to afford it, Kate."

"But we have plenty of money to do it, dear."

"I cannot agree with you; we have *not* plenty of money. That is so like you, Kate, always supposing, because we are lucky enough to have a capital of a few thousand pounds, that we are rich. We are anything but really rich; and I am anxious to invest a little more in the business."

Kate sighed faintly.

"I will do what you wish," she said; "but remember, Kenneth, that we hope—we hope—that our lives will be a little fuller in the winter, when, when our dear little baby comes."

Graham went over and kissed his wife.

"My darling, I have to think of our boy—of course baby will be a boy, Kate; and just for that very reason I am more than ever anxious to economise."

So Kate gave up Myrtle Cottage, found another situation for Miss Beale, and brought Polly and Nellie home to Exmoor Square.

Many of her friends congratulated her on having such bright and pretty girls to enliven the old house; and as Kenneth himself had asked for the girls, she felt rather glad to have them with her.

Nellie was a very gentle and useful little creature; and she was only too delighted to help Kate in making up those mysterious small garments which would be wanting by-and-by. She also helped Mrs. Graham in her numerous charities; she had a class in a Sunday school; and was, in short, quite a little busy bee.

Polly was more difficult to manage. Polly still thirsted for admiration, and was, more or less, a do-nothing.

She took no interest in books, she hated needlework, and she detested evenings spent quietly at home. She stood, however, in considerable awe of Graham, and when he was present, behaved fairly well.

Thus the two years which were to complete poor Alexis's sentence ran themselves out; and the day when he was to be once more a free man on the face of the earth drew near.

CHAPTER XX.

GRAHAM had corresponded with one of the chaplains at Portland. He had asked this man to give him an account, from time to time, of the prisoner Alexis; he had also made a special request that his name should not be mentioned to the prisoner,—that the fact of his taking an interest in him should be kept a secret.

He gave the chaplain his business address, and said that letters which contained news of Alexis would always be acceptable.

The chaplain, a brave and excellent man, whose experiences had been varied,—some of them terrible, some of them almost despairing, a few, a very few, hopeful,—wrote to Graham about every six months.

He said he was glad—very glad—that the poor prisoner had so influential a friend. He had known Alexis for several years now, almost, indeed, from his first arrival in Portland.

He had been imprisoned for forgery, and circumstances had attended his crime which had made his sentence exceptionally severe,—in the chaplain's opinion, too severe.

He had always felt a great pity for Alexis, for he believed him to be more sinned against than sinning; he had always found him docile, gentle, very grateful for small kindnesses, a man of few words, but obliging and good-tempered.

If a prisoner could be a favourite, Alexis had been rather liked than otherwise by the warders and the officials generally of the prison. The chaplain did not consider him a humbug; he was always very glad to receive a visit from him, but he made no loud professions of repentance.

Still, the chaplain thought well of him, and believed that when his term of imprisonment was over, he would really turn over a new leaf, and go and sin no more.

This, the good chaplain said, was his first impression of Alexis; these were his ideas before the prisoner had made his very remarkable escape from Portland.

When he was brought back again after his capture, there was a marked change in him, and that change was for the worse.

He was no longer the sad, gentle, broken-down looking man. His sadness had changed to a morose, gloomy, defiant expression; he was sulky; he snarled at those who spoke to him; he only worked because he must.

The chaplain now felt uneasy about his prisoner, and he spoke about his uneasiness very frankly and fully to that prisoner's good friend in London.

Graham told Mr. Marshall,—for the Rev. Henry Marshall was the good chaplain's name,—that he intended materially to assist Alexis; and he thought the best thing he could do was to give him means to emigrate, and so enable him to have another start in a fresh world.

Mr. Marshall approved of this idea, and he and Graham worked it out between them, exchanging many letters, as the time of Alexis's liberation drew nigh. The chaplain had been most careful, guided by Graham's wishes, to drop no hint to Alexis of the inter-

vention of his benefactor. By his contrivance, however, it was arranged that Graham should see Alexis in the chaplain's own house on the day of his release. That day came in the winter, in the beginning of November.

A letter awaited Graham one morning at his office, making an appointment for him to meet Alexis the next morning early, at the chaplain's house.

He had always known that this letter would come; he had even known the day on which he would receive it; nevertheless, when he broke the envelope and read the contents, he felt his strong muscular hand shaking a little.

"Of course all will be well," he muttered, under his breath; still, however, there had been a feeling of security in knowing that the fellow was incarcerated in a place where he could hurt no one, not even himself.

Graham was a little *distrait* over his work that morning. He wore a slight, very slight, air of worry, and was not quite the cool, calm, admirable man of business he was as a rule.

In the course of the day he visited his bank, and took away from it cash in notes and gold, to the amount of £100. He had carefully thought over the exact sum he would offer Alexis. He wanted to give him enough to tempt him to leave the country without a minute's delay; and yet he felt that if he offered too much, he would arouse the very suspicions which he wished to allay.

He put his money into a pocket-book, and hastened home to Exmoor Square.

Kate was waiting for him in the drawing-room. He was at home more than an hour before his usual time, and she rose to receive him with a little cry of pleasure.

"Ken, darling, I am not feeling very well. I am so glad you have come back."

"But I must go out again, Kitty," he said, calling her by his tenderest name, and raising her face with his hand to look into her eyes. "I must go out again. I have just come home to pack up. Where are your sisters, Kate? You are not really ill, are you, darling?"

"No, I suppose I am fanciful," said Kate, trying to smile. "The girls have both gone out for the evening, and I was alone. It seemed so good to see you coming in, Kenneth. What do you mean by having to pack? You are not really going away just—just—now?"

"I shall be back again to-morrow, dear. Most urgent business takes me away to-night. I am more sorry than I can say. Kate, you really do look very pale! What good are those girls, to be away from you just when you most want them?"

"Oh, Ken, my dear, you know you said last night how much you would like an evening all alone with me! Poor Nellie and Polly are certainly not to blame."

"Well, love, we won't waste words in blaming them, particularly if it annoys you. Now, Kitty, you will promise to be very cheerful when I am away!"

"I'll try to, of course, Kenneth. You'll be sure to come back to-morrow, dear?"

"Oh, certain, positive. You may expect me to dinner. Now I must run upstairs, and put a few things into my travelling-bag, and then I must be off."

"Won't you have something to eat first?"

"I have no time. I must be out of the house in five minutes, if I want to catch my train."

Kate hesitated, and changed colour. Kenneth saw that she was about to speak. He made a movement of impatience.

"I really must be off, Kitty," he said. "Have you anything more to say?"

"No, no, darling—only give me your address. Tell me what hotel you will stay at to-night, and to what town you are going. It is not at all likely, but I may, yes, I *may* want to telegraph; and it will rest my mind to feel I can do so."

Kenneth had been prepared for some such question as this. Nothing would induce him to tell his wife where he was really going. Such knowledge would perplex her. Such knowledge might be dangerous.

He considered for a brief half-minute, then taking a card out of his pocket, he scribbled the name of a hotel on it.

"I'm going to Liverpool," he said, "on business for the firm. This address will find me until noon to-morrow."

Then he kissed his wife and parted from her. She put her arms round his neck, and clung to him passionately for a moment; but finally she let him leave her without a word.

CHAPTER XXI.

"YOUR influence and kindness will certainly have the most beneficial effect on the poor fellow, Mr. Graham. You must be an old friend of his; you doubtless knew him in happier days."

Graham was standing in the prison chaplain's modest little parlour.

"You doubtless knew him in happier days," repeated Mr. Marshall, looking almost wistfully at his guest.

The chaplain had a rugged, but powerful face; his eyes had a piercing glance in them: truth was written all over him—truth, and also the ability to look into a lie.

Graham felt a queer sensation when he looked at this man. All in an instant, a horror seemed to seize him; the remorse which he thought dead, awoke fiercely; a pitiful longing for the lost good came back to him.

Alas! he was well accustomed now to telling lies; he told them to his wife, to his friends, to any one, when he felt it necessary to screen his sin; but curious as it may seem, he could not tell a lie to the prison chaplain.

"Yes," he said gravely, "I knew Alexis when he was a boy; you may tell him, if you will, that an old friend is waiting to see him in this room."

The chaplain went away; and a moment later the ex-prisoner was ushered in.

The prison garb was off, and he was dressed in a queer, obsolete suit of clothes, which he doubtless had worn when he was committed to prison years ago; they were out of date, and hung loosely on his spare frame.

His face was very haggard and deadly white; he looked more like the ghost of a man than a veritable human being of flesh and blood.

Nevertheless, when Alexis entered the room, there was a gleam of hope in his sunken and sad eyes. The moment he saw Graham that look left them; he had come in with a timid sort of expectancy, a shadowy beginning of an undefined hope; now he drew himself up, and his brown eyes blazed.

"My old chum!" he said, and he sat down on the nearest chair and covered his face with his hands.

Graham, with some reluctance, drew close to the wretched man.

It is a well-known fact, that the more we injure people, the more, as a rule, we hate them. Graham, had he consulted his own will and pleasure, would have fled miles from Alexis; but he must not think of his feelings now; he must soothe, he must propitiate, he must mould this weak and plastic being to his will.

Surely the task was easy; surely there never was a more wretched human specimen than poor Alexis.

"I have thought of you, Alexis," he began; "I have not forgotten you, during these two last years, and the facts that we have been boys together, and that our mothers cared for each other, have been remembered by me. Now I want to help you; your term of punishment is over, you must begin again, and forget the past; you must commence once more to live. I will help you to live."

Alexis did not make any reply; he sat motionless on the edge of the chair where he had sunk, his hands still covering his face.

"I must help you to live," continued Graham. "Have you—have you any plans?"

No answer whatever from the man who for so long had been a unit among units, who had been simply spoken of in that vast prison as a number.

"Have you any plans?" repeated Graham, once again.

"We don't make plans at Portland," answered Alexis, dropping his hands and looking up at last, and raising his head. Then he rose to his feet.

"Good-bye," he said; "I must be going. I thought for a minute it was my mother, when the chaplain spoke of an old friend. I thought maybe my mother wasn't really dead—it was a mistake, of course—good-bye."

"I will walk with you, Alexis," said Graham. "I will take you to a hotel, and we will have breakfast together."

"*You!* that you won't. I wouldn't be seen out with you!"

"My dear good fellow, what do you mean?"

"What I say. I'm low, I know that as well as anybody; but I'm not low enough to walk with you."

Graham felt himself colouring, then paling; his heart beat a little heavily. How queerly Alexis was speaking, poor fellow; the prison life had evidently affected his mind.

"We will have our talk here, if you prefer it," he said; "I have made plans for you. As I said, Alexis, I am most anxious to help you. I have brought money with me, which I hope you will accept for the—the sake of old times."

"I wouldn't talk of old times, if I were you," said Alexis, for an instant raising his eyes, which had been fixed on the ground.

"I am sorry to distress you, but I fear I must; I have brought money, money sufficient to give you a start. I should recommend you to go to some other land, where life will be fresh and bright; I will, of course, leave the choice with you, but I would suggest New Zealand or Australia—America is too near."

"Why, it is a few miles from England, after all."

"Let me finish what I have to say, Alexis; I would suggest Australia or New Zealand as the better places, for every reason."

"Why? You must explain what 'every reason' means."

"Oh, I must explain? Well, the climate is more like ours, and—and—these countries are not over-crowded; there is a better chance for a man to make an opening for himself in Australia or New Zealand than in America."

"And they are farther off," continued Alexis, quietly. "Farther from the old

country. When a man has to be put away, he is better put away there than in America; I quite understand. Have you anything more to say?"

Graham could not help looking at the man, who had so lately been a prisoner, with a queer sensation of growing uneasiness; he was not quite plastic in his hands as he had hoped.

"I want to give you the money," he continued. "I have brought one hundred pounds. You will accept it for the sake of old times, will you not?"

"And because we were such old chums, eh, Graham?"

"Now, my dear fellow, why will you bring a sneer into each of your words?"

"Oh, *I* sneer? It is not of the smallest consequence what I do. I suppose you have quite finished what you've got to say, Graham; and as my time no longer belongs to Portland prison, but to myself, I mean to make use of it. I am going."

"Well, take the money. You will think about Australia or New Zealand."

"I will not."

"You are very queer, Alexis. Take the money, anyhow."

"I will not touch it—no, not with a pair of tongs."

"My dear fellow, £100!"

"Keep back, sir; it is yours, and therefore it would poison me. Who sent me back to prison? answer me that. Who used civil words, and then betrayed me? answer me that."

"I—Alexis—my poor fellow! I don't wonder you are bitter, but you would always have been hunted down—always in hiding. Now you are free; now you need fear no man. I meant it for the best; it was like the surgeon's knife, cruel, but kind."

"Keep your intolerable humbug to yourself. I have listened to you so far with patience. God help me if I listen to another word from your cruel, craven lips. You sent me back to prison, and I lived through the two years. How and why? I lived on the thought of revenge. I knew that at the end of two years I could come out and make things uncomfortable for you.

"You cannot deny that you were my old friend. You cannot deny that you knew my mother, and now, with my own name, the name of Jonas Alexis, I will meet you in public places, and force you to acknowledge me. You cannot get away from me, for I will dog your steps; I will haunt you, and come upon you when you least wish to see me; and if I can find out any shady act in your immaculate life, I will blazon it abroad.

"No, thank you, no Australia or New Zealand for me. I wish to live near my old chum, the good fellow who was so gracious and helpful in my hour of need, and who has such kindly memories of our boyhood together. As to that hundred pounds of yours, keep it. I prefer beggary and starvation to bread bought with that money."

THE ANTEDILUVIANS.

By PHILIP HENRY GOSSE, F.R.S.

WHO has not felt a wish to know the history of the world before the flood? Who has not longed to lift the veil of impenetrable obscurity that has fallen upon that protracted period, and to learn what men did, and thought, and said; what mighty works were accomplished; what deeds of renown were done; what triumphs in science and art were won in the new-born earth, when man's life extended to nearly a thousand years? But the Spirit of God has not thought good to gratify our curiosity much on these points. The record of sixteen centuries and a half is briefly told: it was a period of mighty wickedness; the protracted duration of existence enabled men to run riot in crime; and "the earth was filled with violence." Skill and ingenuity in the arts, music and song, opulence and consequent luxury (Gen. 4. 20–22; 6. 2–4), indeed characterized the age; but these things, though highly valued among men, are of little worth, of themselves, in God's sight.

Not one of Cain's race is mentioned as having turned to God. Indeed, amidst the almost universal apostasy of mankind in the antediluvian ages, there appear to have been very few points on which the eye of God could rest with satisfaction; at least, if we may judge from what He has told us. The individuals concerning whom we may gather that they found grace in His sight during all those centuries are no more than these: our first parents, Abel, Enoch, Noah. We need not conclude that these few persons constituted literally *all* the saints of God that lived before the flood; possibly there were thousands of humble godly souls scattered through the seething mass of iniquity that filled the earth; but these are all of whom the Holy Ghost has conveyed to us any information, and it is of these alone that we can speak with precision. The words of God to Noah (Gen. 7. 1), however, and those of our Lord (Matt. 24. 39), as well as those of the Spirit (Gen. 6. 11–13), imply that in that closing age of the period, at least, Noah was singular.

The "scribe who is instructed unto the kingdom of God" is aware that the history of those whose actions are recorded by the All-wise Spirit has been written, not only to afford us direct examples and warnings for our guidance in like circumstances to theirs, but to shadow forth a deeper and more mystical instruction, not to be obtained without searching, but, when found, abundantly repaying the labour, and making the sacred pages full of precious truth, on which the believer may feed, and be nourished "unto a perfect man." The history of Israel in the wilderness affords many instructive "types of us" (1 Cor. 10. 6–11); the first Adam was "a type of the coming One" (Rom. 5. 14); the birth of Ishmael from Hagar, and of Isaac from Sarah, were allegorical fore-showings of the covenant of works and the covenant of grace (Gal. 4. 22–31). In like manner, the brief notices of these four patriarchs, Adam, Abel, Enoch, and Noah, present a succession of pictures or tableaux, of a believer's life in Christ, each occupying its proper order, and all uniting into a perfect whole.

I. Adam (Gen. 3. 6–21). Here we see a guilty sinner, apostate from God his Maker (ver. 6), first seeking to hide his nakedness in a covering of his own making, a righteousness of his own devising (ver. 7); yet, as conscious of its worthlessness, seeking to avoid the Divine all-seeing eye (ver. 8); then found by that Lord whom he had offended, standing in His presence self-condemned, his mouth stopped, to hear his sentence (vers. 10–19). But what does he hear? A message of grace, the glad tidings of a Deliverer, mighty to save, who should assume *his* nature, to fight *his* battle with the terrible adversary.

Helpless and hopeless, the poor guilty one embraces the promise; the mode in which the salvation is to be accomplished is set before him, under the symbol of an innocent animal pouring out its blood * in sacrifice; and his faith gladly accepts the substitution. The skin, which had been the proper clothing of the victim, becomes a robe to cover *his* nakedness; and he is invested with it by the Judge Himself. Thus he has passed out of the condition of a condemned sinner into that of an accepted, adopted son.

This is the first step of the ladder that reaches from earth to heaven. The transition from a state of guilt and death into one of justification and life, into absolute and perfect and irrevocable acceptance with God, is the very foundation of a Christian's course. He is not called to work up *towards* this, through a long probation, and succession of efforts and attainments; it is the commencing point *from* which he is to work. Until he has laid hold on Jesus as the great and perfect propitiation, he is nothing; his spiritual life has not begun; but the moment his faith has recognized the blood of the atoning sacrifice as *his* answer to the claim of a broken law, in that moment he stands before God clothed with the imputed righteousness of Christ.

II. Abel (Gen. 4. 4). Here we have the worshipper. It is no longer a trembling sinner laying hold on the hope set before him, but an accepted son, using the privilege of sonship, and coming with boldness (Heb. 10. 19) into his Father's presence. Worship, real spiritual worship, must be this; it can be nothing else, nothing short of this,—a drawing near to God by the living way that He has appointed, an entering into the holiest of all. But there is no way into the holiest but by the blood of Jesus; and so we find Abel, the worshipper, coming to God with the blood of his choice lamb.

Cain came, or thought to come, without blood, bringing probably the best he had of what had cost him the sweat of his face; his own work, the fruit of the earth that had been cursed. Thus, still, multitudes fondly suppose that they worship God, who fancy that He will be satisfied with what they call "doing their best"; but do not for one moment think of coming through the blood of Jesus. But, without this, their so-called worship is Cain's offering!

True worship implies pardon. Abel must first have known the pardoning, justifying, cleansing power of the blood of Christ, by anticipative faith, before he could come into the presence of God with the calm boldness of an offerer. He must have stood in the position in which his father Adam is presented to us, of a *believing penitent*, before

* This is legitimately inferred from the fact that the clothing with which Jehovah clothed them was of *skin*; for skin necessarily implies an *animal*, and that animal dead. So that this brief text (Gen. 3. 21) is the first distinct figuration of God's great plan of salvation by the death and righteousness of the sinless Saviour. It is a very clear and full type; though, perhaps from its extreme brevity of expression, it is in general little noticed.

he could take the place in which he stands, of an *accepted worshipper*. But his act of worship is a recognition of the same blood as still the only ground of his approach. He presents before God, in acceptable worship, that same Lamb which God had presented to him as the object of his faith. He thanks God for His unspeakable gift (2 Cor. 9. 15), and he rejoices with God in it. For fellowship with God is fellowship in His beloved Son. Jesus is most precious to the Father, and to those who believe He is also precious (1 Pet. 2. 6, 7).

III. Enoch (Gen. 5. 21–24).—The saint is now presented to us in another phase,—*walking with God*. This is a distinct advance from the preceding character, though inclusive of it. Worship is the first instinctive act of the new nature: walking with God is the matured spirituality of the adult saint. "Can two walk together except they be agreed?" (Amos 3. 3). To walk with God implies a knowledge of His will and character; a delight in the things that please Him; an abstinence from the things that He disapproves; conformity to Him in affection and purpose; a reverential hearkening to His word; an indifference to the world's approbation or contempt; a denial of self; a crucifixion of the flesh, with its affections and lusts; an acute sense of the honour that cometh from God; and a fervent zeal for His glory. And it implies the existence of these characteristics, not now and then, impulsively, but abidingly, as the habitual condition of the spiritual being. For *walking* is not a momentary action, but an enduring course of maintained activity. The saint who thus walks with God, fails not to receive a testimony, or "good report," from the Spirit that he pleases Him (Heb. 11. 5). The complacency is mutual; the Lord delights in His obedient child, and manifests towards him the sweetness of His unchanging love. He cheers, comforts, and protects him; guides him by His counsel, sustains his drooping strength, and makes him "more than conqueror" over all his enemies. There is, in such a case, a realization of that precious promise of the Lord Jesus: "If a man love Me, he will keep My words; and My Father will love him, and We will come unto him, and make our abode with him" (John 14. 23).

Nor is such a happy and holy condition at all inconsistent with the common relations of life. Holiness is not an evasion of ordinary homely duties, nor an ascetic abjuration of them, as if there were something essentially defiling to the spirit in them; but a performance of them all with heavenly motives, as unto God (Eph. 5. 21, 22; 6. 5-9); with a faithful aim to please Him by doing them. It was in the midst of the homely labours of a carpenter's shop that the blessed Son of God passed His spotless childhood and early manhood. And the holy Enoch "walked with God, after he begat Methuselah, three hundred years, and begat sons and daughters." It was not as a hermit fleeing to the desert, nor as a monk shut up in a cloister, but in the social duties and endearments, the joys and trials of a husband and a father, that Enoch maintained his walk with God in the midst of an apostate world, and elicited the testimony of the Holy Ghost that "he pleased God."

But in Enoch we see also the faithful monitor of the ungodly around him. Habitually walking with God, he partook of God's counsels (John 15. 15), and looked forward to the coming judgment; and the knowledge thus obtained by communion with his Father, he used in solemn but surely affectionate warning. "Behold," he cried, "the Lord cometh . . . to execute judgment!" (Jude 14). They who most intimately cultivate communion with God will be most sensibly alive to the solemnity of that hastening judgment.

IV. Noah (Gen. 6.–9.).—As, in the cases already noticed, each new phase of character implied those of its predecessors, so it is still. Noah, like Enoch, "walked with God" (ch. 6. 9), and this, as we have seen, necessarily included *worship*, the coming into the holiest by the blood of sprinkling, as that had implied the previous acceptance and justification of the person. Like Enoch, too, Noah was "a preacher of righteousness" (2 Pet. 2. 5), faithfully rebuking the apostasy that was swelling like a flood-tide over the earth, and solemnly warning the world of approaching destruction; thus carrying on the prediction of coming judgment that Enoch had begun.

But more than this. In Noah we see at length the believer passing unharmed through the judgment, and entering into a New Creation. The vengeance of God against the corrupt world, which His servant had faithfully preached, came at last, in spite of all the contempt which rebellious sinners, misusing the long-suffering of God (1 Pet. 3. 20; 2 Pet. 3. 9, 10), had poured upon the message. "They did eat, they drank, they married wives, they were given in marriage, until the day that Noah entered into the ark, and the flood came, and destroyed them all" (Luke 17. 27). But the despised faithful preacher, borne up in the ark of safety above the swelling waves, floated in tranquillity and peace, as free from danger as from fear, until the new earth emerged from the waters, purged and purified from all its defilement. Then he came forth, and took unchallenged possession of the renewed world, the head and ruler of a domain, in which he had formerly been the despised and rejected ambassador for God.

In the ark "few, that is, eight persons were saved by water" (1 Pet. 3. 20). The surging, whelming flood, which drowned the whole world beside, ever, as the ark floated on its surface, lifted them higher and higher, and nearer and nearer to God. Why were they safe amidst destruction? Because "Jehovah had shut them in" (Gen. 7. 16). The Ark is Christ. God Himself has shut and sealed us in Him. "Your life is hid with Christ in God."

The day is swiftly coming, when the lowly believer, now patiently walking with God in humble obscurity, unnoticed or despised, shall be borne in triumph to the presence of his Lord. He shall calmly witness the pouring out of the long-restrained, but certainly predicted vengeance of flaming fire (2 Thess. 1. 7, 8) on the finally obdurate. Then he shall see the "new heavens and the new earth, wherein dwelleth righteousness," recreated from the ruins, "according to the promise" (2 Pet. 3. 13). He shall rejoice in the new inheritance, whence the wicked shall have been purged away; and shall delight himself in the abundance of peace (Ps. 37.); while he himself shall be associated with the glorified Jesus, in His throne, as Ruler and Head of all (Rev. 3. 21), the joint-heir with Him of all His glory and His joy.

"Ye therefore, beloved, seeing ye know these things before, beware lest ye, being led away with the error of the wicked, fall from your own steadfastness. But grow in grace, and in the knowledge of our Lord and Saviour Jesus Christ. To Him be glory both now and for ever. Amen."

ACROSTIC COMPETITION.

OUR Acrostic Competition has called forth some excellent work, though it was perhaps too difficult to be thoroughly popular. It has been a most helpful exercise for all who entered. We give the results below, and cordially congratulate those who have been so successful.

Award of £1 1s. Prize.

DOVE, PERCY W. H., Hardway, Gosport.

HIGHLY COMMENDED.

CHALLICE, John, 7, Coverdale Road, Shepherd's Bush, London.
THOMPSON, Rachel F., Castle Hill House, Settle, Yorkshire.
WISSENDEN, Amy, 73, Maison Dieu Road, Dover.
PELISSIER, W. H., Marlfield, Clonmel, Co. Tipp., Ireland.
JONES, Eliza Y., 5, Charlesville, Claughton, Birkenhead.
HOWE, Cassie P., Mount House, Higher Broughton, Manchester.
RICHARDSON, Miss J., Station Road, Lichfield.

COMMENDED.

WILKINS, Miss G., Westcroft House, Trowbridge, Wilts.
STOKES, R., Newtown Road, Malvern.
MASTERS, Miss L., Mount Avenue, Ealing.
JONES, Clara, Spring Gardens, Holmer Road, Hereford.
ANDREWS, Florence, The Spa, Melksham, Wilts.
CAREY, Lilian, Baildon Vicarage, Shipley, Yorks.
LEADER, G. H., 20, Evershott Street, Camden Town, N.W.
ANDREWS, Miss, Wivenhoe, Bournemouth.
BLYTH, Ivan L., 10, Guadeloupe Terrace, Sandown, Isle of Wight.

COME!

A CONTRAST.

FROM vague disquietude and restless fears,
From anxious gazing into future years,
From dark despondence and soul-rending tears.
From disappointment at earth's faded flowers,
From disenchantment in past pleasures' bowers,
From sad remembrance of embittered hours.
From all the darkness of a life of sin,
From all the madness of this world's harsh din,
From all the stains our souls are plungèd in.
From out the kingdom where dark shadows loom,
From under condemnation's awful gloom,
From certain judgment and eternal doom,
Christ bids us "Come!"

Unto Himself, once lifted up on high,
To see, for us, the sinless Saviour die,
To find once more lost man to God made nigh.
To cleanse our sins beneath His wounded side,
To see God's justice wholly satisfied,
To feel, "I live because my Surety died."
To have forgiveness through His wondrous grace,
To own inheritance in Heaven's high place,
To hold communion with Him, face to face.
To claim the succour of His boundless might,
To share the beauty which is His by right,
To dwell in glory and in heavenly light,
Christ bids us "Come!"

We answer, Lord, as at Thy feet we fall,
And hear the pleading of Thy ceaseless call,
"*From* less than nothing, *unto* more than all,
Thou bid'st us 'Come!'"

G. A. G.

"Often the grand meanings of faces, as well as of written words, may be chiefly in the impressions of those who look on them."
—*George Eliot.*

TALKS WITH MARRIED FOLK

ABOUT THE MANAGEMENT OF INCOME.

By Phyllis Browne.

No. 7.—How to Make the Most of Money.

THE next difficulty that we have to face is that of making the most of the money which can safely be devoted to actual living expenses.

For this, it is a great help to plan the meals two or three days, or even a week in advance, so as to make up by cheap food one day for costly food another day. By planning the meals, we should at the commencement of the proceedings discover what we could afford, and could make our purchases accordingly.

When, however, it is possible for a housekeeper to do her own marketing, this plan for the week should be open to modification; because it very often happens, especially in towns, that one sort of food is abundant and cheap one day, and another sort another. Consequently, the house-mother who can go out and see what is to be had, is much more likely to be able to provide liberally, without paying more for doing so, than is she who has to content herself with ordering food.

It would be a great step in advance if domestic managers could appreciate the advantage to be gained by personal marketing.

Of course, to put on one's bonnet and venture forth on an exploring expedition takes time as well as strength; but the exercise is very good for health, and there is no doubt that, through practice in marketing, we learn to choose wisely, and eventually get more out of our money than would be otherwise possible. Besides, we should by this means find out what is going, and so be able to introduce variety into the daily fare. In these days the treasures of every land are brought to the feet of the average Englishwoman, and she makes a great mistake if she loses the benefit of these through being ignorant of them.

There never was a time when food was as cheap, and at the same time as good and as varied as it is now; and yet there are thousands of people in England who, through not knowing what is to be bought, do not gain as they might do.

This is another form of waste to be added to those already mentioned; these people waste their *opportunities*, through ignorance of their existence. Indeed, we may be quite sure that waste, whenever and however it occurs, is quite as often the result of ignorance as of extravagance.

Personal marketing, however, has its dangers as well as its advantages. The greatest of these is lest we should be tempted to buy what we do not want. To prevent this, it is well to make up our minds before starting out as to what our needs are, and to *pay for our purchases on the spot.*

A great American writer once said, that paying ready money was a great check on the imagination; and certainly there is nothing more calculated to bring us down to the limitations of every day life than to have to bring out our purses and part with tangible shillings and pennies for what we think we need.

Paying ready money, however, is not only a check on the imagination; it positively lessens the amount of the bills. In ready money payments we count the items, and correct the most trifling inaccuracy, as we could not do with accounts of any standing. Also, we benefit by any discount there may be; for, quite naturally and reasonably, a tradesman charges the highest price to people who receive credit. He has to wait for his money, and he pays himself for doing so by taking an extra profit.

To an extent he is justified in doing this, because, as a matter of fact, people who take credit borrow money of a tradesman, which money he could get interest for, if it were in his own hands; or he might turn it over and perhaps gain on it. If his customer prevents his doing this, the customer ought to pay. For the most part tradesmen understand this quite well; they have been taught the lesson by experience, and they generally act upon it.

We very often hear purchasers who believe in "bills" say, "I have my purchases put down; but dealing where *I* do, I pay just the same eventually as if I paid ready money." Usually these self-congratulations are a mistake.

There is an old-fashioned rule for the prevention of lavish expenditure, which cannot be too strongly commended. It is, that intending purchasers should make up their minds beforehand what they ought to spend, take the amount out with them when they go shopping, and *leave the rest at home.* If, while acting thus, nothing is bought but what is paid for on the spot, there will not be many foolish purchases.

It was said a little while ago that to buy foods that will keep in quantities was a means of economising. This was advised because a penny spent by itself has not so much purchasing power as the same penny would have if it were put with a number of other pennies. Thus, if we wanted to buy one pennyworth of oatmeal, or one pennyworth of sugar, or one pennyworth of rice, we should not receive as much in proportion as if we had more pennies to spend, and bought a quart of oatmeal, a pound of rice, or a pound of sugar. If we could buy still larger quantities we should gain still more, provided we could keep our material in good condition and check its consumption.

It is evident, however, that if buying wholesale led to extravagance, harm would be done instead of good. Housekeepers, therefore, who keep stores, should by all means calculate, and give out at regular times, the supplies which they have calculated will be needed for household use. My own opinion is, that it answers best for these supplies to be given out weekly.

If food is not bought in quantities, and if good shops are close at hand, it comes to the same thing to buy what is wanted weekly, after calculating how much will be required. But in any case the purchases should be according to rule; they should not be made haphazard. A house-mother who buys what she feels inclined for, puts no check upon its consumption, and when it is finished, buys more, is injuring every one about her.

She is demoralising her own family, and removing all hindrances to extravagance or dishonesty. What she ought to do is, to find out by observation and experiment what supplies may reasonably be given, and then arrange that the limits thus laid down should be respected. Of course, special occasions may require special provision; but so long as the ordinary conditions remain the same, reasonable limits ought to be honoured.

There is nothing mean in this, and when the spirit of economy reigns in the household, no objection is made to it, and it is not looked upon as a hardship. It is simply regarded as an orderly arrangement, which makes things go smoothly and comfortably. For it ought to be acknowledged that where order and thrift reign, there also is comfort, even though it is of a homely sort. Where there is extravagance, there may be luxury; where there is parsimony, there may be saving; but true comfort for every one concerned is found only where there is thrift.

Another way of preventing lavish expenditure is to buy no more than is needed of food that is perishable, and is to be used immediately. The cost of a quarter of a pound too much here, or a few ounces too much there, will very soon mount up to a sum quite sufficient in itself to make the amount of expenditure exceed that of income.

As I have said that supplies ought to be calculated and given out, I must be allowed (because I feel very strongly on the subject) to say one word about the means to be used for the avoidance of waste. It is this :—

Where the establishment is small, and all the work has to be done by one pair of hands, guided by the intelligent head belonging thereto, it is quite easy to avoid waste. But when the work is divided, it is sometimes very difficult to do so. The lesson we gain from experience, however, is that the only way to success in this direction is through trust, sympathy, and liberality.

Unfortunately, there are a great many people who think that success can only be secured by the policy of being constantly "on the pounce," if the expression may be allowed. This "on the pounce" method never answered yet, and never will answer. Far from preventing waste, it rather increases it, because it destroys co-operation of aim, puts antagonism in its place, and creates suspicion, irritation, and misery all the way through.

Let any house-mother who is trying it ask herself honestly, whether it answers with her. I think, if she will reply candidly, she will say that it does not, and that much of the worry she has to bear arises from the consciousness that it fails. Undoubtedly the watchful method may be effectual over the square yard upon which the watcher's eye rests at any given moment; but it is utterly powerless over the square yard upon which her back is turned; and as no human being is capable of being in every part, even of a small house, at one time, failures are the rule.

The policy of trust, of sweet reasonableness, of liberal consideration for others, on the other hand, is nearly always found to answer admirably. Yet sometimes it fails; because there is a good deal of perversity in human nature, and even generosity cannot be appreciated by every one.

But even its failures are less disastrous than are the failures of the policy of suspicion ; because they are the result of carelessness or ignorance, and not of enmity. When we have to endure loss because our foes are of our own household, our look-out is a bad one ; but when we endure loss through the thoughtlessness or ignorance of those about us, at any rate there is no bitterness mixed up with our annoyance, and this robs it of its worst sting.

"How, then," it may be asked, "is this method of trust and sweet reasonableness to be inaugurated?"

The answer is, "through sympathy," which sympathy must originate with the heads of the family, because in these days they are the persons who are credited with being the least likely to give it. If sympathy is to do any good, however, it must be real ; sham sympathy never answers, because it is invariably found out. Real sympathy shows itself in a real desire for the happiness and well-being of others, a disregard for self, and an acceptance of the golden rule, "Do to others as you would be done by," as the principle of action.

This method is not established all at once ; it must be built up gradually ; but where it is once firmly placed, its success is undoubted. A great American once said, "Every man takes care that his neighbour shall not cheat him. A day comes when he begins to care that he shall not cheat his neighbour. Then all goes well. He has changed his market cart into a chariot of the sun."

Now, the peculiarity of the market cart is that it is always falling over and emptying its load into the mud ; whilst the chariot of the sun rolls on securely and smoothly, along a path of brightness which leads to a sure and pleasant goal.

Nor must it be forgotten that thoroughly accurate accounts are a most valuable check on lavish expenditure. A great many people, particularly amongst women, say that they do not keep accounts, because they are not clever at arithmetic, and would be sure to get into a muddle. But, for simple accounts nothing is wanted but a knowledge of simple addition and subtraction, and it is the simple accounts that are of use.

Simple accounts may be made a record of our own foolishness and mistake, and it is for this reason that they ought to be private. Naturally, we none of us like to record our own weakness, if the record is likely to be inspected. If we know, however, that no eyes but our own will rest upon the page, we do not hesitate to make a plain statement.

My advice, therefore, to house-mothers who are making an earnest effort to keep within a given sum for expenses of living is, "Begin from this moment to keep accounts." Get an ordinary account book, plainly ruled, with columns for pounds, shillings, and pence on each page.

Never mind having any elaborate arrangement,—the simpler the book the better ; we want no complications, for we are not brilliant accountants ; we are only humdrum people, who wish to pay our way honestly. Open the book at the second page, and take two leaves for a week. Upon the left hand page set down the sum you have decided that it is right to spend on household expenses. Underneath it, place a "Model of Expenditure," that is, a statement arrived at, from careful calculation, of the sum which may safely be spent on each tradesman.

The remainder of the space on this page should be given to memoranda of homely experiences, likely to be of use for future guidance. The mere writing down of these will help us to remember them ; and if we are only honest with ourselves, and put them down without any gilding or varnish, we shall have in time a most valuable store of practical hints for daily use.

Some of these notes will be very funny, without doubt, but we need not object to them on that account. Strict economy and keeping within a small income are very prosaic. If we get a smile out of them once and again, we have no cause to grumble.

On the right hand page write down, every day, every sum paid ; and say for what it is paid, no matter how trifling the amount may be. Divide the lower half of this page into as many spaces as there are items in the "model" on the opposite sheet, giving one space to the butcher, one to the baker, one to the milkman, and so on.

In putting down, each day, the various items paid, put each sum down also in the space to which it belongs, and glance at the "model" in order to ascertain if, with regard to this particular item, you are "outrunning the constable." At the end of every week add up the different items, and compare them with the "model," and then make a statement, and sign it, as to whether or not (during this week) the weekly limits laid down have been preserved.

If any one will give this plan a fair trial, I believe it would be impossible to spend too much on living, and not find it out very quickly.

The character of the "model" which is to occupy the left hand page must necessarily vary with the number, age, character, and peculiarities of the family for which it is framed. It would be impossible to imagine a "model" which would suit all requirements.

From my own personal experience, I may say that, for a family, including children, and where the ordinary routine of English home life was observed, the following proportions would probably need to be maintained :— Milk, $\frac{2}{20}$; butcher (including meat, fish, bacon, and substitutes for meat, such as beans, peas, and oatmeal), $\frac{5}{20}$; flour and bread, $\frac{2}{20}$; grocer, $\frac{3}{20}$; greengrocer, $\frac{2}{20}$; butter, eggs, and cheese, $\frac{3}{20}$; laundry, $\frac{2}{20}$; sundries, $\frac{1}{20}$. An estimate of this sort, however, could not possibly be of general use.

(*To be continued.*)

A GLAD REFRAIN.

ALMIGHTY God, who formed the earth so fair,
Who deckest it in robes of softest green,
Which change again to crimson, brown, and gold,
Merging at last in purest virgin white,
As seasons pass, and time rolls on apace ;
Thou, who hast reared Thy grand cathedral piles
Of mountain peaks and pinnacles of snow,
And o'er them stretched Thy heavens in curtain folds
Of clearest sapphire or of vaulted gloom ;
Who givest us the everlasting sun,
Thy royal messenger from Heaven's gate ;
Who scatterest broadcast shining starry gems,
Adorning all the robes of night with gold ;
Who with a lavish hand dost give us flowers,
And trees, and birds, and every beauteous form ;
We thank Thee, blessed Lord, for these Thy gifts,
Which tell us of Thy majesty and power,
And fill our souls with reverence and with awe ;
But, Father, there are higher, holier things
Than Nature's children, howsoever fair ;
Are there not souls who, crossing o'er our path, [love,
Have bless'd our life with light, and joy, and
And raised us nearer to the very Heaven ?
Yes, there are some whose daily, hourly
Is a reflection of the life of Him [walk
Who trod this earth,—the sinless Son of man. [He—
We know, O Christ, that Thou alone art
The living Way by which we come to God ;
But even as many turnings all may lead
To one high-road, so surely may we find
That these pure souls are God's appointed paths
To bring us safely to that blessed Way,
Which is in Jesus Christ.
Again, dear Lord,
For all the noble, earnest-hearted men
To whom Thou givest deep, inspiring thoughts,
Which lift unconsciously a thousand minds
From degradation and from mental sloth ;
For others who have simply lived and died,
Nor known the influence which they shed around,
Yet were they living gospels, full of Thee,—
For these we render loving, grateful thanks,
And pray that Thou would'st so fulfil in us
Thy mighty purpose, form'd ere time began,
That, as we grow in likeness to Thyself,
We in our turn may live to bless the world,
And lead our fellow-men to Heaven and Thee.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

CHAPTER XXXIX.

"I'LL—I'LL GO AND SEE," HE SAID.

EARLY an hour had elapsed since Jack Silk first went on deck to look at the night, and just as he was talking to Chips,—

"Hark!" cried the latter, "it is coming, sir, it is coming."

Both listened. There was a mournful moaning now of rising wind, and the occasional flapping of deck canvas. The sound steadily increased, then died away again. But the next squall was stronger; and so stronger and stronger each one became, and briefer the interval between, till at last they appeared to amalgamate their forces, and howled round the vessel in one continuous roar.

Jack went aft to call the captain.

"This is something serious," said the latter. "Glass still going down? And how does the night look?"

"Thick and dark now, Captain Boyd, and soft snow falling."

"*Soft* snow? *Soft?*"

"Yes, sir; at times it is almost sleet."

"Hush! What is that?"

It was a report like the firing of a great gun, followed by a succession of smaller explosions, and the ship from stem to stern shook and shivered as if she had been a living thing in dread agony.

"The ice is all in motion," said Chips, rushing unceremoniously into the snuggery. "I thought that would be it. Heaven help us! We can do little to help ourselves while the hurricane lasts."

Spring though it was, for the sun had weeks ago begun to shine again, and the days were getting long, still, such a thing as a breaking up of the ice yet, around the ship, had never been dreamt of. The dream and hope of all on board really had been, that the wind would come gently from the south, that the snow would melt or get soft, the ice break, and the sea open, and set the prisoners free to sail away to sunny lands.

All hands were now called, and none too soon.

"Put all lights and fires out on deck," said Captain Boyd, "and batten down the hatches."

"Ay, ay, sir."

The order was quickly obeyed.

But louder and louder rose the voice of the terrible storm. Then suddenly, and high above its din, came a sound of wrenching, tearing, and flapping forward.

All hands instinctively threw themselves face downwards on the deck, and in less time than it takes one to speak the words, the great tent,—ropes, and canvas, and splintered spars,—was carried bodily off astern, and the ship was now exposed to all the fury of the elements. Several men were wounded, and one poor fellow so severely injured, that he died before he could be got below.

The doctor did his best for the rest in the half-deck saloon by the lamp-light.

For hours the raging gale continued, getting worse instead of better towards morning.

The character of the storm was now testified, by the fact that, point by point, the wind was veering round.

There was much to be done on deck, for a time, in clearing away the wreck, and dangerous work it was, what with snapping wood, bending stanchions, flapping canvas, and rope ends, that cracked like whips on every side. The darkness, too, was intense, and although the men carried lanterns, the blinding, driving snow rendered them almost useless. More men were wounded before the wreck was cleared away; like the others, they were taken below to the half-deck, where Dr. McPhee, ably assisted by Boy Bates and active Turlough, had his hands sadly full.

"The ship is leaking like a sieve, sir."

This was the next news Jack brought, and he had to bawl the words into the captain's ear, so great was the noise of the chafing ice mingling with the roar of the storm.

"I've put one watch to pump," he added.

Captain Boyd signalled his approval by patting his lieutenant on the shoulder.

Down below in the saloon, the ladies and the two Nats, with Godfrey, sat together, waiting and wondering. To talk would have been but folly, so great was the din of the raging storm, and the constant cannonading sound alongside.

Day broke at last,—the light gleaming cold and yellow through the driving clouds and haze. The snow had ceased to blow, so that it was possible for those on deck to look around them; the sea was a chaos of ice cakes, grinding and chafing together with the action of the waves beneath. The great icebergs were all in motion, affected more perhaps by wind than water, and from their lofty turrets and spires the snow had been swept clean away, so that they glittered green and threatening in the morning light.

The water still rose, despite the efforts of the men to check it. Orders had been given to get up steam, but both captain and engineer knew this was but a forlorn hope. Breakfast, or rather refreshment, was now served out to all hands fore and aft, in saloon as well as in galley. Alas! it was a last meal for some of these poor fellows.

About ten o'clock steam was got up, and an effort was now made to head round for the shore; it would be better to beach her if she could not be kept afloat.

By eleven o'clock the vessel's bows were turned landwards, but steam was no longer needed, for the wind had gone right round, and was now roaring from the north.

By this time it was evident to all that the ship was doomed, and when the heavy ice was now seen to be steadily advancing towards the shore, every one knew it was but a case of time.

Towards the middle of the afternoon the ship touched bottom within a hundred yards of the shore, and the noise of the crashing ice under her stern was redoubled.

There is only one word in the English language capable of describing the wild scene of confusion now witnessed both on board and around the unfortunate ship. That word is *chaos*—complete and utter.

Chaos reigned even among the icebergs—they were turning, crashing, and twisting. Chaos reigned in the bay-ice, for gradually as the great bergs moved grimly on shorewards, as inexorable and merciless as Fate, this bay-ice was packed. It rose in heaps everywhere, and on the beach was thrown up in one vast barrier. Chaos reigned on board—the ship was fast breaking up; the rudder was already splintered; the ice heaps had even burst in the stern windows, and forced their way into the saloon itself, smashing tables, sofas, bulk-heads—everything. Chaos on deck, where amid-ships all hands were huddled together, looking helplessly on; paralysed, almost, both in mind and body.

The last order given was to extinguish the fires, even below. This was faithfully obeyed, having been seen to by Desmond, Godfrey, and Jack. Had this not been done, an appalling catastrophe would have arisen—the *Oonalaska* would have caught fire, and the ship in which they had sailed so long would have become the wanderers' funeral pile.

To Captain Boyd and his officers the utter helplessness of the situation was the most painful part of it. There seemed for the present no hopes of rescue; for to have attempted to reach the shore would have been but to court death in a more speedy form.

The ladies had been taken to the galley, as to the safest place, for the pressure of the sea was all astern. They were very brave, very quiet, but pale, as if the death they knew was coming seemed already to have claimed them as its own.

Jack Silk came below often. There was still some little warmth in the galley range, and he had seated them there, wrapping the three of them—enshrouding them, I might say—in skins and rugs. Sally, too. There was no distinction now—no difference in rank. All are equal on the brink of the grave.

Jack came below often, because he made himself believe there was frequently something to say or report, and some words of comfort to give; but when he tried to give hope, language seemed to freeze on his very lips. There was one question he could always ask, and always did when he came below, "Are you warm enough?" That was something to say, and indirectly it was meant to give the poor ladies a little comfort; for, while he put the question, he imagined them thinking that if there were any immediate danger it would not be so trivial a matter as this that would occupy his mind.

"Are you quite warm, mother?"

"Oh yes, Jack, thank you."

"And you, Miss Katie?"

Katie would nod. Her voice was too feeble now to be heard; and to see her look so sad and wan, and he to feel so helpless, was a greater grief to Jack than words could have expressed. She must have seen suffering in his face, for once she extended her hand to him, and the tears sprang to his eyes as he pressed it, and he ran on deck to hide his weakness.

"The ship was being hove up astern." That was some news our sailor boy returned with presently. Nor was it bad news.

"They could see from the deck the In-

nuits making a breach in the barrier of ice thrown up on shore." That was more news for the ladies.

"The pressure was less, and the captain thought the great bergs had grounded." Again another item.

"The sky was still clear, and the wind not quite so high." Jack was smiling now.

"Was there hope?" The question was Katie's, and she asked it very eagerly.

The smile died on Jack's lips. Alas! it had been only on his lips, and not around his heart.

"Was there hope? Was there any hope?" How could he answer the question other than truthfully, with those pure, earnest eyes looking into his, and seeming to search his soul, and read the answer there.

"I'll—I'll go and see," he said.

There would still be two hours of light, and then a long twilight, succeeded by a night, the morning to which might never come to any on board this doomed ship, if some attempt to reach the shore was not made at once.

An idea occurred to Captain Boyd and Chips almost at the same time.

"Rafts!" said the captain, suggestively.

"Gangways!" said Chips, with vigour.

"Let it be done at once. Call all hands."

"All hands, assisted by the Innuits, were hard at work to clear the wreck."

It was no easy matter for men to work in that awful gale and in that deafening chaos. But it was life or death, so all hands were speedily active. Spare spars were laid down and held in position, while cross-pieces were nailed and fastened on; and with such hearty will did the men work, that in less than an hour the bridge-like rafts, three in number, were completed, and a ladder let down over the bows for purposes of debarkation on the floating, chafing, tossing sea of ice.

The rafts were about fifteen feet long, all decked over, and with life-lines from upright stanchions at each side. One was gradually lowered. It seemed madness to alight on it, but the men did. It was a forlorn hope, and better than to stay in the ship till they were dashed to pieces among broken wreck and pancake ice.

The second raft was lowered and placed in front of the first, and the men now left the first, and having gained a position on the other, raft No. 1 was dragged in front of raft No. 2. Thus toiling on and on, and struggling against fearful odds, the first batch of men succeeded in reaching the shore.

The Innuits seemed wild with delight.

But there was no time to lose; half a dozen of the saved were left on the beach, and proceeded to light fires in the English kashga, while the others went back with the rafts.

The ladies now were taken, with the two Nats to help them and give them confidence, and they were safely landed and conducted, as much dead as alive, to the kashga.

The third journey was a disastrous one, one of the rafts being rushed by advancing pancake ice and broken into splinters, all on board at the time perishing miserably before the eyes of those on the ship, and almost within touch of the men on the adjoining structure.

The wind went down that evening shortly after the sun, but the ice continued to rise and crush, and further on in the evening, when all hands were mustered in the principal room of the kashga, the list of the missing was found to be a very large one. Eleven men and two officers had perished. Among the men was poor Turlough O'Brady. His merry voice would never again help to cheer the crew with joke and song. The officers were the surgeon, Dr. Duncan McPhee, and the chief engineer. Both had died nobly doing their duty, for they had stuck to the ship to the very last.

It is not known how either died. They had been seen on the raft helping others, and in the darkness they must have slipped off and been crushed to death.

The engineer's strange superstition about the "unluckiness" of going back was therefore verified.

It is a somewhat remarkable thing that the bodies of the poor fellows whose lives had thus been lost were never found, although every search was made next day among the still moving chaos of ice, both by the *Oonalaska's* crew and by the Innuits.

Of the ship herself, when day broke—and the beauty of the sunrise over the hills beggared description—nothing was visible except the masts and the top of the funnel. All else was completely buried in a hill of packed-up pancake ice.

As early as nine o'clock, and ere yet the golden tints of morning had left the hills and clouds, these shipwrecked people had met in the hall of the kashga to return heartfelt thanks to Heaven for the merciful preservation of the living, and to read the service for the dead, whose bodies were not.

A more sad and solemn meeting it would be impossible to imagine; for their lives, all there had reason to be devoutly thankful, and in those who had been taken away, each one had lost true-hearted friends. The poor savage Innuits looked on in silence, not unmingled with awe, while Captain Boyd delivered his short but impressive address. They looked on in silence, and wondered why the ladies wept, and why the men, with downcast eyes, all seemed so stricken and so sad.

The day was spent in refitting the kashga, which, however, had stood the storm well, and in attending to the wants and comforts of the injured.

Night fell at last, and never before had a more beautiful sky or aurora been seen. The same awesome stillness had again settled over the scene, the silence continuing deep and impressive as before.

Next morning, the ice being thick and firm, all hands, assisted by the Innuits, were hard and early at work to clear the wreck of ice, and save all stores and valuables that could be got at. Everywhere on board the riven ship—which by the afternoon they had succeeded in exposing—was evidence of the gigantic and irresistible forces which had been at work on the night of the hurricane. The after-part of the vessel was completely gutted and disintegrated; the great screw shaft had been bent and broken, and the screw itself sent through the *débris* of what had been the captain's snuggery.

Bulwarks had been levelled with the decks, or swept bodily away, hatchways and skylights shivered, and the deck itself in many places stove in with the super-incumbent weight of ice.

For a whole week the weather remained open and the sky clear, and stores of every kind, with coals and wood in abundance, were landed.

The wounded men, despite the cold, which at night was often intense, got rapidly well, and the shipwrecked crew began to get more cheerful, and to look their situation boldly in the face. It was bad enough in all conscience, but it might have been far worse. They had, after all, much to be thankful for. A council was now convened to consider what had best be done. It was held in the officers' quarters of the kashga, and at the board not only had Chips and the Aleut a seat, but Dresky also was present.

There was no formality here, no ceremony. They were men met together to try to solve the question, How best to retract from a position which in a few months would become untenable from want of food? how to make that retreat in the safest way possible, and in the speediest?

"There is where we lie," said Captain Boyd, pointing to a spot on the chart, about midway between Point Barrow and the easternmost shores of Alaska. "Well, gentleman, there is no denying it, the difficulties we have to encounter before we see other civilised faces except our own are many and terrible. But we must meet them and surmount them like men. Thank God, we have, all of us—at present, at all events—health and fair constitutions. Chips here, and myself, are, maybe, old, but I'm not sure we aren't as tough as many of the younger of you. Well, whatever plan we agree to adopt in order to get out of this country, one thing is evident to me, and, I suppose, to you: we must not act on the motto, 'Every man for himself, and God for us all.' We must alter that somewhat. It must be, 'Every man for his neighbour, and God for us all.' Well, now to business. We must all use our wits. Mr. Silk, have you anything to suggest?"

"Only this. American whalers visit here sometimes, and if not exactly, round the coast somewhere; I move, that in our efforts for freedom we hug the shore all we can, and keep our weather-eye lifting seawards," was Jack's reply.

"Spoken like a sailor," said Captain Boyd; "and a sailor may be excused for never thinking himself safe out of sight of salt water. But just cast your eye round the coast, my dear Jack, and see the extent that our journey would be before we reached even Icy Cape."

"I second Jack's motion," said Desmond, "but only in a formal way, Mr. President."

"All right. Take it down, then, Mr. Godfrey. I think you were to act as clerk, and do all the writing, were you not?"

"The sea will be open round this coast in summer," said Nat, senior; "could we not build boats, and force our way round by water?"

"Is that a motion?"

"I second it," said young Nat.

"Take it down then, Mr. Godfrey."

"Well, now, Chips, you're an old iceman, and you know more than any of us about these regions. What say you? Let us have your real, candid opinion."

"Well, gentlemen, it would be mere affectation to say I don't know much; I've lived more years o' my life in Arctic regions than out o' them. And if he'll let me tell him so, Mr. Silk's notion, or his motion, isn't what you'd call 'A. 1. at Lloyds',—leastways so it seems to me, like. And Mr. Graves's idea—he'll excuse a plain sailor-way o' talkin'—isn't ship-shape nor Bristol fashion. If it were possible to build boats, kyaks, bidarkies or bidarhas—and mind, I don't say they couldn't be run up—it would be next to impossible to round Point Barrow in them. It would be all very well if there was to be a surety of open water—no gales o' wind and no fog, gentlemen. Ah! I see, Mr. Graves, you hadn't thought o' the fog, sir. Yet we shall have to take it into account."

"Well, but what is my plan? Why, simply this—that we steer straight away south—overland, I mean—for the great Yukon River, and trust to Providence for all the rest. I have considered the matter well, gentlemen, and I've slept but little since the dear old *Oona*—rest her timbers!—was cast away. The Aleut here, our friend Bob-a-link, and old Dresky, too, will both second my motion. The Innuits can make the journey,—why can't white men? We have as much endurance as they."

"Well, Chips," said Captain Boyd, "your proposal is precisely what mine would have been, had you not been first to the front. Let us now consider the best means of transport,—that is to say, if we are to adopt this course."

"What say you, men?" said Jack. "I now retract my motion."

"And I mine," said Nat, senior.

"Well, we are unanimous," said Captain Boyd. "It is a terrible journey; but whatever men can do, *we* will do; and, as Chips has said, I think we may safely leave the rest to Providence."

"I move now, then," said Jack, "that this meeting resolve itself into a committee of ways and means, and I second my friend's motion."

And so it was; and after the meeting no time was lost in commencing the work of carrying out the resolutions adopted.

(To be continued.)

"YOU'VE GOT YOURS."

By S. G. PROUT.

"MAIS, levez vous, M'sieu."

"A quoi bon, si matin?"

"Comment donc? Messieurs les Prussiens sont ici, vous dis-je."

My worthy and much-flustered landlord added something about "les petites balles," which I did not quite catch, but which a sound, not unlike energetic carpet-beating in the back-garden of the Couronne, helped me to understand.

I was just going in for a small illness, after rather overdoing it for the past few days, and was hoping for a couple of hours' sleep; and I *did* wish "Messieurs les Prussiens" at Berlin, smoking their pipes in placid bliss; however, as they and their pipes were then in that little straggling village on the Sarthe, there was nothing for it but to turn out.

"Ce vieux grogneur," Auguste, who had brought me from Alençon the night before, protesting all the way, while making pretty well a month's income out of the cut lines, had made a still more rapid toilette than my own, and, when I got downstairs, I found he had already harnessed his old mare to the cabriolet, to be off before "*la bonne bête*" got requisitioned — and off he was, "grande vitesse," with not half an ear for my wise suggestion that as the Spikes were not yet at the "hotel" door, we might as well have a *café au lait* to help our cogitations, and put the pieces of my head together.

It was not much of an affair, though the deep snow was red at the Long Bridge end, and the little, hastily knocked-up ambulance in the school-house had more patients than beds. The sun had just risen, large and lurid, like a huge jacinth, above the bare black woods, as, at the "double," I crunched the nightfall of snow, untrodden by so much as a pussy cat, that lay, drifted up against the cottage doors, all down the ragged street, where, through many a little square window-pane, glinting back the orange rays, peered night-capped, flattened faces.

Crossing the rapid river by the crooked old stone bridge, through whose narrow arches clashed and hurtled the ice-masses, the Pont de Fer some yards above, loomed, lofty and spectral, through the warm haze, in which the thin white smoke-wreaths lost themselves; and into the lingering gloom beyond, the ice-cumbered Sarthe foamed and fought its way.

A common-place bit of Brittany landscape, the scene had somehow a curious wan beauty; one could but pause a minute.

"Chocolat!" in a loud, demanding voice, broke the reverie. A very tipsy member of the German Ambulance Corps was charging me at half gallop, with this particularly droll war-cry. His tired mount was quite willing to be checked in his limping career, and turned aside; and with a word and gesture of regret at being unprovided with the required military stores, I trudged on.

"Chocolat! Doktor Englisch— Chocolat! Kapput!" fell on my ear with a minatory emphasis, that stopped me promptly.

My loose-seated friend had wheeled and returned resolutely to the charge, at a mended pace. It would hardly have been prudent to "unship" my brother ambulancier, so I *dived*, where cavalry could not follow. In a crowded cabaret, there huddled round the fire in miserable plight, some thirty or forty Mobiles, who had, as Ducrot put it in respect of certain of their comrades, with vague ideas about cartridges, "fallen back with very regrettable precipitation," from the field a few miles distant, where a disastrous action had just been fought. Twitted by a boy-Franc Tireur, with "want of starch," in having abandoned the capital position they held, the excuse made by the unfortunate fellows seemed to be an unrefusable one: "We got no orders."

Well, you've got *yours*, and a grand thing it is to get them. What *do* I mean? "A. 1." surely, is not coming out as a "United Service" periodical, or the special organ of the Volunteer forces? I'm not talking, am I, to "Tommy Atkins"? That's just what I hope I *am* doing, or, if you like, to his Colonel.

If you're *not* soldiers, lose no time in joining—any branch of the Service you please; only get at once into the uniform that has a cross below the crown, and under the colours that bear but "Calvary" on their folds. If you have nothing to do with "orders," you have nothing to do with victories. Very near the end of the Bible we get some marvellous promises—"to him that overcometh."

Overcoming distinctly predicates fighting; they are all *soldiers'* honours and decorations—those most wonderful awards—not one of them for any but "Christ's own." "But this is not altogether our Mag.; it has, you know, a mixed mission. Are the girls going in for fighting?" I should rather think they are. The Amazon contingent in that division is very strong—quick ear for a command, and quick foot to obey. Heaven's "V.C." will be radiant, over many a loyal, brave girl-heart—an added impulse to you young fellows, to keep well in the van.

It's no "promenade militaire," mind you, nor just a becoming uniform, on occasion, and a cockade on the coach-box; but a life-campaign, with plenty of foot-sore marching, and arm-weary furbishing of lock, and barrel, and bayonet; over and above a deal of stiff, down and up, never say "die" fighting.

What *are* you going to do in that sort of thing, with "no orders"? There is one though, that *comes before enlistment*—for all, since "all" are "out of the way." "God commandeth all men everywhere to repent—repent, and be converted"—in plainest words. Stop! and let God turn you round.

No stern word of command may stay your step; just a memory-whisper of a pleading voice, that for many a year, you know, has been heard only in song-gladness, may bring the order; or the deeper echo of one suddenly hushed, whose reckless laughter had often mingled with your own. And the quick thought pulls you up, "I'm wrong, awfully wrong." As the stayed foot turns, you're in the ranks; and quick and clear comes another order, "Believe! This is His commandment, that we should believe on the Name of His Son Jesus Christ." I'm not preaching to you for your comfort—I can't do much in that line—I'm not *talking at* you; I simply bring you your orders from God's Book of Instructions.

The bugle and the little bugler are nothing—brass and a boy; the note may be very feebly sounded, but it gives the Leader's command! *That*, remember, is not an importunate request. God does indeed "beseech" us to "be reconciled," in Christ's name;—what a most marvellous thing that is! But if we are His soldiers, what we have to do is, *to obey His plain commands.* When an order is given, the thing has got to be done, or attempted; if you cannot go through with it, you have to *go at it.* Just fancy, when the command rings out to form, or advance, a small voice heard from line or square, "Well, but, really——" and another little voice pipes out, "I can't!" True enough, too, *that* might be. Those unlucky Mobiles, had they even got their orders, might have been unable to carry them out: good as their position was, they might have been shelled out of it. Not one order will reach you from the King, but brings its own obedience-power. There is one in His Order-Book we must ever keep memory of:—

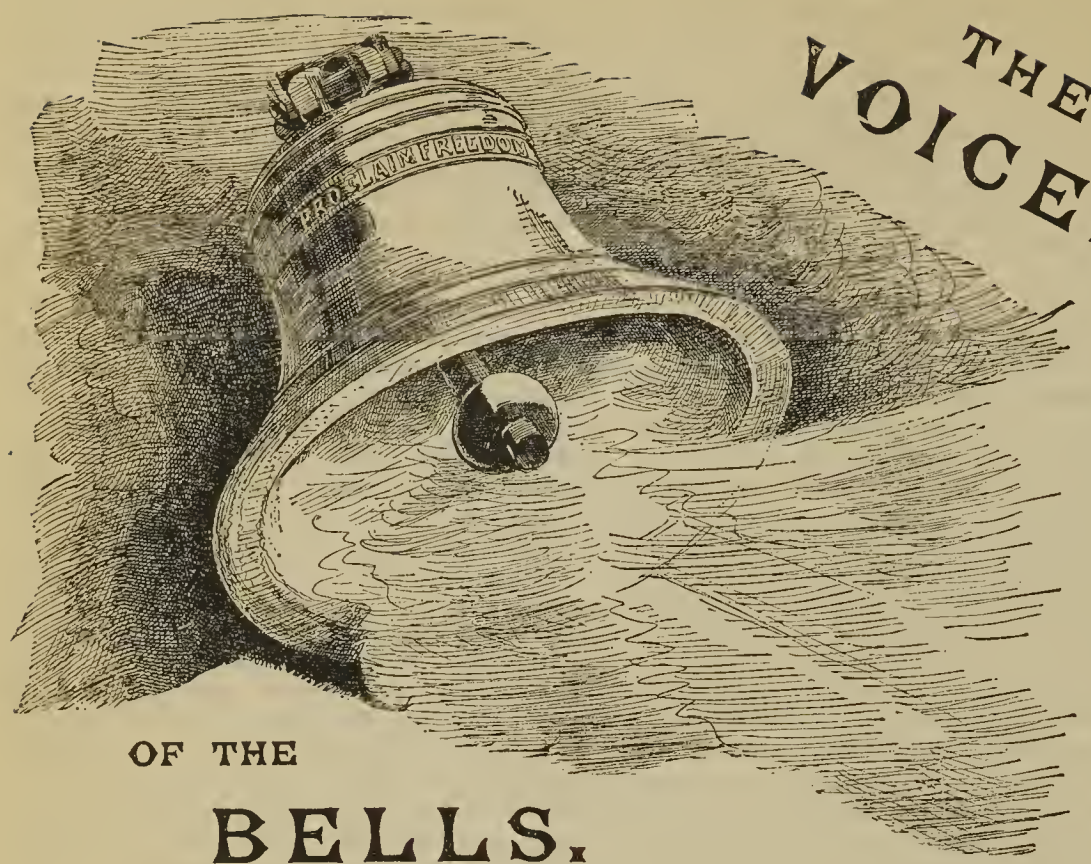
"Be strong! thy God hath *commanded* thy strength."

"A strange command, that," you say. "A fellow may screw himself up to an ugly piece of duty; but how on earth is he to '*be strong*' to order?"

He is to be strong "on earth," because he gets his strength from heaven. We will finish the command: "Be strong—in the Lord, and in the power of His might." *That strength* will do for you, will it not?

"Follow!" "Stand!" "Watch!" These, and many another order, will reach you—each one with a blending note of promise-heartening. "Sure, and its beautiful fighting," to go into action, with the positive assurance that the enemy "*shall flee*"! There's one order that you will never hear sounded, "Retreat!" It is not in the Book, not within the compass of the trumpet; no more than there is a white flag, or a white feather, among your appointments. And, mind this, *no* "*mufti.*"

Every command is a text for more sermons than the three 8's could find hours or preachers for. All I have now to tell you is, that *you can obey every one of them.* If you say you cannot, you say God's strength is not sufficient for you. And *He* says *it is.*



But (*Arcano hoc dico*) "A. 1." *is* rather stiff about "space"; almost as bad as an earnest young friend of mine in the North, who once pressed me to take a slum-service for him; and, tiptoeing to my ear, as I made a big step on to the platform, whispered with hoarse emphasis, "You'll not let the whole concern be over twenty minutes." I'm dreadfully afraid this "concern" has already got beyond limits. Only just a homely word or two about that one all-important order, without having obeyed which, we *cannot even receive* the others, yet which is the one of them all we most boggle at, and blunder over. "*Can't* believe"? What *is* believing? Simply *taking word*—somebody's, anybody's word. In the matter of our souls, and their for ever, and their Saviour, there is of course but One, whose word can be worth taking.

You are "in a corner"—entirely, you admit, through your own folly; that makes it none the better. All your turning things over and over, will not turn that most objectionably explicit document you keep crumpling, and rolling, and unrolling, into an open invitation to a pleasant country house, or a cheque from your godfather.

Comes a tap at your door, and a friend's face inside it. "Well! what is it, old man?"

"May I have a look? Why, you haven't a leg to stand upon! Here, just you leave it in my hands. *I'll* see to this tender epistle. Take first train for my place to-morrow; *it will be all right.*" And you come "right away" out of your corner; and you quite enjoy the dark cold walk to the station in the early morning, to meet your friend.

That's believing; that's "faith," pure and simple. You *just take your friend's word*—that's all. *Do take God's.* Take HIS, who has taken "the handwriting that was against us out of the way, nailing it to His cross"! And, in accepting His "great salvation," obey your Captain's orders.

THE VOICES OF THE BELLS.

BELLS have mingled associations for us all—some sad, some glad ; some of work, and some of play ; some of life, and some of death.

Searching the inmost corners of memory, the first bell whose tones (alas ! they were sorely cracked) have left a record there, is the rising-bell at school. Church bells, of course, I had heard, but they did not specially impress me at that early date ; the dinner-bell must have had meaning for me, though I recall it not ; but that rising-bell at school —oh, ye who have heard its hateful clangour in the grey morning hours, do ye not respond to my memorial groan ?

Far away on the landing above me it would begin, its first distant tones telling of my coming fate. Nearer, nearer, nearer, still muffled by the flooring that intervened, all along the passages above me, until the tramp, tramp of the ringer's feet was heard just above my bed. A moment's silence, as that hateful bell came downstairs ; then it began with redoubled vigour at the further end of the landing on which I was. On, on came that relentless tread, louder and louder clamoured the angry bell ; blankets failed even to dull the intensity of the sound. Then past me, and away into the distance of the corridor it went, giving a last stifled *clang* as it was roughly set down in the niche where it dwelt.

It was possible to get up before the bell rang, it was *too* possible not to get up until some time after it had finished ringing, but to get up while its cracked *crescendo* and *diminuendo* echoed through the house was fairly out of the question. As a snake fascinates a bird, so that bell held me.

The "grown-up" edition of the school-bell is that of the auctioneer. It, however, has the mitigation of being intermittent ; also, it is generally possible to escape its tones, unless you are either being "auctioned off" yourself (in which case even the bell cannot make you more miserable), or else seeking for "bargains" (in which case you deserve all the sufferings that a bad bell can inflict). If I ever entered upon a walking race (I have no immediate intention of so doing), I should stipulate to be started with an auctioneer's bell ringing behind me,—I know of nothing else so potent to accelerate one's steps. A barrel-organ is an approximation, nothing more. The door-bell is also an "aggravator." On the busiest mornings it always rings the most, suggesting possible disturbance in the form of a visitor, when in truth it is but the butcher's boy.

But these are the prosaic bells of our daily lives, the bells that tell of the work-a-day world, with never a touch of romance in their shrill metal tongues.

There are other bells that cause our eyes to dim with tears, or our hearts to leap with rejoicing. Heard you not that slow, deep note that rang through the storm and darkness, when the good old "father of the hamlet" fell "on sleep," or that sadder one in the sweet spring dawning, which told of the death of the miller's little maid ?

Boom ! boom ! the solemn dying away of the sound tells of ebbing life, and as it recurs again and again, it seems a token that, as one life has been hushed to silence, so another will be, and another, and still more,—ours amongst the rest.

But the wedding bells ! Laughing, jostling, tumbling, scrambling, like merry children free from school, how they rang out a peal of silvery gladness as the sweet young bride drove by ! The big bass and the little treble, and the middle-sized ones between, what a wealth of joyous medley burst through the quivering air ! Who ever thought of sorrow on a wedding day ? Ring on, gay bells, ring on ; life is joyous this morning, and it well beseemeth you thus to chime. In years—it may be only *months*—to come, that big bass bell, now so undignified in his merriment, may have to toll out the death of the bridegroom or the bride ; but what of that ? To-day all is sunshine, and the bells have a message of joy.

Stealing through the opened window on a peaceful Sabbath morn, or chiming softly across the level homesteads in the ruddy sunset glow, comes the pleading music of the bells from the old church tower. They have no mystic meaning, but yet they speak. They tell us of the quiet resting-place, the spot set aside for prayer, the gathering souls who come "with one consent" to praise. Out from the houses dotted here and there, out from the hall and the cottage, from the rich and the poor, come "laden souls" at the bells' gentle bidding, and gather in the house of God. For us the bells do nothing, yet each memory of their ringing brings its association of the following sacred hour ; we remember the hush that fell upon us as the chiming ceased, and words of balm and comfort reached our weary ears. True "gospel bells" have they been to many a sin-worn soul !

So far about bells in general ; now a word about bells in particular.

First as to their antiquity. The bells of gold, mentioned in Exodus 28. 34, were probably not bells as we understand the word, but rather jangling pieces of metal. However that may be, the Romans certainly used bells. Lucian, A.D. 180, mentions an instrument worked by water, which rang a bell to measure time. Bells were rung to summon people to the public baths, and also in processions ; hence they naturally passed into the service of the Western Church.

Their first recorded use in sacred services, according to Polydore Vergil, was by Paulinus, Bishop of Nola, in Campania, about 400 A.D. In 680 A.D. Benedict, Abbot of Wearmouth, introduced them from Italy ; and in the seventh century Bede mentions them in England. St. Dunstan hung many bells in the tenth century ; and in the eleventh they were not uncommon in Switzerland and Germany. Very old Scotch, Welsh, and Irish bells are still in existence. They are often quadrilateral, made of thin iron plates rivetted together. St. Gall's bell—he was one of the great early Irish missionaries —is still preserved in the monastery of St. Gall, Switzerland.

Bells have had a very marked effect on ecclesiastical architecture. The elevation of church towers is almost entirely due to their presence ; prior to their day, the towers were merely lanterns to admit the light. But the bells did not always belong to the church in which they hung. The burghers now and again had a jealously guarded right to them. The civil wars of Belgium gave a strange significance to her bells. Whoever held the bell-tower could see the enemy, and make his approach widely known. At Antwerp, for instance, the Curfew Carolus, and St. Mary's bells are the property of the citizens, not of the chapter. After the taking of Constantinople by the Turks, in 1453, the use of the bells in the town was forbidden, lest it should prove a signal for a popular revolt. Conquerors commonly melted down the city bells when it was possible to do so.

Presently we have a word to say about bell-ringing ; but first let us make the acquaintance of a few celebrated bells. There is the great bell of Moscow, Tzar Kolokol, which was cast in 1733, remained in the earth 103 years, and was raised by the Emperor Nicholas in 1836. It is cracked, and seems never to have been rung ; a photograph of it upon a platform is very common, and will be familiar to most of my readers. It is used as a chapel. This ungainly monster weighs 440,000 lbs., is 19 feet 3 inches high, and 60 feet 9 inches in circumference. The second Moscow bell, the largest in use, weighs 128 tons ; the

great bell at Peking, 53 tons; that at Nanking, 22 tons; at Vienna, 17 tons; Nôtre Dame, 17 tons; Erfurt, 13 tons. Of our English bells, Great Peter, in York Minster, which cost £2,000 in 1845, weighs 10 tons; the big bell at St. Paul's, 5 tons; and Big Ben, in Westminster clock tower, weighs between 13 and 14 tons. This cracked giant, against whose unmusical note quick-eared Londoners protest, was cast in 1858.

There are some interesting bells at Antwerp. In the carillon there are forty bells, and besides these there are five celebrated ones, with a history attached to each.

The "Honida" is the ancient tocsin, and is dated 1316. It is a queer, long-shaped bell, and out of consideration for its age and infirmities is considerately not rung now. The "curfew," which hangs apart, is rung each day at 5, 12, and 8 o'clock. The "St. Maria" bell, which weighs 4½ tons, rang for the first time when Charles the Bold entered Antwerp in 1467, and is still in excellent condition. The "St. Antoine" bell is best beloved of all by the citizens; and the fifth great bell, the Carolus, was given by Charles V., and weighs 7½ tons. It is made of copper, silver, and gold, and is worth £20,000. The clapper, from always striking on the same place, has worn the bell, so that it is now only rung about twice a year.

The famous "Holy Ghost" bell, at Strasburg, is only rung when two fires are seen in the town at once. It is dated 1375, and weighs 8 tons. It bears the inscription, "O Rex gloriæ Christæ veni cum pace."

One of the Ghent bells bears the following inscription, common in the Low Countries:—

"Mynem naem is Roelant,
Als ick clippe dan is brandt,
Als ick luyde dan is storm in Vlanderland."

That is,—

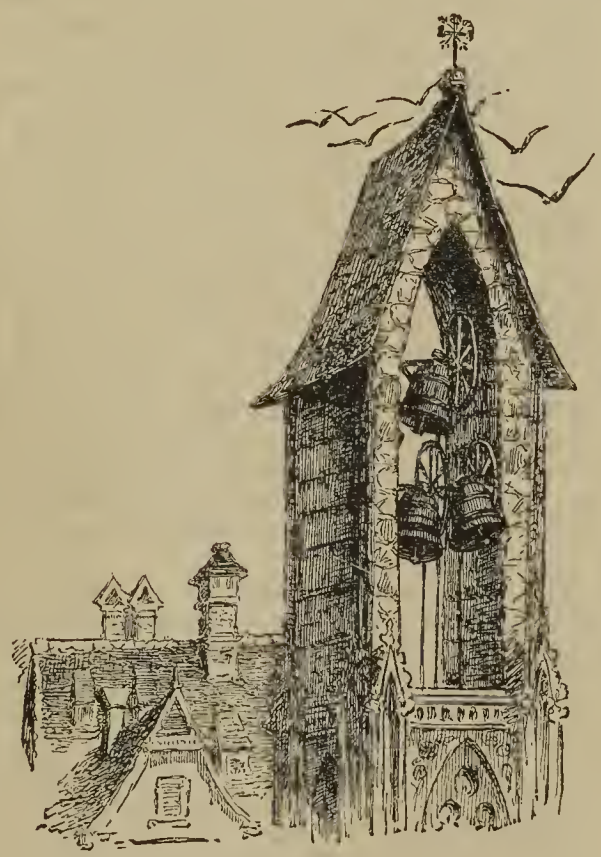
"My name is Roelant:
When I toll, then it is for a fire;
When I swing, then there is stormy weather in Flanders."

Besides the bells that merely ring, there are the "carillons" or tune-playing chimes. The word comes from the Italian "quadriglio," which was a dreary kind of dance, but being very popular throughout Europe in the 16th century, became the first tune arranged for the tune-playing bells. In the 17th century carillons were found in all the principal towns. Of Antwerp we have already spoken; St. Romband at Mechlin had 44 bells; Bruges, 40, and one bourdon, or heavy bass bell; Ghent, 39; Tournay, 40; St. Gertrude, at Louvain, 40. We read also of a peal of bells sent in 1456 by Pope Caliphus III. to King's College, Cambridge; for three hundred years this remained the largest peal in England.

The immense variety of changes which can be rung upon a peal of bells is almost incredible. 3 bells ring 6 changes; 4 ring 4 times as many as 3—that is, 24; 5 ring 5 times as many as 4—that is, 120. It would take 91 years to ring all the changes upon 12 bells at 2 strokes a second, whilst 24 bells would occupy more than 117 billions of years! The technical names of some of these changes are hunting, dodging, snapping, place-making, plain-bob, bob-triple, bob-major, double-bob-major, grandsire-bob-cator, etc.

There are two methods by which these peals are rung. One is by the rope and old familiar wooden wheel, shown in the open belfry in our picture. The other is by means of special machinery, rough and rude no doubt, but still capable of producing the lovely bell-music, which dances at intervals of seven minutes across the Dutch lowlands. We read of "*carillons aux clavecins, et aux tambours.*" The "tambour" is a revolving barrel like a huge musical box, which is up in a room in all Belgian belfries. The barrel is set with little spikes, which, as the barrel is turned, raise a tongue, which pulls a wire, which lets a hammer fall upon the bell.

But far beyond the *tambour*, both in power and association, is that rude key-board also in the belfry tower, where the choicest musical spirits used to assemble to wake the music of the bells. The *clavecin* key-board looks like a series of rolling-pins, arranged in semi-tones, and on them the player strikes a blow with his clenched fist. Rare music was once showered from these Belgian belfries over the listening plains.



The Van der Gheyns were the greatest family of bell musicians and founders, though other names, such as that of Hemony, are not far behind. The 16th and 17th centuries were the great bell-period of Holland, and her greatest carillonneur, Matthias van der Gheyn.

Our modern bell-founding is characterised by the prosaic spirit of the age, but the early bell-makers lavished loving care upon it. The bells were adorned with bas-reliefs of exquisite beauty, feathers, forest leaves, flowers, portraits, and inscriptions in bad, but quaint Latin.

The method of founding was, briefly, somewhat as follows:—

A brick column about the size of the bell was built, and covered with clay to make it smooth. On this were laid wax flowers, figures, or any decorations or inscriptions which the bell was to bear. The model thus prepared was washed with oil, and then the smoothest and most delicate clay was spread over it in several coats, and common clay spread outside to strengthen it. A fire was lighted underneath, the brickwork in the centre was heated through, then the clay. The wax and oil escaped through a hole at the top, leaving the exact impression of the model upon the inside of the cover. When quite hard, the cover was raised, and suspended some feet above the model. The model, being the size intended for the *outside* of the bell, was then broken up, and a smaller one built. The great cover was then let down, leaving a space between its inner surface and the new model. Into this space, which was just the size of the bell, the hot metal was run; nothing remained but to let it cool, to break up the cover, and there was the bell complete.

We have talked on, you and I, for quite a lengthy time. The bells do not appreciate our attentions, for here, right athwart all the other bells, comes the *dinner*-bell, and we must stop.

"They have no meaning, but yet they speak."

EARLY RISING.

WE advocate early rising, because we believe it is in every way conducive to health and vigour of mind and body. There is great truth in the old proverb, "Too much bed is bad for the head." The question comes, What is too much? Ask some: they will say that they require more sleep than others; perhaps they do, but how much? No rule can be laid down. There is more rhyme than reason in the saying,—

"Nature requires five, custom gives seven,
Laziness takes nine, and wickedness eleven."

There may be truth in the two last, but the first two lines require to be accepted with modification and caution; we cannot lay down any one rule for all alike to adopt; we are not creatures of the line and plummet order, nor rows of brick-bats, that can be set up or laid down at the word of command. Physical structure, temperament, occupation, opportunity, results, all have to be considered.

But giving nature and all the "infirmities that flesh is heir to," due credit and allowance, we are forced into the conviction that we spend too much time in our beds, more than the requirements of nature demand; nay, more than this, if we spent less time than we do, we should be much healthier and more vigorous than we now are.

Nature and common sense alike point to the necessity of a reform in our hours of retiring; eleven at the latest, ten better than eleven; then, as soon as you wake in the morning, get up. The great Duke of Wellington's maxim was, "When you turn, turn out." The requirements of the body will soon adjust themselves to the proper amount of sleep needed; beyond what is thus required is indeed custom and laziness, most hurtful and detrimental to body, mind, and soul. There is a baneful, enervating effect on the physical, mental, and moral faculties of the person who lies snoozing, dozing, dreaming, thinking in bed; persons in health should determinedly set their wills and resolves dead against any such pandering to the flesh. Away with truckling to such sensual, sordid appetites, hibernating like the animals that have nothing else to do. Up from thy sloth and carnal indulgence, act as a man whose sense of responsibility to thyself, thy neighbours, and thy Maker demand the full surrender and devotion of all thy powers to a complete discharge of thy duties, which can never be done by a cowardly, selfish surrender of thyself into the complacency and senselessness of late rising.

IS CHRISTIANITY CONDUCIVE TO MANLINESS?

By ARTHUR E. ABEL.

IN some form or another this question has forced itself upon the mind of every young man who has thoughtfully and earnestly considered the claims of the gospel of Jesus Christ. "How is it," said a young friend to me once, "that I meet with a better type of manhood on the river or the foot-ball field than I do in the prayer-meeting and Bible-class?" If we admit that such is the case, we must conclude either that the gospel does not appeal very strongly to *men* as such, or that it fails to make *men* of men, or that it is very defectively preached now-a-days to men. The first two suppositions we cannot allow for one moment. Upon the last we will not now pronounce an opinion.

It is true, however, that among a certain class of young men the idea is prevalent that religion is all very well in its place—its "place" being the heart of the child, the "old woman," and the man well advanced in years. But it is suspected of having a tendency to destroy true, honest, open-hearted manliness. This is a serious indictment, but it is as untrue as it is serious, and therefore does not cause us a moment's anxiety. We are confident, from what we know of the gospel itself, and from a wide observation of its effects, when sincerely embraced, that it does appeal to all that is noble, courageous, and strong in the human heart; and also, that it makes the man who accepts it infinitely more manly than he was before.

Let any one read down the list of earth's great ones—apostles, martyrs, reformers, missionaries, and the like, and then ask himself the question,—"Did the gospel of Jesus Christ make these men in any sense effeminate? or can we not trace their courage, self-sacrifice, and thorough heroism to its glorious influence upon their hearts?" What would Paul have been but for the gospel? What Luther? What Captain Hedley Vicars? What General Gordon? What Livingstone? What Bishop Hannington? We have only selected a few names out of thousands. Let each make a list for himself, and remember that our cemeteries and graveyards contain the dust of unnumbered Christian heroes, whose names have never been heralded by the trumpet of Fame.

Of course it is very easy to reply that these men possessed the noble traits of character for which they are famous, before they came under the influence of Christianity—that they were *men* first and Christians afterwards. But, if this is true, it goes a long way to prove what we have already affirmed, namely, that the religion of Jesus Christ has charmed many of the grandest specimens of manli- that ever trod this earth. And more than this. Could we call them one and all into the witness-box, they would unhesitatingly testify that their nobility, bravery, self-sacrifice, and all the best characteristics with which their names are associated, would never have been what they were, had they not given themselves, body, soul, and spirit, to their Saviour.

Much, however, depends upon what you mean when you use the word "manliness." God has His idea of what a true man should be, and the worldling has another. We are not surprised if we discover that these do not agree in every particular. His thoughts are not our thoughts. God once said, "Thou fool," to one who had a very satisfactory opinion of himself as a wise and prudent man. And He has said "Thou coward" to many a man who has been considered brave by his companions. If your idea of a *man* is one who "talks big," swears, drinks, bets, and fights, there is nothing in Christianity that will assist in the formation of such a character. But if manliness consists in patience, forbearance, self-government, purity, courage, and uprightness, then, we affirm, these are the very fruits of that Spirit whom the Saviour has promised to bestow upon every one that believeth. In other words, true manliness is produced by a living union with Him who through time and eternity will stand alone as the great embodiment of God's design and desire of what a man should be.

The gospel is slowly yet surely lifting the standard of real manliness, even in the eyes of the world. There was a time when the hero was the man who had more of the "brute" in him than his fellows. Mere physical strength, prowess in battle, the boast of numbers slain,—these called forth the applause of men and the admiration of the fair. To a very considerable extent, we are happy to say, this state of things has given way. We seem now to be passing through what may be termed the Intellectual stage. The man of thought, culture, imagination, carries off the palm. But there is a higher standard yet to be reached—that of Goodness or Moral Beauty. Before the man who is in the highest sense good, both brute force and intellectual force will dwindle into comparative insignificance. And if feeble minds and puny, sickly bodies are the results of sin, we may reasonably believe that the time will come when a noble, healthy frame, a cultivated intellect, and a Christ-like heart will be found more frequently than at present in one and the same person.

We admit that there are effeminate Christian young men. We regret to have to state that we know several such. They are good, earnest, harmless fellows enough, but they lack force, backbone, and manly vitality. Their virtues are rather negative than positive. We know them best by what they *are not*, rather than by what they are. They do shine for Christ, but their light is not strong and brilliant enough to be very attractive to those who are acquainted with them. But, we ask, is the gospel to be blamed for this? Would they, think you, be more manly without it? Do you complain that the sea air is not bracing, because along the promenade or on the beach you meet persons who are consumptive and weak?

The New Testament idea of a Christian man is that of one in whom the character of Jesus is reproduced. We do not become like Him merely by imitating Him, but by becoming, by faith, one with Him. "He that abideth in Me, and I in him, the same bringeth forth much fruit." When Christ is not only a man's Example, but is *formed* in him, depend upon it, the weak, the sickly, the effeminate will go, and the manly will appear. Says the Apostle John, "I have written unto you, young men, because ye are *strong*, and the word of God abideth in you, and ye have overcome the wicked one." Such young men are needed in the Church of Christ more to-day than ever. When the world sees that the gospel can produce such, He who was a *young man* when He died on Calvary will achieve victories that the Church hardly yet dreams of.

THE CALL AND THE RESPONSE.

"Then shalt thou call, and the Lord shall answer; thou shalt cry, and He shall say, *Here I am*."—Isa. 58. 9.

IS there any word in the Bible full of greater encouragement to earnest prayer? Is it not as cold waters to a thirsty soul? We have in it the cry of the needy soul, and the Lord's presence immediately made known as the answer. Sometimes, when we pray, God seems far off from us, and it is difficult to realise that He is indeed near to His people for all that they call upon Him for; but here we have the comforting truth, that whenever we cry unto Him from the heart, He does Himself draw near immediately to help and bless. "Thou drewest near in the day that I called upon Thee, Thou saidst, Fear not." "He shall say, *Here I am*."

Just as the little child in the dark night wakes up, and is full of fear until the mother's gentle voice is heard saying, "Here I am, close beside you; my child, you need not fear," and the child goes to sleep again in peace. Or as a traveller in an unknown land, for a moment loses sight of his guide in the darkness; terror seizes his heart, until the reassuring word is heard, "Here I am, still beside you, though you cannot see me," and he treads along the rugged path full of confidence. Just so are God's children cheered and comforted in their lonely hours, by the sweet whisper of His love.

Oh! see to it, that in every need, in every temptation, in every difficulty of life, your first act is to call upon God, to cry unto Him, and most assuredly the answer shall come, "Here I am."

The special request you bring may not always be granted, but of *this* you may feel quite sure, the cry shall be heard and responded to.

WHAT I GOT BY RELEASING A "BLUE-BOTTLE."

ON the front of my father's house in Essex were some fine old climbing rose-trees. One beautiful holiday morning, while walking along the terrace, I heard the plaintive sound of a large blue-bottle fly, caught in a spider's web high up on the wall. Looking up, my heart moved me to try to release the poor thing from the grasp of the spider. I climbed up the old rose-tree with no small difficulty, and the buzz of "Thank you" from the blue-bottle, as with my finger I set it free, was very satisfactory.

On turning round to make my perilous descent, I observed, hanging in the spider's web, a curious little dried rose-calyx, or seed-vessel, with three small seeds projecting from it. On reaching the ground, the treasure was soon shown to my father, who was son of a widely-known Naturalist, and he pronounced it to be the veritable seed of the White Banksia Rose. This was very remarkable, as it had never before been known to produce seed in England.

After sowing the precious seeds, I had the joy of seeing two little seedling rose-trees spring up, and, in due course, had the intense pleasure of watching one of these produce some exquisitely fragrant flowers, less double, but much more fragrant than those of its very sweet parent.

I need scarcely tell those interested in gardening what pure delight it gave me to watch their development.

Even in this world, kindness rarely misses its reward.

A VISIT TO THE PASS OF O-JIGOKU.

By Mrs. Orme Webb.

SOME four years ago, my husband, brother, and myself made a tour round the world, and in the course of our travels we spent some weeks "up country" in Japan, living in "tea-houses," and having some very strange experiences.

One morning we set off to visit the Pass of O-jigoku (which means in literal English, "Big Hell"), of whose weird scenery we had heard so much. I rode in the native chair, or "kangó," which is a sort of sedan slung under a pole, and carried by two bearers, and is calculated to give a severe attack of cramp in five minutes.

The road being all up-hill and very rough, I was bumped about terribly, and was not at all sorry to get out when we reached a small wood or jungle of high bamboo grass, through which the kango could not pass. There I was seized upon by our guide, and dragged through bodily, and at last, panting and breathless with our struggles through the thick grass, we stood and looked round us at the Pass.

I wish I could describe the strange scene. Imagine high brown mountains, or hills perhaps I should call them, rising on all sides, bare of all vegetation, and steep and rocky; here and there a stunted and dead tree lay on the ground, twisted into strange shapes and torn up by the roots by the stones which constantly rolled down the hill-side. In a rocky gorge a foaming stream of boiling hot water rushed down and emptied itself into a boiling torrent below, above which was a narrow path, which we eyed with some distrust.

Our guide warned us to walk in single file some yards apart, as it is not safe for two persons to stand together, owing to the thinness of the crust,—and indeed we shuddered to see how thin it was. One of us poked a stick into the ground, and instantly fumes of sulphuric steam arose, the smell of which was almost unbearable.

Added to this, from all sides rose strange roaring and bubbling sounds, under our very feet at times, as if some imprisoned demon was trying to force its way out. We felt as if we ought only to speak in whispers, the whole scene was so weird and horrible, and we prepared to return; however, our guide led us towards the path we had seen on the hill-side, and resigning ourselves to fate, we very meekly followed him, and soon found ourselves walking on a narrow ledge of shifting sand, with nothing but slippery bamboo grass here and there to hold on to, and nothing whatever to keep us from rolling down into the boiling torrent below.

It was a curious sensation, and I looked back despairingly at my fellow-sufferers. They wore a somewhat chastened expression, and nodded to me in a half-hearted manner, I fancied. It would not have been so bad if only the pebbles would have rolled down the hill in any other direction; but they rattled against our ancles in the most trying manner, and tested one's good temper. At last our sturdy little guide stopped and gave me his hand; I felt as if I was losing my head, and must roll down into the water. "It isn't safe to walk together," shouted my husband, but I was reckless, and did not care, and we soon reached firm ground, and all sat down and surveyed the past scene. My brother mournfully rubbed his bruised ancles.

"Well, you have seen the source of the sulphur springs," remarked my husband, as though starting a new idea; and as I gazed at the weird, bird-less, tree-less place, I replied, "Yes, and I don't care if I never see it again."

INTERNATIONAL SUNDAY SCHOOL LESSONS.

NOTES ON THE INTERNATIONAL S.S. LESSON.

By Rev. J. H. Thorpe, M.A.

June 3rd.

Jesus Crucified.—*Matt.* 27. 33-53.

Golden Text.—*Phil.* 2. 8.

ON a subject so full, it is very difficult to write short notes. The teacher may treat it in many ways.

I. The Passover.—Point out the object of the original institution, and show how perfectly every minute detail was fulfilled at the cross, even to the presence of the hyssop (John 19. 29), and His death just after 3 o'clock—at the time of the slaying of the lamb.

II. Another lesson might be founded on the various characters seen at the cross, and their relationship to Jesus. (1) The heathen world in the Roman soldiers. (2) The ignorant and godless world in the passers by. (3) The bigoted and superstitious ecclesiastical world in the chief priests. (4) The openly abandoned in the two thieves. (5) The faithful followers in the many women (see ver. 55).

III. Or, the sins clustering round the cross, types of sins borne on the cross.

IV. Again, you may see here three sorts of *mocking*. (1) The common people—thoughtless scoffers. (2) The priests—hateful and spiteful scoffers. (3) The criminals—saddest of all scoffing.

V. The lesson may be studied as a series of contrasts. Effects of the phenomena of the cross—on "the rest," ver. 49, and the centurion, ver. 54. Christ strong to save in the hour of weakness—the penitent thief. As crucified persons were stripped naked—what a contrast! His nakedness and our covering through His nakedness! Intention and reality—His accusation was set over Him to mock, whereas it described no crime, really proclaimed His innocence, and described His true office. Contrast the two trees—the cross and the forbidden tree in Eden. The serpent was overcome on a tree, having first overcome man upon a tree. The cross and the Word—see the honour put on the Word of God; every point must be fulfilled. The cross—a mirror, where we see our guilt, God's law in its terrible demands, our sufferings laid on Another; a seal of God's grace and mercy, of our safety and of our acceptance.

VI. Or consider His death as a great result (1) of the world's deadly hate, (2) of His own unconquerable love, (3) of God's grace.

He drank the second drink because (1) the wine was unmixed, (2) Now the moment of rest had come, (3) That the Scriptures might be fulfilled. He rejected the first, for He would not have the world's consolation.

When He was born, night became bright by the shining of the star; when He died, the midday sun was darkened into night. The teacher will, of course, dwell on the punishment of the cross as that used for slaves, and only the worst malefactors; as the most prolonged and painful death.

Calvary, a hill outside the city, now recognised as "a knoll of rock about sixty feet high, of rounded form, covered with shallow soil and grass, in full view of the great northern road from the city." "In its form, and certain old tombs, which simulate sockets of eyes, it has a remarkable resemblance to a skull partly buried in the ground."

As the lesson opens directly with scene on Calvary, make this the starting-point, telling scholars to place themselves in imagination on that green hill "without a city wall," and there, "*by the cross of Jesus*," do *four things*:—

Look, Listen, Realise, Determine.

Look *at the Way Christ Travelled.* From garden to palace, where He was twice examined, buffeted by soldiers, taken to Pilate, to Herod, back to Pilate, scourged, sentenced, cross laid on Him; meets Simon the Cyrenian. Words to women on the way.

Look at the Arrangements for Crucifixion. Hole dug in ground. Cross on ground; Christ laid on it; nails driven in.

Look at His Sufferings. "The most terrible and shameful death of antiquity." "Death by crucifixion included dizziness, cramp, thirst, starvation, sleeplessness, publicity of shame, long continuance of torment, horror of anticipation, mortification of untended wounds—all intensified just up to the point at which they can be endured at all, but all stopping just short of that point which would give the relief of unconsciousness."—*Farrar.* "It is on record that a soldier once said that of all the awful sounds human ears could listen to, the worst, most terrible out of hell were those pitiable cries, in the solemn silence of midnight, from the lonely hill where crucified men were hanging in agonies out of which they could not even die, whilst a breath remained to suffer with." Some ladies of Jerusalem made it their mission to prepare a drink for the prisoners, which would deaden their consciousness. This Christ would not accept (ver. 34). He bore the full burden. He died through *a broken heart.* This asserted by doctors, who prove it through blood and water flowing from side.

Look at His Companions. Thieves (Isa. 53. 9; ver. 38).

Look at those around Him. The cross was low, so that the sea of faces only slightly below. First the group of women; soldiers, holding part of His raiment (ver. 35); sneering scribes (ver. 41); timid, cowardly friends.

Look at His Accusation (ver. 37).

Darkness shuts in the scene (ver. 45).

Listen. Get scholars to repeat seven sayings, also "Truly this was," etc. Sneers (vers. 45, 46).

Realise *that He is your Redeemer* (1 John 1. 7).

Your King, though a crucified prisoner. Cross once a symbol of shame, now of glory (Gal. 6. 14).

Your Inspiration (Phil. 4. 13). Illustration: Dying Indian chief who caused himself to be laid on a cross outside his tent, and died, exclaiming, "It lifts me! it lifts me!"

Determine *to accept Him.* "*My* Lord and *my* God."

To vow Allegiance to Him. "From this day forth, and for evermore."

To do Him Service. Illustration. Hymn, "Something for Thee."

C. Skinner.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSON.

June 3rd.

Seven S's.—*Luke* 15. 1-7.

A CERTAIN class of people who came to Him—*sinners.*

I. What is sin?

"Sin is the transgression of the law" (1 John 3. 4).

"All unrighteousness is sin" (1 John 5. 17).

"Whatsoever is not of faith is sin" (Rom. 14. 23).

"The thought of foolishness is sin" (Prov. 24. 9).

"He that knoweth to do good, and doeth it not, to him it is sin" (James 4. 17).

Now a sinner is one who fails in the above.

II. What is the sinner likened to? *Sheep.*

(1) Because of its *stupidity* in wandering into danger (Is. 53. 6). We well remember reading of two sheep in the north of Scotland wandering from the fold, and straying to a cliff which overlooked a railway; they were unable to get back, and finally fell over the cliff.

(2) Because of its *helplessness* when in danger.

III. Who went after the sheep?—The *Shepherd.* Oh, what a Shepherd He is! There is none like Him.

(1) He is God's Shepherd, who has borne the wrath of God for us (Zech. 13. 7).

(2) He is the Good Shepherd, who has laid down His life (John 10. 11).

(3) He is the Great Shepherd, who is risen from the dead (Heb. 13. 20).

(4) He is the Chief Shepherd, who is coming again (1 Pet. 14).

(5) He is the One Shepherd over the one flock (John 10. 16).

IV. What did the Shepherd do? *Sought* until He found it "Have you found Christ?" asked a Christian worker of a man. "No," was the reply; "but He has found me."

V. Where did the shepherd put the sheep? On his *shoulders.* Mark on his shoulders. In Isaiah 6. 9, we read that "the government shall be upon His shoulder." He only needs one shoulder for the government of the world, but He needs both when He brings a poor, lost sinner home. Creation is the work of His fingers, but in saving a sinner He bares His arm. At creation He spoke, and it was done, but in redemption He gave Himself.

VI. *Singing.* The Shepherd rejoiced at the recovery of the sheep (Zeph. 3. 17).

VII. The *satisfaction* of the Shepherd in finding the sheep expressed in the words, "Rejoice with Me."

Sunderland. F. E. Marsh.

CHRISTMAS EVANS: THE BUNYAN OF WALES.

CHAPTER II.

SOON after this he became a Baptist, being baptized at Aberdeen, when in his twentieth year; and with this body of Christians he developed his powers, exerted his influence, and accomplished his work.

Christmas Evans' first settlement was as pastor of the Church at Lleyn, in Carnarvonshire; and here it was that he met the wife of his youth, in the person of Catherine Jones, in whom he had a true helpmeet.

Christmas Evans had no conception of household duties; he and his wife, however, made up an excellent whole. He was doctrinal, poetical, and mystical, and she was experimental and intensely practical.

One day they happened to be without potatoes for dinner, and it appeared too cold to dig any out of the garden.

Christmas said to his wife, "Never mind, Kitty, trust in the Lord; Providence will give us potatoes for dinner."

She turned upon him sharply, and replied, "Chris, you go to the top of that mountain and sit down, and I'll go into the garden to dig, and see to whom Providence will send potatoes first."

What a gathering is a Welsh Association! The "*session*" of the Methodists, and "*Cymanfa*" of the Independents and Baptists have exerted historical influence upon the Principality, and show how characteristic is the Welshman's intense love of preaching.

At these periodical assemblies there would be gathered 5,000, 10,000, 20,000, 25,000, and even 30,000 people, all having come purposely to spend the hours in listening to the gospel being proclaimed.

At such an Association, of necessity held in the open air, Christmas Evans preached in 1794, and to him was given the doubtful compliment of preaching the last of three at the ten o'clock service.

The two preceding preachers had been tedious and long, and the day being hot, the people had become wearied, and many had wandered to the shade of trees, the vast congregation becoming woefully scattered.

Such was the aspect of things when the stranger rose to continue the already long service. His very appearance, as an untried man, commanded attention, whilst his musical voice, like a trumpet, enlisted all ears, and every face turned with strange expectancy towards him. Five minutes, and what a transformation! the wandering, scattered and listless pressed into the crowd, and in a deathlike silence listened to the preacher.

What a magical effect! See the immense crowd swayed to and fro, like trees in a tempest, by the words of an unknown preacher. No one could resist the mysterious influences. People and preachers joined in the shouts of praise, the exclamations burst, like peals of thunder, from different directions.

His preaching was largely allegorical, and hence he is known as the Bunyan of Wales, and the Bunyan of the Pulpit; and doubtless the designation is true, for he was a master of allegory and metaphor; similitude, figure, and parable sparkled in all his sermons.

The parable of the "Journey of the young Child," with all its anachronisms, is a perfect specimen of his kind. Nothing can exceed the solemn grandeur and devout majesty of his "Graveyard scene," or, as some call it, "The Cemetery World." The quaintest of his descriptions is found in his sermon on the "Demoniacs of Gadara"; and though it would shock the sensibilities of Christians of to-day, the scene and conversation were most natural, and the impression produced and lessons enforced would be marked ones.

He possessed the dangerous gift of sarcasm, but he used it prudently. He had never been to College, but he gave himself to study, and acquired a fair knowledge of Hebrew, Greek, and Latin, gaining the reputation of being learned.

On one of his annual journeys he was overtaken by a student, who sneeringly remarked, "Good-day, Mr. Evans; where is the donkey you had last year? You must be weary without him."

"Oh no, young man, good-day," answered Mr. Evans. "The donkeys are very scarce in our country just now; they have turned them into students, and not one is left."

After three years Mr. Evans left Lleyn, and accepted a call to Anglesea. "The salary was larger, and therefore he went," is the sarcastic remark of one who enjoys a hit at ministers. The salary *was* larger, and what a salary it was! At Lleyn he received the munificent amount of £15 per annum; and when he became "Bishop of Anglesea," he received £2 per year more.

Surely the bitterest foe of Christianity, or the most parsimonious and economical professors of it, cannot say he was overpaid. It seems almost incredible that, after preaching two sermons at a place, one Sabbath, the treasurer slipped into his hand the remarkable sum of one shilling and sixpence. Christmas gazed at the amount, and then playfully remarked, "*Tell me which was the sixpenny sermon, for I will never preach it again.*"

No sooner had he settled in Anglesea, than he appointed a day of humiliation and confession, which resulted in a great awakening.

He had under his charge twelve churches, each of which he visited monthly. The care of these churches, and the very success which he achieved, placed him in difficulties; for the people were poor, and could not build chapels for themselves.

To help on the work, he undertook to go on begging tours into South Wales and England. The amount he collected in this way cannot be computed; but it must have been some thousands of pounds, for he made no less than forty journeys (each of them occupying as long as six weeks), preaching in every hamlet, village, and town through which he passed, generally twice, if not thrice, daily. He is stated to have been a very effective beggar.

It is sad to reflect that the latter days of such a veteran should be cloudy. Complaints were made that he was too authoritative in the Church; and perhaps he was, but were the Churches free from blame?

He left Anglesea, after labouring incessantly for forty years; and it must have been a touching spectacle, to behold a venerable apostle leaving the scene of such prolonged service, the dust of the dear dead, and breaking a thousand ties to undertake fresh work for the Master.

The fact will ever blot the history of the Churches of Anglesea, though it may have been somewhat obliterated by the recall which they gave him, a few years afterwards. He left Anglesea, and laboured successfully at Caerphilly, Cardiff, and Carnarvon.

As the church at the latter place was burdened with a debt, he determined to go on another begging tour, which he did; but it proved his last.

In the course of his journey he arrived at Swansea on a Monday evening, and preached in English at the English chapel. His text was, "*Beginning at Jerusalem.*" He was very feeble, but there were sparkles and gleams of greatness in his sermon, which were highly appreciated. When descending the pulpit stairs he said, loud enough for many to hear, "This is my last sermon"; and so it proved, for that night he was taken seriously ill, and grew gradually worse.

On Friday morning, at two o'clock, the friends and ministers in the town having been hastily summoned, he spoke his last words: "I am leaving you. I have been labouring in the sanctuary for fifty-three years; and my confidence and consolation at this crisis is, that I have not laboured in vain. *Preach Christ to the people, my brethren. Look at me; in myself I am nothing but ruin, but in Christ Jesus I am heaven and salvation.*"

Then he repeated joyously four lines of a Welsh hymn, and, turning to his mourning friends, said in English, "*Good-bye, drive on,*" and immediately fell asleep.

So passed away this prince of preachers,—so declined the brilliant star which filled Wales with its light for sixty years. The glow of its glory has not yet faded; rather, it seems increasing in brightness; for historians are just beginning to recognize the marvellous power and character of this great man.

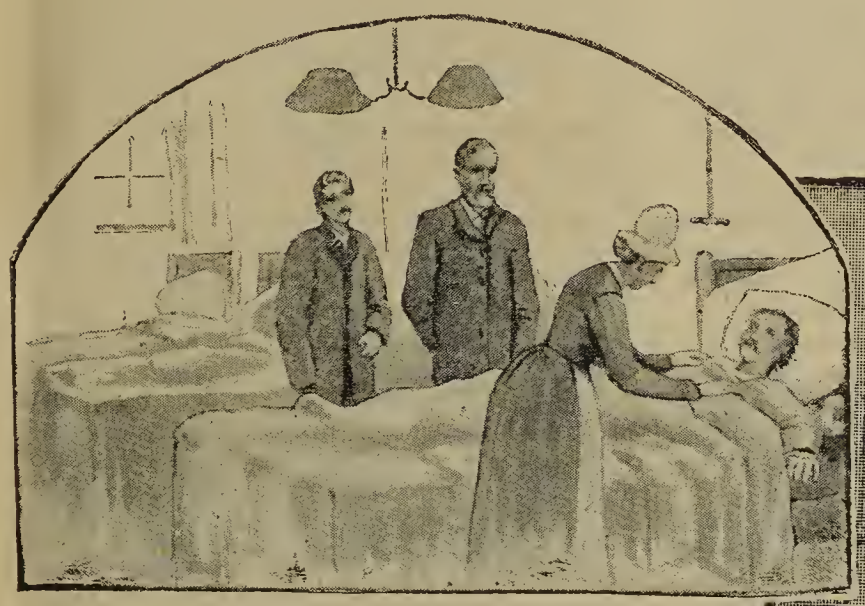
Eternity only will reveal the majesty of his character and work, and yet how poorly recompensed! What slight recognition have his splendid services had in the Christian Church generally.

"Amidst the noblest of the land, men lay the brave to rest,
And give the bard an honoured place with costly marble drest,
In the old minster transept, where lights like glories fall,
And the choir sings and the organ rings along the emblazoned wall."

For those who, like our hero, have spent their lives in seeking to restore the Golden Age of which poets sing, the world has no crown, or chapel, or place in the Temple of Fame. But let them have a niche in the hearts of true Christians, and a chamber in the temple of God; and they have an immortality which is lasting as the throne of God, and a crown which glistens for a blessed Eternity.

MOTHER OF THE LATE EMPEROR WILLIAM.

Louise Augusta Wilhelmina Amelia, sixth child of Prince Charles Louis of Mecklenburg-Strelitz and Princess Frederica Caroline Louise of Hesse-Darmstadt, born March 10*th*, 1776*; married, December* 24*th*, 1793, *to Frederick William, Crown Prince of Germany, with whom she ascended the throne in* 1797. *Queen Louise died at Hohenzieritz, July* 1809.



IN HER, GERMANY SAW

its best self personified; love of liberty and country, pleasure in domestic and family life, taste for poetry, deep and quick gratitude for all the gifts of God.—*See page* 428.

MAY 5, 1888. "A.1." ONE PENNY.

THAT HOUSE IN LONDON.

By L. T. MEADE,
Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "Water Gipsies," etc., etc.

"Her touch was delightfully soothing."

"In an instant he was in the middle of the street."

CHAPTER XXII.

ALEXIS had been provided by the prison authorities with a small sum of money; he had also been given much excellent advice by his kind friend, the prison chaplain. It is to be doubted whether he thought much of the advice, but he certainly was careful of the small store of money.

When he had escaped from prison, two years ago, he had been a creature more or less indefinite of purpose, more or less weak and vacillating of will. Now he had a purpose strong and defined enough. He had a goal to which he steered, and great must be the obstacle which would interfere with his reaching it.

He reached the railway station, and took a third class ticket to London. He knew Graham lived in London, and therefore he, too, must make London his home.

His clothes fitted him badly—they were obsolete in cut; his closely-cut hair, his injured hands, also proclaimed him to be a man who, for a time, had not kept count with other men.

He knew perfectly that he had the flavour of the prison about him; that others would recognise at a glance that he was one of those unfortunate human beings who had dropped out of the life-race, and who now could never, never hope to win any worldly success.

At another time, Alexis would have been intensely, morbidly sensitive on this point. He was not so now; his mind was so full of another subject, that he gave very little thought to the significant glances of his fellow-passengers; he did not mind the little asides they whispered

one to another, nor the curious and suspicious glances they darted at his toil-roughened hands.

As the train neared London, a man, egged on by another, entered into conversation with the ex-prisoner. He talked about the current events of the day—of course Alexis had never heard of them; he alluded to matters of interest a year ago—Alexis owned profound ignorance.

Now the passengers in the railway carriage began to draw away from the outcast; their suspicions were certainties; they would leave the degraded being to himself.

Alexis only smiled when he saw this.

"They cannot interfere with my revenge," he said to himself. "I care for nothing in the wide world but my revenge."

The train steamed into Waterloo station, the passengers dispersed, and Jonas Alexis once more found himself a free man in a free world. Things were not now as they were two years ago. Then he was doubtless free; but he was only free because he was not found; he was only free because his *old chum* had not yet marked him out as his prey.

Now he was free, indeed; he might be hated and despised, and looked down upon, but the law could not touch him; he had paid its extreme penalty; he could go where he liked, he could use his own name, he was not in the smallest danger.

It was delightful not to be afraid of the law; this first taste of liberty, after those long captive years, was positively exhilarating.

It was night when he got to Waterloo. He walked from the station, and presently found himself on the top of an omnibus, which took him across Waterloo Bridge. He dismounted in Wellington Street, and was soon in the gaily lighted Strand. The night was fine; the streets were thronged; men and women hurried to and fro; omnibuses and cabs jostled one another on the crowded roadway. The shops were very bright and gay.

Alexis walked very slowly, gazing into the shop windows as he crept along. A policeman came up to him, and requested him to move on. He did so, smiling to himself as he remembered that he need not now cringe before these protectors of the peace.

He came to a large restaurant, and there discovered that he was hungry—almost starving. He went in at once, and ordered a substantial meal.

Here again he observed the people glanced at him, smiling at the cut of his coat, and frowning at his roughened hands. Alexis had a delicate, almost refined face, altogether out of keeping with these toil-worn hands.

He ate the excellent dinner he had ordered, however, without minding either smiles or frowns, paid for it out of his slender store of money, and once more went out into the street.

The theatres were open, and it suddenly occurred to him that he would go to one. He mingled with the crowd at the pit entrance of one of the largest houses. When the doors opened, he pushed and jostled with the rest of the eager pleasure-seekers, and managed to secure for himself a seat in the front.

The motive of the play came home to him well. A man had been treated badly—the man would avenge himself. Alexis listened with all his ears, and watched with all his eyes. When the crisis came, and the victim fell under the hand of the avenger, he shouted aloud in his joy and excitement.

"That was well done," he said, wiping some drops of moisture from his pale brow. "That was as it should be."

So fierce did he look, so almost fiendish was the expression of his eyes, that a pretty fair-haired girl, who sat by his side, shrank away from him in some alarm.

The play was over, and the crowd once more was turned into the streets. Alexis had always been a temperate man. For many years now he had, of course, not touched anything stronger than water; but he was so excited to-night, so overwrought, that he could not resist the temptation of turning into a gaily-lighted gin-palace.

Here he ordered some whisky and water; he drank one tumbler, then another. The quantity he imbibed was small, but in his weak and excited state, it got into his head before he was in the least aware. A little before midnight he staggered out of the public-house, and now he reeled along the foot-path, a truly miserable object.

At the corner of the street there was a noise, a bustle, a confusion. Alexis looked behind him; he suddenly became frightened and bewildered. Was he really not free, after all? Were the police again pursuing him? Was it a dream that his term of imprisonment was over?

His head seemed to spin round and round. What tall figure was that approaching him? A policeman—surely, surely, and to lock him up! He uttered a cry, and darted from the hand which had almost grasped his shoulder. In an instant he was in the middle of the street; the next moment he was down—down—while a thousand hammers seemed to beat on his brain, a thousand lights danced before his eyes, and then all was darkness and insensibility.

The wheel of a heavy dray had gone over one of his legs, crushing and mangling it. The very policeman who had intended to run him into the lock-up for the night now helped to carry him to the nearest hospital.

CHAPTER XXIII.

ALEXIS was taken to Charing Cross Hospital. He was unconscious when he arrived; he was unconscious for many hours after.

When he came to himself he found that he was strapped down on a narrow white bed, that a strange weight seemed to pervade all his limbs, and that his head felt dazed and queer.

For a time he could recollect nothing; he thought that he was once again in his prison cell, that his time of imprisonment was not yet over, and that the voice of the warder would soon be heard bidding him get up from his hard and unrefreshing couch.

He became quite sure of this, and wondered dimly why all his limbs felt so leaden. He had as yet only half-unclosed his eyes, and therefore was quite unaware of the fact that the room in which he lay was both large and lofty, and that many other narrow beds, similar to his own, were placed at intervals along its walls.

Presently he felt something cool touching his lips; this was not quite like the prison, but he found himself intensely thirsty, and swallowed the refreshing drink thankfully, but with no sense of wonder. He was better after it, and now opened his eyes more fully.

After all, the day had not come—the warder would not call him yet—the light in the room was certainly artificial; how queer to have artificial light in a cell. Then he noticed the size of the apartment, and finally, that it had other inmates. Little groans came from other white beds, some restless movements, some impatient words.

A figure dressed in cool, light-coloured clothes, kept flitting about, now stooping over this bed, now over that. The figure was that of a woman, and her movements were very quiet, calm, and dignified.

Except at chapel on Sundays, it was many long months since Alexis had seen a woman, and the female prisoners at Portland, in their prison dress, were but sorry specimens of what a woman might be.

This quiet nurse belonged to a totally different order of beings; it became refreshing to Alexis to watch her. He now knew that he was not in his prison cell, but his brain was still far too dull and confused to speculate as to the why or the wherefore which had brought him into this unaccustomed place.

He lay absolutely motionless, his eyes alone moving, as they followed the night nurse from place to place. Presently she came up to him again, and raised his head and smoothed his pillow.

"You are better now, my poor fellow," she said, in a voice which fell like music on his ear.

"I'm not at Portland, then?" he said, looking up at her, and speaking in a very hoarse tone.

Many people would have shrunk away at these words, but the sister did not. Her full dark eyes grew a shade more pitiful.

"You are at Charing Cross Hospital," she replied; "you have had an accident; does your leg hurt you?"

"It burns, and I can't move it; is it broken? I can't remember anything."

"Don't try; your leg has been considerably hurt. Drink this soothing draught, it will enable you to get some sleep."

She poured something out of a bottle, and gave it to him, raising his head again as she did so, in order to enable him to swallow the mixture with greater ease.

Her touch was delightfully soothing, and he would have liked her to remain by his side. Some other patient, however, called her, and she had to hurry off.

Then Alexis was left for some hours alone. They were perhaps the longest hours of his whole life. The soothing draught was not sufficiently powerful to dull the ever-increasing pain in his leg. Before the morning, that pain increased to torture; he had to set his teeth and clench his hands to keep himself from screaming.

The next day the ex-prisoner of Portland prison was delirious. Kenneth Graham, expecting he knew not what of revenge and mischief, little knew that Jonas Alexis had again for a time been removed from his path—nay, that there was a chance of his altogether ceasing to be an obstacle in a clever and bad man's career.

The doctors thought badly of Alexis, and feared that he would not have strength to bear up against the amputation of the wounded leg, which seemed necessary.

Days passed—during these days Alexis lay truly within the shadow of death. He was delirious nearly all the time, and, perhaps, fortunately, his delirium took him back to early and happy days.

He talked in the language of a boy, and about boyish things. He was back again in a country cottage with his mother; he was bird-nesting, and fishing, and playing cricket with another boy; he looked up to the other boy with affection; he always mentioned his name in a tone of endearment; then gradually, as he grew worse and weaker, the

scene changed, and his clouded brain evoked less happy memories.

Now he had got into trouble of some sort, and he was no longer a boy. He mentioned his mother's name very, very often just now; his grief of griefs was that he should have done something to break his mother's heart.

He was dreadfully unhappy about it; he called her name aloud with ringing cries of deep distress. The sick people in the beds nearest to him shook their heads when they heard these cries.

"Poor fellow! poor fellow!" they said; "his mother must have been a good 'un to make him cry out after her like that."

The sick people felt quite compassionate towards Alexis when they heard him mentioning his mother's name so feelingly. His delirium did not take him back any farther than that final scene with his mother; he never once mentioned Portland prison, nor did he, in any of his wild wanderings, allude to Kenneth Graham.

When the surgeons discovered that Alexis was far too weak to allow them to amputate his injured leg, they all with one exception believed he would die.

One surgeon, however, in the hospital, a man of great ability and rising reputation, thought differently. He had a great horror of amputation, and he believed that Alexis's case was one which might be treated after a method which he had himself discovered.

Accordingly, he took up the case, and gradually and surely his efforts were rewarded; the pain in the much-injured leg lessened, the inflammation subsided, and once more consciousness came back to Alexis.

His recovery was very, very tedious, but he did recover; he began to sit up in his narrow bed. Although the injured leg was absolutely useless, he could use his other limbs. His head no longer felt confused, memory had come back to him, and he knew exactly where he was, and what his chances were in life.

The good people at the hospital were most kind, and the nurse who had taken his fancy on the first night of his arrival, signalled him out for many special little attentions.

She was a very noble and a very brave woman; the motto of her life was in all cases to help the weakest and the worst. She made this her rule in her hospital practice.

Those patients who were happy in their minds, who had friends who came to see them, who were likely to get better, she left more or less to the other nurses; but those patients who were pronounced on all hands uninteresting and hopeless, to those Sister Lucilla gave many an earnest and sympathising glance; for them she prayed many a prayer.

Any one could see that Alexis was unhappy; any one could see he was a waif and stray, a human being who had fallen so often in the race, that it seemed scarcely worth while for him even to try to go on again.

Sister Lucilla noticed these facts with a quick glance or two; she knew that here was a man who had more or less of despair at his heart; she saw also that his was one of those characters whose very weakness make it almost impossible to impress. Of course she did not give him up; on the contrary, she devoted a good deal of thought to his case.

One Sunday evening, when he had been in the hospital for six weeks, she sat down by his bedside, and tried to draw him out. She began by assuring him that when he spoke in a low tone, and addressed her directly, the other invalids could not overhear them.

Then she said something which startled him, and brought the colour into his white face.

"Is your mother living?"

Alexis turned his full brown eyes directly on the speaker.

"No, Sister," he answered sadly; "no one cares for me is alive."

Sister Lucilla laid her shapely white hand with a certain quiet and sympathising gesture over the sick man's. Her hand was large, and it covered his, which was terribly attenuated now from illness.

"I am sorry for you," she said in her rich, full voice; "you loved your mother very much."

"How do you know? How can you say?" answered Alexis in great surprise.

"You spoke of her in your delirium. Oh, you cannot guess with what passion and anguish you mentioned her name. I was deeply sorry for you."

"That was good of you, Sister," said Alexis. He was very weak in body still, and the sister's words brought tears to his eyes. "Did I speak of anything else?" he continued after a moment's pause, and now he shuffled uneasily, and half turned his head away.

"You spoke of many things, of your childhood, of your youth; on the whole, your memories were pleasant — except — except when you mentioned your mother."

"Did I——" began Alexis; here he suddenly stopped; his face was deadly white.

"Hush; you never spoke of Portland. *I* know you have been there, because you told me the first night you came in; but no one else knows, nor shall from my lips. You don't mind my sharing your secret with you?"

"No, Sister; I believe I could trust you with anything."

"That is right; so you shall, later on. I want to learn all your story, for I am most anxious to help you. I believe God sent you here, and I believe He intends me to do my utmost for you; so you need not feel overpowered with gratitude to me, for I must obey my Master. Now you are weak and must not be excited; just tell me your name again, it is an uncommon one.

"My name is Jonas Alexis."

"Alexis? I knew a lady of the name—not well, but a little; she used to visit at this very hospital. She came here once a week for a long time, and the men all loved her. She was a gentle little old lady, and had one peculiarity; she always would visit the men's wards in preference to the women's. She said she had a feeling towards men, particularly men ill and in trouble. She was most gentle and sympathising, and very popular; we have missed her much since she died."

"Oh, she is dead!" said Alexis with a sigh. "You spoke of her exactly as if you were speaking of my mother; my mother would have done just that; it seemed to me you were drawing her picture when you spoke."

"She could not have been your mother, my poor fellow, for she was, pardon me, a lady."

"Pardon me, too, dear Sister, there was a time when I thought myself a gentleman."

Sister Lucilla started, and looked intently at the ex-prisoner's face. For the first time she noticed that although the physiognomy was undoubtedly weak, yet the features were refined.

"He left off being a gentleman very young, but he was born one," she murmured under her breath.

"The Mrs. Alexis I mean," she continued aloud, "was small in stature, and had a very gentle face. Her eyes, now I remember, were brown, something the colour of yours; her hair was perfectly white. When did your mother die?"

"I don't know, Sister."

"You don't know? This lady died about two years ago. She lived in Exmoor Square, a large square at the back of Bloomsbury. She was rich, and she was very charitable. In every way we miss her much."

"Then she could not have been my mother," said Alexis, with a sigh; "for my mother was one of the poorest women on God's earth. She could not have been my mother, though the description is like, for she, too, was little and gentle, and had brown eyes, and a kind, kind way that would make your heart somehow rise up in your throat if you felt any way low. My poor mother! I don't want to think about her; she has been dead for many and many a day."

"I am sorry for you, Alexis, for I know you must have loved her well. You must tell me all your story another day. Now I must leave you. Here is the little book of hymns; read it when you are not too tired, and remember that, though you may have a dark page in your past, yet there is a Divine Father, who welcomes prodigal sons to His heart. I should have liked that dear little lady to have been your mother. Her name was Grace—Grace Alexis."

"And that was my mother's name; oh! Sister, that was my mother's name."

Sister Lucilla was called away just then for urgent duties, and it so happened that during the remainder of Alexis's stay at the hospital, she was so much occupied that the chance of having another long conversation with him never came.

She did not forget him, and she often stopped by his bedside to give him a kindly word; but Alexis never did confide his life-story to her sympathising ears. Had he done so, much that followed need never have been.

Three weeks later the doctors pronounced him well enough to leave. The little money that he had on his person on the night the accident occurred was returned to him, and once more he put on that obsolete suit of clothes which had belonged to him in the old days.

The surgeon who had attended him gave him quite a hearty good-bye, and Sister Lucilla herself wished him God-speed, expressed her sorrow that she had not been able to see more of him, and finally gave him the address of a clergyman who worked hard in one of the central parishes in London, and who, she said, was her brother.

"He will be good to you, for my sake," she said. "Tell him that I nursed you in Charing Cross Hospital, and he will, I know, do what he can for you. Should you ever be in need of a friend, Alexis, go and see Mr. Raymond."

Jonas promised, for Sister Lucilla had wonderful influence over him; but when he got outside the hospital, his thoughts were quickly directed into a fresh channel.

The story the sister had told him about the old lady who used to visit the hospital had made a deep impression—the old lady whose name was Grace Alexis, and who was

small and pretty, and had brown eyes like his.

He thought about her day and night. How like the description was to his mother! If his mother were alive now, she would have white hair; she would be called old; and he knew she would have just that sweet and gentle face which Sister Lucilla had described.

His mother, however, had been dead for years—so Graham had told him; and although he hated Graham, he knew of no reason why he should fabricate a lie about his mother.

This old lady was also dead; but her death had been recent. She was still remembered at the hospital, and spoken of there, not only on account of her goodness and sweetness, but also on account of her wealth.

Ah, well, she could not be his mother; his mother had been poor beyond words. How well he remembered the scanty fare, the tiny cottage, the grinding poverty.

Riches in connection with his mother? No, no; impossible to associate anything approaching wealth with that gentle and well-beloved memory. Some other Grace Alexis, like his mother, and yet unlike, had visited the hospital at Charing Cross.

But though Alexis told himself this over and over again, the thought of the old lady who bore his mother's name was always present with him. It became a more constant, and certainly a much happier thought than the idea of avenging himself on Kenneth Graham. It gave him an outside interest—an interest altogether beyond himself and his miserable past.

The first use he would make of his returning strength would be to go to Exmoor Square, and inquire first at one house, and then at another, till he found out where the old lady, who bore the name of Grace Alexis, lived and died.

(*To be continued.*)

"NOW I CAN KEEP IT."

"THIRTY years ago," says a working man, "I was one of the worst of men. The teetotalers got hold of me, and made me sign the pledge. I went and broke it, and they got hold of me once more, and made me sign once more. I do not know how many times I signed the pledge, but I do know that I always broke it. The result was that I fell into the hands of the police, and got sent to prison. But neither teetotalers, nor police, nor magistrates, could do anything with me. At last I heard of the Lord Jesus Christ, and that did something for me. I am a sober man, I have taken the pledge, and *now I can keep it!*"

NOT LONELY.

A DYING soldier, placed, on account of the awful nature of his disease, in a tent far away from his comrades, when asked if he were not lonely, replied, placing his hand on his Testament,—

"My companion is here; how can I be lonely?"

The same night he passed away into the country wherein there shall be neither sickness nor loneliness any more.

OUR MONTHLY TALK.

BY THE EDITOR.

MY DEAR FRIENDS,—

In my letter to you to-day, I feel led to take up one or two of the stumbling-stones by which the enemy seeks to bar the road of those who are pressing into the kingdom of God.

"Seek ye *first* the kingdom of God," were words of tremendous emphasis, spoken by Him who would not have uttered them, had He not known that of all the important matters towards which the minds of men are bent, there was not one of any interest at all, in comparison with this momentous and personal matter of seeking the kingdom.

Satan cannot erase this solemn, arbitrary command—and mark well, friends, this is a positive *command*—but he will endeavour to stultify its force. He will reason thus: "'Seek the kingdom of God'—but that does not mean at an inopportune season. 'Seek the kingdom of God'—of course it's good and, perhaps, even necessary to do this, but by-and-by you would do it with far greater ease; just now your business makes tremendous claims upon your time and attention; just now your studies, your university course, your examinations, are your pressing duty; just for a few years society has absorbing attraction, which will slacken in coming days. To everything there is a *season*, and this is certainly *not* the season for seeking the kingdom of God."

Does the arch-fiend seek thus to cheat you of your most inestimable treasure? I pray you, sit down and count the cost. *Business* the most flourishing, a *university career* the most brilliant, *society's* loudest applause—put all these into one side of the balance, and the eternal loss of the kingdom of God into the other, and they shall be but as the small dust of the balance. This present is but as a vapour, appearing for a little moment and then vanishing away. But the kingdom shall be for ever and for ever, the unfading possession of God's people.

But I am writing to some, I fully believe, who have looked "Eternity" in the face, who with their mightiest intellectual capacities have sought to comprehend its infinitude; and who, baffled by its awful mystery, feel that a sure standing-place, a secure refuge, is for them at least an absolute necessity. They have stood in the light of the glory of God's holy law, they have grasped its demand upon every child of Adam, they have found the bed shorter than that a man can stretch himself upon it, and the covering narrower than that he can cover himself withal; and conscience with unerring justice has pronounced the verdict: "Guilty, guilty." Beloved friends, have you come to this point in your spiritual history, and in agony of soul are you yearning for deliverance? A while ago you knew not that you were wretched and miserable and poor and blind and naked; but to-day you are groaning for deliverance from the burden and thraldom of sin, which now has become verily *intolerable*. If this be your position, you have cause to bless God. He who commanded the light to shine out of darkness has discovered to you *yourself*. The sight is ghastly, but it must precede another view upon which He now bids you fix your gaze: "Look unto ME, and be ye saved."

It is just this *look* right away from self and sin, and right off unto Christ, that the enemy would fain hinder. He has no objection to a soul becoming aroused and anxious, or becoming religious, attentive to prayer and Bible-reading, or seeking to abandon old and evil ways; all this may be done and yet no safety and no joy experienced. Thus hundreds of souls are seeking rest and finding none.

Beloved friends, Jesus and Jesus alone can give you rest; and the moment you take from Him the gift He *offers*, that moment you possess eternal life. "The *gift* of God is eternal life." You want eternal life; then you can only have it on God's terms—as His *gift*. But a gift cannot become yours till you take it. And I find that at this one simple point hundreds of seeking souls are hitched. They are convicted of sin, they are willing to surrender anything standing in the way—yet they have not peace. And they are almost in despair. Why? Because they miss this one point—that whilst there is nothing to do, nothing to be earned or toiled for, there must be the taking of the gift; or, in other words, faith must lay hold of and rest upon God's testimony about His Son—His complete atonement, His putting away of sin, His payment of my debt, His enduring of my stripes. God gives the record; it is mine to *believe* it; and the moment faith thus says "Amen" to the glorious tidings, peace is enjoyed.

> "He bore on the tree
> The sentence for me;
> And now both the Surety
> And sinner are free."

And with glad exultation I rejoice, for I know that—

> "Payment God will not twice demand,
> First at my bleeding Surety's hand,
> And then again at mine."

Impossible. So thy happy soul is pardoned, and brought into the glorious liberty of the children of God.

If I have not, in these few words, met the difficulties of some of my readers, do let me assure you that I shall count it a privilege to write to any who will explain the special difficulty which is hindering their instant and simple acceptance of Christ.

In closing, may I again ask the Lord's people to pray that this Paper may widen in its influence and helpfulness week by week? And any co-operation they can give with its circulation will be sincerely appreciated. Especially would I ask this from young men, who have almost unbounded influence when engaged either in work or business, in large Manufactories or centres of Industry.

Thanking you for many cheering communications, which have afforded me much gratification,

Yours most truly,

M. Jane Menzies.

BAD BARGAINS.

MANY a man makes a bad bargain, and lives all his life to repent of it.

"Lot" made a bad bargain, when he went down to Sodom.

"Esau" made a bad bargain, when he bought the mess of pottage.

"Judas" made a bad bargain, when he bartered his Master for silver.

That man makes a bad bargain, who, for money or position, sacrifices peace of mind, and exchanges conscience for gold.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Stanley Grahame," "From Pole to Pole," "Kenneth McAlpine," etc., etc.

"Jack and Desmond went down to the beach to look their last."

CHAPTER XL.

"HEAVE-HO! CHEERILY DOES IT."

THE complete strength of the expedition now in course of formation consisted of thirty white men and ladies, with the addition of nearly thirty Innuits and their baggage.

Their baggage included not only their arms, sledges, and dogs, but their wives and little ones, which latter Dresky assured Jack Silk, through Chips, were baggage, and nothing but baggage. It is a pity that I should have to state that, as far as gallantry to the gentler sex is concerned, Dresky was not a whit more civilised than his fellow-countrymen, albeit he had travelled so far, and seen so much.

Every one was now busy in the camp; the hall of the kashga, indeed, was turned into a huge workshop, under the charge of old Chips himself.

Here the framework of the sledges was made and riveted. They were then turned over to the natives to be finished, these men doing the work quite as quickly, and even more substantially, than the white men.

Every sledge was lined with skin, the hair side up, with the exception of those to be used for the transport of the heavier baggage.

Perhaps the Innuits, under the charge of Dresky and Bob-a-link, were most to be complimented on the building of one large bidarka, a kind of open boat or "cobble," or "coracle." It was very light, although roomy, and with plenty of breadth of beam, being composed of a strong wooden framework, covered over with the skin of a walrus, pared down to a sufficient thinness. It was mounted on light runners or sledge-work, and the whole, when completed, could be dragged over the snow by two men alone.

Very great pains was taken with the furnishing of this sledge-bidarka, and Jack superintended this. He had it roofed over with canvas, the front part of this tent being arranged to open. It could thus be used by the ladies—for, need I say it was meant for their reception?—as a carriage by day, and a comfortable bedroom at night.

The armoury department was placed under the command of Godfrey, while Desmond took charge of the provisions, and ranked as head-steward.

The sleeping department was managed by Nat senior, ably seconded by Mary his sister.

Dresky had charge of his own men, and Bob-a-link, the Aleut, was to ride in one of the swiftest dog-drawn sledges, and act as scout and agent in advance. With him would sit one of Dresky's best men.

Though great haste was made in fitting out the expedition, in packing, and in storing and arranging everything for safety, nothing was forgotten that the experience of sailors and travellers pointed out as necessary for health and comfort.

But haste was imperative, for the first part of the terrible journey would lead them across flats and plains, and wild bogs and moorlands, which would be quite impassable when the weather grew milder and the frost fled. They must push on over these at all hazards, and without delay.

One morning, a few days before the expedition started, Miss Graves appeared unusually quiet and thoughtful during breakfast.

"What is the matter, mother?" said Captain Boyd. "You don't look quite in your usual spirits this morning. Nor you either, Baby. One would think you really weren't glad to be starting so soon for home."

Miss Graves smiled somewhat sadly.

"I'm afraid," she said, "there is one of us will go home before the rest."

"What! not poor old Sally? Now that I think of it, I have missed her for some days. You don't mean to say it is really serious?"

Miss Graves simply nodded. She was soft-hearted, and at present could not trust herself to speak.

Everybody loved old Sally. She had queer ways and queer looks, but all admitted that she had also many most excellent qualities; and not only had she been a faithful servant to the two ladies, but a skilful nurse to the sick.

Captain Boyd went to see her immediately after breakfast.

She was lying in a cot of skins close beside the fire in the ladies' room.

"Ah! Sally, old lass, how are you feeling?"

"Oh!" sighed Sally; "which I be a-sinking fast, sir! Oh! I be, sir, I 'ssure you—ah! I ain't in no pain, sir, thank God, but so cold; and I keeps a-thinking, too, and a dreaming and wandering like. And Turlough, poor, dear gentleman, he went and left us—ah! And my poor, dear darter in Ameriky—I shan't never see her no more, sir."

"Come, Sally, come; don't forget that there is a world beyond the grave. We'll all meet there, I trust."

"What, and talk o' old times, sir?"

"Yes, Sally, and talk of old times, and praise the good Lord who brought us through all our trials here below."

"Ah! I be weak, sir; but I keeps thinking—thinking, and oh! sir, every word our old parson—poor dear soul—used to tell me at home comes back now. It does be comforting like—comforting—ah!"

She seemed to doze after this, and Captain Boyd went slowly and silently away.

He met Boy Bates at the door of the kashga.

"'Ow's old Sally, sir?"

"Ah! my boy, Sally is sinking fast."

"Sally sinking, sir!"

The boy's eyes grew sad and large. His face was very pale. He clutched Captain Boyd by the arm.

"Oh! sir, don't you go for to frighten a poor chap. I did tease Old Sally, but I loves her like a mother, sir. I didn't 'ave a mother before, only the bobbies to chase and chevy me. Oh! sir, don't say she'll—die."

The captain patted him kindly on the head, and passed on. Boy Bates looked after him wistfully. He was hoping against hope, and half expected that Captain Boyd would turn round smiling, and say it was all a joke.

But he disappeared. Then an ice-cold hand seemed to touch the orphan boy's heart.

"Sally sinking!" he muttered. "Sally goin' to leave us? The parson cove in prisin

says we'll hall on us die ; but—Sally sinking ! I—I—I'll go and 'ave it out ; if I don't, w'y —I'll bust."

Boy Bates did not go far to have it out—only to the back of the native kashga, where he threw himself on his face, and wept like the child he was.

Jack found him fast asleep an hour after, and kindly carried him into the hall, and covered him up with skins, for Jack Silk had seen the signs of sorrow on his face, and well knew what they meant.

They buried old Sally near the beach, and the men raised a cairn of rocks over the grave, and then went sadly back to work and duty.

* * * *

Another terrible storm raged all that night and all next day, but the morning after was bright and clear. Jack and Desmond went down to the beach to look their last at the place where the *Oonalaska* had lain. The ice had receded some distance from the shore, and dark waves were lisping on the snowy beach ; but the ice had got mixed, and of the good old ship not one vestige was visible. Crushed, scattered, or sunk was every bolt and timber.

"How do you feel, Dess?" said Jack, turning abruptly to his companion, after a brief silence. "Sentimental, eh?"

"That is the Irish character," replied Desmond, "isn't it, Jack? and I must say I am sorry to leave the poor old *Oona's* timbers in that dark sea. But now," he added, "we've got to nerve ourselves for the journey, and I feel fit—do you?"

"Yes, just burning to be off! I wouldn't mind anything we are likely to come through, if it weren't for Miss Graves—and—Katie, Dess."

"Ah! Katie ; yes, to be sure. Well, Jack, I'm confident she is not indifferent to you. Why don't you tell her——"

"Stop, Dess, stop. I wouldn't now, not for the world. It wouldn't be quite fair. It wouldn't be ship-shape. How do I know her heart is free? How do I know there isn't another fellow somewhere in the world who has gained her love? I'm not going to take a mean advantage of anybody, Dess. Everything fair and square and above board. I want, d'ye see, to woo and win—and that's talking poetic, Dess—woo and win under circumstances that are no more favourable to me than—than to the other fellow, Dess."

Desmond laughed, and they walked on a little way.

"Look here, old man," said Jack, again stopping short, "I'm no orator, and maybe I don't make myself rightly understood. I'm slow in speech, and I express myself badly ; but, do you remember, Dess, when I and a dozen other blue-jackets cut out that big armed dhow right under the guns of the Arab fort?"

"I do, Jack, and a tough fight you had."

"And do you remember the big dhow I boarded and carried in the open sea, when there wasn't much danger to signify?"

Dess nodded.

"Well! which was the action to be appreciated?"

"Both, but especially the first."

"Ay, Dess, though I myself say it to you, that tiff under the fort was worth writing a song about! If ever I'm the lucky man, Dess, to board and carry Katie's heart, it will be in such a way and under such circumstances that all hands will confess I've won the battle fairly."

"Look!" cried Dess, "all is ready for the start. The dogs are harnessed, and a nice row they're making. There goes Bob-a-link ; he's the first man off. Come on, Jack! I am so glad we're going to start at last."

They found, on their return to the village, that nearly all the sledges were already in motion, the Innuits dragging those containing most of the heavy baggage ; while the white men had charge of the armoury and the provisions for themselves. Alongside the bidarka-sledge, in which Miss Graves and Katie were already seated, stood five fur-clad sailors. The ladies, Captain Boyd assured them, looked as charmingly composed as though they were merely going out for a drive in Hyde Park.

The men were about to bend on, when Jack Silk sang out,—

"Avast there, lads! That won't do ; we must start in state. Captain Boyd, jump on board there, and sit by the ladies for a mile or two. Nay, I insist ; if you don't, there will be mutiny. Now, Dess, Godfrey, and you two Nats—I'm not sure the older isn't the stronger, after all—bear a hand here. We've got to pull this sledge for the first three miles. But—Honolulu! look yonder. The old flag is unfurled again."

It was true. The flag-staff that had been raised on the loftiest iceberg, albeit that berg had shifted position several times, had got so firmly welded and wedged into the ice, that it had defied even the efforts of the hurricane to dislodge it. The dear old flag itself, however, had suffered sadly, and, indeed, it was supposed that it had been clean blown away. And now, behold! yonder the ragged remains of it, unfurling from its ice-clad pole, was fluttering out on the breeze.

Captain Boyd was not, as a rule, given to excitement of any kind—he was too old a sailor for that—but now he fairly clapped his hands, and laughed as heartily as a schoolboy on a Christmas morning.

"Bravo! old flag," he cried. "Why! my boys, if ever there was a good omen, that's one."

"Hurrah!" shouted Jack Silk.

"Hip, hip, hip, hurrah!" shouted Dess, and that ringing cheer, begun by the officers, was taken up by the men and the Innuits already half-way up the hill—"Hip, hip, hurrah!"

It went rattling and reverberating over the wild, bleak country, and was echoed back from a hundred rocks and cliffs. It startled even an old bear asleep in a cave ; and, gaunt and hungry, and lean as a wolf, he staggered out to the cliff top, and joined the chorus. Desmond advanced a step, Jack himself made as if to unsling his rifle from his shoulder, but Captain Boyd held up a warning hand.

"No, no," he said. "Not to-day, Jack—not to-day, Dess."

"Now then, boys, bend on!" cried Jack Silk. "Cheerily does it! With a heave-ho! and away we go, for we are homeward bound!"

(*To be continued.*)

Sixty-one Women have made the ascent of Mont Blanc. The first was made by two Frenchwomen ; one of aristocratic and the other of plebeian birth. The sixty-one women referred to represent ten nationalities. 32 were Englishwomen ; 15 hailed from La Belle France ; 4 were from Russia ; and the United States claims 3 ; 2 were natives of Switzerland ; the list is completed by adding one each from Prussia, Denmark, Hungary, Italy, and Austria. Eleven of these ladies accompanied their husbands.

HOW WE MADE OUR WHATNOT.

WE all like to adorn our own rooms, and by contrivance to supply the place of articles which otherwise we could not get. This very natural desire started the idea of the Whatnot, which I am about to describe. I believe many will find it both easy to make, and useful in supplying a place for many knick-knacks, of which it is not easy to dispose in a bedroom furnished in the usual manner.

We first procured four boards, three of them measuring 1 foot 9 inches by 1 foot, and one measuring 1 foot by 7 inches ; these were of common deal, smoothly planed. We covered them with a pretty, dark-patterned paper, pasting it on ; a hole was bored in each of the corners of the four boards, and the edges surrounded with an art fringe, tacked on with brass nails.

We had stored up a large number of empty cotton reels, and procured four pieces of stout iron wire. Two of these were as long as the Whatnot was intended to be high—about 4 feet 3 inches, and two were a foot shorter for the front. The small upper shelf needed special front legs for itself ; so we cut two small pieces of wire about 13 inches in length. A dozen of the largest reels were then strung on the longer wire for the back legs, and the wire turned to keep them from coming off. The wires were then put through the holes in the first shelf, and another dozen reels, a little smaller, were put on ; the second shelf was placed at the desired distance from the first, another dozen reels added, and the third shelf was finally secured by another turn at the top of the wire.

The two front wires were then treated in the same way, and fastened securely on top of the second shelf. Then a hole was bored 5 inches further back on this shelf, to correspond with the breadth of the smaller one above, the short pieces of wire were fastened as before, and a dozen of the smallest reels strung on ; the wires were passed through the front holes at the corners of the little shelf, and turned neatly in.

As the reels we used were white, brown, and black, we were obliged to paint them black, and varnish the whole afterwards, including the shelves. This gave quite a finished appearance to our work.

Small bookcases of three or four shelves can be made in the same way, by using strong crimson cord instead of wire. The height of shelves can be varied to suit the books intended to be held. If these tiny bookcases are hung upon two large nails, they will be quite secure.

£456 5s.

IF we reckon the value of one hour redeemed from bed every day, at the rate of sixpence per hour, it would come, in the course of fifty years, to no less a sum than four hundred and fifty-six pounds five shillings ; this, without any interest or compound interest, just the simple amount for each hour.

Many who value their hours at a higher rate than sixpence each, would feel greatly insulted were they only offered labourers' wages ; to them the amount would be greatly increased, if these hours were put to profitable account. Wisely invested, they would return to the investor forty, sixty, yea, even one hundred fold.

TALKS WITH MARRIED FOLK

ABOUT THE MANAGEMENT OF INCOME.

By PHYLLIS BROWNE.

No. 8.—THRIFT.

HAVING done what we could to make household expenses come well within the limits we thought it right to assign to them, we turn again to the estimate of expenditure we made when portioning out the income, and we find that the next items are clothing and charity.

A great many people consider clothing, or dress, as they would call it, a most important item of expenditure. For it they would starve their bodies, their minds, their hearts, and their characters. To persons who are truly thrifty, conduct of this kind would be impossible.

One of the characteristics of Thrift is that it enables people to go without what is of little worth in order to obtain what is of real worth. Yet, in the long run, the unthrifty go without far more than the thrifty.

In dress, what promotes health and comfort is worth having. Health and comfort, therefore, are the first things a thrifty manager aims at securing. To this end she tries to dress *sensibly;* buying material that is good of its kind and will wear; *suitably*, according to the season, and to her means, her age, and her needs. She does not defy fashion, because people who do that look singular; and persons are never well dressed when others turn round in the street to look at them. But she never follows the vagaries of fashion, because she knows that they are almost always very ugly, and that they are invariably costly, especially when they are cheap. Cheap trimming, for instance, is the most costly thing any one can buy.

Some thrifty people have a notion that pretty dress is not worth thinking about. In this, I think, they are mistaken. We all ought to make the best of ourselves, and try to make ourselves look attractive. We are most likely to do this when we choose dress that is becoming to ourselves, and colours that suit our own complexion and figure,—not merely colours that other people wear. Extremes of fashion are always ugly, and we acknowledge this if we see pictures of them after they have "gone out." Dress that is becoming to ourselves is economical, because we get to like it, and take care of it, and mend it to the last.

From the health point of view, boots and shoes are more important than any other article of clothing. The thrifty mother, therefore, looks to boots and shoes before everything. Children would be more likely to keep well if allowed to go barefoot, than if allowed to wear boots which let in water in damp weather. A doctor once said, there is more illness in children induced by damp boots than by any other single cause besides. Illness in children means trouble and anxiety, but it also entails expense, and we never know where that expense will end.

From the health point of view also, *easy* dress, dress which permits of the growth, development, and free action of the various organs of the body is important. People cannot keep well if their liver, heart, and lungs do not act properly. It is very much to be wished that thrifty mothers could realise the advantage which would be gained through never letting their girls begin to wear stays. What is called "Rational dress," is healthful because it is easy, warm, and light. It is economical also, because there is less of it to begin with, and so it saves both time, money, labour, and washing.

Unfortunately a great many people are afraid of it, because they think it is something extraordinary, when really they do not know what it is. Described in a few words, Rational dress is an under-garment made of wool instead of being made of calico, is made closely fitting instead of being made to flap about, and made Princess shape, instead of being petticoat shape. A girl who wore a good warm woollen combination, and two good warm Princess petticoats would be more warmly clad than would the girl who wore a dozen calico garments with any amount of embroidery and feather-stitch upon them. Yet the first girl would be wearing "Rational Dress," and any one can see that she would save both in pocket and in laundry expenses. She would also be more healthy and more graceful, and after she had become accustomed to the attire, would be more comfortable.

The care of clothes has a great deal to do with economy. Thrifty managers are most particular to keep clothes mended and brushed, and to put them away when done with. This makes them wear three times as long.

In portioning out the sum set apart for dress, it should be remembered that the bread-winner of the family, whoever that is, should have the largest share. He need not be finely dressed, but he should be as well dressed as may be, because this will help to make him respected, and will give him an advantage in his dealings with outsiders. Also, it is well to remember that men's dress lasts longer and *seems* more, if it is changed frequently. It is a mistake for a man to wear the same coat and the same pair of trousers day after day, until they are worn out. If he could have two coats and two pairs of trousers, wear them turn and turn about, and have the clothes not in use well brushed and folded each time they were laid aside, the two costumes would last more than twice as long as the one costume, and the wearer would *seem* better dressed all the time.

So much for dress. The next items we have to consider are Charity, Education, and Books. It may sound ridiculous for people who have difficulty in managing their money so as to supply their own needs to talk about making gifts to others. It is not ridiculous, however. We have none of us a right to live to ourselves, and so far as we can, it is our duty to help those less fortunately placed than we are.

In the old days, it used to be laid down as a rule that one-tenth of the income should be given to the needy, "given to the Lord," as it was called. There are not many of us who would feel called upon in these days, when we have so many claims upon us, to draw a hard and fast line like this. But we have no right, therefore, to suppose that we are at liberty to give nothing. How much is to be given, however, is a matter which each individual must decide. There is this to be said, those who give nothing away, neither money, nor sympathy, nor help, injure themselves more than they injure any one, for they grow mean, small, and narrow, and gradually lose the power of seeing what is highest and best. There is no one so poor that he cannot give something away, and the will to give increases with the practice of giving. It would be a poor end to thrift if no one shared our gain with us.

Not many parents will be found in these days who will be disposed to undervalue Education. Children are not properly equipped for the battle of life, who are not well educated, and wise parents would sacrifice much before they would sacrifice education. Fortunately for the rising generation, children *must* now-a-days be sent to school; the State has taken their case in hand, and will not permit them to grow up in ignorance.

Still, the attitude of the parent towards education makes a good deal of difference to the welfare of the taught. If parents will work with the teacher, support his regulations, uphold his authority, yes, and even spend money in making arrangements for assisting his efforts, the pupil will have a far better chance of making a mark than if things were simply left to take their course. A good education is now to be had at a very cheap rate, but parents have not done all they ought, nor spent all that is due in this direction, when they have sent their children to school and paid the fees. They ought to make the thoroughness and success of the education one of their chief aims, and spare no pains to accomplish it. This is their duty not only as parents but as patriots.

We think that we English make much of education, but we do not make as much of it as do the people of many other countries. Unless our children are properly trained and properly taught, they will not be able to hold their own in the future with the children of other nations. If Thrift consists in looking ahead, surely we ought to look far enough ahead to secure for our loved ones the benefit of all our saving and sparing. We shall not do this if, in order to make things easier for the moment, we let education go to the wall.

So, too, with regard to books. There are many people who never think of buying books. They will give a shilling for shabby finery here, and another shilling in foolishly trying to appear richer than they are there; but to spend a shilling over a good book, a book that could be read again and again, a book that would be a true friend, never turning away from them, always ready to comfort them, always ready to give them beautiful thoughts, which would distract their minds from the sordid cares connected with income and expenses,—to spend a shilling over a book of this sort is the last thing that would occur to them. If these people did buy anything to read, they would buy trash; silly stories that paint life as it is not, and make those who read them dissatisfied with the humdrum duties of every day.

Unfortunately, trash is to be had very easily; it is cheap; it is offered for sale before everything else in every bookseller's shop. But no matter how cheap it is, it is dear. We had better sit with our hands folded before us and read nothing, rather than read trash, because by reading it we destroy our taste for what is good.

(*To be continued.*)

THE STRANGE PLANTS OF A STRANGE LAND.

By Professor J. T. ROTHROCH.

"No Cactus without thorns."

IN far Arizona, world making and plant producing appear to have been conducted on principles utterly unlike those which prevailed in other parts of the American continent. Every aspect of nature is fervid. The hills suggest over-baking; the streams tell of excessive evaporation; the plants indicate that in the long struggle, all textures which could, will have disappeared. Soil and vegetation both are weird and ghostly, and hint at some other globe than ours. In fact, the sun is strongest there, and his last slanting rays upon our soil, before he disappears into the vast Pacific, fairly scorch this desolate region.

For years before that strange region was opened to civilized men, rumour told of its amazing richness in precious ores, its striking scenery, its peaceful Indian agricultural tribes, or its savage wanderers, who had no sympathy with any living beings; but these were regarded as myths, or as something worse. Now we know that no rumour was equal to the reality.

With such a land the Giant Cactus is in keeping,—the one as much alone in creation as the other. Our illustration gives a fair idea of the species, which, though uncouth in its outlines, is still symmetrical in its fluted column and branches. It thrives in the open sunlight, and rejoices in a temperature of one hundred degrees and upwards of Fahrenheit's scale, asking only for a sandy declivity on which to plant its roots—all the better if that declivity have a south-eastern exposure; then, under the most favourable circumsances, this giant will tower up forty feet or more. When we remember the large and attractive flowers which our greenhouse cacti have, we can hardly realise that this, the most regal representative of the whole family, should have flowers which crown the summit of the main stem, and of the branches, in May, no longer than the others.

The fruit serves the Indians as food, and is said to be preserved by them for winter use. The ribs, which are so prominently seen on the surface, are made by the longitudinal woody framework which stretches through the plant from root to tip. These, when young, have no transverse connections, and hence, when the plant dies, those near the summit stand out like so many independent rods, after the soft tissue which covers them has decayed. In this condition they are very suggestive of an enormous but well-worn broom. Farther down the same stem (which may be more than two feet thick) these rods are united by transverse growths, and so the old skeleton may remain in one hollow, perforated cylinder when all the rest of the plant has decayed.

It may be surprising to find such an enormous trunk, green in colour, yet, if time-honoured notions are correct, this is requisite for its well-being. It has no leaves, nor anything comparable to leaves, hence the breathing pores, which should have been on the under side of green leaves, are here on the younger parts of this green stem.

No cactus without thorns, one might almost say; certainly this Giant Cactus (or Giant Cereus, as you may prefer to call it) is no exception. The whole region may be regarded as characterized by this and other members of the cactus group. In fact, it can be regarded as pre-eminently their home and centre of greatest development. Even animal character appears to have been modified by them. I have seen birds which, when in the open ground, were quite shy, banish all fear when seated amid the thorny branches of a cactus.

These well-guarded points are often utilised by the birds to build their nests in. Evidently they feel that the young family is secure there against all attacks of the rattlesnakes and other enemies which infest the region, especially if in the neighbourhood of a "water-hole."

I might add another fact, as illustrating the same principle of animal traits modified by the plants, that these cacti have suggested to the unpitying Apache a mode of torture of prisoners which is too horrible to relate.

Standing on the open, sandy, gravel-stream flat land, one

occasionally finds what in the distance looks like a dead tree. It is perfect in its details, except that not a single leaf suggests the presence of life. These trees are not common ; one or two are all that the traveller is likely to see in a day's march. Sometimes they are twenty feet high, and more than a foot in diameter.

The green colour of the younger twigs and the yellowish green of the older, give it an appearance peculiar enough to invite further investigation, when surprise deepens into absolute amazement on the discovery that the tree is not only in perfect health, but that it is in full fruit or flower. Our second illustration will give a general idea of the appearance of a cluster of the smaller twigs.

Here, again, we have the same lesson as that taught by the Giant Cactus ; in the absence of leaves, the younger green bush performs their functions, and over the surfaces of both plants an innumerable host of openings, so small as to be invisible to the naked eye, is scattered. Neither of these trees, which give so peculiar an aspect to this region, is common even there.

It is hard to say whether they are a disappearing race, which once formed larger masses of vegetation, or whether they are new-comers, which, but for the interference of man, would have multiplied over that waste area, and covered it with dense forests of leafless trees ; most probably the former is the correct view.

Still another striking plant, this time not a tree, however, but a tall, slender shrub, is found in this strange land. It grows in clusters on dry, rocky hill-sides, and though the stem often becomes twenty feet high, it remains almost or quite unbranched, and is not more than an inch or two in diameter at the base.

Hence, then, to say that it is delicate and wand-like would express the exact idea, were it not for the fact that it possesses to the square inch probably as many hard, sharp thorns as any plant could well have. These thorns doubtless have some meaning, and probably some use in the economy of the plant, though, I confess, I cannot even guess what these are.

This ash-coloured shrub has, toward the top, some small leaves, but instead of reminding one of the expanded surface and soft textures of such leaves as we consider well formed, these vary down until part of them become mere thorns. This probably suggests, then, a meaning for the plant's thorniness, which is, that it puts on the leaves for appearance sake, because its ancestors did, but ends by starving and drying them into very small and harsh representatives of what respectable leaves should be.

However, to redeem the plant when it does come to flower, it sends out on the summit of this rod-like stem a most charming cluster of flowers, which is attractive not only as a mass, but because each individual flower is beautiful. The final product of the plant is, then, the most redeeming. Even if we examine the seeds, we shall find their thin, wing-like margins resolving themselves, when much magnified, into hairs which contain delicate threads, forming graceful curls and networks. Candlewood is the common name of this shrub, though botanists will persist in calling it *Fouquera splendens.*

The plant affords some support to the belief that everything has a use, for out of these spiny shrubs the natives make fences, which no one wishes to climb over or to crawl through, and the stems are also used to cover the walls of the Adobe houses, before the mud roof completes the building.

The Agave is represented by several species, none of which attain the size of the Century plant. These are not less remarkable than the others already described, and are, on the whole, much more useful. They are living fountains in the desert, producing pure, sweet juice, which not only assuages thirst, but may often save life ; in a land where water is warm, bad, and scarce, the weary traveller comes to regard them as beacons of hope. The writer has more than once, in time of extreme suffering, found relief from sucking this juice out of the ends of a freshly-cut flower-stalk.

The hard leaves yield abundant fibrous material for making into mats, ropes, and even paper. We may add, too, that the head of unopened leaves furnishes, when roasted, a highly nutritious food, very rich in grape-sugar. The young stem also produces a juice which, by distillation, returns an exceedingly strong intoxicating liquor (known as mescal), of so peculiar a flavour, that its adulteration is almost impossible.

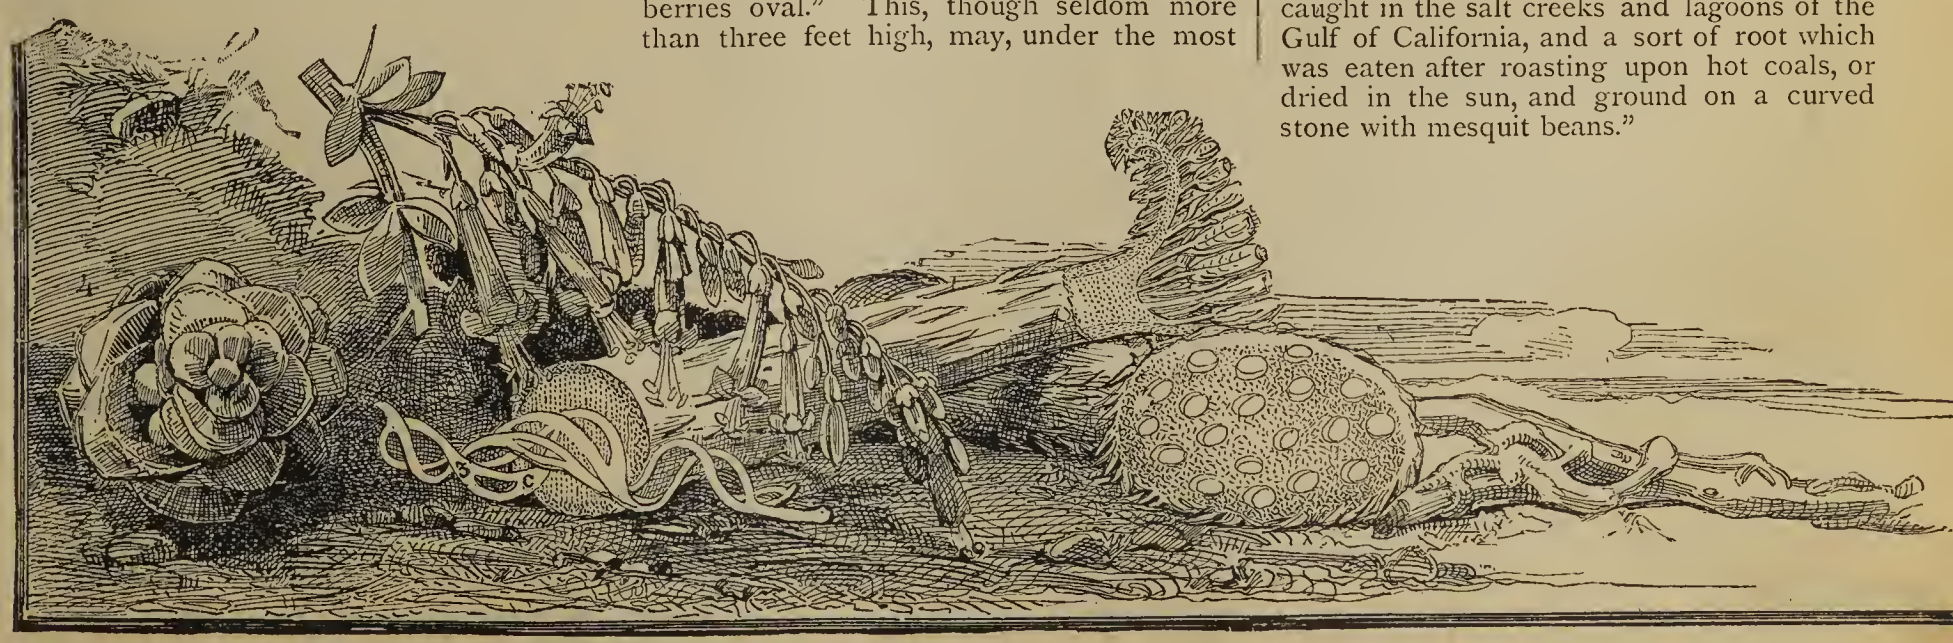
These are the more conspicuous forms of leafless vegetation produced in our Arizona region, but the same characteristic feature is also present in the smaller specimens of plant life. From the Southern Rio Grande westward, may be found a plant known to the botanical fraternity as *Kœberlinia spinosa.*

This is tersely described by Mr. Wright as "a much-branched, leafless shrub, consisting of nothing but thorns, flowering in July and August ; flowers greenish-white, berries oval." This, though seldom more than three feet high, may, under the most favourable circumstances, rise to the dignity of twenty feet.

One can give no clearer idea of the unique character of much of the vegetation we are describing, than to say that botanists themselves are often at a loss to know where to place a particular plant in their systems of classification, and that some of these plants have consequently been changed in name and place so often, as to suggest the legend of the Wandering Jew.

Less conspicuous still are certain hard, herbaceous or shrubby plants (whose floral structure shows them to be closely related to the pea or bean), known in a group under the one name of *Dalea.* Their leaves may be reduced to a minimum, and the entire plant be absolutely dotted with shining yellow, or purplish-brown, or even black glands, though the flowers are often of remarkable beauty.

The oaks never rise to the height of those which we have here, and the leaves are smaller and thicker, as a rule. The Nut Pine produces, as the name indicates, a nut which is a most important article of food to the wretched Indians inhabiting the country.



The wood of this low, much-branched Nut Pine is saturated with resin, and even the cones are frequently quite covered with it. Indeed, when we associate this with the innumerable resin glands on the Dalea, the idea might suggest itself that the resin in both instances is literally baked out ; but this, of course, is a very crude statement.

The writer has in vivid remembrance many camps, at night, where, beside the roaring flame from this wood, the poetry of out-door life was realised to the fullest extent.

In that most barren and absolutely superheated region bordering on the head of the Gulf of California, this sand-food is found growing in the naked, burning sand. Though having a stem from two to four feet long, the entire plant, save the dilated, salver-shaped, flower-bearing portion, is beneath the surface.

It is said to be fleshy, of a dull orange colour, and having no true leaves by which to make food for itself, to obtain this through those of its roots, which have fastened themselves to the roots of some plant which has green leaves. Hence, then, it must have a companion in misery, but what that plant is, cannot now be told.

Among the flora of the Eastern States, there is no plant which can be said to bear more than a remote resemblance to this sand-food. Col. Grey, writing of it, says : " In this naked spot I found a band of Indians, almost in a state of nudity, living on fish and crabs caught in the salt creeks and lagoons of the Gulf of California, and a sort of root which was eaten after roasting upon hot coals, or dried in the sun, and ground on a curved stone with mesquit beans."

" The plant affords some support to the belief that everything has a use."

THE BLANK BIBLES: A DREAM.

By Emily Sarah Holt.

I DREAMED that I was sitting in my easy chair, and a small table stood by me, piled with books. On looking at these books, I saw that they were Bibles; and by that process of intuition which is natural to dreamers, I became aware that there was a strange peculiarity about them. Each Bible bore on a silver plate the name of its owner, and, by some miraculous influence, the words of certain passages in the Book had been blotted out. Every text which contained either a fact which the owner of the Book did not believe, or a doctrine which he refused to receive, or a precept which was not allowed to guide his life, appeared as a perfect blank. I thought, moreover, that I was bound to examine these Books; and on doing so, I discovered, on the fly-leaf of every one, certain words in golden letters, which I perceived to convey the exact truth as to the real spiritual condition of the owner. Having arrived at these discoveries, I now went through the pile in regular order.

The first Book which I took up bore on its silver plate the name of Professor Sands, whom I knew to be an eminent scientific authority, filling a prominent chair at one of our great Universities, with a reputation for vast learning, much amiability, and rationalistic opinions. This Bible might have been sold for a blank book, with little disappointment to the purchaser. The Pentateuch was entirely gone, and everything of the nature of miracle or prophecy, with all doctrines, precepts, or deductions drawn therefrom, was blotted from the pages. The result was, that scarcely anything was left beyond portions of the Proverbs and Ecclesiastes, a few detached versicles of the Psalms, some geographical details from the Acts of the Apostles, and such exhortations to general philanthropy as are to be found in the Epistles. The entire appearance was that of a ruin, very much ruined indeed, and, strange to say, resting upon no foundation whatever.

I laid down this nearly blank Book with a sigh, and took up the second, upon which I saw the name of Dr. Waters, an equally eminent Ritualistic preacher. There was much more printed matter in this Bible, but the blanks were very abrupt and curious. Many sentences ended in the middle; sometimes only a few words of a text were left, and all the rest was gone. The whole ceremonial law was intact; in fact, the Pentateuch was little touched. But the damage done in the New Testament was much greater. Several of St. Paul's Epistles, notably those to the Galatians, Colossians, Thessalonians, and Timothy, had some very odd blanks in them, which at times left the context scarcely intelligible. I noticed, too, that the fifteenth chapter of St. Matthew began with the twenty-first verse, and John 6. 63 was wanting. I sought in vain also for Mark 8. 14–21. The twenty-third of St. Matthew had disappeared entirely, and when I attempted to turn to the Epistle to the Hebrews, I was met by a dozen leaves utterly blank.

I now took up the third Bible, which I perceived to be the property of Father Loyola, a Roman Catholic priest, whom his co-religionists claimed as a most successful preacher, especially in the conversion of heretics. I was struck by the extreme similarity of this Book to the last. In fact, the only difference seemed to be, that in this there were a few more omissions. There were blanks in the third of St. Mark, at verses twenty-one and thirty-one to thirty-five, and in the second of St. John the fourth verse was left out. This reduced the information concerning the Virgin Mary considerably. I also missed Mark 8. 32, 33, and Galatians 2. 11–14. In other respects, the third Bible scarcely differed from the second.

The fourth Book bore on its silver plate the name of Wilbraham Smythe, a wealthy and philanthropic man, whose name was always to be seen in subscription lists for large sums, and who was fond of talking about the duties which "we men of substance" owe to society. Its omissions were puzzling, for there was a singular absence of all the passages bearing upon love or almsgiving. But when I turned to the fly-leaf, and read the golden letters, I wondered no longer: "Not that he cared for the poor," they ran, "for he loved the praise of men."

The volume beneath was inscribed with the name of Caroline Smythe, whom I knew to be the wife of the gentleman last mentioned. "A very remarkable woman, Mrs. Wilbraham Smythe," said most people who knew her. "So discriminating!" said Mrs. Bennett, and "So heavenly minded!" said Miss Carter; to which observation, old Mr. Wainwright was heard to mutter in his beard something which sounded like an assertion, that if Mrs. Smythe were an accurate sample of the society of heaven, he should consider a journey thither of doubtful advantage. But nobody ever listened to Mr. Wainwright, who was generally set down by gentlemen as a regular bore, and by ladies as a malicious old creature.

Mrs. Smythe's Christianity was of that singular type (and singular, in this connection, is very far from meaning unique), which consists in undermining the Christian reputation of everybody else. "You heard Mr. Blake last night? Ah, yes," Mrs. Smythe would say in her soft, smooth voice, "a charming preacher, is he not? Ah, what a pity that he is so apt to—you know." For one of this lady's peculiarities was, that she never brought a distinct and tangible charge of any sort. Of course, the more vague the hint, the more shocking might be the truth. Or she would ask, "Did you meet Miss Carter on Tuesday? Yes, I thought you would. You thought her quite an advanced Christian, did you not? Ah! she does give that impression to a great many." In short, an interview with Mrs. Smythe left you under an idea, very misty, very uncomfortable, but very hard to get rid of—that all your Christian friends were wells without water, and all the people who professed to love you had not a heart anywhere. But then—and this you were never allowed to doubt—Mrs. Smythe's own Christian character was of so elevated a type, that she saw through all these people as easily as through a window, and could not bear them which were evil. Nay, more, if it had not been her duty to warn you in this manner, Mrs. Smythe would never have said a word about it. It gave her indescribable pain to find these people so hollow, and still more to report it, but how could she let you be deceived? Mrs. Smythe's duty was rather puzzling to outsiders. It was her duty to let Mrs. Armitage know that Dick Merton was suspected to be getting into bad ways, by which communication he lost the place, which he had nearly obtained, of under-gardener at the Hall. It was her duty to drop a hint to young Mr. Linwood, which caused him to break off his engagement with Miss Fraser. It was her duty to chaperone her daughter to dancing parties, which required a powerful microscope to distinguish them from balls. She would so much rather have stayed at home, and read the Bible quietly with you; but how could she neglect her duty to Dora?

I opened this Bible, and found the Sermon on the Mount terribly damaged, and the Epistles mere fragments. The First Epistle of St. John had vanished completely. The Psalms presented large gaps. I turned to the golden letters, and read this showy character in two words: "Sounding brass."

Underneath the last Bible, which was rather a large one, lay two small, and somewhat pretty volumes, looking oppressively new. I read, on their silver plates, the names of Leonard and Dorothea Smythe, the son and daughter of the couple last named. As I turned over the leaves, I perceived that the gilt edges stuck together after the fashion of books which have scarcely been used. In Leonard's Bible, the newness pervaded the whole volume; in that of Dora, it was rather more confined to the Old Testament.

I knew Leonard Smythe as a young man of the period, as his sister was a girl of ditto. I did not wonder that he had, apparently, not read his Bible, since I had never seen him read anything except railway novels, *Bell's Life*, and what are termed the "Society" papers. I very much doubted what kind of examination he would stand in Scripture history, except that he would probably not reckon Moses among the apostles, nor imagine that it was for beheading John the Baptist that Adam was turned out of the garden of Eden.

How Leonard had ever been educated was a mystery. Everything was a horrid bore. Cricket he never played—it tired a fellow so. Chess he declined—it took too much out of you. He did occasionally languidly join in lawn tennis for five minutes, when exhaustion supervened, and he threw himself at full length on a garden seat with a cigar. Mr. Wainwright cynically remarked that Leonard must have been cruelly knocked up in his last transmigration, for evidently he wasn't rested yet. Dora was like him in one sense, but very different in another. Want of energy could never be laid to her charge by those who saw the number of miles she could dance in an evening. But neither she nor her

brother ever seemed for a moment to suppose that they could have been sent into the world for any possible end, but to get out of life as much amusement as they could extract, and to shirk pain and trouble, so far as they were able. I may add that in point of dress, both worshipped the goddess Fashion; and in point of language, both indulged in the latest slang. Moreover, both were ready, on any evidence or none at all, to give an off-hand, decided opinion on any and every subject, "from predestination to slea-silk."

From Dora's very emptiness and silliness, this was less offensive in her than in her brother, for it merely showed as a part of her general folly. But Leonard contrived to put on an appearance of perfect acquaintance with every subject he was pleased to discuss, while he settled it without an instant's deliberation, with an air which implied that wisdom would die with him.

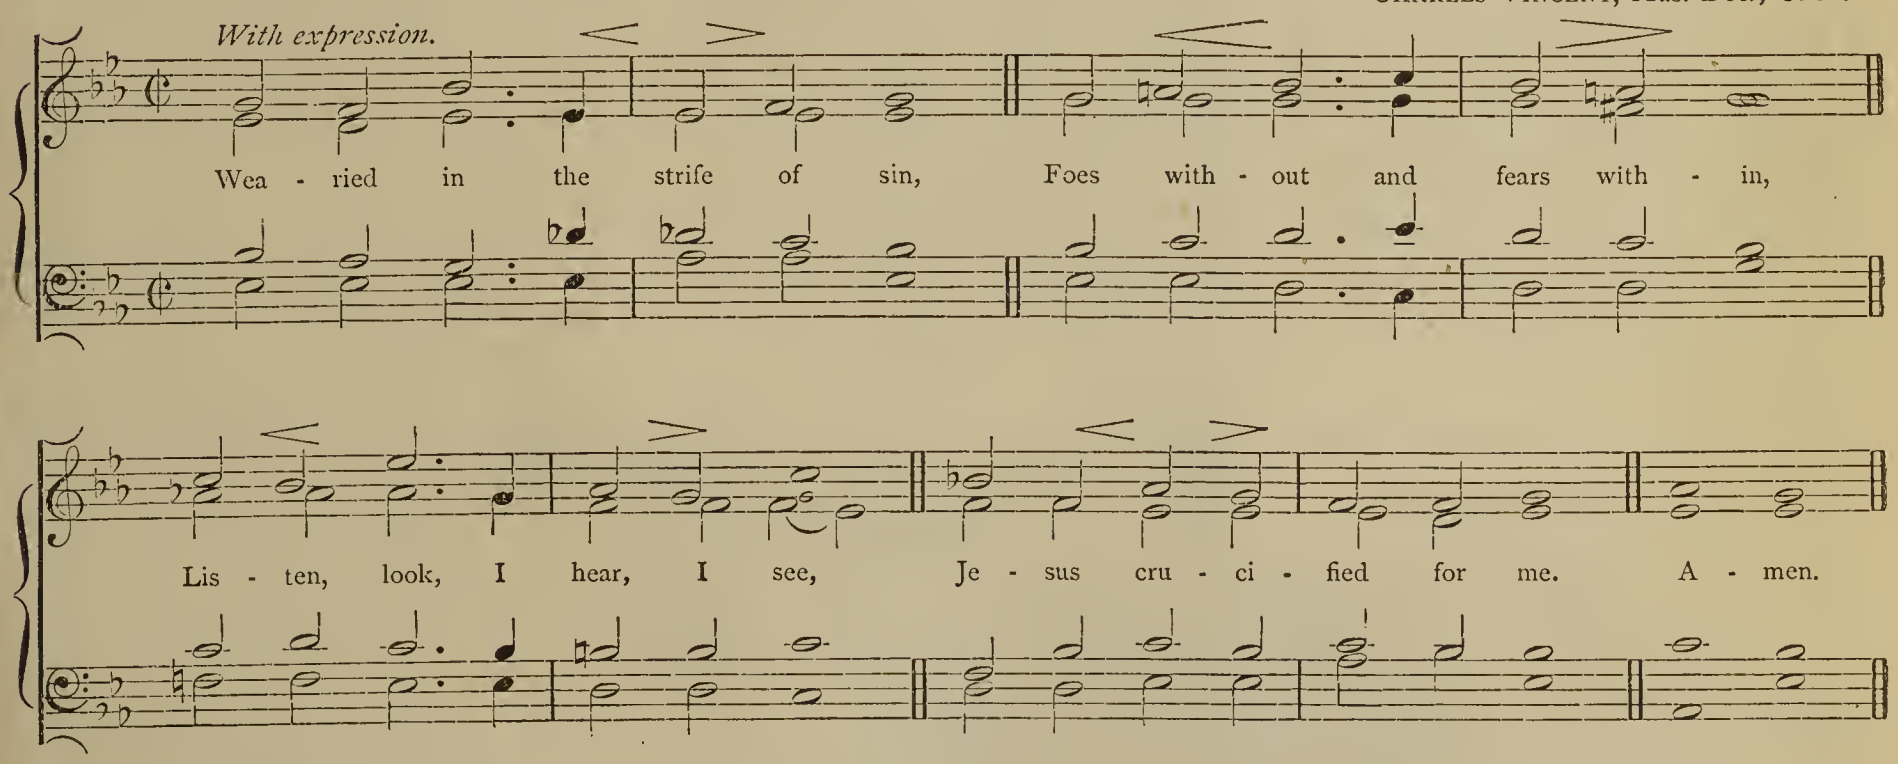
It may be asked how such young people as these could have been reared under the shadow of such parents. From very opposite reasons, both the parents had contributed to this end. Mr. Smythe's one idea was that his children must "settle well," and—he did not say, but he *lived* the sentiment—that until this settlement had taken place, much religion would be rather in the way. Dora was, if possible, to marry a baronet, and baronets were not always attracted by young ladies who aimed at being righteous over much. Leonard was to entrap an heiress, and heiresses did not want to marry Methodist parsons. When this desirable business was satisfactorily effected, then they could be as religious as they liked. That they might not like, but might then prefer to lead the rest of their lives according to that beginning, did not apparently enter into the calculation.

Their mother took an entirely different view, yet hers led to the same end. She was sorry to say that she had no reason to hope that either Leonard or Dora was converted. But what could you expect? If the Lord meant to save them, He would do so in His own good time. She had no power in the matter. It was cruel to blame her for the dispensations of Providence.

"Better to blame Providence, eh?" responded Mr. Wainwright.

"True, in one sense," answered Mr. Blake; "but if you were anxious that your son should go to York, you would not spend your time in dragging stones and logs across the road which led thither, because you had not strength to carry him?"

A few historical facts, and a very few moral maxims, were all that remained of the two pretty little Bibles. They were more empty than any of the others. On the fly-leaf of Dora's book, the golden letters said, "She that liveth in pleasure is dead while she liveth;" while on Leonard's they spoke in equally solemn accents: "There is more hope of a fool than of him."



(*To be continued.*)

Crucified and Crowned.

By the Right Rev. the Lord Bishop of Exeter.

"*We see Jesus, who was made a little lower than the angels for the suffering of death, crowned with glory.*"—Heb. 2. 9.

Charles Vincent, Mus. Doc., Oxon.

Listen, how He pleads, "Forgive;"
Look, my soul, on Him and live:
All my guilt on Jesus laid,
Perfect reconcilement made.

Counting all the world but loss,
Let me clasp the blood-stain'd cross:
What can sinners crave beside
Jesus only, crucified?

Resting in His love, forgiven,
Thoughts will come of home and heaven:
Listen, look, I hear, I see
Jesus crown'd, and crown'd for me.

Listen to His mighty prayer:
He would have me with Him there,
With the saints before His throne,
Clothed in glory like His own.

Look, He reigns for ever now:
Many crowns are on His brow:
By His Father's side adored,
Priest and King, and God and Lord.

Yea, Amen, Thy will be done:
All my prayers are breathed in one,
Jesu, let me rest in Thee,
Crucified and crown'd for me.—Amen.

A SPRING SONG.

By E. H. Knapp.

MERRILY soundeth the voice of the brooklet,
Winding its way through the far-stretching moor,
Telling of Spring to the flowers as they greet it,
Begging a gift from its crystalline store.

On through the vales and the woodland it murmurs,
Where 'mid the larches the soft breezes sigh,
Where the wood-pigeons, high up in the fir-trees,
Cooingly one to the other reply.

Sunbeams glance gaily and kiss the sweet flowerets,
Bidding them wake at the Spring's magic voice;
Gladly the celandines show their bright faces,
Daffodils down in the dingle rejoice.

Fragile anemones, wind flowers of spring-time,
Star-like above it their white petals rear,
While 'midst its sedges forget-me-nots cluster,—
Sweet blue-eyed flowerets, to true lovers dear.

Bluebells chime softly inaudible music,
Rustling their bells as the breezes pass by.
Great snowy lilies, like fairy boats anchored,
Float o'er its bosom as summer draws nigh.

Violets and primroses show themselves near it,
Buttercups ope their corollas of gold.
Daisies with starry crowns heavenwards gazing
Brightly at sunrise their petals unfold.

"Onwards, still onwards," the stream keeps repeating,
"Purity strive for,"—the lilies reply;
"Trust," the anemones tenderly whisper,
"Love," the forget-me-nots joyfully cry.

"Hope," the glad sunbeams all radiantly murmur,
"Upwards," the daisies, with smiles, all exclaim,
While the glad songsters, in musical chorus,
Tell of God's goodness and honour His Name.

Learn, for the whisper of nature is mighty,
Learn of the flowercts, the lesson of love;
Learn of the brook and the sunbeams to trust Him,
God, the good Giver, who watcheth above.

QUEEN LOUISE OF PRUSSIA.

By Barbara Clay Finch.

MENTION has frequently been made, since the death of the Emperor William, of the name of his brave and noble mother, but many of our readers may be unacquainted with the details of her history. In all that stirring epoch during which the eighteenth century *died*, and the nineteenth *dawned* on the stormy and tumultuous scenes that were so sadly frequent throughout Europe; when the Little Corporal was consolidating his wondrous power, and craftily bridling France; when our hero-hearted Nelson was "doing his duty" at the Nile and at Trafalgar; and when Farmer George, yet hale and sane, was honestly wondering how the apple got inside the dumpling—there was not a figure whose memory has come down to us with such pure pathetic lustre, such tender shading of high-souled romance, as that of Louise of Prussia, who had what Thackeray calls "the sad pre-eminence of beauty and misfortune," and who was regarded by the Fatherland with a love and loyalty amounting to veneration, and strongly resembling the spirit in which Dagmar of Denmark was and is looked upon by the brave and tender-hearted Danes.

Louise Augusta Wilhelmina Amelia, sixth child of Prince Charles Louis of Mecklenburg-Strelitz, the youngest brother of Queen Charlotte, and Princess Frederica Caroline Louise, of Hesse-Darmstadt, was born on the 10th of March, 1776, and when scarcely six months old, was taken by her parents, with her sisters Charlotte, Teresa, and Frederica, and one brother, George, to the castle of Herrenhausen, near Hanover, her father having been made Governor-General of the latter state by his brother-in-law, George III.

Here her mother died, when Louise was but six years old, and she and her sisters were removed to Darmstadt, and placed under the care of their grandmother, the Princess George of Hesse-Darmstadt. The young princesses resided in the palace in the Herrengarten, and Louise, under the care of Mdlle. Gelieux, a French Protestant, grew up a lovely and loveable girl, gracious, gentle, and true, her beauty being, as we are told, "only the outward expression of her still more lovely character."

When only fifteen, Charlotte, the eldest of the sister princesses, was married to the Duke of Hilburghausen; and in May, 1789, Teresa, the second, wedded the Prince of Tour and Taxis. In 1790, Louise was present at the coronation of the Emperor Leopold II., at Frankfort, and she and her sister Frederica lodged in the house of Frau Rath Göethe, a kind-hearted lady, the great poet's mother. She humoured the two sisters in all their childish freaks, and defended them from the interference of the stately Oberhofmeisterin, whose sense of propriety was outraged at the idea of her princesses amusing themselves with the undignified heartiness of common clay. One day Louise and Frederica discovered the charm of pumping in the yard, and splashing themselves liberally, and Frau Rath, sympathising with their innocent enjoyment, told the horrified duenna that she would turn the key on her, rather than have the children disturbed. While under her kindly protection, Louise met for the first time the famous Prussian minister, Von Stein, of whom she was destined to see so much in later years; but at present the pump was probably an object of much greater interest to the young princess than the grave, grown-up statesman.

In 1792 war was declared by France against Austria and Germany, and all the princes of Louise's family leaving for the camp, she, her grandmother, and her two sisters, all repaired to the home of the eldest, the beautiful young Duchess of Hilburghausen. In this little court, situated in the most romantic and delightful part of Thuringia, Louise met the poet Jean Paul Richter, of whom her sister Charlotte was the friend and patroness. He had all a poet's admiration for the young duchess's beauty, and soon grew hardly less eloquent concerning the future Queen of Prussia, who is described as being then very lovely, with large blue eyes, full of feeling, exquisitely transparent complexion, soft, golden-brown hair, a tall, slight, and graceful figure, and most winning and attractive manners.

Hostilities having temporarily ceased, the Princess George, thinking they might travel in safety, set out for Darmstadt, but paused on her way to visit the Landgrave of Hesse at Frankfort, there to meet the King of Prussia and his sons, who had arranged to appear at the theatre that evening. The two young princes, Frederick William and Louis, were fascinated by the lovely sister princesses; and the King of Prussia, being fortunately both able and willing to smooth the course of true love, invited the Princess George and her grand-daughters to sup with them after the play, instead of proceeding on their journey as they had intended. What the Crown Prince thought of his future wife may be gathered from the words spoken long afterwards, in the time of his sorrow, to his faithful friend, Bishop Eylert: "I felt when I saw her, 'Tis she, or none on earth.' The expression is somewhere in Schiller, I forget where; but I know it, and it exactly describes the emotions which sprang up in my heart at the moment." The expression quoted was from the "Bride of Messina."

The Crown Prince, then twenty-three years old, is described by Bishop Eylert as being tall, well-proportioned, and soldier-like, with broad forehead, and deep dark-blue eyes. Not the least pleasing phase of his character was the intense affection he bore to his brother Louis—an affection which the latter as warmly returned. The boys had been brought up under the superintendence of their grand-uncle, Frederick the Great, who watched their progress with much interest and satisfaction, and always looked upon Frederick William as his heir.

On the 24th of April, 1793, the double betrothal took place in the palace at Darmstadt; and through the ensuing summer, Louise had many opportunities of meeting her lover, both at Heidelberg, and in the camp before Mayner. Meanwhile the palace of the Crown Prince, lately the home of our own Princess Royal, was refitted and decorated for its fair young mistress; and, on the 23rd of December, the beautiful sister-brides entered Berlin, and passing through Potsdam Gate, were received by the chief magistrates in the name of the town, and met the different guilds of burghers, who fell in with and swelled the processions. Amid loyal cheers, fluttering flags, and many-coloured decorations, the carriage, with its fair occupants, passed up Unter den Linden to the spot now occupied by the equestrian statue of Frederick the Great, where a triumphal arch was erected, and where addresses of welcome were to be presented. Here a pretty child, a burgher's little daughter, came forward and offered the beautiful bride a bouquet; and the fair young princess, stooping to receive it, kissed the small upturned face.

"Ach!" cried the Oberhofmeisterin, Countess von Voss, in tragic tones, "what has your highness done?"

Louise, herself only seventeen, started at the remonstrance.

"What!" she said, "is that wrong? May I never do that again?"

On the day following that on which the two fair sisters, whom Göethe calls "heavenly apparitions amid the turmoil of war," entered Berlin—Christmas Eve, 1793—Louise, with the diamond crown of the Hohenzollerns on her brow, and in the presence of the Queen Elizabeth Christina, the widow of Frederick the Great, was married in the White Drawing-room of the palace, by the

rites of the Lutheran Church. Then eame the banquet and state ball, eoncluding with the inevitable Fackel Tanz; and the following morning—Christmas Day—the newly wedded pair went in state to the Cathedral; and then the Crown Prince took his fair young wife "home" to his palace in Unter den Linden. Three days later, on December 27th, Prince Louis and Louise's sister Frederica were wedded. On the next birthday the King presented the Crown Princess with the palace of Oranienberg as a summer residence.

Louise's first year of married life was almost uncloudedly happy. The one drawback to her own and her husband's bliss was the tedious etiquette and ceremonial which surrounded them. The poor Countess von Voss, whom the Crown Prinee wickedly nicknamed "Dame Etiquette," struggled fruitlessly to preserve the proprieties.

One of the many writers on Louise's life gives an amusing picture of the stately old eourt dame's perplexities. "In vain did she point out to the Crown Prince that it had always been the eustom for the husbands of the royal family of Prussia to apprise their eonsorts of any intended visit before entering their ladies' apartments."

The prince maliciously requested "Dame Etiquette" to announce him in due form the next time he wished to speak with his young wife; and when that zealous official entered the princess's drawing-room with the solemn intelligence, there sat the Prinee already; he having slipped in through a side door before the ambassadress could execute her eommission.

In vain did the good eountess point out, with all the eloquence she possessed, that it was quite necessary for the peace and well-being of the Prussian States that the Crown Prince and his consort should not drive out together in the good city of Berlin except in the traditional coach and six dedicated to that especial service.

Again the prince listened with an air of profound gravity to the lady's remonstrances. He ordered the huge vehiele to be brought out, with the six horses, two eoachmen, and three footmen, all according to precedent and rule. Then gravely handing the *gouvernante* into the carriage, he gave the coachman a sign to proceed, and himself followed with his young wife in a quiet earriage and pair. But the horror of "Dame Etiquette" reached its culminating point when the prince actually proposed to drive his charming wife out in a *char-à-banc!* This was too much—"in the lowest depths, a lower still," and "Dame Etiquette," mournfully refusing to be one of the party, and abjuring all complicity in so horrible an atrocity, retired to the seclusion of her own apartments in the palace, where she remained "more in sorrow than in anger."

This happy life was not destined to be of long duration, for the Crown Prince was forced to return to the seat of war, leaving his wife distressed and trembling indeed, but still showing something of the high-souled courage of the women of mediæval romanee. "The dangers," she said, "to which my husband is exposed, make me tremble; but still the Crown Prince, who is the first after the king on the throne, must also be the first after him in the field." Left thus solitary, the princess solaced her time with studying the literature of her country, being specially attraeted by the writings of Herder, Göethe, and Schiller, and showing much intelligence and appreciation. After the capture of Warsaw, her husband returned; and, Oranienberg being too costly for the prince and princess to retain as a residence, they puchased Paretz, near Potsdam. There they lived in such contented fulness of wedded happiness, as reminds us of that other royal husband and wife who

> "In that fierce light that beats upon a throne,
> And blackens every blot,"

walked hand in hand in such devotion of leal-hearted love, till death sundered them—Albert the Good, and his wife, Victoria.

In this little *château*, far from the restraint of eourt ceremonial, the prince and princess lived like a country squire and his wife, known to all the villagers, and petting the children, for whom the light-hearted young princess would buy toys and cakes; and long after, when the splendour and crown of her queenhood was upon her, she would declare that the child-lisped title of "Gracious lady of Paretz," sounded infinitely sweeter to her ears than the ever-recurring "Your Majesty" of the Court. This pleasant country life was darkened in 1794 by the death by fever of Prince Louis, the Crown Prince's brother, and the husband of the Prineess Frederica, now a widow of eighteen, with an infant son. The following year, however, Louise was gladdened by the birth of her eldest boy, afterwards Frederick William IV., born October 15th; and eighteen months later, March 27th, 1797, William, the late German emperor, was born. At the elose of the same year, the old king died, and the Crown Prince and Princess ascended the throne as Frederick William III. and Queen Louise. About six months after their accession, they made a tour of their eastern dominions, where they were received with the utmost loyalty and enthusiasm, the beauty and sweetness of the queen exciting universal admiration and affection. Not long after their return, she gave birth, at Charlottenburg, to a daughter, Frederiea Louise Charlotte, always known in her own family by the pet name of "Blanchefleur," who married at nineteen the Emperor Nicholas of Russia, and, taking the name of Alexandra, closed her gentle life in the reign of her son, Alexander II.

"In the fierce light which beats upon a throne," Queen Louise stood fearless, strong, and true. Says Madame de Staël, "The court, presided over by a beautiful and virtuous woman, is at once imposing and simple. The royal family mingle freely in society, and identify themselves with the country in the hearts of their subjects."

"I am queen now," wrote Louise to her grandmother, soon after her accession; "and what chiefly delights me in that is that I shall no longer be obliged to be so careful in counting the number of my good deeds." In truth, her charity was boundless. Every expense that could by personal self-denial be restricted, was cut off, that she might have more to give in alms; and she had the happiness of finding her husband in complete accord with her.

He loved her passionately; her bright sweetness and loving energy were just what his grave and rather pensive disposition needed; and she always seemed to him a good angel incarnate.

All sorts of pretty aneedotes were told of their happy married life. Thus, once the king, playfully twitting her with extravagance for giving four dollars for a new eap, called up an old soldier, Christian Brandes, who was standing sentry under the palace windows. "The lady who is sitting on that sofa," said he, addressing the bewildered veteran, "has a great deal of money. Now, what ought she to pay for that little cap that lies on the table? You must not be dazzled by the beautiful pink ribbons, but say what you think it is worth." The old soldier surveyed the article in question, and, with masculine ignorance, opined that it might have eost "some groschen."

"Groschen, indeed!" cried the king; "that thing eost four dollars. She can afford to *give* you as much as she can afford to *pay* for that."

The queen laughed, and paid her dollars cheerfully; but turned the tables on her lord by adding, "You see that noble gentleman standing at that window. He has much more money than I have. All I have I receive from him, and he gives very freely. Go to him, and ask him for double what you have received from me; he can afford to give you eight dollars."

Years after, when the bright queen was gone, the king, who had the royal gift of remembering faees, saw his old soldier again, and said sorrowfully, "Brandes, dost thou remember?" turning hastily away.

(*To be continued.*)

"The Royal Palace in Berlin."

"YOUR SIN WILL FIND YOU OUT."

By M. F. FREEMAN.

THE spring breezes blow softly among the palm branches on the mount of Olivet, and the spring sunshine gilds the white walls of Jerusalem on the opposite side of the valley. The light of a Jewish Sabbath morning has risen on the fair summits of Mount Zion, and within her streets all is active, joyous life, in prospect of the solemn festivities of a Sabbath high day. It is Palm Sunday in the Holy City.

By the winding path from Bethphage and Bethany, over the hill Olivet, a band of worshippers is making its way towards Jerusalem. We catch the music of their voices as they come nearer the crest, and then we see them strewing palm branches in the way, and carpeting the green hill-side with their coats, in honour of One in their midst. Scarcely can we see Him at first, so thronged is He with the happy children as they shout their glad "Hosanna in the highest!"

But now they have mounted to the top, and are halting in full view of Zion—Zion, "the perfection of beauty!" "the city of the great King!" and from the base of her solid bulwarks and buttresses to the summit of her palaces and towers and Temple—how fair is she! The sight of her thrills the band with new ecstasy, and they burst forth into such a shout of praise as they would make the city herself, as well as the surrounding hills, echo the strain, "Blessed is the King that cometh in the name of the Lord!"

But what is this? a sound of weeping in their midst! The children's songs are hushed, and the men and women fall back in the presence of the King's grief. Listen to the voice of His lamentation: "O Jerusalem, Jerusalem, how often would I have gathered thee as a hen gathereth her chickens under her wing, and ye would not! If thou hadst known, even thou, in this thy day, the things that belong unto thy peace. Behold, your house is left unto you desolate!"

Is *this* the King, meek and lowly, and riding upon an ass?—His visage so marred more than any man's, the Man of Sorrows!

The city shone on in the morning light, and none took heed of the voice of prophetic warning. The band went forward on its way, and the children sang their hosannas again, on through the gates into the city, on through the streets to the Temple. The Pharisees from the multitude called to the Master to bid His followers cease their singing; and when the children echoed the refrain within the very Temple walls, the chief priests and scribes were moved with indignation, and rebuked the King and the children.

He came unto His own, and they that were His own received Him not. Ere the week after that Palm Sabbath had fled, the King who had entered the city so triumphantly was led forth from it crowned with all the shame and sorrow its unhappy people could heap upon Him. The cross for a throne; shed blood for royal robes; thorns upon His brow for regal majesty; mockery and derision for hosannas! And all this because of "the exceeding sinfulness of sin!"

Whence the sad echo eddying round us in the fitful gusts of wind? "Behold, your house is left unto you desolate!" It is a weird, dark night as we again visit Mount Olivet, and climb the winding path. Oh, that sad lament! Is it in the winds that whistle and sigh around us? Is it in the hollow answering echoes of the mountains round about Jerusalem? Or is it in the moan of distress that floats across the valley from her charred ruins?

Is it imprinted in that lurid glow of smouldering heat on the hill where the Temple stood?

The children who cried "Hosanna" in the Temple are but become men, and men in the prime of life who saw the King crucified have scarcely run the threescore years and ten, ere judgment has come upon the city, and her house is desolate, her children scattered.

Through the day all the confusion and tumult and tribulation of war has seethed within her tottering walls. Her Temple in flames; her people struggling and shrieking in mad desperation; the Roman soldiers, broken loose from all discipline, fighting and firing and slaughtering with the fury of a bitter hatred.

And now that the dark pall of night has fallen round her, she lies writhing in her misery; her wounds prevent the hush of sleep, and keep her awake to the full sense of her destruction; and the smouldering embers of the fire make even the darkness visible, shrouding the ghastly spectacle of dead bodies in heaps upon her hills.

"'Mountains, fall on us and hide us!'
Rose her people's bitter cry;
But they heeded not, and all her wounds
Lay open to the sky.
Oh, of sin's exceeding sinfulness,
The misery and shame!
Oh the woeful curse on those who mock
At mercy's lowly claim!
Oh the bitterness of death, when Life
Was offered in that Name!"

OF INTEREST TO YOUNG MEN.

THE Eleventh Triennial Meeting of Young Men's Christian Associations of all lands, will be held in Stockholm, the capital of Sweden, from August 15th to 19th. The month of August is the time to see the "Queen of Malaren" (as Stockholm is sometimes called) at her best. Everything is then nice and green; and the banks of Lake Malaren, lined with villages and small picturesque summer dwellings of the city merchants and magnates, is a sight well worth seeing. The woods, extending all along the shores from Sodertelji to Stockholm, contain all kinds of trees from the plebeian pine to the aristocratic oak and walnut. A splendid view of Stockholm is obtained when coming from Sodertelji; you have then the main part of the city in the midst, and on each side the north and south part. When nearing the capital, you cannot fail to notice the large number of small steamers going to different places. Communication between different parts of the city depends to a great extent upon these small boats, and many of them run nearly all the year round.

The Stockholm Young Men's Christian Association (known in Sweden as the Kristeliga Foreningen af Unge Man) rents six rooms, in the northern part of the city, at No. 2, King Street. On entering the Association you are received in the "tambur" (hall) by the "vaktmastare" (doorkeeper), who is pleased to show you around the Rooms, and introduce you to the President and Secretary. The former, Prof. Shuldheis, is a lover of young men, and takes great interest in the work, and he is ably seconded by the General Secretary, Mr. G. Vider. Besides a library containing about four hundred volumes in ten different languages, the Association possesses a large Reading-Room supplied with one hundred newspapers and magazines printed in eight or nine languages. There is a fine gymnasium, and classes in gymnastics are taught three nights a week during the winter months. Besides young men in general, nearly all the city pastors, a good many students, and soldiers of all grades, from General to Private, are members of the Association. The rooms are open to the public from 4 to 10 p.m.

An oculist in New York recently said, in answer to certain inquiries, that wearing eye-glasses, as many do because they think it adds to their personal appearance, is very hurtful. "But," he added, "the greatest enemy to the eyes of young men is the cigarette. A disease has recently appeared among smokers which is dangerous; and after careful investigation, the best authorities, who, for a long time, were at a loss to understand the peculiar malady, traced it to the small paper-covered tobacco sticks. It is now known as the 'cigarette eye,' and can be cured only by long treatment. Its symptoms are dimness and film-like gathering over the eye, which appears and disappears at intervals. If young men continue to smoke cigarettes excessively, they may expect to be afflicted by this troublesome disease; and it is not relieved by spectacles."

During 1887 the membership of the Sydney (New South Wales) Y.M.C.A. increased from 936 to 1,095.

CHARMS OF JAPANESE WOMEN.

GRACE AND ATTRACTIVENESS *versus* EUROPEAN DRESS.

THE general attractiveness of the Japanese fair sex, as to which there are hardly two opinions, is due in a more than ordinary degree to the becoming character of their raiment, and the grace with which it is worn. Few Japanese women possess physical beauty of those lofty types which are the Western ideals. They are for the most part comely and engaging, rather than handsome. Dark eyes and hair, pencilled eyebrows, well set necks, and remarkably good teeth, together with bright artless manners and a winning smile, all serve to draw attention from irregularities of feature which will hardly bear critical scrutiny. It is the combination of physique, grace, dress, and manner that makes up the agreeable sum total of the average young girl or matron. As well in the brisk, bronze-cheeked serving-maid, with her homely but tasteful garments, her eyes of kindness, and her pretty ways, as in the refined little lady of high degree, pale-skinned and gentle-mannered, in her rich, exquisitely neat dress of ceremony, the visitor and the resident alike recognise most pleasing specimens of womankind. But they also acknowledge how much of the general outward effect is really due to the picturesqueness of the national garb. If confirmation of this be needed, it is sufficient to behold the same women clad in foreign clothes, or to mix in any gathering where the two styles can be seen together. Making full allowances for the disadvantages that, in the nature of things, must tell against a costume to which the wearer is wholly unaccustomed, no one who has eyes to see, can then hesitate as to the artistic superiority of the Japanese apparel. And, besides its æsthetic merits, the latter has other points of excellence.

It is healthy, in that it involves no distortion or compression of the kinds imposed by Western fashions. If the skirts of a well-dressed lady's robes are gathered somewhat too tightly for very active locomotion—perhaps the only fault that can be found in her whole attire—no other part of her frame is subjected to unnatural constraint; while the massive girdle gives warmth and protection to the chief bodily organs. Secondly, it is very much less expensive than the costly and irrational habiliments of the West. Jewellery, moreover, forms no part of it in any station of life.

Again, its fashions are abiding. While a Japanese belle, like all of her sex, delights in having good clothes and plenty of them, she has, or at least has hitherto had, the comfortable assurance that her ever-increasing wardrobe is in no danger of being at any moment thrown out of date by the caprices of court milliners and fashion-mongers.

Lastly, it is admirably suited to the beautiful fabrics of the country. It is no wonder, then, that the grievous change now in progress is loudly deprecated by nearly all onlookers. With most of us the first feeling is one of wrathful indignation. That the Japanese, who are nothing if not artistic, should set themselves in this cold-blooded way to blot out one of the most delightful and picturesque features in the whole national life is regarded as incredible, unnatural, and exasperating. It is Vandalism; it is sacrilege; it is mimicry; it is everything that is bad. Such is the general lament, and there seems to be a good deal in its favour.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

NOTES ON THE INTERNATIONAL S. S. LESSON.

By Rev. J. H. THORPE, M.A.

JUNE 10TH. JESUS RISEN.—*Matt.* 28. 1-15.

GOLDEN TEXT.—1 *Cor.* 15. 20.

AN interesting topic arising out of this lesson would be the ministry of women to our Lord when on earth. Amongst other points it would seem that the food, etc., required by our Lord was furnished by a band of women who ministered to Him of their substance (see Luke 8. 3). The teacher, in any case, will not fail to notice that women followed our Lord when His disciples had forsaken Him; women were the last at the cross and the first at the tomb. How completely, therefore, it would seem that the cross of our Lord has restored woman from the stigma of being "first in the transgression."

As to the work of the angel (see ver. 2) in rolling away the stone, the earthquake, etc., it took place in the presence of the women (so *Alford*). It was not needful for our Lord's delivery—He had already risen. A nice point is brought out by St. Mark regarding this stone (Mark 16. 3, 4); it was a difficulty discussed by the women on the way; they did not know how to get it removed, yet they continued on their journey of love, and when they arrived at destination found stone rolled away for them, "for it was very great." Thus does God make the way of His people clear, when they "follow on." Take the next step and the next—and leave *the great stones to His providence!*

See in this lesson the interest angels have in Christ's people. This one knows the seekers of Jesus, and has a word of cheer for them (compare Luke 15. 7). See how the angel regards the word of Christ. He reminds these disciples, "as He said." If we remember what Christ has said to us, we shall be the less surprised at what He does to us. From ver. 7 learn that blessed news is to be passed on. If God lights our candle, it is that other candles may be lit at our flame. From ver. 9 you have the suggestion that Jesus meets with His people in the way of obedience and witnessing for Him. See in ver. 10 (1) The resurrection message is, "Be not afraid." (2) The name Christ gives to His people after His resurrection, *not before*, is "My brethren." (3) How Jesus loves the gathering of His people—see here how He arranges a meeting with them in Galilee.

Vers. 11-15. See (1) How one sin draws on another. The men who crucified Jesus now concoct a lie about His disciples. (2) What a power money is for evil, and how often it is used that way! (3) Here large money was given for the support of a lie, yet how many grudge a little money to advance the truth. (4) How ridiculous was the story they started, and *yet some believed it!* It is easy to deceive men into believing what is popular. Query—If the soldiers slept, how could they know what they said took place? If some were awake, why not arouse the rest? If disciples stole the body, why did not the soldiers search for it? (5) Ver. 15. Note, when once a lie is raised, none knows how far it will spread, how long it will last, or what mischief it will do.

S. S. NOTES (*continued*).

BEFORE reading verses, refer to *burial of Christ*—the *watch* set before the grave, and the dark intervening day between the death and resurrection. Introduce lesson by picturing the women groping their way through the city while it was yet dark (John 20. 1). Sun rises very suddenly in East. They hear a great noise, earth seems to rock (verse 2), but not afraid, they pursue their way.

Lesson might well be made to gather round verse 6, giving it as title—

THE ANGEL'S MESSAGE.

"Come, see the place where the Lord lay." As significant to us as to the women. The message has come floating down the ages to us here in this class. FIVE points of interest about the place.

1. *It was in a Garden.* Call to mind a lovely English garden. Show how an Eastern garden would be still more lovely. The natural desire to make the resting-places of the dead beautiful. Refer, if possible, to some spots in a cemetery or graveyard near by.

2. *It was a* GRAVE. "Of course it was," some scholars may exclaim. Refer to the theory put forth that Christ only swooned. This impossible, owing to sword thrust, if nothing else. Not simply a resting-place, like the well of Samaria. Mysterious influence of graves. Abraham Lincoln converted as he stood by the graves of his comrades at Gettsburgh. Women have come prepared with spices. See rich Joanna laden; they bend and look in—start back.

3. *It was Empty.* "Was it not enough," they cry, "that they heaped indignities upon Him while alive, that they must now steal Him away!" They look again.

4. *He bore Marks of a Resurrection* (John 20. 5-7). The doctrine of the resurrection, the keystone in arch of Christianity. Proofs of the resurrection: Disciples could not have invented, as it was against what they expected. Their after conduct proved it to be no lie of their making. Impossible to think all the guard would sleep. Had either enemy or friend stolen the body, they would not have unwound the clothes. Suppose the guard had slept, the noise would have waked them. Impossible for a handful of men to have stolen anything from that garden, in face of a cohort of Roman soldiers. Nothing in history so clearly demonstrated as this fact. Still another look.

5. *It contained Angel Forms* (John 20. 12). Life where death had been.

Five comforting thoughts gathered from "the place where the Lord lay."

1. *This Life is not all.* There is something beyond. This both comforting and alarming.

2. *Departed Friends who have died in Christ, only gone before.*

3. *Our Saviour conquered Death.* Therefore we need not fear; to do so is to dishonour our Lord.

4. *The other World is close to this.* Proved by appearance of angels and Christ.

5. WE SHALL RISE AGAIN. Repeat Golden Text. This *a fact of prophecy. A fact of history. A fact of science.*

Illustrate by an acorn from which springs oak, diamond from charcoal, silk from worm, butterfly from chrysalis An object lesson might be given by teacher taking some of these things to class.

A chemist's assistant once dropped a silver cup into a vessel containing some clear liquid, when, to his consternation, it disappeared. The master dropped a few drops from a phial into the liquid, when lo, a mass of silver gradually gathered together at the bottom of the vessel. It was taken out, sent to the silversmith's—and, lo, again appeared the silver cup. C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSON.

JUNE 10TH.

THE DEMONIAC.—*Luke* 8. 26-35.

CHRIST'S journey across the Sea of Galilee on this occasion appears to have been solely for the purpose of delivering the poor demoniac. (Compare ver. 37).

Matthew speaks of *two*, Mark and Luke of *one* demoniac. The discrepancy is only *apparent*. *Substantial* agreement with *circumstantial* variety.

Evidently no collusion—artless and candid. *One* demoniac was probably more conspicuously afflicted than the other.

Mark the features of the affliction:—

"*Had Devils*" or demons—not mere madness, but a distinct misery, a literal possession by spirits. See Matt. 4. 24, where the two are specified as distinct.

"*Long Time*," an inveterate case, and therefore, the more painful and NATURALLY hopeless.

"*Abode in no House, but in the Tombs.*" Driven from society—in the place of death.

He could not be Bound with Fetters and Chains. The demoniacal power burst these bonds, and drove him into the wilderness.

All these features are illustrative of a sinner's experience. Under the power of Satan. No legal restraints or resolutions are capable of binding him.

He cried out against Jesus (ver. 28). Thus the devil deceives men, and makes them resist their greatest Friend, the Saviour.

Ver. 31. Observe the subjection of the demons to Christ, their dread of Him, and acknowledgment of His authority.

Ver. 32. Was there not an artifice of Satan here to set the people against *Christ*, by destroying their property? Note the sequel in ver. 37. So now, if Satan can make men believe that religion is injurious to business, he can succeed in setting them against it.

Ver. 35. The happy condition of the poor demoniac. At the feet of Jesus.

Place of Rest (Luke 8. 35).
Place of Safety (Ruth 3. 8).
Place of Humility (Rev. 1. 17).
Place of Honour (Acts 22. 3).
Place of Instruction (Luke 10. 39).

JAMES L. STANLEY.

JOSEPH BARKER AND THE QUAKER.

By Tryon Edwards, D.D.

SOME thirty or forty years ago an avowed infidel, named Joseph Barker, became widely known for his activity and earnestness in spreading atheistic views, and opposing the Bible and the truth of God. In 1854 he had a public discussion in Philadelphia with Rev. Dr. Joseph Berg, which was continued through eight evenings, and was at the time regarded as one of the most remarkable and important debates ever held on such subjects. The large concert hall was crowded to overflowing—floors, galleries, aisles, platform, every part—and the arguments on both sides were stated with singular clearness and power, and were listened to night, after night, with fixed attention and thoroughly intelligent interest.

At every step of the discussion, on to the end, all felt that Dr. Berg, strong in the power of truth, was more than a match for his opponent. And when at the close Mr. George H. Stuart read a series of resolutions, devoutly thanking God for the manly and powerful eloquence with which Dr. Berg had spoken for the Bible, and also expressing full devotion to the sacred Book as the bulwark of all civil and religious liberty, the ground of all lawful authority, and of morality as well as religion, the whole vast audience responded by the peal of two thousand voices, with an earnestness that was grand almost to sublimity. Then followed the request that all opposed to the resolutions would respond in the negative ; but not a voice was uttered, or a hand raised, either because all were convinced, or that the advocates of infidelity were not willing by voting to show how few were their numbers, and how weak their cause. But instead, from every part of the room the people gave a great shout, followed by three groans for the views of Mr. Barker.

It was not far from the time of this debate that Barker went out to Frankford, then a suburb, but now a part of Philadelphia, and there lectured against the Bible to a large audience. At the close of his address, when he evidently felt that he had made a strong impression, he invited either replies or questions from any in the audience. After a moment's silence, a substantial-looking Quaker arose and said :

"Friend Barker, thee said not only that the Bible was a pack of lies and fables, but that every preacher was a hypocrite, and well knew that in his preaching he was telling what was not true—did thee not?"

Barker admitted that he had said it, and again declared it was so.

"Well, friend Barker, was not thee a preacher so many years ago, and did thee not then preach just as other ministers now do?"

Barker was evidently taken by surprise, for he did not suppose that any one present knew his early history (for he had been a preacher before he apostatized to infidelity) ; but colouring and hesitating a little, he admitted that he had been a preacher, but said he had long ago given up such nonsense, as he had no faith in it.

"Well," said the Quaker, "if thee was *not* a hypocrite *then*, thee surely could not say that *all* preachers were hypocrites ; and if thee *was* a hypocrite *then*, thee may be so *now* in what thee is telling us. And beside," he continued, "the Bible must be true, for ages ago it exactly described thyself, saying, 'In the last days there shall come scoffers, false teachers, bringing in damnable heresies, even denying the Lord that bought them, by whom the way of truth shall be evil spoken of' ; and this is just what thee is now doing."

Barker seemed not a little confused, and making no reply, the Quaker again said, "Friend Barker, I would ask thee another question : Did thee ever know a mother teach her child to be an infidel? And if thee was dying, would thee not just as lief have the Christian's faith and hope, as be without them then?" The questions evidently cut Barker to the quick, and made a strong impression on the audience. Barker did not attempt to answer them, and the assembly soon dispersed. They may have had a lasting influence on Barker himself, for some years afterward, in 1870, he publicly renounced his infidelity, and again professed his belief in Christianity, preaching as a minister of the Methodist Church till his death in Omaha, in 1875.

After his conversion he laboured with earnestness and energy to counteract the influence he had exerted while an infidel, and his constant labours with pen and tongue, in the pulpit and on the platform, are said to have hastened his death. He was constantly receiving letters from infidels in the United States and other countries, complaining that he had led them into infidelity, and now had forsaken them, and asking reasons for his change. All these letters he endeavoured to answer, rising early and sitting up late, that if possible he might lead the writers to the truth. He was in the habit of telling them to read the Gospels, for it was the story of Christ, he said, that had converted him. And what aided to open his eyes, and led him to consider the whole subject anew, he added, was the immorality and licentiousness to which he saw infidelity led its disciples ; for he had never known an infidel who hated and opposed the Bible, who was not an immoral man ; thus reminding us of Wilmot, the infidel, who, when dying, laid his hand upon the Bible, and solemnly and with energy said, "The only objection against this Book is a bad life."

A short time before Mr. Barker's death, as his son tells us, he called to his bedside his son, Mr. Gilbert, his lawyer, and Mr. Kellom, one of his trustees, and said, "I feel that I am approaching my end, and desire that you should receive my last words, and be witnesses to them. I wish you also to witness that I am in my right mind, and fully understand what I have just been doing, and that I die in the firm and full belief of Jesus Christ, and trusting in God's infinite love and mercy, and in full faith in a future and better life. I am deeply sorry for my past errors, but during the last years of my life I have striven to undo the harm I did, by doing all I was able to serve God, by showing the wisdom and excellence of the religion of His Son Jesus Christ. I wish you to write down and witness this my last confession of faith, that there may be no doubt about it."

He also left behind him several books which he had published after renouncing his infidelity—books of earnest and powerful argument for the Bible. In one of these he says, "Men who have strayed into scepticism are continually coming back to the Bible, and accepting it as their teacher, guide, and comforter ; and I myself am an instance of this. Carried away, as by a tempest, from my early faith, I wandered for years in the dreary regions of doubt and unbelief. 'I looked for light, and behold darkness.' I sought rest, and found disquietude. And the further I went, the worse I fared, and the more wretched I became. I found myself at length face to face with utter darkness and eternal death. God in His mercy rescued me from that awful state, and brought me back to Christ. And now I am happy in the light of His truth and the assurance of His love. I praise the Bible, and love Christ and Christianity more than ever, and am more happy in my work as a minister than I ever was in my life. And my ability to maintain the claims of Christ and Christianity and the Bible to the love and reverence of mankind, is greater than ever, and my hatred and horror of infidelity is greater than ever. I know it to be the extreme of madness and misery, the utter degradation and ruin of the soul."

THAT HOUSE IN LONDON.

CHAPTER XXIV.

KATE was not at all a fanciful woman. She never met trouble half-way; she was unsuspicious, and had naturally a genial and bright temperament. Nevertheless, when her husband did not return home at the appointed hour, after his supposed visit to Liverpool, a sense of discomfort and uneasiness did oppress her. She began to watch for his expected footstep; and the watching for a footstep that does not come is always, under all circumstances, more or less weary work. Polly and Nellie were at home that evening; they were very bright and animated, and did not at all share in their sister's longing for her husband's return. Kenneth was not popular with his young sisters-in-law; he showed his indifference to them far too plainly for them to care about him. Kate concealed her growing anxiety, talked with apparent interest to Polly about her new winter costumes, was genuinely pleased with Nellie's crewel work, and when the dinner-time was half an hour past, ordered the meal to be served, and was outwardly quite calm, and even tried to eat.

The slow hours passed; Kenneth did not arrive, neither was there a telegram from him. The girls went to bed, and presently Kate also sought her sleepless couch. She never forgot the agony of that night; but she locked her door, and would not even allow the servants to guess at her uneasiness.

In the morning, very early, she got up and dressed, and by eight o'clock she was at the nearest telegraph office. She sent off a telegram to the managers of the hotel in Liverpool, the name of which her husband had given her. She sent the telegram with a reply prepaid, and then she waited at the office until the answer should arrive. The lines were comparatively clear at this early hour, and in a little over an hour the return message was put into her hands. It was brief, and to the following effect:—

"No gentleman of the name of Kenneth Graham has been here."

"He thought and thought—he pondered and pondered."

"'You may faint when I get you into the room that has waited for you so long.'"

She crushed the paper in her hand, and went quietly home.

Something *was* wrong. Was it an accident? Had harm befallen her husband? or, had he tried to deceive her? She put this latter thought away, saying to herself, she could not and would not foster it. When she came home, however, she told her sisters that she feared something was the matter with Graham. She was trembling violently, and Nellie was frightened about her.

"You will go to him, won't you, Kate?" she said.

Kate shook her head; she could not tell these girls she did not know where her husband was.

After breakfast she went upstairs. Mrs. Alexis's room was open, and Betty stood on the threshold.

"Ay, my dear lady," she said, coming up and speaking in an affectionate tone to Kate, "didn't Betty know, didn't Betty know well that the bridal days would soon be past, and the days of mourning at hand? Take comfort, my dear, and know that this is the will of a merciful God."

"No, it isn't," said Kate, turning round, her eyes flashing. "I know better; it is not the will of God that any one should be unhappy. He means us to be bright, and joyful, and glad to live. Don't say that again, Betty; it is not true. I love God too much, far too much, to believe it."

Betty sighed and shook her head.

"I'll go in and light your fire, ma'am, for you're but poorly," she said, in a submissive voice. "Eh, dear," she continued, as she pottered about Kate's bedroom, "it seems sad as the poor little babe should be coming in such troublous times; but who can wonder when we remember Scripter, which says we is all born to trouble as the sparks fly upward? There now, ma'am, you has got a nice fire, and you'll sit by it and get a bit warm. I do hope as your feet aren't wet, Mrs. Graham. Oh, fie! fie! why, your boots are sopping. Here, let me take them off this minute. Yes, ma'am, you're new to it, and you takes it hard; but you'll get accustomed later on."

"I think, Betty, I will be alone now," said Kate, when she could find her voice. "It is very good of you to make me so comfortable. Thank you much."

"Not at all, ma'am; the mourning spirit is ever congenial to Betty Carew, and I'm pleased to be of service. Did I tell you, ma'am, that I've been dreaming lately of poor Master Jonas? I had a dream about him last night, which repeated itself three times. My poor boy, he riz up before me, all white and faded-like, in shabby clothes, and a world of trouble writ across his forehead, but alive, ma'am—alive. It's my belief, Mrs. Graham, Mr. Jonas is not dead."

"Oh, Betty, he must be. If his mother had not been quite sure, she would not have left all her money to my husband."

"She was persuaded," said Betty, "persuaded in her own mind that he had gone before her, but she may have been mistook; and dreams that come three times is never to be disregarded. Oh! I say, Mrs. Graham, ma'am, if that ain't the master's step on the stairs?"

Kate gave a cry, rushed from her seat, and met her husband on the landing. His face was deadly white, his eyes weary and troubled; he scarcely responded to her loving greeting. Betty slipped away into old Mrs. Alexis's bedroom, and the two were alone.

"Oh! Kenneth, I was frightened," said the poor wife; and here her fortitude gave way, and she began to sob.

He led her gently back into their bedroom; then he held her to his heart.

"Poor Kitty!" he said. "Poor Kitty!"

"But why did you do it, dear?" she continued. "Why did you make me so terribly, terribly anxious? If you could not come back last night, you might have telegraphed; and you were not at that hotel at Liverpool at all. I sent a message there this morning, and they told me so."

"You distrusted me, then?" said Kenneth, his brow darkening; and he pushed his wife a little away from him.

"No, dear, by no means; but I telegraphed to know if anything had happened to you. Oh, Ken, don't be angry; I did try hard not to be anxious."

"Poor Kitty! Well, my offence was not very heinous, was it? just to be out one night longer than I intended. I changed my mind about that hotel; there was nothing very heinous in that. I forgot to telegraph. There, I own I was careless; but, Kitty, I knew I should be with you in the morning, and I have been much worried, much worried."

"Never mind now, dear, that you have come back; I mean, never mind on my account. I am so sorry you have been unhappy; and you don't look well, not at all. Sit down in this arm-chair, and let me brush your hair for you. Poor old boy! it is good to have you back with me again."

"I have had a blow, Kate," said Graham, "a blow; and, dearest, I cannot tell you about it, and you must not ask me. Something bad has happened, and I have been hurt. There, it shall not affect you, my darling; how you tremble."

"You have frightened me, Kenneth."

"I know; I can't help it."

"Has the trouble anything to say to the business, Ken?"

"No—yes—think what you like; I can't enlighten you."

"Betty was right," said Kate, speaking half to herself; "Betty was quite right when she said that troublous days were coming. I am so sorry; I wanted everything to be bright when my baby comes."

"I wish that wretched child was not coming now, Kate; it complicates matters. Why, what is the matter, my love?" For Kate had suddenly put her hands to her husband's lips, and sunk on her knees before him.

"Unsay those words, Ken; they frighten me; they sink into my heart."

"My dear girl, what words?"

"About the baby, Ken; you are glad we are going to have a little child of our own? Don't speak of our little unborn child as wretched."

"I won't, dear, if it hurts you so much; only, Kitty, I fear I shall have to go away again."

"Again? Because of this trouble?"

"Yes, on account of it."

"Then it must be a business worry. I am glad, that is a relief; money troubles are by no means the worst."

"No, dear," said Kenneth, trying to speak cheerfully; "but this will, I fear, take me away from you, for a time at least."

"Oh, Ken, not now, not before——"

"My darling Kate, would you have courage to come with me?"

"With you? Kenneth, are you going far?"

"I don't know; I cannot fix my plans in an instant. Now I am better, and will go to the office. We will talk over matters again this evening, Kitty."

He rose from his chair, changed his coat, and washed his face and hands; then, stooping down and printing a hasty kiss on his wife's brow, he left her. She had sunk back again in the arm-chair, and was gazing dreamily into the fire. Just as Kenneth reached the room door, she called him back.

"I will go with you, Ken, even though it is a risk. It is no matter where we are, if only we are together; and to have you away ill and in trouble would be too dreadful."

CHAPTER XXV.

JONAS ALEXIS had managed to checkmate Kenneth Graham. Nothing could exceed the astonishment and the dismay of this well-to-do man of the world when the much-trodden-on worm turned at last. Alexis had asserted himself, had shown Kenneth plainly that he could not tempt him, had used bitter words to the man who had treated him so badly, had refused all aid from him, and then had gone his own way independently. But before he went he had told Kenneth plainly that he meant to find him out. Alexis himself did not know what his words implied, but Graham did. Alexis as his enemy, as his declared enemy, would be sure soon to know too much. Graham was fearfully disturbed. His checkmate was so sudden, that for a time he could scarcely get his breath. He felt that he could not possibly return to Kate until he had made his plans, until he had collected his ideas. He spent that evening and night in a small inland town, about half-way to London. There he thought and thought, there he pondered and pondered; but the more he meditated, the more impossible did escape seem to him. There was nothing for it but flight; there was nothing for it but to take his family with him and go. He would let the house in Exmoor Square, he would break up his establishment in London, and with his wife, and sisters-in-law, and old Betty, go abroad. It would be necessary to take Betty; for he knew that if she saw Jonas, she would certainly remember him. He wondered if he could persuade his partners to establish a branch of their business in Australia; if so, he would have a plausible excuse for going there—in short, he would run away instead of Jonas.

He returned home, and told his wife enough to prepare her for any coming catastrophe. His wife expected soon to be a mother; this much complicated the situation. It would be so unnatural for him to leave her now; she would think him so cruel. The world, too, would be harsh to him; and, if anything did turn up, would be the more likely to suspect him. Then he wondered if he and Kate could go away at once together, go away to some little unknown English or French village; and then, after the baby's birth, he might return, and arrange for the breaking up of his home. It seemed the best thing to be done; and he hurried away now to his neglected business with a certain sense of relief.

In the course of the day it occurred to him he would employ a detective on his own account. He went to Scotland Yard, and saw one of the officers. He had a private interview with this man, which lasted over an hour. He described Alexis's appearance to the detective, and asked him to keep an eye on him, and let him know if he were in London. The man was one of the cleverest of the force. That evening, just before his

return home, he called to see Graham at his place of business; there he told him that he had traced Alexis to Charing Cross Hospital, where he was then lying very ill from the effects of a street accident, and that his recovery was more than doubtful.

Graham received this information with a curious sensation—a sensation which filled him partly with dismay, partly with exultation. The dismay was caused by the glimpse which he suddenly got into his own moral nature, which now rejoiced over another man's pain and probable death; the exultation arose from the sense that time was once more his, and that even if Alexis recovered, he had now some weeks to make his plans in. He thanked the officer from Scotland Yard with almost effusion, paid him handsomely, and asked him to let him know from time to time how Alexis progressed.

Then he hurried home, feeling almost cheerful. After the misery of the last few days, this pleasant little interval of safety was such a relief, that for the time he was happy. He kissed his wife with great tenderness, was unusually affectionate and sympathetic, told her that her mind might rest for the present, as none of his plans could be made in a hurry, and then he proved himself so agreeable a companion, that even his sisters-in-law began to like him. Kate's fears were once more laid to rest, once more she trusted her husband all in all, and almost laughed at Betty Carew when she met her with a long face, or when she spoke in her croaking old voice of the days of mourning.

CHAPTER XXVI.

ALEXIS got to Exmoor Square when it was dark. He was still rather feeble on his legs, and though he had discarded the use of a crutch before he left the hospital, he limped more or less as he walked. He had come from a place which seemed to him by contrast to be wonderfully homelike and refined. Gentle words had been said to him during his two months' residence at Charing Cross. Sympathy and kindness had been showered upon him, and he had learnt to feel real and sincere affection for Sister Lucilla. He was just in the mood when his mother's love and his mother's forgiveness would have been most acceptable to him. When he found himself in the gloomy old Square, a wild hope filled his breast. Suppose the sister had made a mistake when she said that Mrs. Grace Alexis was dead; suppose this good and gentle lady still lived, and that she was, indeed, his mother! Were this indeed so, he fancied how he, who had lived so long upon the husks, who had tasted so bitterly of the waters of sin, would return to his mother in the spirit in which the prodigal in the Divine parable came back to his Father. He had no doubt at all that his mother would pardon and forgive and bless him. Fear on this point never entered his mind. No, he knew well that if his mother were still living, all would be well with him. In that case, he could even believe that he might forgive Kenneth Graham.

He entered the Square, which was dimly lighted, and looked around him. He had not an idea which house to go to. His vaguely formed plan was to knock at each door in succession, and inquire if a lady of the name of Alexis lived there now, or had lived there lately. He knew well that he presented a sorry figure, and that people would not be particularly courteous or civil in answering his inquiries; nevertheless, he determined to persevere. Exmoor Square was, indeed, an old-world region, and Alexis's heart sank when he perceived that more that half the houses were empty. Well, he must take his chance, and ask his question at those doors which might be open to him. He began at No. 1, and walked down that side of the Square. The present owners of No. 1 could tell him nothing; at Nos. 2 and 3 he was equally unlucky; No. 4 was empty; but at No. 5 he met a response which caused his heart to leap into his mouth, and then gave him a queer sensation of faintness and despair.

"Mrs. Alexis?" said the frowsy housemaid who replied to his summons. "Ah, poor dear! she's dead and gone, she is; she did live at No. 10."

Alexis leant up against the door-post. He had built his hopes so high, that the news of the old lady's certain death came upon him with the effect of a shock.

"Was you a relation?" said the girl, peering at him curiously. "She kept herself to herself, no doubt, but from what I could gather, she was always hoping to get tidings of a relation. Maybe they could give you news of her at No. 10."

"I'll inquire," said Alexis. He thanked the servant, and walked feebly down the steps. He did not know why he trembled so much.

"I'm weaker than I thought," he muttered to himself; "that accident shook me a good deal. I was never much, but I'm not even now the man I was. Maybe it's a good thing my poor mother is dead. I wonder if the old lady who lived in one of those grand houses was my mother. Well, I may as well go to No. 10, and ask a question or two."

He walked up the tall flight of steps; the steps were whitened and carefully kept, he could see that much even in the gaslight; the fan-light over the door was well polished, and a full flood of cheerful light from within streamed out in bright rays. Alexis noted all these small details.

"She never lived here," he muttered. "It's clean, no doubt, and so was the cottage clean, but there's nothing else to remind me of my mother. My mother was a very poor lady; God bless her memory."

He rang the bell at the servants' entrance. He heard voices and laughter coming up from the area, but no one attended to his summons. He rang it a second time, more feebly than the first, for he was shaking more and more violently.

"I can't think what's come to me," he muttered; "my head is going round; I must be very weak."

He took off his hat in a vague manner, hoping thereby to relieve the giddiness and lightness of his brain. Just then the door was opened. An old woman, in a black dress and tall mob-cap, stood on the threshold; the light from within streamed full on Jonas's ghastly face; his brown eyes, half glazed, half blinded, looked full into Betty Carew's.

"Thank the Lord!" she muttered, in a sudden half-choking voice; "didn't I know as dreams dreamt three times meant the truth? Come in, Master Jonas, come in, my darling, long-lost boy."

She dragged him into the hall, and slammed the door after him.

"I'm going to faint," he muttered, groping for a seat.

"No, no, not here; come your ways upstairs," she exclaimed. "You may faint and do anything you fancies when once I get you up into the room that has been waiting for you so long."

By the sheer force of will she dragged the tottering, despairing man up the richly carpeted stairs—up and up, past the landing window, with its coloured glass and its stands of richly blooming flowers,—up and up, until they reached the first landing, where she opened a door, and took him into a dismal and lofty room.

"Sit there," she said, guiding him forward; "sit there, my poor, poor lad, and I'll light the fire, and make you a bit comfortable."

She placed Alexis in his mother's old arm-chair; his head rested against the pillow which hers had so often pressed, and he went off into a dead faint.

Mrs. Carew was by no means alarmed; she was all bustle, and interest, and activity; she turned on the gas and filled the room with the blaze of light. Then she lit the fire which had been so long laid in the unused grate; she managed it skilfully, and got it to burn well.

"Let him lie there until I have things a bit home-like," she muttered, looking at the death-like figure as it lay prone in the old arm-chair. "His mother's darling—yes, for sure; well, he's my charge now."

When the fire blazed high and roared up the chimney, Betty got a bottle of smelling-salts from a cupboard in the wall, and applied it to Alexis's nostrils. After a moment or so he stirred uneasily, and opened his eyes with a slow and languid movement.

"There now, dearie," said Betty, "you prop your feet up on this footstool; it was your mother's, dear heart, and who has a better right? You prop your feet there, my bonny lad, and get the warmth into you, and Betty Carew will go and fetch something that will bring back the colour to your lips. Don't you stir until Betty comes back, Master Jonas."

The old woman hobbled out of the room shutting and even locking the door behind her. She went down, right down to the kitchen, where she encountered the cook.

"I wants the very strongest and best beef-tea that you have in the house, Mrs. Andrews. I want it made piping hot, and a bit of toast along with it, and given to me on a tray this minute; so you look sharp, for I've no time to spare."

"Whatever for?" exclaimed Mrs. Andrews.

"Well, for my own bit of supper, so there. You give it to me, and no words about it—the very strongest, mind, that that you serves up for the missis—do you hear?"

"I haven't got none of it," replied the cook; "I sent up the last to the missis's room an hour back, and there'll be no more made before the morning. Come, come, Mrs. Carew, you're none so bad that you can't eat your supper like the rest of us. It's all laid out in the servants' hall, as piping as you please, real juicy steak and onions."

Betty paused to consider for a moment, then shaking her old head, she left the kitchen and slowly remounted the stairs. Now she passed the door where she had shut Jonas Alexis in, and boldly entered another room. It was a pretty room, very bright and cheerful; a baby's bassinet stood in a sheltered corner by the fire, a sofa was drawn up close to the cheerful blaze, and on the sofa lay the young mother, looking fair, peaceful, and happy. Graham was standing with his back to the fire, and when Betty appeared, Kate had been saying something which caused them both to laugh heartily.

"I beg your pardon, ma'am," said Betty, coming in and dropping one of her accustomed curtsies, "but would it be to say convenient to let me have a cup of your beef-tea?

Cook says she has sent up all she has to your room, and I thought maybe you'd spare me a cup."

"There's none to spare," here exclaimed the nurse, coming forward from another part of the room. "Mrs. Graham will want what is here for herself during the night."

"Then you can't have it, Betty," said Graham, in his decided voice.

Betty scowled, and looked up at him with a very frowning face.

Mrs. Graham's gentle voice, however, interposed.

"No, Ken, dear, I wish her to have a cup," she said. "Certainly you shall have it, Betty; are not you well?"

"Not so very, ma'am. I'd like a cup of the beef-tea made very hot, and a slice of toast done delicate and brown.

"Get what she wants for her," said Kate, turning to the nurse. "Will you eat your supper here, Betty? Mr. Graham is obliged to go downstairs in a moment. Will you sit here, and take a look at baby? he is sure to wake in a moment or two."

"No, I thank you, ma'am; I prefers to eat in the room of mourning; much obliged, Mrs. Graham, ma'am."

Betty took her temptingly prepared little tray from the nurse's hands, and left the room.

(*To be continued.*)

PHYSICAL TRAINING.

By Rev. THAIN DAVIDSON, D.D.

THE education of the body is an important element in the training of the mind. When we look at the crowds of ill-formed, emaciated, stunted frames that meet us on every side, it is impossible not to feel that more attention ought to be given to the practical teachings of Physiological Science. I believe the Volunteer movement has done not a little to improve the physique, the gait, the figure, ay, and the health of many hundreds of young men.

Drill expands the chest and braces up the frame; and if a handsome uniform occasionally engenders just a wee bit of personal vanity, we shall pardon this as we mark the decided improvement in general health and bearing.

It is no longer the fashion amongst Christian people, as it certainly was some years ago, to decry as brutalising and irreligious all sports and amusements which bring into full play the physical powers.

I am not sure but that the pendulum of popular taste is not swinging a little too far in the opposite direction. We almost make a demigod of the youthful athlete, who surpasses all his fellows in the feats of wrestling, or pedestrianism, or rowing, or cricketing, or the like.

It is well to develop by training all our physical powers; but the value of such training consists in its effects upon the health, and upon the powers of the mind. The mere production of a large human animal, a mountain of bone, and sinew, and muscle, like some famous pugilist whose picture is occasionally thrust before you; the mere production, I say, of such a creature (as you would produce a prize horse, or a fat ox), is a very poor ambition; indeed, I confess that such a picture only fills me with disgust, suggesting the culture of the brute at the expense of all that gives true dignity and worth to man.

Did you ever, as I have done, stand still for a few moments, and make a study of the faces in the group gathered round such a portrait, or lingering about the door of some sporting journal, waiting for the news from a race or prize-fight? What a humbling spectacle! Of all the brainless skulls and vacant, vapid countenances to be anywhere seen, you will find nothing to match that worthless company!

I hardly know a lower type of men than those who, ignoring their mental and spiritual nature, aim at nothing higher than possessing a strong and well-formed body. But that is no reason why intelligent Christian young men should neglect the culture of their physical powers. There is no necessary connection that I can discover between thoughtful piety on the one hand, and flaccid muscles, lack-lustre eyes, a sallow complexion, a contracted chest, and a shuffling gait, upon the other.

I admire true godliness everywhere, but nowhere more than when I see it in the well-built, manly youth, with bright eyes, clear skin, and buoyant step, who looks the picture of health, who knows how to run a race, or to handle the oars, or spring into the saddle, or climb a tree, or leap a five-barred gate; or even, when occasion requires, use his fists to protect the wronged and feeble.

So long as athletic exercise is kept in its own place, I confess to a thorough approval of the erection of the gymnasium in a young men's Institute; for our Christianity is given to us to bless and develop every part of our being, body, soul, and spirit; and the finest specimens of our race are those who are thus trebly ennobled.

Now a gymnasium is very well in its way; but you want something more than a few upright poles, and transverse beams, and stout ropes, to brace up the system; and

"Complete change of occupation."

living in a large city, it is essential that you seize every opportunity of enjoying cheerful exercise in the open air.

Then I must earnestly counsel you to avoid all recreations and pleasures that are usually followed by reaction, and that leave you less inclined and less fit for duty than before. It is a feature of wholesome pastime, that it qualifies you for future work. You return to the ordinary tasks of life the better for the interval of leisure.

Of course, any exercise, however good, may be *overdone*. I have known young men who injured their constitution for life by foolishly exceeding their strength, it might be by walking, or swimming, or cycling.

Many a permanent injury has been met with through over-violent exertion on the cricket-field, or at a football match. Even the most healthful sport must be indulged in with moderation, or it leaves no benefit behind.

Whatever your favourite recreation may be, take it moderately. Indeed, to some hard-worked men, nothing is so exquisitely delightful and refreshing as just a day or two of absolute *rest*. I never knew a busier man than the late Dr. George Wilson, the famous chemical philosopher of Edinburgh—a man with an extremely poor physique, but a mind of great freshness and beauty.

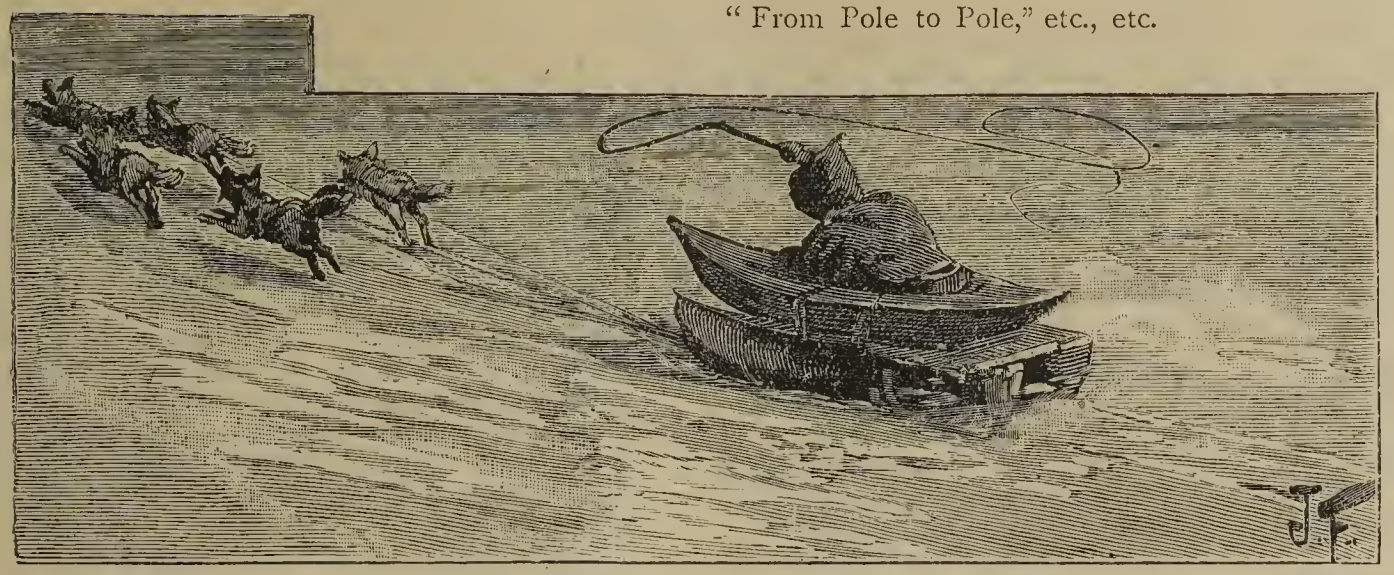
During one of his holidays, he wrote to a friend:—"They speak of the luxury of doing good, but what is that to the luxury of doing *nothing*, especially when, as in my case, doing nothing is doing good? What did I do yesterday? Nothing. The day before? Nothing. What am I doing at present? Nothing."

But of course I speak of this as quite an exceptional state of things; for, where body and mind are not abnormally overstrained, a complete change of scene and occupation is incomparably more restful than absolute idleness.

A game at chess with an accomplished player certainly necessitates no little mental exercise; but that very exercise may be rest to one whose mind has for hours been occupied in a wholly different manner. It is a sound principle to act upon, that the greater the strain upon the nerves and the brain, the more indispensable is it that the body be kept in good condition; and that by fresh air, cold bathing, and active habits, the outer man be thoroughly braced up.

Young men! it is easier to lose health than to regain it. Leave no means untried to preserve so precious a treasure.

HUMILITY.



I BELIEVE the first test of a truly great man is his humility. I do not mean by humility doubt of his own power, or hesitation of speaking his opinions; but a right understanding of the relation between what he can do and say, and the rest of the world's sayings and doings.

All great men not only know their business, but usually know that they know it; and are not only right in their main opinions, but they usually know that they are right in them, only they do not think much of themselves on that account. Arnolfo knows he can build a good dome at Florence; Albert Durer writes calmly to one who has found fault with his work, "It cannot be better done"; Sir Isaac Newton knows that he has worked out a problem or two that would have puzzled anybody else; only they do not expect their fellow-men, therefore, to fall down and worship them. They have a curious undersense of powerlessness, feeling that the greatness is not in them, but through them; that they could not do or be anything else than God made them; and they see something Divine and God-made in every other man they meet, and are endlessly, incredibly merciful.—*Ruskin.*

Life, like the waters of the sea, freshens only when it ascends towards heaven.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan,"
"From Pole to Pole," etc., etc.

"Dresky's sledge went dashing away through the snow."

CHAPTER XLI.

LIFE IN ALASKAN WILDS.

TWO weeks of sledging, two weeks of painful and terrible toil—two weeks that seemed months, ay, years even, so slowly did the days and nights drag on.

"Two weeks!" said Desmond to Jack Silk; "why, it is surely more than two weeks since we left the sea-shore. Why, Jack, old father Time himself appears to be getting tired!"

Two weeks! And over such a country too, so bleak and so dismal and drear, even with summer winds going moaning over it, that, sitting here by a cosy fire, I shudder when I think of it.

But in winter, or as it was now with our heroes the early part of a spring, in a land of all but perpetual snow, imagine, if you can, the utter dreariness—the desolation of those lonesome wilds.

Imagine, if you can, one of their finest days, a sky above of the darkest, heaviest slaty-blue, a sky that a child would know was filled with snow, the earth beneath a wide waste of snowy moorland, rising here and there into rugged hills, broken abruptly in this place or that into cliffs of ice-clad rocks; a sun that, if it did condescend to glance, for a moment or two, through an azure rift in the cumulus, looked flat, and rayless, and cold—a sun you could look at and count the spots in.

Imagine this, and imagine, too, the feelings of the travellers as they gazed wistfully southwards, as if looking and wishing would bring the far-distant goal any nearer. They remembered that, though two weeks had gone, the journey was little more than begun.

"This one of the best days?" you would say; "pray do not tell us of the worst." There! I have thrown down my pen as a sign of my utter inability to describe a snow-storm in Alaskan wilds. And now I take it slowly up again, and write. *As* I write the description of this journey, *so* they performed it—feebly, it may be, but determinedly, because it had to be done.

A snow-storm? They had encountered one. Luckily the expedition had found itself to the lee of some mountain rocks ere it began. Night was descending as the snow commenced to fall, lightly, beautifully, calmly at first. The men made little of it. The bidarka-sledge was drawn close under the rocks, the big tent was erected, the camp was formed.

It was only a handful of snow, old Chips said; there was no wind; the morning sun would brightly shine on the dazzling plains, the days would be merry, they would bark and yelp for very joy as they went bounding along, and all hands would be merry.

"Give us a song, doctor"—thus he finished, addressing the cook—"and bother me if I don't spin you a yarn."

"Well, heave round with your yarn first, Chips. We'll all listen, but mind, I'm busy; this is the last of the fresh beef, and I suppose our friends the Yacks 'll have to eat the most of it."

Chips told his story. He had a queer, graphic way of describing places and events, that was amusing at one moment and thrillingly exciting the next, so that he kept his audience always interested, and sometimes even spell-bound.

He stopped at last, and proceeded to fill his pipe. As he did so, the canvas flapped ominously, and there was heard outside a moaning, wailing sound, rising at last into a shriek, which was half-drowned by the now incessant flapping of the canvas. The wind was awakening; the storm spirit was coming; these sounds were but the voices of his spectre couriers!

"Out, men, now, and see to the fastenings of the tents."

It was Jack's voice.

"See that everything is as secure as hands can make it. Out, boys, out!"

The two great dogs, Robin and John, slank in and laid themselves close to the fire. They were shivering. The Yack dogs had been fed, and had turned in for the night. Poor wise brutes! They had found for themselves a kind of cave or hollow, and here they lay two deep, huddled together for warmth. I suppose they slept sound, and no doubt knew their services would not be wanted next day.

In less than an hour the storm must have reached its height. It blew in gusts, not in actual squalls, but those gusts must at times have reached almost hurricane force. The cold was intense, piercing; a sort of cold, too, that appeared to reach the very bones, and depress the spirits, till one cared not to speak or do anything except sit or lie in a semi-sleep. Sheltered though the bidarka-sledge was, by a tent which formed the ladies' room, a shelter within a shelter, the wind found its way in to-night through a dozen little nooks and crannies that had never before been dreamt of.

A huge lamp burned in this tent for light and warmth, and round it, most of the night, sat Captain Boyd and his officers. Who *could* sleep with the sound of that wailing wind in his ears, and the dull, monotonous flapping of the frozen, snow-laden canvas? If there was anything about the situation that was *not* distressing, it was the thought that in this camp-nook, under the rocks, they were comparatively safe.

It was a doubtful kind of safety, after all; a safety like that which the mariner feels, when he lies down "all standing," not knowing the moment he may have to start up, and struggle for his life with the dark and merciless waves.

One by one they drooped at last, though Jack remembered staggering up to replenish the lamp, swaying about as he held the half-frozen can over the flame to thaw it and make it pour. He remembered throwing himself down again, and burying himself in rugs and skins. All else was a blank, till he awakened, cold, shivering, and aching all over, dull in mind, and inactive in body, half-thinking that those men are the happiest, after all, who lie down in the snow and fall asleep, never, never to awake.

Nobody in this tent was astir yet. The lamp still burns, though Jack knows it must be day. The tent canvas is bulged in with the weight of snow, and icicles hang here and there from it.

The wind is still howling, and when he makes an attempt to get out by what *was* the doorway, he finds he is imprisoned. So he waits, and tries to warm coffee 'gainst the time poor "mother" and Katie shall face once more their waking misery.

Presently he hears a faint shout.

He goes to the doorway, and answers it through the wreath of snow.

"What, ho! there!"

"Ay, ay, men."

"All alive in there?"

"All alive, thanks. And you folks?"

"All alive and kicking."

"We're not kicking yet, but we're going to. Can you dig us out?"

"We're doing it."

"Doing it?" Yes! there were fifteen feet of driven snow to cut through, before the excavation was complete. Then in rushed the daylight, and the lamp looked mean and miserable. But snow, powdery and fine, tried to sift in also. And here was Chips with a camp kettle of smoking coffee and breakfast for the ladies, preserved eggs of sea-birds, biscuits, and butter.

"Good old Chips!" Jack can't help say-

ing to him. "What a tough old fellow you are, to be sure!"

On the second day this happened. It was bright and clear, let me tell you, to begin with, and calm as well, and from an early hour the Innuits and white men were busy striking tents, and getting ready for the road. Jack and Dess and Chips had gone out after breakfast to look at the "lay" of the land, and were standing on a bluff, reckoning the chances of a "best" day, when they noticed Dresky circling round them at some little distance, muttering and motioning to himself. Dresky was composing a speech—a terrible task. Presently he must have mastered his part, for he came down on Jack as a tempest and spoke as follows (Dresky to Blue Jack):—

"Blue Jack, I makee you morning goot."

("The same to you, and many of them, Dresky.")

Dresky, encouraged and smiling from one side of his skin cap to the other,—smiling right "athwart ships," one might say,—proceeds:—

"Blue Jack, I makee you plenty muchee morning goot. See, see," he added, and bending down, he took up a handful of snow, pressed it for a moment as if to form a ball, then opened his hand and blew on the snow. Not a crystal melted; it all flew off in a powder-like smoke. "That is goot, *goot*, plenty goot. Goot to-day, goot tomollee, plaps plenty many day goot, goot. He! he! byme-by sun shinee muchee. Too muchee. No goot. Sledgee no go-ee then. Poor man all walkee, walkee, plenty cold, plenty water. No goot. Byme-by Indian come. Plenty badee man. Make chick! chick!"

(Here Dresky drew his finger across his neck in a most graphically dreadful manner.)

"Then," he continued, seizing another handful of powdery snow, and scattering it in the air, "no more whitee man, no more whitee lady! All go piff—paff. No more poor Blue Jack!"

Jack looked half-amusedly, but wholly puzzled, at Chips.

"It's like this, sir," said the worthy old soul. "Dresky has been to me already, and he has got a real good and handsome proposal to make. He is chafing at the delay, and at the dangers ahead. Now, his chief man knows every foot of the way to Chilcat and Sitka on the Pacific coast. Dresky would leave him as our guide, while he himself goes on in his fleetest sleigh. He'll do the journey in less than a month, and find assistance, if you'll give him letters, for there are sure to be American or Russian ships in southern waters. D'ye understand, sir?"

"I think I do; but what does he mean by 'Chick! chick'?"

"He means that there are howling Indians on ahead, and that they will do their level best, sir, to scupper all hands for sake of what we possess."

"Do you think this danger is real, Chips?" asked Jack.

His heart gave a big, uneasy bounce as he thought of the ladies, and remembered the tales of Indian cruelty which he had already heard around the camp fire.

"I think, sir, the danger is very real, and the sooner Dresky goes the better. We can move on, less quickly, but more surely, then. And if we reach the upper reaches of the Yakon by the time the snow has melted, we shall do well, sir."

Jack went straight away now, and held a consultation with the others. The upshot of this was, that on this same forenoon, Dresky's sledge, drawn by half a dozen of the best dogs, went dashing away through the snow; and the last seen of him was when he checked his speed a moment on the hill-horizon, to wave something dark in the air, in token of farewell.

He carried with him despatches from Captain Boyd and Mr. Graves, that would move mountains, should the bold little Innuit ever reach his journey's end and fall in with white men.

(*Continued page* 456).

EVEN AS A DAY THAT IS SPENT.

THE sun springs up in glory:
The world and day are new,
And fields and waysides hoary
With the fresh, cool morning dew.
We stand on low hills, dreaming
O'er the world that lies below,
When, afar off, comes the gleaming
Of the ocean's ebb and flow.
And it's, oh! to rise and journey
Till we gain that distant shore,
For the lanes are cool and ferny,
And we've all the day before;
And the great sun travels o'er us
Through skies of azure blue,
And the world lies stretched before us,
While our feet brush through the dew!

Oh! days of childhood's glory,
When faith bedews the soul,
And the world's an unread story,
With "Hope!" writ on the scroll!

The sun rolls on unwinking
Through cloudless realms of air;
But heart and hope are sinking
Beneath the noontide glare.
His hot breath burns and parches,
And the dew has left the lawn;
And full of toil our march is,
That seemed so fair at dawn:
For far in front outstretches
The dusty road and dreary,
Where we, weak, faint, discouraged,
Toil on heart-worn and weary.
The goal we seek is shrouded,
Yet toil and toil we must,
Though the sun beats down unclouded,
And our feet plod through the dust.

Oh! manhood's days of sorrow,
And the morn's fair promise dead!
When no hope lies in the morrow,
And the joy of life is fled!

The sun is sinking slowly
In radiance to his rest,
And a glory soft and holy
Illumines all the west.
Cool blows the wind of even
Now the sultry day has passed;
There's a splendour in the heaven,
And that shore is won at last.
The sorrow has departed
Of those plains so drear and bare,
While the hills from which we started
Seem very near and fair:
For the sunset heavens bend o'er us,
Life's circle is complete,
And the boundless sea before us
Is breaking at our feet.

Oh! days of eld's soft splendour,
When faith shines bright and clear;
When life's a memory tender,
And eternity is near!

ALBANY F. MAJOR

TALKS WITH MARRIED FOLK

ABOUT THE MANAGEMENT OF INCOME.

By PHYLLIS BROWNE.

No. 9.—CONCLUSION.

IN our last "Talk" we dealt with the choice of books, and the ease with which literary trash may be obtained. Books worth reading, on the contrary, need to be sought after; we must give time and trouble to finding out what they are. Having found out their titles, we shall be spending money most wisely in buying them, and reading them again and again. If they are of the right sort, they will do more to help us to get on the top of our anxieties about money than anything else that can be named, and we shall not think we are paying too much for them when we devote to them and to education, with stationery, one-sixteenth of our income.

The only items now remaining are Insurance, Doctor's Bills, and Saving, and to them we allotted the one-eighth of the income, which is all that remains after other claims have been met. Doctor's bills are a very uncertain item. There is no saying how much they will be. "Health is the first wealth" a wise man said, and where health is wanting, thrift is arduous work. Yet we must not forget that where people live reasonably, when they have nourishing food, dress for health instead of show, and escape worry through conquering pecuniary difficulties, they are much more likely to keep well, and consequently to reduce their doctor's bills, than they are when they are badly fed, improperly clad, and consumed by anxiety.

It is said, and we find no difficulty in believing the statement, that a large part of the ill-health of the present day is the result of anxiety. People live too fast, they try to appear rich when they are poor, and this leads them to pinch. Their wants are many, and their means are small, and so they get no comfort. If they would be content to go without what is really not worth having, their health would be improved, and their doctor's bills would be lessened.

Then as to Saving and Insurance. People who find it hard to pay their way from day to day, turn with impatience from those who speak glibly about saving, feeling that for them such a thing is impossible. Still the teaching of experience remains the same. No matter how small the income may be, it is foolish not to put a little away—not to make some provision for a rainy day. A beginning should be made, even if it is only a beginning of a penny a week.

In these days there are numbers of means by which small savings can be made. The Post Office Savings Bank is by no means to be despised. It has started thousands on the road which leads to independence. Also there are various clubs, Provident Societies, Building Societies, Co-operative Societies, and trades' unions, all of which have advantages. The choice of a method of saving must of course be determined by individual position and locality; concerning these points no general advice can be given. But about the wisdom of saving something, there is no question. There is this always to be considered. If people once get on the right side in managing their income, by ever so little, the probabilities are that their position will gradually improve; if they get on the wrong side, by ever so little, the probabilities are that things will get worse. It is most

remarkable how this is the case. The chances of life seem to come to the people who have already "got a pull." The mischances of life seem also to visit those who have not "a pull." Does not this make is worth while to make a vigorous effort to enter the position where continuing as we are means improvement?

Now we have come to the end of the list of items, the management of which is equivalent to the management of the income. It may be that there are some who feel a little disappointed that the suggestions given have been of so prosaic a nature. They would have preferred to have been told of some large exciting way of making both ends meet. The truth is, however, that there is no such large way. We cannot buy a large dose of economy at the druggist's as we buy a large dose of physic. We can only arrive at it by "careful niggling at small things." Married people who have not patience for this "niggling" will never order their households economically.

To married people blessed with children I should like to say still one other word. It is this. Economizing is in itself a very dreary business. It is a business which nine-tenths of the community have to follow, but if choice were possible, it is not likely that one amongst them would choose it. Yet it becomes a help or a hindrance to the higher life, according to the spirit of the person who practises it. If the duty of thrift be taken up bravely, if the trials connected with it are endured patiently, if its details are dealt with skilfully and cleverly, and if through everything the higher needs of the nature are not allowed to starve, but daily life is carried on (as under the Great Taskmaster's eye), then even thrift may be converted into a Jacob's ladder, which shall help us to climb to God.

Some of these days, when our battle of life is over, and the place which now knows us, knows us no more, our children will look back upon the time they spent at home, and they will understand, as they cannot now, what was the meaning of it all. If then they can say to themselves, "Father and mother must have had a very hard struggle when we were little. Their means were very small; they were often sorely pressed to feed and clothe us, and to educate us. Yet how cheerful and kind they always were; how patient under trial; through everything they tried to do right; they were always industrious and frugal, yet they never were selfish and mean, and they would have scorned to cheat their neighbour. They were honest and true; they cared for the best things, and were indifferent to shams, and they deserve to be held in highest honour"—if our children can speak thus of us, they will try to walk in our footsteps, and by setting them a noble example, we shall have done more to make them good, than if we had preached to them all our lives.

Before concluding this series of "Talks," we must give a few recipes for economical and appetising dishes, as promised a short time since. They are, for the most part, those used by a lady who, a year or two ago, gave a course of demonstration lessons at Newington Green on economical cookery.

Housekeepers who think of trying them must remember that cheap cookery is almost always slow cookery. In one way this is an advantage, because slow cookery can be carried on at a low heat, so that not much fire is needed for it. But those who adopt it must, above all things, look ahead and arrange, and very often cook, to-morrow's dinner to-day.

Nearly all these recipes take some hours to cook; but as they want slow cooking, the saucepan which contains them can stand on the hob, or at the side of the fire. *The meat must never be allowed to boil*, and the gravy must only gently simmer round the edge of the saucepan. Tough, cheap pieces of meat, thus treated, will be tender and wholesome. If they were quickly boiled they would be ragged, if they were fried they would be hard, but gently stewed they will be excellent.

Also, the housekeeper must remember that what foolish people call inferior parts of meat are, when well cooked, better than prime parts badly cooked, and that the inside parts of an animal are as good as the outside.

Ox Cheek Stewed.—Take 2 lbs. of ox cheek trimmings, cut the meat in small pieces, lay these in a saucepan, season with pepper and salt, and cover with cold water. Bring to a boil, draw the pan back, and simmer for the rest of the day. The stew will be much more savoury if an onion, carrot, and turnip are put with it. To make brawn of it, leave out the vegetables, stew it as before, put it into a basin, and when cold turn it out.

Ox Cheek, Melt, and Rice.—Take 1 lb. of ox cheek trimmings, two pennyworth of melt, half a pound of rice, one small onion, pepper and salt. Put the ox cheek and melt in a brown earthen jar or a saucepan, with one quart of water, pepper and salt, and let it stew all day. Next morning boil the rice with a small onion, pepper and salt. When quite cooked, add the stewed meat, and serve hot.

Tripe and Onions.—Take one pound of tripe cuttings, two onions, pepper and salt, one tablespoonful of flour, one ounce of dripping. Boil the tripe, onions, pepper and salt for two hours; mix the flour smoothly with the dripping and half a pint of milk (or water). Stir into the saucepan with the tripe; boil up for ten minutes, and serve.

Savoury Stew.—One pound of shin of beef, one onion, one carrot, one turnip, one tablespoonful of vinegar, pepper and salt. Cut the beef into small pieces; wash, trim, and cut small the vegetables. Put the meat into a pan, season it, and pour the vinegar over it. Add the vegetables, and shake the pan to mix together its contents. Cover the pan closely, and put it near the fire for four hours. Serve potatoes with it. A stew of this kind cooks very well if put in a basin covered with a saucer, and placed in a saucepan with water round it; or it may be put in a brown jar, covered with brown paper, and set in a cool oven, or *under* the range among the cinders. It will then take five or six hours or more.

Sea Pie.—One pound of pieces of beef, half a pound of flour, two ounces of suet, a carrot, an onion, and a turnip. Cut the lean of the meat into pieces an inch square, and flour them lightly. Put the fat into an iron saucepan, let it get hot, then drop in the meat, and let it brown quickly. Have ready the vegetables cut small, put them with the meat, stir the contents of the saucepan, then pour on as much water as will barely cover the whole. Two potatoes sliced can be added if liked. Let the stew boil, then draw it back, and set it where it will just simmer. Shred the suet till it is as fine as oatmeal, mix it with the flour, add very little baking powder, make it into a stiff paste with cold water. Roll it lightly till it is a very little larger than the saucepan. Put it over the meat and vegetables, put on the lid, and simmer gently for two hours.

Haricot Beans.—One pint of haricot beans, three teaspoonfuls flour, salt and pepper. Soak the haricots in two quarts of cold water overnight. Next day stew them in the same water, pepper and salt, for three hours, until the beans are quite tender and beginning to crack. Strain off the liquor. Mix a pint of it with the flour, turn back into the saucepan, and stir till it thickens. The rest of the liquor may be thickened with oatmeal, and will make nourishing soup. A little piece of fat pork added to the haricots will be an improvement.

Conger Eel.—One pound of conger eel, one pint of water, one teaspoonful chopped onions, one ditto parsley, pepper and salt to taste, and two teaspoonfuls flour. Boil the onion, with the pepper and salt, in three quarters of a pint of water for half an hour. Add the rest of the water, so that the liquor shall be slightly cooled before putting in the fish. Now add the parsley and fish, and boil until the fish is tender (about three quarters of an hour). Mix the flour into a smooth paste with cold water, and stir into the saucepan. Boil till the gravy thickens, and serve.

Carrot and Lentil Soup.—Quarter pound Lentil flour, three halfpenny worth of vegetables (*i.e.*, carrots, potatoes, onions, and parsley), pepper, salt, and sugar, and a slice of dripping. Boil five pints of water. Mix the Lentil flour into a paste with cold water, and stir into the boiling water, adding one tablespoonful of salt, one teaspoonful of pepper, and one teaspoonful of sugar. Cut up the vegetables into very small pieces, and, if convenient, fry all except the potatoes in the dripping. Turn them into the saucepan with the soup, and simmer all together for fully two hours. Before dishing, taste the soup, and add more pepper and salt if liked; and serve with bread. This quantity of soup, with bread, would be sufficient for ten people, and would be very nourishing, wholesome food. It would cost 4d., without bread.

Plum Pudding (Mrs. Beeton).—Half a pound of flour, 6 ozs. of raisins, 6 ozs. of currants, ¼ lb. of suet (finely chopped), ¼ lb. of brown sugar, ¼ lb. of mashed carrot, ¼ lb. mashed potatoes, one tablespoonful of treacle, 2 ozs. candied peel. Mix flour, suet, sugar, and fruit well together; then add mashed potatoes and carrot; lastly, the treacle. Do not put in any milk, water, or other fluid, or the pudding will be spoiled. Put the mixture in a basin, leaving room for it to swell, and boil for four or five hours. The pudding is better for being mixed over night.

THE LIFE OF A DEAD CAMEL.

By the Rev. J. G. Wood, M.A.,
Author of "Homes without Hands," "Nature's Teachings," "Man and Beast," etc.

"I DIE daily," wrote the Apostle Paul, nearly two thousand years ago. The context shows that he used the words metaphorically, but even in the outward sense they are strictly and literally true.

In those days, it was impossible that the writer could have known the fact, but we now know that as far as the material body is concerned, every creature into whom God has breathed the breath of life, dies daily. Every breath which is exhaled from our lungs carries away some particles of the body, and even the lifting of a finger or the winking of an eyelid entails a loss of tissue.

The human body has been well compared to a whirlpool, which retains its shape, though the particles of which it is made are incessantly changing. From earth we came, and, sooner or later, directly or indirectly, we return to earth, who reclaims her own.

I must here repeat the aphorism on which I have frequently insisted, that there is no waste in Nature. Whenever any being has done with the whole or any part of its structure, other beings are always waiting for it. Various means are employed for the attainment of this end, some being conspicuous and self-evident, while others are invisible, obscure, and only to be detected by the aid of chemistry and other cognate sciences.

Chemistry, for example, has taught us that the carbonic acid gas which saturates every breath which is exhaled from our lungs, and which is deadly poison to us if again inhaled, is the breath of life to plants. These inhale it by means of their leaves, which are equivalent to our lungs, and exhale it in the form of oxygen, which is the breath of life to us; and so the cycle of nature rolls its ceaseless round.

As long as life informs the bodily frame, these silent and invisible forces are quite sufficient to aid earth in resuming her own property. But, when any animal lays aside the whole of its body, additional agencies are needed. As an extreme case, I select one which is of too frequent occurrence, *i.e.*, a camel that has broken down and been abandoned to death.

Now we come to another point in the economy of nature. He who has expended such infinite pains in putting together the numberless particles which constitute the earthly body, and in holding them together as long as they are needed, never loses a moment in taking them asunder as soon as their former borrower stands in no further need of them.

No sooner is the breath out of the body, than disintegration commences. Ordinary decomposition would, at a certain temperature, achieve this end, but the process is a slow one, and it has therefore to be supplemented by other agencies of quicker action.

"A scavenger of earth and water."

First, there come the correlative scavengers of earth and water, namely, the hyænas and the vultures; the terrestrial scavengers apparently learning the presence of their prey by means of the nostrils, while the aërial scavengers appear to be guided almost wholly by the eye. Perhaps, as we shall presently see, the eye also may assist in guiding the terrestrials.

Let us first take the vultures. These birds soar every morning to almost incredible heights, and from their vantage point survey a vast expanse of earth, their wonderful eyes acting like telescopes. Humboldt mentions that when he was on the Cordilleras of South America, at an elevation of fourteen thousand feet, he saw above him the great condor-vultures—birds whose wings measure some twelve feet from tip to tip—sailing at such an elevation, that they looked like mere specks in the sky. Their height above the level of the sea was estimated at more than twenty thousand feet, and it is said that the birds can attain the height of nearly six miles. The vultures know every tree, bush, or stone in their district, and a dead rat could scarcely escape their observation. The sight, therefore, of so large a creature as a camel, lying down and unaccompanied by a human being, is quite enough

"Their bodies are very long and slender."

to inform them that a plentiful banquet is at hand.

Down swoops the bird which first made the discovery, and is followed by its companions, which may not have seen the dead animal, but know that a vulture does not swoop for nothing. I am of opinion that the hyænas may also watch the vultures, and so learn the presence of food.

Be this as it may, the breath is scarcely out of the camel before it is surrounded by a cloud of vultures. "Where the carcass is, there will the vultures be gathered together." Jackals, too, gather themselves round the body, waiting to pick up any fragments which may be left uneaten by the vultures and hyænas.

Note how differently these animals fulfil their appointed tasks. The beaks of the vultures can only deal with soft substances, and so the birds content themselves with tearing the flesh from the bones.

In those countries decomposition sets in very rapidly, but the more putrid is the meat, the more the vultures seem to like it, and the effluvium which is so repulsive to our nostrils is peculiarly attractive to those of the vulture.

The hyænas gorge themselves as much as they can, but they have a task essentially their own. The horny beaks of the vultures are unable to deal with the hard skeleton, and for its removal from the face of the earth the very powerful jaws of the hyæna have been most fitly framed.

Hyænas are by no means large animals, but their power of jaw and strength of teeth are almost incredible. Even the hyænas at the Zoological Gardens retain their strength of jaw, though they have little need of it; and if the leg bone of an ox be given them, they will crack it as easily as a Newfoundland dog cracks a chicken bone, the splinters flying in all directions, and each bone, as it cracks, sounding like a pistol shot.

When the late Dr. Buckland made his discovery of the pre-historic hyæna caves, he brought away a number of splintered bones, and then compared them with bones which he had seen broken by the hyænas of the present day. In character they were identical, the only difference being that those which were found in the caves were larger than those of the present time.

The work is not yet finished. There is much material—such as the brain—which neither the teeth of the hyæna and jackal, nor the beak of the vulture can touch. Moreover, there is the skin to be considered.

In this country we can hardly realise the effect of a tropical sun upon the hide of a dead animal. It clings to the ribs, and rapidly dries upon them, enclosing them, as it were, in a case of horn. The reader will remember how the wild bees made their combs in the body of the lion killed by Samson. I never understood how bees could build in so unsavoury a locality until some years ago, when I was collecting the larvæ, pupæ, and perfect insects of our British beetles for dissection.

There had been an exceptionally hot summer, and a lengthened drought, accompanied by a great mortality among the sheep on the Wiltshire Downs. The animals died so fast that there was no time to bury or even skin them, and they were, in consequence, left on the ground. The result was as I have stated: the dried skins being stretched so tightly over the ribs, that when struck they sounded like drums, and a strong and sharp knife was required to cut through them. For the removal of this horny skin another agent is employed. This is the Dermestes—sometimes called the Museum-beetle, and sometimes the Bacon-beetle. The larvæ, or grubs of this beetle are covered with stiff, radiating hairs, and their presence in a museum is a sight of terror to the curators. Still, they are only doing their duty, which is to devour dried skin, and for that purpose their sharp and powerful, though small jaws are eminently fitted.

Through the holes thus made by the Dermestes pour hosts of other feeders on carrion. Chief among them are the various blow-flies.

"Then comes the great tribe of Burying-beetles."

The oft-quoted statement of Linnæus, that three blow-flies would eat an ox as soon as a lion could do so, is far within the mark. The flies themselves, not possessing jaws, but only having a soft proboscis through which they suck liquid food, do not consume a particle of flesh, but leave that task to their countless young.

Some of them lay eggs, which are hatched after a while like those of most insects. But there are some which, instead of laying eggs, deposit long strings of ready-hatched maggots, rolled up like so many ribbons. As soon as they are deposited, these maggot-rolls unwind themselves, and the little hungry creatures at once set to work at their task of eating. They never seem to rest or sleep, but eat unceasingly, until they have attained their full growth. They rapidly pass through the pupal stage, emerge as perfect blow-flies, and in their turn deposit their maggot-rolls upon the carcass.

Now a lion, although he can eat a large amount of food at a meal, is not a continual feeder. He gorges himself to the fullest extent, and then lies down to sleep until awakened by hunger. While he sleeps the maggots are incessantly eating and multiplying, so that the offspring of the three flies would finish the ox while the lion had still much of the carcass to consume.

Then comes the great tribe of Burying-beetles (*Necrophaga*), which render such good service to us of this country. Not only is it true that not a sparrow falls to the ground without the knowledge of its heavenly Father, but He who made and gave it life has prepared for its burial when dead.

Has the reader ever reflected how many birds die annually, and how few dead birds are seen? The fact is, that during all the warm parts of the year, the burying-beetles are at work. They have the power of smelling a dead carcass, however small, and at a wonderful distance, and it is very interesting to see them converging from all directions

"A sight of terror to the curators."

towards the carcass, upborne on their beautiful wings.

I cannot but think that they have some sense, independent of smell, which indicates the presence of food for their future young. Were scent their only guide, the direction of the wind would affect their whole economy. But, as I have already stated, they converge from all points, independent of the direction of the wind.

Of course they could not bury a camel, neither could they bury a sheep, but the bodies of the dead sheep which I have mentioned were swarming with the larvæ of various burying-beetles, the eggs having been laid by the parents without attempting to bury any part of the carcass.

Another large tribe of carrion-eating beetles is that which is scientifically known as *Hister*, a title which I am obliged to use, as they have no popular name. They are short, wide, and are notable for the extreme hardness of their exterior. They are highly polished, and in spite of the nature of the substances in which they are continually burrowing, not a particle of it seems to cling to their steely armour. These insects, like the burying-beetles, have wings of enormous size in comparison with their bodies.

The last group of carrion-eating beetles which I can mention is that which is popularly known as Rove-beetles, or Cock-tails, the latter name being given to them in consequence of their habit of turning up their long, slender bodies when alarmed.

The object of this habit is rather remarkable. Their bodies being very long and slender, so as to enable them to insinuate themselves into the smallest recesses, and their wings very large, the wing-cases must necessarily be very small. So, when packing the wings into so small a compass, the beetle turns its body over its back, and with the end of its tail pushes the wing into its place. I have found that the larvæ of these beetles were mostly to be found within the skull, and could be shaken out in hundreds, their object being evidently the consumption of the brain. Thus does the death of one being become the life of another.

NOT GOING HOME.

DURING the American War, numbers of Christian gentlemen went about caring for the sick and tending the wounded. Amongst them was D. L. Moody. One of his fellow-workers tells the following touching story :—

Mr. Moody went with me to visit the wounded Rebels, who crowded the twenty-three log-house hospitals. In one of them we found almost every inch of room occupied. In a kitchen corner, on some straw, was an old, grey-haired man. I went up to him, knelt down by him, and asked if I could do anything for him.

"No," said he, "you can't."

"Don't you want *anything?* Is there nothing that might comfort you?"

"Oh, yes!" was his answer, "I want to go home; I have a wife and six children in Tennessee, but I'm dying. I'll never go home."

"My friend, if you are dying, are you not *going home?* Don't you know that Christ said He had gone to prepare a home for those who loved Him? Have you never thought of that home in heaven?"

He gazed at me with an expression of despair.

"My wife has talked to me about this for thirty-five years; and God knows how I have treated her. I've rejected every invitation, and I'm dying here without Christ—without Christ."

He kept groaning out for a long time, "I can't die; I can't die." And with no light to show him the heavenly way, he went alone into the darkness of death.

THE BLANK BIBLES: A DREAM.

By Emily Sarah Holt.

(*Continued.*)

ON the silver plate which next came to view, I read the name of Marianne Bennett. This lady was known to me as an indefatigable worker of good works. At every mission service, prayer-meeting, or Christian gathering for any object, you never looked in vain for Mrs. Bennett. She supported a *crêche* out of her own purse. She worried all her friends, with splendid impartiality, for personal help and pecuniary contributions, now to missionary societies, now to hospitals, now to life-boats. When he saw Mrs. Bennett at his little green gate, old Mr. Wainwright was wont to seize his hat and stick, and hobble out into the lane through the side door, with more alacrity and agility than he was apt to manifest on any other occasion. He had been known to call out to Jane in the kitchen, "Tie up the knocker! say I'm sick, I'm dead!" in which line that smiling damsel, accustomed to her master's oddities, probably failed to recognise a quotation from the poets. This dislike to a visit from Mother Bennett, as the old gentleman termed her, was not by any means confined to himself. Mrs. Bennett was unpleasantly apt to make people say their catechism in a style which most reserve for their physician and their confessor, human or Divine. Any stranger in her small world was pounced upon at once (Mr. Wainwright was so wicked as to add "with fiendish glee"), and put through a string of questions. You had to state your denomination and your politics; whether you were a district visitor, a Sunday school teacher, a total abstainer, a worker for the bazaar next June to obtain funds for a new organ, and a subscriber to a dozen societies. If to any one of these queries you said "No," then "Why not?" came with startling sharpness from the inquisitorial lips.

Mrs. Bennett allowed no unworthy evasion of her inquiries, and for a negative she could see no possible cause but one—laziness. Ill-health, want of leisure, felt incompetence, were all so many mock modest variations on that one air. Nothing could be better for health than stirring about, alleged this lively lady, without having the least idea what was the matter with you. As to want of leisure, what *could* you have to do of half so much consequence as the scheme she propounded? And as for incompetence, it was all nonsense. Anybody could teach children to spell, or make kettle-holders, or write cheques, or sign the pledge.

"And as you have not yet signed," out came a little pledge-book from that capacious pocket, which, Mr. Wainwright observed, would be found, if wanted, to contain a white elephant or a kitchen range. And if you succeeded in dismissing that book without adding your signature, you must be a person of the firmest resolution, and you must expect to leave the impression for ever afterwards on Mrs. Bennett that you had no Christianity about you. If she discovered that you were already working in the vineyard, but on another plot of ground from that on which she was then engaged, Mrs. Bennett could never rest till she had dragged you away to her own particular corner. In vain you pleaded special aptitude or training for that one bit of work, Providential leadings, or even sheer possibilities. Mrs. Bennett was eminently one of those persons who see nothing but that which they bring with their eyes to see; and if you failed to see with her, why, there could be no explanation but that you were blind. Though apparently so opposite in disposition, Mrs. Bennett and Mrs. Smythe were fast friends. They styled each other "that dear Christian woman," an epithet which, whenever used in his hearing, was followed by a peculiar little sniff from Mr. Wainwright. They were alike, also, in a point which troubled some of their friends—an utter apparent want of reverence. The most sacred names, on their lips ran off with a lightness and glib smoothness which it was absolutely distressing to hear. The most solemn passages of Scripture, and the most touching hymns, were quoted with as little seeming capability of feeling them, as if they had been the multiplication table. Mr. Blake could hardly keep from shrinking visibly when these ladies struck a religious vein in his presence; while Miss Grandison's quiet, sweet face took a graver expression, and occasionally she attempted to turn the conversation. The reward of both was often a soft remark from Mrs. Smythe, that it was *such* a pity some people seemed to have no relish for spiritual conversation, echoed by Mrs. Bennett with, "My dear, how can you expect it of *some* people?" while Mr. Wainwright muttered from the corner, "Depends on the conversers, sometimes."

On opening Mrs. Bennett's Bible—a well-used volume—I perceived that the direction to women to be keepers at home was missing. So was St. Paul's precept that they should learn in retiredness,* and St. Peter's advice that they should adorn themselves with a meek and quiet spirit. Looking a little further, I saw that all passages were wanting that dwelt on the impossibility of man doing any good thing without Divine help. And turning at last to the golden letters, I read of one who was made keeper of the vineyards, but her own vineyard had she not kept.

The name of the Rev. George Armitage decorated the next volume. About the amiability of this gentleman there could be but one opinion. His sermons were thoroughly sound, not wanting in originality and interest, yet they were wanting in something, and few could say in what. No converts were ever heard of under his ministry, and no saints were built up by him. Yet he was so doctrinally sound, and so exceedingly kind, that it seemed unjust and cruel even to hint a suspicion of the want of satisfaction felt by all his Christian hearers, and angrily resented by all his merely professing ones. In this instance I turned at once to the golden letters, and found a terrible reason for the want without a title: "Thou hast a name that thou livest, and art dead."

On the Bible lying beneath I read the name of Isabella Carter. I took it up with some curiosity, for here was a character which puzzled me. At times she made remarks which seemed to indicate that she must have undergone the new birth, while at others her observations left the impression that she could never have done so. Mrs. Smythe unhesitatingly pronounced her a counterfeit, but then so did every one, except her dear Christian friend, Mrs. Bennett, while Mrs. Bennett never hinted a doubt of Miss Carter's genuine spirituality. She was given to sighing over all those persons whose opinions were not precisely her own, and gushing into raptures over those who exactly

* The word rendered "silence" in the Authorized Version does not signify absence of speech, but a retiredness of modesty (1 Tim. 2. 11, 12).

agreed with her. Miss Carter was not a pleasant companion, for she always felt it her duty to be faithful, which meant that she kept you under a perpetual microscope. Every word or action, however small, which did not square with her opinions, was met with. "Oh, excuse me, dear, but I must be faithful. Do you think so-and-so becoming in a Christian? You won't be angry with me, I know." I am afraid that the last remark was not true, as regarded all Miss Carter's friends, for some were very angry with her. But how could you keep angry long with a limp creature who was ceaselessly bemoaning her own imperfections, and remarking that she *hoped* she was in the right way for heaven, but she always felt afraid of coming short at last, and she was sure all her friends must see how very, very unlike a Christian she was. Of course her friends (Mrs. Smythe included) instantly assured her of the contrary, and declared that if any human being they knew on earth were ever to be met in the New Jerusalem, it would be an angel bearing the name of Isabella Carter. Only that most objectionable of old men, Mr. Wainwright, growled out on one occasion, that if Miss Carter would practise what she preached, she would be a better woman than she was.

"Ah, so we all should—should we not?" responded Mrs. Smythe in a velvet voice.

"You and I would, I don't doubt, ma'am," was the cutting response.

I was astonished to find Miss Carter's Bible so nearly a mass of blank leaves. Except the historical and some of the prophetic portions, it was a mere collection of fragments. And the golden letters ran: "If a man think himself to be something when he is nothing, he deceiveth himself."

Robert Blake was the name on the next volume. He was, as Mrs. Smythe allowed, a charming preacher, though that was not the adjective which I thought most appropriate. Less eloquent and original than Mr. Armitage, there was that about his sermons which those of the latter wanted—the experience of the heart and the unction of the Holy Ghost.

Yet I knew few men who were more pulled to pieces by their neighbours. "How Mr. Blake could call himself a Christian, not to say a clergyman, and give way to all the irritability of temper," Mrs. Bennett could not understand. Mr. Smythe thought Mr. Blake most unneighbourly; he would hardly dine with you once a year. Miss Carter considered him very much to blame, because he took so little interest in the Clothing Club and the Temperance Societies. He ought to put himself at the head of them, and be most anxious to push them on. Mr. Armitage vaguely hinted that a man might spend too much time over his sermons, to the neglect of his parish. "Means well," said Mr. Wainwright; "decent fellow on the whole; might do better." With this last expression of opinion, as concerned any mortal man, who could disagree? Mr. Blake's occasional irritability could not be denied, even by his warmest friends. But most of them knew that it was caused by years of delicate health, was rarely yielded to, and was bitterly regretted. He certainly was very loth to accept invitations from the wealthy, for in his eyes these "neighbourly actions" were generally a sad waste of time, and often something worse. For the pastor of the souls of men to devote himself to Clothing Clubs and other secular affairs, good enough in themselves, but not his work, he considered to be serving tables. He frowned on bazaars, which he thought were, as they have been wittily described, "religious bread, buttered thick with worldliness." Of course this set all the young ladies against him. What he ought to push on, in Mr. Blake's eyes, was the gathering of souls to Christ, and the building up of Christ's body. How could he be popular with those who were not of the body, and had no desire to be included in the gathering? I found Mr. Blake's Bible the most nearly perfect of any I had yet examined. The golden letters were few, but pithy: "He that overcometh shall be clothed in white raiment."

The Bible below this was inscribed with the name of Thomas Wainwright. I examined it with much interest. I was surprised to find it less blank than I expected. Of only one class of texts was there a noticeable omission, but these were such as spoke of tenderness and forbearance. Yet the golden letters assured me that the omission was a serious one. "Though I have all faith . . . and have not charity, I am nothing."

Underneath this lay a shabby little Bible, from which the silver plate shone out the brighter for its surroundings. I read on it the name of Grace Ridgeway, a young daily governess, whose earnings supported a blind widowed mother, and a little sister too young to help herself. She was known to me as a remarkably shy girl, who almost shrank from conversation even with acquaintances, and looked positively alarmed if any stranger addressed her. "A very well-meaning young person," Mrs. Smythe pronounced her, in a tone which ran counter to her words; while Mrs. Bennett thought her "a sly chit, my dear, who will get into trouble some day." Mr. Blake said she taught very well in the school; but he hinted that as teaching was every-day work to her, some person of more leisure might reasonably relieve her of it. Miss Carter did "so *hope* Miss Ridgeway was *really* converted, but——" I opened the shabby little Bible. It was nearly perfect. Some blanks there were. I looked in vain for several passages such as "Rejoice evermore," and "Casting all your care upon Him." Turning at last to the golden letters, I found them at once a commendation and a reproof—a gentle suggestion of imperfection, and yet a setting among the children: "O thou of little faith! wherefore didst thou doubt?"

Underneath this lay a Bible bearing the name of Esther Grandison. I opened it with a feeling of relief, for I felt pretty sure what to expect. Nor was I disappointed. Quietest, gentlest, and sweetest of elderly ladies, Miss Grandison might have been created both as a foil and a panacea to Mrs. Smythe and Mrs. Bennett. The softly-breathed aspersions of the former were met by, "Well, friend, let us hope the best;" the sharp thrusts of the latter by, "I think we might find *some* good point in So-and-so." Even the distant relative who, when left her trustee, had embezzled more than half of her little fortune, met with no evil words from her lips. "Don't call it a fraud, my dear," said Miss Grandison, gently; "he had no head for business, that was all. I daresay I should have done much worse if I had had it in my own hands. I do not believe he meant to wrong me, and I am sure I do not wish to think so." Mrs. Bennett declared fiercely, that if a burglar were to break in on Esther Grandison, she would offer him a cup of tea. But Esther only smiled quietly, and did not contradict her. Few ever saw Miss Grandison actually working in her little plot of the vineyard, yet the condition of the plot bore ample evidence that the work was done. She never teased any one for subscriptions, but she drank her tea without sugar, in order to send the amount thus saved to the Missionary Society. She never worried reluctant, sober people to take the pledge, or insisted on carrying busy people off to meetings, or made incompetent teachers out of fashionable young ladies. On the contrary, she was wont to say, that "there were no pressed men in Christ's army," and that he who felt the Lord's work a burden, and not an honour, was not a fit man to work for the Lord. But when Joe Harrison turned over a new leaf, and dropped his evening visits to the Jolly Tinkers, his wife declared, with tears in her eyes, that it was Miss Grandison who had done it. When little Willie Jenkins was brought near death by fever, the oranges and pots of jelly which moistened his parched lips were of Miss Grandison's sending. Old Sarah Hunt said that she would have gone short of many a cup of tea if Miss Grandison had not kept her regularly supplied. When Dick Merton broke off from those idle lads, who were doing him so much harm, and brought his wages home to his mother every week, it was to please Miss Grandison in the first instance. Mr. Blake remarked with a smile, that you rarely caught Miss Grandison doing a good work, but in every direction you saw the good work done; while Mr. Wainwright said, that half Mrs. Bennett's energy was wasted in noise and dust, as her heavy coach and six dashed along, and Miss Grandison got over twice the ground in her quiet little basket-carriage. I spent no time in examining this Bible, but looked at once for the sentence on the fly-leaf: "Because thou hast kept the word of My patience, I also will keep thee."

And now there were only two Bibles left on the table. Reader, they were yours and mine. Will you give a careful examination to the one, while I do the same to the other?

"THE HAPPIEST MAN YOU EVER SAW."

"CHAPLAIN," said Sergeant Mc——, "are you the Chaplain of this hospital?"

"Yes," said I, "and shall be glad to serve you."

"Oh, I'm so glad we have a chaplain here. I'm the happiest man you ever saw!" and his whole countenance was radiant with joy.

"How is that?" replied I. "You have lost a leg, and——"

"No matter about my leg," he quickly replied, I'm the happiest man you ever saw," and his very heart seemed to leap with gladness.

"Well, what makes you so happy?" I asked.

"I will tell you," said he. "As we were going into battle, I said to myself, 'this is serious work'; so I prayed God to spare my life and pardon my sins, or if I should be killed, to take me to heaven. Presently a shell struck my leg below the knee, and I *just lay still and prayed.* I was left on the battle-field all that night; but I lay still and prayed. Oh, Chaplain, that was the happiest night of my life," and again his countenance was lit up with inexpressible joy.

"How could you be happy under such circumstances?" I asked again.

"Oh, *I just prayed*, and Christ seemed to come and stand by my side all night, and He comforted me. I felt sure that my sins were all pardoned and washed away in His blood, and I do tell you, Chaplain, that I forgot all about my wounds for the moment; it was the happiest night in my life."

And so indeed it seemed. He lingered several days, happy all the time. Then he sweetly fell asleep in Jesus.

QUEEN LOUISE OF PRUSSIA.

By Barbara Clay Finch.

(*Continued.*)

THE Queen Louise, in seeking teachers for her sons, considered nothing so important as thorough conscientiousness and true religious feeling. "Delhüch," she said, speaking of the Crown Prince's tutor, "is much prized by me, because he seeks to awaken and nourish love for the Redeemer and for His holy precepts in the hearts of my children." Good Bishop Eylert often held conversations with his royal mistress, and has left records which give us many glimpses of her ways of thought. "Our moral feelings and our conscience," she said to him, "demand purity and perfection; we seek and seek on, and we find them not; even in the very best we find spots and deficiencies that give us pain. Therefore do I love the holy Saviour so inexpressibly; the highest and purest ideal is united in His life and actions. In veneration we worship Him, and yet we feel at the same time attracted. His endless and self-sacrificing love has a soft but wonderfully winning force."

"I am very happy," she said at another time; "and I am especially fortunate in my religious opinions and convictions being in perfect accord with the Christian belief of the king." Since her husband's accession, Prussia had been at peace, and she had been spared the anxiety and suffering that the horrors of war could not fail to rouse in so patriotic a heart; but in 1805 the insults heaped upon the kingdom by Napoleon, whose marvellous good fortune rendered him indifferent to the indignation or remonstrances of those weaker than himself, grew so unbearable, that it became impossible to submit to them longer without loss of honour; and in the November of that year the king, queen, and Emperor of Prussia, assembling at the tomb of Frederiek the Great, solemnly swore that Germany should be freed from the invader. Even then the king, with that fatal spirit of irresolution and self-distrust which would nullify the highest genius, wavered and hesitated. "I am a young man," he wrote on his accession to General von Kocheritz, "and know too little of the world to be able to depend entirely on myself." And this doubtfulness and want of self-confidence were as strong in him in 1805 as in 1797.

The fearless and high-souled queen, on the contrary, was ardent in her wishes that a stand might be made against the Corsican usurper; caused her name to be enrolled as colonel of a regiment, and, when the war had at last finally commenced, insisted on accompanying her husband to the camp, and would have remained with him throughout the campaign, had she not, after the fatal battle of Jena, been compelled to return to Berlin. On her arrival there, she learned that the French troops, flushed with success, were advancing thither, and that her two sons, aged eleven and nine, had already been removed to Schwalt-on-the-Oder. There she followed them, and, bursting into tears, explained to them the calamities which had fallen upon the nation.

"Ah, my son!" she said to her eldest boy, "you are of age to understand the great events by which we are now visited; in the future, when your mother and queen is no more, recall them to mind, and weep for me as I weep for the overthrow of my country. But do not content yourself with tears,—act, develop your powers; perhaps the spirit of the guardian angel of Prussia will descend upon you. Deliver your country from the shame, reproach, and humiliation which have fallen upon it. Try to win back from the French the sullied fame of your forefathers." Oh, strange kaleidoscope of time! Sixty-four years later, France, not Prussia, lay humbled at the feet of the foe; and the successor of the mighty Corsican victor surrendered his sword to the white-haired king, who, as a little child, listened with dim and half-comprehending awe to the eloquent, well-nigh despairing adjurations, and gazed on the pale and tear-stained beauty, of his fair and sorrowing mother!

A week later, at Cüstrin, a fort upon the Oder, Louise and her husband met; and the queen, putting aside her own sorrow, tended the wounded king, and exerted all her powers to give him consolation and hope. Never was consolation more needed. The French captured fortress after fortress, and town after town; the king and queen fled from place to place, till they reached Königsberg, in sorrow and misery, aggravated tenfold for the hapless queen by the reports Napoleon was spreading, that it was she who had caused the war, and wrought the ruin of her people; reports originating in the fact that the Emperor, ransacking Charlottenburg, had discovered her enmity to himself in private letters, which—great conqueror though he was—he had the feminine meanness to read.

From Königsberg they had again to retreat, and the poor queen was reduced to a state of the utmost privation, a barn being sometimes her only lodging. The one gleam of brightness was the presence of Von Stein, the minister, who had followed his royal master to Königsberg with the treasure. Louise had implicit trust in him, saying that "when he was at the head of affairs, she could always look up and see a little light somewhere." "Von Stein is here," she wrote to her father, "and that makes me feel that Providence has not forsaken us."

In the midst of the sorrow caused by the national calamities, the unfortunate queen's distress was heightened by the illness of her sons, who were attacked by fever—a malady to which she was herself a victim on two different occasions. Suffering and sorrowful, she arrived at Memel, where her first night was spent in a miserably dilapidated room, with a broken window, through which the snow fell upon her bed. From this town the queen wrote to her father, on June 24th, 1807: "My faith shall stand firm, but I cannot hope any more. I will pursue my path in life or death; and, if it must be so, live upon bread and salt. I shall never be entirely unhappy, only I cannot hope any more." A little further on in the same letter she speaks of her two boys. "The Crown Prince is full of intelligence and animation. He has extraordinary talents, that must be carefully cultivated. He is true to a fault, and his lively nature renders dissimulation impossible. He studies history with great avidity, and all good and great actions exercise a singular attraction over his mind. He is devoted to me. I love him most dearly, and I often speak with him upon what may happen when he shall be king. Our son Wilhelm [the late Emperor] will be, if I mistake not, straightforward, sensible, and firm. He is, in appearance, like his father, but not so handsome. You see, dear father,"—with a touch of pathetic playfulness,—"I am in love with my husband still."

After the disastrous battle of Friedland, Napoleon, Alexander, and Frederick William met at Tilsit; and Alexander, wishing to obtain concessions for the king, and believing that Louise's presence would not only cheer and console her husband, but that she might by her beauty and eloquence, soften Napoleon's harshness, persuaded Frederick William to send for his wife. When she received the letter that summoned her, the queen burst into tears. "This," she said, "is the hardest thing I have ever had to do—the greatest sacrifice I could possibly make." And, in writing on the same subject, she thus expresses herself: "What this cost me, my God alone knows; for if I do not positively hate this man, I look upon him as a man who has rendered the king and the whole nation miserable. His talents I certainly admire; but his character, which is manifestly deceitful and false, I cannot endure. To be courteous and complaisant to him will be most difficult to me; but this duty is required of me; and I am already accustomed to make sacrifices."

She arrived at Tilsit in the beginning of July, 1807, and Napoleon, who, having heard much of her talents and beauty, extremely wished to see her, in spite of the opposition roused by Talleyrand, who feared the concessions her beauty might induce him to make, received her with much distinction, sending his state carriage, drawn by eight horses, to meet her, and a company of French dragoons as escort. One hour after her arrival he called upon her, and the victorious emperor and lovely queen met at the head of the staircase. His first impression was one of intense admiration. "I knew," said he to Talleyrand, "that I should see a beautiful woman, and a queen with dignified manners; but I found the most admirable queen, and, at the same time, the most interesting woman, I have ever met with." In later days,—probably after the first novelty of her beauty had worn off, and she had annoyed him with her fervent entreaties,—Napoleon modified this opinion. "When I heard him speak of the beautiful queen," says Mme. Junot, "it was by no means in terms of admiration. He acknowledged that she was handsome, only she did not suit his taste; the expression of her countenance, he said, was too lofty and severe."

Louise was dressed in white crape, which was trimmed with rich embroidery in silk. With his usual insatiable curiosity, Napoleon touched it, and asked: "Was it Indian gauze?"

"Shall we speak of such light things at a moment like this?" answered the queen.

Said the emperor abruptly: "How could you think of making war upon me?"

"We were mistaken," she said sadly, "in our calculations as to our resources."

"And you trusted," pursued the emperor, "in Frederick's fame,—and deceived yourselves."

"Sire," cried the fair queen, raising her eyes to his face, "in the strength of the great Frederick's fame, we may be excused for having been mistaken with respect to our own powers and the means at our command,—if, indeed, we *have* quite deceived ourselves."

Her beauty and earnestness touched Napoleon; and she, quickly perceiving it, pleaded for her husband's distressed kingdom with all the eloquence she could summon. The emperor strove to put her off with compliments and graceful evasions, but she persisted in her entreaties, and so touched him with her beauty and her tears, that when she besought that Magdeburg at least might be spared, the emperor was so manifestly inclined to yield, that Talleyrand was in the greatest alarm. Unfortunately, just at that moment, the King of Prussia entered the room, and, changing the conversation, released Napoleon from the necessity of a reply, and caused the discussion to end for the time.

The queen, however, still hoping to effect her purpose, arrayed herself in all her royal splendour, unused during so many months, for the dinner to which she and her husband had been invited by the emperor, and exerted all her powers of fascination to win the boon she craved from her country's conqueror. Napoleon devoted himself to his lovely suppliant, and at length offered her a rose. "Avec Magdebourg, sire?" she asked

softly. "I must point out to your majesty," answered the emperor, "that it is for me to beg; for you to accept or decline,"—rather a neat snub imperial. "There is no rose without a thorn, but these thorns are too sharp for me," said the queen, refusing the flower. Her heart sank; she had failed.

The following day, in bitter disappointment, she returned to Pisktüpohnen, and Frederick William had an interview with Napoleon, in which the latter positively and peremptorily refused to cede Magdeburg.

If Louise's beauty did not affect the Emperor of France sufficiently to make him accede to her requests, it at all events inspired intense admiration in the heart of his general, Dulau, who considered her, according to Mme. Junot, "the prettiest woman he had ever seen." The same lady adds, in her "Memoirs," the following notice of the lovely queen: "I have known Prussians belonging to her establishment who adored her; I have everywhere met with universal suffrages in her favour from those who had opportunities of knowing her real character."

"The unfortunate King of Prussia," continues Mme. Junot, "lost by the treaty of Tilsit four millions and a half of the ten millions of subjects he possessed before the battle of Jena. He was compelled to open military roads into the heart of his remaining possessions, all of which, Napoleon continually repeated, were restored to him only at the intercession of the Emperor of Russia. These dominions formed a long parallelogram, extending a hundred and eighty leagues upon the coast of the Baltic, while its utmost breadth did not exceed forty leagues. The prohibition of English commodities was stipulated with the utmost rigour, a sentence of death to Prussia, whose heaths and lands, bathed by the waves of the Baltic lost thereby all hopes of fertilisation through the medium of maritime commerce."

After this disastrous treaty was signed, the king and queen did all they could by almsgiving and wise benevolence to alleviate the distress prevailing in the country; and in 1808 their youngest daughter was born.

"Poor child," said the king, when they talked of her christening; "who are to be her sponsors?"

"*Poor* child, do you say?" cried the queen. "She is as rich as we. She has the love of the whole nation."

"Right, Louise," answered the king. "The nation shall be her godfathers and godmothers." And accordingly, representatives of various ranks and classes were present at Königsberg, when the little princess was named Louise. Soon afterwards the queen wrote one of her long, confidential letters to her father.

"Best of Fathers,—

"All is lost—if not for ever, at least for the present. In this life I hope for nothing further. I am now resigned, and feel tranquil in submission to the dispensations of Providence. If, in this calm reliance, I have not earthly happiness, I have what is more—I have peace of mind. . . . Whatever God wills is right. I find consolation, courage, and serenity in this thought, and in the hopes deeply graven on my soul. Is not everything passing away in this world? Yet we must go through it. Let us take care that each day shall find us more and more prepared. . . .

"It will delight you, dear father, to hear that the misfortunes that have encompassed us about have not penetrated our matrimonial and domestic life. On the contrary, they have cemented our happiness, and rendered us more worthy of each other. The king, the best of men, is kinder and more affectionate than ever. I often fancy I still see in him the lover and the bridegroom. More in action than in words—for such is his custom—does he manifest the constant attention he shows for me on all occasions. It was only yesterday that he said, with characteristic simplicity, as he gazed on me with a most affectionate expression of countenance, 'Thou art dearer to me than ever, dear Louise, and more valued in adversity. I know now by experience what I possess in thee. Let the storm rage without, if the serenity of our union remain undisturbed. Because I love thee so tenderly, I have named our youngest daughter Louise.' This tenderness affected me to tears. May she become a true Louise to him. It is my pride, my joy, and happiness, to possess the love and confidence of the best of men. With all my heart I return his love; and we are so perfectly united, that the will of the one is the will of the other. Thus it is easy for me to keep up the good understanding which has increased with our years. In a word, he suits me in every respect, and I am equally well suited to him, and we are always happiest when we are together. Pardon me, dear father, for thus boasting of our delightful union; it is the natural expression of my happiness, which cannot be more important to any one in the world than to you, my best and tenderest of fathers. With people generally, as I have learnt from the king, we may not speak of my private happiness. It is enough that we know it ourselves."

(*Continued page* 454.)

"The experiment is capable of endless variations."

SCIENTIFIC RECREATIONS.

CONTRARY MOVEMENTS.

ONE of our readers has recently communicated to us an amusing recreation, practised with great success during a period of leisure.

It consists of this:—

Seat yourself before a desk, pen in hand, lift the right leg, describe a circle in space; and while the foot describes this circle try to write a capital "D." This will be impossible. Seeking to analyse this amusing experience, we have found that the hand cannot trace a circle in one direction, while the foot describes a circle in an opposite one. Our illustration shows the most simple way of making the experiment. Supposing that the right *hand* describes a circle, in the direction in which the hands of a clock move, the right *foot* cannot at the same time describe a circle in a contrary direction. Why?

This is no doubt due to lack of exercise.

Perhaps, also, the neck will not command two organs acting differently at the same time. Physiologists and psychologists must be equally interested in this curious fact.

It need hardly be said that the method of performing the experiment is capable of endless variations.

Try to pass the left hand up and down the chest; this will be easy. But if at the same time you seek with the right hand to accomplish a similar movement in a horizontal direction, you will find it very difficult. Try, and judge for yourselves!

HOW TO ORGANIZE A POSTAL PHOTOGRAPHIC CLUB.

By J. Eaton Fearn.

(Conductor of the "Argosy" Club.)

THERE are two sides to almost everything. Truth often takes a middle course. Those who have lived in the country all their lives, sigh for the intellectual advantages of the towns; whilst dwellers in the latter wish that their lot had been cast in some sweet Auburn!—

> "Loveliest village of the plain,
> Where smiling Spring its earliest visit paid,
> And parting Summer's ling'ring blooms delay'd."

Each has its peculiar advantages and disadvantages.

Thanks, however, to our splendid Postal system, the dweller in the remotest region can keep in touch with the great centres of intellectual and commercial activity.

Almost every large town possesses a flourishing "Amateur Photographic Club," with monthly meetings in the winter for the reading of papers, as well as discussions, and with weekly trips during the summer months. The isolated individual, however, who lives in the country, is utterly destitute of these great privileges. He is separated from his *confrères*. The people in the village understand more about stock than art. Alas! Wordsworth's lines are too true of many a rustic, more's the pity:—

> "A primrose by a river's brim,
> A yellow primrose was to him,—
> And it was nothing more."

Sympathy, therefore, must be sought further afield. The train and the mail-cart are the willing mediums.

The first thing to be done in organizing a "Postal Photographic Club," is to secure a suitable number of members. This is an easy task. As a rule, there are more amateurs desirous of joining a well-conducted club than vacancies for them. A letter, giving particulars of the proposed club, in that excellent journal, *The Amateur Photographer*, will quickly bring about the desired result. In my opinion, the club should be confined to ten members. By allowing the members three days to look the photographs over, with this number the "Album" should practically be due once a month. Some albums only get round once in two months, but this is a great mistake, since the members do not take the enthusiastic interest they otherwise should do.

In order to secure good working members, the conductor should request each applicant for membership to enclose with his application a fair specimen of his work. He will thus be able to select members of all-round average ability.

There are many plans adopted to circulate the photographs. Some clubs send them round unmounted. This method, however, is not to be recommended, as the photos get seriously damaged by so much travelling about, and are not so handy to examine as mounted ones. Other clubs paste the photos in an album, one album in each year becoming the property of each member.

The best plan is to circulate them in a light wooden box covered with leather, as it stands its work well, and moreover has a neat appearance. The lid should be made at one end, and hinged so as to fall flat and allow the photos to slide out.

At the outset the size of photo to be circulated should be agreed on, and the particular size selected adhered to. The "half-plate" size, or popular cabinet, is undoubtedly the best. Each member should contribute two fresh photographs each round.

Members should be requested to give the fullest details of the photographs they insert. Most of the better-conducted clubs have forms printed to be pasted at the back of the prints. The information asked for should include make of camera, lens, stop used, exposure, light, time of day, month, plate, system of development, toning bath, etc. Interesting particulars also should be given of the subject itself.

A manuscript book should accompany the prints. This should contain, first of all, the names and addresses of all the members. Following this should be the time-table of the month, to register the dates of receipt and despatch of each member. Fines should be levied for delaying the album past the proper time. Punctuality, in this as in all other matters, is an extremely important point, on which success or the reverse turns.

A space in the MS. Book should also be given to interchange of remarks by the members. Then, after this, should follow "criticisms" of the prints, from a technical as well as from an artistic point of view. It goes without saying that all criticisms should be taken and given in good part.

Space also should be left for "Queries and Answers," "Members' Print Exchange," "Discussions," and "Miscellaneous Notes," all of which explain themselves, and greatly add to the interest and success of the club.

The plan of circulation, of course, is obvious to all. The conductor sends the "album" to the first member on the list. This member, after keeping it three days, in which he contributes his portion to the MS. book, inserts his photographs and then sends it to the second member. The second on to the third, and so on until it returns at last to the conductor. Then, as the album appears again, each member should take out his old photos and substitute fresh ones.

There should be special rounds of the album, due notice of which should be given by the conductor the previous month to the members.

One round should be devoted exclusively to "Instantaneous" work, another to "Home Portraiture," others to "Landscape," "Figure Studies," "Animals," "Children," and such subjects as may be suggested.

To those who live "far from the madding crowd's ignoble strife," a club formed on some such lines as the above, will be a source of profit and gratification to all concerned.

OF INTEREST TO YOUNG MEN.

MR. CHAUNCEY M. DEPEW, the President of the New York Central and Hudson River Railroad Company, and one of the wealthiest and most successful men of the day in the United States, recently gave his life experience in the following words: "When I graduated from Yale College, I thought I would lead a life of scholastic ease. I thought I would read and write a little, take it easy, and have a good time. I had a hard-hearted old father, of sturdy Holland-Dutch ancestry. He had money enough to take care of me, and I knew it; and when he discovered that I knew it, and intended to act accordingly, he said to me, 'You will never get a dollar from me, except through my will. From this time forth you have got to make your own way.' Well, I found I had a hard lot of it. Nobody had a harder one, and the old gentleman stood by and let me fight it out. I bless him every day with all the heart and gratitude I have for that. If he had taken the other course, what should I have done? I should now have been nursing a stove, grumbling at the men who had succeeded in the world, and wondering by what exceptional luck they had got on. Having to dig my way along, I got beyond everything my father ever dreamed of; but it was done by fourteen hours, or sixteen or eighteen hours' work a day, if necessary. It is done by temperance, by economy. When you make a dollar, spend seventy-five cents, and put the other twenty-five away. Don't bury savings in a stocking, but put them in Government bonds, or in a house and a plot of ground.

"It has been a study with me to mark boys who started in every grade of life with myself, to see what has become of them. One day, recently, I began to count them over, and it was an instructive exhibit. Some of them became clerks, merchants, manufacturers, lawyers, doctors. It was remarkable that every one of those who drank is dead; not one living of my age. Barring a few who were taken off by sickness, every one who proved a wreck, and wrecked his family, did it from rum, and from no other cause. Of those who were steady, industrious, and hard-working men, who were frugal and thrifty, every single one of them, without an exception, owns the house in which he lives, and has something laid by, the interest on which, with his house, would carry him through many a rainy day."

The office of General Secretary of a Y.M.C.A. is a position which requires an exceedingly well-rounded character, and abilities above the ordinary run, to insure anything like success; and the number of young men of marked ability who have left situations in which they might have earned fortunes and won fame, in order to devote themselves to the secretarial work of a Y.M.C.A., has been a subject of comment among those who have studied the working of these Associations. We were particularly struck with this fact by an incident reported to us from Knoxville, Tenn., U.S.A. The Assistant Secretary of the Y.M.C.A. in that town was, before his conversion, a cartoon artist on the staff of *The Judge*, a New York satirical illustrated paper. This young artist now only uses his crayon for the good that he can do, his pencil being often employed to give chalk-drawing entertainments at Y.M.C.A. social gatherings. He is one of the many young men who, on being arrested in a ruinous career by the influence of the Y.M.C.A., are willing in return to do all in their power to promote the welfare and success of this grand Institution.

CRISP CORRESPONDENCE.

Ignoramus.—Who was the first Poet Laureate?

"With regard to the Poet Laureate of the Kings of England, he is undoubtedly the same that is styled the *King's Versifier*, and to whom one hundred shillings were paid as his annual stipend in the year 1251. He was only a '*graduated* rhetorician employed in the service of the King.' That he originally wrote in Latin appears from the ancient title '*Versificator*,' and may be, moreover, collected from the two Latin poems which *Baston* and *Gulielmus*, who appear to have respectively acted in the capacity of royal poets to Richard I. and Edward II., officially composed on Richard's crusade, and Edward's siege of Striveling castle." (See Warton's History of English Poetry, p. 403, ch. xxv.) We regret we cannot have articles offered for sale through our columns. Thank you very much for your warm appreciation; we are always glad to hear of brothers taking an interest in our Paper.

Muriel.—We are not able to get you the information in reference to "Greenleaf's Examination of the Four Gospels." "Brighter than the Sun," with twelve illustrations and frontispiece, 3s. 6d.; cheaper edition, limp cloth, 2s. Nisbet & Co.

Rose and Violet.—We scarcely think that whistling is a young woman's accomplishment, though perhaps it may be admissible when she is quite alone in her own family, amongst brothers and sisters.

Valencia.—The title of the book for which you ask is "Convent Life Unveiled," published at 1s. by W. Fawcett & Co., 4, Dorset Buildings, E.C. Your request for prayer shall be specially remembered. We trust that your influence with your friend may be the means of leading her to see the fallacy of the creed to which she is now trusting, and that before long she may be led to trust for salvation to Christ, and Christ alone.

Ada R.—Who is the greatest musical composer? Probably Charles Gounod; and Anton Rubenstein is one of our first pianists.

"One Hundred Pounds for Sixpence."—Attention has been drawn to some circulars and handbills under this title which have been slipped into a number of copies of our Paper—"A.1." We would specially caution our readers against all similar advertisements, as they are not inserted in our Paper with our knowledge or consent. We are greatly obliged to friends who have brought this matter under our notice, and we therefore give this word of caution.

"Violet" wishes to know if any person could tell her if old postage stamps are of any use.

Musician.—The Ocarina may be played with very little practice, a moderate ear for music being all that is required. It is made in various sizes, and can be purchased from almost any Musical Instrument Dealer, at prices ranging from 9d. each upwards.

Country Violinist.—Tour's Book, No. 2, "Melodious Exercises," is the best introduction to good music. Published by Novello, Ewer & Co., 1, Berners Street, London, W. Followed by "Album Célèbre," Nos. 1 and 2 containing some of the best music, and not too difficult. Price 2s. 6d. each. Published by Enoch & Sons, 19, Holles Street, Cavendish Square, London, W. Litolff Edition, Nos. 493 and 460. A good Metronome can be bought for about 10s., and is used for beating the time when playing.

A Monthly Subscriber.—You can buy the score of Handel's Oratorio at any music-seller's. You will find a history of the Maccabees in the works of Josephus, which you will get in any parish library, or at any of the London Reading Rooms. The history of the Maccabees belongs to the period between the Old and New Testaments.

W. L. B.—Back Nos. of "A. 1." can always be procured by writing direct to the London Office, 62, Ludgate Hill, E.C.

R. N., Edinburgh.—We advise you to consult a doctor.

"CHRISTIAN EVIDENCES," OUR NEXT COMPETITION.

ACCORDING to our recent promise, we are arranging a Prize Competition on "Christian Evidences," which we hope to announce shortly.

"GOT WHAT?"

A NORTH of England ironmaster lay on his death-bed. He was heard continually to mutter, "I have got it! I have got it!" "Got what?" at last asked one of his friends, who hoped that the dying man had got hold of a possession for eternity.

"A million," was the answer.

"ARE YOU A SCEPTIC?"

IT is told of a celebrated infidel lecturer, that, after he had concluded one of his lectures in a village, he challenged those present to discussion. Who should accept the challenge but an old bent woman, who went up to the lecturer, and said: "Sir, I have a question to put to you."

"Well, my good woman, what is it?"

"Ten years ago," she said, "I was left a widow, with eight children utterly unprovided for, and nothing to call my own but this Bible. By its direction, and looking to God for strength, I have been enabled to feed myself and my family. I am now tottering to the grave, but I am *perfectly* happy, because I look forward to a life of immortality with Jesus in heaven. What has *your* way of thinking done for you?"

"Well, my good lady," rejoined the lecturer, "I don't want to disturb your comfort; but——"

"Oh! that's not the question," interposed the woman; "keep to the point, sir. What has your way of thinking done for you?"

The infidel endeavoured to shirk the matter again; the feeling of the meeting gave vent to uproarious applause, and the infidel had to go away discomfited.

The mother of Hume, the infidel philosopher, was once a professor of Christianity. Dazzled by the genius of her son, she followed him into the mazes of scepticism. Years passed, and she drew near the gates of death, and from her dying bed she wrote him the following:—

"MY DEAR SON,—My health has failed me. I am in a deep decline. I cannot live long. Your philosophy affords me no comfort in my distress. I am left without hope or consolation, and my mind is sinking into a state of despair. I pray you, hasten home to console me, or, at least, write to me the consolations that *philosophy* affords at the dying hour."

Men may *live* without Christ, but they cannot *die* without Christ. You may scoff at the words "Heaven" and "Hell," but they are *solemn realities.*

What may horrify *you* is, that my life has been saved by the death of another, in my stead, and that God should have so loved me as to give His own Son to cruel torture and death for me. But this is *God's plan.* It seems worse than foolishness to *you;* but "the foolishness of *God* is *wiser* than men." And if you are not determined to die as a fool, and meet the fool's end, you must bring your foolish reasonings and intellect to God's plan, and take God's offer, and thus get pardon. If you reject so great salvation, there remains nothing for you but fearful judgment and fiery indignation. Remorse, anguish, despair! Why, these words don't half describe what it will be in those regions "where hope will never come!"

But why should you ever come to this, when the Son of God, *who loved you, and gave Himself for you*, is even now beseeching you to *believe* that HE has died in your stead, to see the Son of God as *your* substitute, and eternal life is yours?

And it is not only pardon that Christ offers *you* to-day, but with it He gives all the good things which you have sought in vain from Satan; and these not merely for a passing hour, but for ever and ever.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

NOTES ON THE INTERNATIONAL S.S. LESSON.

By Rev. J. H. THORPE, M.A.

JUNE 17TH.

THE GREAT COMMISSION.—*Matt.* 28. 16-20.

GOLDEN TEXT.—*Ps.* 68. 11.

THE appearance of Jesus here described is supposed to be identical with that mentioned by St. Paul in 1 Cor. 15. 6, "to five hundred brethren at once." This was a fulfilment of His promise (ch. 26. 32). This gathering explains the words, ver. 17, "but some doubted." The eleven cannot be meant, so that it would refer to "some" of the five hundred. Another point arises as to *what* they doubted. It could not be whether the Person before them was really Jesus.

A lesson might be founded on Matthew's three sacred mountains: (1) Beatitudes, (2) Transfiguration, (3) Ascension. Teacher might point out that Jesus has His meeting-places now: "Jesus, where'er Thy people meet." Also that though "some doubted," He did not therefore reject them, but proceeded to declare to them more truth about Himself. The true cure for doubts, "Tell me more about Jesus." The Great Commission (vers. 18, 19, 20) may be divided thus:—

1. THE MISSIONARY. "Go—teach—baptize." Note, this command was given to *all*, not to Apostles alone. No Christian is free from the obligation to go. The question for each is *not*, "Am I to go?" but "What good reason have I for *not* going?" All who have accepted Christ's invitation, "Come!" are bound by this "*Go!*" It is evident our Lord meant this missionary office to be continued by His Church, for those to whom the command was given in the first instance *could* not teach "all nations." "Baptizing them in the name," etc., should be "into the name," as Gal. 3. 27. Note "name," not "names,"—an instance of the unity of the Godhead.

2. THE PASTORAL. Those who have thus been baptized are to be further taught. Baptism by itself is not enough, it must be followed up. The teachers of the Church of Christ are not left to their own fancy as to their teaching; its subject matter prescribed—"all things whatsoever I have commanded you."

3. THE ENCOURAGEMENTS. They are two: (1) Christ's unbounded *power*, and (2) His unfailing *presence*. Compare "*with you*," He ordained twelve "*that they might be with Him.*" Mark the *presentness* of Christ: "I am with you always"—all the day and every day—and "I am," not "I will be." This assurance about His power was no doubt to encourage the disciples to undertake their stupendous work—otherwise a hopeless task. The whole passage has been fitly called "The Marching Orders of the Church Militant."

THE last lesson in the life of Christ, and truly the *Jubilate* of the series. Matthew evidently only gives a brief summary. Elicit from scholars an account of Christ's *ten* appearances between resurrection and ascension. Five times on first Sunday, once on the second; then by the lakeside, after which our lesson comes in, followed by 1 Cor. 15. 7; Acts 1. 3.

I. A GREAT ANNOUNCEMENT. (See chap. 26. 32; 28. 7.)

Illustrate by Queen's proclamations, newspapers, placards, bills of meetings. In Christ's day announcements were chiefly by word of mouth. An announcement implies there has been an intention formed, preparations made. Christ planned this interview before death. He, the Framer of the world, most careful in every detail. In same way plans all our lives, and is preparing heaven. Disciples did wrong by not going at once to Galilee: we also by not trusting ourselves more entirely in His hands.

II. A GREAT EXCITEMENT.

Illustrate by crowds round notices of German Emperor's death. How did the news spread? From the eleven to rest of disciples; visitors carried it home with them; sent messengers from village to village. "Oh, I must go!" said loving hearts. Preparations for the journey.

III. A GREAT MEETING.

Where? On a mountain in Galilee; name not given. In sight, doubtless, of lake. Why there? The place possessed loving memories. The greatest number of friends, and the greatest security against interruption from foes. Who would be there? Get scholars to give names of those most likely. How many were there? Probably the five hundred mentioned by Paul (1 Cor. 15. 6). What were they met for? *To see Christ.*

IV. A GREAT APPEARANCE.

Picture the *sudden glorious* appearance. Result: they fell down and worshipped Him. First time the disciples are said to have done so. Why did some doubt? They were dazzled, could not realise for joy this was the Master who had been crucified. Perhaps they were those who had not heard of His previous appearances.

V. A GREAT POSSESSION (ver. 18).

Christ had doubtless been explaining His life and work to them. That what had been in their sight failure was all success, for "all power" was His. In same way, and for same reason, Christ still conquering. Christ's ultimate victory over all.

VI. A GREAT COMMAND.

Three things to do. "*Go.*" Not to wait till people came to them. Where? "Into all the world." "To all nations." No one but the great God could conceive a religion suited for all peoples and times. God's plans are vast in extent, yet perfect in detail. *Teach.* What? *Baptize.* In whose name? Trinity. Use St. Patrick's illustration from shamrock—three leaves in one; also the light from a candle produced by three agencies—tallow, wick, atmosphere. A gentleman once asked Daniel Webster, "How can you reconcile the doctrine of the Trinity with reason?" The statesman replied by asking, "Do you understand the arithmetic of heaven?" We ought *all* to be missionaries. The success and importance of missions. How to help foreign missionaries.

VII. A GREAT PROMISE. (Ver. 20), "With you always." Prove this promise was to *us.* "Unto the end of the world." Presence of some people a drag upon us, but this,—An encouraging presence. A guiding presence. A comforting presence. A warning presence. Christ always keeps His promises.

"And faith has yet its Olivet,
And love its Galilee."

C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSON.

MELCHIZEDEK.—*Ps.* 110., and HEB. 5. 6-11.

I. *Purpose of God* (vers. 1 and 4).

The purpose of God is, by virtue of what Christ has done as the servant, to give Him the place of honour now and in the coming glory. "The Lord said," etc. These words take us back to the past eternity; they bid us look up to the throne and see Christ in the place of power (Acts 2. 34); and they bid us look on the future, when Christ shall sit as a priest on His throne (Zech. 6. 13).

II. *The Position of Christ.* "Sit thou on My right hand." He sits at the right hand of God—

1. As our Intercessor, to plead for us (Rom. 8. 34).
2. As the honoured One for us (Mark 16. 19).
3. As the Channel of blessing to us (Acts 2. 33).
4. As the waiting One to receive us (Acts 7. 56).
5. As Head of the body, to minister to us (Eph. 1. 20).
6. As the object to attract us (Col. 3. 1).
7. As the Sin-purger who has cleared us (Heb. 1. 3).
8. As the glorified One who is to reign (Heb. 1. 13).
9. As our Representative (Heb. 8. 1).
10. As the Accomplisher of His work (Heb. 10. 12).
11. As the Conqueror over His foes (Heb. 12. 2).
12. As the Almighty One (1 Pet. 3. 22).
13. As the expecting One (Ps. 110. 1).

III. *Promise to Christ.* "Thine enemies Thy footstool.

IV. *People of God* (ver. 3).

V. *Priesthood* of Christ (ver. 4).

VI. *Power* of Christ (ver. 5).

VII. *Perseverance* of Christ (ver. 7).

There is a difference between atonement and priesthood: (1) Atonement is a thing of death, and priesthood a thing of life. (2) Atonement is, once for all, finished; priesthood is continuous. (3) Atonement was accomplished on earth, priesthood is carried on in heaven. (4) Atonement is for the sinner, and priesthood for the saint.

Christ is a priest after the order of Melchizedek. Melchizedek was without father or mother in a priestly sense, *i.e.*, his priesthood was of a different order from Aaron's, which depended on descent and genealogy, and lasted for a definite period. Christ is the Eternal One. His priesthood begins and ends with Himself.

It is interesting to note the three things that Melchizedek did when he met Abraham (Gen. xiv. 18-20).

1. He brought forth bread and wine to him. Bread is strengthening and wine is symbolical of joy. Our High Priest ministers to us His own word and joy.

2. He blessed him. We are blessed in our High Priest. We read that when Christ was about to ascend to heaven, He led His disciples as far as Bethany, and there, with uplifted hands, He blessed them (Luke 24. 50). We never read that those hands were put down.

3. He received from Abraham a tenth of what he had taken. Our High Priest waits for our gifts and offerings. There are four we can give:—

1. Our bodies (Rom. 12. 1). 2. Our service (Phil. 2. 17; Heb. 13. 16). 3. Our money (Phil. 4. 18). 4. Our praise (Heb. 13. 15).

SOCRATES: THE SAGE OF ATHENS.

Outlines of his Life and Death.

SOCRATES was born in the city of Athens, B.C. 470. His parents were in poor circumstances, his father being a common sculptor and his mother a nurse; but Socrates was never ashamed of their callings, and served for some time in his father's workshop. His genius and wisdom, even in his youth, soon attracted attention, and he gave up the profession of a sculptor to follow the more ambiguous calling of a philosopher and teacher. Like all Athenians he was trained in the use of arms, and was conspicuous for his bravery on more than one occasion. His father bequeathed him about two hundred pounds, which he lost by lending to a friend; and through all his life he had the greatest contempt for riches. A favourite saying of his was that the greatest, riches a man could possess was contentment.

In course of time Socrates married, as all Athenians were obliged to do, on penalty of a heavy fine for celibacy; but his choice was a singularly unfortunate one, and the name of his wife, Xantippe, has been handed down through twenty-three centuries as a typical name for a shrew—a most unenviable notoriety.

But even a Xantippe was unable to disturb the philosophic calm of her husband, who declared he had chosen her especially for her bad temper, knowing that if he could live on peaceable terms with her, then he could with any one—rather an unusual reason for the choice of a wife.

On one occasion she had tried in vain to disturb his equanimity by her foul language and abuse, and when she brought matters to a climax by emptying a pitcher of dirty water on his head, he only remarked that "so much thunder must needs produce a shower." Whether this soft answer turned away her wrath or increased it, is not recorded in history. On another occasion, some hasty person, not his wife, gave him a stinging box on the ear. But this insult only drew from Socrates the words, "It is a misfortune not to know when to put a helmet on."

Socrates' aim in life was to instruct the Athenian youth in morals and philosophy. He had no school, like other philosophers, but went out and in amongst the youth, instructing them at all times and seasons, showing by his own example how a worthy citizen should live, teaching them virtue, and helping and encouraging them to act wisely on all occasions. From all parts of Greece came men who were his eager pupils. Euclid, Plato, and Xenophon were amongst the most distinguished. Euclid belonged to Megara, a province which lay under the ban of the Athenians, who prohibited any Megarian to enter Athens on pain of death; but in such high estimation did Euclid hold the teaching of Socrates, that he came to him at night, disguised in woman's clothing, and only left when it was dawn. In this manner Socrates passed his life, doing all in his power to elevate the *morale* of Athenian society, and to inculcate maxims of probity and justice on the minds of his attached pupils.

But he was not without enemies; and in the sixty-ninth year of his age, those who were jealous of his influence accused him of corrupting the Athenian youth by his opinions with regard to the gods. The method in which they proceeded is higly characteristic of the times. It was the custom in the Greek drama, now so much praised, to introduce personalities on the stage, and to bring in public characters without any attempt to disguise them. Aristophanes, the celebrated comedian, was hired to write a comedy in which the character of Socrates was introduced and held up to public scorn. This play was "The Clouds," and in it Socrates was made to defy Jupiter, a proceeding which the Athenians regarded as most impious.

Once the public ire was awakened, the enemies of Socrates took every means to increase it, and consequently he was cited to appear before the authorities to answer two accusations—the first, that he did not acknowledge the gods of the republic, but had introduced others; and the second, that by doing so he had corrupted the Athenian youth.

The defence of Socrates was well worthy of him. It is couched in elegant language, and he boldly examines and refutes the charges. His closing words are truly noble: "I am more convinced of the existence of God than my accusers, and so convinced that I abandon myself to God and you, that you may judge of me as you shall deem best for yourselves and me." The result of the trial was that Socrates was found guilty, and condemned to die by drinking hemlock. Socrates heard the sentence with unmoved calmness, and when a friend and disciple expressed his sympathy for him, and regretted that he should die innocent, Socrates replied, with a smile, "What! would you have me die guilty?" The unusually long time of thirty days elapsed between the sentence and its fulfilment. The reason was that the yearly sacrifice had been despatched to Apollo at Delphi, and, until the return of the sacred galley, no sentence of death could be carried out.

In this interval Socrates had much intercourse with his friends, who did all in their power to make him escape. They even won over the jailer; but Socrates disdained to save his life by flight, and, when told of the scheme, asked "whether they knew any place out of Attica where people did not die?"

The thirty days too soon came to an end, during which time Socrates had calmly awaited his fate, making good use of the time in instructing those about him in philosophy, and consoling them in anticipation of their bereavement. The mode of death, having to cause it by his own act, to be himself the instrument, was peculiarly painful to Socrates, who held that "man, appertaining to God who formed and placed him with His own hand in the post he possesses, cannot abandon it without His permission, nor quit life without His order."

He took leave of his wife and children, whom he dismissed, and, at sunset, he was informed that the time had arrived for him to drink the fatal hemlock. He did so very calmly, and even reproved his friends for showing signs of grief, which they had with difficulty restrained during the day. In course of time the poison took effect, and Socrates was no more.

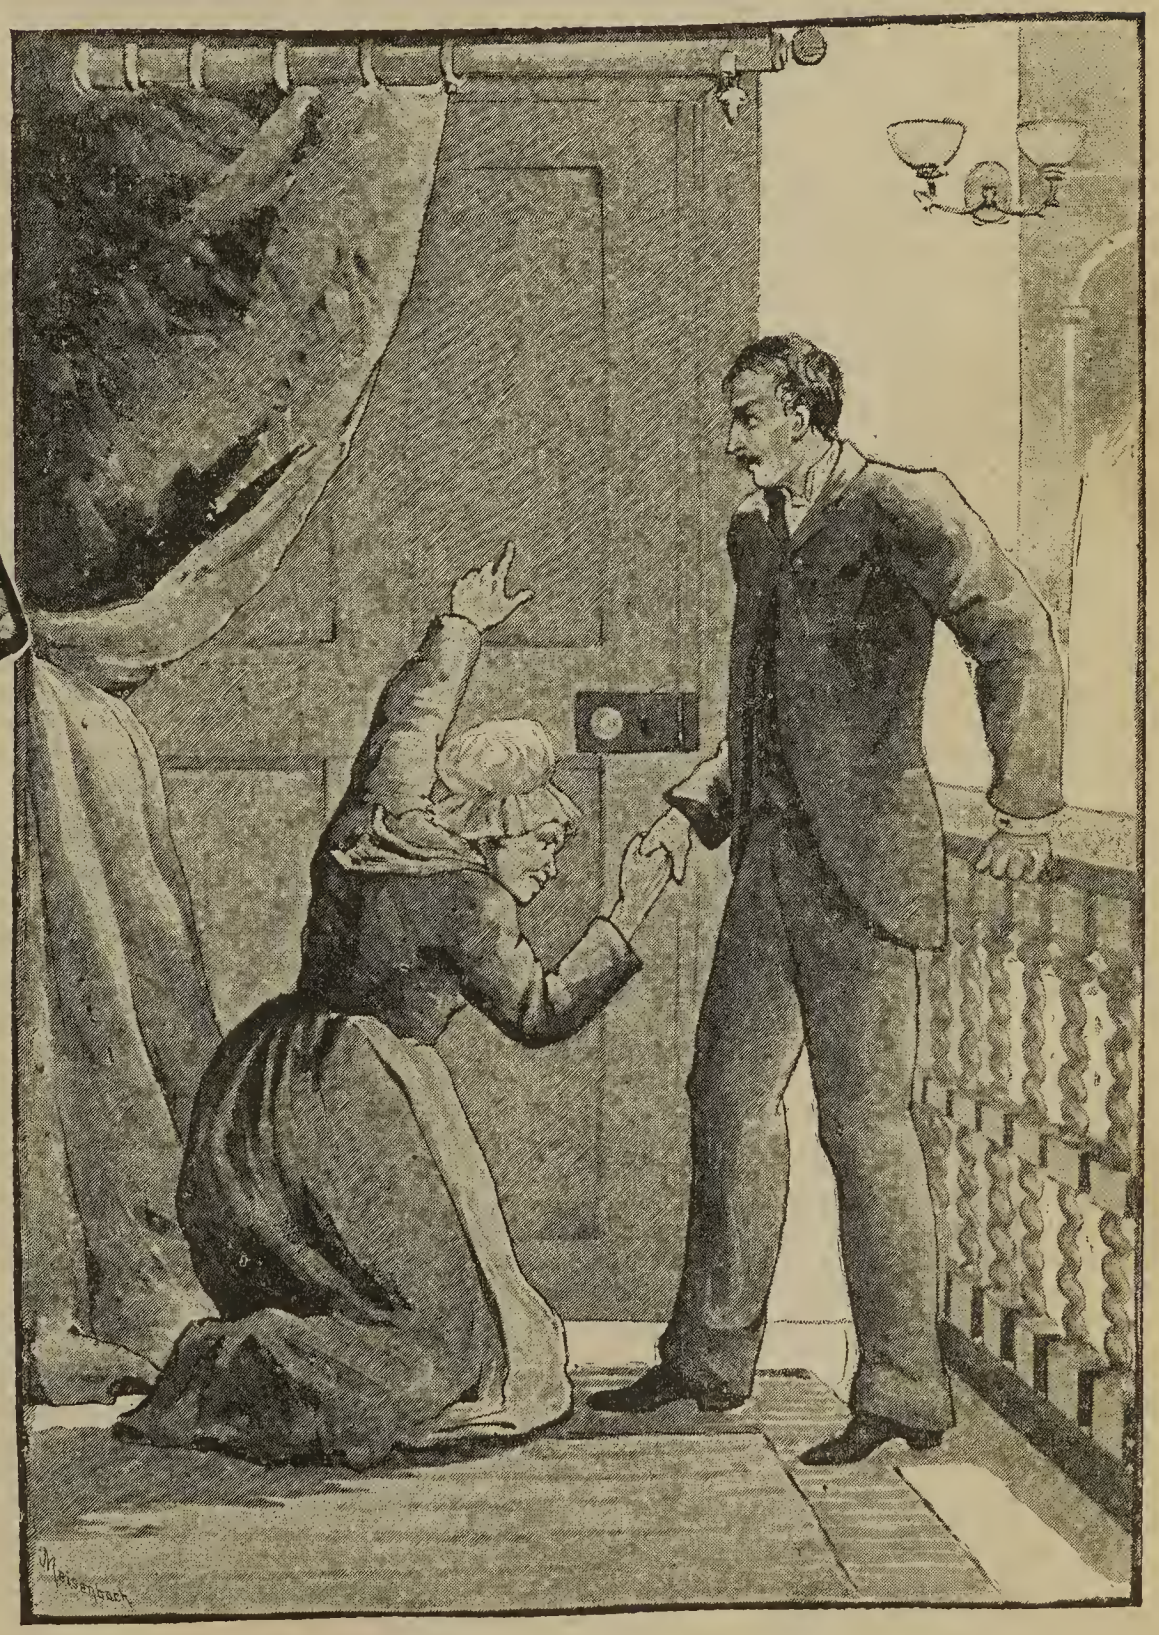
In this manner died the greatest of the Grecian philosophers, one who strove nobly after an ideal which at best was terribly imperfect.

No sooner was Socrates dead than a reaction took place among the people. Euripides wrote a tragedy, called "Palamedes," in which reference was made indirectly to Socrates. At the words, "You doom the justest of the Greeks to perish," the people were visibly affected, and a decree was passed, forbidding any one to speak of him in public. The public conscience was awakened, and the accusers of Socrates were punished by death or banishment. A statue of brass was erected to his memory, and placed in a prominent position, where the people might see it, and be reminded of the virtues of their great teacher.

It is interesting to note that Socrates never wrote one sentence of his sayings; they were written down and treasured by his disciples.

A prayer, written by an unknown poet, often quoted by Socrates, and in which we can all unite, will form a fitting close to this sketch of the great philosopher:—

"Great God, give us, we beseech Thee, those good things we stand in need of, whether we crave them or not; and remove from us all those which may be hurtful to us, even though we implore them of Thee."



THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "A Band of Three," "Water Gipsies," "Your Brother and Mine," etc., etc.

"A wild figure was sitting upright in the bed, his eyes burning, his face flushed, his hair unkempt."

"As Betty spoke, she went on her knees, and exclaimed frantically :— "'Give me your hand, master. Come close—listen! Now do you hear?' Distinct sounds from within were undoubtedly audible—sounds of rustling and moaning — deep-drawn ejaculations; and then a voice, thin and weak and high pitched."

CHAPTER XXVII.

THE tired and worn-out man was still lying almost motionless in the depths of the old-fashioned arm-chair. He had come back from his dead faint to a world of realities, but he was not yet conscious of any sensation of surprise. His mother was dead, and he was in her house—in her large, solid, handsome house—in a bedroom which bore tokens of old-fashioned wealth. He was here, and Betty Carew, the woman who had nursed him as an infant, was once again tending him ; she was hovering about him in the fussy, half-motherly fashion he remembered so well of old.

He took in the facts well enough, but his brain was still too inert to be conscious of any surprise.

Betty bustled round him with zeal and almost cheerfulness ; she brought a little table up to the side of his chair ; she covered this table with a snowy napkin, and on the napkin she laid the tray which contained the fragrant and nourishing little meal.

"Drink your soup and eat your toast, Master Jo, my poor dear," said the old dame. "There, there, you're but feeble still; take a sip at the brandy and water."

She held the glass herself to the feeble man's blue lips. He sipped, and was revived; then she fed him with the toast and strong beef-tea.

"Now lie quiet, dearie, while I air sheets for your bed," said Betty. "This fire burns well, and the missus's sheets, that she died in, are clean and scented with lavender, in the chest of drawers. I'll air them here in a twinkling, and you shall lie soft to-night, my poor boy."

"But I must go," said Jonas, feebly struggling to his feet. "You are very good, Betty, and I am glad to see you again, but I must go now. This is not my house—my mother is dead, you know."

"Sit you down this minute," said old Betty, in an authoritative tone of voice. "After missing you these many years, and the missus's heart being all but broke, you don't suppose as I'll let you out of my sight again in a minute. No, no; sit you down, Master Jo, sit you down; you're Betty Carew's charge now."

Alexis was far too languid to be able to resist these decisive words; he sank once more into the old arm-chair, and watched, in a feeble manner, Betty's active movements. She opened and shut drawers, she pulled blankets off the bed, she toasted fragrant linen sheets by the fire, and when they were very hot, she laid them on the bed, preparing it for his reception with almost reverence.

"The missus would have been glad to see this day," she muttered. "There, Master Jonas, now you'll get between the sheets, and lie down snug and warm. You let your old nurse help you to take off your things."

"I cannot sleep here, Betty," said Jonas. "Everything is like a dream to me; but how can I sleep here, knowing nothing at all?"

"What can I tell you, my poor dear? The missus is gone—that dear saint is no longer in this world. It did come over her that you might be waiting for her above; but no, you are still here, although you are going to her, you are going to her, my dear bonnie boy."

"If you mean that I am on the road to heaven, you are mistaken," said Jonas, covering his face with his thin hands. "Whatever road I'm on, I am not on that path. Oh, mother! Betty, you make me think of her now. Why was it the will of God that I should never look in her face again?"

"It was you that was silent, Master Jonas," said Betty, kneeling in front of the fire. "Well, well, Betty Carew will heap no reproaches on you to-night. Get into bed, my lad. Here, let me help you off with your coat. My word, how thin you are!"

"Betty, how is it my mother came to live in this house? When I left her, she was in the cottage at Silverdale. This house is large, and must have cost money. How is it she lived and died here?"

"She bought the house, dearie. How else would it come to her?"

"But with what money? My mother was poor."

"Poor?" echoed Betty; "oh, that was a long time back. She was rich for many and many a year before she died."

"Rich," said Jonas, feebly; "my mother rich. Then I am not a beggar. Thank God, I am not a beggar. That is good; that puts life into me. Betty, tell me nothing more to-night; my mother died rich, and I am her only son. Betty, there is a man I hate; his name is Kenneth Graham. I won't talk about him to-night, nor about my mother either, for I am dead beat—only this money comes in handy, very handy. Money gives power—it gives great power; with money, I can use means and punish one who made life as hell to me. Betty, I will get into bed; I don't mind anything now, as my mother was rich. Linen sheets, did you say? I never lay between linen sheets. Betty, I've had a hard life, but it's all right now my mother died rich."

CHAPTER XXVIII.

WHETHER he had been too weak to leave the hospital, or whether the shock of finding old Betty, and of knowing that his mother had really died a wealthy woman, was too much for him, no one can exactly say, but the next morning, to Betty's unutterable dismay, Alexis awoke in a high fever. He did not know Betty when she approached him; he knew no one, but he called wildly for his mother, and tossed about, and uttered piteous cries.

Betty looked at him for a moment or two in dismay; then very quickly she made up her mind. She would nurse him in that house; she would nurse him herself, and keep the fact of his existence a secret from the Grahams, and also from the other servants in the house. She knew that her task was an almost impossible one, but one or two circumstances were in her favour.

The room where her old mistress had died had gradually come to be considered her special property. She kept the key of this room; she alone entered it. By slow degrees, and yet very surely, the other servants had come to consider the room uncanny, dismal, almost haunted. They would hurry past it at night; not one of them ever cared to go near it. Betty, who liked the seclusion of this dismal chamber, had taken pleasure in encouraging their fear; she was fond of alluding to the chamber of mourning, to the dead body which had lain there, to the coffin which had been taken out from its threshold. The room stood alone—no other rooms near it; its walls were very thick; surely, if Jonas did make any noise, the servants could be got to attribute it to supernatural sources. Betty made her plans with deliberation; she left the sick man muttering on his uneasy bed, and went downstairs to the kitchen.

"I'm not well," she announced; "my attic is too damp. I'm going down to sleep for the rest of the winter in my old missus's room. That saint would wish it, and I can be near to her dear sperit there. The chamber of mourning, I calls it. Well, well, it suits me; it suits Betty Carew fine."

Then she filled a scuttle with coals, and mounted up the stairs herself with them, refusing all proffers of assistance, which were not too willingly given.

"No, no," she said, "the sperit of the world don't suit what may be found inside those sacred walls. I'll keep myself to myself, if you please. No fear, I'm not lonely; I has the companionship I likes best."

After this speech, not a servant in the house would have ventured near the mysterious chamber. Betty supplied herself with stores of fuel, also with eggs, tea, and a bottle of brandy. Then she laid in candles and night-lights.

"I'm weak, and I wants nourishment," finally she said to the cook. "See that you have my beef-tea when I comes downstairs for it. Oh, yes, thanks, I'll fetch it myself. I wants no one to wait on me."

Then Betty began her arduous task, nursing the sick man day and night, and only anxious on one particular, namely, that he might not grow bad enough to require a doctor. She had a little knowledge of illness, and after her old-fashioned way she attended Alexis well. She kept up his strength with constant supplies of milk and the best beef-tea. When he was very weak indeed she gave him small doses of brandy, but none of her efforts could reduce the strength of the burning, raging fever, and at last, one night the horrible conviction came over her that the sick man would die—that he would die in any case, but all the quicker if she did not immediately get a doctor to see him. She stood at the bottom of the great four-poster looking at him, as this conviction flashed across her mind. He was moaning feebly, tossing from side to side, and muttering words of direful meaning with intense rapidity.

"My mother died rich—that is right, that is right; now I can revenge myself on Ken—fine old chum Ken was!—yes, but I'll pay him out—I'll live and pay him out. I hate him; he wanted to send me to Australia, but he missed his game there. Jonas Alexis might be a fool, but he was not quite such a fool as that. No; London is the place for me—I'll stay in London, and dog his steps, and make his life a hell to him. What do you say, Sister Lucilla?—Vengeance belongs to God? No, no, no — I clutch it in my hand—I press it to my heart—it is part of me, my life, my all. *He* sent me back to penal servitude. I should like to see him die. He has a wife, I should like her to be a widow. Has he a child? I hope it may be fatherless. Oh! oh! oh——"

The confused mutterings died away in anguished moans. Betty went up and laid her hand on Alexis's forehead; it was burning; his pulse was very rapid, but very weak.

"I've done my best," she said to herself; "I've done my very best, but I can't save him. A doctor he must see. How can I fetch a doctor into this room, and nobody know it?"

She pondered very deeply for a moment or two. Alexis had been violent, but he was now too weak to get out of bed; it was certainly dangerous to leave him, but to get no assistance for him meant his certain and speedy death. Betty made up her mind very quickly. She smoothed the tossed bedclothes, gave her patient a spoonful of broth, placed a guard before the fire, and slipping out of the room, locked the door as usual, and put the key in her pocket.

Mrs. Graham was better that evening. Her recovery had been slow. Splendidly strong by nature, after the birth of her child she became unaccountably weak. Her doctor wondered at her lack of strength. He said to himself more than once,—

"Is it possible that even in this happy and prosperous house there is a secret skeleton? I could understand the want of tone which I discover in Mrs. Graham's system if she had a secret care. That fine-looking fellow, her husband, certainly loves her. They have plenty of money—what can it be?"

The doctor discovered nothing. In his presence Kate's large dark eyes seemed serene and uncareworn; he never detected the little flash of anxiety, hidden as soon as expressed, with which she darted an eager glance at her husband's face; he never heard the faintest of faint sighs which now and then came to her lips, as she bent over her beautiful baby. The child was extremely lovely—precocious beyond its few weeks—a fair,

placid, grand-looking baby, with heavenly blue eyes, and now and then a radiant, far-off smile filling the eyes and dawning round the lips, as though angels had, indeed, been talking to him. His mother and his nurse both noticed this look—the nurse uneasily—it wasn't canny, she said; she had seen it before, but never with babies that lived. It did not awaken uneasiness in the unsuspecting mother, but it thrilled through and through her heart with an ecstasy which was also pain.

Kate was not getting on fast, but she was better that evening. She had gone into the drawing-room that day for the first time, and told her husband that she felt much brighter and better for the change. He stayed with her until quite late, and kissed her even more tenderly than usual when he bade her good-night.

As Graham left his wife's room, and walked across the landing towards the stairs, he came across Betty in the act of locking the door of the room which was now known in the house as the "chamber of mourning." This title, given by Betty, was universally adopted, although no one liked it. Graham was in a peculiarly good humour that night, for the step his wife had made towards recovery had cheered him, and he hoped that now she would soon be well enough to go abroad.

"Well, Mrs. Carew," he said, speaking cheerily to the old woman. "Oh, by the way, I think you must give me up the key of that room. I think of taking your mistress abroad for a time, when she is strong enough, and if so, I shall let the house. In that case this room will want papering and painting and renovating generally, to match the others. Here, give me the key. Ill go in and look round it now."

"You'd better," said Betty, lifting up her twinkling, deep-set eyes to his face; "you'd better! There's no modern fashion could abide that room. You listen! Put your ear agen the key-hole and listen! Sperits are at work in the chamber of mourning!"

As Betty spoke, she went on her knees, and pressed her own ear to the key-hole.

"Give me your hand, master. Come close—listen! Now do you hear?"

Distinct sounds from within were undoubtedly audible—sounds of rustling and moaning — deep-drawn ejaculations; and then a voice, thin and weak and high-pitched.

"I will have my revenge! May he die!—may he——"

No other words were audible; but Kenneth had heard enough. The cold dew stood on his forehead; his heart beat heavily.

"There's the key," said Betty, rising to her feet, and greeting him with an almost fiendish grin. "Open the door, and go in, if you dare. You can hear the sperits talking better when you're within. I likes them—I finds them a sort of companions; but folks differ in their taste."

"You're mad, I believe, Mrs. Carew," said Kenneth, angrily. "Good-night! I'll look at the room to-morrow."

He fled downstairs, Betty's shrill laugh following him.

"Ah! my bonny boy—my own Master Jo! I've put him off the scent for a time, anyhow," she muttered, and then she trotted downstairs, and out of the house as fast as she could, in search of a doctor.

Graham went into his smoking-room, sat down in an arm-chair, and covered his face with his hands. He was trembling and cold from absolute fear. What had he heard through that key-hole? A voice—words—a sentence had fallen on his ear.

"Folly!" he said to himself. "Folly! I imagined it. I am always thinking of the fellow; he is ever and always before my mind. Ah! what I gained was not worth what I undergo. No money was ever worth this torture, this suspense, this daily and hourly fear. Since I had that interview with the fellow at Portland, I have scarcely known an hour's peace. My detective has most mysteriously lost sight of him. He may pounce upon me at any moment. I cannot sleep, I cannot rest, I cannot eat. Kate sees it in my face; I know she does—my darling. I can see the trouble in her dear eyes. She will not question me, yet she knows I am unhappy. Oh, how long is this to last? I am indeed unnerved, unmanned, when the shrieking of the wind through a key-hole can be interpreted by me into words—into words uttered in his hated, hateful voice. What a fool I was not to have gone into the room! Mrs. Carew thought I was afraid. I believe that old woman is half mad. She suspects me of something; I have seen it for a long time in her manner. What an awful thing it would be if she came across Jonas; and, of course, what so likely? She would recognise Jonas at once. Yes, there is nothing for it but to get away as fast as possible; go to Spain or somewhere, where one could be absolutely safe. But should I be safe anywhere? No; for what I dread even more than the punishment, even more than the scorn of all my other fellow-creatures, is Kate's knowing; and she would read my secret quickly in my eyes, in my misery. Oh, my God, my God!" added the unhappy man, suddenly falling on his knees, and clasping his hands before his eyes; "if the woman I love finds out about my sin, I shall go mad." Then he added in a hoarse, half sob, "The way of transgressors is hard."

The household had long retired to rest, for the hour was past midnight; but at this moment an unwonted sound in the hall fell on Graham's ear. He started to his feet, shook off his increasing depression, and went hastily out of the room.

CHAPTER XXIX.

HE went into the hall, where he discovered Betty in the act of softly closing the entrance door. By her side stood a little withered-up man of the style and stamp of the ancient apothecary. The hour was past mid-night; every other soul in the house was in bed.

"What does this mean, Mrs. Carew?" said Graham, sternly. It was a relief to him to have a fresh channel into which to turn his thoughts. Betty had no right to smuggle a stranger into his house; the feeling that he might be legitimately angry was quite delightful to Graham after his deadly fear. "What does this mean?" he repeated. "Who are you, sir? This is a most extraordinary hour for a visit."

Betty dropped a little curtsey, and raised a thin, anxious face to her master's. All her shrewish, daring look had left her.

"I'm not at all well, sir," she said, "and this gentleman, Mr. Cutts, is an old friend—a sort of relation of mine. I thought I'd ask him to find out what was wrong with me. I has pains in my joints, awful. I expects it's the damp."

Betty's eyes could not meet Graham's, and now he thought he intercepted a quick glance between her and the stranger. His anger grew greater.

"Pardon me, sir," he said, "but this is no hour for my servant to see a physician. Have the goodness to call to-morrow morning, and let me have the pleasure of showing you out now."

Betty's face turned ashy. If this old apothecary whom she had summoned in her sore need did not see Jonas to-night, he would certainly die. In a moment her resolve was taken.

"I must have the advice I need now, sir," she said. "Come with me, if you please, and stay with us, while the doctor looks at his patient in the chamber of mourning."

Graham felt his heart beating, and once more that cold fear stealing over him. He did not say a word, however, but followed Betty and the doctor up the stairs. They stopped at the oak door, and Betty, taking a key out of her pocket, opened it deliberately. On the threshold she made a last effort to keep Graham out of the room.

"There are ghosts within," she said. "Do you want to keep them company?"

"Let me pass," said Graham, sternly. He pulled the door out of her detaining fingers, and entered the room first.

Where was the gloom and desolation he had pictured? A bright fire roared up the chimney, and in a distant corner was a night-light, shedding a subdued and soft radiance. Its dim light was hardly needed—the blaze from the fire lit up each object in the chamber distinctly. Graham glanced round it. He saw the chair in which Mrs. Alexis had sat on the night when he had bade her good-bye for ever—on the night when she had said to him, with her gentle eyes full faith, as they glanced into his,—

"Everything is arranged, Kenneth, and whatever happens, I trust you fully."

From the chair he looked at the old four-poster. What object met his eyes? Why did he start and fall back and murmur God's name in a voice of anguish under his breath? A wild figure was sitting upright in the bed, his eyes burning, his face flushed, his hair unkempt. When he saw Graham, he uttered a piercing shriek, and buried his face in the pillow.

"Move out of his sight, or you'll kill him," said Betty, rushing up to Kenneth, and with the strength of many women seizing his hands. "There, go behind the curtains, and don't show yourself to him unless you want to be his murderer. I don't care what you think of me—he's my missus's son, and I'd do more than this for him. There, keep out of his sight."

Graham did not need any second bidding to depart. With almost cat-like steps he stole on tip-toe from the room, and closed the door softly, very softly, after him.

CHAPTER I.

A STROLL BY THE SEA-SHORE.

"And Nature, the old nurse, took
The child upon her knee,
Saying, 'Here is a story-book
Thy Father has written for thee.

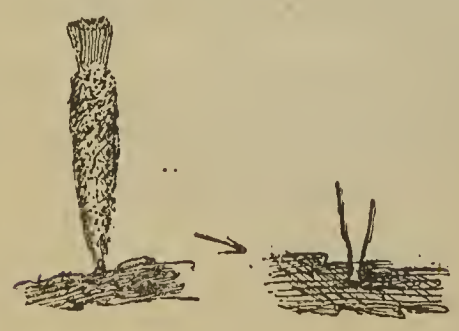
'Come! wander with me,' she said,
'Into regions yet untrod;
And read what is still unread
In the manuscripts of God.'

And he wandered away and away
With Nature, the dear old nurse,
Who sang to him night and day
The rhymes of the universe.

And whenever the way seemed long,
Or his heart began to fail,
She would sing a more wonderful song,
Or tell a more marvellous tale."

—*Longfellow.*

FEW walks are more pleasant than a stroll along an unfrequented, firm, sandy shore on a warm, sunny day. On the one hand is the bright blue sea, whose dancing waves flash back the sunshine; on the other, the tawny sand is heaped up into gently rolling dunes, sparsely covered with wiry grass and silvery-green sea-hollies. The gently sailing fleecy clouds ever and anon afford a grateful shade, and at the same time their chasing shadows dapple the sea with purple and the sands with grey.



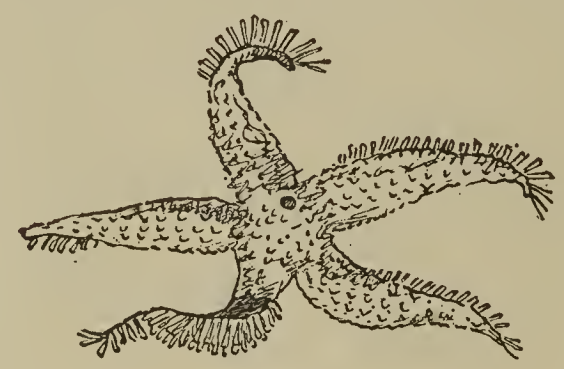
The sky, sea, and shore have their several and collective beauties, but our interest for the present is centred on a few of the forms of life which people the water, land, and air.

At every step in the yielding sand lively little sand-hoppers jump for dear life, with prodigious bounds; and now and again a crunch tells that some dead shell or other has been broken into many fragments. Here is a purple mussel, there a bleached razor-shell; separate valves of cockles, scallops, and oysters lie scattered far and wide. A sand-hopper and an odd shell or two are consigned to a bag, to be examined with other captures later on.

Long ridges of small pebbles or of sea-weed extend along the shore, at various distances from the sea. These mark the limit of divers high tides, and of occasional storms, the deep waves of the latter having torn up large quantities of sea-weed, and cast them forth to die upon the sand.

If one is fortunate enough to walk along the shore after one of these storms, many interesting sea-beasts will be found, which are rarely otherwise met with; especially are they strewn along these ridges of sea-weed. A handful picked up at random will afford employment for several hours.

Most of the branched and gracefully curved objects are not sea-weeds at all, but are colonies of animals, often called "Zöophytes." The word zöophyte means "animal-plant," and, as we shall see, many of them have a very simple structure. Nevertheless, they are true animals, and have no connection whatever with plants. They only possess a superficial resemblance to some sea-weeds in their general form, just as groups of ice-crystals on a frosty window-pane assume the appearance of fronds of ferns and twigs of moss. The "zöophytes" are no more plants than are the frost-markings.



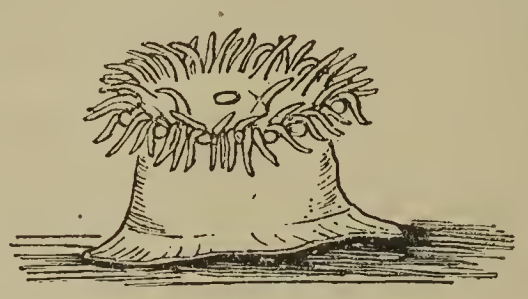
Sponge with Chalky Needles (*Grantia ciliata*).

Long lines of white stretch along the sand, the colour being due to the presence of minute shells, smaller than a pin's head (*Foraminifera*). We will put some of the dust into a bit of paper for future examination.

On many pieces of sea-weeds and "zöophytes" are minute, polished, white, coiled tubes, like fairy porcelain trumpets. Each of these is formed by a tiny worm (*Spirorbis*), with lovely branched plumes, by means of which it breathes; on others are white flat bags or rounded tubes (*Grantia compressea* and *Grantia ciliata*); the latter are usually crowned with a coronet of silken spines. These are really sponges, although so very unlike the fibrous skeleton which is familiar to us all as a "sponge."

Other kinds are often cast up like fleshy balls or branching, flexible twigs; others, again, spread along the rocks, and at low tide may be seen clothing the dripping stones, like yellow or orange-coloured lichens. Though true sponges, none of these are of any use to man.

Starfish (*Asterias rubens*).



The star-fish will be welcomed as an old friend. Amongst the sea-weed, small brittle stars, with their round, flat bodies and five long delicate arms, are frequently found; and the shells of the sea-urchin and of the sand-loving heart-urchin should be looked for.

At low tide the sand is riddled by the burrows of worms, and the fisherman may be seen digging up lug-worms and hairy-bait. Another worm forms a tube for itself by glueing together grains of sand and broken shells, the end of the tube which projects above the level of the sand being provided with curious branched sandy threads.

As we ramble along, we come to a reef of low rocks and stones, and at once find quite a new set of creatures. In the rock pools gaudy sea-anemones flaunt their brilliant colours in the sunshine, and by attentively watching a pool, many delicate creatures may be seen furtively expanding filmy breathing plumes, contracting with great rapidity on the least alarm.

The small conical acorn shells open their lid-like valves, and a fairy-like, many-fingered hand beckons unwary animalcules to destruction.

Worms which rival the emerald in colour, others which glisten like shot silk, glide amongst the roots of the sea-weed; and lively gobies and blennies, together with trans-

Sea-anemone (*Actinia equina*).

parent shrimps, dart through the water as if they are playing hide and seek.

The wonders of the rock pools entice us, but time urges us to make our way homewards; but first let us bask on a sand-hill in the sunshine, and without seeking for anything, see what will come to us.

There is a good old French proverb that "all things come round to him who will but wait," and this is especially true for those who want to learn the hidden things of nature: those who rush about, glancing here and poking there, see only the obvious facts; while to him who possesses his soul in patience, and holds his peace, the rarer and more subtle sights present themselves.

After quietly watching for a minute or so, we discover that there is life everywhere. Little butterflies, like burnished copper, or of metallic blue, flash in the sunshine and are gone; larger ones, of varied hue, flutter hither and thither. Bees buzz with an energy which is almost reproachful in its tone. Beneath the spiny leaves of the sea-holly an active ground-beetle scuttles along, the purple edging of its armour gleaming in the sunshine.

Many different kinds of insects now disclose themselves on the plants, their restless activity offering a marked contrast to the slow gliding of the banded snails. An unwary fly settles on an open spot, to preen its wings in the sun, when immediately it is pounced upon by a hunting spider, just as a leopard springs upon its prey.

A brown streak flashes across a small bank of sand. Now we must be perfectly still. Peering between the grass stems are two brilliant eyes, set in a pointed head; covered with an enamelled coat of armour, on the sand we can just see two little feet

Acorn Barnacle (*Balanus balanoides*).

peeping out, with exquisitely delicate toes; in a moment more the whole body of the elegant sand lizard is revealed, only to disappear at the least sound.

Now for a final glance round. Disporting themselves among the sand hillocks are several rabbits, so like the colour of the sand, that when at rest they almost escape notice, but when frightened, they kick up their heels and away they go, showing the white feather of the proverbial coward, or rather, the white fur of his stumpy tail.

Overhead the sea-gulls are sailing in peaceful flight, and landwards a lark is flooding the air with wondrous melody. Thus we can drink with our ears the rampant joyousness of the lark's song while feasting our eyes with the poetry of motion of the sea-gull.

On our way homeward we pass along hedge-lined roads, and later emerge upon an open common, the hollows of which are converted into reedy pools. On nearing one of these, half a dozen frogs jump from the reeds into the water. We will secure one and allow the rest to escape.

In the course of our short walk we have seen or handled a large number of different animals; let us now endeavour to arrange them in some definite order. The fishes, frogs, lizard, birds, and rabbits all have a backbone and a skull, which protect their brains, and which are not possessed by any of the other animals we noticed; so we may divide the vertebrate from the invertebrate or backbone-less animals.

The rabbit suckles its young, and thus is what naturalists term a mammal; the sea-gull and lark, having feathers, are birds; the lizard is a scaly land animal, which lays eggs, and is consequently a reptile; and the gobies are scaly water-animals, which also lays eggs, and are fish. Representatives of the five great groups of vertebrates, fishes, amphibians, reptiles, birds and mammals, have been met with in our stroll.

There is much greater dissimilarity amongst the invertebrates than amongst the vertebrates, and the work of sorting them will consequently be more difficult. First of all we will put together the active forms—those which fly, run, and hop—such as sand-hoppers, crabs, spiders, and butterflies.

Each of these has a hard skin, and a more or less ringed body, and at least three pairs of jointed legs. The last character gives the name to the group—the *Arthropoda*, or jointed-footed animals. The great group of arthropods is further divided—(1) into the crab group, or *Crustacea*, with a large number of limbs, in addition to the walking legs; (2) into the spider group, or *Arachnida*, which usually have hairy bodies and four pairs of legs; and again (3) into the insects, which have only three pairs of legs, and usually two pairs of wings.

The mussel, cockle, oyster, periwinkle, and snail have soft bodies without legs, but they are protected by a hard shell. The sea slugs and land slugs either have a minute shell or have had one at an early stage of their lives, but it has subsequently disappeared. Thus we unite them all together in the group of mollusca, or soft-bodied animals.

All the worms we noticed have long bodies, which are distinctly ringed, and tufts of fine bristles spring from each ring. Some crawl about at will, others form sandy or chalky tubes, within which they live. There are other worms which are not ringed, and do not possess bristles. The former are the segmented worms, the latter the unsegmented worms.

Some of the "zöophytes," as they are

Common Frog (*Rana temporaria*).

called, are formed of an immense number of little chambers, within each one of which a small worm-like animal lies bent upon itself; when alive, each little hermit protrudes a branch of delicate gills, by mean of which it breathes and catches its prey.

The common sea-mat is a familiar example of one of the *Polyzoa*. The term polyzoa really means "many animals," and this is a very appropriate name. The Germans call them *Bryozoa*, or moss animals, which is equally descriptive.

The starfish and sea-urchins are protected from harm by hard, chalky plates and prickles. They walk about by means of rows of suckers. The prickly-skinned animals, or *Echinodermata*, form a well-marked group.

Nobody could mistake a sea-anemone, with its fleshy, tube-like body, circle of tentacles and bright colour, for any other animal; but it has its poor relations as well as other creatures. They are to be found amongst the remaining "zöophytes," or "hydroids."

Hydroids are small tubular animals, with a crown of tentacles around their mouths. They are often grouped into colonies, the whole forming a blanched horny tube, within which the polyps live securely. Sea-anemones and hydroids, having wide open stomachs, are called by zoologists *Cœlenterates*.

The sponges have their bodies penetrated by a large number of tubes, through which the water flows. The large holes, through which the water is poured back into the sea, look like the craters of small volcanoes. The pore-bearing animals, or porifera, usually have a skeleton of horny fibres (washing sponge), or sharp little flinty or chalky needles.

Lastly, we have yet to arrange the minute shells washed up by the sea on the shore. These have all sorts of beautiful shapes and markings; but, strangely enough, the animal which forms them consists only of a little drop of slime. No skin, no eyes, no ears, no legs, no arms, no mouth, no stomach, and yet they are able to build up the most beautiful of all shells! These simple shell-makers are called *Foraminifera*, and, like the *Infusoria*, or minute animals found in stagnant water, they each, as we have seen, consist of a simple piece of animal slime, or "protoplasm." All the other animals, from the sponge to the rabbit, are built up of an immense number of separate pieces of protoplasm. This fact enables us to divide the animal kingdom into two great divisions; first, the simple animals, or *Protozoa;* and secondly, the complex animals, or *Metazoa*.

The following table will assist you in understanding the manner in which naturalists arrange or classify animals:—

I. PROTOZOA (SIMPLE ANIMALS).
Foraminifera (and other groups).

II. METAZOA (COMPLEX ANIMALS WHICH LAY EGGS).

1. *Porifera* (pore-bearing animals): sponges.
2. *Cœlenterata* (hollow stomach animals): hydroids, sea-anemones.
3. *Echinodermata* (prickly-skinned animals): starfish, sea-urchin.
4. *Vermes* (worms): unsegmented and segmented worms. The polyzoa, or sea-mats, are also placed in this group.
5. *Mollusca* (soft-bodied animals): cockles, snails.
6. *Arthropoda* (jointed-footed animals): crabs, spiders, insects.
7. *Vertebrata* (backboned animals): fishes amphibia, reptiles, birds, mammals.

QUEEN LOUISE OF PRUSSIA.

By Barbara Clay Finch.

(*Concluded.*)

ONE of the queen's favourite passages of Scripture was the 126th Psalm. "The more I meditate on it," she said, "and try to grasp its meaning, the more its loveliness and sublimity attract me. I do not know anything which has such a solemn, benign, elevating, and comforting effect upon my mind as these precious words. The anguish of soul which is simply expressed in them is deep but tranquil, peaceful and tender. What it will effect, and the fruit which it will bring forth, is strikingly explained under the pleasing figure of seed-time and harvest. The hope which soars above all, and makes all sorrow bearable, is like the hues of the morning, and you hear in the distance the triumphal songs of the victor rising above the waves of sorrow. It is pervaded by a spirit of melancholy, but also of victory, of resignation, and the most joyful trust; it is an elegy, but also a hymn of praise; a hallelujah mingled with tears."

In the time of her deepest distress she wrote thus to Mme. Krüdener, with whom she had formed a friendship: "You will understand that I can never be quite miserable while I have a source of purest joy. With the keen eye of truth I have seen the vanity of earthly greatness, and its nothingness in comparison with heavenly possessions. Yes, I have attained to a repose of the soul, and an universal peace, which allow me to hope that I may be able to bear all God's dispensations, and the sorrows that are sent to purify me, with the composure and humility of a Christian. For it is in this light I view all the trials which bow us down."

In 1809 the king and queen paid a visit to the Russian court, and were received by the emperor and empress with every mark of magnificence, honour, and consideration. In spite of the kindness of her imperial hosts, and the growing hope of soon re-entering Berlin after its evacuation by the French, Louise's spirit could not regain its elasticity. "I am come back from St. Petersburg," she writes on her return, "as I went. Nothing dazzles me now. Yes, I feel it daily more and more; my kingdom is not of this world."

In the October of the same year her youngest son was born at Königsberg; and on the 23rd of December following, the anniversary of the day on which, sixteen years ago, she had passed through the city gates as a bride, Louise and her husband again entered Berlin. The day was one of strangely mingled joy and sorrow. "More eyes were wet," says Arndt, "with tears of grief than joy." The deep grief of the beautiful queen was evident in the midst of her joy, as she stood at the window, acknowledging the people's greeting, for her eyes were red with weeping.

Since she had "belonged to Prussia," as she called it, she had slept but one night under her father's roof, and had not seen her aged grandmother, the Princess George, since 1806. She now expressed a deep desire to re-visit her home; and her husband fondly hoped it might restore her fading strength. Accordingly, on the 25th of June, she left Charlottenburg, and travelled through Oranienburg to Furstenburg, the first town in the Grand Duchy of Strelitz. She manifested much joy at seeing her old home again, greeted all her old acquaintances, and showed her friends with emotion the miniature of the king that she wore. "It is the one that resembles him the most of any I possess," she said, "and therefore I always wear it." Some one admired her pearls.

"I prize them very much, too," she answered, "and have kept only these of all my jewels; for circumstances required that I should give up my brilliants. Pearls are more suitable for me; they signify tears, and I have shed many." Her husband's fond hopes that her health might improve were not realised, and she grew manifestly weaker and more fragile. On the 16th of July she was seized at Hohenzieritz with a dangerous illness, arising from an abscess on the lungs. As she lay helpless, the utter vanity of temporal glory struck her forcibly. "Of what avail," she said, "is all earthly greatness? I am a queen, but I cannot move my arms." The king, hearing of her danger, hurried to her with his two eldest boys.

"God be praised, I am here," he said, as tears of joy fell from his wife's eyes.

"How didst thou come?" she said, her anxious love for him conquering her own extremity: "not in an open carriage with thy fever?"

"Who came with thee?" she asked later.

"Fritz and Wilhelm," said the king.

"Oh, what joy to see my dear children!" cried the mother; and when the boys were brought to her side, she exclaimed, "My dear Fritz! My dear Wilhelm!" and tried to question them about her other children; but the pain was too much for even her brave spirit, and they had to leave her.

"Oh, my God, my God, do not forsake me!" she prayed; and in her death agony she besought, "Jesus, shorten my sufferings." The end came mercifully soon; and, with her hand clasped in her husband's, she passed from the waves of this rough world to the home she had ever looked and hoped for, where "beyond these voices there is peace."

The grief of the king was indescribable; he was utterly overpowered; and only the tears and caresses of his motherless children roused him. Long years afterwards, he said, "This was the blow heaviest of all to bear." The queen was interred in a little Doric temple in the grounds of Charlottenburg. Over her grave an exquisite monument—a masterpiece of Rauch, a sculptor she had befriended—was raised. She is represented lying on a marble tomb, and the figure, says an eye-witness, "expresses all that is beautiful in womanhood, all that is perfect in a queen, all that is holy in a saint." It is beautifully described in Körner's lines:—

"Du schläfft so sanft—die stillen züge hauchen,
Noch deines Lebens schöne Traume wieder;
Der Schlummer nur sankt seine Flügel nieder,
Und heil'ger Friede schlieszt die Klaren Augen."

Four years later, when the tide had turned, and the king came back a conqueror from Leipsic, after a public thanksgiving in the Cathedral at Berlin, he hurried to that small temple hidden among the trees, where lay all that was earthly of his lost love. On the still marble form he laid the laurels that symbolized the victory which would have so gladdened the loyal heart now still in death; and lingered long, in his love and sorrow, by the tomb of her who had been the charm of his life, the love of his youth, the wife of his manhood, and the sad and blessed memory of his lonely years. In remembrance of her he instituted an order, to be called by her name, to be worn by the noblest and most heroic of her country's daughters; and, ever faithful and constant to his dead love, was laid, after thirty years, by the side of the wife he had loved so well, and mourned so truly.

It has been well said of Queen Louise that in her "Germany saw its best self personified; love of liberty and country, pleasure in domestic and family life, taste for poetry, deep and quiet gratitude for all the gifts of God." Perhaps it is because of this that her name is so deeply venerated, and her death was so truly mourned, by her people. The grief of the nation was but second to the grief of the king; and Louise, though her life was stormy and troubled, had at least the supreme content of knowing that she had gained, firmly and unalterably, the treasure of a husband's devoted love and a nation's heartiest blessing.

HERE is the heir, yonder the inheritance; here is the toil, there the rest; here the candidate, there the reward; here the faithful, there the crown of everlasting life. In proportion as we grow in excellence, so as not to be barren or unfruitful in God's service, so shall an entrance be ministered to us abundantly into the everlasting kingdom of our Lord Jesus Christ.—*Hamilton.*

THE WHITE CROSS SOCIETY.

(*Inserted at the request of the Lord Bishop of Durham.*)

THE White Cross Society took its rise in a meeting held at Bishop Auckland, under the Presidency of the Bishop of Durham, on February 14th, 1883.

The objects of the Society are threefold:—

1. To urge upon men the obligation of personal purity.
2. To raise the tone of public opinion upon questions of morality.
3. To inculcate a chivalrous respect for womanhood.

The policy of the Society is especially to influence young men of all classes, and in all conditions of life—boys at school, undergraduates at the Universities, clerks in Business Houses, soldiers and sailors, artisans, labourers in the country villages, etc. It will thus be seen that the work of the Society is definitely educational.

The method of the Society has been from the beginning not so much to create new machinery for the special work, as to utilise that which is already existing—Temperance Societies, Guilds, Bible Classes, and similar agencies. Therefore, the spread of the White Cross Society within such organisations as the Y.M.C.A., Young Men's Friendly Society, the Church of England Young Men's Society, the Church of Scotland Young Men's Guild, etc., is strongly recommended.

The diffusion of healthy literature, setting forth a high ideal of manliness, has been systematically undertaken, and more than a million of the White Cross Series have been circulated. Grants of papers for distribution have been freely made. Upwards of five thousand were given away during a general mission recently held in a large manufacturing city.

The five White Cross Obligations have been accepted as the connecting link which binds together Societies in England, Scotland, Ireland, Canada, the United States, Australia, India, Japan, and other parts of the world. Thus the spread of the same principles is secured outside our own country, and a vast moral federation is becoming an accomplished fact.

The working expenses of the Society have been defrayed up to this time by a few warm and liberal friends, who provided the necessary funds for three years. The period for which provision is already made, is fast approaching its termination, and it is now necessary to look forward to the future. The work is rapidly increasing, but it is estimated that for the next few years, a sum of £600 a year will suffice; and appeal is earnestly made for contributions, securing without delay this annual income. It is, however, thought advisable that an effort should be made to obviate the necessity of annual appeals for subscriptions by raising an Endowment Fund of (say) £20,000, which, invested, would place the Society beyond risk of pecuniary embarrassment. The Earl of Aberdeen, Lord Herschel, Lord Kinnaird, and Sir T. Fowell Buxton, have consented to act as Trustees of this Fund.

Donations and subscriptions may be sent to the Bishop of Durham, Auckland Castle, Bishop Auckland; the Lord Kinnaird, 1, Pall Mall East, London; or to Messrs. Ransome, Bouverie & Co., 1, Pall Mall East, London.

J. B. Dunelm, *President.*

Auckland Castle, Bishop Auckland.

JAPANESE ART, ANCIENT AND MODERN.

By M. F. Billington.

WHEN the history of taste in our present century comes to be written, one of the most noticeable points in it will be the comparatively sudden rise into favour which the decorative products of other lands have enjoyed. Eastern Art-work has been especially used, with the result that a distinctive style in arrangements and colouring has arisen from it.

To take the furniture of a tasteful drawing-room of an average house, one will find that scarcely any feature has not been more or less influenced by it. If means or inclination have not allowed the use of genuine Persian or Oriental rugs, the pattern of the Brussels or other European carpet will assuredly show trace of an Eastern model. The probability is that the quaint shape of the tea-table will recall Moorish design.

The chairs will be covered with chintz that is based upon Turkish embroidery devices, and the knick-knacks about the apartment will be a miscellaneous assortment of Chinese blue and white pottery in reality or imitation. Indian coloured ware will have furnished the idea for many an odd-shaped gaily tinted vase or pot, and Japanese screens and fans are distributed *ad libitum*, to say nothing of the fact that a Japanese tray will probably hold the tea-things when they arrive, and the teapot or other accessories will most likely have a touch of the same land about them.

For, strange as it seems to talk about true artistic feeling, when such elementary principles in Western art as those of perspective are completely ignored, Japanese work of this class is among the most beautiful things we can dream of. An American Commission, which has just been to Japan to report upon the art of the country, came back saying, that despite its imperfections and faults, Japanese art is the only *living* art in the world to-day, and that if Japan will only remain true to the best inspirations that are in her, she will become the acknowledged centre and leader of the fine arts in all civilized countries.

And that is not all. The Commission went even farther, and declared that painting has never reached the highest perfection of which it is capable in East or West, and that it can only do so in the future, after experiments made in Japan by the Japanese. Perhaps its most sweepingly unkind remark is that *Millet* is the only artist of recent years whose work may be said to be *almost* on a level with the great bygone race of early European and Asiatic artists.

He adds also, that many artists in all parts of the world are looking to Japan to lead the way, and that in twenty years' time, Tokio will take the place that Paris now holds as the world's art centre. This is of course an immensely exaggerated view, and Sir Frederick Leighton, P.R.A., writes that it is quite ludicrous to think that Japanese art could ever become the expression of Western artistic genius, or really satisfy Western æsthetic demands.

Japanese design may be traced to Chinese origin. It has adhered with rigid conservatism to its traditions, and has very seldom introduced originality or innovation. There is a Chinese drawing in the British Museum which dates from the twelfth century. It is by an artist named Hwui Su, and is merely of two geese by a pond. But in the quaint fashion of distanceless landscape with which we are so familiar, it is perfectly true in its fidelity to nature. The reeds, grasses, and rushes are depicted with surpassing fidelity. There is nothing European, from printing to gunpowder, from the telephone to paper making, in which the Chinese were not before hand. A respect for natural outline did not come into European art until the fifteenth century.

The art of xylography or engraving was known in Japan in the eighth century. Colour printing dates back to the seventeenth only, and is therefore comparatively modern. But another point still on which the inhabitants of the far-off land are in advance of us was in sending New Year's cards, a fashion in favour of which came in towards the close of the last century. New Year's gifts were also made, and it is amusing to read that the lacquer ware sent was often wrapped in an embroidered handkerchief of the choicest material, carried by a special messenger, whose nose and mouth even were frequently enveloped, so that no breath even should fall upon its exquisitely polished and delicate surface.

The labour laid out upon these old Japanese lacquers almost passes credence. In the first place, the wood was selected with the greatest care. The qualities demanded were hardness, closeness of grain, and readiness to take a high degree of polish. Then it underwent a lengthy and tedious process of drying, and was repeatedly rubbed with marble dust, to obviate any chance of shrinking and warping.

The cup or bowl was overlaid then with a very fine but tenacious linen, affixed with a vegetable glue. The next process was to paint it with many coats of a thin varnish termed lac, each coat being allowed several weeks to dry, and undergoing finally a careful polishing to remove the least trace of roughness. The pattern or design is the next step.

This is furnished by some artist who is famed for his prowess, and is drawn on in freehand in gold. Then a coating of lac is passed over, which completely hides it for the time being. A long drying process takes place, and the next step is the tedious one of polishing it with charcoal till the design is again visible, and over this the pattern is again drawn in gold. A beautifully transparent lacquer varnish is added again and again for perhaps six or eight times, and at last the workman is satisfied.

It very often took six months to complete quite a small article, while for a large one fully three times as long was necessary. On some of the old swords the patterns are marvellous. Mr. Marcus Huish, who has a wonderful collection of this work, bought for 15s. a sword which, he says, is thus decorated: "The pattern upon its upper surface and sides is a Greek fret in gold wire beaten into iron, which is subsequently damascened. It measures about an inch in length by half an inch in breadth; and I have had the curiosity to count the lines of pattern upon this half square inch—they are no less than 280. Each one is mathematically true; and the whole is finished to such a pitch of perfection that no inequality can be detected on its polished surface. To plant this wire so firmly that it has not given in a single place, very fine inverted V-shaped furrows have had to be driven into the iron foundation, and into them the wire has been beaten. This must have required a firmness and steadiness of hand, and a clearness of eyesight, little short of the marvellous."

Regarding modern Japanese art, it is to be feared that our slipshod conditions of work are making themselves felt there. Mr. Huish describes that even the sweating system is not without its Japanese imitation; and the demand for such things as screens from Europe exacts the extremity of absurdity and the grotesque. Moreover, cheapness is a paramount consideration.

The agent in Yokohama is depicted as replying to the objection that they cannot properly be made at such low cost, "But they must! They can have but one coat of lac upon the framework instead of three, and the gold thread must contain an even larger interior of cotton than the last, and of course the men must be paid less."

Gold brocades suffer, and those which are professedly the heaviest and richest are often the most weighted with base alloys. Lacquers that want months to finish are ordered to be ready in a fortnight; and Western machinery is cutting out by thousands to stereotype patterns the beautiful metal objects that always of old had the unique *cachet*. that handwork alone gives.

Trade will suffer, and in modern times we know how difficult it is for a country that once loses this to recover it. The one branch that it is said has not yet become demoralized is that of ivory carving and inlaying.

In the imitation and adaptation of Japanese ideas, it is curious that no originality-hunter has ever seized upon the Japanese idea of a picture-frame. This is either a simple affair of lacquered bamboo rods or of elaborate carving; but it differs from our own in the fact that the picture is never placed in the middle. It may be to the top, bottom, sides, or corners, but is never put mathematically straight!

The theory regarding it is that you look at, say a group of people, down a street, or a landscape through a window or between two hills, but it is not exactly in the centre of anything! So that this is one of their queer concessions to realism that always amuse an European mind. An artist of the name of Mempes has opened an exhibition of scenes of Japanese life and country, in one of the Bond Street galleries; and he tells me that he has had all his works framed in Japan by native workmen.

There, ye ingenious young ladies and gentlemen, does not the above account give you any ideas for decorative novelties? But seriously, why not try the effect?

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,

"Kenneth McAlpine," etc., etc.

"'Hush!' cried Godfrey, stretching out his hand."

CHAPTER XLII.

JACK'S WOOING.

THERE was a degree less of cheerfulness in the men's tent after Dresky had gone, for everybody had become fond of him. With his droll ways, and his droller English, he was quite a character, and all hands believed in his sincerity.

So, when Chips said, as the men were gathering up the shower of snow-shoes they had flung after the sledge for luck, "God speed him, for he is a right true-hearted little fellow, savage and all though he be," there was not a single dissentient voice.

But it was no time now for regrets of any kind, nor for sentiment either. Dresky was gone, and Captain Boyd and his officers felt certain in their own minds that he would do all in his power to reach the Pacific shores; and that might, or might not, be to reach the ears of civilization.

Nat Graves, senior, was an American of wealth, and, like many such, he knew the value of money, *i.e.*, not to hoard, but to use aright. He had in this case offered enough to whomsoever it might concern, to reward them for sending to the assistance of the expedition. If Dresky found Americans, patriotism would lend them wings; if Russians—well, they would be paid.

* * * *

Early summer had come to the land of Alaska ere, through toils and difficulties innumerable, the people of the *Oona*, with their Innuit guides, found themselves not far from one of the upper reaches of the great Yukon.

Summer had come quickly, as it always does in this region of wildernesses, and it brought with it sunshine to the valleys, and buds to the trees; it clad the straths and glens and flats around the broad, lonesome river with a profusion of wild flowers; it breathed over the lakes in warm south winds, and the ice fled, and the waters looked like inland seas. But it had brought with it danger as well, and the last fifty miles of the journey had been a weary, anxious drag.

The softening of the snow caused the first delay. Men had to wade over their knees in it; dogs floundered and fell, and their progress was no longer a cheerful trot, but a sadly unwilling walk. Then things got worse, and a general halt had to be made. The south-west wind increased to a gale, uprooting the lofty pines that clad the hills, melting the snow on their sides, and bringing down the streams in roaring spates. Rivers appeared where no rivers had been before, and lakes in flats that had been fields and moors.

Sometimes the streams came down through the glens in lofty bores, that seemed to carry everything before them. Nothing could exceed the fury and irresistible force of such a rush of water. Boulders big enough to be called rocks, logs of wood, and tree trunks came rolling and dashing and roaring, in the tumbling, tossing, foaming cataract, while the ground, for a good mile distant, was shaken as if by an earthquake.

It was not only the growing forests that suffered by these floods and spates, for trees which looked as if they had been long buried, were unearthed, and helped to swell the seething chaos. Once, during a spate, Desmond and Jack saw a sight which made them rub their eyes and stare in wonder.

It was that of a whole island moving slowly down stream. Trees and bushes and grass were growing thereon, and bewildered bears moving uneasily up and down on it. They found out afterwards that there had been a gigantic land-slip in a ravine farther up stream, and this island was but a part of it.

Well, they had reached the Yukon, and here Captain Boyd and his officers came to the conclusion that it would be better to rest for a while. Several of the natives had died by the road, from over exposure, and no less than three of the crew of the *Oonalaska* had also gone to a Land where there is no more sorrow or toil. These deaths had naturally increased the gloom that appeared for some time past to have been settling down on all hearts.

But now they were in camp again, the sick grew rapidly well, and the hale and hearty regained courage.

The place where the camp was pitched was on a piece of table-land, high over the beautiful island-studded river. Behind it was a wooded glen or gorge, and far away on the horizon towered rugged mountains, clad to their summits in snow. The picture was altogether a pretty one; the waving pine woods, now darkly green, with their summer foliage, the dazzling whiteness of the background of hills, and far above, the blue of the sky.

There was plenty of wood about, to build rude huts, and everything that could add to the comfort of the ladies was done by willing hands. Of luxury, alas! there was none now.

But fresh provisions, thanks to the guns of Godfrey and the others, were still abundant, while Bob-a-link, the Aleut, and the Innuits vied with each other in luring the fish from lake and stream. Many were the excursions thus planned. Often Jack Silk and four or five of the Innuits would seek fresh hunting-grounds. By lashing two or three of the bidarkas together, a boat was made that would accommodate the whole party, and it was seldom they returned from such an expedition without well-filled game-bags.

Adventures with bears were by no means rare. One day Jack and Godfrey came upon Bruin at play with her cubs. "Hush!" cried Godfrey, stretching out his hand to stop Jack firmly. It was a moment of breathless suspense, and then they breathed freely as Bruin and the cubs shambled away. The young men also often saw wolves in the woods; while, when the camp was all still, the melancholy yapping howls of these animals used to be heard in the thickets and glens. But they desired no closer acquaintance with Robin Hood and Little John.

How was all this to end? The summer in these regions is not a long one; autumn comes on sharp, dark, and gloomy. It would be impossible to spend the winter here, and so it was resolved that, after waiting for a month, to thoroughly recruit the health of all hands, the journey should be resumed.

The question of embarking in boats or a raft, and risking the voyage down the broad, rolling river, had been mooted and discussed, but was thought impracticable. The Innuits knew the river well, and the description they gave of the fearful rapids and the innumerable cataracts between the upper reaches of the Yukon and the ocean, was not a very cheering one. Chips, on the other hand, knew too much of the muddy flats around the ocean-mouth of the river to make him very anxious to embark on any such wild adventure.

No; the land journey appeared to offer far the greatest chance of success.

It was very pleasant now, when the weather was warm and dry, to roam away over the hills and through the woods. The ladies found it so, and it was none the less pleasant because there was a spice of danger attached to it. Bears or wolves *might* attack them. Katie felt sure—and said so—that if a bear met her, she should be frightened to death.

But Jack kept by her side, and, although he could not shoot so well as Godfrey, somehow she felt safe, although she gave him most strict injunctions always to carry his rifle with "the open end of it pointed upwards."

One day these two got lost in the forest, and a very interesting pair of "babes in the wood" they looked. The sun had been unusually bright and warm. There were birds singing in the trees. There were bees

and butterflies about, and everywhere a profusion of the most charming wild flowers.

It was gathering these wild flowers, I say, that led to their getting lost. But I must state more particularly the outs and the ins of the case. It happened, then, that Jack's eye alighted on a patch of most captivating forget-me-nots. They grew in a kind of bog, with grass-covered sods here and there, beautifully arranged for Jack to tread on. So he laid his gun carefully on the bank, "with the open end pointing upwards," and strode in for them. He only sank once, and that was only with one leg.

What did Jack care? There stood Katie on the brink of this hob-goblin bog, looking more sweetly pretty than ever he had seen any girl look in the world before. And she was filled with anxiety for his safety, too. I do not hesitate to say that this made him stop longer than he otherwise would have done. He made at last a very tiny bouquet of the best of the flowers; then, having no excuse for stopping longer in the marsh, he started to come to bank. It was just when stepping up that he missed his footing and had his little accident. Katie flushed and screamed, and held out a hand to him.

Jack took the little gloved digits in his, and—he did not let them go for some time.

Now all love-making is poetry, if it be true love, and though Jack was not a poet, love for once in a way lent him a Pegasus—and it was a winged one, too. He was as eloquent now as he had been long ago on that coral isle of the sunny south.

But it was not acting this time, and he told Katie it had not been acting then. She stood silent, with averted head, when he paused. Then Jack added,—

"Oh! Katie, you must forgive me. I've been caught aback, as it were, by my feelings—caught aback, Katie. No, no; how *could* I expect that you would care to go through life in convoy with such a rough old plank as I am?"

He had turned away, sadly and disconsolately.

"Jack!"

Jack Silk looked round. Their eyes met, and next moment Katie's sweet, suffused face was on his shoulder.

Soon after this Desmond found the "babes in the wood," wandering hand in hand over the green moss, but going in quite the wrong direction.

"Why, Miss Katie! Why, Jack; where are you going? What are you doing?"

"Why, looking for ourselves, of course," said Jack. "Fact is, Dess, we've been lost, and if you had not found us, the robins would have had to cover up the pair of us with leaves. But what ails you, Dess, my boy?"

"By lashing two or three of the bidarkas together, a boat was made that would accommodate the whole party."

"I've bad news to give you. Poor Miss Graves has been taken ill."

"What! our dear old ship's mother?" said Jack.

"Come, Jack! come quickly," cried Katie.

And back to camp they hurried; no thoughts now in their breasts save for the friend, the cousin, the mother; even love itself seemed drowned in grief.

It did seem hard on poor Jack Silk, that this grief should come *now* to cloud his happiness. They hurried back to camp. Captain Boyd met them near the door of the big log-hut. He was looking more serious and downcast than any of his shipmates had ever seen him look before.

"She has had a fainting fit of some kind," said the captain. "Yes, quite insensible. In a deep sleep, apparently. You can go to her, Baby. You will find Nat there."

All that evening, and all the next day, the ship's mother hovered 'twixt life and death, rallying just a little at times, and even attempting to talk.

It made matters much worse that none could divine the nature of her malady. What a comfort now, had Dr. McPhee lived! How every one would have hung on his words, and on his every look and movement. As it was, those who attended her could but do their best, and be prepared for the worst.

Now, sorrows seldom come singly. And here is a proof of it.

About the second day of Miss Graves's illness, and in the evening (if evening it could be called, when the sun did not set), Bob-a-link and a party of Innuits, who had been high up the river, and away to the east, on a hunting and fishing expedition, came into camp with alarming news.

A thousand Indians were on the war-path. They had met and fought with them; and though their guns and rifles had told to advantage against the bows and arrows of these savages, retreat had been deemed the best policy. They had taken to the river, and done their very wiliest to escape and leave no trail.

(*Continued—page* 472.)

ON A GOOD START.

By Edward Butler.

THREE men started from Leeds to go to York assizes. One got into the wrong train, and was bowled away to Halifax. The second got to York, but found he had left all his papers behind him. Only the third made a successful trip. Whenever we journey, it is clearly expedient that we know whither we intend to go, how we purpose to get there, and what we shall want, both by the way and on our arrival.

You, dear lad, on whom I have my eye, are just meditating a start in life. School-days are over. The bell tinkles you in no more to desk and lessons. You have already just a twinge of that sentiment about the past, of which we elders have sometimes a little more than we can bear with dry eyes. And you begin to take stock of yourself and your requirements. You "realise," as people phrase it, that your school-life has furnished you with the mental tools, implements, weapons, with the ability to use them, on which you now have to rely. The significance and use of the discipline you have gone through is dawning upon you. You may wish you had seen it all as clearly a little earlier; but, like a brave youth, you brush aside nervous fears, and "put a cheerful courage on." Now then; whither are you going? What is your goal? A successful manhood, you say. And what do you mean by success? You reply—ability to gain one's own livelihood by some honest industry; and, perhaps, pleasant but unspoken thoughts make your cheek rosier, as you hope some day to be able to undertake the sweet burden of another life beside your own. Good, so far. There are, I trust, those about you who look on you with eyes as loving as they are critical and discriminating. They will help you to the important decision as to what special form of industry you are most fit for. "God has a plan for every man." A resolute young man may achieve fair success in almost any walk of life; but it is a great waste of faculty to set one who is born with a mechanical bent to a lawyer's books, or a shrewd mathematician to the work of a backwoodsman, or one who has the instincts of a merchant to the high function of a preacher. But as soon as you have selected your work, having made that selection, let us hope, with the aid of the best earthly advice you can get, and with eyes reverently turned to Him who "knoweth the way that we take," and who "directeth our steps," then I counsel you to regard the conclusion as your "calling" or vocation. That word "calling" is a solemn word. It implies a caller, and you may recognise the voice as coming from heaven.

You have, I will now suppose, discovered your calling. How shall you proceed to make it a success? I am afraid I can say nothing very new on that head. If I speak of industry, diligent application, rectitude, veracity, faithfulness, I shall lose your attention, because you have heard of these so often. And yet it is just the old well-worn truths that are the most valuable. And, indeed, these old truths about the secret of success are like the mercies of God, "new every morning, and fresh every evening." Let me, however, essay a word or two to try if I can brighten up the superscription on these old coins, rubbed by the hands of a thousand generations.

"Diligence" is a word, the root of which is "choice," and it is closely connected with "love." To love your work is a tremendous impetus towards the vigorous doing of it. There are miserable people who have not discovered the joy of work. We will only take a pitying glance at that mournful, pale-blooded crew, and pass on. You, I am sure, love work. It is infinitely more exhilarating than "pleasure," though you must sandwich a little recreation with it, to bring out the full flavour. But it is not only work in general that you must love; you must develop affection for your own special work. You remember the tallow-candle maker who sold his business, and retired on his fortune, but who, in the agreement of sale, stipulated that he might come in on melting-days, to enjoy the odour of the tallow-fat. There's true love for you! Imitate it. Every hour you spend with devotion upon your work will make you love it more; partly because of that law of our nature which arouses emotional interest in what we grapple with persistently, and partly because practice in work brings faculty in its performance, and the exercise of faculty is the consciousness of life; so that growing power in it is growing life, and all life is joy. Struggle through the surf of drudgery to the blessed deep sea of conscious power.

On the other side of the old coin lie the symbols of the moral quality of truth and good faith. Now here I labour under a temptation to tell you what is perfectly true, and will nevertheless do you no good to know, viz., that these qualities have a market value. I think of Hiram Power's piteously beautiful statue of the Greek slave; so tenderly sweet, and for sale! Dear boy, try to hold on to nobleness of truth and good faith. No man ever yet securely held these treasures who held them for their "market value," great as it is. The hand that hotly clutches them for what they will fetch in £ s. d. will always, sooner or later, be dexterously rapped on the knuckles by the devil, and made to drop them. Hold them as the briar holds the rose-tree shoot that has been grafted into it, and united with its life and love, and you are then the safe owner.

In starting life, remember also another thing. You have heard often enough that knowledge is power; I will not enlarge on that undeniable truth; but purity is also power. Tennyson says of Sir Galahad, the purest of Arthur's knights:—

> "His strength was as the strength of ten,
> Because his heart was pure."

Stern self-control in youth is the parent of a vigorous and joyous maturity, and a green old age, bearing fruit to the last. Cleave to purity of life like a bull-dog, or an oyster, or a mussel, or a barnacle—like anything that sticks, and cannot be allured to let go. The fire of temptation will be hot; but hold on! The prize is a pearl of untold value: it is the mastery of yourself, the kingdom of your own heart, the Holy Land of your own soul, free from the Hivites, and Hittites, and Girgashites, and Jebusites; bodily strength in the bud, conserved for flower and fruit; heavenly and unperishable gems of virtue, whose home is amongst the undying things of eternity; priceless crystals, slowly but surely formed in the long patience of your manly young hearts, as diamonds in craters of long-extinct volcanoes.

Remember the well-known story in the "Arabian Nights" of the youth who determined to reach the top of the mountain where dwelt the wonderful bird and the golden water. If he looked back as he toiled up, he, like others who had gone before him, would be turned into a black stone by the wayside. What voices he heard!—terrifying voices, alluring voices; but he marched on without turning his head, and gained the prize; and on coming down the mountain, there were also given to him the lives of the poor black-stone failures. So do you strain up the mount of self-conquest! Ah! how I think of the voices you will hear, persuading you to "ungird the loins of your mind"; voices so sweet and soft, so full of dreamy promise of immediate delight. Will they prevail? Will the bird of heavenly melody, the golden water of life, never be reached, and you yourself locked in the black uselessness of a pleasure-seeking, self-centred life?

To combat the siren voices of your peril, you can carry other music within you. There is the music of a mother's prayers and loving entreaties. Memory, if worked, will always take her harp and fill the ear of your spirit with those melodies of love and faith and hope. And in them, and through them, above them, and yet all the clearer for them, shall you hear the bells of heaven, the multitudinous triumphant songs and harpings of those who have overcome; and in the sudden reverent, ecstatic silence of voices and harps, the one ineffable Voice, welcoming yet another warrior, whose fight is fought and won, —"Well done, good and faithful servant!"

THE HARBINGER OF SPRING.

By Capt. J. J. JOHNSTON.

MOST of us, if asked what we know about the natural history of the cuckoo, though we might not answer like the Board-School pupil, "Please, sir, 'e don't lay 'is own eggs 'isself, sir," would reply that the bird neither builds a nest, nor hatches its own eggs ; and so far we should be fairly correct—and only fairly ; for Barrington, in his Memoir, gives three authenticated instances of cuckoos in this country rearing their own young in nests constructed by themselves ; and Darwin, in his "Zoonomia," also cites an instance of one in Derbyshire.

But there are other peculiarities attaching to the cuckoo, that are not so generally known, and which we shall mention, after having tried to settle the question that has puzzled so many learned men from Aristotle downwards, viz., why it is that this bird, as a general rule, deputes the incubation and rearing of its young to other members of the feathered tribe—a seemingly unnatural disposition, which would justly be accounted cruel in a rational creature, but which, upon due examination, we shall find to be a consummate economy in her case, and a plain proof of the infinite wisdom of her Creator ; and also, that this odd action proceeds not from any principle of carelessness or cruelty, but that her conduct therein is founded on solid reason. Some old authors have attributed it to the peculiar formation of the bird, that, owing to its capacious stomach with thin covering, the pressure upon it prevents incubation ; but they did not consider that many birds which incubate have stomachs analogous to the cuckoo—the owl, for example. The two following extracts, from some charming observations on the "Natural History of the Cuckoo," by Dr. Jenner, published by the Royal Society in their Philosophical Transactions for 1788, give a fatal blow to this theory :—

"In the summer of the year 1786, I saw, in the nest of a hedge-sparrow, a cuckoo, which, from its size and plumage, appeared to be nearly a fortnight old. On lifting it up, I observed two hedge-sparrow's eggs under it. At first I supposed them part of the number which had been sat upon by the hedge-sparrow with the cuckoo's egg, and that they had become addled, as birds frequently suffer such eggs to remain in their nests with their young ; but on breaking one of them, I found it contained a living fœtus, so that of course these eggs must have been laid several days after the cuckoo was hatched, as the latter now completely filled up the nest, and was, by this peculiar incident, performing the part of a sitting-bird.

"Having under my inspection, in another hedge-sparrow's nest, a young cuckoo, about the same size as the former, I procured two wag-tail's eggs, which had been sat upon a few days, and had them immediately conveyed to the spot, and placed under the cuckoo. On the ninth day after the eggs had been in this situation, the person appointed to superintend the nest came to inform me that the wag-tails were hatched. On going to the place, and examining the nest, I found nothing in it but the cuckoo and the shells of the wag-tail's eggs." The young birds had without doubt been ousted by the young cuckoo,—a point on which we shall have more to say further on.

This peculiarity, then, is not attributable to the anatomy of the cuckoo, so we must look elsewhere, and the following really appears to contain the solution :—"The short residence this bird is allowed to make in the country where it is destined to propagate its species, and the call that nature has upon it, during that short residence, to produce a numerous progeny." The cuckoo's annual visit to this country lasts from the middle of April to the early part of July.

"Soon as the daisy decks the green,
Thy certain voice we hear ;
Hast thou a star to guide thy path,
Or mark the rolling year ?

"Soon as the pea puts on the bloom,
Thou fliest the vocal vale ;
An annual guest in other lands,
Another spring to hail."

Or, as the old doggerel runs,—

"In April
Come he will,
In July
He prepares to fly,"—

about twelve weeks in all, making the shortest stay with us of any bird of passage ; and when we take into consideration that its eggs are not laid till about the middle of May, that a fortnight is then required for hatching, that the young birds generally continue three weeks in the nest before they fly, and that the foster-parents feed them for more than five weeks after this, we find that not a single nestling would be fit to provide for itself before its parent would be instinctively directed to seek a new residence, and be thus compelled to abandon its young.

But why does the cuckoo make choice of the nests of *small* birds to drop her eggs into (it is still a moot point whether the egg is "laid," or placed in the nest, after being dropped elsewhere, with the aid of the beak or claws), that of the hedge-sparrow in particular, the water wag-tail, titlark, yellow hammer, and green linnet ?—Buffon enumerates at least twenty. The circumstance of the young cuckoo being destined by nature, from the time it is two or three days till about twelve days old, to throw out of the nest the legitimate offspring, accounts for this ; for were the old bird to deposit them in the nest of a larger bird, the young cuckoo would probably find an insurmountable difficulty in ejecting its fellow-lodgers. In this propensity of the young bird we see a wise provision of nature, for it would be impossible for the little step-parents, after a certain period, to find food enough for their own young, as well as for the cuckoo, nor would the nest be large enough to hold them all, verifying, though after an odd manner, "the life of one animal is the death of another."

It is not often that two cuckoo's eggs are deposited in the same nest ; but a couple of instances are reported by Dr. Jenner, of which one runs interestingly thus :—

"June 27, 1787. Two cuckoos and a hedge-sparrow were hatched in the same nest this morning ; one hedge-sparrow's egg remained unhatched. In a few hours after, a contest began between the cuckoos for the possession of the nest, which continued undetermined till the next afternoon, when one of them, which was somewhat superior in size, turned out the other, together with the young hedge-sparrow and the unhatched egg. This contest was very remarkable. The combatants alternately appeared to have the advantage, as each carried the other several times nearly to the top of the nest, and then sank down again, oppressed by the weight of its burden, till at length, after various efforts, the strongest prevailed, and was afterwards brought up by the hedge-sparrows."

There is little doubt, since one of the young ones must inevitably perish, that the eggs were deposited by different birds.

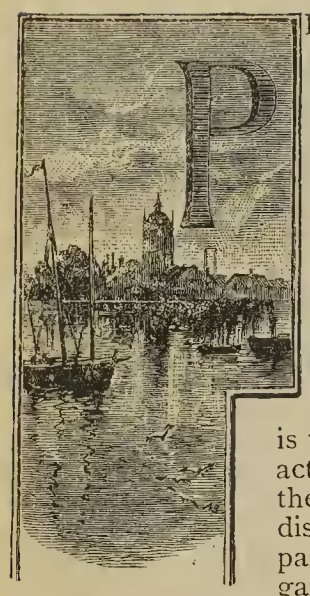
The next singularity we shall notice is that, unlike the generality of birds, cuckoos do not mate. It is no uncommon thing to see a female accompanied by two, or even three, males, all courting and making love to her at the same time.

There are certain uncommon points, too, about the cuckoo's egg. The smallness of it in proportion to the size of the bird is one. So great is this disproportion, that it is in general smaller than that of the house-sparrow, whereas the difference in the size of the two birds is nearly as five to one. The eggs produced by the same bird at different times vary much in size, as much as from 43 to 55 grains in weight. Their colour, too, is extremely variable ; some much resembling those of the house-sparrow, both in ground and pencilling, others, those of the yellow-hammer, while others again are covered with light brown spots.

In the stomach of cuckoos masses of hair are almost invariably found, supposed to be the undigested remains of their favourite food, the hairy caterpillar ; in those of the young, it is found curiously rolled up into a ball, from the size of a pea to that of a nutmeg, and must evidently have been extracted from the lining of the nests in which they were reared.

There are almost endless varieties of this bird scattered over the globe, the one common to the British Isles being the *Cuculus canorus*. In Jamaica, the *Cuculus vetula* is a constant resident, like our robin, and of such a gentle disposition as to suffer the negro children to catch it with their hands ; and is said to be unusually noisy before rain, whence it has obtained the sobriquet of rain-bird. Another species, the *Cuculus honoratus*, that inhabits Malabar, is a great enemy to snakes and other noxious reptiles, and is in consequence held sacred by the natives.

The *Cuculus indicator*, or Honey-cuckoo, feeds, as its name implies, principally on honey, and by its note, when in quest of this favourite food, points out to the Hottentots and Dutch settlers at the Cape the hiding-places in the trees and rocks where the wild bees deposit their stores. The male, like that of the ostrich, occasionally relieves the female during the tedious process of incubation.



The cuckoo has given its name to many things—the cuckoo-flowers in botany (*Cardamine pratensis* and *Lychnis flos-cuculi*) ; the cuckoo-lambs in rural economy, a name applied to those that are yeaned in April, or what is termed the cuckoo-time ; and last, but not least, the cuckoo-spit, that frothy substance which we observe on plants, and which is nothing more than the exudation of an insect.

It is only the note of the male cuckoo which is so familiar to us, few being acquainted with that of the female, which nearly resembles that of the dab-chick.

Cuckoos can be brought up tame, like jackdaws. When fat, they are said to be as good eating as the land-rail. They were a favourite food of the ancient Romans, and Pliny declares that there is no bird to be at all compared with them for delicacy.

THE HEART: OR, SINCERITY IN FEELING.

By the Rev. J. Hiles Hitchens, D.D., F.S.Sc.,
Author of "*Ecce Veritas*," "The Young Men of Scripture," etc.

PROBABLY we all know that what the metropolis is to this country; what the Bank of England is to the trade and commerce of the nation; what the reservoir is to the hundreds and thousands of families needing water — that the heart is to the human body. It is the source of life. Its action is indispensable to the minutest and most distant extremity. All parts of the physical organism are dependent upon the regularity with which its functions are performed. A man may exist without limbs, without sight, without speech, without hearing, but not a moment without a heart.

This marvellously constructed organ is of a round or conical shape, with the broad part uppermost. It has two sides, the right and the left, and these contain hollow cavities, the upper denominated an *auricle*, the lower a *ventricle*. Two large veins—one from the upper part of the body, the other from the lower part—enter the right auricle and convey the blood which has just returned from the tour of the isle of man. From this right auricle it is forced by a sudden contraction of the two sides of the cavity into the right ventricle. By this right ventricle contracting, it is driven by the pulmonary arteries into the lungs; passing through the lungs it is received by the *left* auricle of the heart; thence it is sent to the adjoining ventricle, and by an energetic contraction it is forced on its vitalizing errand to every part of the body.

Paley, in his "Natural Theology," well says, "An anatomist who understands the structure of the heart, might say beforehand that it would play; but he would expect, I think, from the complexity of its mechanism, and the delicacy of many of its parts, that it should always be liable to derangement, or that it would soon work itself out. Yet shall this wonderful machine go, night and day, for eighty years together, at the rate of a hundred thousand strokes every twenty-four hours, having at every stroke a great resistance to overcome; and shall continue this action for this length of time without disorder and without weariness!"

It is said that each ventricle will contain at the least one ounce of blood. If, then, we estimate that the heart contracts, at the lowest number, four thousand times in each hour, then there must pass through your heart four thousand ounces of blood every sixty minutes—that is 350 pounds each hour. And if it be true that the amount of blood in the average human body be about twenty-five pounds, then it follows that about once every four minutes the amount of blood in your body passes home to and out from this great seat of life. According to the state of the blood will be the condition of the entire frame, strong or weak, healthful or diseased, painless or full of weariness and woe. If there be derangement at the centre, it will be felt at the extreme circumference.

But the heart has been referred to in Holy Writ in a moral sense. It is used to signify the seat of understanding, affection, sorrow, and joy. It is indeed employed to denote the entire man, with all his inclinations and antipathies. Nor need we marvel at this, seeing that the heart is so indispensable to the physical organism, the very spring of our daily vitality. In both a physical and moral sense the words of Solomon are true: "Keep thy heart with all diligence: for out of it are the issues of life." When a man lacks understanding and feeling, it is not uncommon to say he is "without heart." That is a Scriptural phrase, for in Hosea we read: "Ephraim is a silly dove, without heart." When a person becomes impressed with what his companion says to him, he is said to "take it to heart." That, too, is derived from Scripture, for in Jeremiah we read: "The whole land is made desolate, because no man layeth it to heart." When an individual becomes generous and confiding, we are wont to say that he "opened his heart." Concerning Lydia, we know it is written, "whose heart the Lord opened."

Very many and diversified are the adjectival classifications of hearts in Holy Writ. There is the "honest and good heart," the "understanding heart," the "willing heart," the "new," the "true," the "liberal," the "merry," the "broken," the "tender," the "proud," the "froward," the "evil," the "double," the "perverse," the "rebellious," the "stony," the 'hard," the "impenitent," the "uncircumcised," the "despiteful" heart. We read of the heart "fainting," being "discouraged," "trembling," being "astonished," "melting," "waxing gross," "failing," and being turned from one line of action to another. All of these phrases suggest that the inspired scribes thought of the heart of man as representing the man altogether—that they believed that as a man is at heart, so is he. Hence the Divine Teacher Himself struck the same key-note when He said, "Out of the heart proceed evil thoughts, murders, fornications, adulteries, thefts, false witness, blasphemies—the things which defile a man."

It becomes, then, of the first importance that we should have our hearts right, that we should have them in health—throbbing regularly with sincere affection in the heavenward direction, and producing the fruits of truth and goodness in all our members.

Naturally the heart is dead and indifferent to all goodness. "The imaginations of man's heart are evil from his youth." Coming into the world with the seeds of evil in his constitution, they very quickly produce evil fruits. Solomon says, "Foolishness," by which he means "sinfulness, is bound up in the heart of a child." We cannot have been long in the company of little children, we cannot have watched them in their nursery games, or in their home lives, without finding unmistakable proof of the natural alienation of the heart from God and goodness. Before much external influence either for good or evil has been brought to bear upon those children, we must have discovered petty jealousies, envyings, moroseness, and anger regnant in their infantile hearts. Just what we are painfully called to witness every hour in this busy world amongst the men and women of society, we discern in miniature in the little ones about our knees. Surely this is evidence that the heart itself is degenerate and depraved, that we are born in sin and shapen in iniquity, and that the heart is deceitful above all things and desperately wicked.

Then, from the infant, look out upon the world at large. Are not the Apostle's words forced upon our minds, when he says, "There is none righteous, no not one"? By a strong repetition of terms, Paul teaches the absolute universality of guilt in the heart of man. Go where you may—in all parallels of latitude, in all countries, in all circumstances, among men of all languages, and all grades, and all habits — among the scanty tribes of some distant isle, and among the cultured peoples of our civilized land, where ignorance sways its dark sceptre and where refinement conceals crime, and you shall discover sickening, saddening indications of the corruption which clings to the very core of human nature.

But the heart may be regenerated. The condition of natural death, darkness, and deformity may be removed. The understanding may receive light, the will may be controlled, the affections may be purified, and the whole man may thus be transformed into the holy image of the perfect God. Hence we have the gracious promise of the Infinite One—a promise which in our naturally degenerate condition should beget unspeakable gladness: "A new heart will I give you, and a new spirit will I put within you; and I will take away the heart of stone out of your flesh, and I will give you a heart of flesh." The late William Jay, of Bath, well illustrated the matter when he said, "Take a stone, feel it, how cold! Strike it, it resists the blow! Lay upon it a burden, it feels no pressure. Apply a seal to it, it receives no impression! Such were our hearts once; thus cold, senseless, unyielding, impenetrable, and unsusceptible." Such, possibly, is the condition of the heart of some reader of this paper. But God *can*, and, if you ask, will take away the heart of stone and give a new heart; that is, He will renew your spirit, cause old things to pass away, and all things to become new.

This is something far beyond mere reformation. The glow-worm's glimmer is not less in comparison with the mid-day sun than is reformation in comparison with regeneration of heart. It is possible to have very clean hands whilst there is within a very foul heart. There may be the most scrupulous observance of the letter of the law whilst the spirit is obnoxious to our heart. You may quiet your raging passions, and keep a firm rein upon your unruly affections, without having one spark of love for Christ. The snake is none the less a snake when he changes his skin. What is required of man is the marvellous change which is figured by the caterpillar when it dies, and from its body rises the beautiful butterfly. The renovation needed is that of the heart, not merely that of the habit. When this takes place, the understanding is illumined. The man sees as he never saw before, the extent and spirituality of the law of heaven, the intense evil and injury of sin, the character, perfections, and government of God, the simple plan of eternal salvation through Christ. His mental eye is opened to discern

beauties, solemnities, and horrors which before he never saw. His affections are purified. His stubborn will is subdued. His conscience is rendered tender and susceptible. And as a result, the heart is filled with new joys, new hopes, new prospects. The past is forgiven, the present is gilded with the serene smile of Immanuel, and the future, though hidden, has no terrors.

Manifestly this is a change too vast, too thorough, too prodigious, and too delicate for mere man to effect. God only can bring a clean thing out of an unclean. If any man dare affirm that *he* can, by any process, regenerate a fellow man's heart, he is an impostor, an antichrist. When the late Rev. Dr. Boaz was in India, a poor Hindoo youth frequently followed him with the earnest entreaty that the missionary would make him a Christian. "It is impossible, my dear boy," said Dr. Boaz. "It is possible only through the Lord Jesus Christ; pray to Him." "How well I remember," writes the missionary, "the sweet voice and sweet face of that boy, when he soon after came home and said, 'The Lord Jesus Christ has come and taken His place in my heart. I prayed and said, "O Lord Jesus Christ, if you please, make me a Christian!" and He was so kind that He came down from heaven, and has lived in my heart ever since.'" In the same simple manner may we give our hearts to the Lord. You cannot make or repeal the laws of our country, but you can petition the Queen and Parliament for the object you desire. As an invalid you cannot rise from your couch, but you can solicit aid from the strong arm of your attendant. You are unable to construct a plant like that which ornaments your conservatory, the leaves and petals of which show "some touch in freckle, streak, and stain, of God's unrivalled pencil"; but you can sow the seed, and water, and watch the tender flower. So, though—

> "The transformation of apostate man
> From fool to wise, from earthly to Divine,
> Is work for Him who made him;"

yet you can covet and eagerly call for the exercise of Divine energy. This is your work, not to rely on valueless efforts toward self-amendment, not to place a jot of confidence in adherence to Pharisaic forms, not to think of merit as the result of rigid morality, but in humility to besiege the throne of grace that God may, for Christ's sake, bestow upon you a new heart.

A celebrated master among the Jews asked his pupils what was the best thing for man to covet. One said nothing could equal a good *eye*, meaning thereby a liberal disposition; another said, a good *companion* is the best thing in the world; a third said a good *neighbour;* a fourth, a *wise man;* but at last came Eleazer, and he decided that a *good heart* was best of all. "True," said the master; "thou hast comprehended in two words all that the rest have said. For he that hath a good heart will be both contented, and moreover, a good companion, and a good neighbour; and also, he will easily see what is fit to be done by him."

So we say, in concluding this brief paper, above all things, and before all things, seek sincerity and uprightness of heart.

TO A BRIDE.

By T. H. Engall.

1.

MISTRESS of a new-born home,
Queen of a new founded state,
Standing now with heart elate,
Since thy crowning day has come;
'Midst the joys that round thee shine,
'Midst the wishes that entwine,
Spurn not this poor song of mine.

2.

Smiles and tears for mastery press
At thy coronation throne,
Smiles that God will not disown,
Tears not born of bitterness.
Honour looks from manly eyes,
Love that fears no sacrifice,
Love that never fades nor dies.

3.

God be with thee in thy life,
In thy smiles, and in thy tears,
In thy mingled hopes and fears;
God be with thee, sweet young wife.
God be with thee, God be guide
All thy future path beside,
Since He blessed thee when a bride.

4.

Fear not thou to mount thy throne;
Double is the throne that's set,
And thy king will not forget
Her whom God has made His own.
Listen! "God be in thy life,
Smile and shadow, rest and strife,
God be with thee, dearest wife."

5.

Listen! "Christ, in Galilee,
Thou didst bless the marriage feast;
Though my kingdom be earth's least,
Deign to tarry, Lord, with me;
Lord, we wait Thy face to greet."
Comes the answer, strangely sweet,
"It is I, not ye, that wait."

"CAN YOU UNDO?"

A WOUNDED soldier lay in a hospital ward, and a godly minister who waited on the sick and dying came to his bedside, to offer him any help within his power.

"Can I do anything for you, my poor friend?"

The soldier lay sternly silent, and refused to speak. At last the minister left him, but some hours afterwards returned to his bedside with the old question,—

"Can I do anything for you?"

The man was silent still.

Night's shadow drew closely in round the hospital; the dim, uncertain light of flickering oil lamps shone here and there in the wards, silent save for the sad moaning of the wounded men. It was known that the silent soldier had not long to live. Again the faithful chaplain stood beside the bed and asked:

"Is there nothing that I can do?"

At last the soldier broke silence, and in a voice of agony, asked,—

"Can you *undo?*"

"No," said the chaplain, startled. "Why do you ask?"

"Because," said the dying man, raising his voice for a last effort, "because there was a young lad who lately joined our regiment. He was honest, pure, and manly. A praying father and mother had sent him to the front with his Bible in his pocket. I took him to my tent; he was only a boy, and I could lead him where I liked. I taught him to laugh at his Bible, to hate what his father believed, to drink, to sin, to swear. He stood near me on the battle-field; he fell with a mortal wound, and the last sound he uttered was an awful oath, which he had learned from *me*. He died with that oath on his lips. Oh! can you undo? *Can you undo?*"

"Nay, my friend," said the chaplain; "but God can *forgive*."

The agony of remorse in the soldier's heart was too much for his weakened powers; he could not claim forgiveness; he could only cry, "Undo! Undo!" and with that cry his spirit passed from him, and he died.

God grant that his awful cry may not be ours in death! Young men, it has a special note of warning for you. Some of you are older, "wiser," more learned in the ways of the world, than those younger fellows who have just come into your office or warehouse; they look up to you, and are so pleased at notice from you. You take a sort of pride in "putting them up to a thing or two"; they are so simple, and so easily amazed.

Thus you lead them on, until you get tired of the whirl, and stop. Not so with them. You have set a ball rolling down hill, and you cannot stop it. Those animal desires which have been roused into eager life, those eyes which have acquired so quickly a yearning to see, those ears which strain to hear, that mouth which is parched for want of further tasting, that gambler's spirit which the lad never knew he possessed before, oh! how they rage and storm, and will not be restrained, like a pack of hungry hounds, clamouring and baying for food.

God help that lad, or the devil will have him, and God help you, friend, and save you from doing the devil's work! You can *do* it. Pause, and ask yourself, "Can I *undo?*"

Perhaps this lad who has come to your office has never heard the Bible questioned, and knows nothing of the sceptical teaching which has become so familiar to you, that its point and sting are gone. You are not an unbeliever, oh no! but it does not hurt you to hear the atheistic argument, or attempt at such, at your Debating Club. The question of Truth never really comes into the question; it is all a sort of intellectual sport: you throw at your opponent's proposition, he at yours, and the best thrower wins, without further demur. "Capital mental exercise," you call it. It is rather like a soldier who, by way of exercising his sword arm, began to slash with his unsheathed blade at the lamp-post in the barrack square. It was good for his muscles, perhaps, but it took the edge off his sword, and called down a stern reprimand from the officer in command. What you call "mental exercise," your Commanding Officer calls by the plainer name of *sin*.

Well, you take this lad with you to your Debating Club, to "open his eyes." The sceptical statements—half met, if they are met at all—strike him with tremendous force; he never knew there were these difficulties about the Bible, or the Christian faith; he is much too young and impetuous to think of waiting to hear the other side strongly put, he thinks that assault must mean conquest; and with one grasp of shuddering dismay, he *lets go* his faith in God.

"*Can you undo?*" When that young fellow, having gained confidence in a week or two, stands up in that very place, and with flushed face, utters boyishly words of awful, daring unbelief, will not you, as you listen to him, feel that you would give all the world if you could *undo?* You *played* at unbelief, God forgive you; this lad has no play look in his face.

Will you fairly and fully face your responsibility to-day? Look back, and count those whom you have *knowingly* influenced for the worse, multiply that number—and with some of you it is not a small one—a thousandfold, and you will not have exceeded the multitude whom you have influenced without any thought of yours. You cannot *undo* the past, but the present and future are yours.

Strong as your influence for evil may have been, your influence for good may be stronger far. In the one case, your influence is aided by Satan, in the other, by God. In fact, we may say that if a man wishes to have and use power amongst his fellow-men, he will find it most fully if wholly on God's side.

You saw just now, when you led that young fellow into the devil's haunts, how ready he was to pounce on his prey. If you had led that same lad into a place belonging to the Lord Jesus, do you think that *He* would have been less ready to claim and to hold His lawful captive?

I tell you, that if you will take Jesus Christ Himself as your Saviour and Captain, putting yourself wholly under His orders, and being ready and *watchful* to gather recruits for Him, your dying cry, in a new and glorious sense may be, "Can you undo?" You will see before you the souls whom you have led to Him, and whose link of allegiance no death or devil can untie. If the devil keeps his captives, so does Christ.

Young men, whilst there yet is time, will you not seek, by God's grace, to recruit for our Captain Jesus, instead of heaping up for yourselves an agony of remorse and condemnation by leading souls to join the hosts of darkness?

SMILES are the wrinkles of our youth;
Ah! gently turn the page,
And say that wrinkles are in sooth
But smiles of our old age.

CRISP CORRESPONDENCE.

ANSWERS.

The number of letters received, asking for help from those who are in spiritual doubt and difficulty, leads the Editor to express the pleasure afforded to receive such communications, and thus be allowed the privilege of seeking to remove a few of the stones by which the enemy is, with some, barring their road to the kingdom, and with others, keeping them from the full enjoyment of peace and rest.

Tare.—(1) Our serial stories are not *true* in incident, but they are *true to life*. (2) The saying of the Lord Jesus, quoted in Acts 20. 35, is nowhere else recorded. We cannot tell when it was spoken; we only know that the record in the Acts is inspired. (3) We shall answer this question in a future issue. (4) The title is a matter of taste; elder unmarried ladies generally prefer to be called "Ma'am," younger ones, "Miss." (5) You cannot legally take a stamp off a post-card for other use, but (6) you may use a printed, but unposted card, by either pasting over or writing across the printing at the back. (7) The best way to dispose of your Encyclopædia will be by advertising it. (8) Advertise in the religious papers, stating your qualifications, and the sort of work you want. A young man with technical knowledge is almost sure of work. (9) If you get into an Institute where there are technical evening classes, all your time would be engaged. We could not advise you to work at home without knowing more of your acquirements. Your hearty appreciation of our Paper is very welcome.

A Follower of Christ.—You will find that only by *abiding* in Christ, and He in you, can your joy be full. Obey Him in all things, search His Word, *believe* His promise to keep you, and remember that "feelings" have nothing to do with your salvation. When you feel the shadow coming, just look up, and remember that Jesus *has* done all for you, and that your salvation rests on His faithfulness, not on your feelings about it. "Blessed are the poor in spirit"—there is a *depth* of meaning in that word of our Lord. He was "meek and lowly." If we want to be like Him, we must let Him take away from us all pride, all self-seeking, all care about the "first place," and be ready to be humble followers of a humble Master, who "made Himself of no reputation." God bless your class, and make you a true labourer in His vineyard. It is such an *honour* that He has called you to stand alone.

A Troubled One.—We feel no doubt that the joy you speak of betokened the Saviour's readiness to accept you as His child. Just tell Him now that whether you really came to Him before or not, you come to Him fully and consciously now, believing that He will never cast you out. He died to take away those sins of yours; He will not break His word. Tell Him just how you feel about it, and then believe fully that as you have *truly* yielded to Him, so He has *truly* accepted you as His blood-bought child.

E. M. L.—"Pouring oil on troubled waters" is one of those phrases which occur in different forms in different authors. References to it are to be found in Pliny, and some of the older Latin authors; and the Venerable Bede makes mention of an experiment of allaying the fury of the waves by divers pouring oil on the water. It is not a legend, but is a proverb found amongst almost all nations and at all times. Many persons consider it to be a Biblical expression; but this is a mistake; it is not in the Bible.

D. W.—(1) Designs used as signs of public-houses, etc., may be adopted by any one without infringing the rights of another. (2) It is not necessary to take out a license for a Coffee-room, or Dining-room, excepting if open after 10 p.m. and before 5 a.m., in which case a license may be obtained of any Excise officer.

QUESTION.

Tame Squirrels.—Can any one give me the title and price of any book on their management, etc., etc.?

ON BEING IN TIME.—A WORD TO TEACHERS.

By Rev. J. H. THORPE, M.A.

S having had some experience in the management of Sunday Schools, we have selected the above title because it describes a virtue which ought to be prominent in every efficient Sunday School teacher, and also because we have noticed that it is not as widely possessed as an outsider would imagine.

We have often had the work of the day considerably delayed by the fact that, although the opening service was over, some of the teachers had not yet arrived, and we hesitated to fill their places by supernumeraries, lest the laggards should come in just after the lesson had begun, and then there would ensue the confusion well known to any reader who knows anything of Sunday School work. And perhaps we have been rendered somewhat timid by the—shall we say it?—black looks, or if not black, decidedly GREY looks of the late teacher, who felt rebuked, and perhaps humiliated, by finding his or her place filled by another. And so the class was disturbed, perhaps the whole school had its attention temporarily diverted from its work, the teacher was humiliated, and the poor superintendent was fretted and somewhat put out.

We have further noticed the bad effect such occurrences have on the *morale* of the whole school.

The boys and girls don't see why they need be in so soon; the superintendent stretches the law as far as possible, not wishing to begin till as many as possible are assembled; the teachers who have arrived punctually are rather tired of waiting, and perhaps also, not a little vexed at having their time for teaching a well-prepared lesson curtailed.

But there, we need say no more; every one knows the mischief. What causes can be assigned? Passing over cases of occasional lateness from unavoidable causes, and fully appreciating the fact that there are such, we would remark that this unpunctuality arises in some instances from an ignorance or forgetfulness of the *Master Himself*. Yes, once lose sight of Jesus in your work, once fix your eye on your clergyman, superintendent, or somebody else, and we shall not be surprised if you don't mind being late; but, on the other hand, realise that in this work you serve the Lord Christ, and you will not *dare* to be so careless as to be late.

Sometimes, perhaps, the teacher is late because *his interest has begun to flag?* Either he took up the work in the first instance without a due appreciation of its importance, and only to please his mother, perhaps, or some one else, or in order to thrust himself into a prominent place—for some men will do *anything* for prominence. Of course when these motives cease to act as powerfully as at first, lateness and other faults will soon manifest themselves. The best thing for such an one is at once to resign his place in the Sunday School, and go down on his knees and cry out to God for pardon and grace to trust Christ.

Sometimes, again, this fault arises in the case of a Christian from a declension in spirituality. In a word, his religious life is there, but there is *a want of tone*. What then? Do as you would if your nervous system were in a like condition. *Go to the Physician!* Once again, teachers are sometimes late from *bad home arrangements*, or a complete absence of *any arrangements!* In one case it will be the watch or the clock. Now, this is an inexcusable cause. If you are often late from this cause, consider, we pray you, this plain question, What's the use of a clock if it will not keep good time? A watch is a poor bauble if it can't do the one and only thing a watch is expected to do—keep time! Get rid of that watch or clock, if it will not do its work; or, if the fault is not in the watch, but the owner's forgetting to wind it, or losing the key, then put a knot on your handkerchief; invent some means of refreshing your memory on Saturday night; buy a gross of watch-keys, or, better still, buy a keyless watch! Further, make it a habit always to set your watch on Saturday night.

Sometimes *the breakfast is late!* Well, well, if the obvious remedy is not adopted, put a crust in your pocket, and start off; but don't be late! If you are hard to be roused in the morning, invent some means of awaking you. It is only a question of *noise*, and surely this is easy of solution. If, however, you still slumber too long, give up the class; *but don't be late.* If, on the other hand, you rise early enough, "but somehow don't know how the morning goes," then we entreat of you but one thing, begin to write "D. D." under your name, and explain to your friends that it is because you belong to the men who "DON'T DAWDLE."

We stop here with this word—be in time, for your own, your scholars', your superintendent's sake, and remember, if it is worth while to teach a class, it is worth while to do it well, and the beginning of this well-doing is to

BE IN TIME!

INTERNATIONAL SUNDAY SCHOOL LESSONS.

NOTES ON THE INTERNATIONAL SUNDAY SCHOOL LESSON.

JUNE 24TH.

REVIEW LESSON.

GOLDEN TEXT.—*Rom.* 4. 25.

Passage for Temperance Lesson, 1 *Cor.* 8. 1-13. For Missionary Lesson, *Isa.* 61. 4-11.

WE have to *look back* over the closing days of Christ's life. Now is the time for getting a clear estimate of that life. "Only by receiving little by little as it comes to us, eagerly, yet patiently, and putting together what we receive as skilfully as we may, do we attain any degree of clear or true conception." It was—

A SHORT LIFE. How many years did Christ live on the earth? Life is but very short at the best. But—

"We live in deeds, not years; in thoughts, not breaths;
In feelings, not in figures on a dial.
We should count time by heart-throbs. He most lives
Who thinks most, feels the noblest, acts the best."

Thus reckoned, Christ's life was the longest ever lived.

A SERVING LIFE. Lived the life of a toiler. Served mankind by lip and hand. First six lessons proof of the first, and seventh lesson of last. (In review lessons it is always well to write down on board or paper a list of the quarter's lessons, scholars supplying titles from memory, and then referring to it during review.) Get scholars to prove from Christ's words that to serve is nobler than to be served. Do we think so? Do we act as if we did?

A SORROWFUL LIFE. *Eighth lesson* (Isa. 53. 3). Why was this? God intended our lives to be bright. It is sin makes shadowed lives. The mission of shadowed lives.

A SOLITARY LIFE. *Ninth lesson.* He trod the wine-press alone. Disciples forsook Him. The most boastful disciple denied Him.

A SACRIFICIAL LIFE. *Tenth lesson.* Died. How? Why? What types did He fulfil?

A SUCCESSFUL LIFE. *Eleventh and twelfth lessons.* In spite of death on the cross. Success often brought about by apparent failure. Success proved by miracles, resurrection, ascension.

A SUBLIME LIFE.

In its teaching. First three lessons.

In its knowledge of the future. Fourth, fifth, and sixth lessons.

In its humility. Seventh lesson.

In its suffering. Eighth, ninth, and tenth lessons.

In its victories. Eleventh and twelfth lessons.

THE PURPOSES OF CHRIST'S LIFE.

To give us a copy to live by (1 Pet. 2. 21).

To die for the sins of the world (1 Thess. 5. 10).

To be to us an inspiration (Phil. 4. 13).

OUR DUTY IN RELATION TO CHRIST'S LIFE.

Make it our "Peace with God," and "Pole-star."

No life successful without *The Five P's* in it—*Purpose, Preparation, Principle, Perseverance, Prayer.* Get scholars to prove that Christ's life had all these.

The *life* all-important. A minister was once speaking of a lady who was recently dead. A young lady immediately asked, "Oh, sir, how did she die?" The venerable man replied, "There is a more important question than that, my dear, which you should have asked before." "Sir," said she, "what question can be more important than, 'How did she die?'" He replied, "*How did she live?*"

Our life can be lived but once. "Shall not pass this way again."

Our life a hindrance or inspiration to others.

Our life here a testing time.

"Life is a leaf of paper white,
Whereon each one of us may write
His word or two, and then comes night.

"Greatly begin! though thou have time
But for a line, be that sublime,—
Not failure, but low aim, is crime."

C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSON.

JUNE 24TH.

UPRIGHTNESS.—*Prov.* 11. 1-11.

"UPRIGHT," vers. 3, 6, 11. The *erect* form of man is used as a figure of his *moral* state. "God hath made man upright."

Ver. 1. This text is like a spiritual inspector of weights and measures, an invisible official that unerringly detects frauds.

This text means *religion in business*, in the scales and weights. Justice in business dealings: no sharp practice, nothing tricky or mean. "The righteous Lord loveth righteousness." This text was once inscribed over a certain old market-place, but when it was rebuilt, the text was not restored. Why?

Ver. 2. Pride and shame: opposite emotions, yet clearly allied. The proud man may be exposed at any moment, and then comes *shame.*

Ver. 3. "What stronger breastplate than a heart untainted?" Integrity clears the vision. The obstinacy of transgressors destroys them. On this verse take Joseph and David as examples of clause 1, and Saul of clause 2 (1 Sam. 15.).

Ver. 4. The values of Riches and Righteousness contrasted.

"Righteousness delivereth from death," in two senses.

1. The righteousness of Christ delivers us from het penalty of sin.

2. Personal, practical righteousness delivers us from the way of death.

Ver. 5. This is similar in its teaching to ver. 3.

Ver. 6. First clause asserts the final vindication of the righteous.

Wickedness may triumph for a time, but righteousness shall ultimately prevail.

Transgressors are unconsciously weaving a web around themselves.

Ver. 7. The death knell of merely human hopes. Wicked men have hopes, but they are baseless—hopes of happiness, of prosperity, hopes, too, of reform and hopes of escape from punishment. Death shall dispel all illusions.

Ver. 8. In this verse the tables are turned. It is well illustrated by Daniel and his persecutors (Dan. 6.).

Ver. 9. This seems to point out the vileness of *flattery.* "He that flattereth his neighbour spreadeth a net for his feet" (Prov. 29. 5; 2 Sam. 17. 7). Fawning, deceitful talk is the idea.

"Through knowledge," etc. Wisdom can make a man a match even for an electro-plated hypocrite. The wise man knows the difference between real silver and sham.

Ver. 10. On this verse see Esther 8. 15; 2 Kings 11. 20.

Ver. 11. Good magistrates, rulers, etc., are the pillars of society. See what Joseph was to Egypt.

"Righteousness exalteth a nation." God blesses the city, the nation for their sakes. "I will not destroy it for ten's sake."

JAMES L. STANLEY.

"THE RICHEST MAN IN THE WOLDS."

OLD John Anderson had laid aside his stone-breaking hammer, and, as the mid-day hour reminded him of his dinner, had opened a red handkerchief, in which was tied a hunch of bread and a "relish" of untempting-looking bacon, and settled himself to his repast. But "grace" must come first, and many grateful thoughts crowded into his heart and made it a very real offering of praise.

His dull ear had not caught the sound of hoofs, and he was startled, as he raised his head, to see the young Squire on horseback close beside him. Reginald Hastings frequently had a talk with old John, and a bright shilling often glistened in the horny palm after such interviews, and many a prayer went up from the grateful heart for true riches to be given to his benefactor. But this morning John had not his usual smiles of pleasant greeting, but instead, a wistful expression, and as the Squire was about to ride away, he stopped him with some agitation.

"Please, sir, I *must* tell you; I'm sorry to do it, but *I've had a dream.*"

"A dream, John? And are you a believer in dreams?"

"I don't know, sir; I'll tell you, and you can judge. I thought I was at the gate of heaven, and looking in and wishing to be amongst all the shining ones, but I couldn't get in; only, as I waited, I heard them talking, and one bright angel said to another, quite loud, as though telling him a bit of good news, '*The richest man in the Wolds will die to-night!*' and with that I woke, and I thought I must tell you, sir; for who can it be but you?"

Who, indeed! The Squire rode away with a faint joke on his lips, but with a great fear at his heart. He was not ready to die. He had everything to lose, nothing to gain by death. And yet, as the Saviour had said, this startling warning had no "persuading" influence, it produced rather a blind recklessness. "But I will go round by the doctor's and ask him to dine with me to-night; it might be useful to have him at hand, and really I do not feel very well." The doctor came, soon found out his friend's uneasiness, and reasoned, and pooh-poohed, and succeeded in keeping up the young man's determination to give no serious heed to the matter. He was not allowed to leave until midnight, and when all the clocks had chimed the assurance that his danger was passed, the Squire came with him to the hall steps to bid him good-night and breathe freely again, feeling all the time like a coward. Just then the housekeeper hurried forward. "Old John Anderson has had a fit, and they think he's dead, sir; but they want the doctor."

Ah, Squire Hastings! you need not have feared. You were not the richest man in the Wolds, after all!

"MAN OVERBOARD!"

A True Story.

"WE shall be in harbour before Christmas, Captain, if this wind holds, and then we shall have a whole family gathering, and the old folks will be so pleased. It is four years since we all met at Christmas."

Captain Austen and his first officer were standing on the moonlit deck of the good ship *Aurora*, which, after a long and perilous voyage, was making splendid progress on her homeward course. The captain looked with kindly interest into the bright young face. He was a true captain, feeling an almost fatherly interest in every man on board, and true Christian as he also was, he lost no opportunity of seeking to win those under his command to the nobler and higher service of the Great Captain of their salvation.

And just now, yielding to a strong impulse, he spoke to the young officer at his side of his earnest desire that before this voyage ended he might have the great joy of knowing that he had chosen Christ as his Master and Lord.

Edward Seaton listened gravely and respectfully to the captain's words, and then, in the quiet solemn midnight stillness, answered him with sailor-like frankness, "It is very good of you, Captain, to take such trouble with me, and every word tells, because it is backed by your Christian life; every one on board feels that, and I promise to think of all you have said; indeed, I have quite made up my mind to go for this kind of thing—*after Christmas.*" "And why not sooner; why not now, Seaton?" "Just because I don't want to cause a fuss at home, Captain. They always have a grand ball at Christmas, and no end of gaieties, and I suppose that wouldn't hold with what you say the Bible teaches; but I could not keep out of it, it would try them all so; besides, I don't want to, for it will be awfully jolly, so I must just put off till after Christmas, and then I will turn over a new leaf; see if I don't.

Captain Austen attempted no further remonstrance, but with uncovered head he sent up an earnest prayer for his young friend; and Seaton, understanding the silent action, was deeply moved and well-nigh shaken in his purpose of delay; but the tempter was at hand with his subtle assurances of safety, and gained another victory.

Ten minutes afterwards, the captain, who had gone below, heard confused noises, and then the cry, "Man overboard!" It was Seaton! Reaching over the quarter to clear an entangled log-line, he lost his foot-hold and fell overboard, and the ship went on her rapid way without him. Everything was done that brave strong men could do, but in vain. Christmas, with all its festive mirth and bright home-gatherings, came to others, but not to him; and his sad, true story points its own moral without any words of mine.

THAT HOUSE IN LONDON.

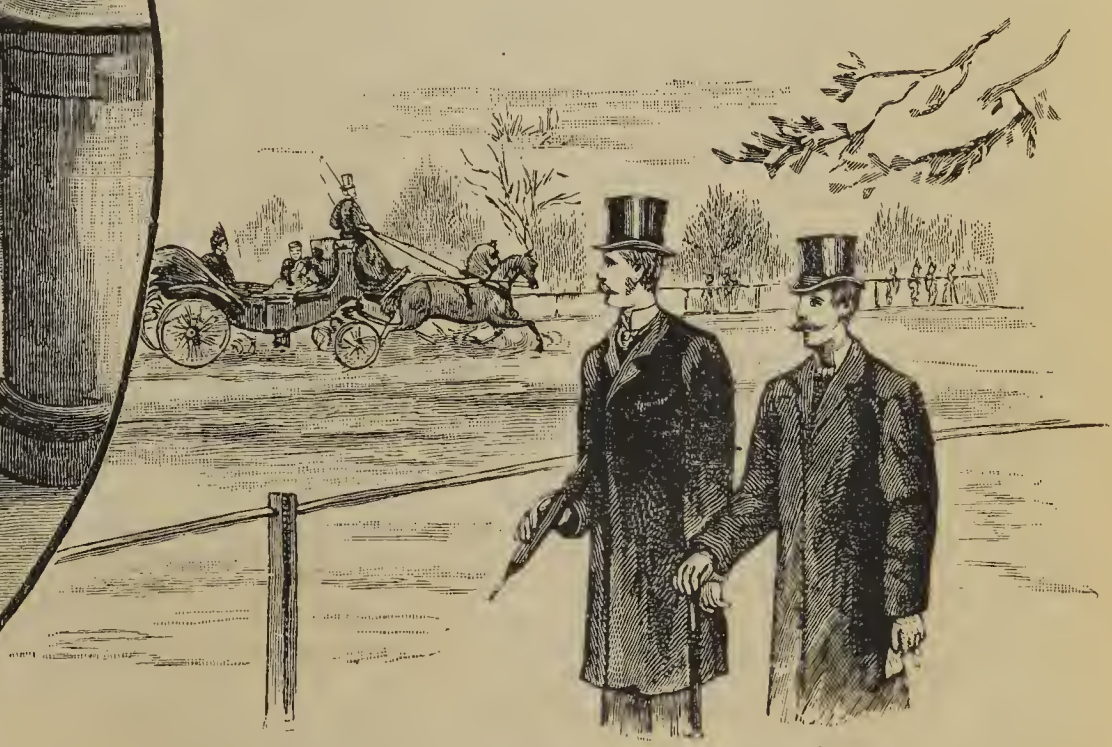
CHAPTER XXX.

GRAHAM stole on tip-toe across the landing to his wife's room. He opened her door noiselessly and went in. There was a night-light burning, and a fire still glowed in the grate. By its light he could see her sleeping face; on her arm lay their little child. He stooped down and kissed first the mother, then the boy; then he crept as softly out of the room as he had entered it, and went downstairs.

In his study he wrote a letter—a rather short letter—which he directed to his wife,—

"My darling," he said; "sudden and most unexpected business takes me from home. I am forced to go without your even bidding me good-bye. I have kissed you and baby just now in your sleep, and I will carry those kisses in my heart of hearts. I am forced to go, and you may hear things that worry you. Don't believe one of them; wait for all explanations till we meet again. Trust me that much, Kate; let me tell you everything. I believe your love will enable you to grant me this great boon. As soon as ever you are well enough, you shall join me, so get well as fast as possible. I will send you an address in a day or two, where you can write to me. My heart will be one long ache until I see you again. Trust me all in all.



Your husband,

"KENNETH GRAHAM."

When the letter was finished, Graham sealed it; then he laid it in a prominent position on his writing-table. Then, opening a secret drawer in the back of the writing-table, he took from a recess a thick roll of bank-notes. These he stuffed into his pocket-book. A little bag which he took backwards and forwards to his office stood on a side-table; into this he put a case which contained his wife's photograph, and, running swiftly upstairs to his dressing-room, he stuffed it with some necessary articles of apparel. When all was finished, he locked his study door, and threw himself on the sofa to wait for dawn. Early in the morning he left the house, and walking to Charing Cross, took the train to Dover. His life as a fugitive and vagabond had begun. Deadly fear was driving him away from wife and child, and home and wealth. These were the wages of sin. Hard payment!

Certainly Mrs. Graham was not getting better. The doctor, who at first had made very little of her continued weakness, was now uneasy; his professional acumen was at fault; he could discover no cause in her perfectly healthy nature, in one to all

"'Mrs. Graham, if you won't lie back in your seat and rest, . . . let me ask the coachman to drive us home.'"

appearance so energetic, in the prime of youth and vigour, for the almost indifference which she manifested for everything under the sun, her husband and baby excepted.

Dr. Matchett questioned her as carefully as he dared. He was sure she must be lonely without her husband. Would she not write to him, and beg of him to return to her?

"No," Kate replied, with gentle dignity. "I miss Mr. Graham, of course, but he is away on important business, and I should be extremely sorry to summon him home."

"But you must arouse yourself, Mrs. Graham," said the doctor. "You will never get back your strength if you sit in that arm-chair by the fire all day, and have no occupation except looking at your baby. Oh, yes, I know the baby is a great source of interest to you, but you want something to stir you up. You want cheerful society. If your husband cannot leave his business, cannot your sisters come back?"

"No," said Kate, flushing slightly. "My sisters are paying a long visit to some friends in Scotland, and I will not summon them home on my account. I really do very well, Dr. Matchett," she added, with a wistful smile, which somehow smote on the kind doctor's heart.

"Well, well," he said, rising to go, "I can suggest nothing further. Only, if you won't get better, I shall write myself to your husband."

When the doctor had left her, Kate turned to the nurse who was taking care of her child.

"Mrs. Murray," she said, "Dr. Matchett is very much mistaken about me."

"How so, ma'am?"

"He thinks I do not want to get well."

Mrs. Murray hummed and hawed, and looked thoughtfully at the pale face of the young mother.

"Well, ma'am, Dr. Matchett is a very discerning gentleman, and he thinks you ought to rouse yourself, that's about it."

"Would that have a good effect, Mrs. Murray? Would it take off the feeling of being so deadly, deadly tired?"

"Oh, you poor dear," said the nurse, affectionately, "that's nothing in life but weakness. You mustn't give way to it, Mrs. Graham. You must take your beef-tea, and your oysters, and live generous—those are the doctor's orders—and go out in the carriage, and see your friends; then you'll soon lose the deadly weakness."

Kate's eyes brightened.

"Shall I?" she said. "I am glad to know it. I am most anxious to get well. I will do anything to promote my recovery. Will you order the carriage for me this afternoon, Mrs. Murray? I will go for a drive, and you and baby shall go with me."

Mrs. Murray cheerfully complied; and, at the appointed hour, Kate and nurse and baby drove solemnly through the park.

The time was still winter, the park was half empty, and the scene was scarcely enlivening. There was a strange sparkle of excitement, however, in Mrs. Graham's eyes. She seemed nerving herself up for some effort. She could not lie back in the carriage; she took no notice of baby's new cloak; baby even cried, without altering that strained expression on his mother's face.

Mrs. Murray was a placid, middle-aged woman, but she was by no means unobservant.

"Something is working in the poor thing's mind," she muttered under her breath. Aloud she said,—

"Mrs. Graham, ma'am, if you won't lie back in your seat and rest, you had much better let me ask the coachman to drive us home."

Then Kate turned, and laid her hand with sudden vehemence on the nurse's arm.

"Mrs. Murray, there is a person in whom I am interested—a poor woman who needs assistance. She has promised to write to me, and to leave her letters at the B—— Street post-office. She is in great trouble—the kind of trouble which makes her shy and miserable and distrustful. We will call at B—— Street, and you will get out and ask at the post-office if there are any letters waiting for me from her."

"Oh, yes, my dear, of course," said Mrs. Murray, in her full, cheery voice.

Kate's brow instantly cleared.

"Thank you," she said, almost rapturously; "please tell the coachman to drive to B—— Street. After that we will go home."

Mrs. Murray gave the necessary orders, and then she busied herself over baby, who was beginning to wake. When the carriage drew up at the post-office in B—— Street, the nurse laid the child on its mother's lap.

"I am so weak, I must ask you to fetch the letters," said Kate, half apologetically.

"Of course, madam; who ever heard of you troubling? Will the letters be directed to yourself, Mrs. Graham?"

"No, no—to my initials, K. G.—the poor thing is so distrustful. Ask for any letters addressed to 'K. G.,' Mrs. Murray."

Mrs. Murray's good-natured face was delightfully matter-of-fact as she stepped cheerily into the post-office. She returned in a few moments, with a single bulky letter, which she presented to her mistress. Mrs. Graham clutched it with eager, trembling fingers, and suddenly bending over her baby, kissed him, and even laid the letter against his little lips.

"We will go home now," she said in a cheerful voice. "I feel ever so much better."

"Poor dear!" muttered Mrs. Murray, under her breath. "Talk of her being able to keep a secret! Well, I'll be true to her, any way."

CHAPTER XXXI

FROM the moment the apothecary visited Alexis, he began to grow better. The simple remedies which this old-fashioned man of medicine applied had an instant and beneficial effect. His patient fell into a sleep, restless and troubled at first, but which soon grew calmer and more sound.

Hour after hour he slept, all through the night, and far into the next day.

During that sleep Graham wrote his farewell letter to his wife, packed a few necessaries together, and stole away like a thief in the night from his home.

During that sleep the train carried him from Charing Cross to Dover, and when Alexis at last awoke, very weak, but conscious, Graham had already left the shores of England behind him, and was speeding away to France.

From that moment Alexis began steadily to mend. Old Betty gave him the best of care, and night after night, after the servants had gone to bed, the apothecary, Mr. Cutts, stepped in to pay his patient a stealthy visit. Betty knew that Graham had gone, she had a shrewd suspicion why he had gone away in such a hurry; but she was just as determined as of old to keep the fact of the sick man's existence a secret from the rest of the household.

She kept his door locked, and carried up the amount of food necessary for his consumption at night. She carefully fostered the growing belief in the household that the room was haunted; the servants were only too ready to believe her; not one of them would have crossed its threshold for much.

Alexis grew steadily better; he began to sit up, his appetite came back to him, gradually his mind recovered from its delirium and weakness. His haggard face seemed to have lost some of its lines of care; lying in this room, where his mother had been, and waited on by the faithful Betty, it seemed to him that he had got back a portion of his lost youth.

One day he was well enough to be moved from the bed to the easy chair. When Betty had achieved this great feat, she stood and gazed at him with an expression of delight.

"Oh, but I love you well, my bonny lad," she said; "and well I may, for haven't I, under the good Lord, been the means of bringing you back from the gates of death?"

"Sit down, Betty; you are a dear old friend to me," said Alexis, with effusion. "Sit down on that chair opposite. Betty, I miss my mother sorely."

"And well you may, my dear, so good she was to you! Eh, but she was a saint while she was on earth, and she's a saint in glory now. But you're going to her, Master Jo, you're going to her, my bonny, gentle dear."

"I don't know, Betty; if I can only get to her by being what you call religious, I am afraid I am not. I don't feel good, Betty; I don't want to be good. I have something to live for, but it is not goodness. Betty, I had a horrible dream when I was ill."

"Oh, don't think of it, dear; the mutterings of the poor frenzied brain need not be recorded."

"Yes, but this seemed real; and I think it was more than a dream. Betty, Kenneth Graham came into this room; I saw him—I saw his hated and hateful face."

"A dream, my dear, a dream; here, sup up your broth. Is there anything I can tell you that will help to pass the time, Master Jo?"

"Yes, I want you to tell me about my mother. How was it she died rich?"

"The money was left to her, dear, through a distant cousin. There, my dear, we won't talk about anything so worriting as money to-day. Maybe I could tell you a bit of a gossiping tale instead?"

Alexis smiled.

"Money is only worrying when you haven't got it," he said; "when you have, it is wonderfully soothing. I am glad my mother died rich—that makes all comfortable. I shall want some money for what I have to do. Did she leave much money behind her, Betty?"

"Now, my dear, your cheeks are getting quite flushed; lie back on your pillow, dear. There, my word, I wonder could I read a bit aloud, just to soothe you into a little bit of a doze? There's the 'Pilgrim's Progress.' What do you say to my reading about the Slough of Despair, or the part about Vanity Fair? There's a deal said against wishing for money in the part about Vanity Fair, Master Jo."

"All right, Betty; but I won't hear it at present. How much money did my mother leave?"

"Well, Master Jo, well,—if you must hear—she passed away from the world leaving behind her a solid £30,000,—that, and this house that you're in, and all the furniture. Ah, she died rich, poor dear; yes, she died rich."

"Thirty thousand pounds!" repeated Alexis, his cheeks flushing vividly; "that's a large sum, Betty; that's good, cheering news, dear old Betty. £30,000! I shall get well soon now, for I want to enjoy it."

Betty said no more, but her old face became very lined and anxious, and she went away to the farther end of the room, to prevent any more conversation.

Alexis sat and mused, and that night he dreamt golden dreams, all about the great happiness which wealth would bring.

In a week he was so much better, that Mrs. Carew felt she could no longer conceal the truth from him. The apothecary had ordered his patient change of air; he said he should leave the sick-room and go into another. Betty wondered if she could smuggle him up to her attic, decided that she certainly could not, and finally resolved to impart to him the painful truth.

For the past week Alexis had slightly changed his manner; for a whole week, for seven delightful days and nights, he had hugged the thought of wealth to his heart. Thirty thousand pounds his, his lawfully!—his, as his rightful inheritance, left to him by his mother. He need neither beg nor starve; his past would be forgotten; if necessary, he might change his name; he had, at least, life before him now.

With a delightful sensation that wealth was his, Alexis became less humble and tractable. There came a bright morning in early Spring when he felt really well.

"Betty," he said, "I shall go downstairs to-day, and to-morrow I may probably take the air in a carriage. By the way, Betty, you poor old soul, you don't do all the work of this large, handsome house alone? Well, well, if you do, you shan't do it much longer. I'm rich, Betty, and I don't mean that you shall suffer or be put upon. I shall get in servants, plenty of them, and you shall have rest, and be a fine lady for the remainder of your days. Do you hear me, Betty? I am going downstairs to-day."

"Yes, Master Jo, I hear you fast enough."

"And you are pleased with what I say about the servants—eh, Betty?"

"There are servants full and to spare already in the house, Master Jo."

"Indeed!—left here, I suppose, by my mother? Well, that seemed a little wasteful, when I was not by to be waited on. However, never mind, you shan't be scolded, good old Betty. You tell the servants to get a sitting-room warm and comfortable for my reception, and let them know that their master is coming downstairs presently."

"Master Jo,—my poor, poor dear Master Jo!—I must tell you the truth."

Betty's face had grown ashy; she came round and stood in front of the young man. Something in her tone caused him to raise his head and examine her face attentively.

"The truth, Betty?" he said. "I suppose the truth means a blow; I'm accustomed to blows. There, get it out at once, and have done with it."

"I could shed tears about it," said Betty,—"tears, hot tears of blood. There, this is the truth—your mother thought you dead; you never wrote to her—for fifteen years there was never a line. She looked for you high and low; she put advertisements into the papers about you; she used to go to the hospitals, and walk through the men's wards; but she never came across you, and you never wrote, and then she thought you dead."

"I could not help it, Betty—don't bring it up to me—I was in trouble, and I could not write."

"Yes, master, and the missus might have broke her heart if she had known; it may have been best for her you did not write; but she thought you dead, and she left her money, and this house, and all that belonged to her, to—to——"

"Speak, Betty; she left it in trust for me, of course?"

"No, no, my poor dear; she left all she had to another."

Alexis was still very weak, but at these tidings he came up to Betty, and gripped each of her shoulders with his thin hands.

"Tell me everything, Mrs. Carew. Didn't I say I was accustomed to blows? To whom did my mother leave the money that should have been mine?"

"Oh, my poor dear, don't look at me with such terrible eyes; think of the shortness of life. Money is but vanity. My missus left her money to one she loved as a son, but one whom you hate most bitter, and whom I have no liking for myself. She left all she had to Mr. Kenneth Graham."

"It's false!" shouted Alexis, hoarsely. Then he found himself turning sick and giddy, and he tottered back to his mother's old arm-chair. "I'm weak yet for these blows," he murmured.

CHAPTER XXXII.

KATE went into her room, shut the door, excluding thereby both nurse and child, and broke the seal of that thick letter which was addressed to "K. G.," with "To be called for" on its envelope.

Her fingers shook, her face was ghastly white as she read, but gradually, as her sad and anxious eyes devoured the words on the closely-written page, colour came back to her lips, hope to her features, and life and sparkle to her whole being.

She read the letter through twice, then she folded it up, kissed it rapturously, and replaced it in its envelope. Eagerly she walked across the room to the writing-table. Taking out a sheet of paper and a pen, she wrote hastily, crookedly, badly, but oh, with such a trembling, such a fearful joy of heart.

"My Darling,—

"I am nearly well; your letter has made me quite well. I will come to you; I will come at once. To-morrow, no, not to-morrow, the next day I will start. I will bring baby, and perhaps Mrs. Murray. I will ask Mrs. Murray to come with me; she is very kind. I think she will do so, and she will take care of baby, and even if I should be a little weak, she will make things easy for me. Of course, Ken, I trust you. You have some good business reason for going away so secretly. I will wait for your explanation, and listen to no one else. No one has said aught against you, Ken. No one would dare to say anything against you before me. Now, my darling, I will post this letter myself. Oh, I am much better since I have heard from you. This is the first of March. I will start on the morning of the third, and be with you at Bordeaux some time the next day. I am well now. I am well at the thought of seeing you again.

"Your loving and devoted Wife.

"P.S.—I will bring the money from my own balance at the bank."

When this letter was written, Kate directed it, stamped it, and then once more put on her cloak and bonnet. She was very weak, but she alone must post the all-important letter; for no one, not even Mrs. Murray, must see the address.

She looked round anxiously, listening with nervousness for the sound of the nurse's tap at her chamber's door. It did not come, however; so, with faltering steps and feeble limbs, she crept downstairs. There was a pillar-box at the corner of the Square; she could surely walk as far as that. She reached the hall; no one was present. She sat for a moment on one of the chairs to rest.

A step on the kitchen stairs startled her, and she rose hastily, opened the hall door, and went out. She had always thought that pillar-box quite close; to-night it seemed a long way off. She struggled to reach it, faltering and trembling. She had told her husband she was quite well, but how very far from real health were those weak, uncertain footsteps, was the gait which from sheer exhaustion swayed as she walked.

At last—oh, thank God—she had reached the pillar-box. She slipped the letter into the slit, and leaning against the box, sent up a fervent thanksgiving to Heaven. A little errand boy came into the Square, whistling gaily. He passed close to Kate.

"I am faint," she called out to him; "let me lean on your back to No. 10."

"You lay 'old on my shoulder, lady," answered the little man cheerily.

In this way Kate got back, giving the delighted and astonished boy half a sovereign for his pains. She managed to get up to her room again, and when the nurse came to see her, she found her sitting in her chair, utterly exhausted, but with a radiant face.

She had heard from Kenneth; she was going to Kenneth; and she had written to him without any one finding out.

"My dear, you are quite fainty-like," said the nurse.

"May I have a little beef-tea, Mrs. Murray?" asked Kate. "After that I want to speak to you."

Just then the parlour-maid knocked at the door, and presented her mistress with two or three letters on a salver. Kate opened them, glanced at their contents, and raising her flushed face, looked full at the nurse.

"Mrs. Murray, I have heard from my husband. He wishes me to go to him at once."

"She's trying to pass off that one of those letters is from him," muttered the nurse under her breath; "but I know better; the letter directed 'K.G.,' with 'To be called for' on it, was his, the scoundrel. No use in trying to blind me, Mrs. Graham."

Aloud the nurse answered respectfully,—

"I'm glad to hear it, ma'am, and I hope the dear gentleman is in excellent health."

"Oh, yes; he is most anxious that I should join him."

"Well, my dear, of course in a few weeks or so; I suppose he'll come back himself and fetch you."

"No, he can't do that; he is employed on most important private business. I can't explain it to you; it's connected with gigantic mercantile enterprises. I shall go to him, Mrs. Murray, on the morning of the day after to-morrow."

"My dear! Oh, what shall I do? Is the poor young thing daft?"

Kate bent forward and took the nurse's hands in hers.

"Dear Mrs. Murray, don't oppose me. My heart was breaking without him. When I go to him I shall be well."

The anguish in the voice, the stricken look on the young face, brought tears to Mrs. Murray's eyes.

"Yes, yes, my love," she answered, taking the white little hands and kissing them; "of

course you shall go as soon as possible, but it would be throwing your life away to venture into foreign parts now, and you so weak as you are."

"But not if you and baby came with me."

"And I'd do that, fast enough, my dear, and the babe wouldn't suffer, beautiful little angel! but it's you. You must get Dr. Matchett's leave before we do anything so rash, Mrs. Graham."

"Oh, no, no, Nurse! My heart has been bleeding so terribly. Hope will keep me up on the journey, and when I see my husband, I shall be well."

So Kate pleaded, and inch by inch Mrs. Murray found the ground taken from under her feet, until finally she settled to become an arch-conspirator in one of the wildest schemes which any young woman in Kate's state of health had ever undertaken.

She would accompany Kate on the morning after next to Bordeaux, and undertake that the baby should arrive without any detriment to its health. She acquiesced in the most natural manner in the world with Kate's earnest desire that their destination should be kept a secret from the servants.

"Certainly, my dear," she said; "in these mercantile enterprises one can't be too careful. Mum's the word with me, dear. Not a soul shall find out where we are going."

Kate went to bed that night, feeling intensely happy and thankful. She was quite sure now that Kenneth was all that was good, and true, and loyal. His letter had lulled her suspicions, had satisfied her longings, had filled her heart with the rosy glow of love and hope.

Of course wives could not understand the curious complications which often came into their husbands' lives. If she did not trust him, who else could be expected to? Oh, yes, he was her own true, brave Kenneth, and she should very soon see him again.

In the morning she awoke, feeling really well and strong; but her heart beat with impatience at the thought of the few hours which must be dragged through somehow before she met her husband.

Immediately after breakfast she told the servants that she, and nurse, and the baby were going away for two or three weeks; that they were to join Mr. Graham, and would probably all return together at the end of that time.

"You will go on as usual during my absence," said Kate; "and I will write, sending our address to forward letters to."

The servants were not in the least surprised, and were glad their mistress was going to have a little change.

Rose, the parlour-maid, came up to Kate to pack her trunk; and Mrs. Murray bustled about, looking extremely important and good-natured.

It was a lovely day, sunshiny and bright, the very same day on which Betty, in the chamber of mourning, had broken the news of his disinheritance to Alexis.

Betty had left him for a few minutes, and having, as she thought, given his room so mysterious a character that no one would dare to venture in, had on this occasion neglected to lock the door.

She knew she left it unlocked; but being much agitated and upset at the breaking of her miserable tidings, she muttered to herself that it really did not matter, for no one would venture in.

Certainly none of the servants would; but Betty had not calculated on Mrs. Graham wanting to go into the room.

(*Continued—page* 481.)

WILLIAM MOMPESSON;
OR,
THE PLAGUE AT EYAM.

HARRISON AINSWORTH has, in his "Old St. Paul's," given us a vivid account of the Great Plague of London, and it requires a very small degree of imagination to realise, in some measure, the horrors of that terrible visitation. At no other time in the history of our country has there been the panic which paralysed the inhabitants of the metropolis over two hundred years ago.

The alarm that was at first manifested, the subsequent terror, and the final panic; the precipitate exodus of the inhabitants, fleeing as Lot fled from the doomed cities of the plain; the streets, a short time before filled with various sounds which are heard in a great, busy, and prosperous commercial city, grass-grown and silent; deserted by all save those who, undeterred even by death, reaped a rich harvest by robbing the dead and dying, and whose stillness was broken by an occasional shriek of some poor victim, or by the lumbering death-cart, and the ominous voice which called out, "Bring out your dead." Death and desolation reigned supreme, and those who could not leave the fated city were swept away in thousands.

Little did the inhabitants of the country towns and villages know of the magnitude and deadliness of the visitation. The mention of the plague, no doubt, blanched their cheeks; but they could not have a true conception of the pestilence. Less fortunate than these were the inhabitants of Eyam, a small village, at that time numbering about three hundred and fifty persons, situated in the Peak of Derbyshire, amongst whom the plague suddenly appeared on the 3rd of September, 1665.

Its introduction was by means of a box sent from London to a tailor in that village. Dr. Meade, who wrote in 1721, states that the box contained some materials relating to the tailor's trade; but others have maintained that the contents were clothes sent by a relative of the tailor, who was residing in London, and who had purchased them for a small sum in consequence of the plague, which was then raging in the metropolis. Whatever the contents may have been, the recipient, finding them damp, hung them before the fire to dry. He was immediately seized with the fell disease, and died after an illness of three days.

The disease soon began to spread, for we learn that twenty-six persons died between the 7th of September (the date on which the first victim was buried) and 28th of October. During the next two months, November and December, the deaths continued, the total number up to the end of the year (1665) being forty-four. The beginning of 1666 was intensely cold, and the terrified villagers hoped, from the few deaths that had occurred since the commencement of the year, that the infection would disappear; but they were doomed to see the slumbering visitant awake in the spring, and continue his devastations with greater malignity, steadily and surely laying his victims low. The surviving inhabitants resigned themselves to a fate from which there seemed to be no escape. The weather in July was warm and sultry, and the number of deaths increased daily during the two following months. October arrived, and the disease still raged; but by the 11th of that month it seemed to have exhausted itself, for we do not read of any further victims after that date.

During this dreadful visitation, two hundred and fifty-nine, out of three hundred and fifty, of the inhabitants fell victims; the survivors being ninety-one, or less than one-fourth. On the outbreak of the terrible disease, a few of the wealthier families hurriedly removed to villages, either contiguous to or distant from Eyam; but the poorer inhabitants, alarmed though they were, were constrained by the force of circumstances to remain. They witnessed, with daily increasing terror, friends stricken; but the places where the malady had shown itself were avoided, and the result was that the occupants of these infected dwellings had to endure the greatest privations. As, however, the infection spread, the privations became more extended; and the selfishness which had at first been exhibited, was forgotten in the general calamity.

During these days of suffering and death, there was one who never shrank from the duties of his high calling. The rector, the Rev. William Mompesson, with a calm courage and a devotion to his flock, which has never been surpassed, went amongst the sufferers, sustaining the failing hearts of the uninfected, breathing words of consolation to the bereaved, and whispering hopes of immortality to the dying. Days passed on, and the disease continued its devastations; the pallid cheeks and hollow eyes of the poor villagers plainly expressed the dread and despair that ate into their hearts. Still this good and noble man remained true to his charge, and never once thought of deserting his post. Up to June, 1666, he continued to hold services at the church; but at the end of this month, or in the early part of July, when the mortality increased, the church was closed; and Mrs. Mompesson, a beautiful but delicate woman, became alarmed, and, with her two young children, threw herself at her husband's feet, urging him to leave the fated place. Nobly did this true steward of God struggle with his feelings, and nobly did he resist that pleading prayer uttered by lips so dear to him; he would not desert his flock. And nobly did this fragile woman, weak but for a moment, elect to stand by her loved husband, to share his danger, to live with him or die with him.

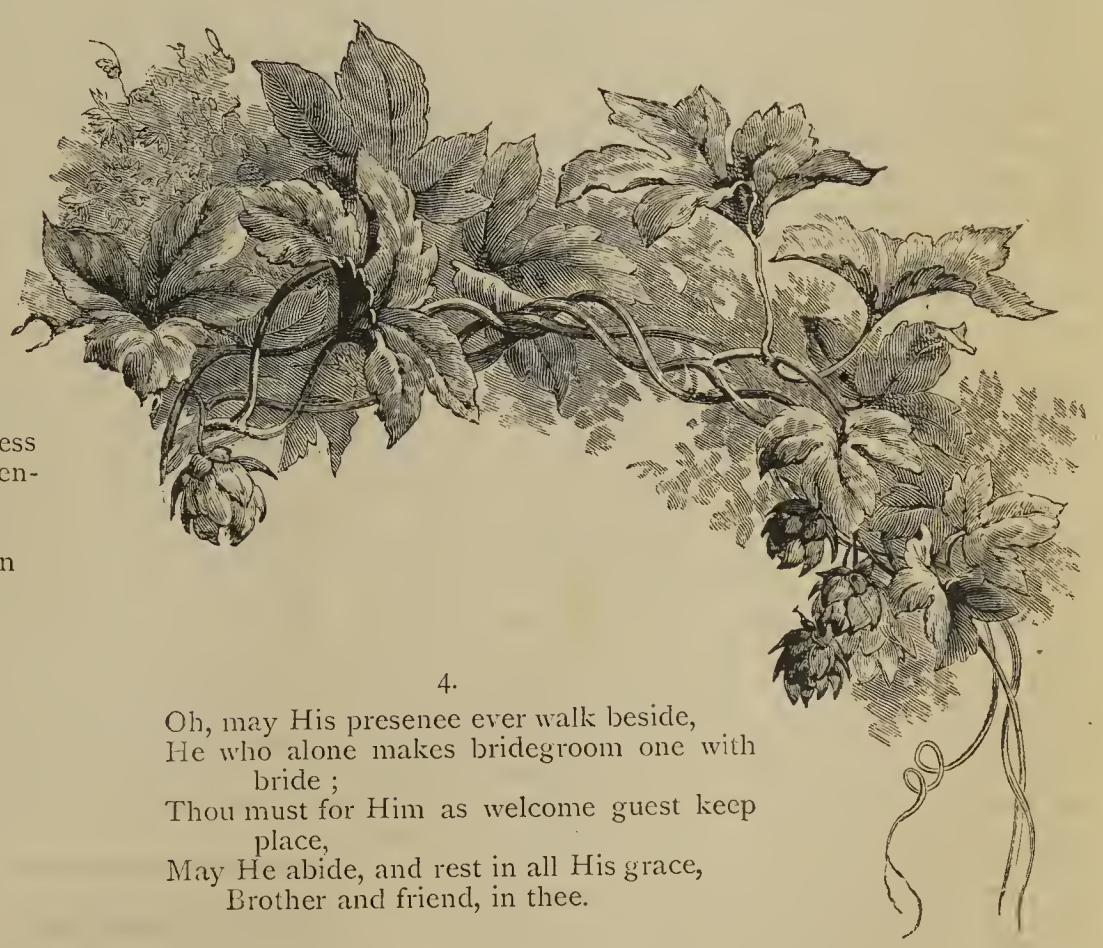
The increasing fatality of the disease, which had terrified Mrs. Mompesson (who fell a victim to it shortly afterwards), began to operate powerfully upon the minds of the despairing inhabitants, who determined to escape from death by flight. This determination on their part roused Mompesson; he remonstrated with them on the danger of flight, pointed out the fearful consequences that would follow, impressed upon them that on them depended the safety of the surrounding country, and concluded by saying that he would remain with them and sacrifice his life, rather than be instrumental in desolating the surrounding country. So well and so forcibly did he reason with the inhabitants, that they renounced all thought of flight.

The heroism of old that guarded the fatal pass of Thermopylæ, was not greater than the heroism of the inhabitants of the little mountain village of Eyam, over two hundred years ago, when they voluntarily consented to remain in a plague-stricken spot, in momentary dread of death, rather than spread desolation in the surrounding country. Such an act in these latter days would thrill the heart of England ; it would be chronicled by many an eloquent pen, and the historian would rank the martyrs higher than the heroes of "Rorke's Drift." But two hundred years ago there were no chroniclers who regarded the martyrdom of the inhabitants of Eyam with more than calm approval; and hence it is that so little is known about an act which, in any other country, would have been commemorated in marble and brass.

As soon as it became known that the terrible Plague of London had appeared, Eyam was avoided by the inhabitants of the neighbouring villages. The inhabitants of the plague-stricken place had none of that help which sympathising neighbours, under ordinary circumstances, are ever ready to afford. Though the privations began to be felt a very short time after the outbreak, they became almost unbearable as the time passed, and brought no relief from the deadly visitant. It is not to be wondered, then, that the almost maddened villagers decided upon flight ; and had it not been for the courage and wisdom of Mompesson, it is certain that the contagion would have spread throughout the country with fearful consequences.

Mompesson took measures, not only to prevent these, but to alleviate the sufferings of the inhabitants. He at once addressed himself to the Earl of Devonshire, who was then staying at Chatsworth, stating the particulars of the calamity, and expressing himself sure of prevailing upon his diminishing flock to confine themselves within the precincts of the village, if they could be supplied with food and other necessary articles. The noble earl promptly responded to the appeal, and all kinds of necessaries were supplied.

To adhere to their heroic resolution, the inhabitants solemnly agreed that no one, infected or not, should proceed beyond the boundary fixed upon. This boundary extended half a mile around the village, and to two or three places, or points, on this boundary provisions were brought. A well, or rivulet, to the northward of Eyam, called to this day "Mompesson's well," or "Mompesson's brook," was one of the places where the articles were deposited. These were brought very early in the morning by persons from the adjoining villages, who, when they had placed them beside the well, fled with precipitation. Individuals appointed for the task fetched the articles away ; and when they took any money, it was placed in the well, or certain stone troughs, to be purified, thus preventing contagion by passing from hand to hand. These precautionary measures proved the wisdom of their originator. The country around was saved ; but the heroic villagers were the victims of the disease, which, as if in baffled rage, destroyed with unrelenting determination.



The visitor of to-day to Eyam is reminded of that fearful season of death and desolation, by having his attention directed to localities with which the memory of it is intimately connected. All are interesting ; but none impress him so much as the sight of the Delf, a secluded dingle, a little south of the village. Here it was that Mompesson met his daily diminishing flock twice a week, during the hot weather, for prayer. Between the present and that period of horror, more than two centuries intervene ; but fancy speeds into the past, and the gazer pictures to himself that earnest, sorrow-stricken minister, preaching from an ivy-mantled rock, to a congregation in whose thin and pallid faces were stamped unutterable woe, hopeless despair. He preached of the Man of Sorrows to sorrowing men ; drew their thoughts, by his earnest and pathetic eloquence, gently upwards, consoling them with the rich promise of that deathless life beyond the skies, and bidding them remember that human life, at best, is but a shadow. In days to come, the mind will unconsciously recall those meetings in the Delf, so full of an inexpressible pathos ; and foremost in the assembly stands William Mompesson, good and true shepherd to his flock, and dauntless minister of God.

TO A BRIDEGROOM.

By T. H. Engall.

1.

I WOULD not break upon thy joy, unless
My words were mingled truth and tenderness,
And all the reason of my verse were seen
In this, that love runs all the lines between
Brother and friend, to thee.

2.

May God be with thee in thy life's great gain,
Thy joys be doubled, and diminished pain ;
Autumn fulfil the promise of life's spring—
In short, I wish God's smile in everything,
Brother and friend, for thee.

3.

Purpose to ripen into perfect deed,
And golden harvest reaped from well-sown seed ;
All Life's unfoldings with rich joys to come
To her, whose love doth make thy new-born home,
Brother and friend, and thee.

4.

Oh, may His presence ever walk beside,
He who alone makes bridegroom one with bride ;
Thou must for Him as welcome guest keep place,
May He abide, and rest in all His grace,
Brother and friend, in thee.

5.

Then at day's close, when life's short psalm shall cease,
And longing hearts desire God's perfect peace,
Oh, in His presence may full welcome be
For her, whose life is now wrapped up in thee,
Brother and friend, with thee.

"1,500 MILES ON FOOT."

IT is but a few years ago that there lived in a town of Northern Germany a young man who had been brought up in the Roman Catholic religion. He believed, however, neither in that nor in any other, but had long cast off all thoughts of God, and lived in sin so open and so terrible, that he was remarkable amongst the ungodly and the depraved as one who outdid them all.

How wonderful are the ways of God! Like him who slew the giant with his own sword, so God made use of the exceeding sinfulness of this young man to awaken in him the first desire after salvation. He became alarmed at his own wickedness. "I am worse than any other," he thought. "If it is true that the wicked go to hell, and only the good to heaven, it is plain where I am going. If ever a man is lost eternally, I must be that man!" Night and day did this thought haunt the wretched sinner; his peace was gone, and he found no pleasure even in sin. "If only," he thought, "it were possible to be saved!" What could he do? He had been told of penances and prayers, of convents where monks spent their days in works that might at last atone for sin; and he felt that no labour would be too great, no torture too severe, if he only might have the faint hope of pardon at last. He resolved to become a monk, but he wished first to know in what convent in the whole world the rule was the strictest and the penances the most terrible. If it were at the other end of the earth, he would go to it, and then he would spend the rest of his days in penance and in prayer.

He was told, in answer to his inquiries, that the convent under the strictest rule was a monastery of La Trappe, distant about one thousand five hundred miles from his home. He could not afford to pay the expenses of his journey, and he therefore resolved to walk the whole way, begging as he went. This alone would be the beginning of a penance, and might gain him one step towards heaven.

It was a long, weary journey, each day beneath a hotter sun and through strange lands. He felt scarcely alive by the time he came in sight of the old building where he hoped to gain rest for his soul—for his body it mattered not. Having rung at the gate, he waited till it was slowly opened by an aged monk, so feeble and infirm that he seemed scarcely able to walk.

"What is it you want?" asked the old man.

"I want to be saved," replied the young German; "I thought that here I might find salvation."

The old monk invited him to come in, and led him into a room where they were alone together. "Tell me now what you mean," said the old man.

"I am a lost sinner," began the German. "I have lived a life more wicked than I can tell you. It seems to me impossible that I can be saved, but all that *can* be done I am ready to do. I will submit to every penance, I will complain of nothing, if only I may be received into the order. The harder the work, the worse the torture, the better will it be for me. You have only to tell me what to do, and whatever it may be, I will do it."

"If you tell me to do the most fearful penance, I am ready to do it," the German had said; and the old monk replied, "If you are ready to do what *I* tell you, you will go straight home again, for the whole work has been done for you before you came, and *there is nothing left for you to do.* Another has already done the work instead, and *it is finished.*"

"It is finished!"

"Yes, it is finished. Do you not know that God sent down His own Son to be the Saviour of the world? Did He not come? Did He not finish the work the Father gave Him to do? Did He not say on the cross, 'It is finished'?"

"What was finished?"

"He undertook to bear the full punishment of sin, and He did bear it, and God is satisfied with the work done by His Son. And do you know this—Where is Jesus now?"

"He is in heaven."

"He *is* in heaven. But why is He there? Because He has finished the work. He would not be there otherwise; He would still be here, for He undertook to do it *all*, and He would not go back to His Father till *all* was done. He is there because God is satisfied with His work. And, dear friend, why should you and I try to do that work which the Son of God *has* done? If God had left it for us to do, we could never do it; were we to perform all the penances that ever have been or could be performed, they would be utterly useless to us. In doing them, instead of gaining anything, you would be but adding the crowning sin to your life. It would be as much as to say, Christ has not done enough. It would be to cast contempt upon the perfect work of the Son of God, and to dare to attempt to add to that which He has said is finished. Yes; in here Christ is insulted and God is made a liar; and were it not that I am so old that I can scarcely walk to the gate, my escape should testify against the place. I would not remain here another day. As it is, I must wait till the Lord comes to fetch me; but you can go, and I beseech you to go, thanking God that His Son has done all for you, and that the punishment of your sins is for ever past. And remember always *that Christ is in heaven.*"

What astonishing tidings for the poor weary sinner! Did he believe them?

He did; and after a short time of rest, during which he learnt more of the blessed gospel from the lips of the old monk, he returned to his own land, there to make known amongst sinners, lost as he had been, the news of that love and grace of which he had first heard in the monastery of La Trappe. There he was employed in this blessed work but a short while since, and probably is still there. May the voice from La Trappe reach your heart here now, and may the "good news of the glory of Christ" bring peace and joy to many who, instead of walking one thousand five hundred miles to hear it, have the gracious message brought to them!

GARDEN LIFE.

FROM THE DINING-ROOM WINDOW.

By TRACEY LAYARD ROBINSON.

JUST one hundred years ago, John Mockett, the Kentish naturalist, of St. Peter's, Thanet, wrote in his "Journal" (now a somewhat celebrated work of reference): "Thanet has long been called the Garden of England," and this title still justly belongs to the little island. Just for an example take the variety of trees and shrubs which grow in luxurious perfection around the lawn upon which I am looking as I write.

First, there is a fine deodora, which "droops her pensive head" in soft feathery fronds, and bends in graceful submission to every breath of wind. Most delicate and frail this beautiful tree appears, yet it has taken a firm root-hold in the shallow soil of our Thanet garden, and increases in size and beauty with every succeeding spring. It is only about ten years old, but it already stands nearly thirty feet in height, and its lower branches stretch from the central stem to a distance of ten feet on either side.

Two fine Portugal laurels stand close together on one side of the lawn, green all the year round, and making the air full of fragrance with the delicate perfume of their innumerable white sprays.

Grown from the seed, are three walnut trees, the eldest not above twenty years, yet all bearing fruit plentifully, and being exceedingly beautiful when, as at present, they are in full spring leaf. These are capital shade trees, and have, therefore, been utilised to the extent of placing a rustic bench beneath their spreading boughs, where, in hot summer days, one may sit and enjoy the air as it passes, getting cooled on its way, through the green aromatic leaves.

At the end of the lawn, about eighty feet from this window, runs an espalier about a hundred feet in length, against which are planted pear, plum, and cherry trees, which form a protection from the east wind for certain more or less delicate shrubs and plants growing on the lawn below. These comprise a couple of oleanders in very good health, which are just preparing to bloom in great profusion; six large tubs full of giant geranium plants, already in blossom, their scarlet flowers looking very gay against their variegated foliage. These will continue to bloom all through the summer and far into the fall of the year, when, tubs and all, they will be carried into the conservatory to be protected from the blasts of winter.

Then there are nine large pots of the beautiful agapanthus lily, which do not bloom before the beginning or middle of August in this climate, but which, nevertheless, do then put forth, in the utmost plenty, very lovely and perfect flowers. In this row also is a cluster of berberis plants, which flourish to perfection, a large clump of feathery prairie grass, and a young catalpa or American bean-tree, which has been raised from a seed I myself sent home from the States nearly four years ago, and which has stood two winters in England out-of-doors already.

It is quite strong and healthy, and is just now bursting into leaf. The catalpa is a very handsome tree, with large broad leaves and a lovely white blossom, something like that of the horse-chestnut. The seed pod, which follows this flower, is a long green bean, sometimes fourteen to sixteen inches in length. They hang in large quantities from the ends of the boughs, giving the tree a quaint and curious appearance.

I must not finish this very brief description of our lawn without mentioning two trees of exceptional beauty which thrive to an uncommon extent in their present apparently very suitable aspects. The first of these is a medlar. At all seasons this tree has its own pecu liar and especial beauties.

At the time I write it is a mass of lovely dark green velvety foliage. The leaves grow in starlike clusters, the centre of every cluster being a bud, which, in a short time will be a white flower of surpassing beauty, so that when they burst into bloom the tree will be like some gigantic bouquet of white flowers, having somewhat the appearance of immense strawberry blossoms. These exquisite blossoms will be followed by the curious fruits, at first somewhat cup-shaped, which gradually fill out and swell into round globular berries, which, strange to say, must not be eaten until they are over ripe, or "sleepy," as I believe the correct term is.

Is there not a story that Queen Elizabeth, or one of our other queens, was so fond of the medlar fruit that she surfeited upon the luscious apples, and became very ill in consequence? Even when the leaves have turned brown, and the autumn winds have stripped the branches, the tree possesses a beauty all its own. The wood is soft and pliable, and the moss-like head stands full of grace all through the winter, waiting only for the spring warmth to renew its perennial loveliness.

The other tree I want to mention is a foreigner, which has taken a firm hold in our healthy Thanet soil. It rejoices in the name of the *Pyrus spectabilis*. At present it is a picture full of beauty to all eyes.

It is simply a clump of exquisite pink and white blossom, intermixed with yellowish-green leaves. The bloom is something like a small azalea, and has already been out for more than two weeks, yet it shows but little signs of dissolution.

I should like also to mention a large almond tree, which is always a beautiful sight when in bloom, and is most prolific of sweet almonds; a fine standard cherry tree now full of rapidly ripening cherries, to say nothing of a large weigelia, several hollies, bays, evergreen oaks, laurels, laurestinus and aucuba laurels.

But I have covered enough space already with proof of the truth of the quotation with which I opened this paper.

Let us now pass to some of the live stock which peoples our lawn.

First and foremost among our feathery population is "Blackie." He has a story which is quite worth telling.

Eight years ago last Spring, one night my dear mother was awakened from her slumbers by a shrill cry of pain. She lay awake a few moments and listened to it, and then said to my father, who had also waked,—

"That is one of our birds; depend upon it, some cat has caught the poor thing. Did you ever hear such a cry?"

The next day, they both looked and listened in vain for the beautiful song of a blackbird, which had long been tame enough to come quite close under this window and pick up worms, or sit on the espalier at the other end of the lawn and whistle for hours.

Two days passed by, and then, while they were at breakfast one morning, there, on the lawn, looking rather dilapidated and torn about the plumage, hopped a blackbird. On looking closely at it, they observed that it had only one leg! The footless stump of the other hung like an empty sleeve from the poor bird's body.

This bird has lived in our garden ever since. Yearly he and his mate build two nests and rear two broods of young blackbirds. He is a constant source of pleasure to the household; for whether singing on the espalier, feeding the young birds that follow him over the lawn, or hunting the worms that form his food, he is quite tame and fearless, and is withal a very handsome bird indeed.

It is great fun to watch him pull a worm from the earth. He plants himself firmly on his single foot, plunges his yellow bill with a sudden dart into the ground, and then commences a series of sharp, rapid tugs, which invariably culminate in the capture of a worm, nearly as long as he is himself.

Once, about three years ago, he had a second adventure, not quite as dangerous as the one by which he so nearly lost his life, but, nevertheless, fraught with consequences which must have proved distressingly uncomfortable to him.

He had ventured within the glass walls of the conservatory, and here my father found him. Anxious to ascertain the exact amount of damage done to his leg, my father gently approached "Blackie," intent upon his capture. Conceiving that he "had him in a corner," he put out his hand and seized the poor thing *by the tail!* Uttering a shrill cry, Blackie darted away, out at the open door, escaping capture, but *leaving his tail behind him!*

However, he must have known that no injury was really intended, for, notwithstanding this rough treatment, he still remains an honoured and welcome guest, and continues to help to people our garden with young blackbirds, who give us their songs.

Whether he always has the same wife, we have never ascertained, as the lady has no distinguishing mark; but he is always a most attentive and faithful husband to the lady of his choice, and an equally good and indulgent father to his progeny. These latter are, indeed, somewhat apt to take liberties with their aged parent.

As an example, only a few days ago, one of the first brood of this Spring was seen in the act of deliberately pulling the stump of his leg, presumably under the delusion that it was a worm!

During the hot summer months we are in the habit of placing a hose with a spray on the lawn, and allowing it to play upon our lilies, or sometimes on the grass where there is a very sun-dried spot. This cool spray of water is a source of great delight to all manner of birds, who come and bathe, evidently enjoying themselves immensely.

In the honeysuckle which covers a portion of this side of the house, we have annually a large colony of sparrows (who, by the bye, make a terrible mess of the honeysuckle!); these birds are especially fond of the water-bath the hose-spray provides for them.

Sparrows are certainly the most thoroughly Bohemian of all birds. They will build their nests anywhere, are absolutely careless of rebuff, not minding in the least being disturbed, or even having their nests torn out; they will build and build again and again, and they are, or seem to be, always happy so long as they have plenty to eat.

One thing alone is sufficient to prove their Bohemian nature. They, of all birds, will not brook confinement. Put one in a cage, and he will begin at once to pine, until at last he dies of a broken heart. I have known a few cases of caged sparrows living, but they are isolated and rare. All these wild birds will become very tame if encouraged, and can be taught a number of clever tricks.

In a clump of laurestinus, close to the walnut tree, a pair of brown linnets have built their nest, and they are constant visitors to the water spray, being "clean, bonnie birdies." Of hedge-sparrows there are two or three pairs, which hop tamely about the lawn, coming close up to the window in search of food.

The thrushes are also very tame, and seem quite to understand that they need fear nothing from their human fellow-inhabitants of this garden. So domesticated is one pair, that they have actually built a nest and reared a family in a bush so close to this window, as almost to be within reach of our hands. When the little fledglings began to feel the strength of their wings, they perched upon the shrub so close to us, that we could with ease have caught them, had we been so inclined.

We have no quadrupedal pets in this establishment, though at one time we did possess a tortoise. This strange little creature was brought from Egypt, by a brother of mine, in a wooden box of fine-cut tobacco! When we opened the box we found that he had drawn into his shell as much of the tobacco as was possible, so that he was stuffed in a quite air-tight fashion with long filaments of the soothing weed!

We allowed him the fredom of the garden, and throughout the summer he conduced very much to our amusement. But on the approach of cold weather he disappeared! Nor did we see anything more of him till once more the warm weather set in, and the outer air was agreeable to this cold-blooded creeper! Then in the autumn he again hid himself. Late in the following summer a terrible tragedy was enacted upon the lawn. The gardener was rolling it with a heavy iron roller; suddenly he felt the machine go over an obstruction of some kind which crackled beneath the weight. Looking down, he found the crushed remains of poor little Mr. Tortoise, who had come out from his winter hibernation to breath the fresh air, get one warm ray of sunshine, and meet a sudden, painful death. We have never kept a tortoise since.

DOUBLE SCRIPTURE ACROSTIC.

1. *THE chosen messenger* of sad tidings to a king.
2. *This name of* our Lord was the second of two names, revealed by Himself to one of His apostles.
3. *A prophetess* and sister of two famous men.
4. David's *ninth son*, born at Jerusalem.
5. *A king* who "was cut off from the House of the Lord," in consequence of presumptuous sin.
6. The *Gospel rendering* of *a patriarch's name.*
7. *This slender token* saved a family from destruction.
8. "Come, let us meet together in some one of the villages of *this plain,*" said enemies of the Jews, wishing to do mischief to one who was "doing a great work."
9. *This place* a wise and good king of Judah "repaired," when he saw that the Assyrian king "was purposed to fight against Jerusalem."
10. *This stone* was erected and named by a prophet, as a witness and memorial to the people of Israel of God's help against their enemies.

The initials, read downwards, form an invitation of the Lord Jesus, and the finals downwards, the way He has opened to enable us to accept it.

The answer to this Acrostic will appear in our issue for June 23rd.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

CHAPTER XLIII.

"RISEN FROM THE DEAD."

THE savages were after skins, not scalps. But, from bitter experience, the Innuits knew their ways well, and that they would far sooner steal these than procure them in a legal way, no species of cruelty being spared by them, if it enabled them to gain their ends. They were in the habit of sacking and burning the little villages on the banks of the river, carrying fire and sword with them wherever they went, and even bearing the younger Eskimos off as slaves.

All their history was given to Captain Boyd and his officers in a very few words, and though not looking upon the threatened danger in the same light that the Innuits did, he determined to be prepared.

The camp must be made into a fort, and that, too, right speedily. Of their ability to defend it against even a thousand Indians (if there were indeed so many), the white man never harboured a doubt. The danger was that they would be, or *might* be placed in a state of siege, which could only have one ending, and that a very dismal one indeed.

Luckily, they were well provisioned, and on three sides fortified by nature, for the camp was built on a promontory of rock abutting on the river. Had it been possible to cut a ditch across, their position would have been inpregnable. As it was, they had to trust to *vallum* instead of *fosse*. There was plenty of wood to build withal, willing hands were soon at work, and the rampart was made extra strong towards the land, being even carried round the river's banks.

In a very few days the fort was completed, and the men, freed from camp duties, could once more go out in parties to shoot and fish.

For a whole week, however, there were no signs of savages anywhere, and confidence became in a great measure restored. The men were divided into four parties, two of these always stopping in barracks in case of a surprise, the other two going to the woods and hills, or rivers. With one of the latter Jack Silk went daily forth, and on returning in the evening, his first question invariably was,—

"How is poor mother?"

For days and days the invariable answer was that common one, which gives so little hope, but to which we so hopefully cling when some dear one lies on a bed of sickness,—"No worse."

But Nat, senior, came one morning to breakfast, and albeit he looked careworn and haggard, there was the old merry smile on his face.

"Mary 'll live," he said.

"Hurrah!" cried Jack.

"You really think she is over the worst?" asked Captain Boyd, in glad surprise.

"I'm sure of it," said her brother. "Ah!" he added, "you don't know Mary yet."

"Hurrah!" cried Jack again. "Let the Indians come now! I feel just in fine form. Godfrey, you and I mean to scare them, don't we?"

Shortly after breakfast Katie came to Jack, and took his hand, and led him straight away to the ship's mother's room. She was sitting up in bed, looking wan and weary, but happy. She had suffered much pain, but had not been heard to make a single complaint. Verily, as Nat senior said, there *was* something remarkable about Mary.

Dresky and Bob-a-link in native costume.

She smiled now as she took Jack's rough, hard hand.

"Katie has told me, Jack, and it has made me very happy. I dreamt last night we were all home again."

"It's a dream, mother, that is going to come true, depend upon that," Jack replied.

"And I am soon to get well; indeed, I am nearly well already."

"Promise us," said Katie, "to risk nothing."

"I promise you, cousin," and Miss Graves smiled again.

The sun shone very brightly now every day, and summer had come in earnest. It was not until Miss Graves went out of doors for the first time, leaning on her brother's arm, that she knew the camp was fortified.

"We did not like to tell you before," said Nat.

"Oh!" she replied; "but I would rather have known it."

So the ship's mother got well. The very thought that they were in danger seemed to nerve her, and assist her convalescence. Another week, a very quiet and happy one for Katie and Jack, went past. Every one was pleased to see the ship's mother beginning to look herself again. She was acknowledged queen of the camp, and all hands vied with each other in paying her attentions.

But as one cloud of doubt and sorrow rolled away, another rose on the horizon, and gradually obscured the sky, for on the very day that Miss Graves resumed her old place at table, Indians were seen in the woods, and their every action was suspicious.

Accompanied by several of the Innuits, and without arms, Godfrey attempted to hold communication with the savages, but they fled at his approach, and on his following them some distance, he was greeted by howlings, threatenings, and brandishing of clubs and spears. Finally, a shower of arrows wounded some of his men, and put them to flight.

Guards were now doubled all round the fort, and constant watch and ward was kept everywhere.

For a time, the Indians contented themselves with gathering in groups at some distance from the fort, and sometimes coming near enough to throw arrows within. This seemed done more in wantonness than anything else.

Day after day went slowly by, and those groups grew larger and larger, and more menacing. It was evident to every one that an attack on the camp would not be long deferred.

Nor was it! Bad news spreads apace. Here were beleagured white people, rich beyond conception from an Indian standpoint, with wealth of rifles, and ammunition, clothes and food—everything, in fact that makes life in these regions enjoyable or bearable. Nothing more easy, the savages thought, than to rob them. It was evident they were afraid; else why hide themselves behind barricades?

One morning it was discovered that the Indians had all gone, and for the whole of the day there was no sight of them.

"Better be prepared for an attack," said Nat, senior. "Savages all over the world are the same. They will be back in force ere long."

And so it turned out.

The first wild rush was meant to carry the fort by storm, at all hazards. The savages depended on their strength of numbers, and on their individual agility and courage. Both the latter qualities were undoubtedly well displayed. But, alas for them! science carried the day, and they had at last to retreat, leaving many of their dead and wounded comrades around the ramparts.

Attack after attack of the same kind was made at intervals all that night, and all next day. But at last they carried away their wounded, fearful, no doubt, that they would meet the same terrible fate which would befall the white prisoners in their own hands.

A long and harassing time was now before the little beleagured garrison, and how it would end no one could tell. The savages made one or two more wild attacks. Then, being beaten back anew, with the loss of many of their number, they retired to the woods, and went quietly into camp.

That they were thirsting for blood and plunder there could be no doubt, but they had all the wiliness of the fox, as well as the fierceness of the wolf. They could wait, for they knew the garrison must capitulate at last. And the garrison knew this would be so, unless help came—an all but impossibility.

Yet there were no signs of fear in any

"English readers would have been pleased, could they have seen with what admiring eyes the Innuits gazed upon a white man's illustrated Magazine, as Nat Graves unfolded the pictured pages."

heart, or on any face, as the dreary time wore on. Never before, during all the voyage, had Miss Graves shown herself so truly a woman and a Christian. For her own comfort or safety she seemed never to have a thought. All her efforts were to make those around her comfortable and happy.

Jack was just Jack, a trifle over-anxious often enough, and making many an attempt when in Katie's presence to laugh at danger for her sake, but, as usual, over-doing it. Nat—both the Nats, in fact—were quiet and firm. Godfrey? Well, life had long, long since lost all charm for him, and at times now he felt he did not care how soon the end came.

* * * *

Civilisation, of the kind known by some white men in countries where I have been, spoils many of the best traits in the character of the black men we too often call savages. But it had not spoiled Dresky; and a more daring and dangerous sleigh-ride was probably never undertaken, and carried out, to save human life.

Poor Dresky himself made light enough of it, and, Innuit-like, gave most of the credit to the dogs, several of which had fallen by the long and tedious way. Yet we, who know something of the country, its wide, wild stretches of forest and hills, its wilder glens, its bleak, beast-haunted stretches of upland moor, its lakes and streams and rocks, can to some extent appreciate the magnitude of the task.

Bears, too, had been encountered, and savage wolves; but poor Dresky made light of these,—

"Goot day. No fear big beast, Blue Jack."

The honest savage had not the gift of language, but he had something better—courage.

The chances against his ever reaching Chilkat were very great indeed.

Truth is stranger than fiction; and that mystery we call "luck" often brings wonders round that man's power alone could not effect. A ship was detained here by accident,—none other than the Russian. She was ready for sea when Dresky was helped on board, weary almost to death, torn and bleeding, his skin clothes in rags.

Spencer Rae was on board himself, and the speed with which a party was armed and equipped to go on the inland rescue expedition barely equalled that with which Dresky had come.

The good Russian captain thanked Heaven now devoutly for the very accident he had previously been bemoaning. The Behring Sea would not see him that summer, nor the seals either.

Poor Spencer Rae could hardly contain himself with joy. He was no nervous young man. Nervousness is a plant that does not flourish in the breast of a Yorkshire lad. Still, for a moment, he was not sure whether he should laugh or cry. He did something infinitely better than either. He thanked God in his heart for all His goodness.

But Godfrey was not found yet, nor rescued.

* * * *

Weeks flew by since the Indians had commenced siege operations, and although there was no further fighting, the state of the beleaguered ones was getting every day more desperate.

It would not be too much to say that hope itself had sunk low in each heart. Resignation alone could take its place; and that, under such terrible circumstances, was hard indeed to retain.

But the hope that had fallen to zero went up to fever heat one morning, when a terrible commotion was noticed in the Indian camp, the shouts of men, and report of trusty rifles.

A goodly mixture of Russians and Americans was next seen rushing wildly towards the camp; and I do not know whether rescuers or rescued shouted the most.

The two Nats did their share; Jack went wild; Captain Boyd and Miss Graves stood with more dignified mien; Katie was crying.

But Bob-a-link, with the big dogs, must jump in a daft way of their own, round and round the hero Dresky.

Meanwhile, Dresky's wife ran off to fetch the piccaninny.

The meeting of Godfrey and Spencer had better be left to the imagination.

When, however, Godfrey first saw his cousin, he seemed too confused and alarmed to speak. Then he managed to get words out,—

"RISEN FROM THE DEAD!"

There was nothing dead about Spencer just then. Nor about that manly shake of the fist, nor the bold, frank look in his fearless eyes.

Spencer Rae brought quite a budget of news from England, in the shape of messages, letters, newspapers, and periodicals; and these latter proved a source of immense amusement.

English readers would have been pleased, could they have seen with what admiring eyes the Innuits gazed upon a white man's illustrated magazine, as Nat Graves unfolded the pictured pages to their wondering eyes.

(*Continued—page* 488.)

A NIGHT'S WORK.

A TRUE ADVENTURE.

IT was evening in the tropical seas, and a ship was just nearing the coast of Madagascar, bearing on board a young missionary and his wife, setting out on their life's work with humble hope and prayer that their efforts might be successful.

They were going to no regular station, but had purposed taking up their abode in some neglected town, where their endeavours might form a little Christian Church amongst the enlightened races. It was a high and holy calling, and such they felt it. As the land drew nearer and nearer, they breathed a silent prayer for strength. The harbour was reached, and they landed. They had made arrangements to travel with a young trader to his home in the hills, it being a comparatively large village, where they hoped to find work.

Arriving safely at their destination, they accepted their guide's invitation to stay at his house as long as they liked; and finding that their presence seemed a pleasure to their kind host, they settled permanently in one part of his home, which was much larger than he required.

So time passed on, and Arthur Baker and his wife Minna prospered in their work. It was a lovely spot, though unhealthy, and the villagers were friendly enough, if the surrounding natives were fierce and cruel. A few Christians gathered weekly in a barn for Divine service, and before three years had passed, their congregation amounted to twenty.

One Sunday in October, the Bakers' host came to them with a troubled face, and looking anxiously at Minna, who was playing with her two-year-old baby, said,—

"I have such a heavy storage of goods just now, that I feel hardly safe from attacks; we must be prepared, especially as I fear my own men are scarcely to be trusted."

Arthur's heart throbbed wildly as he thought of his wife and child, but outwardly he looked calm as he answered,—

"We shall be all right, doubtless; I trust so, at least," he added in a lower tone.

The same night, a soft knock was heard at Arthur's door, and a voice cried,—

"Get your wife up, and make for the river; get off in the boats if possible, there is not a moment to lose."

In a few minutes they joined their friend, and stole noiselessly to where the boat had been moored. It was gone.

The two men looked blankly into each other's faces. Then the merchant said,—

"We must hide your wife and the child, and ourselves go back to keep the wretches occupied." And he led the way into a wood near, where, close by the water's edge, was a cave.

"Stay here, dearest Minna," whispered Mr. Baker lovingly. "God keep you both! Wait till we can get back to you."

Thus they left her, with the baby lying sleeping in her arms.

As with great caution they returned to the house, Arthur's friend said quietly,—

"I have nearly a ton of gunpowder under my room; so if they fire it, they will be rather surprised. I suppose you know that all my men have turned traitors, and joined the enemy. Ah, listen! I hear them. Run to the house, Baker; we must do our best, and that is the safest place."

They got in safely, and having secured doors and windows, waited till a terrible yell told them that the foe was upon them. Sheltering themselves behind the windows, they poured a heavy fire on the natives. But at last the door was broken in, and the two friends got out at a back way just in time, and hid themselves in a wood close by. Soon the smoke and flames, rising from the house, showed them it was doomed.

Suddenly there was a wilder yell, but above the uproar they heard a cry. It sounded like "*Arthur!*" The two friends looked at each other for a moment, then without a word dashed down to the river. Entering the cave, where they had left the two loved ones, they saw only the baby lying fast asleep on the ground, while Minna was nowhere to be seen. A dreadful thought dawned on Arthur, and he turned toward the house, to reach it in time—for what? Ah, indeed! He sees his home in the distance wrapped in flames, and his wife wildly trying to enter it. The next instant there was a roar, and he was flung heavily to the ground.

For weeks he lay unconscious, and when he at last awoke to life, it was but to learn that his wife had perished in the explosion. They could only conjecture that she had been terrified at being left alone, and seeing the burning house had imagined her husband in danger, and heedless of herself had sought him, only to meet her doom. Arthur never recovered the shock, and was obliged to give up his cherished work and return to England with his little son.

To the end of his days he will bear the impress of that terrible moment, which had made him witness his wife's death, whilst he was powerless to help her. Nothing but his faith in God saved him from insanity, and even now he cannot speak of the circumstances without crying like a little child.

SLATES.

By Andrew T. Sibbald.

THOSE who now run through Wales on their way to Ireland, should, unless their time be very limited indeed, turn aside from the iron pathway, and glance at the wonderful slate quarries up Nant Francon. They will be repaid for their trouble.

And if a circuitous coach-route be adopted, instead of the rail, there are Mr. Assheton Smith's quarries in the very bosom of Snowdonia, and Mrs. Oakley's quarries near the beautiful Ffestiniog. Plenty of slate in North Wales, if we will turn a little out of the highway to look for it ; but of all the quarries in the Principality—of all in the world, perhaps—the place of honour must be given to those which have Bangor for their shipping port, and which have poured such wealth into the coffers of the Penrhyns and the Pennants.

Penrhyn Castle, one of the best of all modern castles, built at a cost of a hundred thousand pounds, may be regarded as a slate trophy; its cost was defrayed by the fortunes of the quarry-owners, and it very properly contains rooms and furniture and ornaments of slate. It is alone worth a journey to North Wales, and a walk of seven miles from Bangor, and a day's heat or cold, or rain or snow, to see the pigmies at work high up Y Bron, "the pap," a name frequently given in Wales to rounded summits.

The excavation commences at a low level in the mountain ; but as the workings have been carried on for more than a hundred years, they now extend more than half a mile into its heart, and form a vast amphitheatre. It is an amphitheatre of terraces one above another, like the seats of the ancient Coliseum, but so vastly large as to eclipse them in every sense ; while the workmen appear like mere specks, so high and so wide-spreading are the workings.

The adoption of this terrace-like mode of working is due to the peculiar structure of slate. The slate is not merely separable into beds or layers, nearly horizontal, but it has innumerable lines of cleavage nearly vertical ; and these lines facilitate the separation of the blocks from the vertical face of the mountain. A trench is first worked into the side of the slate mountain, and when this has extended to such a distance that the rise of the mountain causes the height of the trench to be about forty feet, another trench is commenced at the top of the former, and then another and another, like a huge flight of steps up the side of the mountain. Meanwhile, the gradual widening of the lowermost trenches will be effected by detaching blocks of slate.

The upper part of the mountain being, of course, narrower than the base, it necessarily follows that the lowest trenches can be expanded farther and wider than the upper ; in fact, the lowest trenches have ceased altogether to be trenches at Y Bron, and have become vast semicircular cuttings.

No less than sixteen heights or terraces, each about forty feet above the one next below it, now exist ; and all sixteen are advancing simultaneously further and further into the heart of the mountain. As the quarry-men proceed, they will probably have to make other terraces still nearer the summit of the mountain.

Two thousand men are digging, and blasting, and levelling, some of them at a height from the ground equal to double the height of Saint Paul's Cathedral, and all working open to the light of day, instead of burrowing underground like miners. The blasting is extraordinary work, requiring no little firmness of nerve.

The men are suspended by ropes from the edge of an upright crag of the rock ; they drill holes into the vertical face of the slate ; they put the blasting charges into these holes ; they are hauled up again, and, when precautions have been made for obviating danger, the charges are fired, the blast takes place, and huge masses of slate become loosened. At the upper part of the quarry the slates are loose enough to be detached by crowbars ; but at greater depths the slate is more compact, and requires the aid of gunpowder for its disruption. So many are the perils at Y Bron, that accidental deaths are painfully numerous among the quarrymen.

There are parts at which the slate is interrupted by veins of intensely-hard basalt or greenstone, the presence of which is a sore trouble both to the proprietor and the workmen.

The men, the slates, the tools, and the working tackle are raised and lowered from one terrace to another by means of inclined planes. A drum and a brake-wheel are placed at the top of each inclined plane, and by dexterous management, trucks are raised and lowered with great facility. The men not only blast the compact recesses, and split the loose blocks with wedges, but also separate these blocks again into slabs, then slates. They then square and trim them. On most of the terraces there are sheds or workshops in which these subsidiary operations are carried on. The very hard blocks are cut with saws into slabs, while the looser kinds are split into roofing-slates, by means of long, wedge-shaped pieces of iron.

But the quarries themselves are only one part of this great Penrhyn property—one end of a commercial chain. We have said that the valley on the side of which this slate mountain is situated is called Nant Francon.

The quarries are called by the Welsh name of Dolawen, or the still more Welsh name of Braich-y-Cavn ; or Penrhyn, after the name of the first worker ; or Bangor, after the name of the shipping port : but it matters little what we call them, provided we bear in mind that the mountain which yields the slate is Y Bron.

Lord Penrhyn is said to have spent nearly two hundred thousand pounds on the means of transport to the ships ; and a most wise expenditure of capital it was. The railway glides between Bangor town and Penrhyn Park, carrying its long train of little trucks down to the docks and quays at the northern end of the Menai Straits. These quays are excellently arranged ; nothing can better aid the slates in setting off on their travels all over the world. The ships draw close up to the quays ; the railway runs along the quays ; and the transfer from the trucks to the ships is made easily and rapidly.

The quays, running a thousand feet out into the sea, are laden with slates in countless number ; slates in block, and slates in slabs, and slates in slices ; slates little and slates big ; slates for builders and slates for schoolboys ; slates for home and slates for abroad.

As to the extent and value of these quarries and shipments, we are afraid to say how great are the estimates sometimes made. We have been told of three thousand men and boys employed at the works; of eleven thousand persons supported by the wages thus received; of eighty thousand pounds a year expended in working the quarries, and yearly profits much larger than this ; but unless we could tell more accurately, it will be better to keep clear of such big, high-sounding numbers as these.

Despite what we might expect to the contrary, slates are the most lady-like of all mineral substances. What other can boast of queens, and duchesses, and countesses, and ladies—to say nothing of imperials? The slaters tell us that a queen is three feet long by two feet wide ; that a duchess is two feet long by one in width ; that a countess is twenty inches long by ten wide ; and that a lady, a simple lady, is sixteen inches long by eight in width. All this is very peer-like and heraldic ; the four kinds take rank according to their dignity in the peerage.

True, a queen would be a very Queen Dollalolla, who should be half as broad as she is long, like these duchesses, countesses, and ladies ; but the slate-queen presents a still more ample ratio in width. All these ladies, however—like the clown who has been crushed under an enormous weight on the stage—are remarkably thin from front to back—regular flats, in short.

And then these ladies are subjected to square measure ; for we find that a hundred and seventy-six countesses will only cover as much square space as a hundred and twenty-seven duchesses, while it requires no less than two hundred and eighty simple ladies to cover an equal space. We thus see how it is that the dignity of peeresses varies as the square of their dimensions—a law which Mr. Debrett and Mr. Burke would never have discovered.

The greater dignity of a duchess is further shown by this fact, that a smaller number of copper nails is required to fasten down a hundred square feet of duchesses than a similar area of peeresses of lower degree—only two hundred and fifty-four ; whereas three hundred and fifty-two are needed for countesses, and two hundred and eighty for ladies. All alike, however — duchesses, countesses, and ladies—are destined to be fastened down with two nails each.

The slates used for writing do not differ in any considerable degree from roofing-slates ; but the quality is a little finer in the first instance, and the surfaces receive a careful grinding and smoothing in addition. The kind of slate used for pencils is much softer; it contains a little carbon, which lessens its stony character, and so increases its marking or tracing action. The pencils called Dutch are formed of harder slate than the others, and are fashioned into cylindrical pieces for schoolboy use.

CHAPTER II.

SEA-FLOWERS.

USUALLY where rocks occur along our shores, sea-anemones will be found nestling in the crannies, lining the rock pools, and often hanging mouth downwards from some overhanging ledge. These sea-flowers are painted in many hues, the predominating colours being reds, browns, orange-ochre, green, greys, and white; as a rule, purples and blues rarely occur.

Most of those with subdued colouring are pencilled with delicate shades of browns, greys, and greens, and afford never-ending delight to those who can appreciate the more neutral colours.

At one time the sea-anemones were held to be veritable plants; but even the most sceptical observer would not hesitate to regard them as animals, after noticing their sensitiveness to light and touch, their power of rapid contraction, and the intelligent manner in which they catch food, and convey it to their mouths by means of their tentacles.

We will now endeavour to gain some idea as to what a sea-anemone really is, as it is in many respects a very interesting though lowly animal. Any common form will serve us as an example. The animal is attached by a flat base to some firm object, but very few sea-anemones are actually fixed, as many slowly creep about, seeking a more convenient spot to live in, and a few worm-like forms burrow in the sand.

The body is usually extended like a small column, this especially occurring in the dark, but, on the other hand, the body can be contracted so as to look like a button stuck on a rock. The upper end of the column is fringed with tentacles; sometimes there is only a single row of them, but usually they are ranged several rows deep, so that a very large number may be present. These tentacles are arranged so as to form the border of a round disc, in the centre of which is situated the mouth.

The mouth is usually oval or slit-like, but sometimes it is round. The tentacle opposite to each end of the mouth, and that portion of the disc between that tentacle and the corners of the mouth, are occasionally differently coloured from the neighbouring regions.

Thus, externally, a middle line can often be discovered by which the body can be divided into two equal parts. This line is called the *axial line*, and the special tentacles the *axial tentacles*. The body of the sea-anemone may be smooth, or warty, and in some instances it is perforated by distinct loop-holes.

This is about all that we can discover by an external inspection. If we wish to learn more about our sea-anemone we must dissect it. In the accompanying figure the

anatomy of a simple sea-anemone is shown in a diagrammatic manner. The animal is supposed to have been cut in two along the axial line, from the top to the bottom, and again the upper portion is cut horizontally. We then find that the mouth is merely the open end of a short tube—the gullet, which hangs down into the central cavity of the body. Between the gullet and the wall of the body are a number of pairs of fleshy plates or mesenteries, some long and reaching up to the gullet, others much shorter.

Below the gullet, the free edges of the mesenteries are thickened, to form what is known as the mesenterial filament. The figure represents a member of a family of sea-anemones which possesses a long coiled thread on each mesentery. This thread is provided with poison-stings, and can be shot out through loop-holes in the wall of the body, or through the animal's mouth.

In this family only six pairs of mesenteries reach the gullet. In an older specimen than that figured, there might be a large number of pairs of short mesenteries of various length.

Those sea-anemones which possess these long threads were named *Sagartidæ* by Mr. Gosse, for the following somewhat fanciful reason :—Herodotus says, in the army of Xerxes "there was a certain race called Sagartians, and the mode of fighting practised by these men was as follows : when they engaged an enemy, they threw out a rope with a noose at the end ; whatever anyone caught, whether horse or man, he dragged towards himself, and those that were entangled in the coils were speedily put to death." When irritated, the Sagarts, as we will call these sea-anemones, eject their threads in profusion, and by means of the stings with which these are crowded, they poison and paralyse their enemies.

In the figure of the common sea-anemone (page 452) it will be noticed that there is a row of bead-like swellings below the tentacles ; these are blue in colour, although the sea-anemone itself may be red, buff, or green. The beads are closely packed with poison stings, similar to those which are found on the threads of a Sagart. The beads are thus the weapons of the common sea-anemone.

A German naturalist once witnessed a wonderful duel between a sagart and a common sea-anemone. It happened that they accidentally met when on their travels. The beads of the latter, on the side nearest to the sagart, swelled out to a large size, and were used to attack the other almost like boxing gloves. The sagart, however, had the advantage, for it threw out thread after thread upon its foe, and as these threads were several inches in length, they coiled all over its body. It was not long before each had had enough of fighting, and they slowly separated, smarting under their injuries.

Having mastered the general structure of a sea-anemone, we will now endeavour to learn something about its development. Like all other complex animals or metazoa, the sea-anemone lays eggs. Each egg, or ovum, is a small spherical mass of protoplasm, containing a large central clear space, or nucleus. Any distinct mass of protoplasm containing a nucleus is termed a "cell." When development commences, the ovum divides in half, each half being similar to the egg as it was before division ; each new cell again divides into two, so that there are four cells, and so the process of cell division continues, until a small sphere of cells is produced, which is known as a "blastula" or "blastosphere." The central cavity of the blastula, as it results from the segmentation, or division of the ovum, is termed the "segmentation cavity."

Shortly after the completion of the blastula stage, one pole of the blastula is pushed in or invaginated, so as to obliterate the segmentation cavity. Thus a two-layered embryo is formed, which is called a "Gastrula." The outer layer, or "ectoderm," forms the protective covering or skin of the future animal, and the inner layer, or "endoderm," lines the primitive stomach, and serves to digest the food. The central cavity, or stomach of the embryo, is called the "archenteron," and its mouth is the "blastopore." It is not very difficult to learn these technical names, and when one is studying any subject precisely, it is very important to employ terms which have a definite signification, as it saves using several descriptive words, and at the same time prevents misapprehension. I therefore offer no excuse in here using the exact terms which are recognised by all scientific men. The wise John Ray said nearly two hundred years ago :—

"Much might be done would we but endeavour, and nothing is insuperable to pains and patience. I know that a new study, at first, seems very vast, intricate, and difficult ; but after a little resolution and progress — after a man becomes a little acquainted, as I may so say, with it, his understanding is wonderfully cleared up and enlarged, the difficulties vanish, and the thing grows easy and familiar."

FIG. 24.

FIG. 25.

To return to the embryo sea-anemone. The gastrula is clothed with very fine vibratile hairs, or cilia, by means of which it swims about. The gastrulæ of some sea-anemones swim away through the mouth of their parent, but in others they remain inside the central cavity until they are fully developed, though small sea-anemones.

The next change is for the blastopore to be pushed a little way within the central cavity ; the tube thus formed is the gullet, and its outer opening is the mouth of the sea-anemone. From this account it is quite evident that the gullet of sea-anemones is lined by the outer skin or ectoderm.

About the same time a pair of folds of the endoderm is formed, and this is the first appearance of the mesenteries. Later, other mesenteries are formed, but they always come in pairs. At the same time that the mesenteries are appearing, the tentacles sprout out from the hollow spaces between the mesenteries, so that the mesenteries separate the base of each tentacle from its fellow, as may be seen in Figs. 1, 2.

We may now take leave of the young sea-anemone, as the main difference between it and an adult chiefly consists in the greater number of mesenteries and tentacles in the latter, and in a further development of some of its organs.

Simple as the sea-anemones are in structure, the hydroids, which were mentioned in the last chapter, are still more simple. It will be remembered that they were described as being tubular animals, with a mouth at one end surrounded by a circle of tentacles.

The marine hydroids are usually compound, a number being joined together to form tree-like colonies. But there may be found in nearly every pond or ditch a fresh water hydroid, or polyp, known as the hydra. The most common form is of a bright green colour ; but a brown kind is not infrequently found. Here is a sketch of the living animal, and by its side will be seen a very diagrammatic longitudinal section through the animal, and also a transverse section.

From these you will readily be able to understand its structure ; and you will hardly require to be told that the outer layer of the body is equivalent to the ectoderm of the sea-anemone, and the inner layer to its endoderm.

I want you now to compare the gastrula of the sea-anemone with the diagram of the adult hydra. They are identical, the only difference being that the hydra has tentacles. Simple as the adult is, the sea-anemone passes through a stage which is permanently represented by the adult hydroid.

Let us go a step farther back, and note that the hydroids also pass through a blastula stage ; but there is no known animal which, in its fully grown condition, has the structure of a simple hollow ball.

The blastula in both cases arose by the segmentation of an ovum, or egg. But an egg is a simple cell ; so the hydroid and sea-anemone are developed by cell division from a single cell.

In our last chapter, we found that zoologists divide the animal kingdom into the unicellular animals, or protozoa, and into multicellular animals, or metazoa. We have just seen that some of the simple metazoa arise from a unicellular condition. We are then justified in regarding an ovum as representing the protozoon ancestor of the metazoa.

All those who have carefully studied the development of animals, have recognised that they pass through numerous stages in their development, which bear a very close resemblance, in the main, to certain animals lower in the zoological scale ; that is, to animals which are not so highly organised as themselves. And as it often happens that the stage which is passed through bears no direct relation to the adult condition, the development may thus, to a certain extent, be said to be slightly round about.

In some cases special organs may be developed which are useless to the embryo, and which disappear by the time the animal is born. For instance, the embryo of the whalebone-whale has teeth which never cut the gums, the adult having no teeth at all. An early embryo bird, or mammal, has several slits in its throat, which afterwards disappear. These are perfectly useless to the embryo.

We explain the presence of teeth in the fœtal whale, by saying that the whales were descended from ancestors which had true biting teeth ; but owing to the habits of their descendants, the teeth, not being required, were gradually lost. Thus the embryo repeats the ancestral feature of possessing teeth. A similar explanation applies to the perforations in the neck. The ancestors of birds and mammals are assumed to have had slits in their throats, which were useful to them, but which subsequently became useless, and so disappeared.

Everybody knows that fishes have gills separated by gill-slits, which perforate the throat. Although the gill-slits are alone present in the neck of the embryos of birds and mammals, we may conclude that the ancestors of birds and mammals once lived in the water, and breathed by means of gills; in fact, that they were fishes.

We shall, however, return to this subject again in a later chapter. The chief result of the study of the development—or, as it is often called, the "embryology,"—of animals, is the discovery of the fact that each animal repeats in a manner, in its own development, the history of the race ; and thus it is possible, within certain limits, to recover, so to speak, the ancestors of living forms which lived in long bygone geological ages.

The accompanying figures illustrate that such diverse animals as a sponge, sea-anemone, starfish, worm, sea-slug, prawn, and frog, were at one time simple cells, or ova, which, by segmentation, developed into a sphere bounded by a single layer of cells ; and lastly, that the blastula stage was converted into the gastrula, this being the last stage which is common to all metazoa.

We now arrive at a great generalization in zoology. The protozoa represent the permanent adults of the unicellular stage in the development of the metazoa. They remained single cells, while the ancestors of the metazoa developed into complex animals, built up of innumerable cells.

The blastula stage in the development of metazoa is not known to be represented by any adult form now living. The nearest approach to it is the remarkable organism known as *Volvox ;* for though volvox is most generally regarded as a plant, a few zoologists claim it as an animal.

The gastrula stage is passed through by all the metazoa. The hydroids and sea-anemones—or, in other words, the cœlenterates—and also the sponges, never get beyond this stage. A hydroid is nothing more than a tentaculate gastrula ; a sea-anemone is somewhat more highly organised. All the higher metazoa diverge, after the gastrula stage, along different lines of development, according to the group to which they belong.

"THIRTY NOUNS" COMPETITION.

EXAMINER'S AWARD.

WE wish our readers could share the diversion this Competition has afforded, as showing the immense and amusing variety of subjects, with which these thirty nouns can be ingeniously interwoven.

We shall be able to gratify the competitors, by announcing in our next the successful Prize and Certificate Winners.

ENERGETIC!

PLUTARCH, who has been called the prince of story-tellers, gives us this peep at the building of the Parthenon :—

"When the Athenian people built the Parthenon, they set free the mules which had done the hardest work in drawing stones up to the Acropolis, and let them graze where they pleased, unmolested. It is said that one of them came of its own accord to where the works were going on, and used to walk up to the Acropolis with the beasts which were drawing up their loads, as if to encourage them, and show them the way. This mule was, by a decree of the people of Athens, maintained at the public expense for the rest of its life."

CRISP CORRESPONDENCE.

Anxious—Examination for Deacon's Orders. — It is not at all likely that any Bishop would ordain without *some* examination ; indeed, he may not, for the Ordinal requires that there should be an examination of the candidate previously to his being presented. But *what* the examination should be is in the hands of each Bishop. Most Bishops would also require a college course of some kind, either at a University or at a Theological College. Further information would be readily obtained on application to the Principal of either the St. Aidan's Theological College, Birkenhead ; or the St. Bede's College ; or that of St. John's, Highbury, London, N.

Socrates.—A popular edition of Carlyle's "History of the French Revolution," has just been published by Messrs. Chapman & Hall, 11, Henrietta Street, Covent Garden, London, in three volumes, price 1s. per volume.

Two good papers in which to advertise for any educational purpose are *Le Signal*, M. Reveillaud, 8, Rue Porte-Bue, Versailles, pres Paris; *L'Eglise Libre*, M. Leon Pilatte, Nice (Alpes Maritimes), France. Both these are recommended by M. Le Pasteur du Pontet de la Harpe, French Parsonage, Bayswater.

W. W.—We are pleased to reply to your query, "What has been the average circulation of 'A. 1.' since its birth?" Of course, if we followed the usual publisher's rules, this would be a profound secret ; but as we have every reason to be proud of its rapid growth since its birthday—only last Guy Fawkes day—we are glad to tell you that it has averaged not very far short of 40,000.

Bristol "Castle Green Working Boys' Club." We regret that, inadvertently, the subscription to this Club was stated, in a recent issue, to be one penny per week. The lads are only asked to pay one penny per *month*, and, if they are out of work and in needy circumstances, only half this small amount is expected.

A Lover of "A. 1."—We would suggest that you might very readily supplement your present income by type-writing or shorthand, in which case you would probably need about three or six months of earnest work to perfect yourself in either of these branches. In the present day there are very wide openings for secretaries who can write shorthand and work a type-writer. If you could acquire the knowledge of both, so much the better ; your value would be greater in any post where you might become engaged. Or, if a sedentary life would not suit your health, could you not obtain Hospital training with a view to becoming a nurse? There is no employment more womanly, or important, or responsible ; and where God has given a decided talent for sick-nursing, we strongly recommend that this opening should be embraced. You would find all information in reference to Hospitals, time of training, expense, etc., on page 99, vol. ii. of OUR OWN GAZETTE.

Kathleen.—Accept our sincere thanks for your hearty letter. We are glad to know that your brothers are amongst our enthusiastic subscribers, and are sure they will introduce "A.1." amongst their friends. If they could use any specimen copies (gratis), the Secretary (62, Ludgate Hill, London, E.C.) would be happy to supply them.

Matherlees.—A gardener or coachman, on entering a sitting-room or study to speak to their master or mistress on business, would respectfully touch his forehead.

Gertrude.—Marriage under the circumstances you relate is undoubtedly legal, presuming, of course, that your father's present wife is not your own mother.

"THE EVERLASTING HILLS."

By John Calvert.

I LIKE to look on the hills of Scotland! I feel a kind of awe in standing near the base of some of them, and gazing at their lofty summits—sometimes hidden in clouds, sometimes clearly defined against the blue sky! I love to climb their rugged sides, to reach the highest point, and from thence to gaze away down upon the valley or lake that stretches out far below! It is inspiring to stand on a summer day so high above the world; to watch the white sails that glide so smoothly along the shining surface of the placid loch; to admire the varied colouring of the landscape—its rich clothing of foliage or stretches of purple heather; to gaze far away towards the horizon, where other hills close in the view, and seem to blend their dark blue outlines with the sky, or, on the other hand, to where the distant sea reflects the azure from above.

In the winter, how grand and majestic they appear in their rugged outlines. How cold and forbidding, too, when we find the path we climbed in the by-gone genial months now rendered inaccessible, and we can only admire them from the valley below, where we get a glimpse of the now snow-crowned summit, and hear the roar of the mountain torrent, as it makes its rapid descent amongst the rocks in which it has formed a channel.

As I have seen the hills under these varied aspects, one thought has presented itself to my mind, and has caused me to look upon them with somewhat mingled feelings. I have thought of the *unchangeableness* of these hills; of the fact that during the ages past they have stood just where they stand now; and that to the people of olden time, they presented the same view—the same alternate pictures of summer beauty and snow-clad grandeur; and while summer and winter remaineth, these monuments shall still endure; they shall stand there when the generations that now behold them shall have passed away.

And then my thoughts have risen from Nature up to Nature's God—from the contemplation of the unchanging hills, to meditate on Him who hath by His mighty power formed these mountains and hills (Ps. 65. 6). The earth may change, but He remaineth "the same yesterday, and to-day, and for ever." My mind, a little ago, was saddened in thinking of the many changes that these hills have witnessed; of the many who have looked upon them in years gone by, who no more climb their winding paths; and that those who now live amongst them shall soon likewise pass away. But I have been reminded of a fact that causes my sadness to vanish. "The word of the Lord endureth for ever," and that unchanging word of Him who abideth "from everlasting to everlasting" (Ps. 90. 2), speaks of a better country, where there will be no more change. To those who trust in the Lord, there is the prospect of a home that cannot end, of friendships that must continue for ever, of a life that is everlasting. In that coming *eternity*, which is too long, too vast, to be measured by years, there will be no changes. The delights of "the Eden above" will not be marred by thoughts of the inhabitants growing old and passing away: "there shall be no more death" (Rev. 21. 4). God Himself shall dwell among His people, and His dominion shall be an everlasting dominion.

As we look on the "everlasting hills," let us, who trust in Him, think of the unchanging future. Meanwhile His word to us is: "They that trust in the Lord shall be as Mount Zion, which cannot be removed, but abideth for ever. As the mountains are round about Jerusalem, so the Lord is round about His people from henceforth, even for ever" (Ps. 125. 1, 2).

INTERNATIONAL SUNDAY SCHOOL LESSONS.

NOTES ON THE INTERNATIONAL S.S. LESSON.

July 1st.

God's Covenant with Israel.—*Exod.* 24. 1–12.

Golden Text.—*Heb.* 8. 10.

BEFORE entering upon this lesson, reference must be made to previous lessons from Exodus, a year ago. Question scholars as to where we "then" left the children of Israel. *In front of Mount Sinai.* What happened on that mountain?

What is a covenant? "An agreement on certain terms; a compact." "A *covenant* is a mutual compact, as we now consider it, betwixt God and man; consisting of mercies, on God's part, made over to man, and of conditions, on man's part, required by God."—*Hammond.*

Other covenants mentioned in Bible. With Noah (Gen. 9. 12); of Sabbath (Exod. 31. 16); with Abraham (Gen. 17. 7); with David (2 Chron. 21. 7). Covenants made by men only: Joshua (24. 25); Jehoiada (2 Kings 11. 4); Zedekiah (Jer. 34. 8); Judas (Matt. 26. 15). Illustrate by Scottish Covenanters.

The Covenant Makers. *God, Moses.* No covenant possible without two parties. Moses the people's representative. *Their meeting-place*—Mount Sinai. (Opinion of scholars that verses 1 and 2 should be placed, in proper order of time, immediately before the words of the Book of the Covenant, chap. 20. 21.) All the people might have shared in the work, had they not been frightened (chap. 20. 19).

The Words of the Covenant. Get scholars to read the epitome of chapters 21.–23., placed as heading of each. "The Book of the Covenant appears to have been a practical application to daily life for legal and governmental purposes of the great moral principles of the ten commandments." These "words" afterwards written in a book, and regarded with special veneration.

The Covenant-Takers. "All the people" (ver. 3).
They were *unanimous.*
They promised obedience.
They dedicated or confirmed it with blood (Heb. 9. 18).
Moses built an altar. "Twelve pillars," typical of the twelve tribes. "Young men," because priesthood not yet appointed. Moses sprinkled the blood on himself—this time a representative of God—on the book (Heb. 9. 19), and the people. The import of the act very solemn. People are supposed to have said, "As the body of this victim is cloven asunder, as the blood of this animal is poured out, so let my body be divided, and my blood shed, if I prove unfaithful." "The blood of sacrifices was regarded as a substitute for their own blood" (Heb. 9. 22). God had done all His part, the people all theirs—so far, *a perfect covenant.*

The Covenant-Keepers. To accept the covenant was *easy;* now came the more difficult part, to *keep.* "Seventy of the elders"—representatives—were to go with Moses up the mount; directions for this given in verses 1, 2, but not put into practice till covenant was ratified with blood.

Covenant-keepers see visions (Exod. 3. 2; Isa. 6. 7).

Covenant-keepers see God. "From the level of every life there is a way up to the mount of God."

Covenant-keepers are nobles. To see God is to be ennobled.

Covenant-keepers have communion with God. Eat in His presence. Sacrifice followed by sacrificial meal. Hospitality a further sign of union.

Covenant-keepers are safe. "He laid not His hand."

The Covenant-Breakers (Rom. 1. 31). A glimpse forward. Did they keep this covenant? What did they suffer in consequence? Show how present state of Jews is an undeniable proof of the truth of this day's lesson. We, as well as Jews of old, so easily led astray. Sin brings the same consequences now.

Lesson must not close without reference to—

The New Covenant.

Its Author (Rom. 11. 26; Heb. 8. 6–13; 10. 16).
Its Conditions (Rom. 12. 1, 2).
Its Power (Heb. 13. 20, 21).

C. Skinner.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSON.

By the Rev. F. E. Marsh.

July 1st.

The Lost Piece of Silver.—*Luke* 15. 8–10.

I. *Loser of the Piece of Silver.* We may take the woman as representing God. We may lose a thing in many different ways—we may lose a thing through our own carelessness, or we may have it stolen from us; it is in the latter sense that God lost us. Satan and sin robbed God from us, as well as robbing us from God.

II. *Lost Piece of Silver.* 1. It was lost, so is the sinner. Lost in Adam; lost in sin; lost in self; lost in the world; and lost to God. Lost, like a man in a wilderness: lost, like a man without a character; lost, like a man under sentence of death; lost, like a ship without a rudder, being driven toward the fatal rocks; lost, like the wandering sheep; lost, like the prodigal in the far-off land; and lost, like the piece of silver—in the dust of sin and uncleanness. 2. It was a piece of silver, therefore precious. The sinner is precious and costly to God. We read this in the love of the Father, in the work of the Son, and in the labour of the Holy Spirit. 3. It was *one* piece of silver. One soul is precious to Christ. In John's Gospel we have Him again and again saving and blessing individual souls.

1. Nicodemus,	illustrating	Self-righteous one.
2. Woman of Samaria,	,,	Prejudiced one.
3. Nobleman's son,	,,	Diseased one.
4. Impotent man,	,,	Helpless one.
5. Woman taken in adultery,	,,	Unclean one.
6. Blind man,	,,	Blinded one.
7. Lazarus,	,,	Dead one.

III. *Lighted Candle.* What does this represent? The light of man's reason? No. The light of nature? No. The light of the law? No. The light of learning? No. What then? Paul tells us in 2 Corinthians 4. 3–6, it is the gospel. The candle would lead to two things—reveal the piece of silver in the dust, and so cause the woman to recover it. Even so does the gospel. It searches (Zeph. 1. 12) and causes conviction, as in the case of Saul of Tarsus, when the light shone around him. And it brings the light of the gospel and salvation (Luke 11. 36).

IV. *Sifting the Dust, or sweeping the House.* There are two sweepers spoken of in the Bible. 1. The sinner, who sweeps his house with the broom of reformation (Luke 11. 25). 2. God, who sweeps away our refuges of lies (Isa. 28. 17), that we may flee to the only Refuge of Safety. Or He sweeps the sinner with the besom of destruction in judgment (Isa. 14. 23). Here we see the Lord working by His Holy Spirit through the gospel; and whenever He begins to work, there is sure to be a dust. We see it on the day of Pentecost. What a dust, to be sure! but three thousand pieces of silver found. What a dust, when Stephen spoke before the council! They killed him, it is true, but Saul of Tarsus was converted. What a bright piece of silver he was! What a stir there is in the conscience when the Holy Spirit works! Sin is then seen in its right light. What a stir there is in the will and understanding! There is decision for Christ and thinking of Christ when the Spirit works.

V. *Labouring to find it.* She seeks till she finds. There are three seekers spoken of in the Word. Satan, who seeks to devour (1 Pet. 5. 8); the awakened sinner, who, like Zacchæus, seeks to see Jesus (Luke 19. 3); and the Saviour, who seeks the lost (Luke 19. 10). Here the woman represents the Church seeking by the Holy Spirit, through the Gospel, lost souls.

VI. *The Likewise of Joy.* There are at least seven parties who rejoice at the repenting of a soul. 1. The Father (Zeph. 3. 17); 2. The Son (Luke 15. 6); 3. The Holy Spirit (Luke 15. 9); 4. The angels (Luke 15. 7); 5. Loved ones (Heb. 12. 23); 6. The Church (Acts 15. 3); 7. The one who repents.

What encouragement this parable gives to workers! for the one thought is, the children of God are associated with God in the salvation of souls.

WINETA; OR, THE BURIED VILLAGE.

By E. H. KNAPP.

THE vesper bell was ringing softly from the church in the little village of Wineta, which nestled peacefully on the shores of the river Rhine, under the shadow of the beautiful snow-capped mountains, calling all from far or near to worship within the ancient walls at Evensong.

The white-haired Curé stood at the door, smiling benignly on the young and old who flocked up the narrow, well-worn path; but specially kind was his greeting to a tall, handsome mountaineer, whose raven locks and bright, dark eye bespoke youth and energy, as he passed by with the prettiest girl in Wineta, Adye, the orphan grandchild of Mère Richaud. She and the girl had but lately come to live there, having left their sunny home in France on the death of Adye's father, whose early days had been passed in the quaint little village of Wineta. For his sake, Mère Richaud and her little grandchild were warmly welcomed by the people, and when handsome Carl stole away the heart of the sweet young French girl, every one wished him well with all sincerity; and on this summer evening, the whole village had gathered to the church, to witness the marriage of the happy pair.

The Curé had known Carl since he was a tiny, toddling boy, and Adye had won his heart by the touching care with which she had nursed her grandmother through a most dangerous illness, consequent on the excitement of the long journey from her native home. Now she was nearly well again, though not quite strong enough to witness the ceremony. Carl and Adye were so well known and beloved, that the little church was full of spectators.

The service began, the solemn words of marriage were said, and Adye and Carl were man and wife.

Adye looked very pale as she walked down the aisle by Carl's side; the sweet face, which but half an hour ago had smiled so brightly, was now overcast, and the tears nearly found their way into her eyes. You ask why? Ah! Adye was superstitious; and as she knelt before the flower-wreathed altar, trying to collect her thoughts and join in the words of prayer, she heard the clang of the bells, endlessly, distractingly; and they seemed to run in rhyme to words which would come to her mind, though she tried to drive them away,—

> "Ever here, hearts must sever;
> Life is only perfect there."

It was only a verse from a little song she had learnt long ago. Why should it come to her remembrance now? With Carl's loving hand clasping hers, why should—"Hearts must sever, ever here," keep on repeating in her mind?

"Adye! Adye! speak to me, my dearest. Why those tears, sweet one? Carissima!"

Carl's cheerful voice and gentle words reassured her; and it needed not much to draw out the story of her fears. It needed not much to charm them away, too, for the present, as they wandered down the mountain path towards the river, talking of the happy days to come.

Softly the sun sank to rest behind the great mountains, brightly it glimmered on the sparkling waters; and Carl and Adye, tempted by the exquisite beauty of the evening, rowed out into the sunset glow, far away, drifting down with the turn of the tide, rocked by the murmuring lullaby of the waves, forgetful of all else save themselves, and the life which was now so doubly, trebly blessed for them.

On they floated, until the freshening breeze and the deepening shadows awoke Carl to the fact that they had long since left the peaceful little village of Wineta behind them.

"Adye, we have drifted far down with the tide; we must turn homewards."

"And grandmother! Oh, how selfish I have been, Carl! Only think, grandmother will be quite anxious, watching for us."

"Hearts must sever, hearts must sever," rang again in Adye's ears.

She was sitting alone now, while Carl rowed. Hard work it was, too, for the wind and tide were dead against them; and with his loving voice silent, Adye's unwelcome thoughts returned.

She pictured to herself the pretty church, the dear, kind Curé, and the words he had that evening spoken. "For evermore, Carl and Adye; begun on earth, to be finished in heaven. Strive for the perfect love, of which yours is but a type. God's best blessing be on you now and ever, my children."

Vague yearnings were in her mind, and she thought how she would ask him, her good, kind friend, to teach her.

"Adye, art frightened?" Carl's voice sounded reproachful. "Little one, I am so sorry I have led you into mischief; we cannot get back till morning. Art frightened?"

"Not with you, Carl; never with you."

The moon rose clear and full, and shone down on the two young things, rocking alone on the rippling waters.

The motion of the boat, and the strangeness of the adventure, kept Adye awake; while Carl—every nerve strained and intent on protecting her—had no thought of sleep.

A deep, rumbling sound startled them as they were talking quietly.

"Carl, Carl, what is it?" cried the trembling girl, clinging to him.

Again the sullen reverberation, and the dull, continuous sound fell on their ears. Carl pressed her closer to him, while they listened in breathless silence. Minutes passed away, and no more was heard.

"It must have been an avalanche, Adye," said Carl at last. "Pray God, no one was killed."

Often some hapless village was swallowed up by avalanches, as they knew; but Wineta was protected from such dangers, and none of the villagers remembered one happening there. How long that night seemed! But at last the sun rose, and Carl sent the boat skimming along in the direction of home.

Merrily did he and Adye laugh over the thought of the surprise their adventure would occasion.

"The grandmother will fear to trust me again," said Carl, "if this is a proof of how I am going to watch over her sweet floweret, her Edelweiss, as she calls her."

"'Oh, Carl, Carl, naughty Carl,' the dear grandmother will say," laughed Adye; "but I am truly glad we are nearly home now."

"Hearts must sever, ever here," rang at this moment in Adye's ears.

She started. Could she have heard a voice speaking? But no; Carl was humming cheerfully to himself as he rowed, and all was bright and charming.

The point was reached; five minutes more, and then, and then,—ah, me!

"Carl! Carl!" almost shrieked Adye, "see, where is the village? Where is Wineta—the church, the houses, the people?"

But Carl was petrified; he could not speak.

There, where the pretty village had been, nestling under the lofty mountains, was space. It had entirely disappeared.

The giant, rugged rocks were there; the silent, majestic mountains were there; the waters still rippled as of yore; but Wineta had gone.

"God help us, my Adye! we are all that are left now."

But Adye heard not; unconscious she lay; the shock had been too much.

Carl rowed quickly to the next village, and told his tale. The people laughed at him; but they soon found out the truth. The village of Wineta was hidden under the depths of those calm, sinking waters. A fearful landslip? an avalanche? No one knew.

For weeks Adye lay in a trance, till one evening, when again the vesper bell was ringing. She stirred then, and said faintly, "Hark! 'Hearts must sever.'"

A warm arm encircled her, a loving voice whispered: "Adye, my own, come back to me; my heart is still waiting for you. We are spared. Oh, listen to me, my sweet one."

The pleading voice and the loving, earnest face roused her, and she smiled. The tide had turned, and Adye came back from the shores of the Unknown Land—back to life and love, to be the same Adye as of old.

The folks say, and Adye too, that sometimes when they are floating down the river, under the shadow of the mountains, where Wineta once stood, they can hear the vesper bells ringing softly under the waters, and see the spire of the little church glistening beneath the deep blue waves.

And Adye says the bells tell her a new story now of—

> "Hearts once severed
> Meeting there."

[This story is founded on an old legend of a village called Wineta, which disappeared quite suddenly in the night, no one knew how.]

"Kilmeny looked up with a lovely grace,
But nae smile was seen on Kilmeny's face;
As still was her look, and as still was her e'e,
As the stillness that lay on the emeraut lee,
Or the mist that sleeps on the waveless sea."—JAMES HOGG.

"A.1."

THAT HOUSE IN LONDON.

By L. T. Meade,
Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnells of Inchfawn," "Water Gipsies," etc., etc.

CHAPTER XXXIII.

IT so happened that Kate, when helping to put her things together for her contemplated journey, suddenly remembered a curious old vinaigrette of chased silver, which she had seen in Mrs. Alexis's chamber on one of the nights when she had occupied it. She was terribly subject to sensations of great faintness lately, and it occurred to her that she would have the little old vinaigrette filled to put into her travelling-bag.

She tripped across the landing, and opened the oak-painted door. She came in, singing a soft, sweet, happy song under her breath; she saw Alexis, and suddenly stood still, as if transfixed, pressing her hand to her heart, almost unable to move.

She had a curious prevision of coming trouble, her gaiety was spoilt, her high spirits flew away. What was the meaning of the presence of this stranger, who looked so ill, in this chamber? Who was this stranger?

"'I wouldn't tell a lie,' he said, facing round and confronting Mrs. Graham."

"'Surely you ought to know that best, Mr. Martin.'"

"I seem to know your face," she said at last, in a gentle tone. "I think that we have met before."

Alexis was lying back in his chair, with his eyes closed. He heard the door being opened, but thinking it was Betty, did not look round. Perhaps, even had he known who it was who had entered his chamber, he would scarcely, at that moment, have troubled himself to rise to receive her.

Betty's news had not rendered him unconscious—she had taken too good care of his physical health for that—but it had brought on a numbness of spirit, an apathy, which, although at any moment it could be fired to passion, at present rendered him nerveless and indifferent to every creature under the sun.

Mrs. Graham came into the room and stood before him. This sick and ghastly face was not unfamiliar to her. She had seen it before, somewhere—perhaps in a dream.

To discover who Alexis really was, was her first thought, coming before even the wonder of why a sick man, a stranger to her, should be occupying a bedroom in her house.

"I have seen you before; tell me your name," she repeated.

Then Alexis raised his dull eyes, and said two words laconically,—"Jonas Alexis."

Mrs. Graham no longer said, as she had so frequently done already,—"I have seen you before."

A queer and terrible trembling began to seize her. She put her hand on the back of the nearest chair to steady herself, and gazed hard at the man before her.

"You are Mrs. Alexis's son?" she asked, when her voice, which suddenly seemed to grow stiff, and to come to her with an effort, would allow her to speak: "You are Mrs. Alexis's son?"

"I am."

"I thought you were dead," repeated Kate. "I thought you were dead for many, many years."

Jonas raised himself slightly. He did not rise from his seat, nor offer the smallest attempt at courtesy.

"Others thought me dead, too," he said. "They were mistaken. Who are you?"

"I am Mrs. Graham, the mistress of this house."

"Ah, Mrs. Graham. Will you do me a favour?"

"If in my power."

"Then leave this room. I cannot, I will not speak to you."

Just at this moment Betty came in.

"Oh, my poor dear," she began. Then she saw Kate, and her old face went white.

"Ah," she said, "I didn't mean the blow to come so soon—not quite so soon; not till she was a bit stronger. Well, it's the will of the Almighty God."

Kate had felt no sensation of anger towards the sick man; but when she saw Betty, the idea for the first time occurred to her that some one had been taking an unwarrantable liberty. Her anger did her good, and steadied her nerves. She went up to Mrs. Carew, and laid her hand on the old woman's shoulder.

"This gentleman tells me that he is the son of Mrs. Alexis. What right had you to smuggle him into this room, and keep him in illness—for I see he has been ill—without letting me know? Why should I not have had the privilege of doing all in my power for the son of Mrs. Alexis? It looks bad, Betty, and you have done me an ill turn."

"You had better leave him alone now, ma'am," replied Betty, in quite a gentle voice. "He is weak, and you are weak, and you can't come to no explaining of matters now. Leave him, ma'am; he's very low. He has got a blow, poor dear; and he isn't, rightly speaking, fit to converse with a gentle lady like yourself. Leave him now, ma'am, and come and see him again to-morrow, if you will. You'd like to see Mrs. Graham again to-morrow, wouldn't you, Mr. Jonas?"

"I want never to see her—to-morrow or any other day," replied Jonas in a stifled voice.

"And I am going away to-morrow," said Kate. "I am not well, and I want change, so I am going to join my husband."

"Ah, where be he?" said Betty, her tone suddenly becoming cautious.

Kate answered gently, "I am not able to tell you. My husband is engaged on very important business in connection with his firm. Now if Mr. Alexis would really rather I did not stay, I will leave him, for I have much to do; but, later on, I must see you, Betty, for I must find out why this gentleman is here; in short, I must know all about him."

Betty's queer little deep-set eyes began to twinkle.

"I wouldn't," she began. "You're but weak still." Her cautious speech, however, went no farther. Alexis suddenly sprang to his feet. The passion which was smouldering within him had leapt into fire.

"I wouldn't tell a lie," he said, facing round and confronting Mrs. Graham, with his blanched and cadaverous face; "I wouldn't stand there, looking like a beautiful woman, and all the same saying words which turn you into a fiend. You know why Kenneth Graham has gone away; you know as well as I do, and better, that he has gone on no business for his firm; he has gone because he saw me here, and he was afraid."

"Come away, my dear," said Betty, going up and laying her hand on the young wife's arm. "She's but weakly yet, Mr. Jonas; it's cruel of you to deal a blow at her while she's weak."

"I am not weak," said Kate, "not in that sense. Mr. Alexis has said words which he must explain. You can go, or you can stay, Betty, but I have to hear what Mr. Alexis means. He has dared—dared—to throw doubts on my husband's honour—and to me! There is nothing left for it but to explain himself."

"I'd better bring in some beef-tea and brandy," muttered Betty, under her breath; "both one and t'other of them are sure to be off in a dead faint soon. Ah, poor young thing! I didn't know it was in me to feel so sorry for her; there's no mistake, but she's bonny and good, and I believe she's one of the Lord's chosen. Well, it's past belief why such a load should be laid upon her."

Betty left the room, and the strange pair who were together began to talk; in half an hour she came back, and peered anxiously at the face of the sick man, at the face of the listening woman. He was pouring out a long and impassioned tale, burning spots on each cheek, eyes feverishly bright.

"My word, but he's in for a relapse!" murmured Betty. Then she looked at the listener.

Not a word did Mrs. Graham speak; not a shade of colour tinged the purity of her smooth young face; but as the story went on, something else happened—lines came into the face, lines hollowing the eyes, and rendering the mouth tense and rigid.

Betty looked, and suddenly turning away, clasped her hands before her own eyes.

"Oh, merciful Lord!" she began to pray, "don't let him tell her any more, or she'll turn into an old woman before my eyes!"

The story, however, went on to its conclusion. Betty again left the room, unable to endure the sight of the wife's face, as she listened to the hideous narrative of her husband's dishonour. At last Alexis came to the final scene.

"I saw him!" he said, "I saw him! It was no dream, it was no fancy of my delirium; he came into this room when I was at my worst; he came into this room, up to my bedside. I saw him, and I cursed him, and he was frightened; I saw the coward in his eyes, and he crouched from me, and that was why he went away."

Then Alexis leant back in his chair, and taking out a handkerchief, began to wipe his brow.

"That is my story," he said; "what do you think of it? It is true,—true, as I am sitting here; you believe it, don't you?"

"No," said Kate; then—"I promised—I mean, I cannot believe it until I have it from his own lips. I am going to him, then I shall learn the truth; now I must leave you."

She felt quite strong. She rose slowly, and went, with a stately step, out of the chamber. Betty met her on the threshold.

"Mrs. Graham," she exclaimed impulsively, "I would give ten years out of my life that you had not heard this news to-day."

"It is not true, Betty," said Kate, in her gentle voice; "the poor fellow has been ill, and he imagines it all. I had to listen to him, and I feel so sorry for him; but you don't suppose I believe him?—not quite. I am going to my husband, and he will explain things to me; he partly prepared me for something of this kind. Oh no, you can't expect me to doubt my husband.

"But Betty, you must be very good to Mr. Alexis while I am away; let him want for nothing; I shall tell the servants who he is, and he must have every attention. It is strange how fully Mrs. Alexis believed he was dead."

"There was a letter that was wrote," said Betty; "nobody knows what was in it, but it was given to you, ma'am. It was mentioned in the will, and I was by when the will was read; maybe now has come the time to open that letter, Mrs. Graham."

"That is possible," said Kate; "but I was not to open it until my husband gave me permission. I will take it with me when I go away to-morrow."

She did not say any more to Betty, but walked quietly across the landing and entered her own room.

It was two hours since she had left it, and in those two hours she had grown into an old woman; she felt a stiffness, a want of elasticity about her; she dragged her limbs along as if they were devoid of spring.

"This is more than weakness," she murmured; "this must be how the very aged feel."

There was no one in her bedroom, and she went up to the looking-glass, and looked at her own face.

"I have been stunned in some way," she said to herself, "and I feel very old; but I don't believe a word of that story—not a word." Then she tried to smile, and found she couldn't, and went through her room into the dressing-room, which had been turned for the time into the baby's nursery.

The pretty room looked upset to-day; a large travelling trunk stood open upon the floor, and the baby's beautiful embroidered robes lay piled upon the bed. As the mother entered the room, the child heard her step. He was lying wide awake in his cot, and he gave a soft little coo of recognition and pleasure.

There was no one else in the room, and Kate went up to him, and took him in her arms and kissed him passionately. It seemed to her then—she always believed it afterwards—that the baby must have seen the change in her face; his wonderful deep-blue eyes looked earnestly into hers; he did not cry, nor moan, nor show the least alarm, but the eyes lost their heavenly unclouded expression, and grew wistful and sad.

"It is not true, baby," said Kate; "don't look troubled at mother's face, sweetest; you and mother both know perfectly that it simply can't be true."

When Mrs. Murray re-entered the room, Kate astonished her by saying in quite a brisk voice,—

"I believe it is quite possible, Mrs. Murray, for us to start to-night; I am most anxious to join my husband with as little delay as possible, and if we start to-night I can sleep all the way, and shall not be at all more tired than if we waited until the morning."

Mrs. Murray began to expostulate and argue, but she soon saw that Kate was not listening to her.

"How queer she looks!" muttered the nurse under her breath; "not weaker, oh no, but queer."

In the afternoon Kate went out. She had ordered the carriage, and desired the coachman to take her to the London and Westminster bank. Mrs. Murray did not accompany her on this drive; she was straining every nerve to get things in readiness for their journey that evening.

Kate reached the bank, and presented a cheque for a considerable amount to the cashier. He knew her well, and began asking her questions about herself and her husband.

"Will you have it in gold or notes, Mrs. Graham?" he asked, seeing that the cheque was for £500.

"Mostly in notes, please," said Kate. "I want a little gold, but notes will be easiest to carry. I am going to join my husband abroad; we may stay away for a little."

The cashier made no further remark, but made up some rolls of money and handed them to her. She stuffed them into her bag, and left the bank. When she reached home, Rose met her on the steps.

"If you please, ma'am," she said, "Mr. Martin is in the dining-room and would like to see you for a moment."

"I will go to him at once," answered her mistress; "bring tea to the drawing-room, Rose; Mr. Martin may like a cup before he leaves."

CHAPTER XXXIV.

MR. MARTIN, a white-headed venerable-looking man, came gravely forward to meet Mrs. Graham as she entered the room. Hitherto, from the moment that Alexis had told her his story, she had felt stunned, but intensely quiet. Now a kind of excitement began to steal over her; her manner grew restless, her words came up rapidly, and as if she were not quite sure of them.

"How do you do, Mr. Martin? It is most kind of you to call and see me; but don't let me entertain you in this dull dining-room; come up to the drawing-room, and have tea with me."

"No, my dear young lady, I cannot do that. I hope you've recovered your strength, my dear; and how is your baby? A fine boy, ah, doubtless. All young mothers think their babies fine, eh, Mrs. Graham?"

Kate laughed quite merrily.

"And they are right," she said; "only my baby is the most beautiful that God ever gave to a thankful father and mother. Now, Mr. Martin, why must we stand by this dismal dining-room table, when the drawing-room is so cosy?"

"Too cosy for me, Mrs. Graham. The fact is, I cannot stay. I have just come to ask you a question—When may we expect Kenneth back at the office?"

Kate's face could scarcely grow any whiter, only her eyes grew a little dizzy, and she could not see quite clearly; still she answered boldly,—

"Surely you ought to know that best, Mr. Martin. My husband is away on your business."

Mr. Martin gazed straight at her. A torrent of eager words rose to his lips. He pressed them back, then said, slowly,—

"Graham told you he was away on our business?"

"Of course he did. He did not mention the nature of the business, he was too honourable, but he naturally spoke of the fact to me, his wife."

"Ah, he has been out of town over a fortnight, now."

"Yes, he has been away a long time."

Mr. Martin pushed his hands into his pockets, pursed up his lips, and again surveyed Mrs. Graham from head to foot very carefully.

"Graham is wanted in town," he said, then. "His special department is at a standstill. The last day he was with us he left some most important letters unsigned. His presence is immediately necessary, or I should not have troubled you. Can you oblige me with his address?"

Kate was instantly on the defensive.

"If he is away on your business, you must know his address," she said.

"I—ah—the fact is, I do *not* know, Mrs. Graham. You can draw your own conclusions."

"Then, if so, I cannot give it to you."

"My dear young lady, you scarcely know what you are saying. Not give me my own partner's address, when most vital matters connected with our firm are at issue? You surely do not quite realise what you are saying."

"He asked me not to mention it; that is sufficient."

"But he would have made an exception in my favour."

"Very likely; still, I have not his authority for disclosing it."

Mr. Martin's face became angry.

"Is that really your determination, Mrs. Graham?" he said; "think again. Is that your last and final determination?"

Kate looked back into the merchant's angry eyes, her own wide open, the pupils slightly distended, the colour very vivid.

"I can give you no other answer, Mr. Martin," she replied, gravely and sadly. "My husband told me to mention his address to no one; he made no exception, and I can make none."

"Indeed! Then it is impossible for me to spare your feelings. Your husband told you an untruth when he said he had gone away on the business of the firm. He has done no such thing. He left his business at a most awkward time, just when fresh money was urgently needed; in short, in short—but I need not trouble you with details. Sufficient for you that Graham has deceived you; he has gone away on his own private affairs, for no other reason. I, of course, can form no idea as to the motive which has induced him to court ruin, for his absence just now almost amounts to that; but you, doubtless, have the necessary clue."

"I have not."

"Mrs. Graham!"

"Pardon me, I will listen to no more; you malign my husband, and I am not bound to believe you. I will not believe you, and I won't listen to anything more you have got to say. When I see Mr. Graham, he will explain matters to me himself."

"When you see him? He is returning soon then?"

"I cannot tell you. I am going to him. I start to-night."

"You are? Thank God! Do you travel right through?"

"If necessary, I will."

"I am more than thankful. Will you take a letter from me to Graham? Bearing a letter to him divulges none of his secret."

"I will certainly take the letter. Will you write it here?"

"Thank you; I see a writing-case on that table. I will not keep you long."

"My time is at your disposal," said Kate.

She went over and stood on the hearthrug, pretending to warm herself at the fire. Her figure was held well up—her mien was haughty. Not for worlds would she let her husband's partner see that she was even distressed.

Mr. Martin, far too troubled and worried even to glance at her, bent his head over the paper, and began to write rapidly.

At that moment, however, there came an unexpected interruption. The room door was opened, and Alexis, leaning on Betty, came in.

"Ah," he said, "a handsome room. Suits the rest of the house." Then he paused, startled at finding that he was in the presence, not only of Mrs. Graham, but a stranger.

"You'll sit there, Master Jo," said Betty, pointing out the most comfortable arm-chair. "Dear heart, you're but shaky on your legs!"

Jonas sat down at once, trembling and shaking; Kate turned her eyes and looked at him.

"Would you like a screen?" she said, gently.

"No, thank you, nothing from you."

At this moment Mr. Martin, having finished his letter, folded it up and gave it to Kate.

"Pray deliver this to Graham the moment you see him. Tell him how inconvenient his absence is at the present moment, and how difficult I find it to discover a motive for his leaving home just now."

"Ah," said Jonas, suddenly raising himself, "but I can explain that."

"Don't," said Kate, suddenly holding out her hand, with a warning gesture. "I—I—Mrs. Carew, it is not good for him to speak, is it?"

At the look in Kate's eyes, Betty Carew ran forward and took her hand.

"No, my poor dear," she said. "Master Jonas, have pity."

But at that moment Jonas Alexis knew nothing of that quality.

"I have no reason to remain quiet," he said, speaking in a shrill weak voice of passion. "Graham left because he was afraid of me. I am the son of Mrs. Alexis—her only son—and he has disinherited me. Graham has gone because he feared me—gone, and his own conscience can alone tell him why."

Betty Carew held two hands of ice between her clasp. When the cruel voice ceased, Kate said quietly, "I will take care to deliver the letter, Mr. Martin. Good-night and good-bye."

"That woman is stricken to death," said the merchant, under his breath. "Why did the fellow speak out like that, and whoever is the fellow? Well, as I am here, I may as well listen to his story."

Then he drew a chair to the hearth and began to talk. For an hour, for two hours, Alexis and his unexpected auditor conversed. When at last Mr. Martin left the house he looked greyer and more bent than when he entered it.

"I pity that poor wife of Graham from my heart," he said to himself, as he called a passing hansom. "Matters look ugly, very ugly for Graham, and I fear also for our firm."

It is surprising what a woman will endure, as long as she has anything to do. Enough words had been said to Kate on that bitter day to turn her hair white, to take away her youth; but as long as her heart was not quite broken she could go on, and that brave heart of hers would not break, not quite, as long as she had any trust in her husband.

As she toiled wearily and sadly up the stairs to her bedroom, she said to herself,—

"I believe in Kenneth—they are all false; it is a horrible conspiracy; but *he* is true."

There was no logic in her reasoning, but love knows little of logic. She went into her room, and owned to no fatigue; and while Mrs. Murray packed, and flitted about hither and thither, Kate sat by the fire, holding the baby on her knee.

The child, preternaturally wise, kept gazing up at her with solemn eyes. Again that strange change came over his seraph eyes, that wistful, half-wondering look. He was looking full at his mother.

Kate saw the change, and quickly, with the magic of her mother's love, she wreathed her face with gay, careless smiles. The baby must not be disturbed; the little one must not know even the touch of trouble.

At last all the packing was done. The final directions were given, and in good time to catch the tidal train for Dover. Mrs. Graham stepped into the carriage which was to take her to Charing Cross. The luggage followed on a cab, and Mrs. Murray, seating herself beside her mistress, took her hand, and gave it an affectionate squeeze.

"Keep up your courage, ma'am; you'll be with him soon," she murmured.

"Thank God!" said Kate.

It was a misty, foggy night, and as the carriage dashed through the crowded streets, Kate wondered if she could ever bear to look at London again.

"There is not a word of it true," she muttered to herself; "but it was a horrible, cruel story to invent. Oh, yes, I must come back,—Kenneth must come back, if only to show the world how utterly innocent he is. As if my boy's father could be guilty of what that wretched man imagines!"

"Let me take the baby, ma'am," said Mrs. Murray.

"No, no, not this moment. To feel him in my arms comforts me," said Mrs. Graham.

Then they reached Charing Cross — a great deal of bustle and confusion, a great swimming in Kate's weak, tired brain, and then at last, at last they were really off.

They had a first-class carriage to themselves, and Mrs. Murray bustled about, doing everything for her mistress's comfort. Tired out, and with a certain sense of relief, of being at last fairly started, Kate dropped asleep.

The nurse took the baby, and held him tenderly in her arms. Now and then she glanced compassionately at the pale face of the sleeper. No doubt her dreams were uneasy ones, for she stirred restlessly, and murmured words under her breath. Suddenly she awoke, with a great and exceeding bitter cry.

"Oh, my dear lady—my dear, dear lady, what is it?" asked the nurse.

"Nothing, Mrs. Murray, nothing," answered Kate, drawing down her veil, and clasping her hands tightly together.

Nothing, so she said, and she looked out into the dark night, not darker at that moment than her despair, for an overwhelming rush of the great fact had come over her in that brief slumber.

The story she had listened to that day was not false—it was true.

BEFORE we can really lift up other hands, our own must have been lifted up by His good Spirit, and our own feeble knees must have been confirmed by much bowing at His footstool.—*F. R. Havergal.*

"THIRTY NOUNS" PRIZE COMPETITION.

EXAMINER'S AWARD.

TWO PRIZES OF HALF A GUINEA EACH.

IT is most gratifying to state that upwards of 400 Competitors have entered this Competition.

Both in prose and in verse great ability has been shown in almost all these compositions. "SHAKESPEARE," but much more frequently "THE PIG," figures in the theme as the leading idea, to which all other ideas suggested by the string of nouns, are ingeniously made to sudordinate.

There seems to be a prevailing solicitude with regard to the proper "ventilation" of the "pig's" humble dwelling. In one or more instances, the "learned pig" himself gives us his views on this and other matters.

Amongst so much that is excellent, we have yet no hesitation in announcing our award of Prizes, to the authors respectively of—

I. "A LECTURE ON SANITATION," and "TRITE BUT TRUE," a poem; and

II. "AN ESSAY ON WILLIAM SHAKESPEARE," with its companion "EPIC" POEM on the same subject.

Two other competitors are deserving of the highest commendation, for the originality they have displayed. The first of these supplies us with some clever nonsensical paragraphs, in the style of "Alice in Wonderland." The second, the authoress of "My brother Joe," and "A Puzzle," whilst giving us in the last-named the required list of nouns in verse, manages also to pose us with a conundrum. M. G.'s capital lines are deserving of mention, together with her very readable prose paragraph.

The authoress of "A Visit to Brighton," and "My Downfalls," will find her name also in the list, where it well merits a place, on account of the able manner in which she has introduced her "thirty nouns."

Neither time nor space would suffice to do more than allude to the talent and very admirable work displayed in many of the disqualified Papers. One, only, of the many, we will particularise: the author of it has chosen "A. 1." for his subject, and by means of the list of nouns prescribed—heterogeneous material, we may call it—has contrived to write a most eloquent panegyric on our Magazine.

Examiner.

PRIZES.

FALKINER, WILLIAM, Navan.
WHITTAKER, JAMES, Glasgow.

HIGHLY COMMENDED.

RUSSELL, AGNES, Rathmore.
CROMBIE, AGNES, Busby.
GORGES, Mrs., Kingston.

COMMENDED.

BOYER, EDWARD, Caversham.
GRAYSON, JESSIE, Kendal.
HOWELL, E. J., Bourton-on-the-Water.
HUTCHINSON, J., Bedford.
JUTSON, Mrs., West Norwood.
PAGE, LENA, Wadhurst.
PLATT, J. B., Wisbeach.
SHEPPARD, P. E.

"Respectfulness, without the rules of propriety, becomes laborious bustle; carefulness, without the rules of propriety, becomes timidity; boldness, without the rules of propriety, becomes insubordination; straightforwardness, without the rules of propriety, becomes rudeness."

OUR MONTHLY TALK.

HINTS ON BIBLE MARKING.

BY THE EDITOR.

DEAR FRIENDS,—

There are several subjects on my own mind, about which I would like to write to you to-day.

Perhaps the most important for the moment is the question of the "Licensing Clauses" in the Local Government Bill, now before Parliament. As a number of those to whom I write are *men*, I specially press this upon your most earnest consideration. If these Clauses are allowed to stand, the work of Temperance Reform will be put back forty years; and the battles so many of us have been fighting, in order to deliver our beloved land from this accursed yoke of drink, will be rendered utterly fruitless; whilst Publicans and Brewers,—who, alas! have built up their magnificent fortunes upon the wreckage of human lives, and blasted characters, and blighted homes,—will pursue their horrible and soul-destroying traffic with increasing, because unhindered energy.

You noble, honest, hard-working men, who at heart hate drink and drunkenness,—you will surely not allow such a terribly blighting shadow to fall upon you and yours? But now is the crisis! And now, and now only, is the time for energetic action. You have so much in your power; do let me urge you by all that is right as in the sight of God, and by all the love and regard which you bear towards your homes and families,—let me urge you to lay aside, for the moment, all political considerations, and to vote only for those Candidates who will oppose these iniquitous Clauses.

And now, trusting I have said enough to enlist your hearty co-operation in this urgent matter, I may touch upon another topic, one dealing more directly with our own spiritual life, and that of many around us.

These are truly "perilous times" in which we live. Many of those who profess to be the Lord's, are holding and preaching *another* gospel, which is no gospel at all. They are departing from the simplicity of the truth as it is in Jesus; they are accepting and promulgating theories which undermine the cross of Christ, and a deep dishonour is thus done to the precious blood of the Covenant.

"Advanced views"—"the Larger Hope," "a greater liberality of religious thought,"—these are only so many phrases, by which a departure from God's truth and God's Word may be clearly detected. Therefore let us beware, lest before we are conscious thereof, the Devil shall have shunted us upon the Down-grade incline. Let us rather keep to the old paths, and stoutly oppose the wide-spreading heresies of the non-eternity of future punishment, the universal Fatherhood of God, the non-inspiration of Scripture, and all such cunningly devised fables.

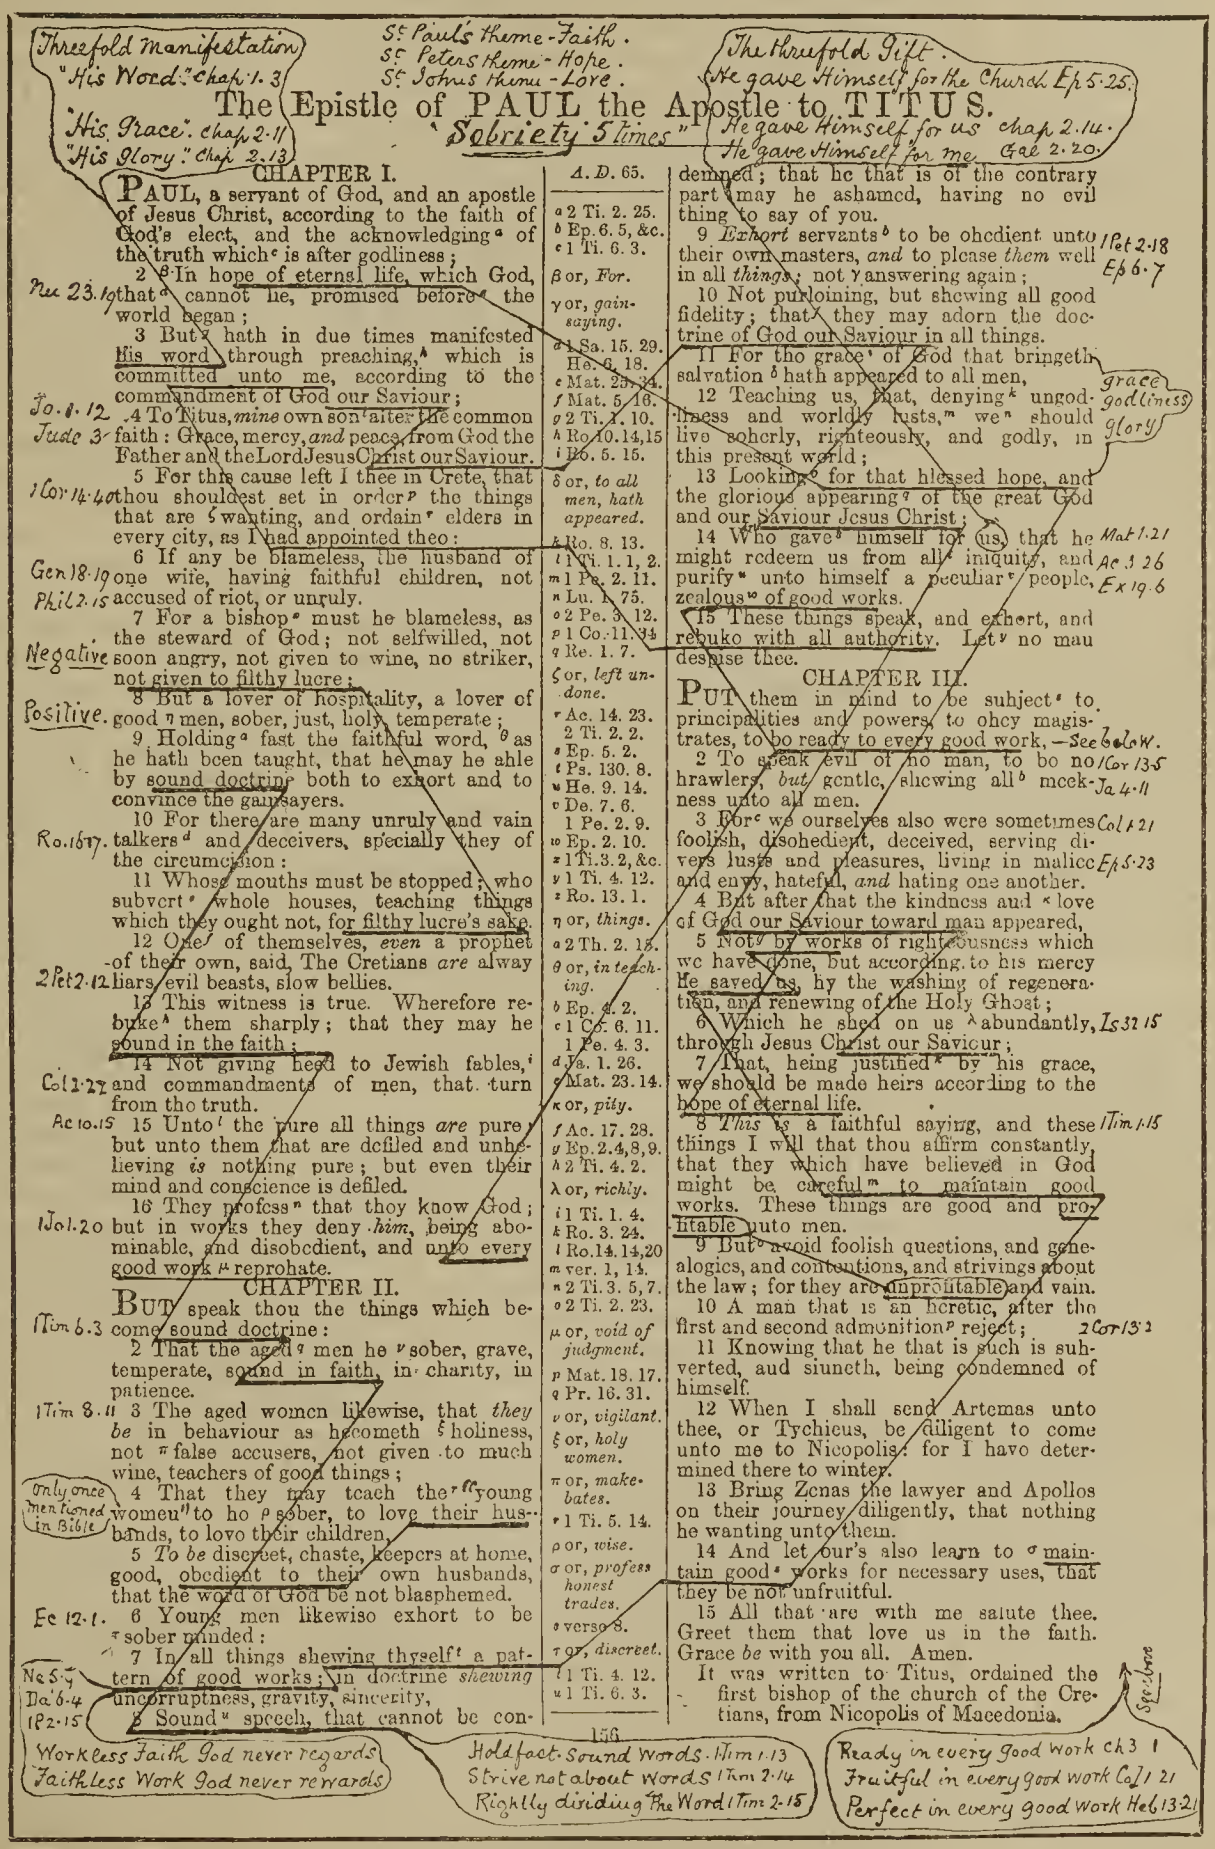
We need to be more thoroughly grounded in the Word of God; not only to read it systematically, but to ponder every verse, every word; to digest it, so that it "dwells in us richly." To this end, a definite plan of marking one's Bible, and thus of treasuring in it all our stores, has been found most helpful. Some twelve years ago, I published an illustrated plan of Bible-marking, in a pamphlet entitled, "Hints on Bible-marking," which had a large circulation, being

reprinted in the United States, and about which Mr. Moody wrote to me, saying: "I believe this plan of Bible-marking will not only help young Christians, but also advanced believers engaged in Bible-teaching; for it converts one's Bible into a note-book, ready to hand at any moment." Mr. Moody asked me to mark a sample page of his own Bible with some railways, and the plan has been used by many other Bible students in all parts of the world.

I am constantly receiving letters about this book (which is now out of print) and plan of Bible-study. The Lord has blessed it as a means of stimulating interest in His own Word, and therefore I purpose reprinting occasionally in our Paper one of these facsimile marked pages from my own Bible, illustrating this system. On the present page is the Epistle of Paul to Titus, thus marked. It needs little explanation. The horizontal lines are called "underlines," and the cross or diagonal lines, "railways." Underlines should be drawn only to the words in two or more verses, which you wish to connect together by a "railway." Do not underline more words than is absolutely necessary.

Take, for example, the railway enforcing the repetition of a word, too little heeded in the present-day teaching, viz., "sound." Mark how St. Paul insists upon teachers being "sound in doctrine," (chap. 1. 9), "sound in the faith" (13), "sound in doctrine" (2. 1), "sound in faith" (2. 2), "sound in speech" (2. 8). It would perhaps have been quite sufficient to have, in this case, underlined only the word "*sound*."

You will notice that, whenever possible, the "railways" are drawn at the same angle; this gives a more attractive and symmetrical look to the page, and the print is also less interfered with. The "railway" should always join an underline at the end, not in the middle. A number of jottings can be introduced (as shown) into the margins, and also fresh marginal references may be entered. These may be jotted down in pencil upon any spare sheet of paper, kept for the purpose in one's Bible, as they occur in the course of one's daily Bible reading, and then entered neatly and carefully into one's Bible, when one has leisure for an hour of Bible marking, perhaps on a Sunday afternoon. I would suggest that every reference should be marked in both the chapters to which it refers. For instance (see illustration), Num. 23. 19 beside Tit. 1. 2, and Tit. 1. 2 beside Num. 23. 19. Many of the pithy points given in our page of weekly Bible-class Lessons might with advantage be transferred to your Bible, and thus be made available for future use. I scarcely think I need add further explanation; a careful study of the page is all that is necessary in order to follow out the plan. I do trust that many of our readers, whose daily reading of the Bible has, hitherto, been rather from a sense of duty than delight, may begin to discover what precious treasures—things new and old—lie hidden in these sacred pages.



Some years ago, I published monthly sheets of Bible "Railways" and Bible Jottings, for the help of those whose busy lives left them little leisure for personal study. These "Fragments that Remain" came out for seven years; most of these sheets can still be had, and some of the yearly Volumes.*

Before closing this letter, I wish most warmly to thank those who have so kindly written words of cheer and commendation about our Paper, and have also helped forward its circulation. You will readily understand that they are far too numerous for me to acknowledge separately; but I should like to add that the letters from young men have been specially welcome, and all communications from them in reference to *spiritual* need or perplexity, it gives me great pleasure to *answer personally. I need not say that such letters are regarded as strictly confidential.*

Some of our readers may search these lines, in order to find the way to Christ. Dear friend, you shall never search in vain. The way is so clear, so simple (we speak that we *do know*). Beside you is a Saviour "mighty to save," and "able to keep." He is ready to save you this very moment, *if only* you are willing to *be* saved, willing to surrender every other ground of confidence and to trust *Him* wholly. "To him that worketh not, but believeth on Him that justifieth the ungodly, his faith is counted for righteousness" (Rom. 4. 5). "Therefore, being justified by faith, we *have* peace with God, through our Lord Jesus Christ" (Rom. 5. 1). That each of our readers may be enabled, at once, thus to trust this mighty, willing Saviour, and to enjoy settled peace is the earnest desire of your sincere friend,

M. Jane Menzies.

(*Mrs. Stephen Menzies.*)

The Epistle of PAUL the Apostle to TITUS.

CHAPTER I.

PAUL, a servant of God, and an apostle of Jesus Christ, according to the faith of God's elect, and the acknowledging[a] of the truth which[c] is after godliness;

2 In hope of eternal life, which God, that[α] cannot lie, promised before[γ] the world began;

3 But[δ] hath in due times manifested His word through preaching,[h] which is committed unto me, according to the commandment of God our Saviour;

4 To Titus, *mine* own son after the common faith: Grace, mercy, *and* peace, from God the Father and the Lord Jesus Christ our Saviour.

5 For this cause left I thee in Crete, that thou shouldest set in order[p] the things that are [ζ]wanting, and ordain[r] elders in every city, as I had appointed thee:

6 If any be blameless, the husband of one wife, having faithful children, not accused of riot, or unruly.

7 For a bishop[s] must be blameless, as the steward of God; not selfwilled, not soon angry, not given to wine, no striker, not given to filthy lucre;

8 But a lover of hospitality, a lover of good [η]men, sober, just, holy, temperate;

9 Holding[a] fast the faithful word, [θ]as he hath been taught, that he may be able by sound doctrine both to exhort and to convince the gainsayers.

10 For there are many unruly and vain talkers[d] and deceivers, specially they of the circumcision:

11 Whose mouths must be stopped; who subvert[t] whole houses, teaching things which they ought not, for filthy lucre's sake.

12 One[ε] of themselves, *even* a prophet of their own, said, The Cretians *are* alway liars, evil beasts, slow bellies.

13 This witness is true. Wherefore rebuke[λ] them sharply; that they may be sound in the faith;

14 Not giving heed to Jewish fables,[i] and commandments of men, that turn from the truth.

15 Unto[ι] the pure all things *are* pure: but unto them that are defiled and unbelieving *is* nothing pure; but even their mind and conscience is defiled.

16 They profess[π] that they know God; but in works they deny *him*, being abominable, and disobedient, and unto every good work [μ]reprobate.

CHAPTER II.

BUT speak thou the things which become sound doctrine:

2 That the aged[q] men be [ν]sober, grave, temperate, sound in faith, in charity, in patience.

3 The aged women likewise, that *they be* in behaviour as becometh [ξ]holiness, not [π]false accusers, not given to much wine, teachers of good things;

4 That they may teach the [ρ]young women[ω] to be [ρ]sober, to love their husbands, to love their children,

5 *To be* discreet, chaste, keepers at home, good, obedient to their own husbands, that the word of God be not blasphemed.

6 Young men likewise exhort to be [τ]sober minded:

7 In all things shewing thyself[υ] a pattern of good works; in doctrine *shewing* uncorruptness, gravity, sincerity,

8 Sound[φ] speech, that cannot be condemned; that he that is of the contrary part may be ashamed, having no evil thing to say of you.

9 *Exhort* servants[b] to be obedient unto their own masters, *and* to please *them* well in all *things*; not [γ]answering again;

10 Not purloining, but shewing all good fidelity; that[χ] they may adorn the doctrine of God our Saviour in all things.

11 For the grace[ι] of God that bringeth salvation [δ]hath appeared to all men,

12 Teaching us, that, denying[k] ungodliness and worldly lusts,[m] we[n] should live soberly, righteously, and godly, in this present world;

13 Looking[o] for that blessed hope, and the glorious appearing[q] of the great God and our Saviour Jesus Christ;

14 Who gave[s] himself for us, that he might redeem us from all[ι] iniquity, and purify[u] unto himself a peculiar[r] people, zealous[w] of good works.

15 These things speak, and exhort, and rebuke with all authority. Let[ν] no man despise thee.

CHAPTER III.

PUT them in mind to be subject[ε] to principalities and powers, to obey magistrates, to be ready to every good work,—

2 To speak evil of no man, to be no brawlers, *but* gentle, shewing all[b] meekness unto all men.

3 For[c] we ourselves also were sometimes foolish, disobedient, deceived, serving divers lusts and pleasures, living in malice and envy, hateful, *and* hating one another.

4 But after that the kindness and [κ]love of God our Saviour toward man appeared,

5 Not[γ] by works of righteousness which we have done, but according to his mercy he saved us, by the washing of regeneration, and renewing of the Holy Ghost;

6 Which he shed on us [λ]abundantly through Jesus Christ our Saviour;

7 That, being justified[κ] by his grace, we should be made heirs according to the hope of eternal life.

8 *This* [ι]is a faithful saying, and these things I will that thou affirm constantly, that they which have believed in God might be careful[m] to maintain good works. These things are good and profitable unto men.

9 But[ν] avoid foolish questions, and genealogies, and contentions, and strivings about the law; for they are unprofitable and vain.

10 A man that is an heretic, after the first and second admonition[p] reject;

11 Knowing that he that is such is subverted, and sinneth, being condemned of himself.

12 When I shall send Artemas unto thee, or Tychicus, be diligent to come unto me to Nicopolis: for I have determined there to winter.

13 Bring Zenas the lawyer and Apollos on their journey diligently, that nothing be wanting unto them.

14 And let [σ]ours also learn to [σ]maintain good[ε] works for necessary uses, that they be not unfruitful.

15 All that are with me salute thee. Greet them that love us in the faith. Grace *be* with you all. Amen.

It was written to Titus, ordained the first bishop of the church of the Cretians, from Nicopolis of Macedonia.

THE ETHICS OF GRIT.

By Josiah Forester.

NOW please, gentle reader, suspend your critical hostility to my title for a moment or two. You are not going to be treated to a dry-as-dust treatise on moral philosophy, if I can possibly help it; and I think I can, seeing my knowledge of that science is about equal to my acquaintance with the language of the scientists' pre-Adamite man. No, nor is there to be any attempt at Ruskinian thought or style, only the faintest echo in title of a noted deliverance of his.

"Grit," as of course every one knows, is a word used by our American cousins to convey in a short and forcible manner the idea of *force of character*. Are there not some people who affect you just as the jelly-fish you pick up by the margin of the sea? The shapeless, colourless, lifeless thing sends a shivering sensation through your whole system, and you are glad to throw the thing away. You soon forget all about it, for it had not a single item of interest in its composition. There are hundreds of people who pass into and out of your acquaintance, and they leave no memory behind of worth or force of any kind. Inoffensive perhaps they may be called, but so utterly devoid of backbone, individuality, character, that they leave no impression whatever behind, unless it be that of emptiness.

You came across the jelly-fish, perhaps, as you ran down the golden sands to have your morning dip in the briny, breezy sea. Presently your companions heard a scream, and in answer to their inquiries, you told them with rueful countenance and helpless flounderings, that something had annexed your foot and was threatening to drag your miserable body under, in the attempt to make off with your pedal ornament. With much ado the offensive crab is dragged to the light of day, and you bear him off in triumph, that he may "point the moral and adorn the tale" of your strange experience. That crab had grit in him, you see—force of character, individuality, and you will find it rather difficult to forget him.

But I hear you say, "Rather an unfortunate illustration for you, Mr. Josiah Forester; you surely would not recommend the readers of 'A.I.' to be offensive rather than inoffensive?" But I would, though—with a little explanation.

To be offensive in the manner I have spoken of, is to be very offensive. The person who has got no mind of his own, who has no settled opinions, which he is ready to stand by in the face of all opposition, until, at least, he sees that he is in the wrong, but who is of the same opinion as the individual who happens to speak to him, and who is fired with no noble and consuming desire in life, is, to my thinking, a very offensive individual indeed. He is like the cork whirled about by conflicting currents, and then thrown up upon the muddy banks to fester and perish.

I must plead guilty to a great liking for aggressive people. No one ever yet succeeded in any department of life without attacking difficulties which stood in the way—often in crowds—and overcoming them. Has any one attained to wealth by loafing, or by waiting dreamily and wistfully for something to turn up? Never. The young man must show his grit by buckling to the work lying ready to his hand, and by making of that a stepping-stone to something better.

One day a young clerk who was ambitious for a large fortune, determined to visit Commodore Vanderbilt, and learn from him the secret of accumulating wealth. He entered the magnificent apartments of the millionaire, with whom he was somewhat acquainted, stated his errand, and asked him on what mysterious principle he conducted business with such unexampled success. Mr. Vanderbilt eyed him a moment, to sound his motives, and then slowly replied: "By working hard and saying nothing about it."

If there be any truth in what employers of young men and women have told me, a little more, nay, a good deal more of Commodore Vanderbilt's grit in the rising generation would be a great boon to themselves and everybody else. I hope it is a libel, but I hear it is the rarest thing possible to find a young man fond of hard work and implicitly to be trusted. They say, in his determination to please himself, the average young man has reduced work-shirking and incompetence to a science. Ask him to remain behind the usual closing hour in a time of business pressure, and his face will grow as black as thunder; but let him work at his own sweet will, and above all, hold out to him the prospect of numerous and frequent "tips," and you put summer into his soul. I will not believe but that this is an exaggeration of the actual state of matters, yet I fear there is enough truth in it to call for serious reflection.

Young men and maidens, who may do me the honour to read this page, believe me, you have not begun to live, unless you have discovered the dignity and delight, the pleasure and profit that honest toil brings to those who are rightly exercised thereby. Labour is Divine, for we read in the grand old Book, "My Father worketh hitherto, and I work."

Put, then, all strength of mind, conscience, and body into your labour, and abhor the very idea of "tips" as utterly lowering to the true dignity of manhood and womanhood.

Your true man of grit is known as much by his moral courage as by any one single quality. It is no doubt a fine sight to see a fireman plunge mid smoke and flame to rescue the endangered inmates of the doomed dwelling, but it is far and away a grander sight to see a man or a woman stand up in the midst of a godless, sneering company, and defend virtue, or mayhap the Bible, or the God of the Bible. A pretty wide experience has taught me, that in nothing is the temptation to cowardice so strong as in matters of religion. The man who can face the most horrible of deaths in the battle-field is ashamed to stand by his colours when his Saviour is assailed; the man whom no chairman, however august, no speaker, however eloquent, no audience, however large, can awe into silence when his political creed is attacked, is an abject coward, and speechless as a mute, when his Lord is dishonoured.

When a young man is ashamed of his godly mother, and is afraid to confess that he reads his Bible and goes to the House of God, through fear of a sneer from some silly, empty-headed, or depraved companion, his manliness has already nearly perished, and his feet are on the brink of a terrible precipice. Why, even rough men have been known to put to shame professing Christians in this respect. I remember hearing a story of Richard Weaver, the converted collier, which illustrates this. He was preaching once in the open air, when he was savagely attacked by some of his auditors. A big, burly Yorkshireman fought his way through the crowd, shouting out, "My muther's a Christian i' Barnsley, an' ye shanna touch him, ye shanna." It is refreshing also to know that Sir Robert Peel, when Prime Minister, if I mistake not, was not ashamed to boldly profess his Christian faith when occasion demanded. At some grand dinner-party, when the ladies had gone to the drawing-room, it is said the host began to make sport of religion, and most of the guests were not slow to follow suit. Sir R. Peel, rising to his feet, said to the host, "May I ring the bell?" "Certainly," was the reply; and when the servant appeared, Sir Robert asked permission to retire, saying in a firm voice, "I could not possibly stay any longer; I am a Christian." There was grit for you of the right kind, and in these days, when it is fashionable in some circles to be sceptical, and when even evangelical doctrines are ridiculed in some of our pulpits, there is much need for young people to display moral courage in arousing their love for, and faith in, the God and Father of our Lord Jesus Christ.

There are other occasions and circumstances which try young people, and show whether or not they have got any "grit" in them. The young man carefully nurtured in a pious and sober home will be invited by fast young fellows in the house of business where he has recently found employment, to join them in drinking at the public-house, in visiting the theatre, low music-hall, or even worse places than these, and should he even hesitate, not to say positively refuse, he will be taunted as a milksop, as a baby tied to his mother's apron strings, etc., etc. Just at this precise moment is the time for the young fellow to prove that he has grit in him. Let him stand up and say, not offensively, but firmly,—

> "I dare do all becomes a man,
> Who dares do more is none."

"I cannot do this evil, and sin against God." There may be for answer a shower of raillery and abuse, but if the young hero stands firm, the tempters will depart, and he will remain in possession of the field. What is more, in their heart of hearts they will honour him for his unswerving allegiance to principle.

Young women have their mettle tried also, but perhaps in somewhat different ways. I will speak only of one. In these days, dancing is becoming a favourite pastime, even in the home of professing Christians. I cannot go into the subject now, but if our good Editor will allow me, I will do so on another occasion. Suffice it to say, that young ladies who have been reared to consider dancing as an amusement not becoming a Christian, are often sorely tried in social circles by being invited to join in "just a little dance, you

know, dear ; only our own friends." Many young ladies are weak enough to let conviction and everything else go to the winds, and they join in the dance because they have not had courage to say, "No ; my conscience will not allow me." Refusal may cause some people to arch the eyebrows, shrug the shoulders, or burst into banter and ridicule, but some will honour the young lady who has the courage of her convictions. Dr. Pentecost tells the following story in illustration of this point :—

A distinguished Christian lady, while staying at an hotel in America, was asked to attend a dance, in order that the affair might have the prestige bestowed by her presence, as she stood high in society. She declined all the importunities of her friends, and finally a Senator tried to persuade her, saying, "Miss B——, this is quite a harmless affair, and we want to have the exceptional honour of your presence." "Senator," said the lady, "I cannot do it. I am a Christian. I never do anything in my summer vacation, or wherever I go, that will injure the influence I have over the girls of my Sunday-school class." The Senator bowed, and said, "I honour you ; if there were more Christians like you, more men like myself would become Christians."

To sum up, the person of grit will never seek to get wealth, pleasure, place, or influence by a slaughter of principle, by underhanded measures, by fawning sycophancy, or by meanness of any kind. He will be poor if it must needs be ; he will be content to be unknown, to be, in the eyes of the world, a nobody ; but he must retain his manliness, and the integrity of his soul. How utterly mean, abject, contemptible is the man who has lied, or, like a cunning dog, crawled his way to place and power. Every true-spirited man despises him, and if he does not at present despise himself, most assuredly he will do so some day. There come to my memory some lines of a modern singer, which the readers of "A.I." will do well to ponder :—

"There are, who bending supple knees,
Live for no end except to please,
Rising to fame by mean degrees ;
But creep not thou with these.

They have their due reward ; they bend
Their lives to an unworthy end—
On empty aims the toil expend
Which had secured a friend.

But be not thou as these, whose mind
Is to the passing hour confined ;
Let no ignoble fetters bind
Thy soul as free as wind.

Stand upright, speak thy thought, declare
The truth thou hast, that all may share ;
Be bold, proclaim it everywhere :
THEY ONLY LIVE WHO DARE."

THE POET'S AIM.

"Some wild poets . . .
Without a conscience or an aim."
—"*In Memoriam.*"

YE souls that strike the tuneful lyre,
And to the Bardic name aspire,
Strike true and clear.
Let lofty themes and chaste, inspire
The strain that, rising in its notes,
And purity of thought and tone,
Tends to uplift, and aye promotes
The love of Truth and Right alone,
'Mid them that hear—
That chidden Wrong abashed retire,
And Justice move each heart's desire.

Strike ! strike ! with firm and certain hand !
That at your touch and loved command,
Your lyres impart
Joy to all hearts around that stand
And list their sound—pure as the Spring
That decks the mountain-side with life,
Sweet as bird-voices clear that ring
And warble forth the joys so rife,
That surge and swell with mirthful strife,
Within each heart ;
And skyward float one pæan grand
From Nature's grateful minstrel band.

Aye sing to charm not sense alone,
But better make the lives of all,
And raise the sad beyond the zone
Of wrongs and cares and sorrow's thrall,
That Woe may smile,
And flashes strange to tear-dimm'd eyes
Bespeak the lash that grief applies,
Now rests awhile.

Of Freedom sing—while she attends,
And through each heart all glowing sends,
With kindling touch,
The love that Death alone but ends—
The love of Home and Fatherland,
The love that erst did'st inly burn,
And led to lofty deeds that band
Which bled, but won, at Bannockburn,
Its courage such
That nought could e'er its charge withstand,
And Freedom joyed o'er all the land.

Of Duty—that with purpose high,
From "day to day" men still may try
Each task to do ;
Nor o'er it carp, complain, nor sigh,
Howe'er repugnant to the mind ;
Nor pliant be as twig in bower,
That swerving passage gives to wind,
That fickle blows and vaunts its power—
But strong and true,
In God right firm, and bravely ply
Their hearts and strength to duties nigh.

Of Peace—that frowning War no more,
With clashing sword and cannon's roar,
Despoil the earth,
And with wild passion swelling o'er,
As swell the billows tempest lasht,
Throw ruin and disaster round
Its path. Whilst Famine follows fast,
Down-trampling crops and fruits where found,
And social hearth,
That erst so happy was, no more
Joy's scene, for Death sits by the door.

Oh, rather, Peace !—that gentle Dove,
The smiling, sweet-voiced child of Love,
Bless all mankind ;
And 'mong the thousand nations move—
Binding all hearts and hopes as one—
Spread calm and joy throughout the earth,
That white-skinned race and Afric's son,
Or dwellers in the frozen north,
Shall kinship find
And "Brotherhood" of all, but prove
In deeds of Truth, Goodwill, and Love.

Of Love Divine—oh ! strike each lyre,
And join the glad celestial choir
In praising Him
Who died, that Love might yet acquire
Its greatest conquest—man redeemed,
Man lifted from the deepest woe,
And placed in glory yet undreamed
By him, its fulness and its glow
That nought can dim ;
And as ye sing with hearts afire,
May Christ grow all the Earth's Desire.

Sing—sing the love of God's dear Son ;
Perchance some happy note struck sweet
Shall live and ring through years to come,
And, falling with soft cadence meet,
Long after lips that sung are dumb,
Shall, balm-like, soothe the heart of some
Poor struggling one,
And hush its tumults, ease its moil,
As Eve the fevered pulse of Toil,
When day is done.

"OONALASKA:" A TALE OF A FAR NORTH LAND.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the 'Snowbird,'" "Thirteen Hundred Miles in My Caravan," "From Pole to Pole," etc., etc.

"To find the captain scanning a gigantic iceberg."

CHAPTER XLIV.

A CHAPTER OF MEETINGS AND PARTINGS.

GODFREY DENNIS was lying on the sofa of a cabin, lazily reading an English newspaper, in the good ship *City of B——*, bound from New York to Liverpool. It was an old paper. What of that? Old news was as good to Godfrey as new news, after having been out of the world so long.

He slapped down the paper on his knee at last, and hailed Spencer.

"I say, Spencer," he cried laughing, "I've got another good idea."

"Another? Well, out with it."

"Why, what say you to a return cricket match between Allandene and Oaksworth."

"First rate!" said Spencer Rae, rubbing his hands.

"And I say, old man, we'll beat them this time, eh?"

"Yes, for certain. Why, it will be just like old times, Godfrey."

"Just like old times; why, I'm full of it already, Spencer. But how slowly this old tub of a ship seems to move!—only 300 miles since yesterday, and we're not half-way across the Atlantic yet."

It was Spencer's turn to laugh now. "You had better not go up to the bridge and tell the captain about his old tub."

Godfrey, half in joke and half in earnest, went on the bridge to find the captain scanning a gigantic iceberg, which floated some distance from the ship, while on the hurricane deck Jack Silk was explaining the phenomenon to Katie. As they got within range, they perceived a bear, which, doubtless to his discomfort, had got cast away.

There was no doubt that Godfrey was burningly anxious to get home now. Nor can we wonder at it, nor that he often lay awake half the night, fevered with the joy of anticipation, building castles in the air, perhaps—he was only young, you know—and wondering what Rosa would say to him first, how she would look, and how express the pleasure he knew she would feel. And his mother, and his dear quiet old father, and Uncle Rae, and the old parson, and "t'ould doctor," and all his old friends in the village. Oh, there were such a lot of them!

But sometimes Giant Doubt would find his way into Godfrey's aërial Castle Beautiful, and for a time make things very dark and unpleasant indeed. Did Rosa love him, after all? All along there had only been a silent or tacit understanding between them, and even in the little letter she sent to him by Spencer's hand, she did not actually say she loved him. (The silly Godfrey! Was it likely that Rosa was going to say anything of the sort?) It was a friend's letter, no more.

Then his mother. Would she be alive, and might not even his father be dead? Oh, what if, on returning, instead of meeting his mother's smiling face, he found but a grave, with deep waving grass and flowers on it! Yet it was but three weeks since he had heard from home.

These were all terrible thoughts, but at last he generally managed to kick Giant Doubt out of the castle and over the coverlet; then he would sleep off into calm, quiet sleep and pleasant dreams, from which he did not awaken till the steward brought his hot water. He turned out then quickly, feeling all over as happy as the birds do at early morning; he was glad because another day was gone, and used to sing while dressing, and this, I take it, is an invariable sign of a light and happy heart.

* * * *

Many a long day had passed since they had left the wild lands around the upper Yukon, and set out southwards on a return journey that lasted months, ere ever they reached the anchorage of the Russian barque.

The wandering tribe of Eskimos came as far as Chilcat with them, and when farewells were said, they found themselves a very rich tribe indeed. But honest Dresky's parting from Blue Jack, our sailor boy, was quite affecting in its way. Even Dresky's wife seemed sad, and the last thing that Jack saw of her, she was waving the baby aloft and shouting, "Tabak, tabak."

Bob-a-link elected to remain at Chilcat. He would find his way home somehow, some day, he said, and if he did not, it wouldn't matter much; so they bade him, too, a long good-bye.

With few adventures, save those inseparable from ship life, the good barque reached San Francisco safely. Of course, Jack had not felt the voyage irksome, neither, if the truth must be told, had innocent Katie. But both Chips and Captain Boyd did confess to the time feeling long.

"It isn't like being at sea," they grumbled, "when you can't put your hand to a rope!"

Still it must be said, in credit to the Russian captain, that he made every one of his passengers, from Boyd himself to Boy Bates, feel as much at home as if they were in their own ship.

At San Francisco, to the joy of Godfrey and Spencer, letters had been received from old England, and—all was well. There had been sent in answer, also, a cablegram, announcing the return of the wanderers.

Straight away home, on the wings of love, Godfrey would have flown at once, had gratitude to Miss Graves not compelled him to stay to witness a ceremony as interesting as any that had ever happened at any church on the Pacific Slope, and much more interesting to honest Jack, for it was nothing less than his marriage to Katie Graves.

And this great event, to use Jack's own phraseology to the last, "passed clear off without a hitch."

Boy Bates had also ventured a remark on the marriage to his friend Chips, to the effect that the bridegroom had looked so awfully happy and jolly, that had poor old Sally been to the fore, he would have proposed, and got married himself.

Almost at the last moment, and just before good-byes were said to the two Nats, Miss Graves yielded to the entreaties of her cousin and Godfrey, ably supported by Jack, to come with them to England, and went quietly away to see after her luggage.

"She has only an hour to pack," said Nat the elder, quietly lighting a fresh cigarette, "and to throw her things together, but she'll do it. You don't know Mary yet."

And so they were all to be found, on a beautiful day in early Spring, on board this same *City of B——*, the only really impatient one among them being Godfrey.

But even a ship that only three hundred knots a day can be "knocked out of," will, if all goes well, reach her port at last. The *City of B——* did, anyhow; and the journey from there to the drowsy wee village of Allandene was all plain sailing.

Nothing was changed.

From the shoulders of Godfrey's mother a weight of years seemed suddenly to have fallen when her son walked quietly in, "not to frighten her," by his way of it.

But his father only said, in his quiet way: "So you've come back, lad."

To say that the excitement of the village of Allandene was great, on the arrival not only of Spencer Rae and Godfrey, but of all the others, would be but poorly to describe it. It was intense, for all loved the young farmer cousins.

* * * *

Hand in hand we found Godfrey and Rosa standing one day at the commencement of our story, in the old-fashioned parlour of the Neils, and hand in hand we find them sitting one evening, soon after the young man's return; for the couple are now betrothed. In his chair by the fireplace is kindly old Neil himself, asleep, and Mrs. Neil in her high-backed chair.

"Isn't it just like old times?" said the mother.

"Yes! like old times," said Godfrey; "but I want Rosa to sing."

Rosa got up and went to the piano.

Then she turned and softly asked, "What shall I play?"

"'The Wearing of the Green.'"

He was silent for a moment after she had finished, and then he told her when he had heard it last, and how it had affected him.

* * * *

The return cricket match between Oaksworth and Allandene duly took place. As before, the two young men rode off together. As before, Rose stood at the little gate, and playfully threw a flower, but the bouquet was soon discovered to be not one buttonhole, but two. And they knew what was meant.

As before, Oaksworth was all *en gala*, and the match was the talk of the place. It is needless for me to add that Allandene was victorious.

Both Allandene and Oaksworth were all *en fête* another day, not a very long time after, and the little church and even churchyard were thronged, as no one ever remembered to have seen them for many a day.

And Rosa looked a bonny bride, and Godfrey a bold and handsome bridegroom.

When they drove away, it was said they were followed by more blessings than even handfuls of rice or old shoes and slippers. A San Francisco marriage is a very gay affair, I grant you, but for genuine hearty enthusiasm give me Yorkshire, after all.

One day, when Ponto, the Newfoundland, came bounding into the parlour of the Raes, where the good old parson sat talking of old times with the farmer and his wife, Mr. Lea lifted a finger to the dog.

"Come hither, Ponto," he said; "a little spark will kindle a big fire, doggie. And it was you who were the innocent cause of al the sorrow."

And poor Ponto laid back his ears and looked quite as penitent as if he knew the meaning of the rebuke, and entirely agreed with Parson Lea.

THE END.

"Jack Silk was explaining the phenomenon to Katie. As they got within range they perceived a bear, which, doubtless to his discomfort, had got cast away."

THE EAR; OR, PRUDENCE IN HEARING.

By the Rev. J. Hiles Hitchens, D.D., F.S.Sc.,

Author of "*Ecce Veritas*," "The Young Men of Scripture," etc., etc.

THE marvellous wisdom of the Divine Creator is as conspicuous in the construction of the ear, as in the formation of other parts of the human body. The exterior portion of the ear is constructed like a trumpet, to collect and transmit the sounds. These are conveyed through winding passages till they reach a thin membrane which is stretched on four small bones. To these bones there are attached several minute and sensitive muscles, which, by their contraction or relaxation, modify the tension of the membrane, just like the cords which brace a drum-head. The membrane is termed the tympanum or drum. When sound is conveyed to it, it vibrates as does the parchment when smitten, and thus produces, through the medium of the nerves, the sensations of sound. The ear is a complete acoustic instrument for the mind.

We are accustomed to speak of the ear hearing, but in reality it no more hears than the metal trumpet employed by the deaf man. The ear is but the servant of the soul—one of the channels by which intelligence is conducted to the absolute mind.
